**Apterodic'erous.** ('Λπτερος, without wings; ôls, twice; κέρας, a horn. F. apterodicere; G. ungeflugelhornig.) Applied by Latreille to insects without wings and with two antenna.

Apterolo'gia. ('Απτερος; λόγος, a discourse.) A treatise on wingless insects.

**Ap'terous.** ('Απτερος; from α, neg.; πτε, νω, a wing. F. aptère; G. flugellos.) Wingless. A term applied in Botany to organs, such as stems, fruits, and seeds, that are wingless.

Apteryg'ia. (A, neg.; πτίρυξ, a fin. F. apterygien; G. ohne Flossen.) Applied by Latrelle to a Section of Mollusea Phancrogama

having no special organs for natation.

Apteryg'idæ. ('A, neg.: πτέρυξ, a wing.) A Family of the Subelass Ratidæ, Class Ares. They are small wingless birds of New Zealand, with long beaks, obtuse at the tip, where the nostrils are placed; feathers hair-like; pre-frontals long, spongy; vomer unites with the short and broad palatines and the pterygoids; no elavicles; a rudimentary humerus; one ungual

phalanx; thirty-two precaudal vertehræ.

Ap'titude. (L. aptitudo, fitness; from apto, to adopt. F. aptitude; I. attitudine; G. Aulage.) Fitness; tendency; suitableness. The natural disposition of an animal or race to the performance of certain acts, to the modification of organic structure or function, according to the influence of certain agents, or the facility with which they become subjected to certain noxious influences.

**Aptya'lia.** ('Λ, neg.; πτύαλον, spittle. F. aptyalie; G. Speichelmangel.) Defect of Defect of

saliva.

**Ap'tychus.** ('Λ, neg.;  $\pi \tau \nu \chi \eta$ ; for  $\pi \tau \dot{\nu} \xi$ , a fold.) Λ name given to the shell-like substance found in the last chamber of some species of Ammonites, and supposed by Keferstein to sup-port the nidamental glands. They are triangular, blunt-angled, and applied together by their straightest sides, so as to resemble bivalve shells; they consist of two layers, the outer laminated and traversed by pores, the inner presenting lines of growth concentric with the angles of the side of attachment.

Aptys'tia. Same etymon and meaning as Aptystos.

**Aptys'tos.** (' $\Lambda \pi \tau v \sigma \tau o s$ ; from  $\dot{a}$ , neg.;  $\tau \dot{v} \omega$ , to spit.) Term applied by Hippocrates, πτύω, to spit.) Term applied by Hippocrates, Coac. Pranot. 381, to plcuritis in which there was no expectoration.

Aptys'tus. Same as Aptystos.

Apulei'us. A botanist who wrote on medicinal herbs; the time when he lived is uncertain, but it was probably about the ninth century

Apulo'sis. (Απούλωσις; from ἀπουλόω, to make to sear over.) Cicatrisation.

Apulotic. ('Απουλωτικός, from ἀπουλόω,

to make to scar over.) See Epulotic.
Apulot'ica. (Same etymon.) Remedies which promote cleatrisation.

Apu'sidæ. Λ Family of the Suborder Branchiopoda. Body with a clypeiform carapace, on which are placed the eyes; fifty or sixty pairs of feet, of which all but the first pair are foliaceous; the eleventh pair in the female carry an oriferous capsule.

Apussey. Native name of an Ashantce plant, of the Nat. Order Leguminosa, probably allied to Robinia. The bark, pounded with cardamom, is applied to the head in headache.

(Waring.)

Aputtasy. A plant of Guinea, employed in the form of decoction for scurvy of the mouth.

(Waring.)

Apy'etous. ('A, neg.; πύον, pus.) Term by Pechlinius, Obs. Phys. Med. 67, p. 174, applied to any external disease, or humour which did not

Apyi'tes. (Uncertain; probably a misprint for Apyrites; a, from; pyrum, a pear.)
The liquor obtained from pears, commonly called

Apy'ous. ('A, neg.; πύον, pus.) That which does not afford pus.

Apyrec'tic. ('A, neg.; πυρίσσω, to be feversh.) Same as Apyretic.

**Apyrenæ mata.** ('A. neg.; πυρήν, the stone or seed of fruit; αἶμα, blood.) Term applied by Mr. Gulliver to the Mammalia, because their red blood-corpuscles are destitute of a

Apyrenom'ele. ('A, neg.; πυρήν, the round head of a probe; μήλη, a sound.) A sound

without a button.

**Apyre nous.** ('Λ, neg.; πυρήν, seed of a fruit. F. apyrene; G. kernlos.) Applied to a fruit that does not contain grains or kernel. Also, without nucleus.

**Apyretic.** ('A, neg.; πυρετός, fever. F. apyretique; I. apiretico; G. fieberlos, fieberfrei.) Term applied to the days of an intermission in

Also, to local and other diseases which do not

induce febrile excitement.

Apyrex'ia. ('A, neg.; πυρέσσω, to have a fever, or paroxysm of fever. F. apyrexie; I. apiressia.) The condition in which there is no fever; applied to conditions of defervescence or recovery in acute disease; but more especially used to describe the bodily state of a person suffering from intermittent fever, or the days when no paroxysm occurs.

Ap'yrin. A kind of starch obtained from the nuts of Cocos lapidea, or Attalea funifera. It is soluble in hot water, but is precipitated on cooling. It is without smell or taste, and is by

some regarded as an alkaloid.

Apyrom'ele. ('A, neg.; πυρήν, stone of a fruit, a nut; μήλη, a probe.) Old name for a probe having no bulb or rounded head at its extremity.

**Apy ron.** ('A, neg.;  $\pi \tilde{\nu} \rho$ , fire.) Old term, used by Dioscorides, v, 124, for Sulphur vivum. Also, for Æthiops mineral, when prepared

Apyrothi'um. ('A. priv.; πῦρ, fire; θεῖον, sulphur.) Old name for Sulphur vivum, or native sulphur which has not been subjected

**Apyro'ti.** ('A, neg.;  $\pi \tilde{\nu} \rho$ , fire.) Ancient name for the carbuncle, because without heat,

though fiery in appearance. (Quincy.) **Apy'rous.** ('A, neg.; πῦρ, fire. F. apyre; I. apiro; G. feuerfest.) Applied to bodies which

sustain a strong degree of heat without any alteration, as *Mica, Tale, Asbestus*, which were anciently so termed; also, to bodies which have not been exposed to the action of fire.

Apy'rum. Same as Apyron.

Aq. An abbreviation of the word Aqua, of

water, occurring in prescriptions.

A'qua. (L. aqua, water, akin to Sanser. ap. The pharmacopoial name (L.) for spring water; (U.S.A.) for natural water in the purest attainable state. Water, being a colourless transparent fluid water in the purest attainable state. without taste or smell when pure. See Water. Also, a term for the urine.

A. absinth'ii destilla'ta. Wormwood water, distilled from the tops of the Artemisia absinthium. Used as a stomachic and as a

vehicle.

A. aceta'tis ammo'nii. A synonym of Liquor ammoniæ acetatis.

A. aceta tis plum'bi crystalliza'ti. A synonym of Liquor plumbi subacetatis.

A. ac'idi carbol'ici, U.S. Ph. Glycerite of carbolic acid 10 drs.; distilled water to make a pint. Strength a grain to a drachm. Dose, one

to two teaspoonfuls.

A. ac'idi carbon'ici, U.S. Ph. Carbonic acid water. The directions are-with a proper apparatus impregnate water contained in a suitable receiver with a quantity of earbonic acid equal to five times the bulk of the water. Carbonic acid may be obtained from bicarbonate of soda, or from marble by means of dilute sulphuric acid. A sparkling fluid, with pungent, acidulous taste. It is a diaphoretic, diurctic, and anti-emetic; a convenient vehicle for the administration of magnesia, the alkaline carbonates, sulphate of magnesia, and the saline catharties generally.

A. ac'ido carbon'ico satura'ta. (L. saturatus, part. of saturo, to fill, to saturate.) Aerated water; water impregnated with carbonic anhydride, often called soda water, or mineral

water.

A. ac'ido carbon'ico supersatura ta. (L. super, above; saturatus.) Aqua acidi carhonici containing an extra amount of earhonie acid.

A. acid'ula cum bicarbona te magne'sico. The A. magnesiæ arrata, Belg. Ph.

A. acid'ula cum na tro-bicarbon ico. (L. acidulus, a little sour. F. cau de soude carbonatée; G. Sodawasser.) Carbonic acid water containing sodium bicarbonate.

A. acid'ula hydrosulphura'ta.

acidulus.) Naples water. See A. Napolitana.
A. acidula sim plex. (L. acidulus; simplex, simple.) A synonym of Aqua acidi carbonici.

A. acid'ula simplic'ior. (L. acidulus ; simplex, simple. Fr. Codex, can gazense simple.) Water charged with carbonic acid gas under a pressure of seven atmospheres. It is frequently used under the name of Ean de Seltz, and administered when the stimulant action of the gas is alone required.

A. acid ulo-sal'sa. (L. acidulus; salsus, salted. Fr. Codex, can acidule saline.) Calcium chloride, 0.33 gramme; magnesium chloride, 0.27; sodium chloride, 1.10; crystals of sodium carbonate, 0.90; sodium sulphate, 0.10; aq. acidula simplieior, 650.0. This gaseous water may be used in the same cases as the Eaux de Seltz, Condillac, Renaison, St. Galmier, Schwalheim, and Soultz**A. acus'tica of Lud'wig.** ('Ακουστικός, belonging to the sense of hearing.) This is composed of a camphorated alcoholic infusion of valerian, rosemary, lavender, laurel berries, castoreum, to which is added liquor ammoniæ and essence of juniper. A remedy in repute for deafness.

A. aera'ta. (L. aer, air. F. can gazeuse simple.) A synonym of Aqua acidi carbonici.

A. aera'ta hydrogen'il hydrosul phu'rica. A synonym of Aqua hydrosulphurica.

A. ae'rls fix'l. (L. aer, the air; fixus, fixed.) Water of fixed air. An old name for carbonie acid. A synonym of A. acidi carbonici.

A. æthera'ta. Ether water. A water made by adding 1 part of pure ether to 20 parts

of cold distilled water.

A. æthera'ta camphora'ta. Camphorated ether water. This is made by mixing I part of eamphor with 10 of ether, and, after allowing the mixture to stand for half an hour, adding 200 parts of distilled water.

A. Africa'na. A solution of nitrate of

silver; employed for dyeing the hair.

A. albumino'sa. (Fr. Codex, eau albumineuse.) Albuminous water; prepared by beating up the whites of four eggs in 100 grammes (about three ounces) of cold water, and adding a little orange-flower water. It is used in cases of poisoning by the salts of mercury and copper.

A. alcali'na carbon'ica. (F. eau alcaline gazeuse.) Effervescing potash water. (F. van It contains I part of potassium carbonate dissolved in 150 parts of distilled water, and impregnated by means of a suitable apparatus with 4 or 5 times its volume of carbonic acid gas.

A. alexete'rla. ('Αλεξητήριου, a remedy.)
Old term for water distilled from leaves of spearmint, fresh tops of sea wormwood, and fresh angelica leaves; formerly used as a vehicle for alexipharmic medicines.

A. alexete'ria oxygena'ta. A synonym

of A. chlori.

A. alexete'ria spirituo'sa. Old name for the A. alexeteria, with a little proof spirit added.

A. alexete'ria spirituo'sa cum ace'to. (L. acctum, vinegar.) Old name for the A. alexeteria, having vinegar in addition.

A. Alibou'ri. (F. cau d'Alibour.) A collyrium containing zine sulphate, 3 parts; copper sulphate, 1.5 part; camphor contused, 0.5 part; powdered saffron, 0.3 part; warm water, 150 parts; digest for 24 hours and strain.

A. alkali'na carbon'ica. Alkaline carate water. A synonym of Potash water, honate water.

efferviscing.

A. alkali'na efferves'cens. (L. effervesco, to boil up. Fr. Codex, eau alcaline gazeuse.) Sodium bicarbonate, 3.12 grammes; potassium bicarbonate, 0.23; magnesium sulphate, 0.35; sodium chloride, 0.08; aqua acidula simplicior, 650. This alkaline water may be employed in the same cases as those in which Vichy and Vals waters are found useful.

A. alkali'na oxymuriat'ica. A name for the Eau de Jarelle, or bleaching liquid; a

solution of chlorinated soda.

A. alumina'ta. (L. alumen, alum.) A solution of 1 part of alum in 50 parts of aqua

A. alumino'sa. (L. alumen, alum.) solution of 10 parts of alum sulphate in 1000 parts of water.

A. alumino'sa Batea'na. (F. cau styptique.) Bates's alum water. Alum sulphate, 15; zinc sulphate, 12; boiling water, 1000 parts. Used as an astringent injection, lotion, or collyrium.

A. alumino'sa compos'ita. Compound alum water. A styptic composed of 1 part of zinc sulphate, 1½ parts of alum, dissolved in 100 parts of distilled water. Used as an injection, lotion, or collyrinm.

Another formula is—alum and iron sulphate, of each 30 parts; boiling water 1500

parts.

A. aiumino'sa Fallo'pil. Fallopius's alum water. This is composed of corrosive sublimate, 1 part; alum, 1 part; rose water, 100 parts; dissolve. Used as a detersive for purulent

and exphilitic sores.

A. ama'ra. (L. amarus, bitter; G. künstliches Bitterwasser.) Artificial bitter water. Magnesium sulphate 35 parts; common salt, 1 par'; sodium bicarbonate, 2.5 parts; spring water, 500 parts; dissolve, filter, and add diluto sulphnrie acid, 8 parts, then tightly cork the vessel.

Also, a water containing 25 grammes of magnesium sulphate in 200 grammes of sweetened

water. Employed as a purgative.

A. ama'ra Mey'eri. (G. Meyerisches Bitterwasser.) This is composed of magnesium sulphate, 32 parts; sodium bicarbonate, 4 parts; sodium sulphate 8 parts; dissolve in 500 parts of water, and impregnate the liquid with 3 volumes of carbonic anhydride.

A. ammo'ni bicarbon'icl. A synonym

of A. ammoni carbonica.

A. ammo'ni carbon'ica. This is composed of ammonium carbonate which has effloreseed I part, water superaërated with carbonic anhydride 1000 parts; mix, and keep in wellstoppered vessels.

A. ammoniaca'lis. Ammoniaeal water. A synonym of Liquor ammoni $\sigma$  carbonatis.

A. ammoni aco caus'tica. (Καυστικός, capable of burning.) A synonym of Liquor ammonne.

A. ammo'niæ, U.S. Ph. Ammonia water. Chloride of ammonium in small pieces, lime, of each 12 oz. troy; water Ovj; distilled water a sufficiency; slake the lime with the water, make a smooth paste, and add the rest of the water; decant from the gritty sediment, and add the chloride of ammonium to the milky fluid; distil into the bottom of a cooled receiver containing a pint of distilled water; add to the distillate enough distilled water to raise the sp. gr. to 0.960; 100 grains saturate 30 grains of officinal sulphuric acid, and contain nearly 10 grains of ammonia. A stimulant, sudorific, antacid, and rubefacient. Dose, 10-30 drops.

Also, a synonym of Liquor ammonia car-

bonutis.

A. ammo size aceta tae. A synonym of Liquor ammonia acctatis.

A. ammo'niæ aceta'tis. The Liquor ammoniæ acetatis.

A. ammo'niæ carbona'tis. Ammonium earbonate 4 oz., distilled water 1 pint; dissolve and filter through paper.

A. ammo'niæ caus'ticæ. (Καυστικός, capable of burning.) Water of caustic ammonia. A synonym of Liquor ammoniæ.

A. ammo'niæ for tior. The Liquor ammonia fortior.

A. ammo'niæ pu'ræ. (L. purus, pure.) A synonym of Liquor ammoniæ.

A. am'nti. See Liquor amnii.

A. amyg'dalæ ama'ræ, U.S. Ph. Bitter-almond water. The directions are—Take of oil of bitter almonds 16 minims, carbonate of magnesia 60 grains, water 2 pints; rub the oil first with the earbonate of magnesia, then with the water, gradually added, and filter through paper. Given in nervous coughs and spasmodic affections.

A. amygdala'rum amara'rum. (F. eau distillée d'amandes amères.) Bitter-almond water. In the old French Codex, 1 kilogramme of bitter-almond paste was directed to he mingled with a sufficiency of water, and after maceration for 24 honrs to be distilled at steam heat till 2 kilogrammes are obtained. Filter to separate the undissolved volatile oil. The Danish and Prussian Ph. add a little alcohol. Dose 10—30 grammes.

Ger. Ph. (G. Bittermandelwasser.) Bitter almonds, freed, by pressure at a low temperature, as far as possible from fixed oil, 12 parts, spring water 80 parts; mix thoroughly and add 2 parts of spirits of wine; then distil 10 parts, or so much that 1000 parts treated with ammoniacal silver oxide, and then with nitrie acid, yield 5 parts of

dry silver eyanide.

A. amygdala'rum amara'rum dilu'ta, G. Ph. (G. Kirschwasser.) Dilute bitteralmond water. This is directed to be prepared by mixing 1 part of the Aqua amygdalarum amararum (G. Ph.) with 19 parts of water.

Anst. Ph. (G. verdimntes Bittermandel-veasser.) This is made of aq. amygdul. amararum concentrata 25 grammes, aq. destillatæ 275 grammes. To be prepared when required.

A. amygdala'rum concentra'ta, Aust. Ph. (G. concentrictes Bittermandelwasser.) Concentrated bitter-almond water. Bitter almonds, freed from oil by pressure and reduced to a powder, 1000 grammes; divide into 12 parts; 11 of these parts are placed in a retort with 10,000 grammes of distilled water and boiled for a few minutes; the heat is then removed, and when the fluid is quite cold the remaining twelfth part is added to it; the mixture is allowed to stand for a night, and distilled till 2000 parts have passed over.

A. amy'li, Belg. Ph. (L. amylum, starch.)
Potato starch boiled with a hundred parts of distilled water for a quarter of an hour and filtered.
A. ane'thi, B. Ph. Dill water. One pound

of bruised dill fruit, water 2 gallons; mix and

distil one gallon.

A. angel'ica. ('Λγγελικός, belonging to a messenger, augelie.) Contains eream of tartar 8 gruss., manna 60, water 250, lemon juice 15. The fluid is clarified with the white of an egg, and a little orange peel is added. A purgative in much repute.

A. angel'ica Viennen'sis. (F. potion purgative végétale.) Vienna angelie water. Manna 60 parts, tartrate of potash 6, the juice of one lime, boiling water q. s.; infuse with the rind of lemon peel, and clarify with white of egg.

Used as a purgative.

A. Anhaltina. (F. cau d'Anhalt.) Water of Anhalt. This is composed of oils of rosemary, fennel, mace, cloves, and cinnamon, of each 5 parts, tineture of musk 2 parts, rectined spirit of wine 600; mix, set aside for one day, and filter.

A. ant'si, U.S. Ph. Anise water. Oil of anise ½ dr., magnesium carbonate 60 grs., distilled water 2 pints; mix the oil with the magnesia and then with the water, and distil 8 pints. An aromatic vehicle.

A. ani'si stella'ti. Star anise water. Made in the same way as A. cascarillæ.

A. anod'ina. See A. anodyna.

A. anod'yna. ('Aν, neg.; ἀδώνη, pain.) Strong solution of ammonia, highly rectified spirit of wine, of each 20 parts, camphorated spirit 10, tineture of opium 3; an antiodontalgic, and an external application in neuralgia.

A. antiarthrit'ica efferves'cens. Effervescent antiarthritic water. A synonym of  $\mathcal{A}$ .

lithii carbonici.

A. antiblennorrhœ'ica. ('Αντί, against; βλεννός, mueus; ρόια, a flux.) A remedy employed, both externally and internally, in the later stages of gonorrhœa and blennorrhœa. Made of the leaves of mint, of dittany of Crete, and of the Florentine iris, of the seeds of rue and of lettnee, of each 7 parts, turpentine 100 parts, white wine 650; distillation is continued till three quarters of the fluid have passed over. It is a clear fluid of unpleasant odour, and possessing a vinous, styptie taste.

A. antienesmatica. (Λυτί, against; κυησμός, an itching.) This is composed of pure earholic acid 10 drops, dilute acetic acid 10 parts, alum sulphate 2 parts, rose water 120 parts. A remedy employed to relieve irritation and prurtus about the perimeum, scretum, and vulvæ.

about the perineum, scrotum, and vulve. A. antiepilep'tica de Lan'glo. ( $\Lambda \nu \tau i$ ;  $\xi \pi \lambda n \mu \nu s$ , epilepsy.) A remedy used, both externally and internally, in epilepsy. It contains (the numbers representing grammes) flowers of the lime tree (Tilia) 70, of the lily 140, seeds of the pæony 30, good white wine 200. An infusion of the ingredients is made in the wine, and after some days it is distilled, and there are then addedentused eanella bank 10, nutnegs 20, cardamoms, cubebs, and long pepper, ef each 2, flowers of lavender 30, of rosemary, mistletoe of the oak, pæony root, and dittany, of each 15. Infuse the whole, and distil again.

A. antiherpetica de Luynes. ('Λντί; "έρπης, herpes.) See Aequa del Cardinale di Luynes.

A. antihysterica fœ'tida (' $\Lambda \nu \tau i$ ; hysteria; fætidus, stinking.) A synonym of A. fætida antihysterica.

A.antinyster ica Pragen'sis. ('Avri; hysteria.) The antihysteric water of Prague. A synonym of the A. fatida antihysterica, G. Ph.

A. antimiasmat'ica. ('Αντί; miasm.)
A solution of ammonio-chloride of copper.

A. antimiasmatica Beis'seri. ('Avri, against; miasm.) A synonym of A. antimiasmatica Koechlini.

**A.antimiasmatica Koechli'ni.** ( $^{\prime}\Lambda\nu\tau l$ , against; miasm.) A liquid of which 120 parts contain 1 part of metallic copper in combination with chlorine and 25 parts of ammonium chloride. It is used, diluted with 50 parts of distilled water, a teaspoonful being given for a dose.

A. antiophthal'mica de Loche. Λ remedy used in chronic ophthalmia and epiphora. It contains aqua meliloti 80 grms., distilled water 60, alcohol 2·5, alum and sulphate of zine 0·80, tincture of aloes 12 drops.

A. antipu'trida. ('Αντί, against; putridus, rotten.) A solution of 1 part of potassium

permanganate in 200 of water.

A. antiscorbu'tica Sydenham'i. ('Avτί, against; scorbutus.) This contains-of oil of mentha crispa, oil of orange rind, oil of sage, and oil of mace, of each 5 drops, spirit of mustard 2 parts, spirit of horseradish and spirit of wine, of each 100 parts.

A. apoplec'tica. A synonym of Liquor

A. aquisgranen'sis. (L. Aquisgranum, the Roman name for Aix-la-Chapelle.) Factitions Aix-la-Chapelle water. Hydrosulphuretted water 4 oz., sodium carbonate 20 grs., sodium chloride 9 grs., water 171 oz.; mix.

A. ar'dens. (L. ardens, fiery. I. acqua

ardente.) Brandy or spirit of wine.

A. argen'tea. (L. argenteus, of silver.)

A synonym of Mercury.

A. armora'ciæ radi'cis. (L. radix, a root. F. eau de raifort.) Horseradish water. This is made by macerating 20 parts of fresh recent root of horseradish in 40 parts of water, and adding 3 parts of rectified spirit; distil 20

A. ar'nicæ. Arnica water. This is prepared by adding 1 part of the oil of arnica flowers

to 1000 of water, and distilling.

A. aromatica, Ger. Ph. (L. aromaticus, composed of spices, G. Schlagwasser.) Sage leaves 4 parts, of the leaves of rosemary and of peppermint, of each 2 parts, of lavender flowers 2 parts, fennel seeds and einnamon, of each 1 part, spirit of wine 26 parts, and water 130 parts. The ingredients are to be macerated for 24 hours, and 72 parts are to be distilled.

A. aromatica spirituo'sa, Aust. Ph. (G. geistig aromatisches Wasser.) Spirituous aromatic water. Lavender flowers, leaves of sage, mentha erispa, and balm, of each 100 grammes, of nutmeg, cloves, cinnamon, mace, ginger, fennel, of each 50 grammes; cut up, and pound, and add of spirit of wine (90 per cent.) 1000 grammes, water 8000 grammes; macerate for 12 hours, and distil 5000 parts. Dose, a teaspoonful as a carminative and stimulant; externally as an embrocation to the abdomen in flatulent colic.

A.arsenica'lisantipedicula'ris, Clater. (L. pediculus, a louse.) Centains of arsenious acid 100 grms., green soap 2 kilogrms., water 15 litres. Used to kill lice in sheep.

A. arsenica'lis Pearson'ii. Pearson's arsenieal water. This contains of sodium arseniate

0.25 parts, distilled water 120 parts.

A. asafœ'tidæ compos'ita. fétide antihystérique.) Compound asafortida water. A synonym of the A. fætida antihysterica, G. Ph.

A. Athenien'sis. (F. can Athenienne.) This is composed of balsamum vitæ hotimanniensis, aqua coloniensis, essentia iridis florentine, of each 200 parts, essentia mosche, essentia ambre, of each I part, tinetura quillaja 25 parts, glycerinum optimum 150 parts; mix, set aside, and filter. Used as a deter-

A. audito'ria. (L. auditorius, relating to hearing.) The Liquor cotunnii.

A. aurantia rum florum, Aust. Ph. (G. Orangenbluthenwasser.) The Austrian officinal name of orange-flower water.

A. auran'tii, Helv. Ph. Orang water. The same as A. aurantii floris. Orange-flower

A. auran'tii fio'ris, B. Ph. Orange-flower water. The distilled water of the flowers of the Citrus bigaradia and C. aurantium, prepared mostly in France. A flavouring agent and, as some say, a nerve sedative.

A. auran'tii flo'rum, U.S. Ph. Orangeflower water. The directions given are-Take of orange flowers 18 troy ounces, water 16 pints; mix, and distil 8 pints. This preparation is made in France and Italy chiefly from the bigarado or bitter orange; but in England and the United States from either the bitter or the sweet orange. In France the oil of neroli, which distils over, is removed.

A. aurantio'rum. A synonym of Aqua auruntii.

A. aura'ta. (L. auratus, golden. F. eau d'or; G. Danziger Goldwasser.) This is composed of oleum citri, eleum macidis, oleum cassia, tinctura croci, of each gtt. 10, spiritus vini rectificatus, aqua rosæ, syrupus flor, aurantii, of each 1000 parts; mix and add a few cullings of leaf gold.

A. au'rea divi'na Ferne'lii. The divine golden water of Fernelius. This is composed of I part of corrosive sublimate dissolved in 100 parts

of lime water.

A. azo'tica oxygena'ta. Water impregnated with nitrous oxide. A diuretic and stimulant.

A. bal'sami Toluta'ni. Water of tolu balsam. One part of balsam of tolu is digested for two hours in two parts of water, and filtered. Expectorant and aromatic.

A. balsam'ica arteria'lis. A synonym of A. Binellii.

A. balsam'ica of Ful'ier. Is composed of ivy, horehound, hyssop, pennyroyal, of each three handfuls, of the roots of mint and of the iris 8 grms. each, turpentine 160, milk 2000, aleohol 160. A remedy believed to be useful in chronic catarrhs and in pulmonary phthisis.

A. balsam'ica of Jack'son. An alcoholated dentifrice, into the composition of which pellitory of Spain, balsam of tolu, and other aro-

matic substances, enter.

A. balsam'ica of Le'mery. Contains of the roots of symphytum officinale, salvia, hypericum, mint, and hyssop, of each one handful, rose water 400 grms. It is clear, of aromatic odour, and is used, both externally and internally, as an excitant and stomachie.

A. bal'samum copai'væ. Copaiba water. A water made in the same way as the A.

cascarillæ.

A. Bareginen'sis. (F. cau sulfurée.)
Artificial Baréges water. Sodium carbonate 6 grs., sodium chloride 10 grs., hydrosulphnretted water 4 oz., water 17½ oz.; mix.

A. bary tee. Baryta water. This is made by dissolving I part of caustic baryta in 20 parts

of bot distilled water.

A. bary'tæ muria'tis. The Liquor barii chloridi.

A. Batca'nea. Bates's water. This contains I part of zine sulphate and 1.5 parts of alum dissolved in 100 parts of water. Used as an astringent.

A. Beis'seri. Beisser's water. A synonym of Aqua antimiasmatica Kocchlini.

A. belladon'næ, Belg. Ph. Belladon leaves 500, water sufficient. Distil 1000 parts. Belladonna

A. Belliluca'na. Artificial Balaruc water. Sodium chloride 1½ dr., calcium chloride 18 grs., magnesium chloride 56 grs., magnesium carbonate I gr., carbonic acid water, containing twice its bulk of carbonic acid, 201 oz. A. benedic'ta. (L. benedictus, blessed.)

A synonym of Liquor calcis.

A. benedic'ta compos'ita. (L. benedictus; compositus, put together.) This is made by macerating sassafras wood 10 parts, gualacum wood 100 parts, liquorice root 20 parts, coriander seeds 5 parts, in 1500 parts of lime coriander seeds 5 parts, in 1500 parts of lime water for some days and filtering. Recommended in scrofulous complaints. Dose, a tablespoonful

three or four times a day.

A. benedic'ta Rulan'di. blessed water. A synonym of Vinum antimoniale.

A. Binel'II. (G. Blutstillendeswasser.) Binelli's styptie. An Italian nostrum, named after a physician of Turin, which at one time enjoyed great reputation in little purple as a styptic. It is believed to contain a little creasote.

A synonym of the Aqua creasoti.

A. Borbonen'sis. Artificial Bourhonne water. Sodium chloride 1 dr.; calcium chloride 10 grs., earbonie acid water 201 oz.

A. borrag'inis, Belg. Ph. Bora parts, water sufficient. Distil 1000 parts.

A. Bredfeld'ii. Bredfeld's water. is composed of eau de Cologne 1500 parts, rose water 250 parts, compound tineture of musk 5 parts.

A. Bristolien'sis. A name of the Bristol

hot well at Clifton.

A. Brocchie'rii. Brocchieri's styptic. An empiric remedy, vaunted as a styptic; supposed to be distilled water of pine wood.

A. broma'ta. Bromine water. Bromine 5 drops, distilled water 1000 parts; mix and agitate. Used in diphtheritic croup.

A. bro'mi. The same as A. bromata.

A. bryo'niæ compos'ita. A synonym of Alcoolatum bryoniæ compositum.

A. buc'co. Buchu water. A distilled water from huchu leaves; used as an injection in gonorrhœa.

A. cal'ami. Aromatic-reed water. It is made in the same way as the A. cascarilla.

A. calcariæ, Ger. Ph. (L. calcarius, pertaining to lime. G. Kalkwasser.) Lime water. Lime 1 part, water, added gradually, 50 parts; allow the mixture to stand for a few hours, and decant and filter the supernatant fluid.

Also, a synonym of A. calcis, of the Aust.

Ph.

A. calca'riæ carbon'icæ. (L. calcarius.) A synonym of the so-called Carrara water; aerated water said to be made with carbonic acid obtained from Carrara marble.

A. calca'riæ us'tæ, Ger. Ph. (L. calcarius; ustus, hurnt.) A synonym of A. cal-

eariæ.

A. cal'cis, Aust. Ph. (G. Kalkwasser.) Lime water. Recently burnt lime 100 grammes, sprinkle in an earthenware vessel, with 50 grammes of common water, and then mix with 10,000 grammes of water; keep in an air-tight vessel.

Also, a synonym of A. calcaria, Ger. Ph. Also, a synonym of Liquor calcii oxydati,

Helv. Ph. A. cal'cis compos'ita Carmichaelis.

A synonym of A. benedicta composita.

A. cam'phoræ, B. Ph. Camphor water.

Half an ounce of camphor in a muslin bag is suspended in a jug containing a gallon of distilled water, and macerated for at least two days.

U.S. Ph. Camphor 120 grains, alcohol 40

minims, carbonate of magnesia } a troy ounce, distilled water 2 pints; rub the camphor first with the alcohol, then with the carbonate of magnesia, and lastly with the water, gradually added, theu filter through paper. This preparation contains from 2 to 3 grains of camphor in each ounce of water.

A. camphora ta. Fr. Codex. Helv. Ph. (F. eau camphrée; G. Kampherwasser.) Camphor 10 parts, distilled water 1000 parts, add a little alcohol, pulverise and macerate for 48 hours, filter; 100 parts of this fluid contain 0.33 of camphor.

A. camphora'ta æthe'rea. Ethereal camphor water. This is composed of camphor 10 parts, dissolved in 25 parts of ether, and mixed with 475 parts water; the mixture is agitated and filtered.

A. carbolica. Water of carbolic acid; consisting of one part to a hundred.

A. carbona'tis ammo'niæ pyro-oleo'si. Water of pyroöleous carbonate of ammonia. A synonym of the Liquor volatilis cornu cervi.

A. carbona'tis magne'siæ. Solution of carbonate of magnesia. A synonym of A. magnesiæ aerata.

A. carbona'tis so'dæ acid'ula. Acidulous water of earbonate of soda. A synonym of Soda water, containing some sodium carbonate.

A. carbon'ica. (F. eau gazeuse simple.)
Aerated or carbonic water. Water impregnated with carbouic anhydride by means of a suitable apparatus.

A. carbon'ica alcali'na. A syuonym of A. alcalina carbonica.

A. carbon'ica oxygena'ta. A synonym of A. oxygenata carbonica.

A. Cardina'lis. See Acqua del Cardinale di Luynes.

A. carmelita'na. (F. ean de melisse des cormes ; I. acqua di melissa ; G. Karmelitergeist.) Carmelite water. Oils of meliss, of lemon peel, of each 3 parts, oils of mace, cloves, and cinnamon, of each 2 parts, rectified spirit 1000 parts. It is often coloured with a little tincture of saffron. Dose, 20-50 drops; also, used as an embrocation, and to the nostrils.

A. carmelita'rum. A synonym of A.

carmelitana.

A. Carmichae'lis. Carmichael's water. A synonym of A. benedicta composita.

A. carminati'va, Aust. Ph. (G. Windwasser.) Carminative water. Chamomile 100 grammes, orange rind, lemon rind, leaves of curled mint, caraway, coriander, and fennel seeds, of each 30 grammes, bruise, add 4900 grammes of water, and after 24 hours' maceration distil 2000 grammes.

The directions, G. Ph., for preparing this are-Take of ol. anrant. cort., ol. carui, ol. fanicoli, ol. coriandri, ol. citri cort., ol. menth. crisp., of each I part, sp. vin. rectif. 100 parts, aqua cha-momillæ 900 parts; mix and filter. Dose, a tablespoonful, as stomachic and carminative.

A. carminati'va re'gia. (L. regius, royal.) This is composed of aq. carminativa 250 parts, aq. aromatica 100, sugar 50, cochineal 1 part. Dose, a teaspoonful.

A. carra'rica. Carrara water. A synonym of A. calcariæ carbonicæ.

A. car'ui, B. Ph. Caraway water. pound of bruised caraway seed is mixed with 2 gallons of water, and I gallon distilled. A carminative in one or two ounce doses.

It is made, Aust. Ph., in the same way as the A. cascarille.

A. car'vi. The same as A. carui.

A. caryophyllo'rum. Clove water. It is made in the same way as 1. cascarilla.

A. cascarillae. Cascarilla water. One part of ethereal oil of eascarilla is shaken with 1000 parts of warm distilled water, and when cold filtered through lint or blotting-paper.

It is also made by agitating 3 drops of cascarilla oil with 100 of distilled water, and filtering.

A. cas'siæ. Cassia water. A distilled water made with the flower-buds of the Cinnamonium cassia.

A. castorei. Castor water. One part of A. castorei concentrata mixed with 5 parts of distilled water.

Belg. Pb. Canada castor 4 parts, water q. s.;

distil 1000 parts.

A.casto'rei concentra'ta. Concentrated castor water. One part of finely divided castor is digested in 1 part of rectified spirit, and 12 parts of distilled water, for 12 bours, and distilled till 6 parts have passed over.

A. casto'rei Rademach'eri. Rademacher's eastor water. A synonym of A. castorei

concentrata.

A. catapulta'rum. (L. catapulta, an engine of war for throwing arrows and stones.)

A synonym of Ean vulneraire.

A. centaur'eæ cy'ani du'plex. (L. duplex, double.) Double corn-flower water. A water made in the same way as the Aq. lactucæ duplex.

A. cephalica. (Κεφαλή, the head. G. Schlagwasser.) A synonym of the A. aromatica,

A. ceraso'rum, (L. cerasus, the cherry.) A synonym of the A. amygdalarum amararum diduta, Ger. Ph.

Also, Hely. Ph., aqua laurocerasi one part

to 19 of distilled water.

A. ceraso'rum amygdala'ta. (L. cerasus; amygdala, the almond.) A synonym of A. amygdalarum amararum diluta, Ger. Ph.\_

A. chamomil'læ, Ger. Ph. (G. Kamillenwasser.) Chamomile water. Chamomile 1 part, of water a sufficiency, distil 10 parts; or, add 10 parts of water to 1 part of the A. chamomillæ concentrata.

Aust. Ph. (Chamillenwasser). Dried matricaria 2000 grammes, water 6000; distil 2000 grammes.

A. chamomil'læ concentra ta, Ger. Ph. (G. concentrivtes Kamıllenwasser.) Concentrated chamomile water. Chamomile 10 parts, ddistil by steam heat 100 parts, add of spirit of wine 2 parts, and of this distil over 10 parts.

A. chlora'ta, Ger. Ph. (G. Chlorwasser.) Chlorine water. It contains 0.4 per cent. of

chlorine.

A. chlo'ri, Aust. Ph. (G. Chlorwasser.) Chlorine water. Manganese peroxide, crude muriatic acid diluted with one third of its weight of water, as much as may be sufficient; place in a retort connected with a Woulff's bottle, pass the gas, after washing with water, into distilled water to saturation.

A synonym of A. chlorata, G. Ph.

A. chlori'ni. Chlorine water. See A. chlori.

A. chlorin'ica. A synonym of Acidum hydrochloricum, and also of A. chlori.

A. chlorin'ii, U.S. Ph. Chlorine water. Black oxide of manganese in fine powder ½ a troy

ounce, muriatic acid 3 troy ounces, water 4 fluid ounces, distilled water 20 fluid ounces; introduce the oxide into a flask, add the acid, previously diluted with 2 fluid ounces of the water, and apply a gentle heat, conduct the generated chlorine by suitable tubes through the remainder of the water contained in a small intermediate vessel to the bottom of a 4-pint hottle containing the distilled water, and loosely stopped with cotton; when the air has been entirely displaced by the gas disconnect the bottle from the apparatus, and, having inserted the stopper, agitate the contents, loosening the stopper from time to time until the gas ceases to be absorbed; lastly, pour the chlorine water into a bottle of just sufficient capacity to hold it, stop it securely, and keep it in a cool dark place.

A. chloroformia'ta. Chloroform water. It is made by agitating 1 part of chloroform with 250 of water.

A. chrysu'lea. (Χρυσόω, to make golden.)

A synonym of Acidum nitro-hydrochloricum.

A. cinnamo'mi, B. Ph. Cinnamon water.
Twenty ounces of bruised cinnamon bark is mixed
with 2 gallons of water, and 1 gallon distilled.
Carminative and somewhat astringent.

Ger. Ph. (G. einfaches Zimmtwasser.) Cinnamon 1 part, water a sufficiency; distil 10

part

U.S. Ph. Oil of cinnamon ½ a fluid drachm, carbonate of magnesia 60 grains, distilled water 2 pints; rub the oil first with the carbonate of magnesia, then with the water, gradually added, and filter through paper. Cinnamon water may also be prepared by mixing 18 troy ounces of cinnamon in coarse powder with 16 pints of water, and distilling 8 pints.

A. cinnamo'mi for'tis. (L. fortis, strong.) A synonym of Spiritus cinnamomi.

A. cinnamo'mi sim'plex, Aust. Ph. (G. einfaches Zimmtwasser.) Simple cinnamon water. Cinnamon 200, water 4000 grammes; macerate for 12 hours, distil 2000 grammes.

A. cinnamo'mi spirituo'sa, Ger. Ph. (G. weinge istiges Zimmtwasser.) Spirituous cinnamon water. Cinnamon 1 part, diluted spirit (sp. gr. 0'892) 1 part, water 10 parts; distil 5 parts.

Aust. Ph. (G. geistiges Zimmtwasser.) Cinnamon 200, water 4000, spirit of wine (70 per cent.) 250 grammes; macerate for 12 hours, and distil 1000 grammes.

A. cinnamo mi vino'sa, Belg. Ph. (L. rinosus, full of wine.) Spirit of cinnamon 225 parts, water of cinnamon 775. Also, called Alcoholatum cinnamomi aquosum.

Also, a synonym of A. cinnamomi spirituosa,

A. cit'ri. Citron water. A water prepared in the same way as the A. cascarilla.

A. cochiea rize. Horseradish water. Horseradish root 10 parts, cold water 50 parts; set aside for a night and add sp. vin. rectif. 1 part; distil 5 parts.

A. cœru'lea. (L. cæruleus, dark hlue.) Copper sulphate 5 parts, distilled water 120—150 parts, ammonia liquor 10 parts; dissolve and mix.

A. Colonien'sis. (F. eau de Cologne; G. Kolnischewasser.) Cologne water. Several receipts for this are given by Hager, one of those for true Eau de Cologne is ol. lavand. opt., ol. rosmarini, of each 1 part, ol. aurantii flor. 5 parts, ol. citri cort. 15 parts, ol. bergamotta 50

parts, sp. vin. rectif. 1000 parts; mix for a month, and then filter. One of those for an inferior quality of Eau de Cologne, ol. lavandulæ opt., ol. rosmarini, ol. thymi, of each 1.5 part, ol. caryophyllorum 5 parts, ol. citri cort. 10 parts, ol. bergamottæ 20 parts, ol. menth. pip. 0.3 part, tinct. moschi 0.6 part, sp. rectif. 750 parts; mix, set aside for a month, and filter.

A. Colonien's is medicina'iis, Belg. Ph. Medicinal Eau de Cologne. Oil of bergamot and lemon pecl, of cach 10 parts, of neroli 7, of laveuder 4, of rosemary 1, alcohol 968. Mix. Also, called Alcoholetum aromaticum de citreis.

A. colora'ta. (L. coloratus, coloured.) Water colonred with caramel, or other matter, for

dispensing purposes.

A. commu'nis, Ger. Ph. (L. communis, common. G. grmeines Wasser, Wasser.) Ordinary rain, spring, or river water.

A. commu'nis stillatit'ia. (L. stillaticeus, dropping.) Common distilled water.

A. Conra'di. Conrad's water. This contains of corrosive sublimate 0.03 part, distilled water 120 parts, tinct. anodynæ gtt. 10, mucilago cydoniorum 4 parts; mix. Employed as a collyrium.

A. con'tra alope'ciam. (L. contra, against; ἀλοωπεκία, mange in foxes, baldness.) The directions for one wash are—Take of tincture of galls 5 parts, tincture of cantharides 1 part, aqua coloniensis 15 parts, aqua rosse 50 parts; mix, set aside for some days, and filter. For another—Take of mistura oleobalsamica, and of glycerine, each 20 parts, tincture of cantharides 1 part, spirit of wine 60 parts, tannic acid 2 parts; mix, set aside for some days, and filter.

**A.** copai'væ. Copaiba water. Λ water made in the same way as the A. cascarillæ.

A. corian'dri, Aust. Ph. Coriander water. A carminative water, made in the same way as the A. cascarillæ.

A. cosmetica Lubi'ni. (F. eand. toilette.) This is composed of sp. vin. rectif. 175 parts, tr. iridis florentin. 70, tr. balsami tolutani 35, tr. moschi gtt. 25, ol. lavandulæ gtt. 30, ol. bergamottæ 2.5, ol. caryophyllorum gtt. 2, ol. nnonæ odoratiss. (Ylang Ylang) gtt. 2; mix,

A. creaso'ti, U.S. Ph. Creasote water.

A. creaso'ti, U.S. Ph. Creasote water.
The directions are—Take of creasote a fluid drachm, distilled water a pint; mix them, and agitate the mixture until the creasote is dissolved.
This preparation contains 3-72 minims of creasote in each fluid ounce. The dose is from 1 to 4 fluid drachms. It may be used as a gargle, or lotion, or be mixed with cataplasms to correct footor, and gently stimulate indolent ulcers.

A. crystal'lina. (L. erystallinus, made of crystal. F. tisane de crème de tartre.) Potassium hitartrate 10 parts, white sugar 40 parts, dissolved with the aid of heat in 600 parts of warm water; filter whilst warm. Used as a drink.

A. cu'pri ammonia'ta. Water of ammoniated copper. See Liquor cupri ammoniata.

A. cu'pri vitriola'ti compos'ita. See Liquor cupri sulphatis composita.

A. de flor'ibus auran'tii. Orange-flower

water. A synonym of A. aurantii.

A. de flor'ibus cit'ri auran'tii. Orange-

flower water. A synonym of A. aurantii.

A. de mo'te con vi'no. The name given, according to Dr. A. Smith, by the Peruvians to a

mixture of the water of boiled maize and wine, used for the cure of Verrugas. (Waring.)

A. destil. An abhreviation, occurring in prescriptions, of the words Aquae destillata, of distilled water.

A. destilla'ta, B. Ph. (L. destillo, to trickle down.) Distilled water. A fluid ounce evaporated in a clean glass capsule leaves scarcely a visible residue; it is not affected by hydrogen sulphide, ammonium oxalate, silver nitrate, barium chloride, or lime water.

A. destilla'ta laurocera'si. (L. destillatus, distilled.) A synonym of A. laurocerasi.

A. destilla'ta sim'plex, Aust. Ph. (L. destillatus; simplex, simple. G. einfaches destillirtes wasser.) Distilled water.

A. Dippel'ii. Dippel's animal oil. This is composed of distilled water 1000 parts, oleum animali athereum 15 parts; shake vigorously, set aside, and filter. Recommended in the convulsions of children.

A. divi'na. (L. divinus, belonging to a deity. F. can divine.) Alumen cupricum 2 parts, distilled water 400 parts; filter. An as-

tringent.

Also, a solution of corrosive sublimate in water.

A. divi'na Ferne'lii. Fernelius' divine water. The same as A. duvina.

A.e la'cu. (L. lucus, a lake.) Lake water. A. embry'onum. (Εμβρυον, the fectus.) A synonym of the A. aromatica, Ger. Ph.

A. epidem'ica. (Επιδήμιος, among the people.) The roots of imperatoria, angelica seeds, and elder flowers distilled from French brandy.

**A. ethiop'ica.** A solution of nitrate of silver; nsed for dyeing the hair.

A. ex pu'teo. (L. ex, out of; puteus, a well.) Well water.

**A.** fabro'rum. (L. faher, a smith.) Blacksmith's water. Water in which red hot iron has been quenched; it contains a little iron.

A. ferrugino'sa aera'ta, Belg. Ph. Acrated ferruginous water. Iron chloride '06 part, sodium hicarbonate 8 parts, citric acid 6, water 986.

A. flo'rum auran'tii, Ger. Ph. (G. Orangenblathenwasser.) The directions are—Take of the orange-flower water of commerce and of distilled water equal parts; nix, and attend to the absence of metallic impregnation.

A. flo'rum aurantio'rum. A synonym of Aqua aurantii.

A. flo'rum cit'ri auran'tii. A synonym of A. aurantii.

A. flo'rum na'phæ. (Napha, the orange flower.) A synonym of A. florum aurantii, Ger. Ph.

A. fluvialis. (L. fluvialis, belonging to a river.) River water.

A. fluviatilis. (L. fluviatilis, belonging to a river.) River water.

A. fcenic'uli, B. Ph. Fennel water. One pound of bruised fennel seed is mixed with two gallons of water, and one gallon distilled. Carminative

U.S. Ph. Oil of fennel \(\frac{1}{2}\) a fluid drachm, carbonate of magnesia 60 grains, distilled water 2 pints; rub the oil first with the carbonate of magnesia, then with the water, gradually added, and filter through paper. It may also be prepared by mixing 18 troy ounces of fennel in coarse powder with 16 pints of water, and distilling 8 pints.

Aust. Ph. Fennel seeds 100, water 4000 grammes; macerate for 12 hours, and distil 2000 grammes.

Ger. Ph. (G. Fenchelwasser.) Bruised fennel seeds 1 part, of water a sufficiency; distil 30 parts.

A. fœ'tida antihyster'ica. Ger. Ph. (L. fatidus, stinking. G. zusammengesetztes stinkasantwasser, Prager Wasser.) Galbanum 8 parts, asafætida 12 parts, myrrh 6 parts, valerian root and zedoary root, of each 16 parts, angelica root 4 parts, peppermint 12 parts, thyme flowers 8 parts, Roman chamomile flowers 8 parts, castoreum 1 part; cut up and pound these ingredients, and add 150 parts of spirit of wine; allow the mixture to stand for 20 hours, and add water 300 parts; distil 300 parts. Dose, I teaspoonful. Also, as an enema, in 10 to 50 gramme doses; also administered in the form of spray. Prescribed in chronic bronchitis with obstructed secretion, and in asthma.

A. font. An abbreviation, used in prescriptions, of the words Aquæ fontis, of water of the fountain, or of Aqua fontana, of fountain

or spring water.

A. fœ'tida Pragen'sis. Prague fetid water. A synonym of the A. fatida antihysterica, Ger. Ph.

A. fonta'na. (L. fontanus, from a spring.)

Spring water.

A.for'tis. (L. fortis, strong. G. Scheidewasser.) A common term for nitric acid.

A. for'tis dilu'ta. (L. dilutus, weak.) A synonym of Acidum nitricum dilutum.

A. for'tis du'plex. (L. duplex, double.) A synonym of Acidum nitricum.

A. for'tis secunda'ria. (L. secundarius, of the second class.) A synonym of Acidum nitricum dilutum.

A. for'tis sim'plex. (L. fortis; simplex, simple.) A synonym of Acidum nitricum dilu-

A. gingiva'lis, Belg. Ph. (L. gingiva, the gum.) Λ synonym of Tinctura laccæ compo-

A. gland'ium quer'cus, Belg. Ph. (L. glans, an acorn; quercus, an oak.) Decorticated recent acorns 666 parts, alcohol 166, water a sufficiency. Distil 1000 parts.

A. Goulard'i. A plumbi subacetatis, B. Ph.

A synonym of Liquor

Also, a synonym of the A. vegeto-mineralis Goulardi, Aust. Ph.
Also, of A. plumbi, Helv. Ph.
Also, of A. plumbi Goulardi, Ger. Ph.

A. Græ'ca. Greek water. Name for a weak solution of nitrate of silver, sold by quacks and nostrum vendors to turn red hair black.

A. gris'ea Gohl'ii. Gohl's grey water. A synonym of Liquor hydrargyri nitrici oxydati.

A. grys'ea. Grey water. Name for an aqueous solution of nitrate of mercury mixed with a decoction of various plants.

A. hæmostatica, Belg. Ph. (Aluóo taσις, a mode of stopping bleeding.) Benzein 1 part, potassium alum 2, water 20. Boil for six hours with frequent agitation; supply the loss by evaporation.

A. hæmostatica Freppel'ii. (Λίμόσ-τασις, a mode of stopping bleeding) Freppel's hæmostatic water. Folia matico, resina albæ, resina benzoes, fuligo splendens, secale cor-nuti, alumen, of each 25 parts; pulverise, and add terebinthina laricinæ 25 parts, aqua 500 parts, boil and filter 300 parts; add to these tinet, arnicæ florum, tinet, vuluerariæ, of each 100 parts.

A. hæmostat'ica Monsel'i. (Λίμόσ-ris.) Monsel's hæmostatic water. This is τασις.) made of tannic acid 1.5 part, pure alum 3 parts, rose water 100 parts; dissolve and mix.

A. halogena'ta. ("λλς, salt; γεννάω, to produce.) A synonym of A. chlori.

A. hepat'lea. (" $\Pi \pi a \rho$ , the liver. Some sulphur compounds are called hepatic, from their

colour.) A synonym of A. hydrosulphurica.

A. hepatica acidulata. (L. acidulus, sonrish.) A synonym of A. hydrosulphurata

acidula.

A. hepatisa'ta for'tior. (L. fortis, strong.) A synonym of A. hydrosulphurata acidula.

L. hordea'ta. (L. hordeatus, from hordeum, barley.) A synonym of Decoctum hordei, B. Ph.

A. Hungar'ica. A synonym of Spiritus rosmarini compositus, so called because supposed to have been originally made by Elizabeth, of

Hungary, in the 13th century.

A. hydrarg'yri. (Υερίργυρος, quick-silver artificially prepared. F. cau de mercure, or cau de negres; G. Quecksilberwasser.) Water holled with prepared.

boiled with mercury.

A. hydrarg'yri fla'va calca'ria. (L. hydrargyrus, mercury; flavus, yellow; calcarius, of lime.) A synonym of A. phagedænica.

A.hydrogena'to-sulphura'ta. A solution of hydrogen sulphide in water.

A. hydrosulfura'ta, Aust. Ph. (G. wefelwasserstoffwasser.) Water through Schwefelwasserstoffwasser.) which hydrogen sulphide has been transmitted to saturation.

A. hydrosulphura'ta. The same as A. hydrosulfurata.

A. hydrosulphura'ta acid'ula. strong solution of hydrogen sulphide in water.

A. hydrosulphu rica. Same as A. hydrosulfurata.

**A. hydrothion'ica.** ("Υδωρ, water; θεῖον, sulphur.) **A** synonym of **A**. hydrosulphurica.

A. hydrothion lea acid'ula. ("Υδωρ; θείου; L. acidulus, sourish.) A strong solution of hydrogen sulphide.

A. hys'sopi, Belg. Ph. Hyssop water. Prepared with oil of hyssop, as A. anisi extemporanea.

A. im'brinm. (L. imber, a shower of rain, rain water.) Rain water.

A. in'ter cu'tem. (L. inter, between; cutis, the skin.) A synonym of Anusarca.

A. in tercus. (L. intercus, under the skin.) A synonym of Anasarca.

A. Javel'li. Javelli's water. A solution of hypochlorite of potash or soda.

A. Javellen'sis. Same as A. Javelli. A. ka'll. (L. kuli, potash.) A synonym of Liquor potassæ carbonatis.

A. ka'li carbon'ici. A synonym of Liquor potassæ carbonatis.

A. ka'li caus'tlei. (Καυστικός, hnrning.) A synonym of Liquor potassæ carbonatis.

A. kali præpara'ti. (L. præparatus; from præpara, to make ready beforehand.) A synonym of Liquor potassæ carbonatis.

A. ka'li pu'ri. (L. purus, pure.) A synonym of Liquor potassæ.

A. ka'li subcarbona'tis. A synonym of

Liquor potassæ carbonatis.

A. kreaso'ti, Aust. Ph. and Ger. Ph. (G. osotwasser.) The directions are—Take of Kreosotwasser.) kreosote 1 part, distilled water 100 parts; mix thoroughly by shaking.

A. labyrinth'i. The water of the labyrinth of the ear. The perilymph or liquor cotunnii.

A. labyrinth'i membrana'cei. The fluid membranaceus, of skin or membrane.) of the membranous labyrinth; the endolymph.

A. lac'tis. (L. lac, milk.) The serum of

milk, whey

A. lactu'cæ du'plex. (F. cau de laitue double.) This is made by macerating 20 parts of finely divided fresh lettuces with 2 parts of sp. vin. reet. and 100 parts of distilled water for one night, and then distilling till 10 parts have passed over.

A. lactu'cæ sati'væ, Belg. Ph. Lettuce The fresh plant and flowering tops of lettuce 1000 parts, water a sufficiency. Distil

1000 parts.

A. laurocera'si, Ger. Ph. (G. Kirschlor-becrwasser.) Cherry laurel water. Fresh cherry-laurel leaves 12 parts, cut up and pound with a wooden pestle in a stone mortar, and add of water 36 parts, spirit of wine I part, and distil 10 parts into a well-cooled receptacle.

The Aust. Ph. directs that 1000 parts must

contain 0.6 parts of hydroeyanic acid.

A. laxati'va Viennen'sis. (L. laxativus, alleviating, laxative; Viennensis, of Vienua.) A synonym of the Infusum laxativum, Aust. Ph.

A. lithar'gyri. Litharge water. A sy-

nonym of Liq. plumbi subacetatis.

A. lithar gyrl aceta ti compos'ita. A synonym of Liquor plumbi subacetatis.

A. lith'iæ efferves'cens. See Liquor lithiæ effervescens.

A. lixiv'iæ caus'ticæ. (L. lixivium, lye; causticus, burning.) A synonym of Liquor po-

A. Lu'ciæ. (F. cau de luce.) A synonym of Liquor ammonii succinici.

A. magne'siæ aera'ta, Belg. Ph. Aerated maguesia water. Sulphate of magnesia 62 parts, carbonate of soda 60; dissolve them separately in five times their weight of boiling water; mix, earefully wash the precipitate of carbonate of magnesia which forms; whilst moist add a sufficiency of distilled water; pass through the mixture carbonic acid gas until solution A. mari'na. (L. marinus, belonging to the sea.) Sea water.

(L. medicatus, healing.) A. medica'ta. A mineral water.

A. medicina'lis Husson'ii. (L. medicinalis, pertaining to medicine.) Husson's medicinal water. A name for the Eau médicinale.

A. melis'sæ, Aust. Ph. (G. Melissenwasser.) Balm water. Dry balm leaves 400, water 6000, grammes; distil 2000 grammes. The Ger. Ph. directs that it is to be prepared in the same way as the A. chamomullæ, Ger. Ph.

A. melis'sæ carmelita'rum. Balm water of the Carmelites. Eau des Carmes. The Alcoolatum melissæ compositum.

A. melis'sæ citra'tæ. A synonym of

the Aqua melissæ, Ger. Ph.

A. melis'sæ compos'ita. Compound balm water. A name for the Eau des Carmes, or Carmelite water.

A. melis'sæ concentra'ta, Ger. Ph. (G. concentrictes Melissenwasser.) Concentrated balm water. This is directed to be prepared in the same way as the Aq. chamomilla concentrata Ger. Ph.

A. melis'sæ quad'ruplex, Helvet. Ph. (L. quadruplex, fourfold.) The same as A. mulissæ concentrata.

A. menth'æ cris'pæ, Belg. Ph. Oil of eurled mint. Prepared as A. anisi extemporanea.

Ger. Ph. (G. Krauseminzwasser.) Curled mint leaves 1 part, water a sufficiency; distil 10

A. menth'æ piperi'tæ, Aust. Ph. Pfefferminzwasser.) Peppermint water. This is directed to be made from the dry leaves of the mentha piperita in the same way as the A.

Ger. Ph. (G. Pfefferminzwasser.) This is directed to be prepared in the same way as the

A. menthæ crispæ, Ger. Ph.
U.S. Ph. Peppermint water. Oil of peppermint ½ fluid drachm, carbonate of magnesia 60 grains, distilled water 2 pints; rub the oil first with the earbonate of magnesia, then with the water, gradually added, and filter through paper.

Peppermint water may also be prepared by mixing 18 troy ounces with 16 pints of water,

and distilling 8 pints.

A. menth'æ piperi'tæ vino'sa. Vinous peppermint water. A synonym of the A. menthæ spirituosa, Ger. Ph.

A. menth'æ piperit'idis spirituo'sa. A synonym of Spiritus menthæ piperitæ.

A. menth'æ pule'gii. Pennyroyal water;

prepared as A. menthæ viridis.

A. menth'æ spirituo'sa, Ger. Ph. (G. weingeistiges Pfefferminzwasser.) Spirituous peppermint water. This is directed to be prepared in the same way as the Aq. cinnamonii spirituosa, Ger. Ph.

A. menth'æ vir'idis, U.S. Ph. Spearmint water. The directions to prepare this water are the same as those for the Aqua mentha

piperitæ.

A. menth'æ vulga'ris spirituo'sa. synonym of Spiritus menthæ viridis.

A. mercuria'lis. Another term for the  $oldsymbol{Acetum}$  philosophicum.

A. mercuria'lis Char'ras. of Liquor hydrargyri nitrici oxydati.

A. mercuria'lis ni gra. black.) A synonym of the Aq. phagedænica nigra, Ger. Ph.

A. metallo'rum. (L. metallum, a metal.)

A synonym of Mercury.

A. minera'lis. A mineral water.
A. mirab'ilis. (L. mirabilis, marvellous.)
This contains acetum vini 200 parts, cuprum sulphurieum 25 parts, kali earbonicum crudum 8 parts, ammonium chloratum, 10 parts, oxalium 2 parts, sp. vini gallici 100 parts; digest for three days and distil to dryness. Used as cordial and earminative.

Also, a synonym of Spiritus pimenta.

A. Monteros'sii. A similar preparatiou to A. Binellii.

A. Morga'gni. See Liquor Morgagni. A. mul'sa. (L. mudsus, mixed with honey.)
Water in which honey has been dissolved.

Also (G. Meth), a term for mead.

A. na'phæ. (G. napf, a bowl.) A synonym of A. aurantii.

A. na'tri oxymuriat'ici. Solution of oxymuriate of soda; a synonym of Liquor soda chlorinatie.

A. Neapolita'na. Naples water; artificially made. It consists of magnesium carbonate 10 grs., sodium carbonate 8 grs., aqua hydrosulphurica 9 drs., carbonie acid water 151 oz.

(Νεφριτικός, affected A. nephrit'ica. with nephritis.) A synonym of Spiritus my-

ristice.

A. nicotia'na. Tobacco water. Made by adding alcohol and water to fresh leaves and distilling. It is said to be sedative and diaphoretic, without possessing the dangerous qualities of other preparations of tobacco.

A synonym

A. ni'gra. (L. niger, black.) A of the A. phagedænica nigra, Ger. Ph.

A. nitrogen'ii protoxi'di. Water impregnated with nitrous oxide gas. It is said to be a nervine tonic, and has been used in cholera, dyspepsia, and chronic alcoholism.

A. niva'ta. (L. nivatus, provided with

snow.) Water from melting snow.

A. nu'cis moscha'ta. A synonym of

Spiritus myristicæ.

A. nu'cis vom'icæ, Belg. Ph. vomica water. Nux vomica, brnised, 666 parts, alcohol 34, water a sufficiency. Distil 1000 parts.

A. obscu'ra. (L. obscurus, covered over,

dark.) Old term for cataract.

A. odorif'era. (L. odorifer, fragrant.) Honey water. Prepared from honey, coriander seeds, vanilla, cloves, nutmegs, lemon peel, storax, and benzoin, distilled from spirit of wine, mixed with spirit of roses and orange-flower water.

A. ophthal'mica. ('Οφθαλμικός, for the eyes.) A synonym of Liquor zinci sulphatis cum

camphorâ.

A. ophthal'mica al'ba, Dan. Ph. White collyrium. Zinc sulphate 6 parts, acetate of lead 3 parts, camphor 2 parts, rose water 576 parts; dissolve the salts of zinc and lead separately in the rose water, filter and mix, then add the camphor rubbed up with a little spirit of wine.

A. ophthal'mica brillia'na. (G. Brilliantenwasser.) This is composed of zinc sulphate, sodium chloride, camphor powdered, of each 1 part, distilled water 200 parts; mix and put aside for a day in a warm place, then cool, and filter.

A. ophthal'mica Bru'nii. This is composed of aloes 10 parts, tincture of saffron 3.7, rose water, white wine, of each 80 parts; mace-

rate and filter.

A. ophthal'mica carita'tis Beroli-(L. caritas, love.) This is composed nen'sis. of zinc oxide 1 part, fennel water and rose water, of each 100 parts.

A. ophthal'mica cœru'lea. (L. cærubus, dark blue.) This contains verdigris 10 parts, ammonium carbonate 20 parts, distilled water 5000 parts; dissolve and filter. Used as a colly-

A. ophthal'mica Conra'di. The same as the Aqua ophthalmica mercurialis, Dan. Ph. The same

A. ophthal mica fœnicula ta. This contains compound tineture of fennel 1 part, distilled water 6 parts; mix. Used as a collyrium.

A. ophthal'mica Hoffman'ui. This contains crystals of iron sulphate 1 part, distilled water 6 parts; mix.

A. ophthal'mica Lanfranc'i. directions to prepare this are-Arsenieum sulfuratum 1-5 part, ærugo 1, myrrha, aloes, of each 0.5; mix, then add aq. rosæ 40, vinum album 100. Recommended, mingled with water, in cases of purulent ophthalmia. (Hager.)

A. ophthal'mica Loche'sii. Alumen erudum, zineum sulfuricum, tinet. aloes, of each 1 part, sp. vin. rect. 5 parts, aqua rosæ 200; mix.

(Hager.)

A. ophthai'mica mercuria'lis, Dan. Ph. Bichloride of mercury .05, tinct. opii croc. 1.5, rose water 150, grammes.

A. ophthal'mica ni'gra Grae'fi. This contains extract. hyoscyam. 1 part, aqua rosæ 30 parts, aqua calcaria 90 parts, calomel 0.6 part; dissolve and agitate.

A. ophthai'mica Parisio'rum. The formula for this collyrium, which is much used in France, is-Zine. sulph., rad. irid. florent., pulv. sacch., of each 5 parts, aqua 1000 parts. Macerate and filter.

A. ophthal'mica Pragen'sis. formula for this collyrium is—Zine, sulph. 1 part, aq. ros., aq. sambue., of each 30 parts, mucilag. gum arab. 1 part. Solve and mix.

A. ophthal'mica Romershaus'eni. A synonym of the A, ophthalmica fæniculata,

A. ophthal'mica saturn'ii. This collyrium contains acet. plumb. 7½ parts, mucilag. cydon, 60 parts, aq. ros. 2000 parts. Mix.

A. ophthal mica Stroinskia na. This collyrinm contains zinc. sulph. 2 parts, aq. patchonli 1 part, and aq. destil. 640 parts.

A. ophthal'mica Taman'ti. This collyrinm contains cup. aluminat. 1 part, aq. ros. 500 parts, sp. æther, tinct. opii crocati, of each 2 parts. Mix.

A. ophthal'mica Whi'tei. This collyrinm contains caryophylli 10 parts, cassia 5, mel 10, aq. rosæ, aq. font., of each 50, acetum crudnm, tinct. arnicæ, of each 25. Digest for one day and filter; then add 21 parts of sulphate of zinc to every 150 parts of the strained fluid.

A. o'pii, Ger. Ph. (G. Opiumwasser.) Opium water. Coarsely powdered opium 1 part, water 10 parts; distil 5 parts.

A. ora'nium. A synonym of A. aurantii. A. oxygena'ta. Oxygenated water, An old synonym of Aqua chlori.

A. oxyg'eno-muriatica. A synonym of A. chlori.

A. oxymuriatica. A synonym of the A. chlorata, G. Ph.; and of the A. chlori, Aust. Ph.

A. Paglia'ri. See Pagliari's hæmostatic. A. paludo'sa. (L. palus, a marsh.) Water from a marsh.

A. parieta'riæ, Belg. Ph. Pellitory water. Pellitory 500 parts, water sufficient. Distil 1000

A. pat'chouli. This is prepared by agitating one part of oil of patchonli with 2000 parts of water.

A. pe'dum. A term for urine.

A. pericard'ii. The fluid which is found in the pericardial sac.

A. Petroselj'ni, Ger. Ph. (G. Petersilien-ser.) The directions are—Take of parsley seeds 1 part, water a sufficiency; distil 20 parts.

A. phagedæ'nica, Ger. Ph. (Φαγέδαινα, cancerous sore. G. phagedanisches Wasser.) Yellow wash. The directions are-Take of finely powdered corrosive sublimate 1 part, and add 300 parts of lime water.

A. phagedæ'nica ni'gra, Ger. Ph. (G. Schwarzes Wasser.) Black wash. The directions are-Take of calomel 1 part, lime water 60

parts; mix.

A. pi'cea. Fr. Codex. (L. piceus, of pitch. F. can de goudron.) Tar water. One hundred parts of tar are macerated with distilled or rain water, and the water is rejected.  $-\mathbf{A}$  second quantity of water is then added, and the mixture allowed to stand for eight or ten days. It is finally decanted and filtered.

A. pi'cis, Ger. Ph. (L. pix, tar. G. Theerwasser.) Tar 1 part, and agitate with 10

parts of distilled water.

A. pi'cis liq'uidæ. A synonym of the Infusum picis liquidæ of the U.S. Ph.

A. pimen'tæ, B. Ph. Pimento water. Bruised pimento 14 oz., water 2 gallons; distil one gallon.

A. plum'bi, Ger. Ph. (G. Bleiwasser.) The directions are-Take of liquor plumbi subacetici 1 part, distilled water 49 parts; mix.

A. plum'bi aceto'si. A synonym of

Liquor plumbi subacetatis.

A. pium'bi Goular'di, Ger. Ph. (Goulard's Bleiwasser.) The directions are-Take of liquor plumbi subacetici 1 part, dilute spirit (sp. gr. 0.92) 4 parts, water 45 parts; mix. A. plum'bi spirituo'sa. A syuonym of

the A. plumbi Goulardi, Ger. Ph.
A. plumbica. A synonym of the Aqua

plumbi, Ger. Ph,

Aust. Ph. (G. Bleiwasser.) Solution of basic acetate of lead 1 gramme, distilled water 50 grammes; mix.

A. pluvia'lis. (L. pluvialis, belonging to

rain.) Rain water.

A. potas'sæ. A synonym of Liquor potassæ.

A. potas'sæ efferves'cens. The Liquor

potassæ efferveseens.

A. ptycho'tis, Ind. Ph. Ajwain or omnum water. Ajwain fruit, bruised, 20 oz., water 2 gallons; distil a gallon. Carminative; used to disguise disagreeable drugs, and prevent griping and nausea. Dose, one to two ounces.

A. pugil'lum. A synonym of Acidum

nitro-hydrochloricum.

A. pule'gii. Pennyroyal water. Made as A. menthæ viridis.

A. pule'gii spirituo'sa. The Spiritus menthæ pulegii.

- An abbreviation, employed in A. pur. prescriptions, of the words Aque pure, of pure water.
- A. pu'ra. (L. purus, pure.) Pure water.
  A. putea'lis. (L. putealis, belonging to a well.) Well water.

A. quas'siæ, Belg. Ph. Quassia water. Quassia wood 468 parts, alcohol 125, water sufficient to distil 1000 parts.

A. Rabel'ii. A synonym of Acidum sul-

phuricum alcoholisatum, or the Acid elixit of Haller.

A. raph'ani compos'ita. (Ράφανος, a radish.) A synonym of Spiritus armoraecæ compositus.

A. rega'lis. (L. regalis, royal.) A term for Acidum nitro-muriaticum.

A.re'gia. (L. regius, royal.) Royal water ; a mixture of nitrie and hydrochloric acids, which was supposed to be the only acid able to dissolve gold. A synonym of Acidum nitro-hydrochlori-

A. regi'næ. (L. regina, a queen.) synonym of Acidum sulphurico-nitricum.

A. regi'næ Hunga'riæ. Queen of Hungary's water; the Spiritus rosmarini.

A. re'gis. (L. rex, a king.) A synonym

of Acidum nitro-hydrochloricum.

A. ro'sæ, B. Ph. Rose water. Fresh petals of the hundred-leaved rose 10 pounds (or an equivalent quantity of the petals preserved while fresh with common salt), water 2 gallons; distil oue gallon.

U.S. Ph. Take of pale rose 48 troy ounces, water 16 pints; mix them and distil 8 pints. When it is desirable to keep the rose for some time before distilling, it may be preserved by being well mixed with half its weight of chloride

of sodium.

Ger. Ph. (G. Rosenwasser.) Fresh roses 2 parts, or 3 parts of salted roses, with a ½ part of sodium chloride, water a sufficiency; distil 10

rosa'rum, Aust. Ph. (G. Rosenwas-Α. ser.) Oil of roses 0.1 gramme, distilled water 400 grammes; shake together and filter.

A. ru'bi idæ'i, Aust. Ph. (G. Himbeeren-wasser.) Raspberry water. Ripe raspberries 400, water 4000, grammes; distil 2000 grammes.

Ger. Ph. Fresh raspberry fruit, after expression of the juice, 100 parts, water a sufficiency, distil 200 parts; or, take of concentrated raspberry water 1 part, distilled water 9 parts; mix.

A. ru'bi idæ'i concentra'ta, Ger. Ph. (G. concentrirtes Himbeerwasser.) Concentrated raspberry water. Fresh raspberries, after expression of the juice, 100 parts, spirit of wine 4 parts, warm water a sufficiency; macerate for a night, and distil 20 parts.

A. ru'tæ, Belg. Ph. Rue water. Made

like A. anisi extemporanea.

A. Said'schutz factic'ia, Helv. Ph. Magnesium sulphate 70 grms., sodium bicarbouate 5 grms., dissolved in distilled water 700 grms., are put into a strong vessel; and before tightly closing 15 grms, of dilute sulphuric acid are added.

A. salicyl'ica. (G. Salicylwasser.) Salicylic acid one part, distilled water 300 parts.

A. salu'bris. (L. salubris, health-bringing.) A mineral water.

A. salviæ, Ger. Ph. (G. Salbeiwasser.)
Sage water. This is directed to be made in the same way as the A. chamomillæ, Ger. Ph.

A. sal'viæ concentra'ta, Ger. Ph. (G. concentrirtes Salbeiwasser.) Concentrated sage water. This is directed to be made in the same way as the A. chamomillæ concentrata, Ger. Ph.

A. sambu'ci, B. Ph. Elder-flower water. Fresh elder flowers, separated from the stalks (or an equivalent quantity of the flowers preserved while fresh with common salt), 10 pounds, water 2 gallons; distil one gallon.

Ger. Ph. (G. Fliederblumenwasser, Hollunderblüthenwasser.) This is directed to be made in the same way as the A. chamomilla, Ger. Ph.

A. sambu'ci concentra'ta, Ger. Ph. (G. concentrirtes Fliederblumenwasser.) Concentrated elder-flower water. This is directed to be made in the same way as the A. chamomilla concentrata, Ger. Ph.

A. Sanc'tæ Lu'ciæ. St. Luke's water. A synonym of Spiritus ammoniæ succinatus, or

Liquor ammoniæ succinici.

A. sapphiri'na. (L. sapphirinus, sapphirine in colour.) The rich deep blue solution formed when an excess of ammonia is added to a solution of sulphate of copper.

Subacetate of copper 1, chloride of ammonium 10, lime water 50 grms.; digest and filter. A stimulant and astringent application to be dropped into the eye once a day.

A. satur'ni. (L. Saturnus, Saturn, a name given to lend. G. bleihaltigeswasser.) The

Liquor plumbi subacctatis dilutus.

A. saturni'na. (Same etymon.)

nonym of the A. plumbi, Aust. and Ger. Ph.
A. sclopeta ria. (Mod. Lat. sclopetum, a gun.) A synonym of the Aq. vulneraria ucida, Ger. Ph.

A. sedati'va (Ras'pail), Belg. Ph. Sedative water. Camphor 2 parts, alcohol 5, water 875, sodium chloride 20, solution of ammonia 100.

A. seidlitzen'sis. Seidlitz water. A synonym of Eau saline purgatif, Fr Codex.

A. seidlitzen'sis extempora'nea, Belg. Ph. Extemporaneous or artificial seidlitz water. Magnesium sulphate 60 parts, water 930, sodium bicarbonate 5, tartaric acid 5.

Or, magnesinm sulphate 30 parts, dissolved in

650 parts of soda water.

A. sem'inum ani'si compos'ita. Compound water of anise seeds. The Spiritus anisi. A. sem'inum car'ui for'tis.

water of caraway seeds. The Spiritus anisi.

A. sere'na. (L. serenus, elear.) Old term for Amaurosis.

A. serpyl'li. Thyme water. Prepared as A. anisi extemporanea.

A. sic'ca. (L. siccus, dry.) A synonym of Mercury.

A. sina'pis. Mustard water. Oil of mustard 3 drops, shaken vigorously with 5 grms. of water. A rubefacient.

A. so'dæ efferves'cens. Effervescent soda water. The A. acidi carbonici.

**A. sote'ria.** ( $\Sigma \omega \tau \eta \rho i a$ , a saving.) A mineral water.

A. spada'na. A synonym of A. ferrugi-

nosa aerata. A. stibla'ta. Stibiated or antimonial water. Tartar emetic 0.2 grm., water 50 grms.

An emetic, of which half is given to begin with.

A. stillatitia. (L. stillatitius, dropping.) Distilled water.

A. styg'ia. (L. stygius, deadly; from στύξ, a river of the nether regions.) A term for nitro-muriatic acid.

A. styp'tica. (Στυπτικός, of astringent quality.) The Liquor cupri sulphutis compo-

A. styp'tica Villa'ti. Acetate of lead 5 parts, dissolved in vinegar 45, to which are added sulphate of zine and sulphate of copper, of each 2.5 parts.

A. subaceta'tis plum'bici. A synonym of Liquor plumbi subacetatis.

A. subcarbona'tis ka'li. The Liquor potassæ carbonatis.

(G. Schwefelwasser.) A. sulfura'ta. Sodium sulphide, sodium chloride, of each 0-13 grm., distilled water deprived of air by boiling 650 grms. Dose, two or more glasses in the day.

A. sulfuro'sa. Sulphnrous water. Water impregnated with 20 per cent, of hydrogen sulphide.

A. sulphura'ta sim'plex. Simple sulphurated water. A term for a solution of hydrogen sulphide.

A. sulphure'ti ammo'niæ. Water of sulphuret of amnonia. A term for Liquor fumuns Buylii.

A. supercarbona'tis potas'sze. Liquor potassæ efferveseens.

A. supercarbona'tis so'dee. The Liquer sode effervescens.

A. superoxi'di muriato'si. A synonym of Chlorine water.

A. Thede'ni. A vulnerary composed of 630 parts of alcohol (of 80°), 210 of concentrated sulphurie acid, 420 of honey, and 1260 of water. It is regarded as an antiseptic and detergent. A. Thedia'na. Same as A. Thedeni.

A. theriaca'lis bezoard'ica. Bezoardie theriacal water. An old alexipharmic compounded of bezoar, theriaca, and other materials.

A. til'iæ, Ger. Ph. (G. Lindenblüthen-wasser.) Lime-flower water. This is directed to be made in the same way as the A. chamomilla, Ger. Ph.

A. til'iæ concentra'ta, Ger. Ph. (G. concentrirtes Lindenblüthenwasser.) This is directed to be prepared in the same way as the A. chamomillæ concentrata, Ger. Ph.

A. Tofa'ni. See Acqua Tofuna. A. Toffa'nia. See Acqua Toffana.

A. tos'ti pa'nis. (L. tostus; from torreo, to toast; panis, brend.) Toast water; made by putting a slice of well-toasted bread into water.

A. traumat'ica veg'eto-minera'lis **Thede'ni.** (Τραυματικός, perta wounds.) A synonym of A. Thedeni. Thede'ni. pertaining

A. valeria'næ, Ger. Ph. (G. Baldrianwasser.) This is directed to be prepared in tho same way as the A. monthæ crispæ, Ger. P.
A. veg'eto-minera'lis. (F. can vegeto-

minérale.) A synonym of Liquor plumbi subacctatis.

A. veg'eto-minera'lls Goulard'i, Anst. Ph. (G. Gonlardscheswasser.) Solution of basic acetate of lead 2, water 100, spirit of wine (70

per cent.) 5 grammes; make when required.

Also, a synonym of the A. plumbi Goulardi, Ger. Ph.

A. Vicien'sis artificia'lis. Artificial Vichy water. Sodium biearbonate 600 centigrs., sodium chloride 30, calcium chloride 30, sodium sulphate 60, magnesium sulphate 26, crystallised sulphate of iron 1.5 centigr.; dissolve in water

a name applied to ardent spirits of the first

distillation.

A. vi'tæ camphora'ta. Camphorated water of life. Camphor 25 parts, dilute alcohol 975. Also called Alcoholetum camphora debile.

A. vi'tæ German'ica. German water of life. A synonym of Tinetura jalapæ composita, Belg. Ph.

A. vitriol'ica camphora'ta. Camphorated vitriolie water. A term for A. zinei sulphatis cum camphora.

A. vitriol'ica cœru'lea. (L. caruleus, dark blue.) Blue vitriolic water. A synonym of

Solutio sulphatis cupri composita.

A. vulnera'ria. (L. vulnerarius, belonging to wounds.) A remedy in repute in Italy as an application to wounds. The "rossa" or red "acqua" contains lavender, the leaves of angelica, and of basil, sage, absinthium, fennel, hyssop, rue, marjoram, and several other labiate plants, with a little alkanet and cochineal. In the "bianca" or "white" form the colouring ingredients are omitted.

A. vulnera'ria ac'ida Thoden'ii, Ger. Ph. (G. Theden's Schusswasser, or Wundwasser.) Theden's acid vulnerary water. This centains acetum 6 parts, sp. vin. dil. 3 parts, acid. sulph. dil. 1 part, mel 1 part.

A. vulnera'ria Laudri'ni. Laudrin's vulnerary water. The same as A. vulnerario. with the addition of a little common salt and cream of tartar.

A. vulnera'ria Roma'na. Roman vulnerary water.

Laudrini. The same as A. vulneraria

A. vulnera'ria ru'bra. Red vulnerary water. A synonym of Tinctura vulneraria rubra,

Helv. Ph. Also, see A. vulneraria.

A. vulnera'ria spirituo'sa. Ger. Ph. (G. weisse Arquebusade.) Spirituous vuluerary water. Leaves of peppermint, rosemary, rue, sage, wormwood, and flowers of lavender, of each 1 part; macerate, after fine division, for two days, in 18 parts of dilute spirit (0.892) and 50 parts of water; distil 36 parts.

A. vulnera'ria vino'sa. (L. vinosus, full of wine.) A synonym of A. vulneraria spi-

A. zin'ci sulpha'tis cum cam'phora. Water of sulphate of zinc with camphor. Sulphate of zinc ½ oz, camphor 2 drs., boiling water 2 lbs. Mix and filter.

A'quæ. (L. aqua, water. G. Gesundbrunnen, Heilquellen.) Mineral waters.

A. acid'ulæ. (L. acidulus, sourish.) Mineral waters centaining sufficient carbonic acid gas to give a distinct taste.

A. Ba'diæ. The mineral waters of Bath. A. Badig'næ. The mineral waters of Bath.

A. Batho'niæ. The mineral waters of

Bath. A. Buxtonien'sis. The mineral waters

of Buxton. A. cal'idæ. (L. calidus, hot.) The mine-

ral waters of Eaux-chaudes.

A. chalybea'tæ. (Χάλυψ, steel.) Mine-

ral waters centaining iron. A. destilla'tæ. (L. destillo, to trickle down, to distil. G. destillirte Wassers.) Waters distilled from various substances, of which, as a rule, they possess the smell and taste; opium water, hewever, constitutes an exception.

A. ferro'sæ. (L. ferrum, iren.) Mineral

waters containing iron.

A. martia les. (L. martialis, belonging to Mars, an old name of iron.) Mineral waters

centaining iron.

A. medica'tæ. (L. medicatus, healing.) Medicated waters. All preparations consisting of water holding volatile or gaseons substances in solution, many of which were formerly obtained by distillation, and some still continue to

A. me'tus. (L. metus, fear.) A synonym of hydrophobia from a prominent symptom, dread

of water.

A. minera'les acid'ulæ. Aciduleus mineral waters; those which contain a notable amount of carbonic acid gas.

A. minera'les ferrugino'sæ. ginens mineral waters; those containing iron.

A. minera'les sulphu'reæ. Sulphurous mineral waters; these containing hydrogen sulphide.

A. pa'vor. (L. pavor, fear.) water. A synenym of Hydrophobia. Dread of

A. so'lis. (L. sol, the sun.) An old term for the mineral waters of Bath.

A. stillatit'iæ. (L. stillatitius, dropping.) Distilled medicinal waters.

A. stillatit'iæ sim'plices. (L. stillatitius, dropping; simplex, simple.) Simple distilled water, now called A. destillatæ.

A. stillatit'iæ spirituo'sa. (L. stillatitius; spiritus, spirit.) Distillations of drugs in which spirit of wine is the menstruum, now called Spiritus.

A. subve'ni hom'ini. Italy; between Puzzueli and Naples. Also called Acqua di zuppa d'uomini. A mineral water, of 35° U. (95° F.), springing from the foot of Monte Olibano; it centains carbenic acid, calcium and magnesium carbonate, iren carbonate, calcium and sodium sulphate, and sodium and potassium chioride. It is used in nervous diseases, in america, amenerrhea, and in chrenic mucous discharges

Aquæduc'tus. (L. aqua, water; ductus, a leading. F. aqueduc; G. Wasserleitung.) A canal, or duct, for conveying water; an aqueduct. Applied to several canals in different parts of the body, though not always containing

fluid.

A. cer'ebri. (L. cerebrum, the brain.) The infundibulum; a hollow conical process of the tuber einereum, to which is attached the pituitary body; it communicates with and forms

part of the floor of the third ventricle.

A. coch'leæ. (F. aqueduc du limaçon ; I. acquedotto della chiocciola ; G. Wasserleitung der Schnecke.) The aqueduct of the cochlea; a small canal extending downwards and inwards from near the commencement of the scala tympam of the cochlea, through the petrous hone to a point near the jugular fossa and just below the internal auditory foramen; it transmits a small vein

A. Cotun'nii. The aqueduct of Cotunnius;

a term for the A. vestibuli.

A. Fallo'pii. (F. aqueduo de Fallope canal spiroide de l'os temporal; I. acquedotto di Fallopio; G. Wasserleitung des Fallopius.) A caual in the petrous portion of the temporal hone, commencing at the upper part of the lamina cribresa of the meatus auditorius internus, running outwards and backwards over the labyrinth, and then downwards to the stylo-mastoid foramen.

It transmits the facial nerve. A. Syl'vii. (F. aqueduc du Sylvius, canal intermédiaire des ventricules; 1. acquidotto di Silvio; G. Sylvi'sche Wusscrleitung.) The aqueduct of Sylvius; a narrow caual extending downwards and backwards from the hinder part of the third ventricle to the fourth ventricle. The floor consists of a prolongation of the fasciculi teretes to the cerebral peduncles, the lateral walls of the superior peduneles of the cerebellum, and the roof of the corpora quadrigemina and valve of Vieussens.

A. vestib'uli. (F. aqueduc du vestibule; I. acquidotto di vestibolo; G. Wasserleitung des Vorhofes.) The aqueduct of the vestibule; a small canal arising from the inner wall of the vestibule of the ear behind the eminentia pyramidalis, and running to the posterior surface of

the petrous bone. It transmits a small vein.

Aquala. An old term for arsenic and for sulphur.

Aqualic'ulus. (L. aqualiculus, a small water vessel, the lower part of the belly.) Old term for the lower part of the belly or abdomen; also, for the pubes.

Aquapunc'ture. (L. aqua, water; punetura, a prick.) A revulsive method of treatment, obtained by means of a force-pump apparatus, which propels a hair-like stream of water on to the skin with sufficient intensity to perforate the epidermis. Sharp pain is felt for a few moments and swelling occurs, both of which, however, soon disappear. The swelling is a whitish elevation, containing in its centre a small drop of blood. It has been used in cases of neuralgia, sciatica, lumbago, and muscular rheumatism.

Aquaracinn'ha-a'cu. The name of a Species of Borago, probably a heliotrope figured by Piso ('Bras,' p. 109), and by Marcgrave. The leaves are used in Brazil as an application to

wounds and ulcers.

Aquara-ibi. A name applied in Para-guay to trees of the Nat. Order Terebinthinaceæ. The fruit of all the species used contain a resinous, aromatic juice, from which is prepared the much esteemed mission halsam, of which the Jesuits send annually a present to the Spanish The halsam is an inspisated vinous It is employed to relieve rheumatic pain and for the cure of severe ulcers, and is said to be useful in hæmoptysis and bronchial fluxes. Dose, 6—8 grains frequently reneated.

Aqua'rium. (L. aquarium, a vessel for

water.) A chamber with one or more glass sides for the observation of the habits of aquatic

animals.

Aqua'rius. An old term for Ferrum, or iron. (Ruland and Johnson.)

A'quas de Veru'ga. The Peruvian name of certain springs supposed to be endowed with deleterious properties, producing the disease termed veruga. This commences with sore throat and febrile symptoms, followed by an eruption of pimples or boils, from which great bleeding occurs, reducing the strength of the patient and leading often to consumption. It attacks mules and horses (see Tschudi). Sudorifies, purgatives, and excision of the verugas is the treatment adopted by the Peruvians.

Aquas'ter. A term employed by Paracelsus to express the visions or hallucinations of

patients. (Dunglison,)

Aquatic. (L. aquaticus, living in the water. F. aquatique; I. acquatico; S. acuatico; G. Wasserlebend.) Of, or belonging to, water. Growing in the water; applied to certain plants of this nature. By some authors its application is restricted to fresh water.

A. box. A term for Animalcule rage

A. respira'tion. Breathing by gills or other provision for effecting respiratory changes iu the body by means of the oxygen dissolved in

A. roots. The roots of plants growing in the water, and which have no attachment to the earth.

**Aquat'ilis.** (I. aquatilis; from aqua, water; G. im wasser lebend.) Living in water. A'queduct. See Aquæductus.

Aqueducus. (L. aqua, water; duco, to conduct.) Same as Aquaductus.

Aque'ola. Old name for a species of Hordeolum, or stye.

A queous. (L. aqua, water. F. aqueux; G. wasserig.) Of the nature, or quality, of water; watery. Used to denote definite combinations of

A. can'cer. A name given to gangrene of the mouth in infants, or noma.

A. cham'ber of eye. The space between the crystalline lens and the cornea, divided by the iris into the anterior and the posterior chamber.

A. ex'tract. (L. extraho, to draw ont. F. extrait aqueux; G. wasseriges extraet.) A term applied in Pharmacy to solid preparations of drugs made chiefly or entirely with water.

A. forma'tions. The stratified or sedimentary rocks which have been formed by deposit

from water,

A. fu'sion. See Fusion, watery.

A. hu'mour. (L. humor aquosus. F. humeur aqueuse.) Term for the eight or ten drops of colourless fluid filling the anterior and posterior chambers of the eye. It is a clear liquid, of alkaline reaction and sp. gr. 1.003-1.009; it contains 1:-1.5 per cent. of solids. In the aqueous humour of the ealf there were found water 986.87, sodium albuminate 1.223, extractive 4.21, sodium chloride 6.89, potassium chloride 113, potassium sulphate 221, earthy phosphate 214, and lime 259.

A. va'pour. The steam or vapour which is given off from water at all temperatures. Its radiating and absorbing power for heat is very great, being more than 16,000 times that of air.

Aquet'ta. The Aqua Toffana. Aquidu'ca. (L. aqua, water; duco, to lead.) Medicines that produce watery evacuations; hydragognes; eathartics.

Aquidu'cous. (L. aqua, water; duco, to lead.) Drawing or leading water; draining off water. Used by Col. Aurelianus, de Tard. Pass. iii, 3, synonymously with Hydragogue.

Aquif'erous. (L. aqua; fero, to bear. wassertragend.) Containing or carrying G. wassertragend.) water.

A. canal's. Small canals in the foot of some molluses having an external opening.

A. sys'tem. See Water-vascular system. Aquifolia ceæ. (L. acus, a needle; folium, a leaf. F. aquifoliacées.) The hollies. An Order of epipetalous corollifloral Exogens. Evergreens. Leaves coriaceous, simple, exstipulate, smooth, sometimes with spiny teeth; flowers small, solitary, axillary; sepals distinct, 4-6; corolla imbricated; stamens alternate with the petals; anthers 2-celled, aduate, opening longitudinally; ovary 2-6 or more celled, free, truncate, uniovular; ovule pendulous; placentæ axile; fruit fleshy, indebiscent.

Aquifo'lious. (L. acus, a needle; folium,

a leaf.) Having sharp-pointed leaves

Aquifo'lium. (L. acus, a needle; folium, a leaf; because its leaves are prickly.) The holly tree. See *Hex aquifolium*.

A'quiform. (L. aqua; forma, appearance.) Having the semblance of water.

Aquig'enous. (L. aqua; gigno, to pro-

duce.) Living in water.

Aq'uila, Briss. (L. aquila. F. aigle; I. aquila; G. Adler.) The eagle. Beak long,

straight at the base, not indented; legs feathered to the origin of the toes. The several commoner varieties of eagle were formerly much esteemed in medicine; the bones were given in headache, the brain in jaundice, and the tongne in incontinence of urine; the dried bill was used as a sternutatory, and the wings were put under the feet to facilitate labour.

Also, an alchemical term for sal ammoniac, mereury, arsenie, sulphur, and the philosopher's

A. al'ba. (L. albus, white.) Old term for calomel and for sal ammoniac.

A. coeles'tis. (L. calestis, heavenly.) A synonym of White precipitate, thought to be the

cure for all diseases

A. Ganyme'di. (L. Ganymedes, Ganymede, son of Laomedon, taken up to heaven by Jupiter's eagle to be his cup-bearer.) A term for sublimed sal ammoniac.

A. mitiga'ta. (L. mitigo, to reuder gentle.)

A synonym of Calomel.

A. ni'gra. (L. niger, black.) Old term

for a preparation of cobalt.

A. philosopho'rum. (Φιλόσοφος, a lover of wisdom.) An old term for hydrargyrum, or mercury.

A. terres'tris. (L. terrestris, helonging to the earth.) A synonym of Antimony oxy-

chloride.

A. ven'eris. (L. Venus, the goddess of love.) Old term for a preparation of verdigris sublimed with sal ammoniac.

Aq'uila, Giovan'ni d'. An Italian physician of the fifteenth century. He wrote, amongst other books, a treatise on bloodletting in pleurisv

Aq'uilæ. (L. aquila, an eagle.) The temporal veins, for it was said that these were pro-

minent in the eagle.

A. lach'rymæ. (L. lachryma, a tear.) Eagles' tears. Old term for a certain preparation, of which calomel was an ingredient.

A. la'pis. (L. lapis, a stone.) Ancient

name for the aëtites, or eagle-stone.

A. lig'num. (L. lignum, wood.) Eaglewood. Former term for agallochum, or Lignum aloës.

A. ve'næ. (L. vena, a vein.) Ea veins. An old term for the temporal veins. Eagles'

Aquila'no, Sebas'tien d'. Professor of medicine at Padna; died 1543. He wrote two treatises: one, entitled Interpretatio morbi gallici et cura; and another, Quæstio de febre sanguinea.

Aquila'ria. A Genus of the Nat. Order

Aquilariace

A. agal'locha, Roxb. Also called Alocxylum agallochum. A plant producing a resinous wood, formerly generally valued for incense, and named the Lignum or Lign aloes. It is considered in some parts of Asia as a cordial, and has been prescribed in Europe in gout and rheumatism. In Assam, where it is known under the name of Hansi, the bark was formerly used for paper, and in Silhet a fragrant oil is distilled from the wood. (Waring.) See Aloes-wood.

A. chinen'sis, Spreng. A South China

species, with undulate, lanceolate leaves, and terminal, solitary, hexamerous flowers. It also

supplies eagle-wood.

perfume, known in Cochin-China as "tram-toe" is prepared from the podestion. A. malaccen'sis, Lam. Eagle wood. is prepared from the nodosities that form on the base of the broken branches of this tree. Its wood is often substituted for aloes-wood.

A. ova'ta. (L. ovatus, egg-shaped.) A species said also to supply aloes-wood.

A. secunda'ria, De Cand. (L. secundarius, second-rate, inferior.) A species also supplying eagle-wood; a substitute for aloes-wood.

Aquilaria ceæ. An Order of the Sub-class Monochlamydeæ, of angiospermous Dicoty-ledons. Trees with entire, exstipulate leaves; flowers apetalous; ealyx tubular, 4-5-lobed, imbricate, persistent; stamens 10, 8, or 5, opposite the divisions of the calyx when equal to them in number; ovary composed of two carpels, superior; ovules 2, suspended; seeds exalbuminous.

Aquila riads. Plants of the Order Aqui-

Aquilarin'eæ. The same as Aquila-

Aquile'gia. (L. aquila, an eagle; the nectaries resembling claws; according to some aquilegus, a water drawer.) A Genus of the Nat. Order Ranunculaceae. Calvx with 5 deciduons colonred sepals; petals 5, terminating in a hornshaped spur.

A. alpi'na. (L. alpinus, belonging to the

Alps.) A synonym of A. rulgaris.

A. canaden'sis. Canadian or wild columbine. Hab. North America. The seeds are said to be tonic.

A. sylves'tris. (L. sylvestris, belonging to the woods.) A synonym of A. vulgaris.

A. vulga'ris. (L. vulgaris, common. arcolie vulgaire; S. paxarilla; I. aquiligia; G. Akelei; Dut. akeley.) Columbine; culverwort. Spur of petals incurved; capsules hairy; leaves glabrous; stem leafy, many flowered; styles as long as stamens. Hab. Most part of Europe and Japan. The whole plant was formerly employed medicinally, and was regarded as a diuretic, diaphoretie, and antiscorbutic. It was especially valued in senrvy; it was also used in jaundice and in smallpox to promote the eruption. Linnæus placed the dose at from 30-60 grains of the powdered seeds. The tincture of the blue flowers has been used as a test for acids.

Aquilic'ia. (L. aqua, water; elicio, to draw out.) A Genus of the Nat. Order Vitacea,

also called Leea.

A. sambuci'na. (L. sambucus, the elder.)
The systematic name of a plant, native of Java, the Moluceas, &c. A decoction of its root is used against heartburn, and of its wood, to allay thirst.

Aquili'na. The Aquilegia vulgaris.
Aquili'na. The eagles. A Subfamily of
the Family Falconida, Order Raptores. Large, powerful birds, with completely feathered heads, high toothless beaks, with sinuous margins, feathered legs, and strong claws.

Aq'uiline. (L. aquila, an eagle. F. aquiline; G. aderähulich.) Bent like the beak of an eagle. The Pteris aquilina is so called because a transverse division of its root presents the rude image of an eagle with two heads.

Aquipa ria. (L. aqua, water; pario, to bring forth. F. aquipare.) Applied by Blainville to an Order of Reptilia Bactracii which deposit their progeny in water.

Aquip'arous. (L. aqua, water; pario, to produce.) Producing or secreting water.
Also, laying eggs, or bringing forth, in

A. glands. A term applied to such glands as the parotid, the secretion of which is very

watery

Aquocapsulitis. (L. aqua, water; capsula, a small box.) Inflammation of the membrane supposed to line the anterior and posterior chambers of the eye. Applied to a condition in which, with the signs of iritis, the posterior surface of the cornea and the anterior capsule of the lens exhibit numerous white discrete spots. See Iritis, serous.

Aquomembrani'tis. (L. aqua; membrana, a skin or membrane.) The same as Aquo-

capsulitis.

Aquos'itas. (L. aquosus, watery.) The

state of that which is aqueous.

Aquo'sus. (L. aquosus, watery. G. wasserig.) Belonging to, resembling, or full of, water; watery, aqueous. A term for the lining membrane of the anterior chamber of the eye; and also, for the fluid contained in it, tho aqueous

Aqu'ula. (L. aquula, a little water; dim.

of aqua.) A small collection of water.
Also, a synonym of hernia of the cornea, or keratocele.

Also, applied to some hydatids.

Also, a synonym of Hydra.

A. acoustica. ('Ακουστικός, belonging to the sense of hearing.) Term for the fluid which fills the cavity of the vestibule of the internal ear.

A. auditu'ra. (L. auditus, the hearing.) The perilymph and the endolymph of the internal

A. Cotun'nii. The perilymph, or aqua Cotunnii.

A. iabyrin'thi externa. The external water of the labyrinth. The perilymph.

A. iabyrin'thi inter'na. The internal water of the labyrinth. The endolymph.

A. labyrin'thi membrana'cea. water of the membranous labyrinth. The endolymph.

A. Morga'gni. See Liquor Morgagni.

A. vit'rea auditi'va. (L. vitreus, of glass; auditus, the hearing) The endolymph.

A. vitri'na audito'ria. (L. vitrum, glass; auditorius, relating to hearing.) The glass-like auditory water. The endolymph.

A'ra par'va. Name (Gr. βωμός μικρός) used by Galen, de Fasciis, n. 26, for a certain kind of bandage, like the corners of an altar, attributed to Sostratus.

Ara bia digita ta. The Paratropia venulosa.

Arabian coffee. The fruit of Coffee arabica.

A. man'na. The saccharine exudation of Tamarix indica.

A. sen'na. The leaves of the Cassia lanceolata.

**Arabic ac'id.** (G. Arabinsäure.)  $C_{12}$   $H_{22}O_{11}$ . An acid obtained by dissolving guiu arabic in cold water and slightly acidulating with hydrochloric acid; the addition of alcohol produces in it a precipitate of the acid in question. Arabic acid gives up H2O when united with bases; it has a great tendency to form salts containing several equivalents of acid to one of base. Natural pure gum may be regarded as the potassium and calcium salts of arabic acid having a large excess of acid.

A., gum. The Acaciæ gummi.

A. treatment. The treatment of cutaneous diseases by arsenic sulphide, as is usual with the Arabians.

Arabica. (L. Arabicus, Arabian.) Arabian stone. A mineral substance, white, ivory-like; a product used by the ancients locally in hamorrhoids, and as a dentifrice. (Waring.) Theoph. on Stones, c. 35; Dioscor. l. v. c. 148; Paul. Æg. l. vii, § 3; Pliny, l. xxxvi, c. 54.

Also, called A. lapis.

A. antidotus hepatica. (L. antidotus, a remedy; hepaticus, affected in the liver.) Term for a powder formed of cassia leaves, white pepper, myrrh, and costus, in former use.

A. fa'ba. (L. faba, a bean.) The coffee berry.

A. la'pis. (L. lapis, a' stone.) Old name for a kind of white marble, formerly used in powder as absorbent, and applied to hæmorrhoids.

Arab'icum gum'mi. (L. Arabicus, Arabian; gummi, gum.) Gum arabic. Sec Acacie gummi.

Arabideæ. A Tribe of pleurorrhizal Crucifer $\sigma$ , the fruit of which is a straight, clongated siliqua, and the seeds generally biserial, with accumbent cotyledons.

Arabin. The same as Arabic acid. Also, applied to the soluble portion of gum arabie and gum of Senegal, as well as soluble gum of Acaiou.

Arabin'ic ac'id. The same as Arabic acid.

Arabinose. (F. sucre de gomme.) H<sub>12</sub>O6. A non-fermentable sugar obtained from arabic acid, the chief constituent of gum arabic, by treatment with dilute sulphuric acid. It occurs in large, colourless, rhombic prisms, of a sweet taste, and fusible at 160° C. (320° F.) It is easily soluble in water; the solution is reduced by copper, and turns the plane of polarisation to the right.

Ar'abis. (Arabia, the habitat of many species.) A Genus of the Nat. Order Crucifere. Annual or pereunial horbs; root leaves spathulate, stem leaves sessile; sepals short; petals entire, usually clawed; pods linear, compressed; valves flat, keeled, veined, or ribbed; seeds usually one-rowed, compressed, often winged;

cotyledons accumbent.

Ancient name for a species of nasturtium, not now known, used in pickle.

A. areno'sa, Scop. (L. arenosus, sandy.) A species covered with bifurcate hairs, with the radical leaves lyrate, pinnatifid, and the cauline incised. Grows in shady, moist elevations in Middle Europe. Used as A. turrita.

A. barbar'ea. (St. Barbara. G. Barbarakraut.) A syuonym of Sisymbrium offi-

cinale.

A. chinen'sis, Rottl. (F. alivirio de l'Inde.) The seeds of this plant are prescribed by Indian native doctors as a stomachie and gentle

A. cilia'ta, Br. (L. cilium, an eyelash.) Plant ciliate; radical leaves subsessile, obovateoblong, obtuse, slightly toothed; eauline leaves

sessile; pods erect. Properties as A. turrita.

A. gla bra, Bernh. (L. glaber, without hair, smooth.) A synonym of A. perfoliata.

A. hirsu'ta. (L. hirsutus, shaggy.) hispid plant, with the radical leaves shortly petiolate, toothed; cauline leaves sessile; petals spreading; pods numerous, slender, erect. Used for the same purposes as A. turrita.

A. malag ma. (Μάλαγμα, any emollient.) An antiserofulous remedy, containing myrrh, olibanum, wax, sal ammoniac, iron pyrites, and

other materials.

A. malia'na. A synonym of Sisymbrium maliana.

A. perfolia'ta, Lam. (See Perfoliate.) Glabrous, glaucous; radical leaves obovate, sinuate, or lobed; cauline leaves amplexicaul; petals erect, yellow; pods crect, numerous. Used as A. turrita.

A. sagitta'ta, De Cand. (L. sagitta, an arrow.) A synonym of A. hirsuta.

A. turri'ta, Linn. (L. turritus, towershaped, lofty.) Pubeseent, with stellate hairs; leaves remotely toothed, stem leaves amplexicauline; flowers bracteate; petals spreading; pods long, decurred, with thick, veined valves; seeds oblong, winged. This small plant is common on old walls and rocky places in Europe and America. Its juice is said to kill worms, and it is locally applied to cure aphthæ.

Ar'abists. (Arabia.) The followers of the Arabiau school of medicine.

Ar'abs. People of the Semitic branch of the Mediterranean or Caucasian race. The skull, seen from above, and the face are oval; the hair is black and glossy; eyes black; openings of eyelids almond-shaped; eyelashes long and black; forehead not high; uose aquiline; chin receding; stature about the average; body lean. The skull is highly mesocephalic, almost dolichocephalic.

A., med'icine of. Towards the eighth and ninth eenturies of the Christian era, the Arabs, having founded a great and flourishing empire, took a faney for the science of the Greeks, of which they translated, through precedent Syriac versions, a great number of books; thence arose Arabian medicine. At that time the Greeian Empire produced nothing but compilations, which gradually became more and more dry and curtailed; it was the same with the Latins. The Arabs, without renewing medicine, it is true, revived the great works, and published important encyclopædias. Essentially they followed Galen; nevertheless they introduced ideas taken from Indian medicine; they made also new observations and new descriptions, and enriched pharmacy. To them is owing the first description of variola. In truth they deserve, during the medical torpor of the earlier middle age, to hold the sceptre, and posterity ought to recognise their services. (Littré and Robin.)

('Aραβος.) Term for grinding Arabus.

of the teeth.

Ar'ac. See Arack.

Araca'cha moscha'ta. The Conium moschatum.

Ara'ceæ. A Nat. Order of petaloid monoeotyledonous plants, including the Arums. They are herbs or shrubs with an acrid juice and subcutaneous tubers, corms, or rhizomes. Leaves petiolated, sheathing, usually with reticulate veins, simple, lobed, sagittate, eordiform, or rarely compound, sometimes peltate; flowers monocious, arranged on a spadix within a spathe; perianth absent. Male flower: -Stamens few or numerous; anthers extrorse, sessile, or upon very short filaments. Female flower: -Ovary 1-celled, or rarely 3- or more eelled; fruit succulent; seeds 2-8, pulpy, with mealy or fleshy albumen, or rarely exalbuminous; embryo axial, slit on one side. The species abound in tropical countries, but a few are also found in cold and temperate regions. They are all more or less acrid.

Arach. (Fr.) See Arack. Also, an old spelling of Orach.

Arachi'chu. (S. yerba mora.) The name given in Paraguay to a Species of Solanum which possesses sedative and narcotic properties.

A. poch'e. The native name in Paraguay of a Species of Strychnos, the juice and seeds of which are poisonous. (Waring.)

Arachid'eæ. A Subtribe of the Tribe

Hedysarea, Nat. Order Leguminosa.

Arachid'ic ac'id. C20H40O2. (G. Arachinsaure.) A monobasic acid obtained by the saponification of the oil of the seeds of Arachis hypogæa. It is found also in the fatty acids of butter and olive oil, and in the tallow of Nephelium lappaceum. It crystallises in small shining scales, melts at 75° C. (167° F.), and behaves like stearine with glycerin, forming three classes of compounds-monarachin, diarachin, and triarachin. It is but slightly soluble in cold alcohol, hut dissolves readily in hot.

Arachid'na hypogæ'a. A synonym

of Arachis hypogwa.

The glycerin-ether of Ara-Ar'achin. chidic acid.

**Ar'achis.** ('Λ, neg.; ῥάχις, the spine.) A Genus of the Nat. Order Leguminosæ.

A. Africa'na. The African variety of A. hypogæa.

A. America'na. The American variety

of A. hypogæa.

A. hypogæ'a. (Υπόγαιος, underground; from ὑπό, under; γῆ, the earth. F. pistache de terre; Tam. Vayer or Nelay-Cadalay; Tel. Nela-Sanagalu; Duk. Velaiatu moong; Hind. Moong-phullee.) Earth nut; Manilla nut. Hab. S. America; growing wild in Florida, Peru, and Brazil, but cultivated in the southern countries of Europe and India. A diffuse herbaceous annual plant, having stems a foot or more in length, and solitary axillary yellowish flowers, with an extremely long filiform calyx tube; the anterior sepal free; petals very unequal; vexillum thickened, gibbous at the back; stamens forming a close tube, sometimes reduced to 9; ovary almost sessile, but, after the flower withers the torus becomes much elongated, and bending towards the ground forces into it the young pod, which matures its seeds some inches below the The ripe pod is oblong, cylindrical, surface. about an inch in length, reticulated, and contains one or two irregularly ovoid seeds. The plant is cultivated, for the sake of its nutritious oily seeds, in all tropical and subtropical countries, but especially on the West Coast of Africa. The large embryo is eaten roasted, and is regarded as analeptic, tonic, aphrodisiae, and highly nutritious. It contains sugar, casein, salts, cellulose, and a large quantity of oil. It is mixed with the inferior qualities of chocolate, and has been proposed as a substitute for coffee. It has been erroneously said to be poisonous.

A. oil. (F. huile d'arachide, or de pistache de terre; G. Erdnussol.) The fat oil of Arachis hypogea obtained by pressure without heat. It is almost colourless, of an agreeable faint odour and a bland taste, resembling olive oil; sp. gr. 0.918. It becomes turbid at 3° C. (37.4° F.), concretes at -3° C. to -4° C. (26.6° F. to 24.8° F.), and hardens at -7° C. (19.4° F.) On exposure to air it slowly alters and becomes rancid. A considerable commerce is carried on in it, and it is employed to a great extent in the manufacture of soaps. Used as a substitute for

olive oil.

Arach'ne. ('Αράχνη, a spider. L. aranea; F. araignée; G. Spinne.) A spider. Under this name the ancients described two species of spiders, which Sprengel identifies with Aranea domestica and A. retiaria. The web was used as a styptic and as a local remedy in diseases of the eye, and the spiders themselves, beaten into a plaster, were applied to the temples and forehead for the eure of periodical headaches. Dioseor. l.

iii, c. 68; Paul. Æg. l. vii, § 3; Pliny, l. xxix, c. 38. (Waring.)

Also, the arachnoid membrane.

Arach'nida. (Same etymon. G. Spinnen.) A Class of the Subkingdom Arthropoda or of Condylopoda. Articulated animals. Head and thorax usually fused into one mass, to which the eight legs are attached; mandibles absent. They have only one pair of jaw-like palpi. They breathe by trachee or by pulmonary cavities, or, in some of the lower forms, through the skin. With the exception of the Tardigrada, the sexes are The eyes, 2-12, not very definitely separate. localised.

Of the larger Arachnida the scorpions have a poison-sting at the end of the tail; some of the larger spiders, as Mygale, are credited with venomous properties; of the smaller arachnids the ties and mites attach themselves to the skin in a troublesome fashion, and the Demodex is

found in the follicles of the skin.

Arachnid'ium. ('Αράχνη.) The gland which secretes the substance forming the web of the spider.

Arachni'tis. (Arachnoid membrane.) Inflammation of the arachnoid membrane of the

brain.

In olden medical books the symptoms and morbid anatomy of arachnitis were related at length; but later authors contend that inflammation of the arachnoid is not seen without concomitant affections of the pia mater. Arachmitis of the cerebral ventricles has also been described. See Meningitis.

A., chron'ic. A term applied to opacity and thickening of the arachnoid membrane, usually occurring along the longitudinal sinus.

A., diffu'se. A term applied to a form of meningitis, occasionally resulting from injuries to the head, or facial erysipelas.

The same as A., A., erysipel'atous. diffuse.

A., sup'purative. Meningitis with puru-

lent deposit in the arachnoid eavity. **Arachnoder'mous.** ('Αράχνη; δίρμα, the skin.) Having an extremely fine or scarcely

perceptible skin. Arach'noïd. ('Αράχνιον, a spider's web; είδος, form. F. arachnoïde; G. spinnenwebeformig, spinngewebeartig.) Resembling a spider's

web. Term applied to a plant or organ covered with

long, fine, soft, and entangled hairs. A. apoph yses. ('Απόφυσίς, an offshoot.) An old term applied to the interlacement of nervefilaments.

A. canal'. A name for the canal of Bichat.

See Bichat, canal of.

A. cav'ity. The space between the arach-

noid membrane and the dura mater.

A. cysts. Cysts found on the surface of the brain, depending, in all probability, on extravasation of blood on the surface of the arachnoid from a vessel of the pia mater, or, according to some, of the dura mater, or from a vessel developed in a false membrane. They are more frequent on the left side and in males.

A. hydroceph'alus. Hydrocephalus in which the effusion is in the arachmoid cavity.

A. mem'brane. (F. arachnoule, lane externe de la meningine; I. aracnoide; G. Spinnewebchaut.) The arachnoid is a delicate serous membrane investing the brain and spinal cord; the outer or parietal layer is closely adherent to the dura mater; the inner or visceral layer is more loosely connected with the pia mater, and covers the brain and cord. It separates the hemispheres of the brain, but does not dip into the sulci of the brain nor into the fissures of the cord. It penetrates into the interior of the brain through the great transverse fissure, and lines the ventricles and central canal. It is composed of connective, mingled with some clastic, tissue, and is lined by a layer of pavement epithelium. The eavity of the arachnoid contains a little fluid, permitting the opposed surfaces to glide upon one another in the movements of the brain associated with respiration, circulation, and locomotion. The existence of the parietal layer of the arachnoid has been much questioned. Many late observers regard the epithelium lining the dura mater as being a part of that membrane, and not belonging to the arachnoid.

Also, applied by Galen to the retina, to the hyaloid capsule of the vitreous body, or to the

capsule of the crystalline lens.

A term anciently given to a A. pulse. tremulous and small pulse, as unsteady as a cobweb.

Arachnoï dea. (Same etymon.) synonym of Arachnida.

A. cer'ebri. (L. cerebrum, the brain. G. Spinnwebehaut des Gehirnes.) The arachnoid membrane of the brain.

A. medul'læ spina'lis. (L. medulla. the marrow; spinalis, belonging to the spine.
G. Spinnwebehaut des Rückenmarkes.) Tho arachnoid membrano investing the spinal

A. oc'uli. (L. oculus, the eye. G. Oberaderhaut.) The lamina fusca, or outer layer of the choroid coat of the eye.

Arachnol'deus. meaning as Arachnoid. Same etymon and

Arachnoiditis. (F. arachnoïdite.) Same in etymon and meaning as Arachnitis.

**Arachnol'ogy.** (Αράχνη; λόγος, a discourse.) A treatise on spiders.

**Arachnoph'ilous.** ('Λράχνη; φίλεω, to love.) Λ term applied to fungi which grow on the dead bodies of spiders.

Arachnop'oda. ('Αράχνη; ποῦς, a fọot.) A synonym of Podosomata, so called from their spider-like appearance.

Ar'aci aromat'ici. A synonym of Vanilla.

Ara'cium alpi'num, Monn. A syno-

nym of Mulgedium alpinum, Less.

Arack. (Ind.) Name for a spirituous liquor common in India, prepared from rice; also from sugar fermented with cocoa-nut juice; often from the juice which exudes from incisions in the cocoa-nut tree, and called toddy; it is used like other strong spirits, but seems more heating in its nature.

Also, and more commonly, spelt Arrack.

Aracka. A spirit distilled by the Tartars from koumiss, fermented mare's milk.

(Arab.) An alchemical name Arac'on. (Arab.) An al for the metal Cuprum, er copper.

Aracouchi'ni. See Icica aracouchini. Aracus. Same as Arabus.

A. aromaticus. (L. aromaticus, fragrant.) An old name of Vanilla, the pod of Vanilla planifolia.

The Guzerat name of Phaseolus A'rad. munao.

Ar'ados. ('Apados.) Used by Hippocrates,

de R. V. in Acut. i, 18, for perturbation of the humours, or the disturbance excited in the stomach from the digestive process acting on several kinds of food; likewise to that caused by the milder purgatives; also to disturbance in any part of the body, especially of the heart after violent exertion.

A'rads. Plants of the Nat. Order Ara-

Aræ'a. ('Αραιά; from ἀραιός, thin. G. Unterleib.) The lower portion of the belly; the

Aræo'ma. ('Αραίωμα, from ἀραιόω, to

Aræom'eter. ('Aραιός, light, rare, thin; μέτρου, a measure. G. Senkwage.) An apparatus for determining the specific gravity of fluids; usually called a Hydrometer.

Aræomet'ric. (Same etymon.) Relating

to areometry

Aræom'etry. ('Αραιός, thin; μετρέω, to measure.) The knowledge of measuring the

density of fluids. See Hydrometry.

Aræot'ica. ('Apaiow, to make thin. F. areotique.) Making thin; reducing. Applied to medicines which formerly were supposed to rarefy

Arag'mos. ('Αραγμός, noise from concussion G. Zusammenstossen, Rasseln, Klirren, Knirschen.) Noise, rattling, bruit, groaning,

gnashing.

Arago, Francois. A celebrated French physicist; born 1786, died 1853. His optical investigations, especially in regard to the undulatory theory and the polarisation of light, are of the highest value.

Aragoa'ceæ. A term Section of the Scrophulariaceæ. A term proposed for a

Arairaj. A tree of Bengal the bark of which, with the addition of black pepper, is employed by the natives to procure abortion. (Waring.)

Ar'aki. A spirit distilled by the Egyptians

from dates.

Aral'da. A term for digitalis.

Ara'les. The Aral Allianee, according to Lindley. Unisexual, petaloid, or naked-flowered Endogens, with a simple naked spadix, and an embryo in the axis of mealy or fleshy albumen. It contains the Natural Orders Pistiacea, Zyphaceæ, Araceæ, and Pandanaceæ.

Ara'li. The Tamul name of Nerium odo-

201112.

Ara'lia. A Genus of the Nat. Order Araliacea, or, according to some, of the Umbellifera, which last it closely resembles in its general character, except that the ovary contains 2-5 loculi, and the fruit is often a fleshy drupe. The plants belonging to the Genus are herbs or shrubs, chiefly found in the warm and temperate regions of America and Asia.

A. ed'ulis. (L. edulis, eatable.) This plant is used in China as a sudoritie; it's young shoots are a delicate vegetable. The root, which is bitter and pleasant to the taste, is employed by

the Japanese in the winter as food.

A. his pida. (L. hispidus, rough.) Dwarf elder. A small shrub of North America, where it is known as the wild or dwarf elder. The root is regarded as diurctic, and has been used with advantage in the form of decoction in dropsy, and as a substitute for sarsaparilla.

A. hu'milis. (L. humilis, low.) A sy-

nonym of Panax ginseng.

A. Muhlenbergia'na. A synonym of A.

hispida.

A. nudicaul'is. (L. nudus, bare; eaulis, stem. F. aralie à tige nue, petit nard.) False or wild sarsaparilla; small spikenard. A native of the United States. The root is horizontal, creeping, sometimes several feet in length, about as thick as the little finger, twisted, yellowish brown externally, fragrant, and with a warm aromatic taste. It is reputed to be a gentle stimulant and diaphoretic. It is employed in rheumatie, syphilitic, and cutaneous affections, in the same manner and dose as gennine sarsaparilla. A strong decoction has proved useful as a stimu-lant to old ulcers. The Crees employ it, under the name of war-poos-ootchepeh (rabbit root), in venereal disease, and as an application to recent wounds.

A. papyrif'era. (L. papyrus, paper: fero, to bear.) A native of China, and believed to be the plant, or one of the plants, from which the rice paper of that country is manufac-

A. quinquefo'lia. (L. quinque, five; folium, a leaf.) A synonym of Panax quinquefolium.

A. racemo'sa. (L. racemosus, full of clusters.) A plant common in the United States, where it is known as American spikenard. It is used for the same purposes as A. nudicaulis. The root boiled and made into a cataplasm is a

useful application to obstinate ulcers.

A. spino'sa. (L. spinosus, thorny.) Angeliea tree; toothache tree; prickly ash. A native of the United States. The bark, root, and berries are medicinal. The bark is usually in small quills or half quills, from one sixth to half an inch in diameter, thin, fibrous, grey externally, and armed with prickles, yellowish within, slightly aromatic, bitter, and slightly aerid in taste. It is a stimulant and diaphoretic; an infusion of the recent bank is emetic and cathartie. It is used in chronic rheumatism and in cutaneous eruptions, and in some parts of the south in syphilis. The bark is most conveniently ad-ministered in decoction; the tincture of the berries is pungent, and has been used in tooth-

A. umbellif'era. (L. umbella, a sun-shade, an umbel; fero, to bear.) The systematic name of a species affording an aromatic gum resin,

which exudes from the bark.

Aralia'ceæ. Ivy worts. By Lindley regarded as a separate order of plants; but by Baillon only as a Subdivision of the Umbellifera. characterised by having a three or more celled fruit, without a double epigynous disc, pentamerous flowers, a valvate corolla, alternate leaves without stipules, and anthers turned inwards, opening lengthwise, fruit fleshy and generally The more important plants belongdrunaceous. ing to it are the Ivy (Hedera), Ginseng (Panax), and Aralia.

Aralia'ceous. Having the characters of the Aralia.

Aralias'trum. Name for the plant Panax quinquefolium, or ginseng.

The name in Ceylon of Ter-Aralloo.

minalia chebula.

Arama'ians. (Aram, the youngest son of Shem.) The inhabitants of the old geographical division Aram, which included Mesopotamia and the countries south-west of the Euphrates, as far as Palestine. They were a division of the northern Semitic branch of the Mediterranean or

Caucasian race of men.

Spain, Prov. of Alaya. Aramayo'na. There are two springs, sulphurous and chaly-The sulphur spring, of a temp. 14° C. (57.2° F.), in addition to hydrogen sulphide, contains carbonate of lime, and some sulphate. It is given internally for skin diseases; also in catarrh of pharynx and bronchi, and in rheumatism. Baths are also used. Season, June to

September.

The iron water has a temperature of 13.8° C. (56.8° F.), and is used in anomia and chlo-

Aram'sheetul. An article of the Indiau Materia Medica, described as useful in bilious and catarrhal affections. (Waring.)

A'ran. The Arabic name of the Capparis

spinosa.

A'ran, Fran'çois. A French physician; born at Bordeaux 1817, died 1861. He wrote on

diseases of the heart and uterus.

Ara'nea. (L. aranea, a spider, or spider's web; from ἀράχνη. F. araignée; G. Spinne.) A Genus of the Suhfamily Agelenine, Family Tubitelaria, Suborder Dipneumones. Spiders with eight equal sized eyes in two curved rows; third pair of legs shortest. The spider was formerly supposed to be poisonous, as well as very efficacious in medicine, from the volatile salt which it contained.

Also, a name for the herb Paris quadrifolia. A. diade'ma. (L. diadema, a royal head-dress. F. araignée à croix papale.) This species has been used in medicine.

A. domes'tica. (L. domesticus, belonging to the house.) The Tegenaria domestica.

A. tarant'ula. See Tarantula.
A. tu'nica. (L. tunica, a tunie, a membrane.) The spider's web-like tunie. A term which is understood to have been applied by the ancient anatomists to the capsule of the crystalline lens.

**Ara'neæ te'la.** (L. aranca, a spider; tela, a web.) Spider's web. It has been vaunted as a febrifuge, and was externally and internally administered; it was only recently recommended in India as an antiperiodic, and is used as a popular remedy in ague; also, as a styptic in hamorrhage from cuts and leech-bites. Dose,

5-10 grains in pill.

Aranei'da. (L. aranea, a spider.) An Order of the Class Arachnida. The cephalothorax and abdomen are unsegmented and joined by a constricted portion. The skin is usually soft; the mouth mandibulate. Respiration pulmonary, or exceptionally pulmo-tracheal. The mandibular palps perforated by the duet of a poison gland. Eyes 6-8, except in Nops, which has two.

Aranei'dæ. A Family of Suborder Di-pneumones, Order Arancina, Class Arachnoidea. The animals included in this Family are sedentary web spinners, with occili in two transverse rows. Some are tube or dask spinners. Examples: -Argyroneta, the water spider; Tegenaria, the house spider.

Araneif erus. (L. aranea; fero, to hear.) Applied to Ophrys aranciferus, from a supposed resemblance between its flower and a spider.

Ara'neiform. (L. aranea; forma, likeness.) Applied by Kirby to earnivorous, hexapodous larvæ, the body of which is very short, which have long mandibles proper for suction, perform a retrograde movement, and resemble in some respects the spiders, as those of Cicindela, Myrmelcon.

Araneifor'mia. (L. aran shape.) A synonym of Podosomata. (L. aranea; forma,

Aranei na. (L. aranea.) the Class Arachnoidea. Spiders. An Order of They have an unjointed cephalothorax and a saccular abdomen, which are united by a narrow peduncle, breathing by tracheal lungs and trachea; mouth masticatory, rarely with no labium; antennary jaws pierced by the poison duet; eyes 6-8; spinning warts posterior, rarely only two; stomach anuular, surrounded by the voluminous liver. There are usually two tracheæ behind the tracheal lungs, and the six openings are between the lung stigmata; the nonchelate palpi are simple in the female, but in the male they are swollen at the tir and grooved beneath, and bave several hooklike appendages; by these the spermaphores are placed in the female vulva. They are predaceous, with often comb-like paired claws, and undergo ne metamorphosis, but moult frequently. (Macalister.)

(L. aranca; ɛlôos, ferm.) Ara'neoid.

Spider-like.

**Araneology.** (L. aranea; λόγος, a discourse. F. and G. araneologie.) A treatise on spiders.

Araneo'sa uri'na. Term (Gr. ἀραχνιῶ-ôες οὐρον), used by Hippocrates, Coac. Prænot. 582, for urine which presents an appearance as if mixed with spider's web.

Araneo'sus. (L. araneosus, like a spider's web. F. araneen.) Having, or being full of,

spider's web.

A. pul'sus. (L. pulsus, a beating.) A term for the pulse when so small that it moves as if agitated by a gentle breeze, as a spider's

Ara'neous. (L. aranea, a spider. Term applied to a surface which is araneeux.) covered with long, fiue, and soft hairs, decussating like the web of the spider.

Also, in Mycology, applied to that state of the annulus in which, instead of forming a membrane, it is composed of separate filaments.

Ara'neum. (l. arancam.) A spider's web. See Aranca tela.

A. ul'cus. (L. ulcus, an ulcer.) Paracelsian term for a gangrenous ulcer. Same as Astchachilos.

Ara'neus. The same as Aranea. Also, old term, the same as Astchachilos.

Aran'juez. Spain; Province of Madrid; 1640 feet above sea-level. A mineral water containing sodium sulphate. Used in constipation, jaundice, urinary deposits, gout, and asthma.

Aran'tii cor'pora. (Because first described by Aranzi or Arantius. L. nodulus Arantii seu Morgayni; F. nodule d'Aranze, or dr Margagni; I. nodulo di Aranzi; G. Arantische Knietchen.) The bodies of Arantius; applied to small tubercles, one in the centre of the free edge of each segment of the semilunar valves of the aorta, and pulmonary arteries; otherwise termed the corpora sesamoidea.

A. duc'tus. (L. ductus, a passage; ductus renosus Arantii. I. aranzio condotto renosadi.) A venous trunk which, in feetal life, forms the communication between the umbilical vein with

the vena cava inferior.

Aran'tius. See Aranzi.

Aranzet'ti. A synonym of Fructus aurantiorum immaturi.

Aranz'i. An Italian anatomist; born at Bologne 1530, died 1589. The tubercles of Arantius, or corpora Arantii, are named after

Arapaba'ca. A synonym of Herba spigeliæ anthelmiæ.

Arapa'tak. Austria-Hungary; Sieben-bürgen. Altitude 1970 feet. The springs contain 1000 e. cm. of gas in a litre, with a little bicarbonate of iron. Also, called Elöpatak.

Arar-tree. The tree supplying sandarach, the Callitris quadrivalvis.

Ara'ra. The Myrobalanus citrina.

Arar'abin. A non-nitrogenous, crystallisable alkaloid, obtained from the bark of the Arariba rubra.

Arari'ba. The name of a tree believed by M. Riedel to be a Pterocarpus. The wood is whitish, but is used for dyeing.

A. ro'sa. (L. rosa, a rose.) This plant produces a wood which, according to M. Guibourt, is identical with the Bois de Diababul.

A. ru'bra. (L. ruber, red.) Eastern Brazil, the bark of which, red internally, is employed by the Indians to stain wool of a red colour.

Araro'ba pow'der. A synonym of Goa

Araru'ta. The Brazilian name of the Maranta; a corruption of the English word arrowroot.

Aras'con. A synonym of Nymphomania. Ara'sum-ma'rum. The Tamul name of Urostigma religiosum.

Ara'trum. (L. aratrum, a plongh.) The

Arauca'nians. A people of the south-

western part of South America.

Arauca'ria. (From the Chilian name Aracannos.) A Genus of the Family Abietee, Nat. Order Coniferæ. The inflorescence is ter-minal. Male flowers in cylindrical spikes. The fruit large and globular, each scale bearing a single seed. The branches are verticillate and spreading, with stiff pointed leaves.

A. Bidwil'lif. A species on the seeds of which, called Bunya-bunya, the natives of More-

ton Bay feed.

A. Brasilia'na. This plant is a native of South America, and yields a resin resembling dammar resin, and having a pleasant odour.

A. Dombey'i, Richard. A synonym of Dombeyi excelsa.

(L. imbricatus; from A. imbrica'ta. imbrico, to cover with gutter tiles.) The Chilian pine, which supplies a white resin. The seeds are the chief food of the inbabitants of Chili and Patagonia. The produce of one large tree will, it is said, maintain eighteen persons for one year.

Arax'os. A synonym of Fuligo, or Soot. The Tamul name of A'ray-Ke'ray.

Amarantus tristis. Araya-augely. The Malay name of Antiaris saccidora.

Arbaci'adæ. A Family of the Order Regularia, Class Echinoidea. Ambulaera narrow, with a small number of rows of tubereles; four large triangular anal plates.

Arbol a bre'a. (Sp.) The Spanish name of the tree growing in the Province of Bataugas, in the island of Luzon, which yields

elemi. The name signifies pitch tree, from the circumstance that its resin is used in the caulking of boats.

Ar'bol-a-brea res'in. This resin is the product of the Canarium album, a native of the Philippine Islands. It is greyish yellow, soft, glutinous, and has a strong and agreeable It contains amyrin, breidin, brein, and bryöidin.

Arbor. (L. arbor, a tree.) In Chemistry, term applied to any crystallisation which ramifies like a tree.

A. Africa'na. (L. Africanus, African.) A synonym of Ochna (Diporidium) atropurpurca.
A. al'ba. (L. albus, white.) A synonym of Melalenca.

A. al'ba mi'nor. (L. albus ; minor, less.) The Melalenca cajuputi.

A. beni'vi. The benzoin tree, Styrax benzoin.

A. camphorif'era. (L. camphor; fero, to bear.) The camphor tree, Camphora officina-

A. cœ'li. (L. cælum, heaven.) A synonym of Ailantus moluccana.

A. de Leche. The Galactodendron utile. A. Dian'æ. (G. Dianenbuum.) The tree of Diana; a term for the beautiful arborescent precipitate produced by throwing merenry into a dilute solution of nitrate of silver.

A. excæ'cans. (L. excæco, to blind.) A synonym of Excoccaria agallocha.

A. farinif'era. (L. farina, flour; fero, to bear.) The sago palm, several species of Sagus, and the Sagnerus succharifer.

A. febrifu'ga Peruvia'na. fever; fugo, to put to flight.) The einchona tree of different species.

A. inca'na sil'iquis toro'sis. (L. incanus, hoary; siliqua, a pod; torosus, fleshy.) A leguminous plant whose leaves were used in hæmorrhoids; probably a species of Cajanus.

A. in'dica. (L. Indicus, Indian.) The

eassia tree, Cinnamomum cassia, and other species.

A. in'dica fruc'tu conoï de. (L. fructus, fruit; κωνος, a pine-cone; είδος, form.) The cashew-nut tree, Anacardium orientale.

A. insa'nia. (L. insania, madness.) A synonym of Caragna nuncupata. A. lacta'ria. (L. lactarius, milky.) A

synonym of Cerbera. A. lanig'era spino'sa. (L. laniger, wool-bearing; spinosus, full of thorns.) silk-cotton tree, Bombax ceiba.

A. malabarica lactes'cens. (L. lactesco, to become milky.) The conessi-bark tree, Wrightia antidysenterica.

A. ma'ris. (L. mare, the sea.) The tree of the sea. A name given to coral.

A. medulla'ris cerebel'li. (L. medulla, the marrow; cerebellum.) The same as A. vitac cerebelli.

A. Mexica'na. The annotto tree, Bixa orellana.

A. minera'lis philosoph'ica. Same as A. Diana.

A. nucif'era. (L. nux, a nut; fero, to bear.) The cabbage bark tree, Andira inermis.

A. ovig'era. (L. ovum, an egg; gero, to earry.) A synonym of Hernandia.

A. palo'rum. (L. palus, a stake.) A synonym of Euphoria pometia.

A. philosopho'rum. Same as A. Diana

A. pomif'era in'dica. (L. pomum, fruit; fero, to bear; Indicus, Indian.) The eashew-nut tree, Anacardium orientale.

A. prunif'era in'dica. (L. prunum, a plum; fero, to bear; Indieus, Indian.) eashew-nut tree, Anacardium occidentale.

A. sa'guisan. A synonym of Unona odorata.

A. Sanc'ti Tho'mæ. St. Thomas's tree,

Bauhinia variegata.

A. satur<sup>i</sup>ni. (L. Saturnius, Saturu, an old name for lead.) cipitate formed by the slow reduction of lead by another metal, as zinc.

A. spicula'rum. (L. spicula, the ground pine.) A synonym of Trigonostemon.
A. spino'sa. (L. spinosus, full of thorns.) A tree which produced an astringent drug called Lycium.

A. thurif'era. (L. thus, frankineense;

fero, to hear.) The Juniperus lycia.
A. u'teri vivif'icans. (L.

A. u'teri vivificans. (L. uterus, the womb; rivifico, to make alive.) The same as A. vitæ uterinus.

(L. vita, life.) A name for the A. vi'tæ. plant Thuja occidentalis, and to other species of Thuja and Biota.

A. vi'tæ, Amer'ican. (L. vita, life.)

The Thuja occidentalis.

A. vi'tæ cerebel'li. (L. vita, life; cere-bellum. F. arbre de vie; G. Lebensbaumes.) The arborescent appearance presented by a section of the cerebellum, and eaused by the alternation of the lamellæ of white or medullary substance, covered by grey matter, springing like the branches of a tree from the central white mass. This appearance is the result of the enfolding of the cortical grey matter.

A. vi'tæ uteri'nus. (F. arbre de vie ; G. Lebensbaum.) A term applied to certain folds, from ten to twenty or thirty in number, that run obliquely upwards from two median ridges situated in the anterior and posterior median line of the interior of the neck of the uterus.

Arbo'real. (L. arboreus.) Of, or belonging to, a tree. Applied to animals living in, on,

or amongst trees.

Arbo'rei. (L. arboreus, helonging to a tree.) Term applied by Ruelle to Agarici which grow on trees.

Arbo'reous. (L. arbor, a tree. F. arboré.) Of, or belonging to, a tree; tree-like; dendroid.

Ar'bores. An arborescent change in the

skin preceding nleeration. (Ruland.)

Arbores'cence. (L. arboresco, to grow like a tree.) The same as Arborization.

Arbores'cent. (L. arboresco, to grow to a tree. F. arborescent, G. baumurtig.) Becoming like, or acquiring, the characters of a tree.

Arboricola. (L. arbor, a tree; colo, to inhabit.) A plant growing as a parasite on a tree.

Arbor'iform. (L. arbor; forma, likeness. G. baumformig.) Having the form of a tree or

Arborisa'tous. (F. arborisation.) Applied to the agates which present in their interior dendrites, or representations of trees, usually of a brown colour, from the infiltration of a hiquid charged with a metallic oxide.

Arboriza'tion. (L. arbor.) Applied to an aggregation of crystals presenting a likeness

to a small tree.

Also, applied to small branehed blood-vessels

when distended with blood, so as to look like the branches of a tree.

Arbre à beur're. (F. arbre, a tree; beurre, butter.) Term applied to several Sapotaeons plants, especially the Pentadesma.

A. a cal'ebasses. (F. calebasse, a water bottle, a callebash.) The Crescentia cujete.

A. a cannel'le. (Fr.) A synonym of the Lauros quixos, which is the Mespilodaphne pretiosa, and perhaps also the Nectandra cinna-

A. à chape'let. (F. chapelet, a string of beads.) The Melia azedarach and the Abrus precatorius.

A. à chou. (F. chou, eabbage.) Andira or Geoffroya of the Antilles.

A. à cou'is. (Fr.) The Crescentia cujete and others.

A. a fraises. (F. fraise, strawberry.) The Arbutus unedo.

A. a galles de l'Inde. (F. galle, a gall.) The Acacia bambolah.

A. a l'ail. (F. ail, garlie.) Term applied several plants, parts of which exhale an alliaceous odour, as the Cerdana alliodora and

Petiveria alliacea, and some species of Cassia.

A. à lait. (F. lait, milk.) The Piratinera utilis; several Enphorbiaceous plants; several Apoeynaceous plants; the Taberna montana utilis.

A. a l'hnile. (F. huile, oil.) The Terminalia catappa; the Elwococca; the Alcurites cordata; the Dipterocarpus.

A. a l'oseille. (F. oseille, sorrel.) The Andromeda arborea. A. a pain. (F. pain, bread.) The Arto-

earpus incisa.

A. a pa'pier. (F. papier, paper.) The Bronssonetia papyrifera. A. a pau'vre homme. (F. pauvre, poor;

homme, man.) The Ulmus campestris.

A. a perru'ques. (F. perruque, a wig.) The Rhus cotinus.

A. a pi'pa. (Fr.) The snmach tree. A. a sang. (F. sang, blood.) The Vismia cayennensis. A. a sav'on. (F. savon, soap.) The Sa-

pindus; the Quillaja.
A. a sel. (F (F. sel, salt.) The Areca

madagascariensis. A. a serin'gues. (F. seringue, a squirt.)

The Hevea or Siphonia. A. a suif. (F. suif, tallow.) The Croton sebiferum; the Pentadesma butyraceum; the

Myristica kombo. A. à tan. (Fr.) The Weinmannia macro-

stachua. A. a ves'sie. (F. vessie, a bladder.) The Colutea arborisceus.

A. à la fie'vre. (F. fievre, fever.) The Vismia quianensis and cayennensis.

A. a la fleche. (F. fliche, an arrow.) The Aloe dichotoma.

A. a la gale. (F. gale, iteh.) The Rhus toxicodendron.

A. à la glu. (F. glu, bird-lime.) Tho Hippomane biglandulosa, and Ilex aquifolium. A. à la gomme. (F. gomme, gum.)

Several acacias. The Eucalypterus resinifera; the Metrosideros costata; the Azorella. A. à la mâ'ture. (F. mûture, a mast.)

The Uvaria longifolia, and other Amonacow, A. à la mi'graine. (F. migraine, siek headache.) The Premna scandeus.

A. à la pis'tache. (F. pistache, the pistachio nut.) The Staphylea trifoliata.

A. à la puce. (F. puce, a flea.) Rhus toxicodendron.

A. a la vache. (F. vache, a cow.) Piratinera or Galactodendron utilis.

A. au vermil'ion. (F. vermilion, vermilion.) The Quereus coccifera.

A. aux quatre épi'ces. (F. épice, spice.) The Ravensara aromatica.

A. aveug'lant. (F. areuglant, dazzling.) The Execcaria agallocha.

A. d'am'our. (F. amour, love.) The Cereis siliquastrum.

A. de Bré'sil. (F. Erésil, Brazil.) The Clesalpiniæ which supply the Bois de Brésil.

Also, the Grangeria borbonica.

A. de caro'ny. (Fr.) The Galipea or Cusparia febrifuga.

A. de fer. (F. fer, iren.)

The Mesuca ferrea; the Stadmannia ferrea.

A. de la sa'gesse. (F. sagesse, wisdom.) The Betula alba.

A. de moise. (Fr.) The Mespilus pyracantha.

A. de mort. (F. mort, death.) The Hippomane mancinilla.

A. de par'adis. (F. paradis, paradise.) The Thuja occidentalis.

A. de poivre. (F. poirre, pepper.) The Schinus molle; the Vitex agnus-castus; several of the Genus Xylopia.

A. d'épreuve. (F. épreuve, trial, test.) The Physostigma venenosum, and perhaps the Eythrophlæum quineeuse.

A. de vie. (F. vie, life.) The Thujæ. A. du cas'tor. (F. castor, a bearer.) The Magnolia glauca of North America.

A. du Cypre. (Fr.) In the East, the Pinus halepensis; in Louisiana, the Taxodium distichum; in the Antilles, the Cordia gerascanthus.

A. du voyageur. (F. voyageur, traveller.) The Urania speciosa.

Arbro'ath. Scotland; County of Forfar, seventeen miles from Dundee. Possesses a cold chalybeate carbonated spring; recommended in serofula.

Arbus'cula. (L. arbuscula, a little tree, a shrub; from arbor, a tree. F. arbuscule.) A little tree or shrub.

Applied to the branchize of certain of the Annulata, from their resemblance to the branching of trees.

A. coral'lii. (Κοράλλιον, red coral.) Δ species of Erythrina.

A. gummif'eræ Brazilien'sis. gummi, gum; fero, to bear.) A name for the Hyperieum baceiferum er H. gummiferum.

Arbus'cular. (L. arbuscula, a shrub.) Ramified like a small tree, as the appendages placed around the mouth of Holothuriæ

Arbus'tate. (L. arbustus, provided with trees.) Planted, or beset, with trees.

Arbusti'va. (L. arbustivus, planted with trees; from arbustum, a plantation, and in the plural, shrubs.) An old term for plants of a shrubby nature.

Arbus'tum. (L. arbustum, a place where trees are planted; in plural, trees or shruhs.)  $\Lambda$ plant the woody stem of which does not attain three times the height of a man, and is ramified almost from the base.

**Arbu'tean.** (L. arbutus, the wild strawberry tree.) Pertaining to the arbutus.

Arbuth'not, John. A Scotch physician, born at Montrose in 1658, died in Lendon 1735. He wrote on aliments and on the influence of air on the human body. He was the author of many works in general literature, among which was the 'History of John Bull,' a satire on the campaigns of Marlborough, since which time this pseudonym of Englishmen has been preserved.

**Arbutin.** C<sub>21</sub>H<sub>32</sub>O<sub>14</sub>H<sub>2</sub>O. An indifferent bitter, neutral principle, crystallisable in acicular prisms, obtained from the *Arctostaphylos uva*-It dissolves readily in alcohol and hot water, but with difficulty in cold water and ether. On boiling with dilute sulphuric acid arbutin is

resolved into hydroquinone and glycose. **Arbuti'na.**  $C_{12}H_{16}O_7$ . A glycoside obtained from the leaves of the Arctostaphulos una-ursi.

Arbuti'num. Arbutin, the bitter principle of the Arctostaphylos ura-ursi.

Ar'butus. (L. arbutus, the wild strawberry tree; akin to arbor, because in Italy the tree is abundant.) A Genus of the Nat. Order Ericaceæ. Shrubs with alternate and generally evergreen leaves; flowers in terminal, panicled racemes; sepals five; corolla hypogynous, urceolate, five-toothed; stamens ten; anthers deflexed, opening by two pores; fruit fleshy, five-celled, many seeded.

Also, the Arbutus unedo.

A. alpi'na, Linn. (L. alpinus, belonging to the Alps.) The Arctostaphylos alpina. **A. andrach'ne**, Linn. ('Ανδράχνη, a wild

strawberry tree.) The strawberry bay. The bark and leaves are astringent. A narcotic wine is made from the fruit in Corsica, and the fruit itself, although austere, is eaten.

A. buxifo'lia, Stok. (L. buxus, the box tree; folium, a leaf.) The Arctostaphylos uvaursi.

A., com'mon. The A. unedo. A. filiform'is, Lamb. (L. filum, a thread; The Thalerocurpus serpylliforma, shape.) folia.

A. integrifo'lia, Lamb. (L. integer, entire; folium, a leaf.) Hab. Crete. A species the berries of which are esculent.

A. mucrona'ta, Linn. (L. mucronatus, pointed.) The Pernettya mucronata.

A. papyra'cea. (L. papyraccus, made of papyrus.) A synonym of A. unedo.

A., trail'ing. A name of the Arbutus unedo, and also of the Epigea repens.

A. un'edo, Linn. (L. nnedo, the strawberry tree. F. arbonsir; G. Erdbeerbaum.) The strawberry tree. Bark rugged; leaves oblonglanceolate, acute, doubly serrate, smooth, shining; panicles drooping, many flowered; fruit globose, muricated. Leaves astringeut, used in decoction; fruit eatable, some say narcotic; made into wine in Corsica.

A. u'va-ur'si. The Arctostaphylos uvawrsi.

(L. areus, a bow. G. Bogen.) A part Arc. of a circle or of a curved line.

A. indlca'tor. An apparatus for measuring the development of an interuode of a growing plant during short periods of time. It consists essentially of a thin but strong thread of silk fixed by one end to the upper pertion of the internode, passing vertically over an easily moveable pulley, and moving an index fixed to the

face of the pulley, the index moving over a graduated segment of a circle.

A., metallic. See Metallic arc.
A., volta'ic. The luminous arch which passes from one charcoal terminal of a voltaic battery to the other when they are slightly separated.

Ar'ca arcano'rum. (L. area, a place for keeping anything; arcanum, a secret.) term for the Mercurius philosophorum.

A. cor'dis. (L. cor, the heart.) The peri-

cardium.

Arcachon. France, not far from Bordeaux, on a large lagoon opening into the Bay of Biscay. A winter residence among pine trees, to the balsamic odour of which it owes its chief reputation as a cure place for phthisis and bronchial affections. There is a good deal of rain, but it soon dries up.

Ar'cadæ. Are shells. A Family of the Group Asiphoniata, Class Lamellibranchiata, Subkingdom Mollusca. Shell thick, equivalved, with an external ligament and a well-developed hinge, with interlapping teeth; mantle open;

branchiæ filamentous; foot large.

Arcæ'us, or Arce. A Spanish surgeon, born at Fregenal, in the Province of Badajos, 1493, died 1573. From him the Balsam of Arcaus derived its name. He wrote a treatise on wounds and on fevers.

A. bal'sam of. An ointment, consisting of 2 parts of mutton suct, 1 of hog's lard, 1½ each of turpentine and resin; mixed with heat,

strained, and stirred till cold. Ar'canite. (L. arcanus, hidden.) A form of potassium sulphate occurring in crusts and powdery efflorescences.

Arcan'ne. A synonym of red ochrc. Arcan'son. (Fr.) The common name

of the resin of Pinus pinuster.

Arca'num. (L. ureanum, a secret; from arceo, to shut up. F. arcane; G. Geheimniss, Geheimmittel.) "A thing secret and incorporeal, which can only be known by experience, for it is the virtue of everything, which operates a thousand times more than the thing itself" (Ruland). A term for a nostrum, or medicine, the composition of which is concealed.

A. album. (L. albus, white.) A name for the Pulvis Viennensis albus virgineus.

**A. be'chicum.** ( $B\eta\chi\iota\kappa\delta s$ , belonging to a congh.) Name given to a solution of liver of

sulphur and sugar in water.

A. coral linum. (Κοράλλιον, coral.) Term for an old preparation made by digesting nitric oxide of mercury in a solution of potash, washing it, and burning spirit of wine upon it; used to induce salivation, and as an escharotic.

A. du plex. (L. duplex, double.) Same

as A. duplicatum.

A. duplica'tum. (L. duplicatus, doubled.)

A synonym of Potassium sulphate.

A. duplica'tum cathol'icum. (Καθολικόs, general.) Old name for an amulet composed of the root of colchicum and plantain; recommended as a preservative against postilential

A. duplica'tum depura'tum. from; puro, to purify.) A synonym of Kali sul-furicum, G. Ph.

A. holsat'icum. A synonym of Potassium sulphate.

A. holsteinien'se. A synonym of Potassium sulphate.

A. Jovia'le. (L. Jovialis, pertaining to

Jupiter; an old name for tin.) Same as A.

A. Jo'vis. An amalgam of tin and quieksilver digested in nitre; formerly employed as a sudorific in doses of 3—8 grains.

A. ludeman'ni. Ancient term for the oxide of zinc.

A. materia'le. (L. materialis, helonging to matter.) An extract of, or one supposed to be allied to, the material substance of a body.

A. specificum. (L. specificus, of a particular kind.) An extract of the interior nature of the body.

A. tar'tari. A synonym of Potassium acetate.

A. tar'tari dul'ce. (L. dulcis, sweet.) A synonym of Potassium acctate. A. vi tæ. (L. vita, life.) The Elixir

Arcate. (L. arcuo, to hend like a how. G. bogenformig, gebogen.) Arched, bow-shaped.

Arc-bois. (Fr.) The Cytisus laburnum.

Arc-bois. (Fr.) The Cytisus laburn Arceau. (Fr.) Same as Archetto. Arceion. ("Αρκιιον, the hurdock.) name of the Arctium lappa.

Ar'cell. The Parmelia caperata.
A. cork'er. The Parmelia omphalodes. Arces thida. ('Αρκευθίς, the juniper-berry. F. arcesthide.) Name by Desvaux for a spherical fruit composed of many fleshy scales, which do not separate till maturity, as of Juniperus communis (Jourdan), apparently an error for Arcenthida.

Arceu'thos. ("Αρκευθος, a juniper bush.)
Old name for the juniper tree and fruit.

(Quincy.)

Arch. (L. arcus, a how. F. arc; I. and S. arco; G. Bogen.) A hending in the form of a bent how. Any arc, or any part of the periphery or circumference of a circle.

A., alve'olar. See Alreolar arch.
A., anastomot'ic. ('Αναστομόω, to bring to a mouth. F. arcade anastomotique.) The union of two blood-vessels in a curved line, as those of the mesentery.

A., aor tic. See Aorta, arch of.

A., cru'ral. (L. cruralis, belonging to the leg.) See Crural arch.

A., cu'bital. The arciform termination of the auterior cubital artery, one of the two branches of the hrachial, at the knee in the horse and many other mammals.

A., den'tal. See Dental arches.

A., diastal'tic. See Diastaltic arch.
A., fem'oral. (L. femur, the thigh.) A synonym of Crural arch.

A., glute'al. (Γλουτός, the buttock.) See Gluteal arch.

A., hæ'mal. (Alμά, blood.) See Hæmal

A., in'guinal. (L. inguinalis; from inguen, the groin.) A synonym of Crural arch.

A., ma'lar. (L. mala, the check bone.) The Zygomatic arch

A., na'sal. (L. nasus, the nose.) Nasal arch.

A., neu'ral. See Neural arch.

A. of Fallo pius. A synonym of the Crural arch.

A. of the aor'ta. See Aorta, arch of. A. of the co'lon. A synonym of the transverse colon.

A. of the pal'ate. A term applied to the horizontal or palate plates of the palate bones.

A. of the pu'bis. See Pubic arch.
A. of ver'tebra. The two processes which spring from each side of the posterior surface of the body of a vertebra, and, curving round, meet in the middle line behind; they, with the body, form the foramen. At its springing the arch is narrow and rounded, and is called the pedicle; the further part is broad and flat, and is called the lamina.

A., or'bital. (L. orbita, a track.) See Orbital arch.

A., pal'mar. (L. palma, the palm of the hand.) See Palmar arch.

A., pec'toral. See Pectoral arch.

A., pel'vic. See Pelvic arch. A., plan'tar. (L. planta, the sole of the foot.) See Plantar arch.

A., poste'rior car'pal. See Carpal arch,

posterior. A., pu'bic. (F. arcade pubienne.) The

Subpubic arch. A., ra'dial. (F. arcade radiale.) A syno-

nym of the deep palmar arch.

A., scap'ulo-clavic'ular. The supporting arch of the upper limb, consisting of the clavicle and the scapula.

A., se'nile. See Arcus senilis.

A., sesamoide'an. (F. arcade sesamoidi-An anastomotic arch formed by the enne.) branches of the posterior cubital artery of the horse and other mammals.

A., subpu'bic. See Subpubic arch. A., supercil'iary. (L. supercilium, an

eyehrow.) See Superciliary arch.

A., supraor'bital. (L. supra, above; orbita, a track, the orbit.) See Supraorbital arch.

A., tem'poral. The Zygomatic arch. A., zygomatic. (Ζύγωμα, a bar.) See Zygomatic arch.

**Archæol'ogy.** ('Αρχαῖος, ancient; λόγος, discourse.) The history of ancient things. The consideration of the practice of the ancients.

Archæopteryg'idæ. ('Aρχαῖος, an-

cient; πτέρυξ, a wing.) A synonym of Saurura.

Archæop'teryx. (Same etymon.) A
Genus of the Suhclass Saurura, Class Aves. An extinct bird from the oolitic lithographic slate of Solenhofen, characterised by having a tail longer than the hody, consisting of about twenty vertehræ, and clothed with lateral feathers. metacarpals are four, not anchylosed. The first and second digits are clawed. The ilium is elongated.

**Archæostom'atous.** ('Αρχιῶσς, primæval, ancient; στόμα, mouth.) Those animal forms in which, according to Prof. Huxley, the orifice of invagination of the wall of an embryo, at the stage when it consists only of a single

layer of cells, persists as a mouth.

**Archæus.** ('Αρχαΐος, ancient; pristine.) Applied by Hippocrates, *l. i, de Morb.* xxxii, 5; *l. de Steril.* xxiv, 20, either to the whole of aneient medicine, or to the natural state before disease entered the world; or, specially, the natural situation or seat of any member, or bone.

It is sometimes, but improperly, used for

Archeus, which see.

A. coelest is. (L. calestis, heavenly.) The name by which, according to Paracelsus, the alchemists designated the Nostoc.

Archag'athos. A Peloponnesian, who settled in Rome about B.C. 219, and who was helieved to have been the first person who practised medicine there as a distinct profession.

Ar'chambault, The'ophile. A French physician, born at Tours 1806, died 1863. He wrote chiefly on mental diseases.

Archan'gel. The name is derived prohably from its flowering about the Archangel St. Michael's Day, 8th of May, in the old style. The Angelica archangelica.

A., pur'ple. The Lamium orvala.

A., red. The Lamium purpureum, or the Stachys sylvatica.

A., spot'ted. The Lamium maculatum.

A., white. The Lamium album.

A., yel'low. The Lamium galvobdalon.
Archan'gel, New. Situated in Sitka
Island, North-west Coast of America. Thermal sulphurous mineral waters of a temp. of upwards of 67° C. (152.6° F.) (Dunglison.)

**Archangel'ica.** ('Αρχάγγελος, an archangel.) The Angelica archangelica.

Also, an old name of the Lamium album. A. atropurpu'rea. (L. ater, black; purpureus, purple.) A native of the United States, and known under the name of masterwort. See

Angelica atropurpurea

A. officina'lis, Hoffm. (F. angelique des jardins; G. Angelikwurzel, Brustwirz; Dutch Tamme, Engelwortel; Dan. Ovanue; Turk. Me-laik.) Nat. Ord. Umbelliferæ. Garden angeliea. The whole plant, but especially the root, is fragrant, bitter, and pungent. Used by the Laplanders as medicine, in coughs, hourseness, and pectoral disorders. The flowers, boiled in milk, they use to promote perspiration in catarrhal fevers, and to strengthen the stomach and howels in diarrhœa. The Angelica archangelica, which

A. triquina'ta. (L. tres, three; quinque, five.) A synonym of A. atropurpurca.

**Ar'che.** (' $\Lambda\rho\chi\dot{\eta}$ , the beginning.) for the earliest stage of a disease. **Archebiol'ogy.** (' $\Lambda\rho\chi\dot{\eta}$ ';  $\beta$ lo

Blos, life; λόγοs, an account.) An account of the earliest forms of life.

Archebio'sis. ('Αρχή, the beginning; βiωσιs, life.) A term which has been proposed to express the doctrine of the origin of living things from non-living matter by the gradual but sole action of forces which belong to matter as

('Aρχός, the anus; κπτωμα, a dislocation.) (Αρχός, the anus; Prolapsus of the anus. **Archeg'enes**. (Άρχε, an inseparable prefix, meaning first; γίνομαι, to be born.) Firstborn; original. Applied to acute disorders. **Archegovicas** Archecpto'ma.

**Archegen'esis.** ('Αρχή, the beginning; γένεσις, generation.) The doctrine of the origin of living from non-living matter.

Archego'nial. (Archegonium.) Pertaining to an archegonium.

A. recep'tacle. A term applied to several

archegonia grouped together.

**Archego'nium.** ('Αρχέγονος, first of a race.) A term applied to the female organ of mosses, Hepaticæ and vascular Cryptogams. Speaking broadly, it is always composed of a ecllular sac containing a single female cell (germ or embryonal cell), naked. This, after fusion with an antherozoid, produces a new asexual individual, which itself carries special cells destined to produce a sexual individual. In mosses the archegonia are often surrounded by paraphyses.

Archegosaur'ia. (' $\Lambda \rho \chi \eta \gamma \phi'$ s, primary;  $\sigma av\rho a$ , a lizard.) A Suborder of the Order Labyronthodonta. Extinct amphibians with a divided tooth-bearing vomer, temporal fossa with an osseous roof, short free ribs, and unossified vertebras.

Ar'chel. The same as Archil.

A., auver'gne. The Lecanora parella.
A., ground. The Lecanora parella.

Ar'chell, cana'ry. A term for the Archella weeds of the Canary Islands, usually species of Roccella.

**Archel'ogy.** (' $\lambda \rho \chi i$ , the beginning;  $\lambda \dot{\sigma} \gamma \sigma_s$ , a discourse.) A treatise on the fundamental principles of the science of man.

Archemy. Same as Archimia.

Arche'na. Spain, Prov. of Mureia. Two springs of sulphuretted water, of a temperature of 54-8° C. (130-64 F.), and containing in 1000 parts sodium chloride 14871, magnesium chloride 2553, sodium sulphate 1212, hydrogen sulphide, and free carbonic acid. The water is used as a bath and to drink; it produces reddening of skin and perspiration, and excites the genital organs. Its great reputation is in cases of secondary or tertiary syphilis; it is also used in chronic skin diseases, in chronic rheumatism, and in chronic mercurial or lead poisoning. Season, April—June, September and October.

Archen'as. The Juniperus communis. Archenceph'ala. (Λοχω, to over-rule; εχκέφαλος, the brain.) The fourth and highest Subclass of the Class Mammalia. A term applied by Owen to the Genus Homo, which he regards a a distinct order, on account of the great development and functional activity of the brain; distinguished by the greater folding of the cerebral hemispheres, and by their extension over the olfactory lobes and the cerebellum. These characters extend to the higher Quadrumana also, and so invalidate the proposed distinction.

Archen'da. Name used by Prosp. Alpinus, de Med. Ægypt. ii, 18, p. 113, b. for powder of the leaves of aleanna, Lawsonia inermis, mixed into a paste with water, used by the Egyptians to correct the fetid odonr of the feet, and to tinge the hands and feet with a golden colour. Also, called Henna.

Archen'de. The Egyptian name of powdered henna, or aleanna, Lawsonia inermis.

Archen teron. ('Αρχε, a prefix signifying arch, chief; εντερον, a bowel. G. Urdarm.) The primitive alimentary canal, formed as a cavity in the Planula, bounded by a special layer of cells—the enteric cell layer; and not formed by the oral ingrowth—stomodeum, or by the anal ingrowth—proctodeum.

Arches, aortic. See Aortic arches.
A., axil'lary. See Axillary arches.
A., branch'ial. (L. arcus branchialis. F.

A., branch'ial. (L. areus branchialis. F. ares branchiales; I. archi branchiali; G. Kicmenbagen.) A term applied to those parts of the parietes of the neck of the embryo which occupy the interspaces of the branchial fissures. The branchial arches are four in number, and appear towards the close of the first month of pregnancy. They correspond to the gills of lishes.

A., neu'ral. See Neural arches.
A. of Cor'ti. The rods of Corti. See
Corti, organ of.

A. of pal'ate. See Palate, arches of.
A. of skull, lat'eral infe'rior. A term
applied to the bones of the head which enclose

the upper part of the visceral cavity, as represented by the nose, mouth, and pharynx.

A. of skull, lateral superior. A term applied to those parts of the bones of the head which enclose the cerebrum, cerebellum, and medulla oblongata.

A., vis'ceral. See Visceral arches.
Archet'to. (I., from L. arculus, a little bow. F. arceau; G. Schutzbogen.) An instru-

bow. F. arecau; G. Schulzbogen.) An instrument composed of bent pieces of wood or iron, which can be placed over an injured limb, and serves to protect it from the pressure of the bedclothes. Palmer states that by an edict of the Grand Duke of Tuscany, mothers and nurses were compelled to adopt, in sleeping with infants, the precaution of guarding the latter with the archetto.

Ar'chetype. (' $\Lambda\rho\chi\epsilon$ , a prefix signifying chief;  $\tau \dot{\nu}\pi\sigma s$ , type. G. Urbild, Vorbild.) A term applied in Comparative Anatomy to an abstract idea of the essential form, either of the whole animal, er of one of its systems of organs, and to which, as to a standard, other animals or systems

of organs can be compared.

Arche us. ( $\Lambda \rho \chi \omega$ , to be first. F. archie; I. archeo; S. arqueo; G. Archäus, allgemeine Lebenskraft.) A word invented by Basil Vulentin, and afterwards adopted by Paracelsus and Van Helmont, to designate an imaginary entity, which served to explain the different phenomena of the living economy. According to Van Helmont, tho archeus is an immaterial principle, existing in the semen before feenndation, and presiding over all the phenomena of the organised body. According to him, this principle is not the same as the intelligent mind, although he attributes to it an intelligence, and that of a very high degree. In addition to the principal archeus, which has its seat at the upper extremity of the stomach, he allowed the existence of many other secondary ones charged to excent the orders of the chief one.

Archezos'tis. The same as Bryonia

alba. Archiamphias'ter. (' $\Lambda\rho\chi \iota$ , a prefix signifying chief;  $a\mu\phi i$ , on both sides;  $a\sigma\tau\eta\rho$ , a star. F. amphiastre de rebut; G. Karyolytic figur.) Two poles encircled with well-defined radial lines, found in the ovum of various Annulata and Mollusca, which result or proceed from the germinal vesicle, and gradually approach the surface of the ovarian egg, where at the time of deposit one pole becomes visible as a white stellate figure, which last marks the place where the mouth forms at a later period. The remains of the archiamphiaster are converted into the female pronucleus.

Archia/ter. ('Αρχι, chief; laτρόs, a physician. F. archiatre. G. Oberarzt.) Ancient term, used by Hier. Mercurialis, for the physician of any prince, emperor, or king; also, by C. Hoffmannus, for the chief among the physicians of any college. It was afterwards conferred on a number of physicians who forfined a college, the president or head of which was called Comes archiatrorum. The physicians to the kings of France, from Clovis to Charles V, were called archiatres.

**Archiblast.** ('Aρχή, the beginning; βλαστός, a bud. F. germe principale; G. Keimscheibe, Hauptkeim.) Term applied by His to the opiblast.

**Archiblas'tic.** ('A $\rho\chi\dot{\eta}$ , the beginning;  $\beta\lambda a\sigma\tau\dot{\phi}$ , a bnd.) One of the simplest types of development, that which, according to Hacekel. is

strictly palingenetic; it is that form of primitive egg segmentation in which the cleavage spheres are equi-formal, and which results in a simple two-cell-layered gastrnla form, with or without apical orifice. The Amphioxns, some Ascidians and Brachiopeds, Echinoderms generally, some Molluscs and certain corals, Medusæ and sponges, are examples of this type of development. The series of forms or stages of development are the Archimonerula, Archicytula, Archimorula, Archiblastula, and Archigastrula.

**Archiblastula.** ('Apxi; blastula, a diminntive from  $\beta \lambda a \sigma \tau \dot{\phi}$ s, a bnd.) The fourth stage of the archiblastic type of development, according to Haeckel, in which, by accumulation of fluid in its centre, the mulberry-like archimornla has become a fluid-holding vesicle, with an enclosing layer of cells in one row.

Archibugia'te, ac'qua del'le. A

synonym of Aqua vulneraria.

**Archicyt'ula.** ('Λρχι, chief; cytula, a dimiuntive from κότος, a hollow.) The second stage of the archiblastic type of development. according to Haeckel, in which the ovum has now obtained a newly formed nucleus.

**Archidia**'ceæ. A Family of Mosses belonging to the Cleistocarpæ or Phascoideæ. Small organisms with whip-like branches at the upper part of the stem. Archegonium lateral; no spore sac or columella; spores large, at most 20 in number, enclosed in and filling the membrane of their mother-cell.

Archigas trula. ('Ap $\chi$ ı; gastrula, a diminntive from  $\gamma a \sigma \tau \dot{\eta} \rho$ , the belly.) The fifth and last stage of the archiblastic type of development, according to Haeckel, in which the single cell-layer of the archiblastula has become a double layer; the two primary germ-layers and the cavity open externally by the archistom.

Archigenes. A celebrated physician of the sect of Eelecties, who practised in Rome during the time of Trajan. He wrote on the

Archig'enus. Same etymon and meaning

as Archegenes.

Archig'ony. ('Αρχή, the beginning; the doctrine of the first yours, offspring.) The doctrine of the first commencement of creation. The primordial production of inorganic and organic nature.

Ar'chil. Common name for the plant Roccella tinctoria, and other species.

More commonly applied to the red colouring matter obtained from the lichens; usually called Orchil.

Ar'chill. A synonym of Orchil.
A., cana'ry. The Roccella tinetoria.
Archima'gia. ('Αρχι, chief; μαγεία, the theology of the Magians, magic science.) Alchemical name given to the most sublime part of alchemy, or that which treated of making gold and silver.

Archim'edes. A celebrated mathematician, born at Syraense about B.C. 287; killed at the capture of that city by Marcellus B.C.

A.'s prin'ciple. See A.'s theorem.

A.'s the'orem. The principle thus expressed:—That a body when immersed in a fluid loses a portion of its weight equal to the weight of the fluid which it displaces.

Archim'ia. ('Αρχή, cause or origin, chief; χυμεία, a melting or fusion. F. archimie.) An alchemical term, nearly resembling Alchemia, from which, however, it is different, inasmuch as it was applied specially to the art of the transmutation of imperfect metals into the more perfect.

Archimoner'ula. (' $\Lambda \rho \chi \iota$ , chief; monerula, a diminutive of monera; from µovnons, single.) The first stage of the archiblastic type of development, according to Haeckel, in which the fertilised ovum has lost the germinal vesicle.

**Archimorula.** (' $\Delta\rho\chi\iota$ ', morala, a diminutive formed from  $\mu\delta\rho\sigma\nu$ , the black mulberry.) The third stage of the archiblastic type of development, according to Haeckel, in which there is a spherical agglomeration of equi-formal cleavage

**Archineph'ron.** (' $\Lambda \rho \chi \eta$ , the beginning;  $\nu \epsilon \phi \rho \delta s$ , the kidney. G. Urniere.) A term applied by Ray Lankester to the primitive kidney of vertebrates before differentiation of the Mullerian and Wolffian ducts.

Archin'geay. France, near St. Jean d'Angely. Mineral waters containing carbonates of lime and iron, chlorido of sodium, and some bitumen. (Dunglison.)

Ar'chiot officina'rum. (L. officina, a shop.) A synonym of Arnotto or Anotto.

Ar'chipin. A name of a gum resin obtained from the Bursera gummifira.

Archipteryg'ium. ('Αρχή, a beginning, origin; πτέρυξ, a wing, a in.) The primitive or archetypal limb shaft. Huxley considers that the orbit terrainment of variabrates emissis that the archipteryginm of vertebrates consists of a central-jointed axis made of a succession of mesomeres, each having appended to it laterally a diverging pair of parameres, each mesomere, with its lateral parameres, making up a ptero-

Archisco'lex. ('Αοχή, beginning, head; σκώληξ, a worm.) The hypothetical ancestor from which, according to Haeckel, the whole phylum of Vermes took their origin.

**Ar'chisperms.** (' $\Delta \rho \chi \eta_i$ , the beginning;  $\sigma \pi i \rho \mu \alpha$ , a seed.) A term synonymous with Gymnosperms, indicating the antiquity of the Conifera.

**Ar'chistom.** ('Αρχή; στόμα, a mouth. G. *Urmund.*) The primitive month or blastopore. It is the orifice of invagination in the Gastrula individual, which ultimately closes up in the majority of cases.

Architectu'ra apoplec'tica. (L. architectura, architecture; apoplecticus, apoplectic.) A term for the apoplectic constitution.

Architis. (' $\Lambda \rho \chi \delta \sigma$ 's, the rectum, or anus.) Inflammation of the rectum.

**Ar'chitroch.** (' $\Delta\rho\chi\dot{n}$ , the beginning;  $\tau\rho\sigma\chi\dot{u}$ s, a wheel.) Term applied by Ray Lankester to the primitive circlet of vibratile cilia found in some larvæ of Echinoderms and worms, which by a nipping-in may be converted into an 8-shaped double circlet, and finally into two distinct circlets -the cephalotroch and branchiotroch.

**Architroch'ophor.** ('Αρχή: τροχός, a wheel, a hoop; φορέω, to bear.) Term applied by Ray Lankester to any organism provided with an architroch.

Archiu'lidæ. ('Αρχή, beginning; ἴουλος, the centipede.) An extinct Family of the Order Myriapoda.

**Archocele.** ('Aρχόs, the anus; κήλη, a tumour. G. Mastdarmbruch.) Prolapse or hernia of the anus.

**Archocystocolposyrinx.** (Άρχός; κύστις, a bag; κόλπος, the womh; συριγξ, a pipe. G. Mastdarm-Harnblasen-Mutterschei-

denfistel.) Fistula of the anus, urinary bladder, and vagina.

**Archocystosyr'inx.** ('Λρχός'; κύστις'; σῦριγξ. G. Mastdarm-Harnblasenfistel.) Fistula of the anus and urinary bladder.

**Archometrum.** ('Αρχός; μέτρου, a measure. G. Mastdarmmesser.) Name by Howship for an instrument for measuring the anus.

**Archopto ma.** ('Λρχός, the anus, or rectum; πτωμα, a fall; from πίπτω, to fall.) Old term for prolapsus ani. (Quincy.)

**Archopto** sis. (Αρχός; πτῶσις, a fall-g G. Mastdarmvorfall.) The progress of Archoptoma.

**Archorrha**'gia. ('Αρχός, rectum; ρήγ-νυμι, to break forth. G. Afterblutfluss.) Η εmorrhage from the rectum.

**Archorrhœ'a.** ('Λρχός; ροία, a flow; from ρέω, to flow. G. Afterausfluss.) Discharge of fluid or blood from the rectum.

Ar'chos. ('Λρχός, the fundament.) Ancient name for the anus; also, for the rectum.

Archostegno'ma. ('Αρχός; στεγνόω, to curve closely, to render costive.) A contracting of the anus, or stricture of the rectum.

Archostegno'sis. ('Αρχός; στέγνωσιs, a making close. G. Mastdarmbercagang.) Stricture of the rectum.

**Archosteno**'sis. ('Λρχός, reetum; στένωσις, a being straightened.) Stricture of

Archosteno ta. Same as Archostegnoma.

Archosteno'tis. Same as Archosteg nosis.

Archosyr'inx. ('Aρχός, the anus; συριγξ, a pipe. G. Mastdarmfistel.) Fistula in ano.

Also (G. Klysterspritze), a elyster or injection pipe.

Ar'chus. Same as Archos.

**Archyle.** ('Αρχή, the beginning; ἕλη, matter. F. archyle; G. Grundstoff, Vorstoff.) Primitive matter; the essence of matter. (Littré and Robin.)

Arciform. (L. arciformis; from arcus, a bow; forma, form.) Bow-shaped. As a general term, applicable to the majority of curves, or to

anything like a bow.

A. fi'bres. These are of nervous tissue, and may be traced from the brain to the spinal cord, i.e. through the medulla oblongata. pass from the pyramidal to the restiform bodies, and, so doing, form a curve below the extremity of the olivary bodies on each side. They do not pass down into the spinal column, but curve upwards to the cerebellum. When the arciform fibres are largely developed the lower part of the groove, which defines the outline of the clivary bodies, is, in its lower part, partially interrupted. **Arci'on.** (Άρκειον, the burdock.) A synonym of Arctium lappa.

Ar'co. Austria; in the Tyrol, near Lago di Guarda. Latterly brought into notice as a winter eure place for phthisis. It is nearly 300 feet above sea-level, and has a still air and equable temperature in the winter; it is beautifully situate, with great facilities for exercise.

Arcoli'ni. An Italian physician of the fifteenth century. He wrote a treatise on prac-

tical medicine.

Arcta'tion. (L. arcto, to draw close together. F. arctation; G. Enge.) Old term, used by P. Zacchias, Quast. Medico-Leg. iii, 1, q. 8, n. 27, for a preternatural straightening or tightness of the female genitals, or of the vulva.

Also, a straightness or narrowing of other openings or eanals, or passages, as of the calibre of an

artery.

Formerly applied by Lindenus, Ex, iv, § 25, in the same manner as constipation, but particularly, constipated bowels, from the presence of inflammation.

Also, the closing together of divided parts by

suture.

Arc'tion. The Arctium lappa. Arctis'ca. ('Apktos, a hear.) Water bears. An Order of the Class Arachnida. Small,

vermiform animals, with eight short, indistinctly three-jointed feet; month suctorial, with rudimentary lateral jaws; body not divided.

Arc'tium. A Genus of the Tribe Cynarea, Nat Ord\_r Compositæ. Leaves alternate; heads solitary, racemed, or corymbose, not rayed; involuere globose; bracts many, imbricate, with stiff, spreading, hooked tips; pappus short, pilose, distinct.

A. barda'na, Willd. A synonym of A.

tomentosum

A. lap'pa, L. (F. bardane, glouteron; S. lampazo; 1. lappola; G. Hopfenklette; Dan. agerborre; Arab. aratheræ.) The burdock. A biennial plant, growing to the height of three feet, with large cordiform leaves, deepgreen above, woolly beneath; flowers reddishviolet, in terminal panicles; pappus short, pilose, distinct; bracts subulate, hooked, longer than the florets, forming a hur. The roots, leaves, and seeds are used. The root is long, the size of the thumb, yellowish outside, white within, and with an unpleasant odour. It conwithin, and with an unpleasant odour. It contains incline, nitrate and earbonate of potash, and a waxy or oleaginous greenish substance, soluble in ether, which constitutes the hasis of a secret remedy against baldness. The sudorifie action of the root has led to its employment in cutaneous diseases, in the itch, and in rheumatism. The decoction of the leaves is said to be very effective in allaying pruritus, and useful in eases of old ulcers, and for patches of timea. The seeds have been used as diureties in calculous and venereal complaints. The plant is still used in Loiret (France) against the bite of serpents.

A. ma'jus, Schk. (L. major, greater.)

The A. lappa.

A. mi'nus, Sehk. (L. minor, less.) The smaller burdock, known by its cottony heads, placed in racemes; has the same properties as the A. lappa.

A. tomento'sum. (L. tomentum, a stuffing for eushions.) This species, which has a very large root, is recognised by a cottony down, similar to a spider's web, which covers the involucral scales. It has the same properties as the

other species.

**Arctoi'dea.** ('Αρκτος, a bear.) A Sub-order of the Order Carnivora, Class Mammalia. Plantigrade or subplantigrade earnivores, with no hony septum in the tympanic cavity; the paroccipital, which is remote from the promiuent mastoid, does not touch the tympanic, the lower lip of the tubular portion of which is prolonged. The curved penial hone is not grooved; Cowper's glands and the cæeum are absent, and the prostate is small (Macalister). The Order includes the hears, racoons, kinkajous, ailurids, weasels, otters, badgers, and ratels.

Arctomy inæ. ('Λρκτος, a bear; μῦς, a

The marmots. A Subfamily of the mouse.) Family Sciuridae, Section Sciuromorpha, Suborder Simplicidentati, Order Rodentia. Incisors not compressed, limbs without a pataginm, taii short.

('Αρκτος, a bear; Arctophyl'lum. φύλλον, a leaf.) A synonym, used in Apuleius,

of the Anthriscus cerefolium.

A. officina'lis. (L. officina, a shop.) A

synonym of Arctostaphylos ura-ursi. **Arctopithe ci.** ( $A\rho\kappa\tau\sigma s$ ;  $\pi i\theta\eta\kappa\sigma s$ , an ape.) A Suborder of Order Primates, Class Mammalia. The marmosets or oustitis. Squirrel-like, gregarious, arboreal, thick-furred South American monkeys, with long, furred, but not prehensile, tails, large hair-clad ears, and broad septum between the wide nostrils. No cheek pouches. Fore limbs shorter than the hinder. The pollex is not opposable. Dentition i. \(\frac{3}{2}\), c. \(\frac{1}{2}\) p. \(\frac{1}{2}\), m. \(\frac{3}{2}\).

Arcto pium sulphu ricum. A salt of an alkaloid obtained by making an incision into the root of Arctopus echinatus. The sulphate presents the form of small, scaly, white crystals, which are astringent in taste, and which in halfgrain doses produce coagulation or inspissation of

the saliva within the mouth.

Arcto'pus. A Genus of the Nat. Order

Umbelliferæ.

A. echina'tus. (L. echinatus, prickly.) A native of the Cape of Good Hope, where it is known to the Boers as Platdoorn. It is demulcent and diuretic, resembling sarsaparilla. decoction of the root is prescribed in gonorrhea, in lepra, and in all kinds of chronic cutaneous affections.

Arctoscor'odon. ("Aoktos, a bear; σκόροδον, garlie.) A synonym of the Ullmia

wrsinum.

Arctostaph'ylos. ("Αρκτος; σταφυλή, a bunch of grapes.) A Genus of the Nat. Order Ericacea. This genus differs from Arbutus in the drupe with five to ten distinct one-seeded stones; the corolla is urceolate, with a revolute limb; anthers with two spurs at the back.

A. alpi'na. (L. alpinus, belonging to the Alps.) A trailing species, with white flowers,

the berries of which are used as food.

A. pun'gens, Kuuth. (L. pungens, stinging, pungent.) A Mexican species used as a

diuretic.

A. u'va-ur'si, Spreng. (L. uva, a grape; ursus, a bear. F. busserole; G. Bürentrauben.) A small procumbeut evergreen shrub, only dif-fering from Arbutus by the loculi of its ovary, which are usually 6 in number, containing only a single anatropal ovule. The leaves are dark green,  $\frac{3}{4}$ —1 inch in length by  $\frac{1}{4}$ — $\frac{3}{6}$  of an inch in breadth, obovate, rounded at the end, gradually narrowed into a short petiole. They are entire, with the margin a little reflexed, and in the young state slightly pubescent, otherwise the whole leaf is smooth, glabrous, and coriaceous; the upper surface shining, deeply impressed with a network of veins; the under minutely reticulated with dark veins. The leaves have a very astringent taste, and, when powdered, a tea-like smell. The decoction contains gallie and tannic acids, arbutin, cricolin, and ursone. The leaves are sometimes adulterated with those of the Vaccinium vitis-idwa. They are chiefly used in the form of decoction, as an astringent tonic in affections of the bladder, accompanied with mucopurulent discharge.

Arctu'ra. (L. arcto, to contract. F.

arcture.) Old term for inflammation of the finger or toe, from an incurvation and pressure of its nail.

A. un'guium. (L. unguis, a nail.) Narrowness and constriction of the nails, with

ingrowing.

Arctu'vin. A substance obtained, along with glucose, from arbutin by boiling with sulphuric acid. It is believed to be the same as Hydroquinone, obtained from quinic acid.

Arcua'lis. (L. arcuo, to bend like a bow.) Bowed, or bent like a bow; curved.

A. os'sa. (L. os, a bone.) A synonym of the parietal bones.

A. sutu'ra. (L. sntura, a seam.) A synonym of the coronal suture.

Arcuate. (L. arcuatus; from arca, a bow. F. arqué; G. bogenformig, gekrummt, gewolbt.)
Arched, curved, bent like a bow.

A. lig'aments. Two fibrous bands on each side of the spine; the internal (lig. arcuatum internum), which is the strongest, is connected internally to the tendinous part of the pillar of the diaphragm, and externally to the transverse process of the first or second lumbar vertebra, arching over the psoas muscle; the external (lig. arcuatum externum), which is the broadest, extends from the transverse process of the first lumbar vertebra internally to the last rib, arching over the quadratus lumborum. Some fibres of the diaphragm arise from these ligaments.

Ar'cuate-are'olate. (L. areuo, to bend; arcola, a small open place.) Term applied in Botany to a surface presenting spaces bounded by curves.

Arcua'tion. (L. arcuo, to bend like a bow. F. arcuation; I. marcamento; G. Bogenkrümmung.) Old term, used by Avicenna, l. ni, f. 21, tr. 2, c. 12, for a globosity anteriorly, when accompanied by a curvature of the sternum. Also, curvature of the bones generally.

Arcua'tus. (L. arcuo, to bend like a bow. F. arqué; G. bogenformig.) Bent or curved like

a bow; bowed.

A. mor bus. (So termed from arcus, a bow; because resembling in colour, to some extent, the rainbow; morbus, disease.) Old name for icterus, or jaundice; also called morbus arqua-

Ar'cueil. France; one league south of Paris. The water contains calcium carbonate and sulphate, sodium chloride, and some deliquescent

salts. (Dunglison.)

Arcula. (L. arcula, dim. of arca, a chest. G. Kästchen, Schachtel.) A little chest. Formerly applied to the orbit, or socket, of the eye. (Quincy.)

A. cor'dis. (L. cor, the heart.) The pericardium.

Arculæ. (L. arcula, a little chest.) The

Ar'culus. (L. arcuo, to bend like a bow.)
An arched frame to prevent the contact of the bed-clothes with the diseased part.

Arcus. (L. arcus, a bow, an arch. G. Bogen, Krümmung, Wolbung.) A bow, arc, or arch. The periphery of any part of a circle.

In Botany, a term applied in the case of ferns with anastomosing nervures to the arch formed along the mesoneurium by the anastomosis of two nervures starting from opposite points and meeting each other. This arch never carries spores, but it frequently gives origin to fertile nervilli.

A. adipo'sus. (L. adeps, fat.) A synonym of A. senilis.

A. arte'riæ subcla'viæ. (G. Achselschlagen aderbogen.) The arch formed by the subclavian artery.

A. atlan'tis ante'rius. (Atlas, the bone of that name; L. anterior, that which is foremost.) The anterior arch of the atlas.

A. atlan'tis poste'rius. (Atlas; L. posterior, that which is hindmost.) The posterior

arch of the atlas.

A. axilla'ris. (L. axilla, the armpit. G. Achselbogen.) That part of the axillary fascia which is formed by the union of the fascia covering the pectoralis major with that covering the pecteralisminor, and which presents a concave border looking towards the arm.

A. brachia'lls. (Βραχίων, the arm. G. Armbogen.) The arch formed at the posterior horder of the axilla by the junction of the axillary fascia with that covering the latissimus dorsi. Its concavity is directed forwards.

**A. car'pi dorsa lis.** ( $Ka\rho\pi\delta s$ , the wrist; L. dorsum, the back.) The dorsal carpal arch formed by the union of two arteries, one from the radial and the other from the ulna.

A. cruralis. (L. cruralis, belonging to the thigh. G. Schenkelbogen, ausseres Leistenband.) See Crural arch.

A. crura'is profun'dus. (L. cruralis; profundus, deep.) See Crural arch, deep.
A. denta'is. (L. dentalis, belonging to

the teeth. G. Zuhnbogen.) The dental arch, consisting on each side of the alveolar process of the inferior maxillary bone, the gum, and the teeth.

A. dorsa'lis hu'meri posti'cus. dorsum, the back; humerus, the upper arm bone; posticus, hinder.) The anastomosis situated posticus, hinder.) The anastomosis situated immediately above the electanon fossa, hetween the anastomotica of the brachial artery and the superior profunda of the same vessel.

**A.** glos'so-palati'nus. (Γλῶσσα, the tongue; L. palatus, the palate.) The same as A.

palatinus anterior.

A. mala'ris. (L. mala, a check. G. Wangenbogen, Jochbogen.) The same as the A. zygomaticus.

A. medulla'ris. (L. medulla, marrew.)

A synonym of the Fornix.

**A. ner'vi hypoglos'si.** (Υπό, below;  $\gamma \lambda \tilde{\omega} \sigma \sigma \sigma$ , the tongue.) The curve or loop formed by the hypoglossal nerve as it crosses the caretid

A. palatinus anterior. (L. palatinus, belonging to the palate; anterior, foremost. G. vordere Gaumenbogen.) The anterior pillar of the fauces formed by the palate-glossus muscle and the mucous membrane covering it,

A. palati'nus poste rior. (L. palatinus; posterior, hindmost. G. hintere Gaumenbogen.)
The posterior pillar of the fauees, formed by the palate-pharyngeus muscle and the muceus membrane covering it.

**A. palatoglos'sus.** (L. palatus, the palate;  $\gamma \lambda \tilde{\omega} \sigma \sigma a$ , the tongue.) The A. palatinus anterior.

A. palatopharynge'us. (L. palatus; φάρυγξ, the gullet.) The same as A. palatinus posterior.

A. palma'ris contrac'tus. (L. palma-

ris, belonging to the palm; contractus, from contraho, to draw together.) A term for contraction of the palmar fascia.

A. pharyn'go-palati'nus. (Φάρυγξ, the gullet.) The same as A. palatinus posterior. A. planta'ris profun'dus. (L. plantaris,

belonging to the sele of the foot; profundus, deep.

G. Sohlenbogen.) The deep plantar arch.

A. poplite'us. (L. poples, the ham of the knee. G. bogenformiges Kniegelenkband.) Ligamentum pepliteum arcuatum. A thickening of the fascia connected with the upper edge of the tendon of the popliteus muscle, and situated at the outer part of the posterior surface of the knee-joint.

A. pu'his. (Os pubis, the pubic hone. G. Schambogen, Schamwinkel.) The A. subpu-

A. seni'lis. (L. senilis, belonging to old people.) The senile arch; a term for a peculiar arched, or circular, opaque appearance on the eyes of old persons, round the margin of the cornea, cansed by fatty degeneration of the corneal tissue. It is believed to indicate the tendency of other structures to undergo a similar change, and especially it has been supposed to point to cardiac degeneration; but it is probable that this is by no means universally true. The condition does not generally interfere with the healing process.

A. subpu'bicus. The arch formed below the symphysis pubis by the two rami of the pubic bones, and the ascending rami of the ischia.

A. supercilia'ris. (L. supercilium, an G. Augenbrauenbogen.) A ridge on erchraw. the frontal bone running in a curved direction

upwards and outwards from the glabella. **A. superficialis volue.** (L. superficialis, helonging to the surface; rola, the hollow of the palm. G. oberflüchliche Hohlhandbogen.) The

superficial palmar arch.

A. tar'seus infe'rior. (Ταρσός, any broad, flat surface; L. inferior, lower.) The ultimate branch of the inferior palpebral artery running along the border of the lower cyclid.

A. tar'scus supe'rior. (Ταρσός; superior, upper.) The ultimate branch of the superior palpebral artery running along the border of the upper lid just below the tarsal cartilage.

A. tendin'eus fas'ciæ pel'vis. The tendineus fascia of the pelvis. The line corresponding to the division of the pelvie fascia into the recto-vesical and obturator fascia.

A. tonsilla'ris. (L. tonsilla, the tonsils.) The isthmus faucium.

(L. verto, to turn.) A. vertebra'les. The arches of the vertebræ.

A. viscera lis. See Visceral arches. A. vola'ris profun'dus. (L. volaris, belonging to the palm of the hand; profundus, deep. G. tiefe Hohlhandbogen.) The deep

palmar arch. A. vola'ris subli'mis. (L. volaris; sub-limis, high. G. oberfluehliche Hohlhandbogen.)

The superficial palmar arch.

A. zygomaticus. (Ζύγωμα, a bar. G. Wangenbogen, Jochbogen.) The arch formed by the zygomatic processes of the malar and tem-

poral bones.

Arcyria'cea. A Family of the Order Calonemea, Section Tricophora, Subdivision Lamphosporæ, Division Endosporeæ, of the Class Myxomycetes, characterised by having the sporangia of a regular shape, stipitate, dehiseing by a circular fissure, the upper portion evanescent, the lower springing from an immediate prolongation of the stem, in the form of a drinking-glass; capillitium of numerous arms, either grown to

the receptacle or fixed in the midst of the closed tubes of the stem.

**Arcythophy'tum.** (Αρκευθος, the juniper bush; φυτον, a plant.) Name by Necker for a plant which bears fruit like that of Juniperus.

Ar'da. ('Apôa, dirt.) Excrement.
Ar'dales. Spain. Mineral waters; known also as those of Carratraca.

('Apôalos, dirt.) Ardalos. ment

Ar'das. (Άρδα, dirt.) Same as Sordes.
Ar'dea, Linn. (L. ardea, the heron; akin to ἐρωδιός, a heron.) A Genus of the Family Ardeidæ, Order Grallæ, Class Aves. The herons. Body slender; bill long; neck very long; head with a nuchal crest.

A. cico'nia. (L. ciconia, a stork.) The stork, Ciconia alba.

A. cinerea. (L. cinercus, resembling ashes. F. heron; I. aghirone; G. Reiher.)
The heron, the fat of which was formerly supposed to allay the pain of gout, to remove nebule from the eyes, and to correct dulness of hearing, when applied within the ears, according to Aldrovandus, Ornithol. 1. 20, c. 8, seqq. Bruyerinus, de Re Cibar. 1. xv, c. 66. Schröderus, 1. 5, c. 2, n. 47. The flesh was supposed to be hurtful to piles.

Arde'idæ. (G. Reihers.) A Family of the Order Grallatores, Class Aves, or a Family of the Order *Pelargomorphæ*, Suhclass *Carinatæ*, including the herons, storks, and flamingoes. Beak long, hard, and conical, pointed or flattened; neck and legs long, the latter with warty surface

and transverse plates or shields.

Arde'ides. See Ardeidæ, Ardel'1æ. ('A $\rho\delta\omega$ , to sprinkle.) A term applied in Botany to the small dust-like apothecia of such lichens as Arthonia.

Ar'dent. (L. ardens; part. of ardeo, to burn. F. ardent; I. ardente; S. ardiente; G. brennend, feurig.) Heated to an extreme degree; hurning hot.

A. contin'ued fe'ver. The febris perniciosa, the malignant or typhoid fever of the tropies.

A. eyes. (F. yeux ardents.) Congestion of the conjunctival vessels.

A. fe'ver. (F. fievre ardente.) An old term for an acute fever with much heat of skin. Or, severe and long-continued cases of febri-

A. spir'it. (F. esprit ardent.) Distilled spirit or alcohol.

A. u'rine. High-eoloured nrine, with much uric acid, and giving a burning sensation when

Arde'sia hiber'nica. (L. Hibernicus, relating to Ireland; F. ardoise, slate. G. Schieferstein.) A kind of slate drank, when powdered, in spruce beer for the cure of contusions.

Ardisia, Swartz. A Genus of the Tribe Ardisiacee, Nat. Order Myrsinacee.
A. hu'milis, Vahl. (L. humilis, lowly.)
Ceylon, Badulan. A small tree the fruit of

which, made into syrnp, forms a cooling drink.

Ardisia'ceæ. A Tribe of the Nat. Order

Myrsinaceæ, having a free ovary and one-seeded fruit.

Ar'dor. (L. ardor; from ardeo, to burn. F. ardeur; I. ardore; S. ardor; G. Brand, Fener, Begierde.) Violent heat. Applied to an intense or morbidly increased sensation of heat.

A. febrilis. (L. febris, fever.) Feverish or febrile heat.

**A. stom achi.** (Στόμαχος, the stomach. F. ardeur a estomac; G. Sodbrennen.) Same as Ardor ventriculi.

A. uri'næ. (L urina, the urine. F. ardeur d'urine.) Term for a sensation of heat in the inflamed urethra when passing water, as if the urine were scalding hot.

A. vene'reus. (L. venereus, belonging to sexual love.) The heat or periodical sexual de-

sire of animals.

Also, a term for excessive sexual desire.

A. ventric'uli. (L. ventriculus, the stomach.) Heat of the stomach. A term for Heartburn.

Ardros'san. Scotland; on the Firth of Clyde. Climate somewhat damp. A sea-bathing place, with a chalybeate spring.

Ardru'ka. The vernacular Indian name

of Zingiber officinale.

Ardru'kum. The Sanscrit name of Zingiber officinale.

Ardui'ni, or Ardui'no, Giaco'mo, an Italian botanist of the end of the 18th and beginning of the 19th century, obtained sugar

from Sorghum in 1810. A., Lui'gi. Born in Padua, the son of the foregoing, also a botanist; died 1833.

A., Pie'tro. Grandson of Giacomo Arduini. A hotanist devoted to economic botany.

Ardui'nus. A celebrated Italian physician and philosopher in the beginning of the fiftcenth century. He wrote on poisons.

A're. (L. area, an open space.) A French measure of surface containing 100 square metres, or 119.6 square yards.

Area. (L. area, any open void place. G. Platz, Flache, Hofraum.) The space within, or, the internal capacity of, any given houndary or limit of what shape or figure seever.

Also (G. Glatze des Kopfes), a hald place; used sometimes as a synonym of Alopecia, and sometimes as a synonym of Alopecia areata.

A. cel'si. A synonym of Alopecia areata. A. dif fuens. (L. diffno, to disappear.) Diffluent area. Bald patches, of no special figure, occurring in the beard as well as on the scalp.

A. germinati va. (L. germino, to sprout forth. F. tache embryonnaire; 1. macchia embrionale; G. Fruchthof.) The germinative area. A name given to an opaque spot in which the embryo appears, on the blastodermie vesicle, on the side opposite to the insertion of the mesometrium.

A. opa'ca. (L. opacus, shaded. F. tache obscure; G. dunkler Fruchthof.) The opaque area. A term for a dull circle immediately surrounding the area pellucida, formed out of the area germinativa by the latter becoming clear in the centre.

A. pellu'cida. (L. pellucidus, transparent. F. tache claire; 1. area transparente; G. heller Fruchthof.) The pellucid or clear area; situated and arising in manner explained in the preceding

A. ser'pens. (L. serpo, to creep.) Serpentine area. Baldness commencing on the occiput and winding in a line, of an inch or so in width, to each ear, and sometimes to the fore-

A., u'nit of. The area of a square, the dimension of one side of which is the unit of length, this being in England one yard.

A. vasculo'sa. (L. vasculum, a small vessel.) The vascular area; it commences in that part of the area opaca nearest to the area pellucida, in the mesoblast of which blood-vessels first make their appearance, and gradually extends

A. vitelli'na. (L. vitellus, the yolk of an egg.) The space outside the A. vasculosa. Area'lu. The Malay name of the Uro-

stigma religiosum.

Are'ca, Linn. ('Λρήγω, to assist; because it is used to help digestion. G. Katechupalme, Arekapalme.) A Genus of the Nat. Order Palmacea. Leaves pinnate; flowers monocious; petals imbricated in the female, valvate in the male; ovary three-celled; fruit a fibrous drupe; spathes two, membranous or fibrous.

A. al ba, Bory. (L. albus, white. F choupalmiste.) Hab. Reunion. The terminal bud is

catable.

A. America'na. The Areca oleracea.

A. cat'echu, Linn. (Tam. Paak-marum, or Camooghoo; Tel. Poka Chettau; Duk. Suparie; Mal. Adaka, or Cavooyhoo; Beng. Gooa.)
The areca or betel-nut palm. A palm, 40 or 50 feet high and 20 inches in circumfercuce, growing in Iudia and the Malay Archipelago. Leaflets broadly linear, plaited, acuminate; the upper confluent, wedge-shaped, præmorse; fruit ovate. It affords a nut like the nutmeg, but larger and harder, from which two kinds of catechu are extracted, one called by the Tamus Cuttacamboo; the other Cashentti; in Teloogoo, Kansee; and in Dukhami, Bharab-cutta and Acha-cutta. Cuttacamboo is chewed with the betel leaf. The ripe nuts, as well as young nuts, in a raw state, are used by all classes of Indians. See A. nut.

A. Dickso'ni, Roxb. A Malabar species supplying a nut, which is eaten instead of that of

the A. catechu.

A. fau'fel, Gaertn. A synonym of A. catechu.

A. globulif era, Lam. (L. globulus, a little hall; fero, to bear.) A Meluceas species supplying catechn.

A. In'dica. (L. indicus, Indiau.) The A. catechu.

A. lax'a, Ham. (J. laxus, loose.) An

Andaman species supplying catechu. (F. arecque A. Madagascarien'sis.

singe.) A species which supplies an oil, which is used externally in gout and rheumatism.

A. nagen'sis, Griff. A Bengal species supplying catechu.

A. nut. (L. nuces Arecæ, Betel; F. semence or noix d'arec; G. Arekanüsse, Betelnüsse.) The fruit of the areca palm is small and ovoid, of the size of a small hen's egg, slightly pointed at its upper end, and crowned with the remains of the stigmas. The exterior consists of a thick periearp, at first fleshy, but when quite mature, composed of fine stringy fibres, running lengthwise, with much coarser ones beneath them. This fibrous coat is consolidated into a thin crustaceous shell or endocarp, which surrounds the solitary seed. The latter has the shape of a very short, rounded cone, scarcely an inch in height; it is depressed at the centre of the base, and has frequently a tuft of fibres on one side of the depression, indicating its connection with the pericarp. The testa, which seems to be partially adherent to the endocarp, is obscurely defined and inseparable from the nucleus. Its surface is conspicuously marked with

a network of veins, running chiefly from the hilum. When a seed is split open these veins are seen to extend downwards into the white albumen, reaching almost to its centre, giving the seed a strong resemblance, both in structure and appearance, to a nutmeg. The embryo, which is small and conical, is scated at the base of the seed. Areca nuts are dense and ponderous, and very difficult to break or cut. They have when freshly broken a weak cheesy odour, and taste slightly astringent. The brown tissue which rnns into the albumen is composed of cells, which assume a rich red if moistened with caustic lye, and a dingy green with ferric chloride. Hanbury and Flückiger obtained 14 per cent. of a crystal-line fatty matter, melting at 39° C. (102.2° F.), by exhausting the seeds with other, which, after sponification, appeared to consist chiefly of lauric and myristic acids. Further exhaustion of the seeds with alcohol yielded 14.77 per cent, of tannic matter, and water then removed some mucilage. Areca nut may be given in powder, in the dose of 4 to 6 drachms, in milk, for the expulsion of the tapeworm, after a fast of 12 hours. It is also said to be effective against lumbrici. The dense charcoal obtained by burning areca nuts in a close vessel is sold as a deutifrice. As a masticatory, areca nut has been used from time immemorial in India. It is chewed with a little lime and a leaf of the betel pepper, generally when the nut is in a young state, but also when rendered tender by boiling, and sometimes combined with aromatics, as camphor or cardamom, and is considered to strengthen the gums, sweeten the breath, and improve the tone of the digestive organs. The improve the tone of the digestive organs. dry expanded petioles serve as ready-made sphuts. In doses of 10-15 grains they check diarrhoa.

A. olera'cea, Linn. (L. deraceus, herb-like. F. arec d'Amerique.) The cabbage-tree palm, growing, beautiful and very lofty, in South America and both Indies. Leaflets linear, fine pointed, bifid; spadix covered with dry, ragged. white, deciduous, downy scales. The medulla or pith forms an inferior kind of sago; the young buds are used as cabbage, and the fruit affords

A. palm. The A. catechu.
A. ru'bra, Bory. (L. ruber, red. F. palmiste rouge.) The terminal hud, when boiled, is caten as food.

Arechavale ta. Spain, Province of Guipnzcoa. A sulphur water, of a temp. of 22° C. (71.6° F.), from nine springs, containing calcium, sodium and magnesium sulphate, some calcium carbonate and sodium chloride, with free carbonic acid and hydrogen sulphide. It is diuretic, and is recommended for cutaneous diseases and syphilis. Given internally, and employed in the form of baths. Season, June to September.

Name for the red, insoluble Ar ecin. colouring matter of the fruit of Arcea catechu,

Arcin'eæ, Mart. A Tribe of the Nat. Ord. Palmaceæ. Ovary with 3, 2, or rarely I loculus, formed of 3 or 2 carpels; ovules usually solitary, rarely 2 in each loculus, erect or laterally suspended; fruit bacciform or slightly drupaccous; stamens hypogynous; flowers sessile.

Arcfaction. (L. arcfacio, to make dry.

F. aréfaction; I. arcfazione; S. arcfaccion; G. Austrocknung, Dorren.) Term formerly used for exsiccation, but somewhat stronger in its meaning, being a certain mode of preparation of watery medicinal substances, by which they may

be reduced to dust or powder.

Are gon. ('Αρήγω, to aid; from its virtues.) Old term for a certain resolvent ointment.

Aregre'sa. The Bryonia scrobiculata. Arellano. An Italian physician of the sixteenth century. He wrote on plague.

Are maros. Arabie name for cinnabar. Are'na. (L. arena, sand, the dried up thing; from areo, to be dry; perhaps from Arab. harar, to dry up. F. sable; G. Sand.) Sand. Applied to sand or gravel deposited from the

Arena'ceous. (L. arena. G. sandig, sandartig.) Applied to a mineral, or other substance, which has the appearance of sand.

Arena'men. An old name for the Ar-

mentan bole. (Quiney.)

Arena ria. (L. arenarius, pertaining to sand. G. Sandkraut.) A Genns of the Nat. Order Caryophyllacea. Annual or perennial herbs. Flowers in dichotomons eymes; sepals five; petals five; stamens ten, sometimes five, inserted on the disc, which is annular, or composed of interstaminal glands; ovary one-celled; styles 3-4; seeds compressed; embryo annular.

Old name for the herb coronopus or crow's-foot, so called because it grows in sandy places.

A. peploï'des, L. The sea sandwort, sea A. pepiol des, L. The sea sandword, sea purslane, or sea chickweed, which has been used as an application to whitlows. A creeping, fleshy plant; leaves ovate, recurved; flowers polygamons, axillary; sepals obtnse; disc glandular; capsule glohose. Used as a pickle.

Arena rious. (L. arenh. F. arinaire.)
Applied to a plant that grows in sand, or in sandy and arid soils.

and arid soils.

Arena'tion. (L. arena, sand. F. arénation; I. arenazione; S. arenacion; G. Sandbad.) Old name, used by Andr. Baccius, de Therm. ii, 17, p. 118, for an external remedy in dropsy, consisting in the application, by immersion or otherwise, of hot sand to the body, legs, and feet.

Aren'di. The Hindu and Bengalee name of the Ricinus communis.

Arendran te gum. (Fr.) A resinons substance stated to be produced by a tree of Madagascar, named by Flacourt Arindranto. Bory regards it as a kind of gnm animë.

A'reng palm. The Arenga saccharifera. Aren'ga. A Genus of the Nat. Ord. Palmacca. The male flowers have a convex receptacle; a perianth with two trimerous verticilli; petals longer than sepals, with valvate æstivation; stamens indefinite; anthers bilocular, introrse; female flowers with three uniovulated loculi; fruit with per-istent pericarp; seeds with horny albamen, and excentric embryo.

A. farinif'era, Labill. (L. farina, meal; fero, to bear.) A species yielding sago.

A. saccharif'era, Labill. (F. palmier d'area, palmier condiar loutar.) A native of the Moluccas and the Philippine Isles. A kind of sago is obtained from the pith, cordage is made from the petioles of the leaves, and when the spadices are incised a jnice is obtained, which yields a sngar named Gaulaitam. This, after fermentation, supplies a wine named Viu de Sagnère. The green fruit preserved in sugar is regarded as stomachic, tonic, and useful in disease of the chest. The fresh juice inflames the mucous membranes and produces great irritation of the

skin, and has been used as a weapon of defence. It has been termed Eau infernale.

Arenie'ola. (L. arena; colo, to inhabit. F. arenicole; G. sandbewohnend.) Applied by Cuvier and Latreille to a Section of Searabaides that dig deep holes in the earth or sand.

Areniferous. (L. arena; fero, to bear. G. sandtragend.) Accidentally bearing or containing sand.

Arenifodina. (L. arena; fodina, a pit; from fodeo, to dig. G. Sandyrabe.) A sand pit. Are'niform. (L. arena; forma, likeness. F. arentforme; G. sandformig.) Resembling

Arenilith'ic. (L. arena; λίθος, a stone.)

Belonging to sandstone

Areno'sa uri'na. (L. arenosus, sandy; urina, urina.) Urine containing a deposit, generally called sand.

Ar'enose. (L. arena. F. sablonnous; G. sandig, sandvoll.) Having, or full of, sand;

Aren'tes. (L. areo, to be dry.) A kind of ancient cupping glasses.

Are'nula. (Dim. of arena. G. Sandkorn.)

Fine sand.

Arenula'ceous. (L. arenula, fine sand.) Applied to small worms that resemble grains of

sand. Are'ola. (L. arcola, dim. of ar a, an open void space. F. arcole; I. arcola del capezzolo; G. Warzenhof, Warzenkreis.) A little circle. The halo or small reddish, or brownish, circle round the nipple of females. The skin of the areola is thin, and contains some twelve to twenty rounded eminences, caused by small glands, with branched ducts. In pregnancy the areola becomes much darker from deposit of pigment, especially in dark women, it increases in size, and the glands project more; about the fifth month there occurs a secondary areola in some women, especially in those who

immediately surrounding the original one. Applied (F. arcole inflammatoire; G. Entzundungshof) to the margin of pustules in certain eruptive diseases; it is then also called the halo. Another term for the cytoblast, or cell-nucleus

are dark complexioned, very faint in colour, and

in plants.

In Histology, the spaces existing between the fibres of connective or fibrous tissue, or the spaces between vessels.

In Botany, a circular spot on the surface of an organ, such, for example, as is seen at the base of the corolla in Helianthemum guttatum, and in many seeds.

A. apicila'ris. (Mod. L. apiculus; dim. aper, a point.) An arcola exhibited by of apex, a point.) the upper part of the pericarp which carries the other floral organs.

**A. basila'ris.** (Bá $\sigma$ is, a step, a base.) A term applied by Cassini to the inferior part of the pericarp in Synantheræ which rests on the eli-

**A. embryona'lis.** (" $E\mu\beta\rho\nu\nu\nu$ , the fruit of the womb before birth. G. Keimhof.) The part of the grass seed where the embryo or germ lies, indicated by a depression on the outside.

A. ovarif'era. (Ovarium; L. fero, to bear.) The surfaces of the clinanthus which correspond to the basilar areolæ of the pericarps.

A. papilla ris. (L. papilla, the nipple.) The halo or circular reddish or brownish space around the female nipple. See Arcola.

A., scc'ondary. An additional circle, of faint reddish or brownish colour, described under Arcola.

A. umbilica'lis. (L. umbilicus, the navel.) The dark pigmentation immediately around the umbilicus; it is to be seen in most persons; it becomes darker in pregnancy and in Addison's disease.

(Samo etymon.) Are'olæ. Plural of Arcola.

A., pri'mary. Spaces found in cartilage which is undergoing ossification, and formed by the absorption of the lineally arranged cartilage cells. The spaces are bounded by newly deposited bone spicules.

A., sec'ondary. Spaces found in growing bone by the absorption of spiculæ of bone sepa-

rating the primary areolæ.

Are'olar. (L. areola, a little space. F. areolaire.) Having areolæ; sometimes used as synonymous with cellular.

A. can'cer. (F. cancer areolaire) A sy-

nonym of Colloid cancer.

A. cavities of bone. (F. cavités aréo-

laires des os.) The cancelli of bone.

A. cav'ities of the spleen. arcolaires de la rate.) The spaces formed by the trabeculæ of the spleen, which contain the

A. exhala'tions. (L. exhalo, to breathe ont, to exhale.) An old term for such fluids as the aqueous and vitreous humours of the eye and the serous fluid found in the joints and among the meshes of areolar tissue.

A. hyperpla'sia. See Hyperplasia, areolar.

A. tis sue. (F. tissu arcolaire.) A term applied to that form of connective tissue which is found beneath the skin, the mucous and serous membranes, and hetween the various organs of the body, connecting, insulating, and supporting It accompanies the blood-vessels and lymphatics, forms investing sheaths for nerves and museles, and dipping into their structure divides them into finer and still finer fasciculi. It is apparently composed of fine wavy fibres, united into sheets and bundles, which decussate at various angles. These fibres imperfectly surround spaces which often contain fat cells, and they are mingled with clastic fibres, which may be rendered conspicuous by the addition of acetie acid, when the arcolar tissue swells up and becomes transparent, whilst the elastic tissue remains unaltered, and is often seen to wind spirally round the fasciculi of arcolar tissue. By some the fibrillation of areolar tissue is believed to be artificial. Seattered through the tissue are númerous corpuscles and cells, some of which are proper to the tissue itself, whilst others are wandering white corpuscles. On hoiling it is converted into gelatin. It is easily regenerated. The areolæ, if they are not the commencement of the lymphaties, are in close relation with them, since subcutaneous injections of toxic agents are rapidly absorbed, and constitute one method of administering remedies.

A. tu'mour. A term given to the softer

fibrous tumours. See Fibroma.

Are olate. (L. arcola. F. arcolé; G. felderig.) Applied to a leaf marked with inequalities or slight wrinkles.

Also, applied by Kirby to the wings of insects when divided into areoke, as the Diptera.

Are olus. (L. arcola, a small open place.)

The mosaic-like spaces presented by the thallus of some lichens; a small space bounded by the outline of the cellules of the leaf in mosses. (Cooke.)

Areom'eter. ('Αραιδ's, thin, light; μέτρου. a measure. F. arcometre.) A name for an instrument for determining the specific gravity or the strength of alcoholic liquids; literally a measure of lightness, or rarity, so called because the more alcohol contained in the liquid the less will be its specific gravity.

Arcomet'ric. (Same etymon.) Per-

taining to areometry.

A. meth'od. The process of determining the sp. gr. of a solid by weighing it in a liquid.

Areometry. (Same etymon. F. aréo-métrie.) The process for determination of the specific gravity of liquids.

**Areotic.** ('Αραιωτικόs, rarefying; from άραιόs, thin. F. arcotique.) Rarefying. Term applied to remedies supposed to rarefy the hu-

A'res. (Arab.) A Paraeelsian word, meant to signify a principle or power which gives form and substance to all things in nature, so that they wear or are arrayed in their own proper, and not another, nature.

Ares'ta bo'vis. See Arresta bovis. Aretæ'us. A Greek physician of about the first century; he is generally called the Cappadocian. He wrote an important work on the signs and treatment of acute and chronic diseases.

Ar'ete. ('Λρετή, excellence, especially of manly qualities.) Mental or corporeal vigour.

Arethu'sa. A Genus of the Nat. Order

Orchidacea

A. bulbo'sa. (L. bulbosus, bulbous.) It is employed in the United States in toothache and bringing tumours to a head. Arethu'seæ. A Tribe of the Nat. Order

Orchidaceæ. Anthers terminal, lying under cover of the helmet of the gynostigium; pollenmasses unstalked, mealy, or granular. **Ar'etos.** ('Αρετή, excellence.) A species of

meth mullein, so called from its good qualities.

(Turton.)

Arez'zo. Italy. In the neighbourhood of this town rise five alkaline chalybeate springs-Acqua della Chiusa dei Monaci, Acqua della Chiusa d' Alliotti, Acqua del Vingore, Acqua del Casino dei Fulciaj, and Acqua della Villa della They contain, in 25 ounces, sodium carbonate 5 grains, calcium and magnesium carbonate 7, and 1 grain each of sodium chloride and iron carbonate, with carbonic acid, nitrogen, and oxygen.

An old name for arsenic. Ar far. (Arab.)

(Ruland and Johnson.)

Argal. (F. tartre brut; G. Weinstein.) Arabic name for crude tartar in a crystalline form as it is tak from the inside of wine vessels, and termed red or white according to the colour of the wine from which it was deposited; also called Argol.

A., red. Argal obtained from easks of red wine and stained by the colouring matter of the grape skins.

A., white. Argal obtained from casks of white wine, and so uncoloured.

Argali. The Ovis ammon, or wild sheep. of Central Asia, which yields a valuable kind of wool.

Ar'gand burn'er. A mode of burning

oil, spirit, or gas, by means of a tubular wick; named after the inventor.

Arga'nia. A Genus of the Nat. Order

Sapotaceæ.

**A. eleoden'dron.** (Ελαιον, oil; δένδρον, a tree.) A native of Madagascar; it furnishes an oil, argan oil, which is serviceable for all ordinary purposes.

A. siderox'ylon, Röm. (Σίδηρος, iron; ξύλον, wood.) A North African species, the seeds of which snpply an oil, which serves for

food and for lighting.

Ar'gas, Latr. A Genus of the Family Irodida, Order Acarida. Body buckler-shaped, oval; maxillary palpi with four cylindrical joints; no suckers to feet.

A. America'na. A species found on cattle

in Texas.

A. chin'che. A species found in Columbia, which is a very troublesome parasite of the

dwellers there.

A. per'sicus, Fisch. (L. persicus, Persian. F. argas de Perse, punaise de Miana.) Common in the town of Miana in Persia, whence its name. Head indistinct; body blood-red in colour, with elevated white spots on the dorsum; eight legs. It is parasitic on the camel, and attacks mau; its punctures are very painful, and are said occasionally to produce death.

A. reflex'us, Latr. (L. reflexus, part. of reflecto, to bend back.) Body marked with tortuous furrows. A parasite of the pigeon, and

occasionally found on man.

Ar'gel. The Cynanchum oleafolium, or

Solenostemma argel.

**A. leaves.** The leaves of the *Solenostemma* argel. They are sometimes used to adulterate Alexandrian senua, from which they are distinguished by being thicker, greyer, more wrinkled, and bitter to the taste.

**Ar'gema.** (Λργεμα; from ἀργόs, shining, bright. F. ἀrgéme.) Name for a small ulcer, with clear base, situated on the margin of the cornea. Whiteness of the cornea.

Arge'mon. ('Αργεμου.) Same as Ar-

Argemo'ne, Tourn. ('Αργεμώνη. F. argemone.) A Genus of the Nat. Order Papaveracea. Petals four to six; stigmas four to seven, radiating, concave; capsule obovate, opening by

valves at the point.

Dioscorides describes two plants under this name, one of which has been identified with Papaver argemone, and the other with Geum urbanum. They were both used in diseases of the eyes, and the latter in the bites of venomous snakes, and in dysentery (Dioscor. l. ii, c. 208).

A. Mexicana. (Tam. Bramadandoo; Duk. Feringie-datura, or Peela; Beng. Buro-shial-kanta; Hind. Bherband. F. argémone de Mexique, pavot épineux; S. Figo del Diferno; G. Teufelsfeige, Stachelmohn; L. paparer spinosum.)
The yellow thistle, or prickly poppy, which
grows wild in Mexico and the Antilles, and is
naturalised in the south of Europe. It is also naturalised throughout India, and in Senegal. Leaves sessile, repand, sinuated, spiny, variegated with white; flowers yellow. It contains a yellow, acrid juice; its seeds are emetic and purgative, and when smoked with tobacco its flowers are narcotic; an infusion of the leaves, and also the juice, are used in ophthalmia, and in chancres. In doses of 30 drops on sugar it rapidly relieves

gastralgia, and the brnised root relieves the pain of the sting of the scorpion. Used in the West Indies as a substitute for ipecacuanha. An oil expressed from the seeds has been recommended for use, instead of castor oil, as a mild and painless aperient, in half-drachm doses. The yellow latex of the stem, leaves, and capsules, are

said to contain morphia.

Argen'son. France, Dauphiné. A chalybeate spring; used in cases of obstruction.

Argen'tal. (L. argentum, silver.) Pertaining to silver.

Argen'tan. A term for German or nickel silver.

Argen'tate. (L. argentum, silver.) combination of ammonic with argentic oxide, which in that case plays the part of an acid.

Also, having the appearance, colour, or lustre of silver.

A. of ammo'nia. Term for the substance otherwise called fulminating silver, or Ammoniosilver oxide, which see.

Argent'eous. (L. argentum. F. arnté.) Silvery. A term applied in Botany to genté.) Silvery. A term applied in Botany to leaves which are covered with a dense, white, silky down.

Argente'ria. (L. argentum.) The Potentilla anserina, so called from its silvery

appearance.

Argen'ti ammo'nio-chlori'dum. 2AgCl+3NH3. Silver chloride and ammonia. Formed by saturating solution of ammonia, by the aid of heat, with silver chloride, and allowing the liquid to cool in a closed vessel. It crystallises in unstable cubes. Has been recommended in syphilitic affections, in doses of a fourteenth of a grain.

A. ammo'nio-ni'tras. See Ammonio-

nitrate of silver, solution of.

A. chloridum. (F. muriate or chlorure d'argent; G. Chlorsilber, salzsaures Sulber, or Silber muriat.) AgCl. Silver chloride. Obtained by precipitating silver nitrate with common salt, or with hydrochloric acid. Insoluble in water, and therefore tasteless. It is regarded as a tonic, and is given in chronic diarrhea, and in various forms of neurosis, especially in epilepsy. The dose is one to three grains, given two or three times in pill form; or it may be used as a salve in syphilitic affections, and in chronic spasm of the orbicularis palpebrarum, 1 part being mingled with from 10 to 25 parts of lard.

A. cyani'dum, U.S. Ph. AgCN. Two ounces of nitrate of silver dissolved in a pint of distilled water are placed in a tubulated glass receiver, to which is attached a tubulated retort, containing two ounces of ferrocvanide of potassium dissolved in ten onnces of distilled water, to this is added a troy ounce and a half of sulphuric acid mixed with four ounces of distilled water. Six ounces is distilled, or the distillation is continued till a precipitate of silver evanide is no longer formed in the receiver; the precipitate is washed in distilled water and dried. It may be made by adding cyanide of pota-sium to a solution of nitrate of silver. It is a curdy-white precipitate, or dry powder, tasteless, insoluble in water and dilute nitric acid, soluble in ammonia. It is used in the preparation of hydrocyanic acid,

A. cyanure'tum. A synonym of A.

cyanidum.

A. iodi'dum. (G. Iodsilber.) AgI. Silver iodide. Obtained by precipitating a solution of silver nitrate with potassium iodide. A yellow powder, insoluble in water and ammonia. It

forms a yellow liquid at a dull red heat, changes by increase of temperature to a reddish-brown fluid, which, on cooling, solidifies into a yellow, soft mass. It is abnormal in its behaviour with heat, contracting when heated from -10° C. (14 F.) to 70° C. (158° F.), and expanding on cooling. It has been used, in the same manner as intrate of silver, in hooping-cough, gastralgia, dysmenorrhoea, and epilepsy. It is said not to produce argyria.

A. nitras, B. Ph. (F. nitrate d'argent; G. salpetersaures Sièber.) AgNO<sub>3</sub>. Nitrate of silver. The directions for making it are —add 2½ fl. oz. of nitrie acid and 5 oz. of distilled water to 3 oz. of refined silver, and heat gently, decant from any precipitate into a porcelain dish, evaporate, and set aside to crystallise; dry the crystals. To obtain the nitrate in rods, fuse the crystals in a platinum or porcelain vessel, and pour the melted salt into a mould; preserve in well-stoppered vessel. The crystals form colourless tabular crystals, the primary form of which is that of a right rhombic prism; they are soluble in distilled water and in rectified spirit. The solution gives a curdy white precipitate with hydrochloric acid, which darkens with exposure to light, and is soluble in liquor ammonise. A small fragment heated on charcoal with a blowpipe first melts and then dedagrates, leaving behind a dull white metallic coating. Ten grains dissolved in 2 drachms of distilled water give, with hydrochloric acid, a precipitate, which, when washed and dried, weighs 8:44 grains.

Silver nitrate is applied both externally and internally. When lightly applied externally silver nitrate in the solid form whitens the skin, the part touched, after a short time and on exposure to the light, turning black; in a few days the epidermis exfoliates. It has a similar action on excoriated and ulcerated surfaces. Its solutions congulate the secretions of such surfaces, and promote healing. When rubbed firmly on the skin it produces a sensation of burning, causes vesication, and a kind of eschar is ultimately formed. It thus effects the removal of warts, condylomata, and polypi. Its powerful action in coagulating albuminous substances has been taken advantage of to arrest chronic purulent discharge, as of gonorrhoa, and to destroy various poisonous agents, as those of syphilis, snake-bite, dissection wound, and the bite of a mad dog, and to prevent the entrance of such poisons into the system; also to promote the cure of fistulous passage, fissures of the mouth, anus, and tongue. Troublesome bleeding from a leech-bite may be stopped by the pressure of a point of the nitrate on the bleeding spot. The spread of crysipelas over the skin may be arrested in some instances by drawing a broad circle around the part affected with the solid nitrate, and the indammation consecutive upon frostbites may be considerably reduced by rubbing the whole surface of the frostbitten part with it. It has been employed in the same way with advantage in eases of chronic arthritis, rheumatism, and in pneumonia. It is largely used, both in substance and in solution, in affections of the eye; the solid nitrate, either pure or mitigated, being chiedy employed to arrest the profuse secretion of purulent ophthalmia, and to effect the cure of phlyctenulæ and uleers; and the solutions, in strengths varying from 1 to 10 grains to the ounce of distilled water, being employed in cases of conjunctivitis, blepharitis, and other slight

inflammatory diseases. In Aural Surgery, it is used in eases of otorrhea, polypi, and contrac-tions of the Eustachian tube. The pitting of smallpox is said to be prevented by opening each vesicle as soon as formed, i.e. about the 4th or 5th day, and applying a solution, coataining 20 grains to the ounce of the salt, to the raw surface beneath, or the skin generally may be painted with the solution. It has been used in cases of ervthema, herpes labialis, eczema, and pruritus, and in threatened bedsore. When only weak solutions are required nitrons other is the best solvent for the nitrate, as it dissolves the fatty secretion of the skin. The nitrate has a strong metallic taste, and has been applied to the gnms in scorbntic affections, to the tongne in cases of fissure and epithelial cancer, to aphthæ of the mucous membrane of the tongue and cheeks, to the inflamed or hypertrophied tonsils and uvula, to the pharynx and larynx in eases of hooping cough, of diphtheritis, and of croup. The solution has been applied in the form of spray, or with a brash or probang, to the chronically inflamed larynx in phthisis, and to the trachea in asthma, bronchitis, and phthisis.

Taken internally it has been recommended in the vomiting of pregnancy, in cardialgia, and in chronic inflammation of the stomach; and in nlcerations, blennorrhoa, and acute and chronic diarrhea of the intestines; also in epilepsy and

various forms of neurosis.

It must be administered with care, and its uso must not be continued for too long a time, since, after the administration of 200 or 300 grains, the parts of the skin exposed to the light have heen observed to assume a dark grey or brown aspect (Argyria), which is irremediable.

In doses of a few grains it is an irritant and corrosive poison, producing vomiting and convulsions. After death the surface is generally of a blue tint, and there is often a blue line round the gnms; the œsophagns, stemach, and intestines are red and inflamed or present white corroded patches, or there may be black patches. The treatment recommended is the administration of solution of common salt, to produce an insoluble chloride, also emeties and white of egg.

It may be recognised by the following tests:-When mixed with sodium carbonate and heated on charcoal with the blow-pipe, a hard, white, malleable metallic bead is produced, without any incrnstation. Hydrogen sulphide gives a black precipitate, Ag.S, insoluble in ammonium sul-phide, but soluble in warm nitric acid. Tho caustic alkalies give a brown precipitate, AgIIO, soluble in excess of ammonia, but not in potash or soda. Hydrochlorie acid and any soluble chloride give a white precipitate, Ag Cl, which turns slate colour after exposure to the light, soluble in ammonia, in hyposulphite of soda, and in potassium eyanide, but insoluble in boiling nitric acid. The chloride, when heated, becomes a horny mass. Iodide and bromide of potassium give yellow precipitates, which are not easily soluble in ammonia. (Tidy.)

A. ni tras fu'sa, U.S. Ph. (L. fusus, part.

of fundo, to pour out. Lapis infernalis; F. pierre inf. rnal; G. geschmolzenes salpetersaures Silber, Hollenstein.) Melt nitrate of silver in a porcelain Hollenstein.) Melt nitrate of silver in a porcelain capsule until frothing ceases, then pour into suit-

able silver morlds. For properties, see A. mitras.

A. oxi'dum, B. Ph. (G. silberoxyd.)
Ag<sub>2</sub>O. Oxide of silver, or argentic oxide. The directions for preparing this are-dissolve 1 an

ounce of silver nitrate in 4 ounces of distilled water, and pour the solution into 3½ pints of solution of lime, agitate the mixture and set aside, collect the deposit on a filter, and wash it with 6 ounces of distilled water, dry at a heat not exceeding 100° C. (212° F.), and keep in a well-stoppered bottle. It is an olive-brown or, when long kept, greyish powder, which at a low red heat gives off oxygen, and is redneed to the metallic state. It dissolves completely in nitric acid, without the evolution of any gas; 29 grains heated to redness yield 27 grains of metallic silver. The exide is used internally for the same purposes as nitrate of silver, than which it is much less likely to produce argyria. Dose,  $\frac{1}{2}$ —2 grains.

Argen'tia exter'na. (L. argentum; externus, outward.) A silvery lamina investing the outer surface of the cup-like cartilage of the

eyes of Cephalopoda.

A. inter'na. (L. internus, inner.) silvery lamina lining the internal surface of the cup-like cartilage of the eyes of Cephalopoda.

Argentic. (L. argentum, silver. F. argentique; G. silberig.) Applied by Berzelius to the first degree of oxidation of silver, or oxydum argenticum; to oxysalts that have this exide for their base; to halosalts with a base of silver, and to sulphosalts corresponding to oxysalts in their composition, or sales argentici.

A. ox'ide. Ag<sub>2</sub>O. Also called silver hemioxide and oxide of silver. See Argenti oxidum.

Argentico-ammonic. (F. argentico-ammonique.) Term applied by Berzehus to double salts resulting from combination of an argentic with an ammonic salt.

A .- cal'cic. Same as Argentico-ammonic, with a calcie instead of an ammonic salt.

A .- plum'bic. Same as Argentico-ammonic, with a plumbic instead of an ammonic salt.

A .- potas'sic. Same as Argentico-ammonic, with a potassic instead of an ammonic salt. A .- so'dle. Same as Argentico-ammonic,

with a sodic instead of an ammonic salt.

A .- stron'tic. Same as Argentico-ammonic, with a strontic instead of an ammonic salt.

Argentie'ro. Italy; near Cape Sarsari, in Sardinia. Λ cold mineral spring containing sulphate of alumina.

Argentif'erous. (L. argentum; fero, to hear. F. argentifère; G. silberhaltig.) Containing silver

Argentilla vulga'ris. (L. argentum; vulgaris, common.) The Potentilla anserina.
Argentina. (L. argentum, silver. F. argentine.) A name for the plant Potentilla anserina, silverweed, or wild tansy.

A. vulga'ris. (L. vulgaris, common.) The Potentilla anserma.

Argentine. (L. argentum. G. silber-furben.) Having the appearance, or shining colour, and especially the clear sound of silver when struck.

A. flowers of an'timony. See Antimonn, argentine flowers of,

Ar'gentite. (L. argentum, silver.) Native sulphuret of silver. It is of a leaden-grey colonr, and slightly lustrons.

Argen'tous ox'ide. Ag40. A name

of Silver tetrantoride.

Argen'tum. (Akin to Sans. rajatam, silver, from the root raj, to shine; some have derived it from άργός, white, from its colour. F. argent; I. argenti; S. platu; G. Silber.) Silver; a metal which is found native, as also in combination with gold, copper, lead, mercury, arsenic, cobalt, sulphur. The pharmacopocial arsenic, cobalt, sulphur. The pharmacopolial name (U.S.A.) for silver which is used only in

the state of oxide and nitrate. See Silver.

A. ace'ticum. Ag. (F. acetate d'argent;
G. essigsaures Silber, Silberessigsalz.) Silver

acetate. See Acetate of silver.

A. aera'tum. (L. aer, air.) A synonym

of A. carbonicum, or Silver carbonate.

A. broma'tum. (G. Brom Silber.) Silver bromide. Obtained by precipitating solution of silver nitrate with potassium bromide. A white substance, becoming grey on exposure to light, insoluble in water, soluble in concentrated solution of potassium bromide in water. Dose, the same as of silver chloride; used in severe forms of neurosis.

A. calcina'tum. (F. oxide d'argent; G. Silberoxyd.) Calcined silver; oxide of silver. See Argenti oxidum,

A. carbon'icum. (F. earbonate d'argent; G. Kohlensaures Silber, Luftsaures Silber.) See Silver carbonate.

A. chlora'tum. A synonym of Argenti chloridum.

A. chlora'tum ammonia'tum. Chlorsilber-Ammoniak, or Silbersalmak.) Silver and ammonium chloride. A crystalline powder, smelling of ammonia, obtained by dissolving silver chloride in boiling liquor ammoniae. Dose, same as silver nitrate.

A. chlora'tum Rademach'eri. Rademacher's silver chloride. A substance prepared in the same way as A. chloratum, except that the precipitated silver chloride is digested with dilute spirit of wine.

A. chro'micum. (F. chromate d'argent; G. chromsaures Silber.) See Silver chromate.
A. cor'neum. (L. corneus, horny. F.

argent corné.) A synonym of Argenti chloridum.
A. cyana'tum. (F. cyanure d'argent; G. Cyansilber, or blausaures Silber.) Silver cyanide.

See Argenti eyanidum.

A. cyanogena'tum. Same as Argenti cuanidum.

A. divi'sum. (L. divisum, from divido, to divide, to separate.) Metallic silver in a very fine state of division. It has been recommended in syphilis.

A. folia'tum. (L. foliatus, leaved. F argent en feuilles, argent buttu; G. Bluttsilher Silberblütter, geschlagenes Silber.) Silver leaf; nsed for covering pills.

(L. fugitirns, fleeing A. fugiti'vum. (L. fugitirns, fleeing away.) Fugitive or mobile silver. A synonym of Mercury.

A. ful'minans. (L. fulmino, to lighten. F. fulminate d'argent, ammoniure d'argent; G. Silber oxydammonium, Kuallsilber.) Ammoniosilver oxide. See Fulminating silver.

A. fulmin'icum. (L. fulmino, to lighten.) A synonym of Fulminating silver.

A. fu'sum. (L. fusus; part. of fundo, to pour out.) A synonym of Mercury.

A. iu'sum mitiga'tum. (L. fusus; mitigo, to render mild.) A synonym of A. nitricum cum kali nitrico.

A. hydrago'gum Boyl'ei. A synonym of Argenti nitras.

A. hydrocyan'icum. A synonym of Argenti cyanidum.

A. hyposultaro'sum. (G. unterschwefligsuures Silber.) AgNaS<sub>2</sub>O<sub>3</sub>. Silver sodium theosulphate or hyposulphite. Made by adding a solution of sodium hyposulphate to one of silver chloride or nitrate. It is slightly soluble in water, and has a sweet taste. It has been used in epilepsy, paralysis agitans, and other neuroses.

A. ioda'tum. Sce Argenti iodidum. A. liq'uidum. (L. liquidus, fluid.)

synonym of Mercury. A. metal'licum. (Μέταλλον, a metal.) Mctallie silver.

A. mob'ile. (L. mobilis, easily moved.)

A synonym of Mercury.
A. mor'tuum. (L. mortuus, dead.) A term for metallic silver, in contradistinction to argentum vivum, mercury.

A. muriat'icum. A synonym of Argenti chloridum.

A. muriat'icum ammonia'tum. synonym of Argenti ammonio-chloridam.

A. na'trico-hyposulfuro'sum. unterschwefligsaures Silberoxyd Natron.)  $\Lambda$ substance obtained by dissolving silver oxide in solution of sodium hyposulphite. It forms erystals of sweetish taste, which are soluble in water, and the solution in the proportiou of 1 part to 50 or 100 of water has been recommended for subcutaneous injection, as being preferable to solutions of silver nitrate.

A. nitra'tum. Nitrated silver. A synonym

of Argenti netrus.

A. ni'tri. A synonym of Argenti nitras, A. ni'tricum. (F. nitrate d'argent; G. Salpetersaures Silber.) A synonym of Argenti nitras.

A. ni'tricum crystallisa'tum, G. Ph. (F. nitrate d'argent crystallisé; G. krystallisirtes salpetersaures Silber.) Silver nitrate in crystals.

A. ni'tricum cum ka'li ni'trico, G. Ph. (G. salpeterhaltiger Hollenstein.) Mitigated silver nitrate. A preparation made by melting and mixing 2 parts of potassium nitrate with I part of silver nitrate. It is chiefly used in ophthalmic surgery, as an application to the conjunctiva of the lids in chronic blepharitis.

A. ni'tricum fu'sum. (L. fusus, part. of fundo, to pour out. F. nitrate d'argent fondu, argent nitrique fondu, lune caustique; G. geschmolzenes Silber nitrat, Silber atzstein höllischer Feuerstein.) Lunar caustic. Fused silver nitrate. See Argenti nitras fusa.

A. ni'tricum fu'sum mitiga'tum. (L. fusus; mitigo, to render mild.) A synonym of A. nitricum cum kali nitrico.

A. ni'tricum oxyda'tum crystallisa'-

tum. A synonym of Argenti nitras. A. oxyda'tum. (G. Silberoxyd.) Silver

oxide. See Argenti oxidum. A. oxyda'tum aceta'tum. A synonym

of Acetate of silver. A. oxyda'tum ace'ticum. A synonym of Acetate of silver.

A. oxyda'tum ni'tricum. A synonym

of Argenti nitrus. A. oxyda'tum ni'tricum fu'sum.

synonym of Argenti nitras fusa.

A. præcipita'tum. (L. præcipitatus, part. of practipato, to throw down.) Silver obtained by the reduction of silver chloride. Obviously inert. One part of silver chloride is mixed with a zine rod with four parts of dilute sulphurie acid until the chloride is converted into a black powder, which is washed in solution of ammonia, then in dilute nitromnriatic acid, and lastly, in pure water, and dried.

A. purifica tum, B. Ph. (L. purificatus, part. of purifice, to purify.) Refined silver. Pure metallie silver which, if ammonia be added in excess to a solution of the metal in nitrie acid, exhibits in the resulting fluid neither colour nor turbidity,

A. pu'rum divi'sum. (L. purus, pure; divisus, part. of divido, to divide.) Silver obtained by the reduction of silver chloride.

A. repurga'tum. (L. repurgo, to clean again.) Refined silver.

A. sall'tum. (L. salitus, part. of salio, to salt.) A synonym of Argenti chloridum.

A. subsulfuro'sum. A synonym of A. hyposulfurosum.

A. sulphu'ricum. Ag<sub>2</sub>SO<sub>4</sub>. (G. schwefelsaur.s Silber.) Silver sulphate. It has been recommended as a remedy in epilepsy. See Silver sulphute.

A. vi'vum. (L. vivus, living. F. argent vif, G. lebendiges Silber, Quecksilber.) A synonym of Mercury.

A. vi'vum purifica'tum. (L. purificatus;

from purifico, to make clear.) Another name for the Hydrargyrum purificatum. A. zootin icum. (Žιφον, an animal.) A synonym of Silver eyanide.

**Arges.** (' $\Lambda \rho \gamma \tilde{\eta} s$ .) A serpent considered

by Hippocrates to be excessively venomous.

Ar'ghel. See Cynauchum arghel. Ar'gil. (F. argile; 1. argilla; S. arcilla; G. Thon.) An old name for alumiua.

Also, a name of a whitish earth, soft and unctuous to the feel, composed principally of silica and alumina, but often containing calcium earbonate, and coloured by iron oxide. Argillaceous earths were formerly employed in medicine. See Terra.

**Argilla.** ("Αργιλλος, potter's earth. F. argile, or argille; G. Thonerde.) Alumina.

In G. Ph. described as a coherent, friable, whitish, faded-looking earth, which is somewhat tenacious when damp, falls to pieces in water, and consists for the most part of pure clay.

A. ace'tica. A synonym of Aluminium acctute.

A. al'ba. (L. albus, white.) A synonym of Bolus alba.

A. bo'lus fia'va. (Βῶλος, a clod of earth. L. flavus, golden or reddish yellow.) A synonym of an old preparation called Terra lemnia.

A. bo'lus ru'bra. (Balos. L. ruber, red.) A synonym of Bole, Armenian.

A. ferrugin'ea. (L. ferrugineus, impregnated with iron.) A synonym of Bole, Armenian.

A. ferrugin'ea ru'bra. (L. ferrugineus, impregnated with iron; ruber, red.) A synonym

of Bole, Armenian.
A. hydra'ta. A synonym of Alumina hydrata.

A. hydrochio'rica. A synonym of Aluminium chloride.

A. incarna'ta. (Low L. incarnatus, fleshcoloured.) A synonym of Bole, Armenian.

A. ka'li sulphu'rica. A synonym of

Potassium alum

A. murlat'ica. A synonym of Aluminium chloride.

A. ni'trica. A synonym of Aluminium nitrate.

A. och'rea ru'bra. (L. ochru, a kind of

earth that colonrs yellow; ruber, red.) A synonym of Bole, Armenian.

A. pal'lida. (L. pallidus, pale.) A synonym of Bole, white.

A. plumo'sa. (L. plumosus, full of feathers.) A synonym of Asbestos.

A. pu'mex. (L. pumex, pumice stone.) A synonym of Pumice stone.

A. pu'ra. (L. purus, pure.) A synonym Alumin exsiccatum, and also of Alumina hydrata, G. Ph.

A. ru'bra. (L. ruber, red ) A synonym of Armenian hale.

A. sulfu'rica. A synonym of Aluminii sulphas.

A. sulphu'rica alcalisa'ta. Alkalised sulphurated argil. A synonym of Alum.

A. sulphu'rica usta. (L. ustus, part. of uro, to burn.) A synonym of Alumen exsicca-

A. vitriola'ta. Vitriolated or sulphated argil. A term for alum.

( Appullos. G. thon-Argilla ceous. haltig, thoureich.) Belonging to, or of the nature of, clay or alumina.

A. earth. A synonym of Alumina. Argil'læ ace tas. Acetate of argilla. A synonym of Aluminium acetate.

A. sul'phas. Sulphate of argilla. A

synonym of Common alum.

A. supersul'phas alcalisa'tum. Supersulphate of argilla alkalised. A synonym of Common alum.

**Argillic'olous.** ('Αργιλλος: L. colo, to inhabit. G. thonbrwohnind.) Living in argil or clay.

**Argilliferous.** ('Αργιλλος; L. fero, to bear. G. thonhaltig.) Containing argil or clay. Argil'liform. (Αργιλλος; L. forma, likeness. G. thonformig.) Resembling argil or

Argillit'ic. ('Αργιλλοs.) Pertaining to

argil or clay

Argillo-arena ceus. (Αργιλλος: L. arena, sand. G. thonsandartig.) Formed of argil and sand.

A.-areno'sus. (L. arenosus, sandy. argillosubuleux; G. thonsartig.) Applied by Brongniart to a group of rocks containing clay aud sand.

A .- ferrugino'sus. (G. thonrostartig.) Containing clay and oxide of iron.

A .- gypso'sus. (G. thongypsartig.) Con-

taining clay and gypsum. **Argilloid.** (Αργιλλοs. G. thonahnlich.)
Resembling argil; applied to rocks the chief bulk of which presents the aspect or properties of certain argils or clays.

Argillolith'ic. ('Αργιλλα stone.) Formed of hardened argil. ('Αυγιλλος; λίθος, a

Argil'lous. (F. argilleux; G. thonig,

thonartig.) Similar to Argillaceus.

Argis'tatus. ('Αργός, shining, white.) Incorporated with white wax. (Turton.)

Ar'gol. Same as Argal.
Argonaut'idæ. A Family of the Section Octopoda, Order Dibranchiatæ, Class Cephalo-poda. Eight arms with sessile suckers; female with a calcareous, external, one-chambered shell.

Ar'goor. An article of the Indian Materia Medica, probably cinnabar. (Waring.)
Arguel. The same as Argel.

Argulin'idæ. A Family of the Order Siphonostomata, of the Subclass Copepoda. The

body is flattened; cephalothorax and abdomen fused; post-abdomen small; eyes two, aggregate; Fem iles with no eggtwo pairs of maxillipedes sacs; front antennæ hook-like, the second jointed; abdominal feet only eleft at the tip; liver multiramose; proboseis protrusible, with two annular poison glands; front maxillipedes forming suckers (Argulus) or hooks (Gyropeltis). (Macalister.)

Argulus, Müll. A Genus of the Family

Argulidæ, Suh oder Branchiura, Order Capepoda. First pair of legs transformed into large suckers; last four pairs bilid, and furnished with ciliated filiform processes; mouth with a per-

forating apparatus.

A. folia'ceus, Linn. (L. foliaceus, leaf-like.) Carapace greenish. Parasitic on the carp and other fishes.

Argumentum integritatis. (L. argumentum, proof, argument; integritas, inno-cence.) The hymen. (Danglison.)

**Argyran themous.** ('Αργυρος, silver; ανθος, a flower.) Having shining white flowers. Argyran thous. ("Aργυρος, silver; avtos, a flower. F. argyrantheme; G. silberblumig.) Having flowers of a shining white.

Argyrei'a. A Genus of the Nat. Order Convolvulacea

A. bractea'ta, Choisy. Hab. Madras. Twining shrubs. Leaves on long petioles, cordateovate, shining green above, silky and hirsute below; sepal hairy; peduncles axillary, terminally two- or three-branched, each bearing a flower with three bracts and the base of the calyx, and a bractless sessile flower in the axilla. A decoction of the leaves is used by natives of India as a fomentation in cases of scrofulous enlargements of the joints, the boiled leaves at the same time as a poultice.

A. Malabar'ica, Choisy. Hab. Mysore, Malabar. Leaves acute, slightly hairy; peduncles many flowered at the apex; outer sepals villous, heary; root eathartic. Used externally in erysipelas; leaves beaten up with butter are

applied to abscesses.

A. specio'sa, Sweet. (L. speciosus, hand-some.) Hab. Malabar. Leaves glabrous and thickly nerved above, silky beneath; peduncles umbellately capitate. Leaves are used in poultice, and as a rubefacient and stimulant applica-

tion in skin diseases Argy'ria. ('Apyvoos, silver.) Discoloration of the skin, mucous membranes, and other parts of the body, with silver, in consequence of its prolonged internal administration. Neumann found that, with the exception of the epithelial lining of the glands and their contents, the outer coat of the hair, and the rete, all layers of the skin composed of connective tissue and containing vessels presented a deposit of silver in a granular form. The silver is probably deposited in the form of finely divided metal or of oxide; the greatest quantity found was only '061 per cent, in the dried kidney. Blistering, potash and soap baths, the internal use of iodide of potassium, have been recommended, with little good effect; two eases have been reported of gradual fading of the stain during the administration of iodide of potassium and the use of mercurial vapour baths for the cure of syphilis.

Argyri'asis. Same etymon and meaning as Argyria.

Argyric. (Same etymon. F. argyrique.) Pertaining to silver A. salts. (F. sels argyriques.) Silver salts.

Argyr'ides. ('Apympos, silver.) Name by Ampère for a genus of simple bodies, comprising bismuth, mercury, silver, and lead; by Bendant for a family of minerals, having silver for their

Argyri'tis. ('Λργυρίτης, belonging to silver, silver ore; from aργυρος, silver. G. Silber-glatte.) Old term, used by thiny, l. 33, H. N. c. 6, for lithargie or semivitrified oxide of lead, separated in the process of extracting silver from its ores; so called because it is a mixture of lead and silver, or from its colour only, because white like silver, as Dioscorides states, v, 102.

A. ter'ra. Term formerly given to earth taken from silver mines, having small particles

of that metal mixed with it.

**Argyrochæ'ta.** ('Αργυρος, silver; χαίτη, long hair.) The feverfew, Chrysanthemum parthenium.

**Argyroco'ma.** ('Αργυρος, silver; κόμη, hair.) Name for a Subgenus of Gnaphalium, or cud-weed, the species of which have white silvery

Also, a name of the Gnaphalium muricatum.

Argyrod'amas. ('Αργυρος, silver; ἀδάμας, unconquerable.) Old term for a kind of talelike silver, unaffected by fire, supposed to act as a mechanical destructive when swallowed, by its sharp laming penetrating the coats of the stomach and intestines; according to Andr. Casalpinus, Art. Med. iii, c. 32, and P. Zaechias, Quest. Medico-Leg. ii, 2, q. 4, n. 24.

Argyrogonia. (Αργυρος, silver; γονεία,

a bringing forth of fruit.) An aichemical term for the argentific seed concocted from silver, first perfectly dissolved, or the argentific tineture, of a white colour, by which silver might be generated, or rather, by which base metals might be

made to appear like silver.

Argyrolib anos. (' $\Lambda \rho \gamma \nu \rho \sigma s$ , silver; λiβavos, the frankincense tree.) Old name for the white olibanum.

Argyrolith os. (' $\Lambda \rho \gamma v \rho o s$ , silver: λίθος, a stone.) Old name for a kind of tale of

the appearance of silver. (Quincy.)

Argyrolith'us. Same as Argyrolithos. Argyroph'ora antid'otus. ("Apyvρος; φορέω, to bear; αντίδοτος, a remedy.) Old name for a medicine consisting of opium, various gums, aromatics, &c.; it was recommended in all diseases of the head, and in other cases. It was named the money-bringing antidote, from its high price.

Argyrophthal'mus. ('Αργυρος; δφ-Balpos, the eye. G. silberangig.) Having the

eyes of a silvery white.

Argyrophyllous. ( Αργυρος ; φύλλον, a leaf. G. silberblattrig.) Having leaves covered with close down or soft hair, whitish and shining.

**Argyropæ'ia.** (Αργυρος, silver; ποιίω, to make. F. argyropie; G. Silberverfertigung, Silbermackerkunst.) An alchemical term for the art of making silver by transmutation of the baser metals into the more valuable one.

Also, applied to the separation of silver from its

**Argyropy**'gus. (Λργυρος; πυγή, the rump. G. sulberrumpñy.) Having the extremity of the abdomen white.

Argyrostig'mus. (Δργυρος; στίγμα, a spot. G. silberfleekig.) Applied to plants having flowers marked here and there with white spots, as Begonia argyrostigma.

**Argyros'tomus.** (Λργυρος; στόμα, a mouth. G. silbermundig.) Having the mouth of a silver white, as Musca aryyrostoma.

Argyrotrophe'ma. ('Αργυροτρόφημα; from ἄργυρος, silver; τροφή, food.) Term, used by Galen, de Suecor. bon. et vit. c. 13, for a kind of food prepared from milk for attempering the heat of the body.

Ar'gyrus. (Αργυρος, silver; from άργος, white.) Old name for the metal argentum, or

silver.

Arha'gea. A Suborder of the Order Nemertiden, Class Turbellaria, characterised by having rudimental or no cephalic grooves.

Bevoid of rheumatic.

pains; having no rheumatism.

Arhi'za. ('A, neg.; ρίζα, a root. G. Wurzellos.) A term applied to plants that have no root. See Arrhiza.

**Arhizoblas'tous.** ('A. neg.; ρίζα, a root; βλαστός, a sprout.) Applied by Wilde-('A. neg.; ρίζα, a now to embryoes that have no root.

Arhu'ka. The vernacular name in India

of the Cajanus indicus.

Arhynchotæni'adæ. ('A, neg.; ρύγyos, a snout; \(\tau\)ia, a tapeworm.) A term proposed for those tapeworms which have no proboscidiform head.

Arhyncotæ'nia. (Same etymon.) Genus of the Family Teniade, Order Cestoda.

A. crit'ica. A tapeworm infesting the Hydrax capensis, which in its cestode form has been called Canurus serialis.

Arhync'tia. ('A, neg.; ρύγχος, a snout.) Absence of the frontal proboscis in animals or of the face in man; there is often fusion of the eyes into a single globe.

**Arhythmic.** ('A, priv.;  $\dot{\rho}\nu\theta\mu\dot{\phi}s$ , measured motion.) Without rhythm or regularity; applied to the state of the pulse.

Arhyth'mous. The same as Arhythmic. A'ri tu'ber. The root of the arum.

A'ria. Old name for the white bean-tree, Cratæqus aria.

Aria-bepou. The Malay name of the Azadirachta indica.

A'rians. See Aryans.

Ari'ca bark. (Arica, a port of Peru.) The bark of the Cinchona pubescens, var. Pelleteriana, of Weddell; originally so called from the port at which it was shipped. Now known as Cuseo bark.

Aric'ia. Same as Aricin.

Arici'idæ. A Family of the Suborder Sedentaria, Order Polychæta, Class Annelida. Body composed of numerous segments; head with only small feelers or none; the oral segment with bristle-bearing eminences. The two-branched or two-rowed bristle eminences often extend with the short branchize to the middle of the back. Bristles simple.

Aricin. (Arica, F. aricine; G. Aricin.) from a species of cinchona, Cinchona pubescens, var. Pelleteriana, coming from Arica in Pern. It crystallises in white prisms; rather astringent than bitter; soluble in chloroform easily, and also in alcohol and ether. It melts at 188° F., but is not volatile. It forms an uncrystallisable neutral salt with sulphuric acid, and an intense green colour with nitric acid. According to Hesse, it is only a more or less pure einchonidine

Aric'ymon. ('Αρικύμων, prolific; from άρι, incret; κύω, to be pregnant.) Ancient term for a woman who readily and frequently con-

ceives. Hippoerates, de Superfat, x, 10, 11.

Ar'id. (L. aridus, dry. F. aride; I. arido; G. tracken, durr.) Dry.

Aride'na. (L. aridus, dry.) Leanness.

Aridifolie'æ. (L. aridus, dry; folium, a leaf. F. aridifolie'. Applied by Agardh to plants having leaves generally dry, as Epacridea, Ericea.

Ariditas. (L. aridus, dry. F. ariditė; G. Dürre, Trockenheit.) Dryness.
A. cor'poris. (L. corpus, the body. Ξηρασία.) Term, used by Galen, Def. Med., for marasmus; dryness of the hody. Also formerly applied to the tongue, as a symptom of fever.

Aridity. (Same etymon. F. aridité; I. arideza; S. aride, G. Durre.) Dryness.
Aridu'ra. (L. areo, to be dried up. F.

aridure ; I. aridezza ; S. aridura ; G. Darrsucht.) Old term for a wasting or leanness, as that attending consumption or hectic fever. Applied particularly to the wasting of a limb or member, according to Hartmannus, in Prac. Chymiatric. part. poster. c. 183, and so distinct from atrophia, or a general wasting of the body.

A. cor'dis. (L. cor, the heart.) Atrophy

of the heart.

A. he'patis. (L. hepar, the liver.) Atrophy of the liver.

Ari'gous. ('Λ, neg.; ρίγος, cold.) Without

cold or rigor. Art'ka. A kind of koumiss or spirit distilled

from mare's milk in Tartary. Ari'kelu. The Telugu name of Paspalum scrobiculatum.

Ar'il. See Arillus.

Arillary. (F. arillaire; G. samen-deckig.) The arilla of some Passiflorea, much divided and in form of a pulpous membrane, is termed arillary tunie.

Aril'late. (Arillus. F. arillé.) Having

Aril'li myris'ticæ. Mace; the arillus of the nutmeg

A. myris'ticæ moscha'tæ. The arillus of the nutmeg tree, Myristica moschata. Aril'liform. (Arillus; L. forma, shape.)

Resembling an arillus, as in the substance termed arnotto.

**Ar'illode.** Term applied to an arillus springing from the margin of the micropyle. See

Arillus micropylaris.

Aril'lus. (Low L. arillus, a raisin. F. arille ; G. Samenmantel, Samendecke.) A thickening of the funiculus or of certain regions of the seed or placenta, which, gradually extending upwards, forms an additional investment of the seed outside the testa.

In the nutneg, the arillus, which is the substance termed mace, commences by a thickening on the right and left sides of the base of the ovule between the hilum and the micropyle; it extends gradually around the hilum and then ascends to the right and left towards the exostome. A very similar form of arillus is observed in Maranta, Thalia, Stromanthe, and Calathea.

In Bureavia, which has an arillus that, when mature, resembles mace, the first appearance of the organ consists of an outgrowth of cells forming flattened hairs that take origin from around the micropyle, the sides of the hilum, and the

funiculus.

In Phyllanthus and in Oxalis the primine thickens throughout, and thus is constituted a general arillus. If instead of a thickening of the funiculus or coats of the seed the cells form hairs or filaments, an arillus is formed, which may be localised, like the pilose arillus of Wrightea and Kixia of Alstonia, the Hibiscus, and the Gossypium.

A kind of arillus, formed by a large cellular growth or crust situated at the level of the chalaza, seen in Cheledonium and some other Papaveraceæ, is termed arille du raphé hy M. Baillen,

and strophioles by other authors.

M. Baillon has suggested that the terms true and false arillus, Arillode, Caruneulæ, Strophioli, and the like, should be abolished, and that instead all forms of arillus, whether arising from the funiculus, the raphé, the chalaza, the hilam, or the micropyle, or from several of these regions coincidently, should be distinguished as either generalised or localised arilli, according to whether they form a partial or a complete investment of the seed; and further descriptions may be given of the form, consistence, and degree of development that may be present.

A., false. A synonym of Arillode. A. funicula'ris. (L. funcalus, a slender rope. F. arille funiculaire.) An arillus springing from the funiculus. Thus, in Nymphaca it commences by an annular thickening of the funiculus just above the hilum, which, rapidly enlarging by the growth of new cells, covers the summit of the ovule and conceals the micropyle, though without contracting any adhesion to the

seminal integuments. A. micropyla'ris. (Micropyle. F. arille micropylaire.) An arillus consisting of a thickening of the exostome. Thus, in Ricinus, a collar forms a little before the opening of the flower around the exostome, which is formed by a thickening of that membrane. The rest of the primine is reduced to a thin membrane. The thickening forms three lobes, two large and one small, between which is the micropyle. This is the organ sometimes called an arillode, and by M. Planchon the caruncle. In other Euphorbiacea its size and form undergo much variation; in Cluytia it becomes palmate; in Manihot and Cureas it is biauriculated and folded like a fan; in Hyananche it forms a narrow, straight tongue, with serrated borders; and in Acalypha it resembles a Phrygian cap. By the growth of the seed, and its own development, the micropylar arillus of Euphorbiaceæ may change its position, and ultimately come into close relation with the hilum.

A. myris'ticæ. The arillus of the nutmeg. A synonym of Mace

A. umbilica'lis. (L. umbilicus, the navel. F. arille ombilical.) An arillus springing from the hilum. Thus, in Buxus, the arillus is an outgrowth from the seminal integuments immediately around the hilum, and it forms two small lips, which contract no adhesions to the seed, and are soon arrested in their growth.

Ari'mara. The Strychnos cogens, Benth. Arimathe'a. Palestine; a place near Jerusalem, where the Jews show the tomb of Christ. Here is a highly saline and bitter spring, which enjoys a great repute in the neigh-

bourhood as a vermifuge.

Ariobarza'nios. (Ariobarzanes, king of Cappadocia.) Name formerly given to a diseutient plaster composed of cerussa, turpentine, frankineense, &c., according to Panlus Ægineta, iii, 23; vii, 17.

Ariobarza'nius. Same as Ariobar-

Arion, Fér. A Genus of the Family Limacina, Suborder Pulmonata, Order Gasteropoda, Rudimentary shell fragile; genital orifice in front of the middle of the dorsal shield and below the respiratory orifice; a caudal gland and a mucous orifice at the extremity of the back.

A. empirico rum. (G. Nachtschnecke.)
The slng. A common animal in gardens and
woods throughout Europe. The body is destitute
of a shell, clongated, slimy, two or three inches
long, half an inch broad, black, brown, greenish,
or orange coloured, with flattened foot and arched
and rugose back; head not distinctly separated
from the body, provided with four feelers, the
two longest bearing eyes. At the fore part of the
dorsum is a shield, partly hardened by the deposit
of calcarceous granules, which covers the pulmonary cavity and the sexual aperture. The sexual
organs are destitute of a gland sac and stylet. A
mueous sac opens at the posterior extremity of
the body. It was formerly used in medicine for
the same purposes as the suail.

Arisæ'ma. A Genus of the Nat. Order

Araeca.

A. atroru'hens. (L. ater, black; rubens, red.) A synonym of Arum triphyllum.

A. pytho nium. The juice is caustic.
A. triphyllum, Schott. (Γρis, thrice; φέλλον, a leaf.) A synonym of Arum triphyllum.

A.u'tile. (L. utilis, nseful.) Hab. India. A species with a tuber yielding a faccula like arrowroot.

**Aris'arum.** ('Αρίσαρου.) The herb monkshood, so called from its likeness to the arum.

Arish'ta. The Hindoo name of the Aza-dirachta indica.

Aris'see. The Tamul name of Oryza sa-

Arista. (L. arista. F. arète; G. Granne.)
The beard or sharp point issuing from the husk
of grasses; the awn. A bristle-like process surmounting any organ. It is commonly applied to
the prolongation of the median nervure of the
palex of grasses, and sometimes also to one of the
lateral nervures.

Aristalookheea. The Arabic name of Aristolochia longa.

**Aristalthæ'a.** ('Aριστος, hest;  $\dot{a}\lambda\theta\epsilon ia$ , marshmallow.) Ancient name for the plant  $\Delta l$ -thea officinalis, or marshmallow.

Aristar'chi, antid'otus Paulitaa. Term for an ancient medicine, much extolled by Aëins in various diseases, composed of opium, castor, styrax, galbanum, and aromatics, mixed up with honey; also called Confectio archigenis.

Aris'tate. (L. arista, the awn, or sharp point of the husk of grasses. F. ariste; G. begrannt.) Having an awn, or long rigid spine; awned; bearded.

Aristiferous. (L. arista; fero, to bear. G. arannentragend.) Awned.
Aristio'nis machinamen'tum.

Aristio'nis machinamen'tum. (L. machinamentum, a machine.) Name for a former apparatus for reducing dislocations, invented by Aristicu.

**Aristoloch'ia**, Linn. ('Αριστολοχία; from ἄριστος, the best; λοχεία, childbirth; or

λόχια, the discharge after childbirth; because it was highly esteemed as promoting childbirth, or the lochial discharge. F. aristoloche; G. Oster-lazei, Schlangenveurzel.) The plant birtbwort. A Genus of the Nat. Order Aristolochiaecae. Calyx tubular, oblique, inflated at the base, hairy inside; anthers six, rarely five or seven, adnate to the style; capsule six-celled, many-seeded, inferior.

A. angulci'da, Linn. (L. anguis, a suake; cædo, to kill.) Leaves cordate, acuminate; stipules cordate, solitary, amplexicauline; calyx erect, with a lanceolate tip. Hab. Mexico. Tho snake-killing birthwort, the jnice of its root so stupefying scrpents that they may be handled with impunity; also, esteemed a preventive of the venomous effects of the bite of scrpents. It is said to be antiperiodic and emmenagogue.

A. antihyster'ica. The rhizomes imported from Rio Grande do Snl, run in a horizontal direction, are often six inches long and from one third to one half inch thick, knotted; the cortex corky, but thinner than the rather solid pale brown wood. It contains cerin, a hard and a soft resin, gnm, starch, ethereal oils, and salts. An antispasmodie.

A. arbores'cens, Linn. (L. arboresco, to grow to a tree.) A species with cordate-lanceolate leaves. The jnice of the stem and leaves is said to be poisonous, and the root to be emmenagogue.

A. barba'ta. (L. barbatus, bearded.) Hab. Venezuela. An aromatic and antispasmodic, like the genus.

A. biloba'ta, Linn. The bilobed aristolochia; used as the other species. It has been used as an emmenagogue and expectorant; a decoction of the leaves is used in itch.

A. bœ'tica, Linn. (L. Bæticus, belonging to the Bœtis, a river of Spain, which gave its name to a district now forming Andalusia and a part of Granada.) A species said to be poisonous to snakes.

A. bractea'ta, Linn. (Mod. L. bracteatus, having bractes. Tam. Addatimapalay; Tel. Gadidagudapa; Hind. and Duk. Kera-mar.) Stem trailing; leaves alternate, petioled, kidney-shaped, curled at the margins, glaucons below; flowers axillary, solitary, peduncled, drooping. A nauseously bitter plant, given by native Indian practitioners as an anthelmintic, antispasmodic, antiperiodic, and oxytocic. The fresh leaves, bruised and mixed with castor oil, are considered a valuable remedy in obstmate psora.

A. cauda'ta, Jacq. (L. cauda, a tail.) Probably the same as A. hilobata.

A. ca'va. (L. cavas, hollow.) A synonym of Fumaria bulbosa.

A. clematitis, Linn. (F. aristoloche des vignes, aristoloche elematite; G Osterlusci.) The common clematis-like or climbing birthwort. A native of the South of Europe. Leaves roundish-cordate, glaucous beneath; stem crect, simple, angled; flowers clustered, axillary; lip narrow, acute; root long, vertical, twisted, angular, annulated, and from one quarter to one half inch thick, strongly scented, and of aerid taste. The transverse section exhibits a thin cortex containing yellow oil cells; vascular bundles wedgeshaped, separated by white medullary rays; medulla slender. The parenchyma contains starch. The rhizome contains an ethereal oil, elematidin, and aristolochie acid. Formerly used as an emmenagogue and oxytoxic.

A. cordifo'lia, Mutis. (L. cor, the heart; folium, a leat.) Used as the rest, especially as an antidote to the bites of poisonous serpents.

A. cret'ica. (L. Creticus, Cretan.) A sy-

nonym of A. clematitis.

A. cymbif'era. (L. cymba, a boat; firo, Rhizome twisted, as long as six inches, to bear.) one eighth to one half inch thick, branched, knotted; cortex thick, mealy, white internally; medullary rays white. Properties similar to A. serpentaria. It supplies the chief part of Guaco bark.

A. faba'cea. (L. fabaccus, relating to a

bean.) The Famaria bulbosa.

A. toe'tlda. (L. fwtidus, stinking ) Hab. Mexico. Used in decoction as an application to foul ulcers.

A. fragrantis'sima, Ruiz. (L. superl. of fragrans, sweet-scented.) Called in Peru star reed; is highly esteemed as a remedy against dysenteries, malignant inflammatory fevers, colds, and rheumatic pains.

A. frutes cens. (L. frutex, a shrub.) A

synonym of A. sipho.

A. galea'ta. (L. galeatus, helmeted.) A species with properties similar to those of A. serpentaria.

A. geminiflo'ra, Kunth. (L. geminus, twin-born; flos, a flower.) A species supplying some part of the Guaco bark.

A. grandiflo'ra. (L. grandis, large; flos, a flower.) A West Indian species, whose flowers have a very fetid smell, and whose root is poison-

ous. Used in dropsy, dyspepsia, and paralysis.

A. hasta'ta, Nuttall. (L. hustatus, armed with a spade.) Hab. North America. Leaves hastate, acute, somewhat cordate; lip of the corolla ovate. A doubtful species. Found along with the roots of the officinal A. serpentaria.

A. hirsu'ta, Muhlenberg. (L. hirsutus, hairy.) Stems jointed, flexuose, pubescent; leaves roundish-cordate, pubescent; peduncles solitary, hairy, with three or four leafy, hairy bracts, and one flower with a hairy corolla; root like, and with similar properties to, A. serpen-

A. in'dica. (L. indicus, Indian. Hind., Duk., and Beng. Isharmul; Tam. Perumarindu; Tel. Ishvaraveru; Mal. Karalekam.) Indian birthwort. An antidote to snake-bites. Given in white leprosy. Supposed by the Hindoos to possess emmenagogue and antarthritic virtues; it is very bitter.

A. lablo'sa. (L. labiosus, having large lips.) A species having similar properties to A.

serpentaria.

A. lon'ga. (L. longus, long. F. aristoloche longue.) The long-rooted birthwort. Hab. South Europe. A species judigenous to the sound Europe. The tubers are 2.5—4 cm. thick, 8—10-25 flattened. dense, and A species iudigenous to the South of 15 cm. long, more or less flattened, dense, and hard; externally pale brown, slightly wrinkled; internally yellowish white, with radially arranged, darker coloured, vascular bundles, separated by bright medullary rays. They contain much starch; taste at first disagreeably sweet, then persistently bitter and slightly acrid. The root only is in use, having a slightly aromatic smell, and warm hitterish taste, with slight pungency; sometimes given in gont.

A. macrophyl'la, Lam. (Μακρός, long;

φύλλου, a leaf.) A synonym of A. sipho.

A. macru'ra, Gomez. (Μακρός, long; οὐρά, a tail.) Rhizome spongy, one third to two

thirds of an inch thick, with thick, spongy, dark brown cortex, which is usually thicker than the dark brown soft wood. Properties as A. serpen-

A. maxima, De Cand. (L. maximus, very great.) A species which supplies some part of Guaco bark.

A. medicamen'ta. (L. medicamentum, a drug.) Old term for medicines which promote the lochial discharge

A. odoratis sima, Linu. (L. odoratus, sweet swelling.) A species found among commercial Guaco.

A. officina'lis, Nees. (L. officina, a shop.) A synonym of A. serpentaria

A. pal'lida. A plant having the properties of the species and reputed to be anguicidal.

**A. pistoloch ia.** (L. pistolochia, a plant facilitating parturition; probably from  $\pi\iota\sigma\tau\acute{o}\omega$ , to make trustworthy;  $\lambda\acute{o}\chi\iota a$ , childbirth. F. aristoloche erénellée, a. petite.) Hab. Europe. Roots consist of fine yellowish-brown fibres attached to a central stem; they have a pleasant aromatic smell and a bitter and rather acrid taste. Used as a stimulant, tonic, diaphoretic, and diu-

A. polyrrhi'zos auricula ribus fo'liis. (Πολός, many; ρίζα, a root; L. aurwula, the ear; folium, a lear.) The A. hastata.

A. pseudoserpenta'ria. (Ψενδης, false.) A name proposed by Guibourt for the plant producing the false screentary of Virginia. It is by many believed to be A. serpentaria.

A. puncta'ta, Lam. point.) The A. cymbifera. (L. punctum, a

A. reticula ta, Nuttall. (L. reticulatus, net-like.) A native of Texas, Louisiana and Arkansas, from which is obtained Red River suake-Stems villous; petioles villous; leaves round or oblong, cordate, obtuse, reticulate, villous, especially on the very prominent veins; flowers small, purplish, densely pubescent; roots slender, fibrous, proceeding from a central caudex. Supplies some of the commercial serpentary root under the name of Red River or Texas serpen-

A. rin'gens. (L. ringor, to open wide the mouth.) A species with similar properties to A.

serpentaria.

A.rotun'da. (L. rotundus, round. F. aristoloche ronde.) Hab. Sonth Europe. A native of South Europe. The tubers of this species are spheroidal, often nodulated, 4-8 cm. thick, yellow internally. Bitter acrid roots, which are stimulaut and tonie; used in amenorrhæa and in gout.

A. sagitta'ta, Muhl. (L. sagittatus, provided with arrows; here meaning arrow-shaped.)

 $\Lambda$  synonym of A, hastata.

A. sempervi'rens, Linn. always; vireo, to be green.) Hab. Arabia. A reputed anguicidal species with the other quali-

ties of the genus.

A. serpenta'ria. (L. serpens, a serpent. F. serpentaire de virginie viperine; G. Schlangen-osterluzei.) Hab. United States. A perennial herb, about a foot high, with simple or slightly branched flexuose stems; leaves varying much in shape; flowers small, solitary, dull purple. root or radix serpentariæ of commerce includes the rhizome, and is knotted, contorted, scarcely one inch in length by one eighth of an inch in thickness, bearing on its upper side the short bases of the stems of previous years, and giving off from the under numerous slender matted branching

roots 2-4 inches long. The drug has a dull | brown hue, an aromatic odour, and a hitterish aromatic taste. Virginian snake root contains about half per cent. of essential oil, and the same

amount of resin.

It is employed in the form of infusion or of tincture, frequently in combination with cinchona bark, as a stimulating tonic and diaphoretic. It is said to arrest the progress of severe typhus, to promote the eruption of exanthematons diseases, to be useful in ague, and in some cases to act as an antispasmodie and anodyno. It checks vomiting, especially in bilious cases.

A. si'pho, L'Herit. Hab. North America.

A decoction is used in foul ulcers.

A. sol'ida. A synonym of Corydalis solida.

A. ten'uis. (L. tenuis, slender.) The A. chematitis.

A. tomento'sa, Sims. (L. tomentum, a stuffing for cushions.) Hab. United States. A climbing species, with a thick creeping root. Properties as the officinal serpentary root.

A. trif'ida. (L. trifidus, three-cleft.) A

synonym of A. trilobata.

A. triloba'ta. (F. aristoloche trilobec.) The three-lobed birthwort, every part of which is dinretie.

A. turbacen'sis. (Turbaco, in Mexico, where it has been found.) Used as an antidote to snake bites.

A. unda'ta. (L. undatus, in the form of waves.) A synonym of A. sempervirens.

A. vulga'ris. (L. vulgaris, common.) The A. clematitis.

A. vulga'ris rotun'da. (L. vulgaris, common; rotundus, round.) A synonym of

Fumaria bulbosa. Aristolochia'ceæ. (Same etymon, G. Osterlazeigewachse.) A Nat. Order of dieotyledonous plants almost intermediate between Exogens and Endogens. They are epigynons with monochlamydeous flowers; stamens 6-12, rarely 18-36, in one or two whorls; anthers extrorse; receptacle concave; 3-6 celled inferior ovaries; indefinite ovules; embryo small, lying in a large quantity of albumen, leaves alternate, simple; flowers usually axillary. The prevailing quality of the Order is that of an aromatic stimulant.

Aristolochia ceous. (Same etymon.) Having characters similar to the Aristolochinece.

Aristoloch'iæ ra'dix. (Aristolochia; L. radix, a root.) Belg. Ph. The root of the Aristolochia rotunda.

Aristoloch'ic. (Same etymon as Aristolochia, F. aristolochique.) Applied to remedies for the lochia.

Also, pertaining to the Aristolochia.

A. ac'id. A volatile acid obtained from the roots of A. clematitis and other species of Aristolochia.

Aristolochie'æ. Same as Aristolochincea.

An amorphous, bitter Aristoloch'in. principle contained in Virginian snake root, which is precipitated by neutral acetate of lead and by tannie acid.

Aris'ton. ('Αριστον, a morning meal.) Old term, often used by Hippocrates, de Vet. Med., for dinner, or a repast or refreshment at noon.

A. mag'num. (L. magnus, great.) Term used by the aucients for certain compound medicines against phthisis, pain of the belly, and mixed fevers; they contained sulphur, opium, cuphorbium, aromatics, stimulants, &c., according to Avicenna, v, summ. i, tr. 1.
A. par'vum. (L. parvus, small.) Same

A. magnum.

Aristophanei'on. An emollient plaster used by the Greeks, composed of pitch, apochmya, wax, opoponax, and vinegar. It was invented by Aristophunes. (Gorræus.)

Aristophan'eum. Same as Aristonhancion.

Aristote'lia. A Genus of the Nat. Order Tiliaceæ.

A. glandulo'sa. (L glandulosus, full of

kernels or glands.) A synonym of A. maqui.
A. ma'qui, L'ller. Hab. Chili. Fro Fruit edible; from it a fermented drink is made, which is given in malignant fevers.

A. racemo'sa. (L. racemosus, full of sters.) Mako-mako. Hab. New Zealand. elusters.) Mako-mako.

Fruit edible.

Ar'istotle. Born at Stagira, in Macedonia, B.c. 384; died at Chalcis, in Eubæa, B.c. 322. His works embrace metaphysics, philosophy, and natural science. He divided animals-Zwa, into sanguineous-ἔναιμα, and asanguineous-ἄναιμα; the former into quadrupeds—τετράποδα; birds—δρράθες; and fishes—iχθόες. Quadrupeds were further subdivided into viviparous—ζωστόκα, mammals; and oviparous - ωοτόκα, reptiles. The asanguineous were divided into those with soft parts outside—μαλάκια, mollusen; and those with soft parts in the inside—μαλακόστρακα, erustacea; όστρακόδερμα, testacea; and έντομα, insects.

A.'s lan'tern. A term for the dentary apparatus of Echinus. It consists of five long, calcareous, rod-like teeth, which perforate a similar number of wedge-shaped, hollow, calcareons pieces, united by strong transverse muscular fibres.

Aris'tous. (L. arista grannenreich.) Having awns. (L. arista, an awn.

Aris'trios. An old name for the astra-

galus, or ankle-bone. (Hooper.)

Aris'tulate. (Dim. of arista, the beard of corn. F. aristale; G. kleingranniy.) Having a very small arista.

Aris'tum. Same as Ariston.

Arithmoman tia. ('Αριθμός, number; μαντεία, divination.) Divination by numbers.

Arit'tie. One of the Telugu names of the Musa paradisiaca.

Arka. The vernacular name of the Calotropis giganten.

Arkan'sas, min'eral wa'ters of. Five miles from the Washita or Qualita river, and about twenty miles north of the Louisiana railway. Temp. from 33.8 -65.5° C. (93°-150° F.) Employed in rheumatism and cutaneous affections. There are more than fifty springs. (Dunglison.)

Arkei'on. ( Δρκειον.) The burdock. Arctium lappa.

Ark'mutt. The Bombay name of the Phascolns vulgaris.

Ark'onas. The Youanee name of the Juniperus communis.

Arla'da. Arabic for calcined realgar, much praised by Paracelsus for malignant ulcers.

Arladar. Same as Arlada.
Arlanc. France; Department Puy-de-Arlanc. France; Department Puy-de-dôme. Mild ferruginous waters containing a small quantity of sodium carbenate.

Arles-sur-Bains. See Amelie-les-

A .- sur-Tech. Same as Amelie-les-Baines. Arm. (Sax. arm, earm; G. Arm; L. armas; άρμός, a joint; from ἄρω, radical form of ἀμαρίσκω, to join.) That portion of the upper extremity from the shoulder to the wrist, consisting of the os humeri or os brachii, the radius, and ulna, their coverings, nerves, and vessels; divided by the elbow-joint into the upper arm and forearm.

A., aponeuro'sis of. See Aponeurosis of arm.

A. of le'ver. That part of the bar forming the lever which stretches on each side of the fulcrum to the extremity. On the relative length of each arm of the lever depends the value of the power; in other words, the power is to the weight in the inverse ratio of the arms.

A. presenta'tion. See Presentation of

arm. Ar'ma. An Italian physician of the sixteenth century. He wrote on dropsy, pleurisy, and diseases of the kidney.

Arma. (L. armus, armour.) signifying bucklers or shields, but also offensive or defensive weapons.

One of the seven Linnean species of fulcra of

Also, the penis.

A. pe'nis. (L. penis.) The penis. Armadillo. (G. Ringelassel.) A Genus of the Family Oniscidæ, Tribe Euisopoda, Suborder Isopoda. Body convex; capable of rolling up into a ball.

Also, the Dasypus, an edentate mammal, which is used as food.

A. officina'lis. Pill-millepede, brought chiefly from Italy, is sometimes prescribed on the Continent as a diuretic, lithontriptic, an antiscrofulous remedy, and in jaundice. It is one of several species of millepedes whose virtues rest on credulity; they are sold in France under the name of Cloportes préparés.

A. vulgaris. (L. vulgaris, common.)

The A. officinalis.

Armajo'lo. Italy. A snlphur spring contaiuing sodinm chloride 6 grs., calcium carbonate 10, magnesium carbonate 3--5, and a little iron oxide, in 25 ounces. Used in kidney and bladder diseases, and nervous affections.

Armala. The wild rue. (Quincy.)
Armalgol. (Arab.) An old name for

coral. (Quincy.) Armamenta'rium. (L. armamentarium, an arsenal. G. Waffenvorrath.) A stock or store of weapons, or means, as medicines and instruments.

A. chirurg'icum. (Χειρουργικός, belonging to surgery.) A collection of surgical instruments.

A. portab'ile. (L. portabilis, that which can be carried.) A case of surgical instruments. Arma'rium. Same as Armamentarium.

A. unguent'um. (L. unguentum, an ointment.) Term for an ancient ointment which was fancied to cure wounds, if only the weapon by which they were inflicted were smeared with it; it was made from the usnea of the human skull, human fat, blood, mummy, linseed oil, turpentine, and Armenian bole. The Emperor Maximilian, to whom Paracelsus presented the prescription, regarded it as a great treasure.

(F. arme; G. bowaffnet.) Arma tæ.

Having arms; armed. Applied, in Botany, by Debach to a Tribe of Ammoned having many rows of spines.

Also, applied to fishes having the body covered

with a strong cuirass.

Ar'matory un'guent. See Armarium

Armatu'ra. (L. armatura, equipment.) Armour. An old term for the amnion. (Quincy.) Armature. (Same etymon.) applied to bristles, prickles, and such like covering, to a plaut or animal, or organ of one.

Also, the piece of soft iron, also called keeper, which is placed in contact with the poles of a magnet to prevent the loss of magnetism which would otherwise take place. An armature acts by becoming a temporary magnet, having opposite polarity to the magnet.

**Ar'me.** ('Αρωή; from ἄρω; radical form of αραρίσκω, to adapt, to join.) A junction of the lips of a wound; also, the joining of the

sutures of the head.

Armed bou'gie. See Bougie, armed.
Armeni'aca. (Armenia, from which it was brought.) A Genus of the Suborder Drupuceæ, Nat. Order Rosaceæ.

A. briganti'aca. A native of Dauphine; cultivated near Briançon (Brigantia). The seeds of this tree yield on expression a fixed oil commonly called huile de Marmotte, which is used instead of olive or almond oil.

A. epiro tica. (Ἡπειρωτικός, of Epirus.)

The apricot, Prunus armeniaca.

A. ma'lum. (L. malum, an apple.) The apricot, Prunus armeniaca.

A. vulga'ris. (L. vulgaris, common.) The apricot, Prunus armeniaea.

Arme'nian bole. Name of a pale redcoloured earth, used for the removal of aphthae from the mouths of children, and as a component of tooth-powders; the Bolus Armenia.

A. stone. See Armenius lapis.
Armeni'tes. Armenius lapis. Malachite. Arme'nius la'pis. (L. lapis, a stone.) The Armenian stone, a variety of the blue carbonate of copper, malachite, principally brought from Armenia. It was formerly esteemed as a dispeller of melaneholy, and cordial; it was also given in epilepsy.

Armentum al'bum. Carbonate of

lead. (Anthon.)

Arme'ria. (From Armorica, the country from whence it was brought; or from Wm. Armerius, who first described it.) The sweetwilliam.

Arme'ria, Willd. (Same etymon. G. Strandnelke.) A Genus of the Nat. Order Plumbaginaceae, with a naked membranous calyx and distinct feathery styles.

A. maritima. (L. maritimus, belonging to the sea.) A synonym of A. rulgaris.

A. vulga'ris, Willd. (L. vulgaris, common.) Thrift, sea-pink. Pubescent; leaves linear; scapes dwarf, villous. Flowers used as a dinretic, leaves as a tonic and astringent.

Arme'rius. A synonym of Armeria. Armicipita. (L. arma, armour; caput, the head.) Applied by Latreille to a Tribe of Cluprides, having the head defended by osseous pieces or calcareous scales.

Armig'enæ. (L. arma; gena, the cheek. F. armigine.) Applied by Ficinus and Carus to a Tribe, by Latreille and Eichwald to a Family, of fishes, having the cheeks shielded.

Armig'erus. (L. arma; gero, to bear. F. armigere; G. armitragend.) Applied to Purpura armigera with long tubercles; to Aquila armigera having strong claws.

Armil'la. (L. armilla, a bracelet; from armas, the arm; or from arma, armour. G. \_1rmband.) A bracelet worn on the arm or wrist.

A. membrano'sa ma'nus. (L. membranaceus, of skin; manus, the hand.) Applied by P. Barbette, Chirney, v, 1, to the annular

ligament of the carpus.

Armilla'ris. (L. armilla. F. armillaire; G. armbandig.) Applied to an artificial sphere composed of circles that represent the orbs of celestial bodies, of which the solar system is composed.

Applied to Jacquinia armillaris, its branches surrounded by verticillated leaves, resembling

rings or bracelets.

(L. armilla. F. armillé: Armillate. (L. armilla. F. armilla; G. armbandig.) Like a bracelet, or having bracelets.

Armipes. (L. arma, armour; pes, a foot. F. armipide; G. waffenfussig.) Having spinous feet. In Musea armipes each anterior thigh of the male bears a spine.

Armoise. (Fr.) The Artemisia vulgaris.

Armonia'cum sal. Same as Ammo-

**Armora'cia.** (Pliny, xix, 5, says that in the l'outic language it is called *Armon*, or from Armorica, Brittany, the country from which it was brought. F. Ruifort, eranson, cochlearia de Bretague, montarde des moines, des capacins, or des Allemonds, radis de cheval; 1. rafano rasti-cano, or selvagio, ramol accio; 8. rabano Mar-visca; 6. Merrettig; Put. mecradys; Dan. poherrod; Port rabao de cavalleo; Ar. fidgel; Ch. lo-pe-tsi; Swed. pepparret; Jap. daikou; Pol. clovan; Russ. chen; Turk. jabani turnp.) The horseradish; the pharmacopeial name (L. Ph., U.S. Ph., A. Ph.) for the root of the Cochlearia armoracia.

A. rivi'ni. The Cochleuria armoracia. A. rustica'na. (L. rusticanus, pertaming to the country.) The horseradish, Cochlearia armoracia.

A. sativa. (L. sativus, that which is planted.) The cultivated borseradish, Cochlearua armoracia.

Armora'ciæ ra'dix, B. Ph., U.S. Ph. Horseradish root; the fresh root of Cochlearia ar moracia. A long, fusiform, fleshy root; very white internally, with a pungent taste and smell. Its active principle is a volatile oil, perhaps identical with that of mustard; it also contains a bitter resin, sugar, gum, starch, and salts. It is supposed that the volatile oil does not exist in the natural root, but that an albuminoid matter, myrosine, and potassium myronate, both present in the root, when brought into contact along with water, react on each other to form the oil, in the same way as the volatile oil of mustard is formed. It is used as a condiment, and in medicine as a gastric stimulant and a diurctic. It is given in anasarca, in chronic rheumatism and hoarseness.

Arm'pit. The pit of the arm under the

shoulder; the axilla.

A. glands. A series of excretory glands, with large ducts, opening in the armpit or axilla of some animals, as the iguana.

Ar'mus. (From Heb. arom, naked; or from

άρμός, a joint, or commissure, from ἄρω, to fit; for it is properly the joining of the arm with the shoulder, the ancients having called the shoulders aud arms Armes.) A shoulder or arm.

A. sum mus. (L. summus, uppermost.)

The acromian process.

Armu'theus la'pis. Another term for the Armenius lapis, of which it is said to be a corruption, according to Actius, Sermon. ii. 47.

Ar'my itch. A term which has been given to a skin cruption in soldiers, accompanied by great itching, and believed by some to be a special Tilbury Fox was of opinion that badly treated itch, phtheiriasis, and pruritic rash, consequent on perverted innervation of the skin, make up the item, army itch.

Arn. The alder, Almus glutinosa.

Armabo. Old term for lead. (Quincy.) Arnal'dia. Old term for a malignant chronic disease, said to have been formerly prevalent in England; but neither as to the etymology, nor as to the special disease meant, is anything certain known, but it is said to have been attended by falling off of the hair, and has been supposed to be a milder form of syphilis.

Arnat'to. The same as Annotto.
Ar'naud. A noted physician, astrologer, and alchemist, who was born probably about 1250, and died in 1313. France, Spain, and Italy each claim him, and his name is spelt in many ways, as Arnaldus, Rainaldus, Reginaldus. He is often described as of Villa Nova or Nova Villa, He was a great Arabic, Greek, and Hebrew scholar, and entered freely into theological disputes. He has been credited, but probably erroneously, with the discovery of sulphurie, nitric, and hydrochloric acids. His works are very numerous, and include the 'Speculum Medicinæ,' a 'Commentary on Galen, numerous writings on sanitary matters, and instructions, not only as to the treatment, but as to the prevention, of disease.

Arne'bia. A Genus of the Nat. Order

Boraginace x.

A. peren'nis. (L. perennis, perpetual.) A species used as A. tinctoria.

A. tineto'ria, Forsk. (L. tinetorius, belonging to dyeing.) A species used in France as a substitute for Anchusa tinctoria.

A. tin'gens, De Cand. (L. tingo, to colour.) A species used as A. tinctoria.

Arnedil'lo. Spain; in Castille. A salt water, of temp. 53° C. (127.4° F.), containing sodium chloride 50 grs., sodium sulphate 14, and calcium sulphate 16, in 16 ounces. Used in liver and spleen diseases, rheumatism, and old para-

Ar'nemann. A German physician born 1763 at Luneburg; died 1807. He wrote on reparation of injuries, and venereal diseases, as well as general treatises on medicine, surgery, and obstetrics.

Ar'nica. (By some it is derived from donos, a lamb, from the resemblance of its leaf to the soft coat of a lamb; by others from appyv, male, or appenis, strong; and by some it is believed to be a corruption of πταρμική, a plant supposed to be yarrow. G. Wohlverleikraut.) A Genus of the Nat. Order Compositae. Pappus hairy; florets of the ray Q, of the disc Q; stigmus elavate; bracts forming a cylindrical involucrum; receptacle naked; achania wingless, striated.

A. angustifo'lia. (L. angustus, narrow; folium, a leaf.) A variety of A. montana, with

narrow, almost linear leaves, found in high Asiatic and American latitudes.

A. mol'lis. (L. mollis, soft.) A species having properties similar to A. montana.

A. monta'na. (L. montanus, belonging to a mountain. F. arnique, or betoine des montagnes; G. Wohlverlee; Dut. volkruid.) A Genus of the Nat. Order Compositæ. Leopard's A perennial herbaceous plant; root bane. fibrous, brown without, whitish within; stem 12 to 16 inches in height, cylindrical, pubescent, supporting two or three flowers; leaves forming a rosette on the ground, small, sessile, oval, and entire; in addition there are two opposite to each other about the middle of the stem. The dowers are large, radiate, orange coloured. The involucre is pubescent. Hab. Europe and North America. The flowers, leaves, and roots are used in medicine. The taste is bitter and acrid. Small doses cause increased frequency of the pulse, beat of the skin, and secretion of urine; the muscles quiver. Large doses are followed by yawning, headache, frequent defecation, rapid respiration. Horses and cows exhibit great dulness for several hours; dogs vomit. Post-mortem examination showed that the vessels of the thoracic and abdominal viscera were congested. The only British preparation is the tincture of the root. It is used externally in bruises, and internally, in doses of 3j to 3ij, as a stimulant in debilitated states of the system. Care is required in its external use, as it is liable to produce iuflammation of the skin. The French, Americans, and Germans employ the powder and infusion or extract of the flowers-and the Germans the leaves also-as a nervine tonic and excitant in intermittent typhoid and typhus fevers, and pulmonary catarrh, as well as in infantile paralysis and vesical

A. nudicau'lis. (L. nudus, naked : caulis. a stem.) A species with properties similar to the

A. montana.

A. opodel'doc. White soap 4 parts, rectified spirit 10, tincture of arnica 5, campbor one part. Dissolve by heat and strain. (Squire.)

A. planen'sis. A synonym of A. mon-

A. scorpioi des. (Σκορπισειδής, scorpionlike.) The Aronicum scorpioides.

A. spu'ria. (L. spurius, false.) The Inula dysenterica.

A. sueden'sis. (Suedensis, Swedish.) The

Inula dysenterica.

Ar'nicæ flo'res. (L. flos, a flower. F. fleurs d'arnique; G. Wohlverleihblüthen.) The flowers of the Arnica montana. They are large, orange yellow, with a greenish calyx; florets of the ray 15-20, ligulate, hairy at the base, female; florets of the disc tubular, with a fivelobed margin. They have an aromatic smell, and a sharply aromatic, bitter taste. They contain an ethereal oil, resin, and Arnicin. When powdered they are used as a sternutatory. Arnica montana.

A. fo'lia. (L. folium, a leaf. G. Wohlver-leihblütter.) The leaves of Arnica montana. Used in tincture. See Arnica montana.

A. ra'dix, B. Ph., U.S. Ph. (L. radir, a root. G. Wohlverleihwurzel.) The root of Arnica montana. It is a woody, brownish, cylindrical, contorted rhizome, 1-3 inches long, rough with the scars of the leaves, ending abruptly and sending out many fibres; it has a peppery taste and a peculiar odour. It contains gallic acid, gum, albumen, yellow colouring matter, and a bitter principle-Arnicin, which see; also, Arnica montana.

Arnicin. (F. arnicine; G. Arnicin.) A solid, slightly bitter, brownish, resinous alkaline, but not acrid, substance, extracted from the flowers of Arnica montana. It has the odour of easter, and is slightly soluble in water, but much more so in alcohol aud ether. Its formula is said to be C<sub>35</sub>11<sub>54</sub>O<sub>7</sub>.

Another substance, which has received the same name, has been obtained from both flowers and root. It is amorphous, yellow, acrid to the taste, and has had assigned to it the formula  $C_{20}H_{30}O_4$ .

It is believed to be a glucoside.

Arnoglos sum. ('Λονόγλωσσον; from ἀρνός, a lamb; γλώσσα, a tongue.) Ancient name for the Plantago, or plantain, from the likeness of its leaves to a lamb's tongue.

Ar'nold. A German auatomist of the present

day; born 1826.

A.'s gang'lion. A synonym of the Otic ganglion.

A.'s nerve. The auticular branch of the vagus.

Arnophyl'lum. A synonym of Arnica. Arnott, J. An English physician of the nineteenth century.

A.'s bed. An arrangement by which water, covered by a waterproof substance, is retained in a wooden trough. It is used to prevent bed-sores from pressure.

A's. dila'tor. Au air-tight cylinder of oiled silk, lined by the gut of some animal, which, baving been passed through a stricture, can be distended with air or water, and thus made to exert a dilating action.

A.'s method of local ana sthe sia. A mode of producing anæsthesia of the skin and superficial structures by means of a freezing mix-

ture of ice and salt applied in a bag.

Arnot'to. The native name in Tropical America of the arilliform organ which covers the seeds of the Bixa orellana, and which is used to tint and prepare chocolate. It is regarded as the best remedy against the aerid poison found in the fresh roots of the Manioc. See, for further detail, Annotto.

A. tree. The Bixa orellana.

Arn'stadt. Germany; in Schwarzburg. An iodic and bromic strong salt bath, lying in a hill-surrounded valley, nearly 1000 feet above sea-level. Sixteen ounces contain sodium chloride 1723 grs., calcium chloride 49.5, magnesium chloride 39, magnesium bromide 39, magnesium iodide 17. Used in scrofula and syphilis, in liver and uterine enlargements and fibroids.

Ar'nut. The earth nut, Bunium bulbo-

Arci'ra. The Schinus arcira. Arc'hot. Arabic for Argentum rivum, or quicksilver. (Ruland.)

Aroid'eae. ("Apov, the arum; ɛlôos, likeness.) A synonym of Aracea.

Aro'ma. ('Αρωμα, spice. G. Gewürz, Wohlgeruch.) Term for the fragrant principle of plants, and substances derived from them. An odour.

A. german'icum. Elecampane.

A. philosopho'rum. (Φιλόσοφος, α philosopher.) An old remedy consisting of chloride of iron and ammonia. Made by roasting hæmatite and sal ammoniae together.

Aromaden'dron. ( 'Αρωμα, a spice;

είνερου, a tree.) A Genus of the Nat. Order Magnoliacea.

A. el'egans. (L. elegans, elegant.) A species growing in Java. Used as an aromatic,

febrifuge, and emmenagogue,

Aromatic. (Apwna. G. gewürzhaft.) Oloriferous; having an agreeable smell, as spices and such substances have. Applied to a Class of plants (Aromaticae) in some natural arrangements.

Acids derived from benzene A. ac'ids.

and its homologues.

A. group. A term given to benzene and its homologues, together with the alcohols, acids, and bases derived from them. They are so called on account of the arematic odour of many of them.

A. sug'ar. A substitute for the Pulvis aromaticus, prepared by subjecting eight ounces of the freshly prepared powder to percolation with strong alcohol, mixing the percolate with eight onness of sugar, and evaporating at a low

A. vin'egar, Oils of cloves, lavender, rosemary, and calamus, dissolved in strong acctic acid. Used as a stimulating scent in threatened fainting.

A. wa'ters. A term for such of the distilled waters of the Pharmacopæia as are prepared from seeds or other aromatic substances.

A. wine. See Wine, aromatic. Aromatica nux. The nutmeg.

Aromatics. (Same etymon.) Medicinal substances which owe their properties to a stimulating essential oil. Such are canella, cinnamon, ginger, clove, vanilla, musk, and such like.

Aromati'cum lig'num. The Camlla

alba. (Quincy.) A. rosa'tum. Rose-spice. An old aro-

matic powder containing roses.

Aromaticus cor'tex. The aromatic bark; a name for Canella alba.

Aromati'tes. ('Αρωμα, spice.) Ancient term for a wine prepared with various spices; also, for a bitumiuous stone found in Arabia and Egypt.

Aromatopola. ("Αρωμα, an odour; πωλίω, to sell.) A druggist; a vendor of drugs

and spiceries.

Aron. (Agov.) The Arum.
Aron aou. The resin of the Icica heptophylla.

Arona'na. The Radix Waikouri. (Anthon.)

Aro'nia. (G. Felsenmispel.) The Neapolitan medlar.

Aron'icum. A Genus of the Nat. Order

Compositæ. **A. scorpiol'des.** (Σκορπιοειδής, scorpion-like. G. Schwindelkraut.) Creeping leopard's Creeping leopard's

bane. Roots aromatic. Used for giddiness Aro'nis tu'ber. (L. tuber, a swelling.)

The root of the Arum. Aroo. The Persian name of the Amygdala

Arocna-chitraca. The Sanskrit name

of the Plumbago rosea.

Aroos. The Egyptian name of Oryza

Aroosukpus-purdah. The Fars name of the Punceria coagulans.

Aroph. (Aroma philosophorum.) chemical term applied to the flowers prepared by sublimation of the Lapis hamatites with sal ammoniacum, in equal portions, to which great virtues were attributed in quartan ague, plica polonica, and hypochondriasis, according to Fr. Hotfmannus, Clav. Schrod. p. 179; also, to a mixture of saffron, with bread and wine, placed in a close vessel for some days in horse-dung, and then distilled, according to Helmontins, de Lithiasi, vii, 14; viii, 23; also, to a medicine for mitigating the action or operation of the kidneys, according to Paracelsus; also, a term for the Mandragora. (Ruland, Johnson, and Dornæns.)

A. Paracel'si. A term for Ferrum am-

moniatum.

Arp. Switzerland; near Leuk, in the Rhone Valley. A sulphur spring. Used in skin diseases.

Arqua tus morbus. (L. arquatus, arched; morbus, a disease.) See Arcuatus morbus.

Arquebusa'de wa'ter. (F. arquebusse, an old form of gun.) Distilled water for application to bruises; originally to gunshot wounds. A name of Aqua vulneraria.

Arra chit'ta. An Indian leguminous plant, the juice of which is given by the natives An Indian leguminous

in acute dysentery. (Waring.)

Arracach'a. A Genus of the Nat. Order Umbelliferæ.

A. esculen'ta. (L. esculentus, eatable.) Cultivated in South America on account of its edible roots.

Ar'racan hemp. (Arracan or Arakan, a province of British Burmah, where it is grown.) A kind of fine jute, used for making surgical bandages and dressing.

Arrache. The Atriplex. (Quiney.)
Arrack. (Arab. arak, sweet.) The spirit distilled from palm wine, Toddy, the fermented juice drawn from the unexpanded flower spathes of various palms, especially Borassus flubelli-formis and Cocos nucifera.

Also, applied by the Dutch to the spirit dis-

tilled from an infusion or wash of rice.

Arrag'onite. (Arragon in Spain, where it is found.) One of the dimorphic forms of crystallised calcium carbonate, the other being calc-spar. It is a right rhombic prism, and contains one to three per cent. of strontia.

Arraphon. See Arrhaphon. Arrec't. (L. arrigo, to set up. gerichtet.) Upright; directed upwards. G. auf-Arrec'tio. (L. arrigo, to set np.) Erec-

tion.

Arrecto'res pilo'rum. (L. arrigo, to erect; pilus, a hair. G. Haurbulgmuskel.) Small slips of unstriated muscle inserted into the hair follicles, and causing the hairs to rise under the influence of cold and of certain mental emotions, producing the condition termed goose-skin or cutis anserina, and tending to squeeze ont the secretion of the sebaceous glands. Each arrector is strapshaped, and arises by several pointed processes from adjoining hairs, and from immediately beneath the epithelium of the sebaccous glands. It terminates by several similar processes above,

Arrenot okous. ( Αρρην, a male ; τόκος, birth; from τίκτω, to bring forth.) A term proposed by Leukart and v. Siebold to denote parthenogenetic females which produce male young only.

Arrenot'oky. (ἸΛρρην, a male; τόκος, birth.) That form of parthenogenesis in which the unimpregnated females produce only males, as is the case amongst the saw flies, as the  $Nematus\ ventricosus$ .

Arrep'tio. (L. arripio, to seize.) Insanity. Arres't. (L. ad, to; resto, to stop behind, to withstand. F. arrêt; I. arresto.) Detention, delay.

A. of devel'opment. That condition in which any organ fails to grow to its natural size and proportions, or to present the complexity possessed by the same organ in the same individual or in the same species. Thus in veronica amongst plants the young flower presents a pentamerous calyx, corolla, and andrecium; but in the adult there are only four stamens, the fifth being small and imperfectly developed, existing only as a fleshy scale.

Arres ta bovis. (L. ad; resto; bos, an ox. F. arrête beuf.) The herb rest-harrow, Ononis spinosa; so ealled because its roots impede the harrow, and the ox dragging it.

Arrest'ed. (L. ad, to; resto, to stop.) Hindered, restrained.

A. clea'vage. The imperfect division of a eartilaginous tract into segments in certain generalised forms, which segments appear distinct in higher or more specialised types. A good example is found in the shoulder girdle of the skate, osseous fish, and lizard, as compared with the bird and mammal; and the pelvis of birds and mammals generally, as compared with the shoulder

girdle.

A. head. This word is applied in midwifery when the head of the child is hindered or delayed, but not impacted, in the pelvic cavity, a distinction which has been held to be of the greatest importance in reference to the propriety of having recourse to instrumental aid.

Ar'rhabon. See Arrhaphon.

**Arrhaphon.** (Λρραφος, without scam; from ά, priv.; ράπτω, to sew.) Term applied by Melchior Sebizius, in Exerc. Med. p. 132, to a cranium deficient in sutures, which he assigned as a cause of incurable cephalalgia.

Arrhaphum. Same as Arrhaphon. Arrhenoto'cia. (Άρρην, male; τόκος, hirth.) The faculty possessed by the queen bee, previous to copulation, of laying eggs, which develop into male bees only.

Arrheumatic. Same as Arheumatic.

**Arrheumatic.** Same as Arheumatic. **Arrhi'za.** ('A, neg.; ρίζα, a root.) Plants without roots.

**Arrhi'zæa.** (Same etymon.) Asynonym of *Cryptogamia*.

**Arrhizoblas'teæ.** ('A, neg.;  $\dot{\rho}$ iça, a root;  $\beta$ \a\sigma\sigma\sigma'\delta\sigma, a sprout.) Term applied by Willdenow to plants the embryo of which he considered to be destitute of a radicle, as in the case of some parasitical dicotyledonous plants and

some aquatic plants.

Arrhizoblas tous. (Same etymon.)

Possessing an embryo with no radicle. **Arrhi'zous.** ('A, neg.; ρίζα, a root.)

Term applied to plants without roots.

Arrhœ a. (Appoua; from a, neg.; pota, a flux, or flowing. G. Unflüssigkeit). Old term, used by Hippocrates, de Loc. in Hom., although it does not occur there in Linden's edition, but will be found in that of Foësius, p. 423, seqq. de Morb. Mul., for the retention or suppression of a natural discharge, as the menses.

**Arrhos'tema.** ('Λρρωστέω, to be sickly.) Disease.

**Arrhos'tia.** ('Αρρωστία. G. Schwachheit.) Debility; infirmity; ill health.

Arrhyth'mous. See Arhythmous. Arriba. The Geoffresa vermifuga.

Arroche. (F., from L. ad, near to; ripa, a bank; in Walloon, avanue.) Term employed in the Capitulaires of Charlemagne to indicate plants growing ou the borders of rivers.

Also, a term for the Atriplex hortensis. Arrope. A brown syrupy liquid obtained by boiling down sherry, and used as a colouring ingredient in the manufacture of wine. (Dun-

glisou.)

Arrow, caus'tic. A pointed rod, composed of zine elloride or other caustic mixed with flour, gum, or other material, inserted into tumours to effect their destruction.

A.-head. Common name for the plant

Sagittaria sagittifolia.

A.-leaf. Sum as Arrow-head.
A.-poi'son. A synonym of Carars.
A.-weed. The Sagittaria sagitt folia.
A.-wood. A name of some species of

Euonymus, and of the Viburman dentatum.

Arrowroot. (The word is said by some to be derived from the reputation of the tubers in the treatment of wounds from poisoned arrows; by others it is derived from ara-ruta, a native phrase, said to mean mealy root. G. Pfeilwurzel.) A kind of starch obtained from the Maranta arundinacea, and other tuberous-rooted plants. It is obtained by digging up the rhizeme after the plant has attained complete maturity, which in Georgia is at the beginning of winter, cleansing, and then grinding or rasping them. The pulp is washed on fine sieves, and the starch which passes through the sieves allowed to settle. rhizomes yield about a fifth of their weight of starch. Arrowroot is a brilliant white, tasteless powder, without smell, the particles more or less aggregated into lumps, which seldom exceed a pea in size. When pressed it emits a slight crackling sound. Like other forms of starch, it is composed of granules which, under the microscope, appear subspherical or broadly and irregularly egg-shaped. When seen in water they show a distinct stratification in the form of fine concentrie rings around a small star-like hilum placed at the larger end. They begin to tumefy in water at 70°C. (158°F.) Their sp gr. is 1-504 or 1-565 after being dried at 100°C. (212°F.) The size of the granules varies, but they are most commonly 0.0010 inch in length and 0.0008 in breadth. Arrowroot is prepared for food by mixing a little with cold water or milk, then adding boiling water or milk, and stirring vigorously; sugar and lemon juice, spice, or wine, or brandy, are added as taste or occasion may require. also made into puddings and hiscoits. It is a popular remedy for diarrhea. See A., Bermuda.

A., African. The produce of the Maranta arundinacea.

A., Antilles. The same as A., Errmuda. A., a'rum. Also called Portland arrowroot; the produce of the Arum maculatum. Granules small, angular, and facetted, not unlike those of maize.

A., Bermu'da. The produce of Maranta arundinacca. It is the kind most highly esteemed in commerce. The granule is uneven in outline, with well-marked concentric lines, and often with beak-like projectious; the hilum is crucial, or three-limbed.

A., Brazil'lan. The produce of Manihot utilissima.

A., Brit'ish. The same as A., potato.

A., Calcutta. The same as A., East Indian.

A., can'na. Tous les mois. The produce of unescertained species of Canna. The granules The produce are large, ovoid, with an even outline, and strongly marked concentric rings reaching less than half round; hilum distinct.

A., com'mon. A synonym of Potato starch.

A., cur'cuma. East Indian arrowroot, obtained from Cureuma angustifolia, C. leucor-rhiza, and other species. The granules are large and oblong, with an even outline, and prominent concentric half rings; hilum indistinct at the smaller end.

A., East In'dian. (Hind. Tikor; Mal a-Koghei; Tam. Kooamaoo.) The product Kooa-Koghei; Tam. Kooamaoo.) chiefly of Curcuma angustifolia and C. leucorrhiza but also of the Maranta arundinacca and M. indica.

A., Eng'lish. A synonym of Potato starch.

A., Flor'ida. A variety obtained from the Zamia integrifolia and Z. pumila.

A., Jamai'ca. The produce of Maranta urundinacea.

A., maize. The product of Zea mais; also called Corn flour.

A., Malabar. The same as A., East Indian.

A., man'ihot. The product of Manihot utilissima; also called Brazilian arrowroot. The granules are well marked, very like those of Tahiti arrowroot, but smaller, and having a fissured hilum.

The starch of the Ma-A., maran'ta. ranta arundinacea; usually called simply Arrowroot.

A., Natal'. The product of Maranta arundinacea.

A., Otahei'ti. The same as A., Tahiti. A., Port'land. The product of the Arum maculatum.

A., pota'to. Starch obtained from the potato, Solanum tuberosum. The granules are large, pyriform, even in outline, with concentric rings reaching more than half round, and having a distinct hilum at the smaller end.

A., rice. The product of Oriza sativa. Known also as Rice flour.

A., Sier'ra Leo'ne. The produce of Maranta arundinacea.

A., Tac'ca. The same as A., Tahiti.
A., Tahi'ti. The produce of Tacca pinnatifidu, a plant growing in Madagasear. The granules are like those of sago, but smaller, with few and indistinct concentric rings and circular, sometimes stellately fissured, hilum.

A., Talcahua'no. A variety the produce of an Alstromeria.

A., Tavou'lou. The same as Arrowroot, Tahiti.

A., Travanco're. Chicfly derived from Curcuma angustifolia and C. rubescens, but in part from Maranta arundinacca.

A., West In'dian. The produce of Maranta arundinacea.

Arrythmia. See Arythmia.

**Ars.** (L. ars, probably akin to άρω, the radical form of ἀραρίσκω, to joiu.) The practical application of skill or science.

A. cabalis'tica. The cabalistic art. See Kabbada.

A. chymiat'rica. (Xunzia, chemistry;

latoria, medical treatment.) The art of curing disease by chemical means.

A. clysmat'ica no'va. (Κλυσμός, α elyster; L. novus, new.) A term for the injection of medicinal or nutrient substances into the veins.

A. coquina ria. (L. coque, to cook.) The art of cooking.

**A. cosmet ica.** (Κοσμητικός, skilled in decorating; from κοσμέω, to adorn.) The art of preparing cosmetics; preparations supposed to beautify the skin.

A. culina'ria. (L. culinarius, pertaining to the kitchen.) The art of cooking.

A. empirica. (Εμπειρικός, experienced.) The art of medicine as founded on experience or experiment.

A. for mulas medici nas nan'di. (L. formula, a rule; medicinus, medical; concinno, to arrange appropriately.) The art of writing prescriptious.

A. hermetica. ('Ερμής, Hermes or Mercury, the god, among other things, of magic and science.) A term for chemistry.

A. hydriatrica. (Υδριάς, of the water; laτρεία, medical treatment.) The treatment of disease by water according to the system called hydropathy.

A. infuso'ria. (L. infusus, part. of infundo, to pour into.) The art of introducing medicines into the body by injection into the

A. Machao'nia. (Μαχάων, the son of Esculapius, the earliest surgeon.) The art of medicine.

A. mago'rum. (L. magus, a learned man and magician.) The art of chemistry.

A. maieu'tica. (Μαιευτικός, skilled in midwifery.) The art of obstetries.

A. med'ica. (L. medicus, healing.) The art of medicine. A. obstetric'ia. (L. obstetricius, belong-

ing to a midwife.) The art of midwifery.

A. sanan'di. (L. sano, to heal.) The art

of healing; medicine. A. separato'ria. (L. separator, he that separates; from separo, to disjoin.) The art of

chemistry. A. signa'ta. (L. signatus, shut up, guarded.) The cabalistic art. See Kabbala.

A. spagyrica. ( $\Sigma \pi \acute{a}\omega$ , to draw out; άγείρω, to bring together.) A term for chemistry. See Spagyria.

**A. sphyg'mica.** (Σφυγμικός, relating to the pulse.) The art of recognising and appreciating the conditions of the pulse.

A. veterina'ria. (L. reterinarius, relating to beasts of burden.) The veterinary art; farriery.

A. zciat'rica. (Ζώον, an animal; laτρι-κός, skilled in medicine.) The veterinary art. Ar'sag. Ancient term for arsenie. (Quincy.)

Arsaltos. A term for asphalt.
Arsa'neck. An old name for sublimed

arsenic. See Filum arsenicale. (Quincy.)

Arsa'tum. A synonym of nymphomania.

Arsel'la. A synonym of Argemone, probably in consequence of the acridity of its juice, which was used in cases of ophthalmia, arse sig-

nifying fire in the ancient language of Italy.

Arsenate. A salt of arsenic acid. The arsenates are isomorphous with the corresponding phosphates; silver nitrate throws down a reddishbrown precipitate, and hydrogen sulphide gives a

yellow colour; arsenates, when heated before the blow-pipe on charcoal, give off a smell of garlic.

Arsendime'thyl. A synonym of Cacodul.

Arse'nias. An Arseniate, or Arsenate.

A. ammon'icus. The Ammonia arsenias. A. bihy'drico ka'lieus. A synonym of Potassium arsenite.

A. fer'ricus. (L. ferrum, iron.) Ferri arsenias.

A. ferro'sus. (L. ferrum, iron.) The Ferri arsenias.

Sodium A. hy'drico bina'tricus. arsenite.

A. lixiv'iæ. (L. lixivia, lye.) Potassium arsenite.

A. potas'sicus. A synonym of Potassium arsenite.

A. so'dæ sicca'tus, Belg. Ph. (L. sieco, to dry.) Sodium arsenite.

A. so'dicus. The Sodii arsenias.

A. so'dicus a'qua solu'tus. (L. aqua, er; solutus, dissolved.) The Liquor sodii water; solutus, dissolved.) arsenitis.

Arseni'asis. (Arsenic. F. arseniase, arseniciase; G. Arsenikkrankheit.) Term for disease the effect of arsenic. See Arsenic, poisoning by.

Arseniate. Term for a combination of arsenic acid with a base. Now usually called Arsenate.

A. of ammo'nia. See Ammoniæ arsenias. A. of an'timony. See Antimony, arseniate of.

A. of i'ron. See Ferri arsenias.

A. of pot'ash. Potassium arsenite. A. of potas'sa. Potassium arsenite.

A. of protox'ide of potas'sium. Potassium arsenite. See also  $\bar{L}iquor$  arsenicalis. A. of quini'ne. See Quiniæ arsenias.

A. of so'da. See Sodii arsenias.
Ar'senic. (Λρσενικόν, yellow orpiment; from ἄρσην, or ἄρρην, masculine, vigorous; or άρρενικός, masculine, from its power as a poison. F. arsenie; I. arsenieo; G. Arsenik; Arzarnick; Turk. zirnick.) Symb. As; comb. prop. 74.9; vapour dens. 149.8; sp. gr. at 14° C. (57.2° F.) 5.727; sp. heat 083. A metal plentifully met with in nature, generally in union with sulphur, or with other metals, or with oxygen. Arsenic has a steel-grey lustrous colour; it is brittle, crystalline, and volatilises without fusion, with an odour of garlie, to a lemon-yellow vapour when no air is present; heated with air it oxidises to arsenious oxide; it obtains a blackish grey coating of oxide in moist air at an ordinary temperature, but does not tarnish in pure water. Itself and its compounds are poisonous. Arsenic is ranked by some amongst the pentad metals, by others amongst the triad group of non-metallic elements represented by nitrogen.

Also, the common name for arsenious acid. For its medicinal properties, see Arsenious

acid.

A. a'cid. (F. acide arsenique; G. Arsensäure.) AsO(OII)<sub>3</sub>. Formed by warming arsenic trioxide in nitric acid; it is then a thick acid liquid of sp. gr. 2.0, which deposits, when cooled, transparent crystals having the formula 2AsO (OH)<sub>3</sub>+H<sub>2</sub>O; when heated to 100° C. (212° F.) these crystals melt and give off their water of crystallisation, leaving trihydric arsenate or orthearsenic acid, H<sub>3</sub>AsO<sub>4</sub>. If the liquid commercial arsenic acid be heated to 180° C. (356° F.), it deposits crystals of dihydric arsenate or pyroarsenic acid, H<sub>4</sub>As<sub>2</sub>O<sub>7</sub>; heated still further, to 200° C. (392° F.) and upwards, monohydric arsenate or metarsenic acid, HAsO3, is left. It is reduced by the action either of a sulphite or of sulphurous acid to arsenious acid. It is used as an oxidising agent in the preparation of anilin colours. It is to this substance that the poisonous effects of magenta-dyed socks and gloves is due. Its salts are called arsenates. It is escharotic and poisonous.

A. anhy dride. A synonym of A. pentoxide.

A. bloom. Arsenious acid, in native erystals, found in association with, and arising from, the oxidation of metallic arsenic.

A. bro'mide. See A. tribromide.

A. disul'phide. (L. arsenicum rubrum; F. arsenie rouge, arsenie sulfure rouge, risigale rouge, rubine d'arsènie, orpiment rouge, sand-araque; I. solfaro rosso d'arsenico; G. rother Arsenik, rother geschwefelter Arsenik, Schwefelrubin, zweifach Schwefelursen, unterarseniges Sulfid.) As<sub>2</sub>S<sub>2</sub>. Red arscuie. This sulphide Sulfid.) As2S2. Red arsenie. occurs native as realgar. It may be formed by heating arsenical and common pyrites in such proportion that the mixture contains 15 per cent. of arsenic and 27 of sulphur. It is orange red, fusible, and volatile. It enters into the forma-tion of white fire. It is a sulphur acid, and unites with other metallic sulphides to form sulphur salts, called hyposulpharsenites. It is used as a pigment and in tanning.

A., flow'ers of. Sublimed arsenious acid. A. glass. Arsenic trioxide or arsenious acid in a vitreous mass, obtained by heating the crude arsenious acid in an iron vessel with a

conical head.

A. i'odide. See Arsenici iodidum. A., oil of. Chloride of arsenic.

A., ox'ide of. A term for Arsenious acid. A. ox'ide. A term for A. pentoxide.

A. pentasui'phide. As<sub>2</sub>S<sub>5</sub>. Obtained by fusing the trisulphide in the proper proportion with sulphur. It is a yellow, fusible, sublimable substance, and has similar properties to A. trisulphide.

A. pentox'ide. As<sub>2</sub>O<sub>5</sub>. Prepared by treating the trioxide with an oxidising agent in the presence of water. It is a white porous substance of sp. gr. 3:734, soluble in water, and deliquescing in moist air with formation of arsenic acid; when heated it melts and decomposes into arseure trioxide and oxygen.

A. phos'phide. AsP. A brownish-red powder, formed when dry arseniuretted by drogen

is passed into phosphorous trichloride.

The symptoms of A., poi'soning by. poisoning with arsenious acid may commence immediately, or may be delayed to the fourth day, but are usually apparent in the course of from two to five hours. They are those of an intense irritant, as pain, vomiting, diarrhœa, dysuria, cramps, convulsions, and collapse, ter-minating fatally in about nine or ten hours, though death may be almost immediate or delayed for long periods. Une or two grains may prove fatal. The treatment may consist of the administration of hot milk and water, with sulphate of zine; milk and eggs; sugar and magnesia; hydrated peroxide of iron, prepared by adding ammonia to the tineture of the perchloride of iron, collecting and washing the precipitate: and lastly, uitrate of potash to stimulate the

The post-mortem appearances are those of intense inflammation in the alimentary tract, with remarkable preservation of the parts affected.

Two grains have destroyed life; from two to three grains are looked on as a fatal dose; the average duration of life after taking the poison is

twenty-four hours.

In poisoning by small and repeated doses there is often an eczematous eruption, great irritation of the conjunctiva and photophobia, exfoliation of the cuticle, and loss of the hair; local paralysis, with more or less anaesthesia, is not uncommon; salivation, jaundice, and dysuria have been

In cases of poisoning from the inhalation of dust charged with arsenic, as in certain trades, and where the walls of rooms have been covered with paper containing arsenie, there have been noticed conjunctival irritation, dryness and irritation of throat and nostrils, cough, loss of appetite, dysenteric relaxation of bowels, abdominal pains, emaciation, and great debility.

A., red. Realgar, or arsenic disulphide.
A., red sulphuret of.  $\Lambda$  term for

realgar, or arsenic disalphide.

A. sesquiox'ide. Arsenious acid.
A., tersul'phuret of. Arsenic trisul-

phide.

**A. tribre'mide.** AsBr<sub>3</sub>; vapour density 57.8. Powdered arsenie is added to a solution of one part of bromine or earbon disulphide until the solution becomes colourless; as the carbon disulphide evaporates, colourless deliquescent crystals of arsenic tribromide are formed. solution is prepared for medicinal purposes by boiling a drachin each of arsenious acid and potassium carbonate in half a pint of distilled water, adding water to make twelve ounces, and then two drachms of pure bromine; in time the solution is colouless. It has been given with success in epilepsy and other nenrotic diseases, in doses of one to two drops in water once or twice a day.

A. trichle'ride. AsCl<sub>3</sub>; vapour density 90.5. It may be obtained by passing dry chlorine over heated arsenie, or hy heating 40 parts of arsenic trioxide with 100 parts of water to 100° C. (212° F.), adding fused chloride of sodium, and distilling over the trichloride. It is a colour-Iess oily liquid, of sp. gr. 2·205 at 0° C. (32° F.), giving off white fumes. It is very poisonous, and has been used as a caustic in cancer and

venereal warts.

A. trii'odide. AsI3. See Arsenici iodidum.

A. triox'ide. As<sub>4</sub>O<sub>6</sub>; vapour density 197.7.

The substance usually known as Arsenious acid. A. trisul'phide. (L. aurum pigmentum, arsenicum persulfuratum; F. deatosulfure d'arsenie, orpiment, orpin, arsenie jaune naturel; 1. solfuro giallo d'arsenico; G. gelber natürlicher geschwefelter Arsenie, Aperment, Operment, Goldgelb, Konigsgelb, Schwefelgelb, gelbes Schwefelar-sen, Rouschgelb.) As<sub>2</sub>S<sub>3</sub>. Yellow arsenie; orpiment. This compound occurs native, and may be formed by mixture of the two substances in proper proportions and the application of heat, or by precipitating a solution of arsenious acid with hydrogen sulphide. It is golden yellow, crystalline, fusible, and volatile. It is a sulphur acid, and unites with other metallic sulphides to form sulphur salts, called sulpharsenites. Used as a dye, and as a depilatory.

A., white. A synonym of Arsenious acid. A., white ex'ide of. A term for Arsenious acid.

A., yel'lew. Arsenic trisulphide.

A., yellew sulphuret of. Arsenic trisulphide.

Arsen'ical. (Arsenicum, arsenic. G. arsenikalisch.) Of, or helonging to, arsenicus acid or arsenic.

A. caus'tic. Name for a kind of eaustic formerly used in the treatment of cancer. It was composed of one part of arsenious acid to two of levigated sulphuret of antimony, melted together in a crucible,

A. cigaret'tes. A sheet of hibnlons paper is soaked in a solution of twenty graius of arsenite of potassium in half an ounce of distilled water, dried, divided into twenty parts, and each rolled into the shape of a cigarette. Five or six pulls from the lighted eigarette are slowly inhaled once a day. Recommended in asthma, aphonia, and bronchial dilatation.

A. green. A pigment composed of copper arsenide, or of copper and arsenic acetate.

A. cede'ma. (Οἴοημα; from οἰοίω, to swell.) Swelling of the eyelids and face from arsenical poisoning. It is quickly produced by the inhalation of arseniuretted hydrogen gas.

A. paste. Cinnabar 70 parts, dragon's blood 22, arsenious acid 8; mixed into a paste with saliva and applied to cancerous sores for

their destruction.

Arsenious acid 2 parts, sulphate of morphia 1, creasote sufficient to make a stiff mass; a piece of the size of a pin's head, spread on cotton wool, is placed in a carious tooth to destroy its sensibility before stopping.

A. pyrites. (Πυρίτης, a mineral which strikes fire.) Iron pyrites containing arsenic.

A. rash. The prolonged administration of arsenic may produce a papular eruption of the face, neck, and hands, from hyperamia of the follicles, and also an erythematous condition of the face, with conjunctival irritation; it is also said to produce pityriasis rubra and herpes zoster. When locally applied, as in socks or gloves coloured with an anilin dye, it produces severe eczema, and in those who work in Scheele's green and such colours, obstinate ulceration of skin.

A. salt. Arsenite of potassium, or of

sodium.

A. salt, Mae'quers. Potassium arsenite. A. selu'tien. A term for the Liquor arseniculis.

Arsenica'lis li'quor. The arsenical solution, or arsenical liquor. A preparation which accords with the formula of Dr. Fowler of Stafford, who first introduced it, in imitation of a celebrated popular remedy for intermittent fevers, called the tasteless agno drop. See Liquor arsenicalis.

Arsen'icate. (Arsenic.) To impregnato with arsenic.

Arsen'ici al'bum oxi'dum ve-na'le. (L. albus, white; venalis, for sale.) The name of commercial arsenious acid, or sublimed oxide of arsenic.

A. hydri'edas. A name of A. iodidum,
A. iodi'dum. U.S. Ph. AsI<sub>3</sub>; vapour density 227 3. Arsenic triiodide. Sixty grains of arsenic, in fine powder, are rubbed in a mortar with three hundred of iodine, then heated in a small flask till liquefaction occurs, poured on to a slab, broken into pieces when cold, and kept in

It is an orange-red, a well-stoppered bottle. crystalline solid, soluble in water, and volatilizable by heat. When obtained from a solution it occurs in bright red hexagonal tables. It has been used externally and internally in lepra, impetigo, and cancer. Dose, one eighth of a grain three times a day; externally, three grains to an ounce of lard.

A. iodure'tum. The same as A. iodidum.

A. oxy'dum al'bum sublima'tum. Sublimed arsenious acid.

A. teriodi'dum. See A. iodidum. Arseniciasis. Same as Arseniasis. Arsenicism. Same as Arseniasis.

Arsenicoph'agy. (L. arsenicum ; фаγείν, to eat. F. arsenteophagie; G. Arsenikes-send.) The eating of arsenie. This practice is common amongst the peasants of the mountains of Austria, Styria, and especially at Salzburg and in the Tyrol. By degrees they are capable of taking two or three grains for a dose. It is consumed partly for the purpose of becoming fat and fresh coloured, partly to facilitate the respiration in the ascent of mountains; it is said to be aphrodisiae. The sudden discontinuance of the use of arsenic is followed by symptoms similar to those of a slight degree of poisoning, as languor, malaise, anxiety, anorexia, vomiting of glairy matter in the morning, pyrosis, ptyalism, constipation, respiratory troubles, hourseness of voice. It is given to animals also for the purpose of fattening them and improving their condition.

Arsen'icum. The pharmacopœial name (U.S.A.) of arsenic. See Arsenic.

A. album. (L. albus, white. G. weisser Arsenik.) The pharmacopeial (E.) name of arsenious acid.

A. al'bum calcina'tum Bergman'ni (L. albus, white; calx, lime.) A synonym of Arsenious acid.

A. al'bum pulvera'tum. (L. albus. white; pulveratus, part. of pulvero, to reduce to powder.) A synonym of Arsenious acid.

A. album sublima'tum. (L. albus, white; sublimo, to lift up on high.) Arsenious acid purified by sublimation.

A. broma'tum. The same as Arsenic

bramide.

A. citri'num. (L. citrus, the citron G. gelber Arsenik.) A synonym of Arsenic trisulphide.

A. citri'num factit'ium. (L. citrus, the citron; factitius, made by art.) A synonym of Arsenic trisulphide.

A. citri'num nati'vum. (L. citrus, the citron; nativus, native.) A synonym of Arsenie trisulphide.

A. cum antimo'nio. A synonym of Arsenical caustic.

A. fla'vum. (L. flavus, golden yellow.) A synonym of Arsenic trisulphide.

A. Gren'ii. A synonym of Arsenious acid.

A. gris'eum. (Mod. L. griseus, from F. gris, grey. G. regulinisches Arsen.) A synonym of metallic arsenic.

A. ioda'tum. The same as Arsenici iodidum.

A. ioda'tum liq'uidum. (L. liquidus, fluid.) A solution of iodide of arsenic.

A. lu'teum. (L. luteus, golden yellow.) A synonym of Arsenic trisulphide.

A. nativum porosum. (L. nutivus,

natural; porus, a passage.) A synonym of metallie arsenie.

A. ni'grum. (L. niger, black.) A synonym of metallic arsenic.

A. exyda'tum. A synonym of Irsenious

A. oxyda'tum al'bum. (L. albus, white.) A synonym of Arsenious acid.

A. persulphura'tum. (L. per, intens.; sulfuratus, impregnated with sulphur.) A synonym of Arsenic trisulphide.

A. potas'sicum. A term for potassinm arsenite. See Liquor arsenicalis.

A. pulverisa tum. (L. pulverizo, to re-

duce to dust.) A synonym of Arsenious acid.

A. rex. (L. rex, a king.) An old name given to arsenic when it was believed to be a semi-metal.

A. ru'brum. (L. ruber, red. G. rother Arsenik.) A synonym of Arsenic disulphide.

A. ru'brum eru'dum. (L. ruber, red; erudus, raw.) A synonym of Arsenie disulphide, or Realgur.

A. ru'brum factit'ium. (L. ruber, red; factitius, made by art.) A synonym of Irschic disulphide.

A. ru'brum nati'vum. (L. ruber, red; nativus, native.) A synonym of Realgar, native arsenic disulphide.

A. sandarach'a. A synonym of crude Arsenic disulphide.

A. sulphura'tum citri'num. (L. sulfurutus, impregnated with sulphur; citrus, the citron.) A synonym of Arsenic trisulphide.

A. sulphura'tum fla'vum. (L. sul-furatus, impregnated with sulphur; flavus, golden yellow.) A synonym of Arsenic trisulphide.

A. sulphura'tum ru'brum. (L. sulfuratus, impregnated with sulphur; ruber, red.) A synonym of Arsenie disulphide.

A. testa'ceum. (L. testaceus, consisting of tiles.) A synonym of Metallic arsenic.

A. vet'erum. (L. retus, aged.) A synonym Arsenie trisulphide.

Ar'senide. A compound of arsenic with a metal.

Arsenikan'ton. A name of the Mentha

Arseniophthisis. (L. arsenieum; phthisis. F. arseniophthisie; G. Arsenicaldarre.) Wasting, the result of poisoning by arsenic. See Arsenic, poisoning by.

Arse'nious. (L. arsenieum, arsenie. F. arsenieux.) Of, or belonging to, arsenie; having,

or full of, arsenic. A.ac'id. (F. acide arsenicux; G. arsenige

Säure.) The Acidum arseniosum of the London Pharmacopæia; the Arsenicum album (E. Ph.), or sesquioxide of arsenie; the Arsenici album oxidum venale (D. Ph.), or sublimed exide of arsenic; rats'-bane; arsenic.

It is prepared on a large scale by roasting arsenical pyrites, and other arsenic-holding ores. The vapours are condensed in the form of crude flowers of arsenic, and are purified by further sublimation. It is a white crystalline powder, or, when condensed in an iron vessel, a vitreous block; it has no smell, a sweetish metallic taste; of sp. gr. 3 738; slightly soluble in water, from which it crystallises in regular octahedra. It sublines at 193.3° C. (380° F.), and condenses in brilliant octahedra, and occasionally in prismatic needles. It is an active escharotic, and as such has been used for the destruction of cancers, and of the nerves of carious teeth. When taken internally it is rapidly absorbed, and is eliminated by the kidneys and liver, and, in some measure also, by the alimentary canal, the skin, and some of the secretions, as the tears. The system may become habituated to its use in large doses (see treemcophagy.) In large doses it is a powerful irritant poison (see Arsenic, poisoning by). Its chief use is in chronic skin diseases; it is a valuable antiperiodic in chronic cases of ague, and the results of malarial poisoning; it has been given with advantage in chorea, asthma, and gastrodynia, and has been recommended in whooping-eough, rheumatoid arthritis, and as an addition to chalybeates. Dose, one twentieth of a grain to one eighth, in solution or pill, immediately after a meal.

The tests for arsenious acid are the garlic odonr it emits when volatilised; the octahedral form of its crystals and their volatility; the appearance of a dark volatilisable metallic ring, when it is heated with a reducing substance (charcoal and sodium carbonate); the occurrence of a vellow film when a little ammonium sulphide is added to the suspected powder and evaporated to dryness. See Hume's, Marsh's, Reinsch's, and

Scheele's tests.

The substance above, and in all medical books, thus described, is arsenie trioxide, As4O6; arsenious acid. As(OII)<sub>3</sub> not having been prepared in a pure state, but existing in the aqueous solution of arsenic trioxide; its salts are called arsenites.

A. anhy'dride. A synonym of Arsenic trioxide, the substance usually known as Arsenious acid.

A. ox'ide. A term for Arsenic trioxide. Arse'nis. (Mod. Lat.) Arsenite. A. potas'sæ. Potassium arsenite.

A. potas'sæ aquo'sus. (L. aquosus, watery.) The Liquor arsenicalis.

A. potas'sæ liq'uidus. (L. liquidus. fluid.) The Liquor arsenicalis.

A. potas sicus a qua solu tus. aqua, water; solutus, dissolved.) The Liquor arsenicalis.

Ar'senite. Term for a combination of arsenious acid with a base.

A. of cop'per. See Copper arsenite.
A. of pot ash. See Potassinm arsenite.

A. of quini'ne. Prepared by boiling arsenions acid 64 grains, and potassium carbonate 32 grains, in four fluid ounces of water until dissolved, filling up the deficiency by evaporation; five drachms of this solution is mixed with a solution in boiling water of two scruples of sulphate of quinine. The precipitate is washed on a filter and dried. Recommended in chronic skin diseases, in doses of a third of a grain two or three times a day.

A. of strych'nia. C42H22N2O4, AsO3. Prepared by adding a solution of sulphate of strychnia to one of potassium arsenite. It is in white enbic crystals, soluble in water and alcohol. It has been used in intermittent fevers.

Arseniuret. Applied to a combination of arsenic with a metal; now called Arsenide.

Arseniuret ted by drogen. Asll<sub>3</sub>. A very poisonous gaseous compound. It is in-dammable, and may easily be detected in other gases by Marsh's test. See Hydrogen arsenide.

Arsine. AsH<sub>3</sub>. Hydrogen arsenide, usually

called arseniuretted hydrogen.

Ar'smart. A common name for the Polygonum hydropiper.

Artabot'rys. ('Apros, a loaf of bread; βότρυς, a bunch of grapes.) A Genus of the Nat. Order Anonaceae. Shrubs often climbing, inhabiting the warm regions of Africa and Asia. Leaves alternate, generally smooth; flowers solitary or grouped in cymes, supported on peduncles, which are frequently bent, like a crozier, hermaphrodite, regular; sepals three; petals six, in two rows; stamens 00, extrorse; earpels 00, each containing two or many anatropal ovules. Fruit a berry, with one or many seeds.

A. interme'dia. (L. intermedius, that which is between.) This plant yields a vola-tile oil, employed in Japan as a perfume, under

the name of Minjac-Kenangan.

A. odoratis sima. (L. odoratissimus, very fragrant.) A shrub inhabiting the Eastern Archipelago. In Java its leaves are regarded as a valuable remedy in cholera. The flowers are execedingly aromatic.

A. suave'olens. (L. suaveolens, sweetsmelling.) The aromatic leaves of this plant are employed to make an infusion which is considered

to be efficacious in cholera.

Ar'taneck. A term for arsenious acid. Artanita. The Cyclamen hedera folium. Artanithe, Miguel. (Αρτος, bread; or ἀρτάω, to fasten to; ἄνθη, a flower. G. Maticopfianze.) A Genus of the Nat. Order Piperacee. Spikes solitary, opposite the leaves; flowers hermaphrodite; style absent; bracts peltate or cncullate.

A. adun'ca, Miguel. (L. aduncus, bent towards one.) Hab. Panama. A substitute for the true matico, A. elongata, from which it is known by the larger and more pointed leaves, which are also less rugous below, more fibrous, and less easy to pulverise. The bark is rubefacient.

A. croca'ta. (L. crocatus, saffron-yellow.)

Used in tropical America as pepper.

A. elonga'ta, Miguel. (L. elongo, to A. elonga'ta, Miguel. (L. elongo, to lengthen.) Matico. Leaves almost sessile, alternate, acuminate, rugose above, pubescent and arcolar beneath, by means of prominent veins. It supplies Matico.

A. eucalyptifo'lia. (Eucalyptus tree; L. folium, a leaf.) Hab. Brazil. Used iu colic

and flatnlence.

A. lanceæfo'lia. (L. lancea, a lance; folium, a leaf.) A synonym of Piper lanceafolium.

A. trichostach'ya. (θρίξ, a háir; στάyes, an ear of corn.) Used in tropical America as pepper.

Artan'thic ac'id. A crystallisable acid abtained from matico.

Ar'tate. (L. artatus, part. of arto, to compress. G. dichtgedrangt, zusammingedrückt, eng.) Compressed, narrow.

Arte'di. Swedish botanist and ichthyologist: born 1705; died 1735. Studied the Umbelliferæ, and first used the words involucrum and involncellum.

Arte'dia. A Genus of the Nat. Order Umbelliferie.

A. squama'ta, Linn. (L. squamatus, sealy.) Leaves diuretic and stomachie; used cooked or raw.

Arte'dian boncs. (Artedi, named from him.) Tendinous ossifications between the myotomes, as occurs in the herring.

Arte'ijo. Spain, Prov. of Corunna. Here are saline waters, containing sodium and magnesium ehloride, and hydrogen sulphide gas; temp. 30° C. (86° F.) They are recommended in cutaneous diseases. Season, July-Septem-

Ar'telsheim. Germany. Mineral waters recommended in hysteria, gout, and palsy. (Dunglison.)

Artemid'ium. The Dittany of Crete,

Origanum dictamnus.

Artemis ia. (Λρτεμιε, the goddess of the chase, the Roman Diana, perhaps because it was used in diseases of women. G. Beifuss.) A Genus of the Nat. Order Composita. Pappus 0; florets few, all tubular, of the disc 2, of the ray in one row; bracts forming a roundish, imbricated head; receptacle naked or hairy; achænia

obovate, with a small epigynous disc.

The plants of this genus are for the most part warm aromatic bitters, and have a tonic and sialogogue action; anthelmintic and emmenagogue properties are also ascribed to them. From the A. absinthium the liquor termed Absinthe is made. The soft lanuginous substance of the leaves of A. chinensis and moxa, and their beaten tops, form an inflammable substance called Moxa, employed to produce eschars. Tarragon is used to

flavour vinegar, and as a pickle. **A. abrot'anum.** ('Αβρότονον, southernwood. F. aurone male, citronelle; G. Stabwurz, Eberraute.) Southernwood. Leaves downy beneath, bipinnate, with very narrow segments; flower heads hoary; receptable naked. Fragrant, strong smell, and acrid bitter taste. Used as a tonic and vermifuge, and on the Conti-

nent for making beer.

intermittent fevers

A. abrot'onum, Linn. Same as  $\mathcal{A}$ . abrotanum.

A. absin'thium, Linn. (F. absinthe grande, aluyne, armoise amere, herbe sainte; I. assenzio maggiore, a. volgare; S. ajeujo; G. Wermuth, Beifuss; Dutch alsem; Arab. afsantin.)
Wormwood. Leaves hoary, 2—3 pinnathid, with lanceolate obtuse segments; receptacle hairy; flowers yellow, of aromatic smell and bitter taste. It supplies, on distillation, a green volatile oil, the base of the liqueur absinthe. Wormwood has been used in dyspepsia, intestinal worms, and

A. a'fra. (L. Afer, an African.) Hab. South Africa. A species which has been used in dyspepsia and jaundice; and in decoction as a collyrium.

A. alba. (L. albus, white.) A synonym of the A. santonica.

A. argonen'sis. A plant growing on the high plateaux of Algeria, and much employed by the natives, under the name of El Chikh, as a tonic, aperient, and vermifuge. **A. balsami'ta,** Willd. A synonym of A.

pontica.

A. bien'nis. (L. biennis, lasting two years.) Hab. United States. Same properties as A. absinthium.

**A. bot'rys.** (Βότρυς, a cluster of grapes.) A synonym of Chenopodium ambrosioide

A. campes'tris. (L. campester, belonging to a level field. F. aurone de champs.) Used as an anthelmintic, an astringent, and a discutiont.

A. camphora'ta. An anthelmintic similar to the A. cœrulescens.

A. canaden'sis. Canadian wormwood. Has anthelmintic and bitter properties.

A. cauda'ta. (L. cauda, a tail.) Hab. United States. Has the properties of the

A. chenopo'dium. (Υήν, a goose; πούς, a foot.) A synonym of Chenopodium botrys. A. chinen'sis. A species which has been

said to yield the moxa of China.

A. ci'na, Berg. A plant growing in Tur-kestan, believed by Willkomm to be the motherplant of santonica, or wormseed.

A. cœrules'cens. (L. cœruleus, dark blue.) A Mediterranean plant, the flowering heads of which are the anthelmintic known as Semen seriphii, or Barbotine.

A. con tra. (L. contra, against. F. semencine, harbotine; G. Zittwersamen.) Hab. Persia,

Asia Minor. Probably the .1. sieberi.

A. dracun'culus. (L. dracunculus, a small serpent, tarragon. F. estragon; G. Dragun, Estragon, Kaisersalat.) Tarragon, a pot-herb, cultivated in large quantities at Grasse, in France. A fraggant oil is obtained from it by distillation. It is said to be emmenagogue, sudorific, and stomachic.

A. erianth'a, Fen. (Έριον, wool; ἄνθος,

a flower.) The A. spicata.

A. gal'lica. (F. sanguerii, or sanguerite.) A plant used as an anthelmintic.

A. glacialis. (L. glavialis, iey. F. genipi vrai.) Mountain wormwood. Stomachie.

A. glomera'ta. (L. glomeratus, rolled together.) The A. sieberi.

A. Gmeli'ni, Stechm. A species furnish-

ing in part Semen contra.

A. grandiflo'ra, Hoffm. (L. grandis, great; flos, a flower.) The A. rupestris. A. incul'ta, Del. (L. incultus, unculti-

vated.) The A. lercheana.

A. tn'dica. (Hind. majtari mastaru; Tam. machipattiri; Mal. tiru-nitri-pacha; Beng. mastau.) Indian southernwood. Said to be a powerful deobstruent and antispasmodie; used in nervous and spasmodic affections, and as a fomentation in phagedenic ulceration.

A. juda'ica, Linn. (L. judaicus, Jewish.)
One of the species supplying Semen contra.

A. latifo'lia. (L. latus, broad; folium, a leaf.) The A. chinensis.

A. leptophyl'la. (Λεπτός, delicate;

φύλλον, a leaf.) A synonym of A. pontica.

A. lerchea'na. One of the species entering into the composition of the Semen contra, or Semen einæ.

A. maderaspata'na. A synonym of A. moxa; and also of Grangea maderasputana.

A. maritima. (L. maritimus, belonging to the sea. F. absinthe maritime; I. assenze marino; G. Meerbeifuss.) Wormsood; sea wormwood. A low shrubby aromatic plant, with small creet ovoid flower-heads, having oblong obtuse involucral scales, the interior scales being scarious. The stem in its upper half is a fasti-giate thyrsoid paniele, crowded with flower-beads. Properties the same as A. absinthium.

A. marit'ima, var. stechmari'na. Yields santonica. (Brown.)

A. mexica'na. Hab. Mexico. Leaves tonic and anthelmintic.

A. monog'yna, Waldst. (Móvos, single; A species forming part of the γονή, a female.)

Semen contra of Russia.

A. mox'a, De Cand. Moxa weed. Hab. Chma. Leaves downy, bipinnatifid, with linearlanceolate, obtuse segments; heads middle-sized, globose, in racemose panieles. The easily separable down of the leaves is used to form the variety

of actual cautery called Moxa.

An oil, called Ngai oil, is distilled in China from the plant, which is gathered on the fifth day of the fifth month. It is used externally in rheumatic and neuralgic pains, and internally as a carminative, stomachic, astringent, and re-

A. mutelli'na. (F. genipi blanc.) An Alpine plant, used in the manufacture of the bitter aromatic liqueur known as Crême d'Absinthe.

A. panicula ta, Lam. (L. panicula, a tuft.) Used as a substitute for A. abrotanum.

A. pauciflo'ra, Stechm. (L. paucus, few; flos, a flower.) One of the species supplying Semen contra or Semen cina of Russia.

A. pon'tiea. (L. Pontieus, belonging to the Pontus or Black Sea. F. absinthe petite; I. assenzio minore; G. Edelwermuthbeifuss.) The Roman wormwood. Bitter stomachie.

A. procera. (L. procerus, tall.) Used as

A. abrotanum.

A. ramo'sa, Smith. (L. ramosus. branched.) A species supplying the chief part of the Semen contra of Barbary.

A. roma'num. (L. Romanus, Roman.) The A. pontieum.

A. ru'bra. (L. ruber, red.) The A. san-

tonien.

A. rupes'tris. (L. rupes, a cliff.) Tonic and vermituge.

A. santon'ica. The Tartarian southernwood, or wormseed plant. A source of Semen contra.

A. santon'icum. The same as A. santonica.

A. Sie'beri. A species producing the Somen contra or Semen cinæ.

A. sinen'sis. Same as A. chinensis. A. spica'ta, Jacq. (L. spico, to point. F.

genipi noir.) An Alpine species, used in the manufacture of the bitter aromatic liqueur named Creme d'Absinthe.

A. tenuifo'lia. (L. tenuis, slender; folium,

a leaf.) The A. pontica.

A. Vahlia'na. The flower-heads of this species, which inhabits the north-east of Persia, furnish one of the kinds of wormseed called Semen cinæ levanticum or Semen cinæ in granis.

A. vallesi aca. A tonic and stomachic.
A. vulga'ris. (L. vulgaris, common. F. armoise vulgaire.) The mugwort. The flowering

beads are said to be actively emmenagogue; and

the root is used in epilepsy and chorea.

Artemisie'æ. (F. artemisie's.) Applied by H. Cassini to a Group of Anthemidea chrysanthemea; by Lessing to a Subtribe of Senecionides, having the Artemisia for their type.

Artem'isin. (F. artémisine; G. artemisin.) The bitter principle of Artemisia.

Artemo'nium. ('Αρτεμώνιου.) name for a collyrium formerly in use, described by Galen, de C.M. sec. Loc. iv, 7.

Artereurys'ma. ('Apτηρία, an artery; τύρυς, wide.) A synonym of Aneurysm.

Arteria. ('Αρτηρία, the trachea; as if α ροτηρία, from άήρ, air or spirit; τηρίω, to keep or preserve; the plural ἀρτηρίαι, arteriæ, the bronchial tubes, was the designation given only to those more hard canals or vessels which enter the lungs, which, being found empty after death, were supposed to be filled with vital spirit; but they were afterwards called by the name,

τράχειαι άρτηρίαι, arteriæ asperæ, from the cartilaginous structure of the larger branches, and the simple term, dornolar, arteria, was transferred, because they were found empty of blood after death, to pulsating blood-vessels, which alone are called arteries at this day; according to some, ἀρτηρία is derived from ἀρτάω, to suspend, as applied to the relation between the trachea and lungs; a somewhat improbable suggestion is that ἀρτηρία is, as if ἀλτηρία, from άλλομαι, to leap; because the heart's pulsation is felt throughout the arteries, causing them, as it were, to leap. F. artére; I. arteria; G. Pulsader, Schlagader.) Term for that class of blood vessels by which the blood is conveyed from the heart towards the various organs and members of the body; an artery. See Artery.

A. abdomina'lis. (L. abdomen, the lower part of the helly.) The deep circumflex iliae artery

A. abdomina'lis exter'na. (L. externus, outward.) The superficial epigastric artery.

A. abdomina'lis snbcuta'nea. sub, under: cutis, the skin.) The superficial epigastric artery.

A. acetabuli. (L. acetabulum, the socket of the bip-joint. G. Huftgelenkast.) The external terminal branch of the obturator artery, which enters the hip-joint through the incisura acetabuli, and is distributed chiefly to the ligamentum teres.

A. acromia'lis. ('Ακρώμιον, from ακρος, the summit; wuos, the shoulder.) See Aeromial

A. ad cu'tem abdom inis. (L. ad, to; cutis, skin; abdomen, the lower part of the helly.) The superficial epigastric artery.

A. alveola'ris infe'rior. (L. alveolus, a small hollow; inferior, lower.) The internal maxillary artery

A. alveola'ris supe'rior. (L. alveolus; superior, above.) The alveolar branch of the internal maxillary artery.

ge'nu mag'na. A. anastomotica ('Αναστομόω, to furnish with a mouth; L. genu, the knee; magnus, great.) artery of the thigh. The Anastomotic

A. anastomotica transvers'a. ('Δναστομόω; L. transversus, turned across.) A branch of the peroneal artery which establishes a com-

munication with the posterior tibial artery.

A. angula'ris na'rium. (L. angularis, having augles; nares, the nostrils.) The augular artery.

A. anon'yma. ('Δν, neg.; ονομα, a name.) The innominate artery.

A. anon'yma ili'aca. (L. ilia, the groin.) The common iliae artery.

A. aor'ta. Sce Aorta. A. aor'ta ascen'dens. (L. aorta; ascendens, from ascendo, to mount up.) The ascending portion of the arch of the aorta.

A. aor'ta descen'dens abdomina'lis. (L. aorta; descendens, part. from descendo, to descend; abdominalis, pertaining to the abdomen.) The abdominal aorta.

A. aor'ta descen'dens thorac'ica. (l., thoracicus, pertaining to the chest ) The descending part of the arch of the aorta and the thoracic aorta.

A. appendica'lis. (L. appendix, an appendage.) A synonym of the A. appendicularis.

A. appendicula'ris. (L. appendicula, a small appendage.) The brauch of the ilio-colic

artery which supplies the appendix vermiformis

A. articula'ris capit'uli fib'ulæ pro'**pria.** (L. articularis, pertaining to a joint; capitulum, a small head; fibula; proprius, proper.) A branch of the anterior tibial artery supplying the parts in the neighbourhood of the head of the fibula; also called superior peroneal artery.

A. articula'ris ge'nu az'ygos. articularis; genu, the knee; "ζυγος, not paired.)

The azygos articular artery.

A. articularis ge'nu infe'rior exter'na. (L. articularis; genu, the knee; inferior, helow; externus, on the outer side.) The inferior external articular artery of the knee.

A. articula'ris ge'nu infe'rior inter'na. (L. internus, internal.) The inferior internal articular artery of the knee.

A. articula'ris ge'nu latera'lis. (L. lateralis, lateral.) The superior external articular artery of the knee.

A. articula'ris ge'nu me'dia. (L. medius, in the middle.) The azygos articular artery of the knee.

A. articula'ris ge'nu media'lis. (L. medialis, middle.) The superior internal articular artery of the knee.

A. articula'ris ge'nu profun'da. (L. profundus, deep.) The superior internal articular artery of the knee.

A. articula'ris ge'nu recur'rens. (L. recurro, to run backwards.) The recurrent branch artery of the anterior tibial artery

A. articula'ris ge'nu superficia'lis. (L. superficialis, on the surface.) The anastomotica magna artery

A. articula'ris ge'nu supe'rior exter'na. (L. superior, above; externus, on the outside.) The superior external articular artery of the knee.

A. articula'ris ge'nu supe'rior inter'na. (L. internus, internal.) The superior internal articular artery of the knee.

A. articula'ris ge'nu supre'ma. (L. supremus, very high.) The anastomotica magna artery.

A. as'pera. (L. asperus, rough.) The rough artery. An old term for the trachea or windpipe; because of the inequalities or roughness of its surface, caused by the cartilaginous rings entering into its formation.

A. auditi'va inter'na. (L. auditus, hear-

ing; internus, internal.) The internal anditory

arterv.

A. auricula'ris ante'rior. (L. auricula, the external ear; anterior, in front.) anterior auricular artery. A branch of the superficial temporal artery.

A. auricula'ris cor'dis dex'tra. (L. auricula, the auricle; cor, the heart; dexter, right.) The right coronary artery of the heart.

A. auricula ris cor dis sinis tra. (L. auricula; cor; sinister, left.) The left coronary artery of the heart.

A. auricula'ris poste'rior. (L. auricula; posterior, behind.) The posterior auricular

artery.

A. auricula'ris profun'da. (L. auricula; profundus, deep.) A small branch given off from the internal maxillary artery in the first part of its course. It runs up behind the articulation of the lower jaw, and is distributed to the external auditory meatus.

A. axilla'ris. (L. axilla, from ala, a wing.) The axillary artery.

A. basila'ris. (L. basis, a pedestal.) The basilar artery.

A. brachia'lis. (L. brachialis, pertaining to the arm.) The brachial artery.

A. bronchia'lis. (Βρόγχια, the bronchial tubes.) The bronchial artery.

A. bucca'lis. (L. bucca, the check.) The buceal artery.

A. buccinato'ria. (L. buccinator, the

muscle of that name.) The buccal artery.

A. bulbi'na. (L. bulbus, a bulb.) The artery of the bulb of the penis.

A. bul'bo-caverno'sa. (L. bulbus; cavernosus, full of cavities.) The artery of the bulb of the penis.

A. bul'bo urethra'lis. (L. bulbus, a bulb: οὐρήθρα, the urethra. G. Harnrohrenarterie.) The urethral artery. A small branch of the artery to the bulb, which runs forward in the groove between the corpus cavernosum and spongiosum of each side to the glans penis.

A. bulbo'sa. (L. bulbus, a bulb.) The artery of the bulb of the penis.

A. capsula'ris. (L. capsula, a small chest. G. Kapsclarterie.) A branch of the arteria centralis retinæ, which, until near the close of fætal life, runs forward through the vitreous humour to the posterior capsule of the

Also, term applied to the branch of the aorta distributed to the supra-renal capsule of each side.

A. caro'tis cerebra'lis. (Καρωτίδης, the carotids; from καρόω, to stupefy; cerebrum, the brain.) A synonym of the internal carotid artery.

A. caro'tis exter'na. (Καρωτίδης; L. externus, external.) The external carotid artery.

A. caro'tis facia'lls. (Καρωτίδης; L. facies, the face.) The external carotid artery. A. caro'tis inter'na. (Καρωτίδης; Ι. internus, internal.) The internal carotid artery.

A. car'pea dorsa'lis radia'lis. (Καρπός, the wrist; L. dorsum, the back; radius, the bone of that uame.) The posterior carpal branch of the radial artery.

A. car'pea dorsa'lis ulna'ris.  $(Ka\rho\pi\delta s;$ L. dorsum; ulna, the bone of that name.) posterior carpal branch of the ulnar artery.

A. centra'lis ret'inæ. (L. centralis, in the middle; retina. G. Netzhautarterie.) branch of the ophthalmic artery, which perforates the optic nerve about a quarter of an inch before its entrance into the globe of the eye, and, reaching the retina, ramifies in it: in the fœtus a branch, A. capsularis, runs to the posterior surface of the lens; this is absorbed before birth. A. cerebra'lis. (L. cerebrum, the brain.)

A synonym of the internal carotid artery. A. cervica'Hs. (L. cervix, the neck.) The

Basilar artery

A. chorioldea. (Choroid plexus. G. adernetzschlagader.) A small hranch of the internal carotid artery, distributed to the tela chorioidea of the lateral ventricles of the brain.

A. choriof dea poste rior. A branch of the posterior cerebral artery, which, passing over the corpora quadrigemina, enters the tela chorioidea.

A. circumflex'a il'ii exter'na. (L. circumflexus, bent round; ilium, the bone; externus, outer.) The external circumflex iliac

A. circumflex'a scap'ulæ. (L. circumflexus, from circumflecto, to bend round; scapula, the shoulder-blade.) The dorsal branch of the subscapular artery.

A. collatera'lis exter'na. (L. collatero, to admit on both sides; externus, ontward.) The superior profunda artery of the arm.

A. collatera lis inter'na. (L. collatero; internus, inward.) The inferior profunda artery of the arm

A. collatera'lis mag'na. (L. collatero; magnus, great.) The superior profunda artery of the arm.

A. collatera'lis me'dia. (L. collatero; medius, that is in the middle.) Term applied to the lower part, or continuation, of the superior profunda artery of the arm.

A. collatera'lis profun'da. (L. collatero; profundus, deep.) The lower part of the superior profunda artery of the arm.

A. collatera'lis radia'lis. (L. collatero; radius, the hone of that name.) The lower part of the superior profunda artery of the arm.

A. collatera'lis ulna'ris. (L. collatero; ulna, the bone of that name.) The inferior pro-

funda artery of the arm.

A. commu'nicans Willis'ii. (L. communico, to unite; Willis.) A name applied to the posterior communicating artery of the circle of Willis.

A. corona'ria mallcola'ris. (L. coronarius; malleolus. G. quere Verbindungsarteric.)
The communicating branch of the peronaeal

- A. corona'ria ventric'uli dex'tra. (L. coronarius, pertaining to a wreath; ventri-culus, dim. of venter, the belly; dexter, on the right side.) The pylorie artery of the sto-
- A. corona'ria ventric'uli sinis'tra inferior. (L. ventriculus; sinister, the left; inferior, lower.) The gastro-epiploiea sinistra artery.
- A. corona'ria ventric'uli sinis'tra superior. (L. coronarius; ventriculus; sinister, the left; superior, upper.) The pyloric artery of the stomach.
- A. cor'poris callo'si. (Corpus callosum, a part of the brain.) The anterior cerebral artery.
- A. costa lis ante rior. (L. costa, a rib; anterior, in front.) Branches given off from the internal mammary artery, and running backward in the intercostal spaces.
- A. costalis inferior. (L. costa, a rib; infirior, below.) The anterior branch of the intercostal arteries.
- A. costalis posterior. (L. costa; posterior, behind.) The posterior branch of each intercostal artery.
- A. costa lis supe'rior. (L. costa; superior, comp. of superus, above.) The superior intercostal artery.
- A. cos'talis supre'ma. (L. costa; supremus, superlative of superus, above.) superior intercostal artery.
- A. cras'sa. (L. crassus, thick.) aorta
- A. cris'tæ pu'bis. (L. crista, a crest; pules, the bone of that name. G. Schambeinarteric.) A branch of the epigastric artery distributed to the posterior surface of the pubes. It anastomoses with the branches of the obturator

artery, and sometimes constitutes the origin of that vessel.

A. crura'lis. (L. cruralis, of, or belonging to, the leg.) The femoral artery.

A. crura'lis ili'aca. (L. cruralis; ilia the groin.) The external iliac artery.

A. cubita'lis. (L. cubitalis, pertaining to

A. cu'biti exter'na. (L. cubitus, the elbow, the forearm; externus, outward.) radial artery.

A. diaphragmat'icæ infe'rior. diaphragma, the midriff; inferior, below.) inferior phrenic artery.

A. diaphragmat'icæ supe'rior. diaphragma; superior, above.) The superior phrenic artery.

A. dorsalis clitoridis. (L. dorsum, the back; αλειτορίς, the clitoris. G. Kitzlerarterie.)

The dorsal artery of the clitoris.

A. dorsa lis digiti min'imi pro'pria. (L. dorsualis, belonging to the back; digitus, a toe; minimus, least; proprius, peculiar. G. Rüchenarterie der kleinen Zehe.) A branch given off from the outermost of the interesseous branches of the dorsal artery of the foot, which runs along the outer border of the little toe, and forms its external collateral branch.

A. dorsa'lis metacar'pi. (L. dorsum, the back; metacarpus.) The metacarpal or first dorsal interesseous branch of the radial artery.

A. dorsa'lis na'si. (L. dorsum, the back; nasus, the nose. G. Nasenrückenarterie.) The nasal branch of the ophthalmic artery

A. dorsa'lis scap'ulæ infe'rior. dorsum, the back; scapula, the shoulder-blade; inferior, below.) The dorsal scapular branch of inferior, below.) the subscapular artery.

A. duodena'lis infe rior. (L. duodenum, the intestine of that name; inferior, below.) The panereatico-duodenalis artery.

A. du'ræ ma'tris me'dia max'ima. (Dura mater, the cerebral membrane of that name; medius, middle; maximus, very large.) The middle meningeal artery.

A. emul'gens.
out.) The renal artery. (L. emulgeo, to milk

A. encephalica. ('Εγκέφαλος, within

the head.) The internal carotid artery. **A.** epigas'trica infe'rior. (Επιγάστριος, upon the belly; inferior, below.) dcep epigastric artery.

A. epigas'trica infe'rior exter'na. (Επιγάστριος; L. inferior; externus, on the ontside.) The superficial epigastric artery. ontside.)

A. epigas'trica infe'rior inter'na. (Επιγάστριος; L. inferior; internus, within.) The deep epigastric artery.

A. facia lis anterior. (L. facies, the face; anterior, foremost.) The facial artery.

A. facia'lis exter'na. (L. facies; externus, outward.) The facial artery. A. facia'lis poste'rior. (L. facies; posterior, behind.) The transverse facial artery.

A. facia'lis profun'da. (L. facies; profundus, deep.) The internal maxillary

artery. A. facia'lis transver'sa. (I. facies, the face; transversus, lying across.) The transverse facial artery.

A. femora'lis commu'nis. (L. femur, the thigh; communis, common.) The temoral

A. femora'lis profun'da. (L. femur, the

thigh; profundus, deep.) The profunda femoris

A. femora'lis superficia'lis. (L. femur; superficialis, pertaining to the surface.) The femoral artery.

A. fibula'ris. (L. fibula, the bone of that

name.) The peroneal artery.

A. fibula'ris supe'rior. (L. fibula; superior, above. G. obere Wadenbeinarterie.) A small branch of the anterior tibial artery distributed to the head of the fibula.

A. fos'sæ Syl'vii. (L. fossa, a ditch; Sylvius, the name of an anatomist.) The middle

cerebral artery.

**A. funicula'ris.** (L. funiculus, a slender cord.) The cremasteric artery.

A. funic'uli spermat'ici. (L. funiculus, a slender cord; spermaticus, pertaining to seed.) The cremasteric artery.

A. gas'trica infe'rior dex'tra. (Γαστήρ, the belly; L. inferior, lower; dexter, on the right hand.) The gastro-epiploica dextra artery.

A. gas'trica infe'rior sinis'tra. (Γασ-

τήρ; inferior, lower; sinister, on the left hand.) The gastro-epiploica sinistra artery.

A. gas trica superior. (Γαστήο; L. superior, upper.) The coronary artery of the stomach.

A. gas'trica supe'rior dex'tra. ( $\Gamma a \sigma$ - $\tau \acute{n}\rho$ ; superior, upper: dexter, on the right hand.) The pyloric artery of the stomach.

A. gas'trica supe'rior sinis'tra. ( $\Gamma a\sigma$ -Tip; superior, upper; sinister, on the left.) The coronary artery of the stomach.

**A. gastrocne mia.** (Γαστήρ; κνήμη, the leg.) The deep branch of the sural artery.

A. hæmorrhoida'lis infe'rior. (ΑΪμα, blood; ρέω, to flow; inferior, lower.) The inferior hæmorrhoidal artery.

A. hæmorrhoida'lis inter'na. (Alua, blood;  $\dot{\rho}\ell\omega$ , to flow; internus, within.) superior hæmorrhoidal artery.

A. hepat'ica dex'tra. (Ήπατικός, of the hver; L dexter, on the right.) The right hepatic artery.

**A. hepat'ica me'dia.** ('Ηπατικός; L. medius, that is in the middle.) One or more small branches of the hepatic artery distributed to the posterior and inferior surface of the liver.

**A. hepat'ica pro'pria.** (Ἡπατικός; L. proprius, special.) The hepatic artery.

A. hepat'ica sinis'tra. ('Ηπατικός; L. sinister, left.) The left hepatic artery.

A. humera'ria. (L. humerus, the shoulder. G. Schulterast.) The descending or humeral branch of the acromial thoracic artery. It runs with the eephalic vein in the interval between the deltoid and pectoralis major muscles, to which it is distributed.

A. il'eæ. (L. ilia, the flanks.) The iliae branch of the ilio-colic artery.

A. il'eo-col'ica. (L. ilia, the flanks; κῶλον, the colon.) The ilio-colic artery.

A. ili'aca anterior. (L ilia, the flanks; anterior, foremost.) The external iliac artery.

A. ili'aca commu'nis. (L. communis, common.) The common iliac artery.

A. ili'aca exter'na. (L. externus, outward.) The external iliae artery.

A. ili'aca inter'na. (L. internus, inward.) The internal iliae artery.

A. ili'aca par'va. (L. parrus, small.) The ilio-lumbar artery.

A. ili'aca poste'rior. hinder.) The gluteal artery. (L. posterior,

A. ili'aca primiti'va. (L. prime first of its kind.) The common iliac artery (L. primitivus,

A. il'io-lumba'lis. (L. lumbus, the loin.) The ilio-lumbar artery.

A. infra-scapula'ris. (L. infra, below; scapula, the shoulder-blade.) The descending branch of the subscapular artery distributed to the subscapularis, serratus magnus, teres major, aud latissimus dorsi muscles.

A. innomina'ta. (L. innominatus, nnnamed.) The nameless artery; applied to the first branch of the aorta, dividing into the right carotid and right subclavian arteries. See Innominate artery.

A. intercosta'lis pri'ma. (L. primus, first.) The superior intereostal artery.

A. intercosta lis supre ma. (L. supremus, highest.) The superior intercostal artery.

A. intermetacar peæ vola res. (L. inter, between; metacarpus; vola, the palm.)
The palmar interosseous branches of the deep palmar arch.

A. intermetatar'sea dorsa'iis pri'ma. (L. inter, between; metatarsus; dorsualis, belonging to the back; primus, first.) The first dorsal interesseous artery.

A. interos'seæ antibra'chii commu'nis. (L. inter, between; os, a bone; antibrachium, the forearm; communis, common.) The common interesseous artery of the forearm.

A. interos'seæ antibra'chii exter'na. (L. inter, between; os, a bone; antibrachium, the forearm; externus, outward.) The posterior interesseous artery of the forearm.

A. interos'seæ antibra'chii inter'na. (L. interosseus; antibrachium; internus, inward.) The anterior interesseous artery of the forearm.

A. interos'seæ antibra'chii poste'rior. (L. interosseus; autibrachium; posterior, hinder.) The posterior interosseous artery of

A. interos'seæ antibra'chii superficia'lis. (L. interosseus; antibrachium; superficialis, pertaining to the surface.) The comes nervi mediani branch of the anterior interosseous artery of the forearm.

A. interos'seæ dorsa'lis ma'nus pri'ma. (L. interosseus; dorsum, the back; manus, the hand; primus, first.) The metacarpal artery of the hand, which is a branch of the radial, and gives off the dorsal arteries of the thumb and index fingers.

A. interos'seæ dorsa'lis pe'dis pri'ma. (L. interosseus; dorsum; pes, the foot; primus, first. G. Rückenarteric der grossen Zehe.) The first dorsal interesseons artery of the foot, which is a branch of the metatarsal artery, and supplies the dorsum of the great toe, and the external dorsal artery of the second toe.

A. ischiad'ica. (L. ischiadicus, that has gont in the hip.) The sciatic artery.
A. jejuna'lis. (Jejunum, the intestine of

that name.) The upper branch of the superior mesenteric artery supplying the jejunum.

A. jugula'ris. (L. jugulum, the throat.)

The carotid artery

A. labia'lis infe'rior. (L. labium, a lip; inferior, lower.) The inferior coronary artery of the lips.

A. labia'lis puden'di ante'rior. (L. pudenda, the privy parts; anterior, foremost.) The analogous artery to that supplying the scrotum in man; it supplies the labia majora in women.

A. labla'lis puden'di poste'rior. (L. labium; pudendi; posterior, next.) The artery supplying the posterior part of the scrotum in man, and of the labia majora in women.

A. mag'na. (L. magnus, great.) The great artery. A term for the aorta, being the chief trunk from which the whole arteries (with the exception of the pulmonary) of the body spring.

A. mamma'ria exter'na. (L. mamma, the breast; externus, outward.) The long thoracie

or external mammary artery.

A. maxilla'ris exter'na. (L. maxillaris, relating to the jaw; externus, ontward.) facial artery.

A. maxilla'ris inter'na. (L. maxillaris; internus, inward.) The internal maxillary artery.

A. max'ima. (L. maximus, very great.) The aorta.

A. me'dla anastomet'ica. (L. medius, middle; anastomotic.) The middle colie artery.

A. mediasti'nieæ. (L. mediastinus, belonging to the middle.) The mediastinal artery.

A. medul'læ spina'lis ante'rier. (L. medulla, marrow; spinalis, belonging to the spine; anterior, front. G. vordere Rückenmarksarteric.) The anterior spinal artery.

A. medul'hæ spina'lis peste'rier. (L. medulla; spinalis; posterior, hinder.) The pos-

terior spinal artery.

A. meninge a accesso ria. (Μήνιγξ, a membrane; L. accedo, to approach.) The small meningeal artery.

A. meninge'a anti'ca. (L. anticus, foremost.) A branch of the anterior ethmoidal artery.

A. meninge'a mag'na. (L. great.) The middle meningeal artery. (L. magnus.

A. meninge'a me'dia. (L. medius, middle.) The middle meuingeal artery.

A. menta'lis. (L. mentum, the chin.) The terminal branch of the inferior dental artery; it anastomoses with the submental and inferior mental arteries.

**A. mesara'ica.** (Μέσος, middle; ἀραιός, thin, as of the small intestine.) The inferior

mesenterie artery.

A. metacar'pea dersa'lis ulna'ris. (L. ulna, the elbow.) The dorsal carpal branch

of the ulnar artery.

A. metacarpea volaris profunda. (L. profundus, deep.) The deep palmar branch of the radial artery. The deep palmar arch.

A. metaear'pea vola'ris subli'mis. (L. sublimis, high.) The superficial palmar arch.

A. mctacar'pea vela'ris ulna'ris profun'da. (L. profundus, deep.) palmar branch of the uluar artery. The deep

A. metacar'pea vela'ris ulna'ris subli'mis. (I. sublimis, high.) The branch of the uluar artery forming the superficial palmar arch.

A. metatar'sea dorsa'lis fibula'ris. (L. fibula, the bone of that name.) The branch of the metatarsal artery to the little toe.

A. metatar'sea pri'ma. (L. primus, first.) The dorsal artery of the great toe, or first dotsal interesseous artery.

A. muscula ris tem'eris. (L. musculus.

a muscle; femur, the thigh.) The profunda of the thigh, or deep femoral artery.

A. muscula'rls profun'da fem'eris. (L. musculus, a musele; profundus, deep; femur, the thigh.) The profunda artery of the thigh.

A. mus'culo-phrenica. (L. musculus, muscle; φρένες, the midriff, the diaphragm.) The branch of the internal mammary supplying the diaphragm. It is given off about the sixth intercostal space.

A. nasa'lis ante'rior. (L. nasus, the nose; anterior, foremost.) The nasal branch of

the ophthalmie artery.

A. nasa'lls exter'na. (L. externus, outward.) The alar branch of the facial artery supplying the ala and dorsum of the nose.

A. nasa'lis latera'lis. (L. lateralis, pertaining to the side.) The alar branch of the facial artery supplying the ala and dorsum of the nose.

A. nasa'lis poste'rior. (L. posterior,

hinder.) The spheno-palatine artery.

A. nutrit'ia fem'eris. (L. nutritius, one that nourishes; femur, the thigh.) The nutritions artery of the femur. It is a branch of the third perforating artery.

A. nutrit'ia fem'eris infe'rier. inferior, lower.) The inferior nutritious artery of the femur. It is a branch of the third perforating artery.

A. nutrit'ia fem'eris mag'na. magnus, large.) The great or inferior nutritious artery of the femnr.

A. nutrit'ia fem'oris supe'rier, (L. superior, higher.) A nutritive branch for the femur, given off from the first perforating artery.

A. nutrit'ia fib'ulæ. (L. fibula, the bone of that name.) The nutritious artery of the fibula. It is given off from the peroneal artery, and, entering the fibula, runs downward.

A. nutrit'ia hu'meri. (L. humerus, the bone of that name.) The nutritive branch of the brachial artery of the arm which supplies the humerus, entering the bone about the middle. It runs downward.

A. nutritia il'ii. (L. ilium, the bone of that name.) The nutritious artery of the ilium. It is given off from the gluteal artery just at tho point where the gluteal leaves the pelvis.

A. nutrit'ia mag'na hu'meri. magnus, great; humerus, the bone of that name.) The nutritious artery of the humerus.

A. nutrit'ia mag'na tib'iæ. (L. tibia, the shin-bone.) The nutritions artery of the tibia. It is a branch of the posterior tibial artery given off near its origin, and runs downward.

A. nutrit'ia ra'dil. (L. radius, the bone of that name.) The untritious artery of the It is a branch of the anterior interosradius. scous artery.

A. nutrit'ia tib'iæ. (L. tibia, the shinbone.) The nutritions artery of the tibia. It is a branch of the posterior tibial artery near its origin.

A. nutrit'ia ul'næ. (L. ulna, the bone of that name.) The nutritious artery of the ulna. It is a branch of the auterior interesseous artery.

A. palati'na ma'jer. (L. palatum, the palate; major, greater.) A branch of the descending palatine artery supplying the hard palate near the inferior palatine foramen.

A. palati'na supe'rior. (L. superior, higher.) The descending palatine artery,

A. palma'ris. (L. palmaris, belonging to the palm.) The anterior interesseous artery.

A. pedi'aca. (L. pes, a foot.) The dorsal artery of the foot.

A. pe'dis. (L. pes, the foot.) The dorsal artery of the foot.

A. pel'vica. (L. pelvis, a basin, the pelvis.) The internal iliac artery.
A. pe'nis. (L. penis, the male organ.) The

terminal branch of the internal pudic artery

A. per'forans antibra'chii infe'rior. (L. perforo, to hore through; ante, before; brachium, the arm; inferior, the lower.) A branch of the anterior interesseons artery, which perforates the interesseous ligament near the upper border of the pronator quadratus muscle.

A. per'forans antibra'chii supe'rior. (L. superior, upper.) The posterior interesseous artery.

A. per'forans fem'oris pri'ma. (L. femur, the thigh; primus, first.) The first perforating artery of the profunda femoris artery.

A. pericardi'aco-phren'ica. (11ερικάρδιος, the membrane about the heart; phrenicus, relating to the diaphragm.) comes nervi phrenici artery.

A. perone'a anti'ca. (Περόνη, the fibula; L. anticus, foremost.) The perforating branch of

the peroneal artery.

A. perone'a per'forans. (L. perforo, to hore through.) The anterior peroneal artery.

A. perone'a superior. (L. superior, higher. G. obere Wadenbeinarterie.) A branch of the anterior tibial artery near its origin, supplying the parts near the head of the libula.

A. pharynge'a infe'rior. (L. pharyngeus, relating to the throat; inferior, lower.) The ascending pharyngeal artery.

A. pharynge'a supre'ma. (L. supremus, highest.) A brauch of the spheno-palatine artery running parallel with the vidian, and supplying the soft parts.

A. pharyn'go-basila'ris. (L. pharyngeus, relating to the throat; basilaris, relating to the base.) The ascending pharyngeal artery.

A. pharyn'go-meninge'a. (Μήνιγξ, membrane.) The ascending pharyngeal artery.

**A. pharyn'go-pala'tîna.** (Φάρυγξ, the throat. L. pulatum, the palate.) The inferior palatine artery.

A. planta'ris media'lis. (L. plantaris, relating to the sole of the foot; medialis, middle.)

The internal plantar artery.

A. planta'ris profun'da. (L. plantaris; profundus, deep. G. tiefe Sohlenarterie.) The first posterior perforating branch of the interosseous branch of the dorsal artery of the foot.

A. præparan tes. (L. pare.) The spermatic arteries. (L. praparo, to pre-

A. prin ceps pol'licis. (L. pollex, the G. Hauptarterie des Daumens.) branch of the radial artery just as it is about to turn into the palm; it passes in front of the abductor indicis and between the metacarpal bone of the thumb and its superjacent muscles to the space between the two ends of the flexor brevis pollicis, where it divides into two branches, which run on each side of the palmar aspect of the thumb, and join in an arch at its extre-

A. profun'da bra'chii. (L. profundus, deep; brachium, the arm.) The superior profunda branch of the brachial artery.

A. profun'da cer'ebri. (L. profundus,

deep; ccrebrum, the brain.) The posterior cerebral artery.

A. profun'da clitor'idis. (Κλειτορίς, the clitoris.) The deeper of the two terminal branches of the pudic artery in the female supplying the clitoris, and analogous to the artery of the corpus cavernosum in the male.

A. profun'da lin'guæ. (L. profundus, deep ; lingua, the tongue.) The ranine artery.

A. profun'da pe'nis. (L. penis, the male organ. G. tiefe Ruthenarterie.) The artery of the corpus cavernosum.

A. profun'da vo'læ. (L. profundus, deep; vola, the palm. G. tiefe Hohlhandarterie.) The terminal branch of the radial artery forming the deep palmar arch.

A. profundis'sima il'ii. (L. profundissima, the lowest; ulum, the bone of that name.) A branch of the deep branch of the gluteal artery, supplying the hip-joint.

A. puden'da commu'nis. (L. pudenda, the privy parts; communis, common.) The in-

ternal pudic artery.

A. puden'da exter'na. (L. externus, ontward.) The external pudic artery.

A. puden'da inter'na. (I inward.) The internal pudic artery. (L. internus.

A. pu'dica. (L. pudicus, from pudeo, to

be ashamed.) The internal pudic artery. A. pulmona'lis. (L. pulmo, a lung.)

The pulmonary artery. A. ra'dio-palma'ris. (L. radius, the bone of that name; palmaris, belonging to the palm.) The superficial volar artery.

A. re'no-capsula'ris. (L. ren, the kidney; capsularis, capsular. G. Nebennierenschlayader.) The snpra-renal or capsular artery.

A. sa'cra latera'lis. (L. saerum, the

bone of that name; lateralis, relating to the side.) The lateral sacral artery.

middle.) The middle sacral artery.

A. sacra lis me time. \\_\_\_\_\_\_

middle.) The middle sacral artery.

(L. scrotum;

A. scrota'lis ante'rior. (L. scrotum; anterior, in front.) The terminal branch in man of the deep division of the external pudic artery.

A. sep'ti na'rium poste'rior. (L. septum, a fence; naris, a nostril; posterior, hinder.) A branch of the sphæno-palatine branch of the internal maxillary artery; it runs along the septnm nasi, and, entering the incisor foramen, inosculates with the descending palatine artery.

A. sigmoïde'a. (Sigmoid flexure of colon.)

The sigmoid artery.

A. si'nus caverno'si. (L. sinus, a gulf; cavernosus, full of cavities.) One or more branches of the internal earotid artery given off whilst it is in the cavernous sinus, and supplying its walls, the Gasserian ganglion, and the crura cerebri.

A. spermat'ica deferentia'lis. spermaticus, relating to seed; defero, to carry away.) The artery of the vas deferens.

A. spermatica externa. (L. spermaticus, belonging to seed; externus, outer.) The cremasteric artery.

A. spermat'ica inter'na. (L. internus,

inner.) The spermatic artery.

A. sphæ'no-spino'sa. The middle meningeal artery; so called because it enters the skull through the spinous foramen of the sphenoid

A. spino'sa. (L. spinosus, the foramen so called.) The middle meningeal artery.

**A. spiralis.**  $(\Sigma \pi \epsilon i \rho a)$  anything wound round.) The superior profunds of the arm.

A. stape'dia. (Stapes, the bone of that name.) A branch of the stylomastoid artery, which passes through a triangular opening in the Fallopian canal, penetrates the membrana obturatoria of the stapes, and is distributed on the promontory, and often anastomoses with the artery accompanying Jacobson's nerve.

A. sterna'lis. (Στέρνον, the breast.) The

internal mammary artery.

A. subcuta nea ma'læ. (L. sub, under; cutis, the skin; mula, the jaw.) The terminal branch of the deep temporal artery.

A. supracosta'lis. (L. supra, above; costa, a rih.) The collateral intercostal artery.

A. supramaxilla'ris. (L. supra, above; maxillaris, belonging to the jaw.) The superior dental artery.

A. supratar'sea. (L. supra; ταρσός, the flat of the foot.) The metatarsal branch of the dorsalis pedis artery.

A. supratar'sea exter'na. (L. externus,

outer.) The external tarsal artery. A. Sylvia'na. (Sylvius.)

cerebral artery.

A. tar'sea exter'na ante'rior. (Tap- $\sigma \dot{o}$ s, a broad flat surface, so the sole of the foot; L. externus, outward; anterior, in front.) The metatarsal artery.

A. tar'sea exter'na poste'rior.

posterior, hinder.) The tarsal artery. A. tar'sea inter'na. (L. internus, inner. G. innere Fusswurzelarterie.) A small branch arising from the inner side of the dorsal artery of the foot opposite the tarsal artery, and supplying the fore part of the inner side of the tarsus.

A. tar'sea latera'lis poste'rior. lateralis, belonging to the side: posterior, hinder. G. hintere aussire Fussicurzelarterie.)

tarsal branch of the dorsal artery of the foot.

A. tempora'lis me'dia. (L. temporalis, belonging to the temples; medius, middle.) The

middle temporal artery.

A. tempora'lis profun'da ante'rior. (L. profundus, deep; anterior, in front.) The anterior branch of the deep temporal artery.

A. temporalis profun'da poste rior. (L. posterior, hinder.) The posterior branch of

the deep temporal artery.

A. tempora'lis superficia'lis. temporalis, relating to the temples; superficialis, belonging to the surface.) The temporal artery.

A. temporalis superficialis anterior. (L. anterior, in front.) The anterior temporal artery.

A. tempora'lis superficia'lis poste'-rior. (L. posterior, behind.) The posterior

temporal artery.

A. testicula'ris. (L. testiculus, a testicle G. Hodenarterie.) A branch of the spermatic artery, which anastomoses with the artery of the vas deferens and supplies the testicle.

A. thorac'ica acromia'lis. (L. thorax, the breast; acromion.) The aeromial thoracie

artery.

A. thorac'ica ala'ris. (L. thorax, the breast; ula, the armpit.) artery.

A. thorac'ica axilla'ris. (L. axilla, the armpit.) The alar theracic artery.

A. thorac'ica humera'lis. (L. humerus, the arm.) The acromial thoracic artery.

A. thorac'ica humera'ria. (L. humerus, the shoulder.) The acromial thoracic artery.

A. thorac'ica infe'rior. (L. inferior, lower.) The long thoracic artery.

A. thoracica interna. (L. inner.) The internal mammary artery. (L. internus,

A. thorac'ica lon'ga. (L. longus, long.) The long thoracic artery.

A. thorac'ica ma'jor. greater.) The long thoracic artery. (L. major,

A. thorac'ica mi'nor. (L. minor, less.) The short thoracic artery.

A. thorac'ica pri'ma. first.) The short thoracic artery. (L. primus.

A. thorac'ica secun'da. (L. secundus, second.) The aeronial thoracic artery.

A. thorac'ica supre'ma. (L. supremus, highest.) The short thoracic artery.

A. thorac'ica ter'tia. (L. tertius, third)

The long thoracic artery.

A. thorac'ico-humera'ria. (L. humerus, the arm. G. Brustschulterschlagader.) The descending branch of the A. thoracico-acromialis; it lies beneath the cephalic vein in the interval between the deltoid and pectoralis major muscles, both of which it supplies.

The term has also been used as a synonym of

the Acromial-thoracic artery itself.

A. thyreofdea adscendens. (Thyroid hody; L. adscendo, to mount up.) The inferior thyroid artery

A. thyroïdea i'ma. (Thyroid body; L. imus, the lowest.) An artery occasionally found supplying the thyroid body. It arises from the inneminate, or from the right common carotid, or from the aorta; in rare instances from the right internal mammary, or from the right subclavian. It runs along the front of the trachea.

A. transver'sa car'pi dorsa'lis. transversus, turned across; καρπός, the wrist; L. dorsum, the back.) The posterior radial earpal

artery.

A. transver'sa car'pi vola'is. vola, the palm.) The anterior carpal radial artery.

A. transver'sa facie'i. (L. favics, the countenance.) The transverse facial artery.

A. transversa'lis cervi'cis. (L. eervix, the neck.) The transverse cervical artery.

A. uteri'na hypogas'trica. (L. uterus, the womb;  $\dot{v}\pi\dot{o}$ , under;  $\gamma u\sigma\tau\dot{\eta}\rho$ , the belly.) The uterine artery.

A. u'tero-ovar'ica. (L. uterus, the womb; ovarium. G. Eierstocksarterie.) The ovarian branch, in the female, of the artery corresponding to the spermatic artery of the male.

A. vas'ta poste'rior. (L. vustus, im-use; posterior, hindmost.) The profunda mense; posterior, hindmost.) artery of the thigh.

A. veno'sa. (L. venosus, venons.) Name anciently given to each of the trunks of the pul-

monary vein.

A. vola'ris dig'iti quin'ti. the palm; digitus, a tinger; quintus, fifth.) branch of the deep-palmar arch supplying the ulnar side of the little finger.

A. volaris in dicis. (L. index, the forefinger.) The radialis indicis artery.

A. vola'ris ma'nus ulna'ris. (L. vola. the palm; manus, the hand; ulna, the bone of that name.) The superficial palmar arch.

Arteriaca. ('Αρτηρίακός, from άρτηρία, the name originally given only to those harder canals which enter the lungs; wherefore, those medicaments which were used for loss of voice and diseases of the arteria aspera, as the trachea

and bronchial tubes were subsequently called, were termed arteriaca. F. artiriaque.) Of, or belonging to, the arteria aspera, trachea, or windpipe; a term applied to medicines used against disorders of the voice, or diseases of the windpipe.

Arte'riæ adipo'sæ. (L. arteria, an artery; adeps, fat.) The hranches of the diaphragmatic, capsular, renal, and other arteries which supply the fat around the kidneys.

Also, applied to the small branches of the eoronary arteries of the heart distributed to the fat occupying the auriculo-ventricular and interventricular furrows.

without name; L. ilia, the flanks.) A synonym of the common ilia arteries.

A. antibra'chii. (L. ante, in front; brachium, the arm.) A term applied to the arteries supplying the forearm and hand.

**A. apoplec'ticæ.** ('Αποπληκτικός, apoplectic.) The carotid arteries.

A. atrabilia'riæ. (L. ater, black; bilis, the bile, G. Nebennierenschlagadern.) The

aortic supra-renal arteries.

A. bronchia'les superio'res. (Βρόγxia, the bronehial tubes; L. superior, upper. G. obere Luftrohrenschlagadern.) The superior bronchial arteries, which are small branches given off from the concavity of the arch of the aorta, and distributed to the brouchi.

A. capitales. (L. capitalis, relating to life, or to the head.) The carotid arteries.

A. circumflex ge'nu. (L. circum-flexus, bent round; genu, the kuee.) A term applied to the articular branches of the kneejoint collectively.

A. collatera'les col'li. (L. collatero, to admit on both sides; collum, the neck.) Rathke's term for the vertebral arteries of birds, which arise from near the base of the elongated common carotid artery.

A. collatera'les ge'nu. (L. genu, the knee.) A term applied to the articular branches

of the knee collectively.

A. digita'les commu'nes planta'res. (L. digitalis, pertaining to the fingers; communis, common; planta, the sole.) The plantar interosseous arteries.

A. digitales communes volares. (L. rola, the palm of hand or sole of foot.) The

palmar interesseous arteries.

A. digita'les dorsa'les ma'nus. (L. manus, the hand.) The dorsal brauches of the interesseous arteries of the hand.

A. digita'les dorsa'les pe'dis. (L. pes, the foot.) The dorsal branches of the interesseous arteries of the foot.

A. digita'les planta'res pro'priæ. (L. planta, the sole; proprius, special.) The plantar interosseous arteries.

A. digita'les vola'res pro'priæ. (L. digitus, a finger; vola, the palm; proprius, special.) The palmar interesseous arteries.

A. gemel'læ su'ræ. (L. gemellns, a twin; sura, the calf of the leg.) The sural arteries.
A. intercosta'les aor'ticæ. (L. inter,

hetween; costa, a rih; aorta.) The aortic intercostal arteries.

A. intercosta'les inferio'res. (L. inferior, lower.) The aortic intercostal arteries.

A. intercosta'les posterio'res. posterior, hinder.) The aortic intercostal arteries.

A. intermetacar'peæ dorsa'les. (L: inter, between; metacarpal bones; dorsum, the back.) The dorsal interessei arteries.

A. intermetatar'sæ dorsa'les. inter, between; metatarsal bones; dorsum, the back.) The dorsal interessei arteries.

A. interos'seæ metacar'pi dorsa'les. (L. inter, between; os, a bone; metacarpal bones; dorsum, the back.) The interesseous branches of the dorsal metacarpal arteries.

A. interos'seæ metatar'si dorsa'les. (Metatarsal bones.) The dorsal interesseons

arteries of the metatarsal artery.

A. interos'seæ planta'res. between: os, a bone: plantaris, relating to the sole of the foot.) The plantar interossei arte-

A. interos'seæ vola'res. (L. vola, the

palm.) The palmar interessei arteries.

A. intestinales. (L. intestinus, a gut.) The branches of the superior mesenteric aftery supplying the small intestine.

A. lethargicæ. (Ληθαργικός, drowsy.)

The carotid arteries.

A. lumba'res i'mæ. (L. lumbaris, relating to the loins; imus, lowest.) The fifth lumbar arteries.

A. lumba'res quin'tæ. fifth.) The fifth lumbar arteries. (L. quintus,

A. malleola'res anterio'res. (Malleolus; L. anterior, foremost. G. vordere Knochelarterie.) The external and internal malleolar branches of the anterior tibial artery.

A. malleola'res latera'les. (L. lateralis, relating to the side.) The external malleolar branches of the anterior tibial ar-

A. malleola'res media'les. (L. medialis, middle.) The internal malleolar branches of the anterior tibial artery.

A. malleola'res posterio'res. (L. posterior, next to. G. hintere Knochelarterie.) Branches of the peroneal artery supplying the inner malleolus.

A. metacar'peæ dorsa'les radia'les. (Metacurpus; L. dorsum, the back; radius, a staff.) Term applied by Heule to the dorsal arteries of the thumb and forefluger.

A. metacar'pi vola'res. (L. vola, the palm.) Term applied to a few small recurrent branches given off from the concavity of the deep

palmar arch.

**A.** cesophage'æ inferio'res. (L. asophagus, the gullet; inferior, lower.) Branches of the coronary artery of the stomach supplying the lower part of the esophagus.

A. perforantes arcus plantaris. (L. arcus, a bow. G. durchbohrenden Arterien.) Branches given off from the anterior extremities of the interesseous arteries, or from the posterior extremities of the digital arteries, which perforate the interesseous spaces to join the dersal arteries of the toes.

A. perforan'tes fem'oris. (L. perforo, to bore through; femur, the thigh.) The per-

forating arteries of the thigh.

A. pericardi'acæ posterio'res. (Περί, around; καρδία, the heart; L. posterior, next to. G. Herzbeutelaste.) The posterior pericardiac branches of the aorta.

A. phren'icæ mag'næ. (Φρένες, the diaphragm; L. magnus, great.) The inferior phrenic arteries.

A. phren'icæ posterio'res. (L. pos-

terior, hinder.) The posterior mediastinal arteries.

A. phrenicæ superio'res. (L. superior, upper.) Small branches of the posterior mediastinal arteries distributed to the diaphragm.

A. pro'prize rena'les. (l. proprius, proper; renalis, belonging to the kidney.) The branches of the renal artery which penetrate the columns of Bertini, the cortical substance intervening between the pyramids of Malpighi, and, traversing this, reach the bases of the pyramids and form arches, from which the interlobular arteries are given off.

A. receptac'uli. (L. receptaculum, a reservoir.) Branches given off by the carotid artery as it lies in the cavernous sinns, which supply the sella turcica, the walls of the sinus and the nerves traversing it, as well as the Gasserian ganglion and the pituitary body.

A. rec'tæ. (L. rectus, straight.) The vasa recta of the kidney.
A. scrota'les. (L. scrotalis, relating to the scrotum.) The terminal branches of the superficial perineal artery.

A. somnif eræ. (L. somnus, sleep; fero,

to bear.) The carotid arteries.

A. sopora'les. (L. sopor, sleep.) The carotid arteries.

A. suprarenales aorticæ. (L. supra, above; ren, the kidney; aorta.) The suprarenal arteries.

A. suprarena'les inferio'res. (L. inferior, lower.) Small branches of the renal artery supplying the adrenals.

A. suprarena'les me'diæ. (L. medius, middle.) The supra-renal arteries.

A. veno'sæ. (L. venosus, venous.) A sy-

nonym of the Palmonary reins.

A. vesi'co vagina'les. (L. vesica, the bladder; raginalis, relating to the vagina.) Branches of the inferior and superior vesicle arteries, in the female, supplying the va-

A. vola'res car'pi. (L. vola, the palm; καρπός, the wrist. G. Handwurzelaste.)

carpal branches of the deep palmar arch. **Arteria**'gra. ( Λρτηρία; ἄγρα, a seizure.

F. artériagre; G. Schlaguderschmerz.) Pain of the arteries.

Arte'rial. (L. arteria, an artery.) Of, or belonging to, an artery, or to the arteries.

A. arch'es. The same as Aortic arches.
A. blood. See Blood, arterial.
A. bruit. (F. bruit, noise.) See

See A. sounds.

A. circle of Willis. See Willis, circle of.

A. constitu'tion. A term for a plethorie habit of body.

A. diastol'ic mur'mur. A term proposed by Dr. Gemmell for an arterial murmur produced by pressure with the stethoscope, inasmuch as it is coincident in time with the expansion, diastole, or pulse of the artery in which it is heard.

A. duct. See Ductus arteriosus.

A. mur'mur. See Murmur, arterial.
A. pyæ'mia. A term proposed for those cases of purulent infection, in which the blood contamination is the result of special inflammation of the eardiac valves.

A. sounds. Two distinct sounds heard on auscultation of the larger arteries, and usually produced by transmission of the eardiac sounds; according to some, the sounds may be the result of vibrations, the result of friction of the blood on the arterial walls, or, at least, the first sound in part.

A. sys'tem. The whole series of arteries from the aorta to the termination of the remote

branches in the capillaries.

A. sys'tole. (Συστολή, a contraction.) The active return of the artery to its natural dimension after being distended by the blood forced into it by the eardiae systole.

A. ten'sion. The same as A. systole.

The expression is also applied to the pressure of blood from within on the arterial tube.

A. tone. (Tovos, tone.) The condition of permanent contraction of an artery, which is natural to it in a healthy state, and which is lost, giving place to dilatation, when the vaso-motor nerve-forcs are divided.

A. to'nus. The same as A. tone.

A. va'rix. A synonym of Cirsoid aneurusmi.

A. vein. (F. veine artérieuse.) The pulmonary artery

Arterialisa'tion. (Same efymon.) The oxidation of the blood.

Arteriec'tasis. ('Αρτηρία; ἔκτασις, extension. F. artericetasie; G. Schlagaderer-weiterung, Arterienausdehnung.) Dilatation of an artery; aneurysm.

**Arteriec'topy.** ('Λρτηρία; ἔκτοπος, away from a place. F. arteriectopie; G. abnorme Lage einer Arterie.) An abnormal situation of an artery.

Arterieurys ma. ('Αρτηρία; εὐρύς, wide. G. Schlagaderausdehnung.) Aneurysm.

Arteriitis. Same as Arteritis. Arterioarc'tia. (L. arteria, an artery; areto, to contract.) Piorry's term for Arteriostenosis.

Arterio-cap'illary fibro'sis. A term applied by Sir W. Gull and Dr. Sutton to a deposit of hyalin-fibroid material in the fibrous walls of the small arteries and capillaries. This condition of the general arteries and capillaries of the body is seen in eases of granular kidney, and constitutes, according to them, the essence and cause of the disease. This view is not universally accepted.

Arteriochal'asis. ( Αρτηρία; χάλασις, a slackening.) Dilatation of an artery.

Arteriodial'ysis. ('Αρτηρία; διάλυσις, a separating. F. arteriodialyse; G. das Aufschwinden einer Arterie.) A shriuking or wasting of an artery.

Also, a synonym of False aneurysm.

Arteriodias tasis. ('Αρτηρία; διάστασις, a standing aloof. F. arteriodiastase.) The separation of two arteries that normally should be together.

Also, the retraction or separation from each other of the two ends of a divided artery.

Arteriodiplopies mus. (Αρτηρία; διπλόος, double; πίεσμός, a squeezing. F. artériodiplopiesme; G. die Doppelcompression einer verwundeten Arterie.) A double compression of a wounded artery, in order to form a small space in which the blood may become coagulated.

Arteriod'omum. ('Αρτηρία; δομάω, to overpower. F. arteriodome; G. Arteriodom.) An artery-compressing forceps.

Arteriog raphy. ( Αρτηρία; γράφω,

to write. F. and G. artériographie.) A description of the arteries.

Arterioid. ('Αρτηρία; εἶδός, likeness. F. arterioide; G. schlagaderahnlich.) Resembling an artery.

Artério'la. (Dim. of arteria, an artery. F. arteriole; G. ein kleine Palsader.) A minute artery; an arteriole.

A. auricula'ris cor'dis dex'tra. (Auricle; L. cor, the heart; dexter, on the right side. G. rechten Kranzarterie.) The right coronary artery of the heart,

A. auricula'ris cor'dis sinis'tra. (Auricle; cor, the heart; sinister, on the left. G. linken Kranzarterie.) The left coronary artery of the heart.

Arterio'læ rec'tæ. (L. rectus, straight.) The vara reeta of the kidney.

Arteriole. (Same etymon as Arteriola.)

A small or ultimate artery.

Arteriol'ogy. ('Λρτηρία; λόγος, a discourse. F. and G. arteriologie.) A treatise on the arteries.

Arteriomala'cia. ('Αρτηρία; μαλακία, softness. F. artiriomalacie, arteriomalacose; G. Erweichung der Arterienhäute.) Softening of the arteries.

Arteriomalaco'sis. Same etymon and meaning as Arteriomalacia.

**Arteriopal'mus.** ('Αρτηρία; παλμός, palpitation. F. arteriopalme.) Veheuent pulsation of the arteries, or palpitation.

Arterioperissia. (Αρτηρία; περισσός, beyond the regular number, extraordinary. F. arteriopérissie; Schlagaderüberwacherung.) Engorgement of the arteries.

Arteriophlebot'omy. **Arteriophlebot'omy.** ('Αρτηρία, artery; φλέψ, a vein; τέμνω, to cut.) Bleeding by scarification, as in cupping and the use of

**Arteriopies'ter.** ('Αρτηρία ; πιεστήρ, a squeezer. F. arteriopiestère ; G. Arteriondrücker.) An artery squeezer or compressor.

Arteriopituitous. (L. arteria; pituita, phlegm.) Term applied to the vessels which are distributed to the mucous membrane

of the nose. (Dunglison.) **Arteriopla'nia.** ('Αρτηρία; πλανάω, to wander. F. arterioplania.) Excessive elongation or displacement of the arteries.

Arteriopleg'mus. Same as Angioplegmus.

Arterioplo'ce. Same as Angioploce. Arteriorrhex'is. ('Αρτηρία; ρῆξις, a breaking or bursting. F. artériorrhexis', G. Schlagaderzerreissung.) Rupture of an artery.

Arterioscenograph'ia. ('Αρτηρία; seenographia. F. and G. artérioscénographie.)

Scenography of the arteries.

**Arteriosclero**'sis. ('Αρτηρία; σκλη-ρόs, hard.) Hardening of the walls of an artery from hypertrophy of connective tissue; said to he the result of a migration of leucocytes, through the endothelium of the vessel, into the spaces between the striated lamelle of the tunica intima, and their conversion into spindle-shaped and stellate cells.

Arterios'ity. ('Αρτηρία.) The retention of arterial characters by blood traversing veins.

Arteriosteno'sis. ('Αρτηρία: στένωσες, a being straightened. F. arteriosténose; G. Schlagaderverenderung.) arteries.

Arteriosteogen'esis. ( Αρτηρία; όστέου, a bone; γένεσις, generation.) Same as Arteriostosis.

Arteriosto'sis. ('Αρτηρία; δστέου. F. arteriostose; G. Schlagaderverknocherung.) Ossification of the arteries.

Arteriostrep'sis. ('Αρτηρία; στρέψις, a turning round. F. torsion des artéres; G. Drehen der Schlagadern.) Torsion of the arteries.

Arterio'sus. (L. arteria, an artery.) Having numerous arteries, full of arteries, or of the nature of an artery.

A., duc'tus. See Ductus arteriosus.

Arteriothlim'ma. (Αρτηρία; θλίμαα, that which is pressed out. F. arteriothlimme.) Injury from pressure or bruising of the arteries.

Arteriothlip sis. ( Αρτηρία; θλίψις, a pressure. F. arteriothlipsis.) Pressure, a bruising, or grazing of an artery.

Arte'riotome. ('Αρτηρία; τομή, a cutting.) A lancet.

**Arteriot'omy.** ('Αρτηρία, an artery; τομή, from τέμνω, to cut. G. Schlagaderoffnung.) Term for the operation of cutting into, dividing, or opening an artery

Arteriotrepsis. ('Αρτηρία; τρέψις, Torsion of the arteries. a turning.)

Arteriove'nous. (L. arteria, an artery; vena, a vein.) That which concerns the mutual relations or connections of an artery and a vein.

A. an'eurysm. See Aneurysm, arteriorenous.

A. mur'mur. A whirring murmur having a continuous base of sound, with intermittent increase, occurring in places where there is a communication between a large artery and a vein, such as to permit a current of blood from the former to the latter.

Arteritis. ('Αρτηρία, an artery. F. artérite; I. arteritide; G. Schlagaderentzündung.) Inflammation of an artery. This may either be neute or chronic. Acute inflammation affects either the Tunica intima, or the T. adventitia, or, very rarely, the T. media. Inflammation of the internal coat is usually produced by direct irritation, as by the action of mechanical or chemical agents. such as a wound, the presence of chalky fragments of degenerated semilunar valves and emboli. The membrane loses its polish and transparency, the endothelial cells becoming detached, and it separates in shreds from the middle coat; the inflammatory process with suppuration may spread to the outer coat.

Chronic inflammation is sometimes designated arterio-sclerosis, and leads to atheromatous

In the earlier stage the arterial walls are stiffer and less elastic than natural. On section they present unusually round orifices, and appear to be somewhat dilated. The endothelial cell-layer remains unchanged, but beneath it and in the tunica intima hyperplastic unclear- and cellformation occurs, raising the intima into nodules, and these subsequently pass into fatty degeneration, giving the coat at this point a yellowish hue. Deposit of lime, salts, or calcareous degeneration occurs coincidently with the farty metamorphosis, and parts of the wall of the vessel become almost bony, though no true bone is ever formed. Mingled with the fattly degenerated tissue and lime salts is cholesterin, the whole forming the atheromatous patch. The endothelial cells usually become detached, and the atheromatous material is more or less com-

pletely swept away by the blood current, leaving an atheromatous ulcer, from the edges of which calcarcous laminæ project, that again lead to the

formation of thrombi.

Inflammation of the outer coat, sometimes termed ex- or periarteritis, results from direct injury, or from the spread of inflammation to it from other parts. The vessels of the adventitia become injected, it swells by exudation and proliferation of cells, and suppuration occurs in it. The lumen of the vessel is constricted, and after some time the tunica media undergoes fatty degeneration, and the intima becomes friable; an abscess may form and burst internally or externally. If the circulation continue through the vessel, it now again begins to dilate, and usually is the seat of a thrombosis. Subsequently, the thrombosis may become organised and lead to the obliteration of the artery, or it may suppurate, or portions of it may become detached and lead to embolism elsewhere, or to pyamia.

Chronic arteritis occurs most frequently in the aorta, the splenie, crural, cerebral, and coronary arteries. It is rare before 30 years of age, is often a consequence of abuse of alcohol, and is

associated with gout.

By interfering with the due supply of blood to parts it leads to spontaneous gangrene; by rendering the walls of arteries more rigid, and thus requiring that more force should be exerted to maintain the circulation, it induces hypertrophy of the left ventricle, and lastly, by weakening the walls of the vessels, it predisposes them to dilatation and aneurism.

The treatment in acute cases consists in rest and local depletion; in chronic it must be essentially symptomatic, and be directed to arresting the progress of the disease by the adoption of a

wholesome regimen.

A., acu'te. See under Arteritis. A., chron'ic. See under Arteritis.

A. defor mans. (L. deformo, to disfigure.) A term applied by Virchow to those conditions of the arteries, especially of the aorta, which produce crumpling or irregularity of the walls, and which, usually called atheromatous, are regarded by him as a result of chronic inflammation.

A., diffu'se. A variety formerly described, in which the inner coat of the artery was reddened and softened; it is now considered to be a

pya mie or septicaemic condition.

A., embolic. (Embolism.) The same as A., plastic.

A., erysipel'atous. The same as A., diffuse.

A. obliterati'va. (L. oblitere, to obliterate ) A form of disease of the arteries consisting in a development of connective tissue, rich in cells, within the inner coats of small arteries, which gradually diminishes the lumen, and at last closes the canal of the artery.

A., plas'tic. (Πλαστικός, fit for moulding.) That form in which the internal coat, in consequence of intlammatory change, becomes conted with fibrin, and a clot forms. It is seen as a

result of ligature of an artery.

A., subacu'te. The same as A., chronic. A., umbili'cal. (Umbilicus.) Inflammation of the umbilical artery in the tied remains of the cord in new-born children. It is said to be most frequent during epidemies of puerperal fever. Serious results, such as embolic inflammations of internal organs, may ensue.

Arteriyperec'tasis. ('Αρτηρία; ὑπέρ,

above; ἔκτασις, extension. F. artériypérectase; G. Schlagaderausdehnung.) Τοο great extension

of an artery.

Artery. (For etymon see Arteria.) The membranous, elastic pulsating tubes, or canals, which couvey the blood in its course from tho heart, by numerous ramifications, to every part of the body, diminishing in size as they proceed, and terminating in a network of vessels interposed between them and the veins, the capillary vessels. They are usually enclosed by, and loosely connected with, a sheath of connective tissue. Thin sections of arteries, variously prepared, show that they are composed of three layers, an outer, middle, and inner layer.

The outer layer, tunica adventitia, is composed of loose connective tissue, with much elastic, and not unfrequently in the aorta some muscular, tissue intermingled with it. The inner part of the adventitia sometimes presents quite a strong and well-defined layer of longitudinally arranged clastic fibres, as in the basilar artery. Bloodvessels, vasa vasorum, and nerves ramify in the

adventitia

The middle layer, tunica media, constitutes the greater part of the thickness of the arterial wall in medium-sized arteries. It is composed of one or several layers of circularly running unstriated museular fibres, separated, when there are several layers, by networks or laminæ of elastic tissne, most abundant at its inner and outer surfaces. In the larger arteries the elastic tissue gradually augments in quantity, till at length in the aorta it is almost as abundant as the muscular tissue, some of which last is disposed longitudinally. No vessels enter this layer.

The internal layer, tunica intima, is composed of a series of flat, elongated, nucleated cells, with sinuous borders, arranged with their long diameter parallel to that of the vessel, a subepithelial layer of connective tissue, with branched corpuseles, and a fibroid coat of clastic tissue, in which a few

nuclei are scattered.

A. for ceps. A forceps possessing a springcatch; designed for taking and keeping hold of an artery, so as to dispense with, or liberate the hands of, an assistant.

Artetis'cus. (L. artus, a limb.) Old-term applied to one who has suffered the loss of any limb. (Dornæus, Ruland, and Johnson.)

Arthani'ta. A name for the herb Cyclamen europæum, or sow-bread; also, for an oint-ment prepared from the cyclamen, which was rnbbed into the abdomen as a purgative.

Arthanit'ic ac'id. (Arthanita.) A synouym of Cyclamin.

Arthani'tin. (F. arthanitine; G. Arthanitin.)  $C_{20}II_{31}O_{10}$ . A glucoside contained in the tubers of the Cyclamen europæum. It forms white odourless crystals, having a very acrid taste. It is readily soluble in water and alcohol, but insoluble in ether, chloroform, and carbon bisulphide. It is an irritant poison, and is mentioned by Professor de Luca as a substitute for curare, and as a remedy for tetanus.

Also, called Cyclamin. Arthereticus. (Αρθρου, a joint.) Synonymous with Arthriticus.

Arthetica. A name for the Teuerium chamepitys.

Also, used as a synonym of Arthritis. Also, remedies for the gout.

Ar'thonoid. Applied to apothecia resembling those of the lichen named Arthonia.

**Arthræ'mia.** (' $\Lambda \rho \theta \rho o \nu$ , a limb or joint;  $\alpha I \mu a$ , blood. F. arthremic.) Engorgement of blood in a joint. Congestion of a joint.

Arthra'gra. ( Αρθρον; αγρα, a seizure.)

A term for gout.

A. anom'ala. ('Ανώμαλος, irregular.) Irregular or anomalous gont.

A. genui'na. (L. genuinus, natural.)

Ordinary or regular gout.

A. legitima. (L. legitimus, belonging to law.) True gout.

A. norma'is. (L. normalis, made according to the square.) True gout.

A. ve'ra. (L. verus, true.) True gout.

Arthragro'sis. (Arthragra. F. arthragrose; G. Gieht, Giehtkrankheit.) The progress of gout.

Arthral'gia. (Αρθρον, a joint; ἄλγος, pain. F. arthralgie; l. artralgia; G. Gliederschmerz, Golenkneuralgie.) Pain in the joints;

Also, same as Arthritis.

Also, neuralgia of a joint. A. hysterica. Hysterical joint-pain. Pain in a joint occurring in hysterical persons, generally with cutaneous hyperaesthesia, and

sometimes swelling. A. saturnina. (L. Saturnus, Saturn, a name for lead.) Pain in a joint and its neighbouring muscles, especially the flexors, with recurrent eramps occurring in persons the subjects of lead-poisoning. Opium, potassium iodide, and baths of sulphide of potassium, are employed.

Arthral gic. (Same etymon.)

which relates to arthralgia.

Arthrapobrochis'mus. ('Αρθρου; άποβροχίζω, to bind tight. F. arthrapobrochisme; G. Abbinden eines Gliedes.) Subligation or firm bandaging of a joint.

Arthraposphinx'is. (Δρθμον; ἀπόσφιγξιε, a squeezing tight.) Same as preceding.

Arthraposte ma. ( Λρθρου; ἀπόστημα, an abseess. F. arthrapostème; G. Gelenkabseess.) Abseess of a joint.

Arthrecta'sia. ("Αρθρον; ἔκτασις, extension. F. arthrectaste; G. Gelenkausdehnung.)

Dilatation or distension of a joint.

Arthrectasis. Same as Arthrectasia.
Arthrelco'sis. ("Αρθρον; ελκωστε, an ulceration. F. arthrelcose; G. Gelenkversehwurung.) Ulceration of a joint.

Arthrembole'sis. (' $\Lambda \rho \theta \rho \sigma \nu$ ;  $\epsilon \mu \beta \dot{\alpha} \lambda \lambda \omega$ , to throw in.) The reduction of a dislocated

joint, or a fractured bone.

Arthrem'bolum. Same as Arthrem-

bolus.

**Arthrem bolus.** ('Αρθρον, a joint ; ἐμ-βάλλω, to impel. G. Gliedeurichter.) Name, used by Jac. Spouins, in Aph. Nov. Hippocrat. s. iii, in not. 7, of an instrument anciently used for reducing luxated bones.

Arthrempye'sis. ( Αρθρον; εμπύησις, suppuration. F. arthrempyese; G. Gelenkeiter-

ung.) Suppuration of a joint.

Arthrentasis. (Λρθρα, the limbs; εντασις, a stretching tight. F. arthrentase; G. die Krümmung der Glieder.) Term for gouty contraction of the limbs.

Arthret'ica. The same as Arthetica. **Ar'thric.** (Αρθρον. F. arthrique; G. Gelenke betreffend.) Belonging to the joints; applied to diseases affecting them.

**Arthrid'ium.** ('Αρθρίδιου, dim. of αρ-θρου, a joint.) A small joint.

**Arthrit**ia. ( 'Αρθρῖτις, gout.) Gout. **Arthritic.** ('Ap $\theta$ p $\tilde{\iota}\tau\iota s$ , gout, inflammation of a joint, or gont. G. gichtisch.) Of, or

belonging to, the disease arthritis, or to gout, or to the joints.

A. cal'culus. (L. calculus, a small stone.)

A gouty concretion; a chalk stone.

A. coxal'gia. See Coralgia, arthritic.

A. fe'ver. (F. fièvre arthritique.) The symptomatic fever accompanying an attack of gout.

A. insan'ity. A term applied to certain cases of insanity, in which rheumatism or gout is supposed to be the cause of the mental disturb-

A. iri'tis. A form of iritis, said to be due to gout. See Iritis, arthritic.

A. ophthalmia. ('θφθαλμία, a disease of the eye with secretion.) A synonym of acute inflammatory glaucoma.

A. pains. (F. douleurs arthritiques.) The

pains of gout.

The zone of injected blood-A. ring. vessels, seen in iritis, surrounding the margin of the cornea.

Arthrit'ica. The same as Arthetica. Arthrit'icus ve'rus. ('Αρθρῖτις, gout; L. verus, true.) Gout.

Ar'thritide. A cutaneous affection indi-

cative of gonty diathesis. (Bazin.) **Arthritifu'ga.** (Arthritis; fugo, to drive away.) Remedies for expelling or curing gout.

**Arthritis.** ("Αρθριτις, from ἄρθρον, a joint. F. arthrite; G. Glinderreissen, Gicht, Gelenkentzündung.) A term for inflammation of a joint; also, for rheumatism in a joint, and for

gout.

At present, arthritis is taken to signify iuflammation of all or most of the structures entering into the formation of a joint, synovial membrane, fibrous capsule, ligaments, cartilage, and bone, in any one of which it may commence. It may be caused by a brui-e, sprain, wound, or fracture; it may occur in the course of pyemia, gonorrhea, or of albuminuria, and as a consequence of uterine phlebitis following labour or abortion: it is often strumous. The joint is hot, sometimes red, very painful, often uniformly swollen, generally doughy to the feel, and slightly flexed; nocturnal startings are very painful; and there is high fever and often great distress. Displacement of the bones is a common result from softening of ligaments and contraction of muscles. The disease may subside or suppuration may end in death. In advanced cases there is usually destruction of cartilage. Total rest is essential to the successful treatment; suppuration may necessitate the removal of the limb. There is more or less stiffness or anchylosis on recovery.

A. aber'rans. (L. aberro, to wander Wandering gout; attacking internal away.)

organs.

(L. acutus, sharp, severe.) A. acu'ta. Ordinary acute gout. ("Aρθρου, a joint; A. arthrodyn'ia.

οδόνη, pain.) A term applied to chronic rheumatism of the joints, or to rheumatoid arthritis.

A. asthen'ica. ('Ασθενικός, weakly.) Atonic gout.

A. aton'ica. (Arovos, feeble.) Atonic gout.

A. atyp'ica. (L. a, neg.; typicus, belonging to a regular form.) Atomic gout.

A. blennorrhag'ica. (B\ivva, mucus; ρήγνομι, to flow.) Term applied to an inflammation of one of the larger joints supervening in the course of severe blennor rhagia. Suppuration rarely occurs, and the disease is rare in women. It usually terminates by resolution. Rest, the topical and general employment of opium, vesication, and the application of tineture of iodine, are usually recommended.

A. chron'ica. (Xpovos, time.) A synonym

of A. rheumatica chronica.

A. defor mans. (L. deformo, to disfigure. F. arthrite chronique séche, rhunatisme noueux; G. Knoten-gieht, rheumatische Gieht, giehtischer Rheumatismus.) A progressive inflammatory disease of the joints, due to trophic disturbance of all the structures entering into them, but especially of the eartilage, which becomes fibrillated, and then breaks down, leading to outgrowths of bone, which produce great deformity of the joint, impairment of motion, and persistent shortening of muscles. It chiefly affects old people. For further account see Rheumatoid arthritis, to cases of which, where the deformity is a prominent feature, this term is applied.

A. diaphragmat'ica. (Διάφραγμα, α partition wall, the diaphragm.) A synonym of

Angina pecturis.

A. erratica. (L. erraticus about.) Wandering or erratic gout. (L. erraticus, wandering

A. hydrarthros. ("Υδωρ, water; ἄρθρου, Effusion of fluid into a joint, the result a joint.) of synovitis.

A. inflammato'ria. (L. inflammatio, inflammation.) Acute gout.

A. juvenilis. (L. jurenilis, belonging to youth.) A term which has been applied to acute rheumatism.

A. maxilla ris. (L. maxillaris, belonging to the jaw.) Rheumatic inflammation of the joint of the lower jaw.

A. nodo'sa. (L. nodosus, full of knots.)

A synonym of A. deformans.

Also, a synonym of gout, in which there is a nodular deposit of chalk stones.

**A. pau perum.** (L. pauper, poor.)  $\Lambda$  term applied to those cases of rheumatoid arthritis where the disease commences in the fingers, probably from overstrain.

A. plane'tica. (Πλανητικός, wandering.) Term for wandering or erratic gout.

A. poda gra. (Ποδάγρα, gout in the feet.)

Acute gout. A. regula'ris. (L. regularis, regular.)

Normal acute gout. A. retrogra'da. (L. retrogradus, going back.) Retrocedent or metastatic gout.

A. rheumatica. Rheumatic arthritis; a

term for rheumatoid arthritis. A. rheumat'ica chron'ica. See Rheumatoid orthretis.

A. rheumatis'mus. ('Pευματισμός, a defluxion.) Acute rheumatism.

A. rheumatoï des. (Rheumatism; elòos, likeness.) See Rheumatoid arthritis.

A. sic'ca. (L. siccus, dry.) A synonym of A. deformans.

A. typ'ica. (L. typicus, belonging to a particular form.) Normal acute gout.

A. uratica. (Uric neid.) Gout, so called from the excess of uric acid present in this disease, and from the frequent deposits of urates about the joints.

A. urethra'lis. (Θόρήθρα, the urethra.) Arthritis supervening upon severe inflammation of the urethra, from gonorrhea or from mechanieal injury to this canal. It affects usually one of the larger joints, and suppuration is not infrequent. Leeches, vesicatories, acupuncture, and rest, have been recommended.

Λ. u'rica. Inflammation of joints associated with disorder of the renal secretion, otherwise gout. It includes the various forms of gouty inflammation of the joints, known under the names of podagra, gonagra, omagra, chiragra,

ischiagra, and rachisagra.

A. va'ga. (L. ragus, wandering.) Gouty attacks shifting from one joint to another.

A. ve'ra. (L. verus, true.) A synonym of gout.

A. viscera'lis. (L. visceralis, from viscera, the bowels.) Inflammation of internal organs, alternating with gouty inflammation of the joints.

Arthri'tis, cervi'cal. (I. cervix, the neck.) Inflammation of the joints of the cervical

vertebræ. A., fun'gous. A term applied to those cases of chronic arthritis in which there is a fungus-like degeneration of articular cartilage.

A., stru'mous, chronic. Chronic jointinflammation occurring in a strumous person, often called white swelling, from the even, white, semi-elastic swelling of the joint, obliterating all prominences; the limb wastes, suppuration occurs in and around the joint, hectic weakens, and death occurs from exhaustion or tubercular deposit in the lungs or other organs. The disease probably begins in inflammation of the synovial folds, which gradually spreads over the whole membrane; the folds are said to grow, to become attached to the cartilage, and then to become the centre of destructive change, which gradually spreads to the bones; concomitantly the other structures of the joint, ligaments and capsule, become swollen and softened, with large increase of cell growth, ending in suppuration. The treatment recommended is entire rest by means of splints and compressing plasters, and counterirritation, good diet, fresh or sea air, tonics, and cod-liver oil. Destruction of tissue may necessitate amputation or excision. Recovery seldom takes place without more or less anchylosis.

A., subdiarthro'dial. (L. sub, under; diarthrosis.) According to Littré and Robin, a white swelling, in which the medulla, being inflamed, has given origin to fleshy sprouts, lying between the bone and the articular cartilage, and

lifting up the latter.

A., traumatic. (Tpavpatikós, belonging to a wound.) Inflammation of a joint from a wound; the disease commences as synovitis, and if unchecked spreads to the other tissues of the joint. Rest and antiseptic treatment are usually employed; if suppuration occurs the joint is to be opened, and generally a drainage tube is inserted and the antiseptic treatment followed. If the injury be extensive amoutation may be needed.

Arthrit'olith. ('Αρθρῖτις, gout; λίθος, a stone ) See Arthrolith.

Ar'thrium. ('Λρθρον. F. arthrion; G. Gelenkehen.) Name by Kirby for a very small joint at the base of the last articulation of the feet in most tetramerous and trimerous Colcoptera.

**Arthroc'acë.** ('Αρθρον, a joint; κακός, evil or disease. G. Winddorn.) A term for an

ulcerated condition or caries of the cavity of a

Also, used as synonymous with Spina ventosa by Dr. Cullen.

A. coxa'rum. (L. coxa, the hip.) Hip-

joint disease.

**Arthroca'cia.** ('Αρθρον', κακός, evil. F. arthrocacie; G. Arthrokakie.) Name by Rust for a chronic disease of the joints, particularly luxation from internal causes.

(Arthrocacia; Arthrocacolo'gia. λόγος, a discourse. F. arthrocaeologie; G. Arthrokakologie.) A treatise on diseases of the

joints.

Arthrocarcino ma. ('Αρθρον'; carcinoma. F. arthrocarcinome; G. Gelinkkribs.) Δ

careinomatous joint.

**Ar'throcele.** ('Αρθοον; κήλη, a tumour. F. arthrocele; G. Gelenkgeschwulst.) A tumonr

of a joint.

Arthrocenchriasis. ('Λρθρον; κεγχρίας, a grain of millet. F. arthrocenehriuse; G. die Kirsenflechte der Gelenke.) An eruption over a joint.

**Arthroceph'ala.** ('Αρθρον', κεφαλή, a head. F. arthrocephale', G. gelenkkopfig.) Applied by Duméril to a Family of Crustaccæ having the head distinct from, and jointed with, the hody.

Arthrocera lis. (Άρθρον; κίρας, a horn. F. arthroceral; G. gelenkhornig.) Applied by Robineau-Desvoidy to nine pieces of the vertebre of Articulata which are developed above, and consist in a pair of articulated appendages forming the palpi, antennæ, halteres, and often a part of

the wings.

Arthrochondri'tis. (Αρθρον; chondritis. F. arthrochondrite; G. die Entzündung der Gelenkknorpel.) Inflammation of the carti-

lages of a joint.

Arthrococ'ci. ( Αρθρον, a joint; κόκκος, a kernel) The product of the growth in an acid fluid of plastide-particles, called micrococci, into cells, like Torula or yeast-cells, which further develop into arthrococci (Hallier). By growth in the longitudinal direction, accompanied by the formation of septa at intervals, arthrococci are said to be capable of developing into distinct fungi of the Oidium type. **Arthro'des.** (Αρθρον. F. arthreux; G.

gliedartig, gelenkartig.) Having, or pertaining

to, a joint.

Arthro'dia. ('Αρθρωδία, from ἀρθρόω, to fisten by a joint. F. arthrodie; 1. artrodie; G. Kugu lgelenk.) Term for an articulation admitting of gliding motion; a variety of the Class Diarthrosis. In arthrodial joints the surfaces are either plane or slightly concave and convex; the motion is limited by the ligaments of the joints, or by the process of the bone. Such are the articular processes of the vertebræ, the radio-carpal, carpal, metacarpal, inferior radioulnar, superior tibio-fibular, tarsal and tarsometatarsal, temporo-maxillary, acromio-clavicular, and sterno-clavicular joints.

Arthrodie'æ. (Same etymon. F. arthrodie'.) Applied by Bory to an Order of Phytozoa,

composed of articulated filaments.

Arthro'dium. (Same etymon. F. arthrodion; G. ein kleines Gelenk.) A little joint.

Also, the same as Arthrodia. **Arthrodyn'ia.** ("Αρθρον, a joint; ὁδύνη, pain. G. Gelenkschmerz.) Term for the sensation of pain in a joint, or chronic rheumatism.

A. podag'rica. (Ποδάγρα, gout in the feet.) Gout.

Arthroecta'sia. See Arthrectasia. Arthrœde'ma, (Δρθρον; ædema. F. arthrodeme; G. Gelenkwassersucht.) Edema of

Arthroempye'sis. (Λοθρον; ἰμπύησις, suppuration.) Suppuration in a joint.
Arthrogastra. (Δοθρον, a joint;

γαστήρ, stomach.) An Order of the Class Arachnoiden. The abdomen is sessile and segmented; maudibular palpi developed as pincers.

**Arthrog raphy.** ("Αρθρον, a joint; γράφω, to write. F. arthrographie; G. Gelenk-

A description of the joints.

(Λρθρου, a joint; Arthrogrypo'sis. γρυπόυμαι, to become bent.) Distortion of the joints from muscular action.

Arthrone'mia. Piorry's form of spelling arthremia.

Arthrohy'drin. ('Λρθρον, a joint; δέωρ,

water.) The fluid of joints; synovia. **Arthrolepro'sis.** (Αρθρον; λέπρωσις, hecoming leprous. F. arthroleprose; G. Gelenk-leprose.) Leprosy of the joints.

**Ar'throlith.** (Λοθρον, a joint, \ίθος, a stone.) Λ loose calcined cartilage, or mass of lymph, in a joint.

Arthrolo'bium. A Genus of the Nat. Order Fabaceæ.

A. scorpioï des. The leaves are capable of being employed as vesicatories.

**Arthrôl'ogy.** (Αρθρου, a joint; λόγος, a discourse. F. arthrologie; G. Banderlehre.) A description of the anatomy of the joints.

**Arthrom bole.** (Approx, a joint;  $\beta d\lambda$ ,  $\lambda \omega$ , to place, ix, or build.) A term for the reduction of a dislocation, or for coaptation of the parts of a fracture.

Arthromeningi'tis. ('Λρθρου; μῆνιγξ, a membrane. F. arthromeningite; G. Entzundung der Gelenkhante.) Indammation of the membranes of a joint: synovitis.

A. croupo'sa. Croupous synovitis; jointinflammation with fibrinous deposit.

A. purulen'ta. Purulent syn witis. Arthronal'gia. ('Αρθρού, a joint; ά\γος, pain.) Saure as Arthrodynia, Arthralyia.

Arthron'cus. (Αρθοον, a joint; ογκος, a mass, or eminence.) A term for the distinct cartilaginous body (one or more) which sometimes forms within the knee-joint.

According to some (G. Gelenkgeschwulst), swelling of a joint.

Arthrone ma. ('Αρθρον'; νῆμα, a thread. G. Gluderfaden.) A filament with nodnles or joints.

The same as Arthronempye'sis. Arthrocmpyesis.

Arthroparal'ysis. ( Λρθρον; παρά-λυσις. F. arthroparalysis; G. Gluderlahmung.) Paralysis of the limbs.

('Aυθρου, a joint; Arthropathi'a. πάθος, a disease. G. Gelenkleiden.) Name given to an affection of the shoulder-joint, commencing. without appreciable cause, with violent pain and swelling of the brachial portion, chiefly affecting the humerus and its envelopes.

A. hysterica. Painfulness of a joint without apparent organic change, occurring in an hysterical person.

Arthroperisphinx is. See Arthra-Arthroperis'sia. ('Αρθρον'; περισσεία, abundance. F. arthroperissie; G. Uberzahl der gluder.) The state of having supernumerary

lumbs or joints

Arthrophlogo'sis. ('Λρθρον, a joint; φλόγωσις, from φλογόω, to inflame or burn. G. Gelinkentzundung.) Another term for inflammation of a joint.

A. synovialis. (Synovia.) Synovitis. **Arthrophy ma.** (Αρθρον; φέμα, a tumour.) An old term for white swelling of a

**A. adenochon'drium.** ('Λδήν, a gland; όνι ρως, cartilage. G. weisse Gelenkge schwulst.) White swelling of a joint, innsuruch as it affects

both glands and cartilage.

Arthroplas'tic. ("Αρθρον; πλάσσω, to form. F. arthroplastique.) Relating to Ar-

throplusty.

Arthroplas'ty. (Apopor, a james form. F. arthroplastique; G. (" $\Lambda \rho \theta \rho \sigma \nu$ , a joint; πλιασω, to form. F. arthroplastique; G. kunstliche Gelenhbildung.) The formation of

an artificial joint to remedy anchylosis.

Arthrop'oda. ('Αρθρον, a joint; πούς, a foot.) A Subkingdom of the Invertebrata, defined by Macalister as symmetrical, usually diactions, non-ciliated schizoccelous persone, of a limited specifically constant number of often heteronomous metameres or somites, each usually with a pair of ventrally articulated, hollowjointed organs as feelers, jaws, or limbs. The body consists of head, thorax, and abdomen; the first contains not fewer than four united somites, bearing the sense organs preorally; the second hears the locomotory limbs; the third contains the vegetative and reproductive organs. heart when present, is dorsal, tubular, often segmented, and the circulation is more or less lacunary. Breathing effected by the surface, gills, or tracheæ. Digestion absent in some parasitic crustaceans; mouth usually anterior, ventral; auus terminal, occasionally aproctous; intestine seldom tortuous; the surface of the body presents a firm chitinous investment, with or without an interstitial calcareous deposit, pierced by many pore canals. Muscles colourless, transversely striated, metamerically divided. There is a pharyngeal nerve ring with an epipharyngeal brain ganglion, and a hypopharyngeal pair of ganglia with complex commissures, from which a double gangliated ventral cord extends backwards. The upper surface of the ganglia is motor, the lower sensory. Some have a separate sympathetic system and a vagus nerve attached to the pharyngeal ring. The ova undergo partial cleavage. The germ divides into two layers. Parthenogenesis occurs in several cases; metagenesis in one of the Cecidomyidæ. In most cases the young undergo either progressive or retrogressive metamorphesis.

Arthropo'mata. (Άρθρον, a joint; πωμα, a lid.) An Order of the Class Brachio-poda, Subkingdom Mollusea. Shell calcarcous, furnished with a hinge; valves held together by teeth; alimentary caual terminating in a cul-de-

**Arthropyo**'sis. ('Αρθρον, a joint: πύον, pus. F. arthropuose; G. Gelenkvereiterung, Gelenkgeschwur, Estergelenk,) Term for a collection of pus in a joint; but also applied to other affections of the joints in which suppuration was supposed to have taken place, and also to lumbar

**Arthrorrha**'gia. (Λρθρον; ρήγνυμ, to burst forth. F. arthrorrhagie; G. Gelenkblut-

fluss.) A sudden discharge-by custom understood to be of blood-from a joint.

Arthrorrheu'ma. ('Αρθρον; rheuma, for rheumatism. V. arthrorrhumatisme; G. Gliederrheumatismus, Gelenkrheuma.) Acute rheumatism in the joints.

Arthrorrheumatis'mus. Same as

Arthrorrheuma.

Arthro'sia. ('Aρθρόω, to fasten by a joint.) A generic name for articular inflammation, according to Good.

A. acu'ta. (L. acutus, severe.) Acute rheumatism.

A. chron'ica. (Χρόνος, time.) Chronie rheumatism.

A. hydarth'rus. ("Υδωρ, water; ἄρθρον, a joint.) Serous effusion into a joint.

A. poda'gra. (Ποδάγρα, gout in the feet.) Acute gout.

('Aρθρόω, to fasten by a .) Term for articulation Arthro'sis. joint. G. Einlenkung.) or connection by joints.

Arthrospongo'sis. (Λρθρον; spongosis. F. arthrospongose; G. Gliedschwammung.) The formation of fungus in a joint.

Arthrospon'gus. ('Αρθρου; σπόγyos, sponge. G. Gliedschwamm.) The disease of the joint, especially of the knee, formerly known as white swelling.

**Ar'throspores.** ('Αρθρον'; σπόρος, ed.) Term applied in Botany to spores united ("Αρθρου; σπόρος, sced.)

in the form of a chain or rosary.

**Arthrospo'rous.** (<sup>h</sup>Αρθρον, a joint; σπόρος, seed.) A term applied to plants like Fungi which develop from a jointed mycelium, or the spores of which develop by fission, the segments remaining attached.

Arthrosteno'sis. ('Αρθρον'; στένωσις, a heing straightened. F. arthrostenose; G. Gelenkverengerung.) Contraction of a limb.

**Arthrosteophy'ma.** ('Αρθρον'; osteophyma. F. arthrosteophyme.) An osseous tumour in a joint.

**Arthrostere** 'sis. (Αρθρον; στίρησις, deprivation. F. arthrosterise.) The removal or absence of one or more limbs.

Arthrosterig'mata. joint; στερίγμα, a prop.) A term in Botany applied to the jointed sterigmata of Fungi.

**Arthros'traca.** (Ἄρθρον, a joint; ὅσ-τρακον, an egg-shell.) A synonym of Edri-

ophthalmata.

Arthrosym'physis. (Αρθρον; σύμφυσις, a growing together. F. arthrosymphyse; G. Gelenkverwachsung.) Adhesion of limbs, as the fingers or toes.

**Arthrosyr'inx.** ( Λρθρον; σῦριγξ, a pipe. F. fistule articulaire; G. Gelenkfistel.) Fistula in a joint.

**Arthrot'omy.** (Λρθρον, a joint; τομή, a cutting.) The resection or excision of joints. **Arthroto'phi.** ('Λρθρον; tophus. G. Gelenk-Tophi.) Conceptions around the joints

in gout, or other diseases.

Arthrotrau'ma. ('Λρθρου'; τραύμα, a wound. F. arthrotraume; G. Gelenkwunde.) Α wound of a joint.

Arthrotro'pia. ("Αρθρον; τροπή, a rning. F. arthrotropie; G. Glæddrehen.) ("Αρθρου; τροπή, α turning. Torsion of the limbs.

**Arthroxero** sis. (\*Αρθρον; ξήρωσις, a drying up.) A synonym of Arthritis deformans. **Arthrozo'a.** (Αρθρον; ζφον, an animal. F. arthrozoaire; G. Gliederthiere.) Applied by Herm. Burmeister to a Family containing An-

nulata, Malacostraca, and Insecta.

**Arthryperpathia.** (Άρθρον: ὑπλο, in excess; πάθος, disease. F. arthryperpathic.) Term by Piorry for an excessively severe affective. tion of the joints, as arthritis, hip-joint disease.

Arthryposphinx'is. See Arthrapo-

sphinzis.

Artia. Old term, used by some for Arteria, but by others applied to the Arteria aspera, or

windpipe, according to Castellus.

Artiad. (Aptios, complete, even, as of numbers.) A term applied to chemical elements, the equivalency of which is expressed by an even number, as dyads, tetrads, hexads.

Ar'tichaut sauva'ge. (Fr.) See

Carlina acanthefolia.

Artichoke. (Said to be derived from Ar. ardischauki, earth thorn. F. artichaut; I. carciofo, earciofano; S. artichoka; G. Artischocke.) The common name of the plant Cynara scolymus. The unexpanded flower-head furnishes a wellknown vegetable of delicate flavour, the disc and the fleshy hases of the scales being the parts

A., French. See Cynara scolymus.

A., Jeru'salem. (I. girasole, sunflower; of which the word Jerusalem is said to be a corrnption.) The common name for the plant Helianthus tuberosus, the tubers of which are used as food. According to an analysis given by Pavy, 100 parts contain-Nitrogenous matter 3.1, sngar 14.7, inuline 1.9, pectic acid .9, pectine .4, cellulose 1.5, fatty matter .2, mineral matter 1.3, water 76.

Artico'ca. Same as Articocalus.

Articoc'alus. ('Αρτιος, perfect; κόκκαλοs, the kernel of the pine cone.) Name for

the Cynara scolymus, or artichoke.

Articulamen'tum. The deep layer of the lateral area of the anterior and posterior semicircular valves of Polyplacophora. (Macalister.)

Artic'ular. (L. articularis, pertaining to the joints. F. articulaire.) Of, or belonging to, an articulation or joint.

A. ar'teries of arm. The circumflex

arteries of the arm.

A. ar'teries of knee. See Knee-joint, arteries of.

A. arteries of hip. See Hip-joint, arte-

ries of.

A. bone. A bone constituting the proper centre of the proximal or articular part of the free lower jaw. It can only exist when the mandibular arch is segmented into a pier and free arch, as in the oviparous Vertebrata generally. In mammals this segmentation does not take place, as the primary rod is arrested to form the mallens, and is not segmented. Their lower jaw answers to the superficial "dentary" bone of the Ovipara, and is articulated to another superficial bone, viz. the squamosal.

A. cap'sule. (L. capsula, dim. of capsa, a. F. capsule articulaire.) A synonym of box. F. capsule articulaire.)

Capsular ligament.

A. cartilage. See Cartilage, articular.
A. facette. (F. dim. of face, face, aspect.
F. facette articulaire.) The more or less rounded or flattened surface of a bone which touches a similar part of another bone in a joint.

A. leaves. (F. feuilles articulaires.)
Leaves which spring from the nodes or articula-

tions of a stem or branch.

A. pro'cess. (F. apophyse articulaire; G. Gelenkfortsatz.) A process, also called zygopophysis, situate near the junction of the pedicle and lamina of a vertebra, one above and one below, on each side. The free surface of each, covered with cartilage, articulates with that of the adjoining vertebra; that of the superior is directed backwards, that of the inferior forwards. The articular processes of the atlas and axis do not correspond in situation to those of the other vertebra, but are situate at the junction of the pedicles with the bodies of the vertebrae. The articular processes of the sacral vertebra- become nnited to each other, except in early life, and those of the three lower coccygeal vertebrae are wanting.

Articularis. (Same etymon.) Relating

to a joint.

A. ge'nu. (L. genu, the knee.) The subcrureus muscle.

A. mor'bus. (L. morbus, a disease.)

Another term for arthritis, or gout.

A. ve'na. (L. vena, a vein.) the vein accompanying the posterior circumflex artery; also called subhumeralis; it arises from the basilic, then passes transversely round the neck of the humerus, and ramifies on the scapula.

Articula'ta. (L. articulus, a joint.)
The third great division of the four into
which Cuvier divided the animal kingdom. The nervous system consists of two long cords with a series of gauglionic enlargements, the first of which is the brain, and is situated on the @sophagus, the rest along the body; the external envelope is divided into a number of rings, it may be hard or soft, and it gives attachment to the muscles; the body may have attached to it articulated limbs; the jaws, when present, are lateral. It consists of four classes—Hexapoda, Arachnida, Crustacea, and Annelida.

Also, a Suborder of the Order Brachiata or Crinoidea, Class Crinoidea, Subkingdom Echinodermata. Calvx not entirely formed of coronal pieces; no parabasals; the arch of the membranous calyx furnished with grooves and ambulacral

Also, one of the Subdivisions of cyclostomatatons Polyzon, in which the colonies are vertical

and jointed.

Also, one of the Divisions of the Brachiopoda, in which the valves of the shell are united by teeth along the hinge-line, the lobes of the mantle are not completely free, and the digestive canal is provided with a distinct anus.

Also, a synonym of Arthropodu.

Articulate. (L. articulatus, distinct, part. of articulo, to divide into joints.) Divided into joints, distinct.

A. sounds. The vocal elements of which speech is formed; they are divided into vowel

sounds and consonant sounds.

A. speech. It is conceivable that communication might be carried on by vocal sounds of the same pitch and intensity by the individual sounds being made of various lengths; but by articulate speech is meant the employment of words pronounced by various movements of the lips and tongue. The co-ordinating centre for the movements required to produce these sounds is situate in the medulla oblongata, for in it are the origins of the pneumogastric, spinal accessory, hypoglossal, and facial nerves.

Artic'ulated. (Same etymon. F. articule; G. gegludert.) Jointed. The term is

applied in Botany to a part when it is capable of separating into definite portions. Thus, a stem is said to be articulated when it breaks across without difficulty at each node, and a foliar or theral organ is articulated when it separates at the point of its attachment to the stem or axis.

Applied in Geology to columns of basalt and other rocks which, being separable into blocks,

appear jointed.

Articula tio. (L. articulus, a joint.) A

A. artificia'lis. (L. artificialis, artificial.)
A false joint, as from non-union of a fractured bone.

**A.** atlan'to-epistroph'ica. (Atlas;  $i\pi i$ , upon;  $\sigma\tau\rho\dot{\epsilon}\phi\omega$ , to turn.) The articulation between the atlas and the axis.

A. cox'æ. (L. coxa, the hip.) The hip-joint.
A. no'tha. (L. nothus, spurious.) A false

joint.

Articulation. (L. articulus, a joint. F. articulation; G. Gelenk, Gliederung.) A joint. The connection between two hones or cartilages; according to the mode in which this connection is accomplished, articulations are divided into three classes, named Synarthrosis, Amphiarthrosis, and Dierethrosis.

Applied also to the artificial connection, or fastening together, of the various bones of the skeleton, one to another, in their natural situation. Also, a term for the distinct utterance of sylla-

bles or words, by the organs of speech.

In Botany, the term is applied to the point when, at a certain period, a separation between two organs takes place. Thus, an articulation frequently occurs between the petiole of a leaf and the branch, or between the peduncles of the tloral organs and the axis. In the former case there is sometimes a layer of soft transparent cells, which has been called the "couche separatrice," through which the rupture takes place.

A., defect of See Alalia and Stammering.
A., false. A false joint, as when a fractured bone does not unite, or a dislocated bone is not replaced.

Articula'tus. (L. articulus, a joint.)

Having knots or joints.

A. cau'lis. (L. caulis, a stem.) A stem having nodes.

A. dehiscen'tia. (L. dehisco, to split open.) Bursting transversely.

A. folium. (L. folium, a leaf.) A leaf

which articulates with the stem.

A. fruc'tus. (L. fructus, fruit.) A fruit

transversely divided into nodes.

Articuli. (L. pl. of articulus, a member.)
Members, divisions. The joints of the cirrhi of

Members, divisions. The joints of the cirrin of Crinoids.

A. digito'rum ma'nus. (L. digitus, a

finger; manus, the hand.) The phalanges of the fingers.

A. digito'rum pe'dis. (L. digitus; pcs,

a foot.) The phalanges of the toes.

Articuloden'tate. (L. articulus; dentatus, toothed. G. gegliedert-gezahnt.) Jointed and toothed. Used in Botany.

Articulo mortis. (L. articulus, a moment; mors, death.) Between life and death; in the act of dying.

Artic'ulo-spina'lis. (L. articulus; spinalis, belonging to the spine.) The semi-spinalis colli muscle.

Artic'ulus. (L. articulus. F. article;

G. Glied.) A joint.

Term applied in Botany to a series of parts which collectively constitute an organ, but which at a certain period separate from each other. Thus, in the Papilionaceae, the several parts of the fruit which contain a seed and separate from each other at matnrity are called articuli.

Applied to that part of the stalk which extends between two knots or joints; also, a knot or joint.

In Mycology, the term designates a cell issuing like a branch from another cell, from which it is separated by a dissepiment.

A. no thus. (Nόθος, spurious.) A false joint.
A. no'vus. (L. novus, new.) A false joint.
A. preternatura'lis. (L. præter, beyond;

naturalis, natural.) A false joint.
A. spu'rius. (L. spurius, false.) A false

joint.
Artific'ial. (L. artificialis, artificial; from artificiam, a handieraft. F. artificial; G. künstlich.) Produced by art.

A. a'nus. (L. anus, the fundament.) Term for an opening made in the parietes of the abdomen, by disease, accident, or operation, through which the faces are, in whole or in part, discharged during life. Also, an opening made in the natural situation in cases of imperforate anus in infants. See also Colotomy.

A. eye. A shell made of glass and tinted,

used to conceal the loss of au eye.

A. joint. Applied to that condition in which the broken ends of a fractured bone do not unite by a consolidation of osseous matter, but become rounded and smooth, and connected by a fibrous ligamentous substance; also termed a false joint.

A. limb. A mechanical contrivance, in imitation of the appearance and action of one or other of the limbs, for nse when the natural member, or part of it, has been removed.

A. membra'na tym'pani. See Mem-

brana tympani, artificial.

A. meth'od. This term is applied in Botany to systems of classification, which, like those of Liunaus, are founded on the condition of a single or of a small number of organs, and which enable a plant to be readily recognised without a comprehensive knowledge of its relations.

A. pu'pil. Name for the result of operation for removing obstructions to the light eaused by adhesious or permanent contraction of the iris. See Iridectomy, Iridodesis, Iridodialysis, Core-

tomia, Corectomia, and Coredialysis.

A. respiration. (L. respiratio, breathing back.) The aeration of the blood of an asphyxiated person by artificial means. This may be effected either by the injection of air into the lungs in a rhythmical manner, by means of bellows or syringes, or by insuffaction from the lungs of another, the mouth being applied to that of the asphyxiated person, and the nostrils closed by pressure; in all of which cases the escape of the air is effected by the natural elasticity of the parietes of the chest and of the lungs. Double-acting bellows have been used to substitute the inspiratory and expiratory acts. Artificial respiration may also be effected by imitating the expansion and contraction of the chest by certain positions or movements.

Ancient method.—The method of artificial respiration formerly employed was the alternate compression and relaxation of the walls of the

chest. It has been shown by direct experiment that very little interchange of air can thus be

effected.

Howard's direct method. The patient is placed on his face, with a firm bolster under the epigastrium, that the stomach may be on a higher level than the mouth; pressure being made on the back, accumulations in the stomach and chest are evacuated by ejection and drainage; then he is quickly turned on his back with the bolster underneath it, the arms are raised and crossed behind the head, and the tongue held out of the extreme right corner of the mouth. In this position two thirds of the entrance to the mouth is free; the epiglottis, by the backward curvature of the neck, is precluded from the pressure caused by undue flexion; the head is dependent, au advantage according to Nélaton, the free margins of the costal cartilages are prominent, the latissimi dorsi are brought freely into play, and there is fixed thoracic expansion. The operator now kneels astride the patient's hips, resting the ball of each thumb on each side of the metasternum, and spreading the fingers along the sides of the chest over the lower intercostal spaces; resting his elbows against his sides and using his knees as a pivot, he compresses the chest by throwing the whole weight of his hody slowly and steadily forward until his mouth nearly touches the mouth of the patient, remaining there until he ean slowly count three, then suddenly he, using the patient's chest as his point of resistance, resumes his original position, retains it until he can count two, and then repeats the mauœuvre, performing it eight or ten fines in a minute.

Postural, or Marshall Hall's method.—In this method the patient should be placed on his face, the chest being supported on a folded coat or other article of dress. The body is then to be turned very gently, but completely, on the side and a little beyond, and then briskly on the face, alternately repeating these measures deliberately, efficiently, and perseveringly, fifteen times in a minute only. The rationale of these proceedings is that when the patient reposes on the thorax, that cavity is compressed by the weight of the body and expiration takes place; when he is turned on his side this pressure is renoved and inspiration occurs. When the prone position is resumed, equable but efficient pressure with friction should be made on the back, removing it immediately before rotation on the side.

Silvester's, or the physiological method .- The following are the rules to be adopted in carrying out this method:-1. Place the patient ou his back, with the shoulders raised and supported on a folded article of dress, and secure the feet. Wipe the mouth and nostrils, draw forward the patient's tongue, and keep it projecting beyond the lips. If the lower jaw be gently raised, the teeth may be made to hold the tongue in the required position. Should it be found necessary, the tongue may be retained in that position by passing a handkerchief under the chin and fastening it over the head. 3. Raise the patient's arms upwards by the sides of his head, and then keep them stretched steadily, but gently, upwards and forwards for two seconds. This action enlarges the capacity of the chest by drawing up the ribs, and induces an inspiration. Next, throw down the patient's arms and press them gently and firmly for two seconds against the sides of the chest. This action diminishes the cavity of the thorax, by pressing down the ribs, and produces a forcible expiration. Repeat these measures alternately, deliberately and perseveringly fifteen times in a minute. 4. Rub the limbs from the extremities towards the heart. Replace wet clothing by warm and dry covering. Occasionally dash cold water in the patient's face. The measures are perfectly compatible with the systematic performance of the imitation of the movements of respiration. A similar remark applies to the use of the warm-water bath or hot-air bath if required. By this method twenty cubic inches of air or more may be introduced at each inspiratory movement, and many cases of recovery have occurred.

Rain's method.—This method only differs from Silvester's in the circumstance of the operator seizing the upper part of the arm, or rather the axilla, so that direct traction is made upon the pectorales muscles, and a slight increase in the absolute amount of air into the chest is effected,

but it is very fatiguing.

A. teeth. See Teeth, artificial.

Artiodac tyla. (Αρτιος, even; δάκτυλος, finger.) A Suborder of the Order Ungulata, of the Class Mammalia. Third and fourth toes symmetrical and supporting the body; first and fifth generally rudimentary; dorso-lumbar vertebræ seldom more than nineteen, never twentytwo; molar teeth always with enamel folds; stomach never quite simple; cacum small. It includes the pigs and hippopotami.

**Artiomor'pha.** (Λοτιος, even; μορφή, shape. F. artiomorphes.) The first of the three subkingdoms into which De Blainville divided animals; it included mammals, birds, reptiles, fishes, insects, eephalopods, and all whose form is

symmetrical.

**Artiozo'a.** ('Aρτιοs, well formed; ζφον, an animal. F. artiozoaire.) The same as Artiomorpha.

Artiphyllous. (Αρτιος, complete; φάλλος, a leaf.) Applied by Link to plauts, in the axillae of all the leaves of which are buds or branches.

Artiscoc'cus læ'vis. (L. lævis, smooth.) The artichoke, Cynara seolymus.

Artiscus. ('Aprignos, a little loaf; from apros, bread.) Old name for a troche formed like a little loaf; but more particularly for that which was prepared from the flesh of a viper mixed and sodden with bread to form a theriaea, or remedy against poison.

**Artistom'ia.** ( $\Lambda \rho \tau \iota$ , just;  $\sigma \tau \delta \mu a$ , a mouth.) An old term for a proper or fitting opening for an instrument or a wound.

Also, a term for distinct utterance.

 $\mathbf{Ar}$ 'tius. ('Ap $au \iota os$ , complete.) Perfect; entire.

**Artiypoch'rus.** ("A $\rho \tau \iota$ , just;  $\dot{\nu} \pi \dot{\nu}$ , under;  $\dot{\nu} \chi \rho \dot{\nu}$ s, pale. G. blussgelblich.) Of a pale chlorotic hue.

Artizo'ous. ('Apri; ζωός, alive.) Just

Artocarpa'ceæ. (Αρτος, bread; καρτός, fruit.) The bread fruit order. Trees or shrubs with a milky juice. Leaves alternate, simple, with large convolute stipules; flowers unisexual in dense heads. Male flowers achlamydeous, or with a 2-4 lobed or 2-4 sepaled calyx; stamens opposite to the lobes of the calyx or to the sepals. Female flowers arranged over a fleshy receptacle of varying shape; calyx inferior, tubular, 2-4 cleft or entire; ovary superior, 1-celled. Fruit commonly a sorosis;

seed erect or pendulous, with little or no albumen; embryo straight, with a superior radicle-Exclusively tropical plants.

Artocarp'ca. The same as Irtocar-

Artocarp'us. ('Λοτος, brend; καρπός, fruit. F. artere à pain; G. Brodfruchtbaum.) Λ Genus of the Nat. Order Artocarpaceae. Male flowers in catkins; females uaked, becoming a rounded fleshy fruit.

A. bengalen'sis. Systematic name of a species, the fruit of which is pickled in salt, and

used in cookery.

A. brazillen'sis. A species growing in Brazil, similar in use to the A. integrifolia.

A. communis. (L. communis, common.)

The 1. incisa.

A. heterophyl'la, Lam. ("Ετερος, different; φύλλον, a leaf.) Fruit and seeds esculent. Probably the same as A. integrifolia.

A. hirsu ta. (l. hirsutus, shaggy.) The An-jeli of Malabar. It produces an edible froit, which, if used too freely, brings on diarrhoea, for which the bark or root of the tree is given.

A. inci'sa, Willd. (L. incisus, notehed. F. arbre a pain.) The bread-fruit tree, about the size of a small oak. Hab. South Sea Islands, and transported theuce to the W. Indies, and S. America. The fruit, contained in a round eatkin, varying in size from a child's to a man's head, is gathered when of full growth, baked in an oven, and, on removing the rind, the internal portion is found to resemble bread crumbs, and is used as In the South Sca Islands the juice is employed as glue, the wood as timber, and the bark for making a coarse kind of cloth.

A. integriio lia, Willd. (L. integer, entire; folium, a leaf. F. jacquier; Tam. Pila; Tel. panasa; Duk. phunus; Mal. pilavoo; Beng. kantal.) The Iudiau Jack or Jaca tree, the fruit of which, larger than that of the A. incisa, but of inferior flavour, is largely eaten by the natives in Ceylou, Southern India, and Asia. The inner wood is also employed to dye the robes of the priests of Buddha of a yellow colour.

A. ja'ca. The A. integrifolia.

Artoc'reas. ('Aρτος, bread; κρίας, flesh. G. Fleischbrod, Fleischpastete.) Bread-meat, or a kind of pasty, made of bread and various meats boiled together.

Artog'ala. ('Aρτοs, bread; γάλα, milk.)

A poultice made of bread and milk.

Also, a cooling food made of bread and milk.

Artom'eli. ('Λρτος, bread; μέλι, honey. G. Honigteig.) Old name for a cataplasm made of bread and honey.

Artopœopsora. (Αρτοποιός, a baker; Jupa, the itch. G. Backerkratze.) Baker's itch; usually a form of eczema, or lichen agrius.

Artop'ticus. ('Αρτος, bread; οπτάω, to toast.) Toasted bread.

Artorhizeæ. ('Λρτος, bread; ρίζα, root.) A term employed by Endlicher as a synonym of the Dioscoreacew and the Taccaccw.

Ar'tus. (L. artus, a joint; in the plural, limbs. G. Glied.) An articulation; a limb. **Arty'ma.** ('Αρτυμα, a condiment.)

preserve or conserve, a condinuent, an aroma.

A'ru-aru. The name applied by the

Aruae, Arowaka, or Aroaquis Indiaus to the fecula

of the mandiee.

Arum. ('Aoor, the euckoo-pint; F. gonet; S. aro; G. Aronwarz.) A Genus of the Nat. Order Araceæ. Spathe convolute; spadix naked

at the point; male flowers placed above, female below, separated by cirrhi; anthers sessite; ovary one-celled.

A. america'num be'tæ fo'liis. (L. beta, the beet; folium, a leaf.) The American beet-leaved arum. A synonym of Drucontium fætidam.

A. atroru'bens. (L. ater, black; rubens, reddish.) The A. triphyllum.

A. campanula'tum. (New L. campana, a bell.) A species producing an edible corni.

A. coloca'sis. (Κολοκασία, the Greek name of the plant. F. colocuse Egypte.) A plant cultivated in the E. Indies, Syria, Egypt, and S. Europe, the leaves and root of which, boiled in water, are much used as food.

A. Dioscorides. (Dioscorides, an early Greek physician.) The turio of this plant was anciently used, when fresh, as an active purga-

A. dracon'tium. (L. draco, a kind of

serpent.) The plant Dracontium pertusum. A. draeun'eulus, Linn. (L. draenneulus, a small serpent. F. serpentaire commune; G.

gemeines Schlangenkraut.) The plant dragon'swort, and many-leaved Arum; it is extremely acrid, with properties as A. macalatum.

A. esculen'tum, Linn. (L. esculentus, fit for eating, F. chou carabe.) A species used as a pot-herb in the West Indies. The fresh leaves and root are very acrid, but lose this when boiled.

A. hedera'ceum. (L. hederaceus, ivylike. F. herbe a mechants.) A climbing plant, the jnice of which is poisonous and eaustic. It is probably a Philodendron.

A. In dicum. (L. indicus, Indian.) A species cultivated in India for the sake of its

esculent stems and pendulous tubers.

A. ital'icum. (L. Italicus, Italian.) The turio of this plant was formerly used for the same purposes and under the same name as the turio of A. vulgare.

A. macrorhi'zon. (Μακρός, large; ρίζα, a root.) A synonym of A. montanum.

A. macula tum, Linn. (L. maculo, to spot. F. gouet, pied de veau; G. gemeines Aronswurz.) The plant wake-robin, or common arum, or cuckoo-pint. Leaves hastate sagittate; spadix straight, club-shaped. The corm is ovoid, with little smell and an acrid taste; the acridity is destroyed by torre-faction and fermentation. From it a starch is made, called Portland or arum arrowroot, or sago; the corms are pounded, the pulp washed, and the water strained, until all aeridity is removed; the starch is then allowed to settle, and is dried (see Arrowroot, arum). Several cases of poisoning have been recorded. There is great pain and swelling of the tongue and throat, vomiting, diarrhea, a feeble pulse, sometimes convulsions, coma, and, it may be, death. Fresh butter, melted, has been advised to be given, and, after free vomiting, strong coffee.

A. monta'num. (L. montanus, belonging to a mountain. Tel. konda-rakis.) The root is employed to poison tigers in India, but after long boiling becomes innocuous and a wholesome food.

A. moscha'tum. (Mooxos, musk.) An old name of black pepper.

A. musciv'orum, Linn. (L. musca, a fly;

voro, to devour.) A poisonous species with a cadaverous odour.

A. ringens. (L. ringens; part. of ringer, to open wide the mouth.) The A. triphyllum.

A. sanguin'eum. (L. sanguineus, bloodcoloured.) Hab. Antilles. Said to be useful in pruritus vulvæ.

A. segui'num. The Dieffenbachia sequina.

A., three-leav'ed. The A. triphyllum. A. triphyl'lum, Willd. (Τρείε, three **A. triphyl'lum**, Willd. (Τρεῖε, three; φύλλον, a leaf, F. arum à trois feuilles.) Dragonroot, or Indian turnip. A species of Arum growing in North America, from which a white starch is obtained. The powder of the dried root is used in emulsions, in chronic catarrh, chronic bronchitis, and rheumatism. The fresh root is very

acrid; this property is lost by drying.

A. virginica. The Icitandra virginica.

A. vulga're. (L. vulgaris, common.) The fresh turio of this plant was formerly employed, under the name of Govet and Pied de year, as an

energetic purgative.

A., wa'ter. The Calla palustris.

Aruma'ri. A synonym of Caramata.

Arundina cee. (L. arundo, a reed. F. arundinacees; G. Schilfgewüchse.) A Tribe of the Nat. Order Graminacea. Spikelets uniflorous or multiflorous; flowers covered with silky hair; two glumellæ and two membranous glumes; glumella often longer than the flowers; external valve of the glume often awned.

Arundina ceous. (Same etymon. G. rohrahulch, schilfartig.) Reed-like; having the characters of Arundo.

Arun'do. (L. arundo, the reed; perhaps from ar, for ad, near; nonda, water. G. Rohr, Schilf.) A Genus of the Nat. Order Grami-Schilf.) naceie.

A. ampelodes mos, Arillo. ('Αμπελόδεσμος, a plant used for tying up vines; from ἄμπελος, a vine; δεσμός, a band.) A grass, known as diss, growing in North Africa. The ergot is said to be much more active than that of It is from 1-3 inches long by only about 1-10th of an inch broad, generally enryed or twisted spirally.

A. bam'bos. A name for the Bambusa

arundinacea, or hamboo plant.

A. bra'chii ma'jor. (L. brachium, the arm; major, greater.) Old name for the ulna.

A. bra'chii mi'nor. (L. brachium; minor, less.) Old name for the radius.

**A.** calamagros'tis. (Καλαμάγρωστις, the reed-grass.) The reed-grass, Culumagrostis

lanceolutu.

A. do'nax. (Δόναξ, a reed. F. canne de Provence, grand roseau; G. Wasserrohr.) Spikelets containing two to five distichous, hermaphrodite flowers; glume with two keeled scales; glumellules consisting of two fleshy scales; stamens three; ovary sessile, smooth; stigmas plumose; eariopsis free. The rhizome, which is officinal in the French Codex, is long, fleshy, and of a sweet taste; it contains a resin of an aromatic flavour like vanilla. It is used as an antilactic.

A. in'dica. (L. indiens, Indian.) A name

for the Sagittaria alexipharmica. A. ma'jor. (L. major, greater.) Old name

for the tibia. A. minor. (L. minor, less.) Old name for

the fibula.

A. phragmi'tes. (Φραγμίτης, growing in hedges.) The systematic name of the common reed. It has been used for syphilis and some cutaneous diseases. See Phrugmites communis.

A. saccharif'era. (L. saccharum, sugar;

fero, to bear.) A name for the Saccharum officinarum, or sugar-cane; the sugar-bearing reed.

A. tabaxif'era. The Bambusa arundinacen.

Arungze'be. A term for Delhi boil. Arushka'ra. Indian name of the Neme-carpus anucardium. Nat. Order. Anucardiacea. Said to be anti-yphilitic.

Ar'va. The same as Ava.

Arven'sis. (L. arvum, tilled land.) Growing in cultivated land, as Anagallis arvensis.

Arvicoline. (L. arrum; colo, to inhabit.) The voles. A Subfamily of the Family Muride, Suborder Simplicidentati, Order Rodentiu. Molar teeth composed of alternating, triangular prisms; skull constricted in front; a ridge at the front border of the squamosal bone.

Arvina. (L. arvina, grease, fat. G. Speck, Fett.) Old name for the Adeps suillus, or hog's lard, according to Stokerus, Practic. Morbor.

partie. c. 10.

Arvisium. (Arvicia, a promontory of Chios, where it was made.) Mahmsey, a rich cordial wine.

Ar'vum. (L. arvum, cultivated land.) The vulva.

A. natu'ræ. (L. arvum; naturu, nature.) The uterus

Ary-arytæ'noid. The arytenoid muscle; probably so called from its attachment to both arytenoid cartilages.

A. epiglotticus. The aryteno-epiglottidean muscle, so called from its connection both with the epiglottis and the arytenoid cartilage.

A.-santorinia'nus. (Santorini.)

arytenoid muscle.

Aryans. (Sans. arya, of good family; probably from a hypothetical primitive root, ar, earth.) The race of men originally living in earth.) Central Asia, who spoke a language from which most modern European languages and the chief Indian tongues are derived.

**Arys'ter.** ('Λρυστήρ, a ladle; from ἀρύω, to draw.) A vessel or cup used for chemical pur-

Arytæ'neal. (Arytænoid. F. aryténéal.)

Belonging to the arytenoid cartilages. A. bones. A term given by Gooffroy St. Hilaire to the third pair of auxiliary bones of the branchial arches in fishes.

Arytænoepiglot'tie. (Αρύταινα, α pitcher; epiglottis.) Pertaining to the aryte-

noid cartilage and epiglottis.

A. lig ament. The Arytanoepiglottidean

Arytænoepiglottide an. ing to the arytauoid cartilage and the epiglottis.

A. fold. A fold of mucous membrane on each side of the larynx, which stretches from the cartilages of Santorini to the lateral border of the epiglottis. In it is placed the cartilage of Wrisberg and some muscular fibres.

A. mus'cle. (F. aryténo-épiglottique.) muscle arising from the external angle of the base of each arytanoid cartilage, and inserted partly into the upper and outer part of the other cartilage, partly passes forwards in the arytenoepiglottidean fold, and partly joins the fibres of the thyro-arytenoid muscle. The two approximate and depress the arytænoid cartilages, and draw down the epiglottis; by this they diminish the size of the upper laryngeal aperture.

Arytæ'noid. ( Λούταινα, a pitcher; becanse when the two cartilages of the larynx, to

which the term is chiefly applied, are in their natural position, they appear somewhat like the pipe, or mouth, of an ancient pitcher. F. arytenoide; G. Giesskannenformig.) Resembling, or shaped like, the mouth of a pitcher.

A. cartilages. (F. cartilages aryténoïde G. arytanoideische Knorpel, Giessbeckenknorpel.) I'wo cartilages of the larynx, which, in their natural situation, resemble the mouth of a pitcher. They are three-sided pyramidal bodies, with their base on the upper margin of the posterior part of the cricoid cartilage, and their recurved apex free. Each is 5"-6" high, 3" wide, and 1" thick; the posterior face, broad, triangular, and concave from above to below, lodges the arytanoid muscle; the anterior face, rough and convex, gives attachment to the thyro-arytænoid muscle and the superior or false vocal cord; the internal face, the narrowest, slightly convex, is covered by mucous membrane, and is parallel with that of the other cartilage; the base is slightly coneave and articulates with the cricoid cartilage; its short, rounded, external angle gives insertion to the posterior and lateral crico-arytanoid muscles, and to its pointed anterior angle the true vocal cord is attached. The apex is curved backwards and inwards, and to the summit are articulated the cartilages of Santorini. Their function is to regulate the tension of the chordæ vocales through the action of the muscles.

A. glands. (F. glandes aryténoïdiennes.) Numerous muciparons glands lying in front of the arytanoid cartilages, in the hind margin of

the arytæno-epiglottidean fold.

A. mus'cle. (F. muscle aryténoïdien.) A thick band of transverse fibres stretching between the posterior concave surfaces of each arytanoid cartilage and filling up the interspace. It draws together the arytenoid cartilages and depresses their summits.

Arytænoide'us. (Arytænoid cartilage.) Of, or belonging to, the arytenoid eartilages.

A. ma'jor. (L. major, greater.) The Arytænoul musele.

A. mi'nor. (L. minor, less.) The A. obliquus.

A. obliquus. (L. obliquus, slanting. F. aryténoïdien croisé.) Two slender bundles of mnscular fibre, placed in an oppositely oblique position on the arytenoid muscle; now considered part of the arytano epiglottidean muscles.

A. transver'sus. (L. transversus, lying across. F. aryténoïdien vrai.) The Arytanoid muscle.

**Aryth'mia.** ('A, neg.;  $\dot{\rho}v\theta\mu\dot{\omega}s$ , measured motion.) Irregularity, specially of the pulse.

Aryth mic. (Same etymon.) gular.

As. An old term for the weight libra, or a pound, divided into twelve ounces, or equal

A'sa, Arab. (Heb. ADN, to heal.) An old term signifying a healer; also spelt Assa. (Quincy.)

A. dul'cis. (L. dulcis, sweet.) The sweet healer; an old term for benzoinum, or gum ben-

zoin; Schröderus, iv, cl. n. 372.

A. tœ'tida. (L. fwtidus, stinking.) The fetid or stinking healer; Schröderus, iv, cl. n. 377. See Assafutida.

A'sab. (Arab.) The disease borozail, when it affects males. See Borozail.

A saba her'mes. (Heb. אצאנעדוכום.

Arab. azaba, yellow.) The meadow saffron, so named either from hermes, or from its colour.

Asaba-ul feteyat. Arabic for Ocymum basilicam, common sweet basil.

Asabatus. Sec Assabatus. Asa'bon. (Ileb. אטפור). Arab. asaphon.) Old term for sapo, or soap. (Ruland.)

Asæs'tus. Lime, or limestone. (Castellus) Asafe'tida. A synonym of Asafwtida. Asafe'tida. See Assafwtida.

A. Disgunien'sis. (Disgun, a town in the Persian province of Laristan, where it grows.) A shrub, according to Kämpfer, which supplies assafœtida.

Asa'gen. (Arab.) The Sanguis draconis, or dragon's blood.

A'sagi. (Heb. pds. Arab. asak.) Arabic for vitriol. (Ruland.)

Asagræ'a. (Called after Dr. Asa Gray.) A Genus of the Nat. Order Melanthacea.

A. officinalis, Lind. (L. officina, a shop.) Sabadilla. Flowers racemose, naked; sepals and petals narrow, coloured with a honey spot at the base; stamens perigynous, alternately shorter; authors bursting vertically; follicles 3, acuminate, papery; seeds winged. An alpine Mexican plant, yielding the cevadilla seeds of commerce. The dried fruit is imported from Vera Cruz and Mexico. An aerid, drastic, emetico-cathartic; used in chronic rheumatism, paralysis, and neuralgia; also, as an anthelmintic and for pediculi. Dose, 4-6 grains. The substance called Veratria is obtained from the seed.

Asagray'a. The same as Asagraea. A'samar. Arabic for Erugo aris, or verdigris. (Quiney.)
As'amaz. Term for vitriol. (Ruland and

Johnson.)

Asa'non. Prepared Sal ammoniacum. Asapei'xe. The Brazilian name of the Blpha hmerīa caudata.

As'apes. ('Aσαπήs, not liable to rot; from à, neg.; σήπομαι, to rot, to corrupt.) Term applied to the sputa, or to other excreta, which are not liable to putrefaction, or, according to some, which do not result from digestion.

Asapha'tum. Arabic term for a kind of serpigo or impetigo, or intereutaneous itch, generated in the pores like worms, which, on the skin being compressed, come out like worms with black heads. (Dornæus, Ruland, and Johnson.) Doubtless what are now called Comedones.

**Asaphi'a.** ('Ασάφεια; from å, neg.; σαφής, clear. G. Undeutliehkeit.) Ancient term for an indistinctness of voice, whether depending on defect of speech, or on disease of a nervous kind; also, a state of partial delirium. It has been applied to defect from malformation of the soft palate.

Asa'prixe. Brazilian name of the Bah-meria caudata. Nat. Order Urticaeca. Said to be antihemorrhoidal. (Littré and Robin.)

Asarabac'ca. (From a confusion between

the two plants Asarom and Baccharis, which so came to be united under one name.) A synonym of Asarum canadense, A. europæum, and Inula dysenterica.

A. officina'rum. (L. officina, a workshop) The Asarum europæum.

Asarabica. A term applied to the root of Asarum europeum. (Birdwood.)

As'aral alli'ance. The same as Asa-Asara'les. (Asarum.)According to Lindley, an Alliance of epigynous Exogens, having monochlamydeous flowers, and a small embryo lying in a large quantity of albumen. The Natural Orders of Asarales are Santuliacea, Loranthacea, and Aristolochiacea.

As'arath. The name in Turkey of the Cannabis sativa.

Asarcia. ('Ασαρκία; from å, neg.; σάρξ, tlesh. F. asarcie; G. Fleischmangel, Magerkeit.) Want of tlesh, or leanness; emaciation.

Asar'con. (Same etymon.) Leanness.
As'arin. (F. asarine; G. Haschewz-camphor.) C<sub>8</sub>H<sub>10</sub>O<sub>2</sub>, or C<sub>20</sub>H<sub>20</sub>O<sub>5</sub>. A white, crystallisable, solid, volatile, aromatic, camphorlike substance, obtained from the Asarum europæum. It is soluble in alcohol, ether, and volatile oils; softens to a waxy consistence at 26:6° C. (S0° F.), melts at 65:6° C. (150° F.)

Also, by some, applied to a bitter, nauseous

principle found in the same plant.

Asarin'eæ. (Asarum.) A synonym of Aristolochiacea.

Asarite. A yellowish, acrid, thick, volatile essential oil, obtained from the Asarum europæum.

**Asari'tes.** (' $\Lambda \sigma a \rho i \tau \eta s$ .) A directic wine containing three ounces of asarum to six pounds of strong sweet wine.

As'aron. Same as the camphorous Asarin. As'aroon. Arab. for Asarum europaum, or Asarubacca.

**As'arum.** ('A, neg.; σειρά, a chaplet, because it was rejected from garlands by the ancients; according to some, from ἀσαρός, causing nausea. F. asaret; G. Haselwarz.) A Genus of the Nat. Order Aristolochiw. Perianth campanulate, 3-eleft, superior; stamens 12, arising from the apex of the germ; stigma rayed, 6-lobed; capsule 6-eelled.

The officinal name, U.S. Ph., for the root of

Asarum canadense.

**A.** arifo'lium, Michx. (Arum, the plant of that name; jolium, a leaf. F. asarct à faulles d'aron.) A species having the same properties as A. europæum.

A. cam'phor. A synonym of Asaron.
A. canaden'se, Willd. (F. asarct du Canadu.) Wild ginger, Canada snake-root, Hab. North America. Stem very short, dividing into two long, hairy leaf stalks, each bearing a pubescent, reniform leaf; in the angle is a single flower on a pendulous peduncle, with a brownish purple calys, and no corolla. The dried root is in contorted pieces, the thickness of a straw, wrinkled, brownish without, whitish within, aromatic and bitterish in taste; it contains a volatile oil or camphor, \( \Delta sarin, \) and a bitter resin. Warm aromatic simulant and diaphoretic. It has been used in dropsy. Dose, 20—30 grains.

A. carolinia'num. Carolina asarabacca; the A. canadense.

A. europæ'um. (F. cabaret, oveillette, nard sauvage.) Hab. Woods of Europe. Stamens 12, horned, distinct from each other and from the style; calyx campanulate, 3-lobed; leaves reniform, ohtuse, hairy, in pairs. The leaves, and particularly the root, are emetic and catbartic, and were employed, before the introduction of ipecacuan, for the purposes to which it is applied; the leaves are still used as a sternutatory: also called Nardus montana, or rustica, or sylvestris.

A. grandiflo'rum. (L. grandis, great; flos, a flower.) The A. arifolium.

**Λ. hypocis'tis.** (Υποκισπίε, from ὑπό, upon: κίσπος, the cistus plant.) The Cytimus hypocistis.

A. latifo'lium. (L. latus, broad; folium, a leaf.) The A. canadense.

A. officina'le. (L. officina, a workshop.)
The A. europæum.

A. villo'sum. (L. villosus, hairy.) The

**A. virgin'icum**, Willd. Used for the same purposes as *A. canadense*.

A. vulga're. (L. vulgaris, common.)
The A. europæum.

Asbes'tinum. A term for asbestos.
Asbes'to'id. ('Λσβεστος: είδος, likeness.
F. asbestonde; G. asbestahnlich.) Resembling

asbestos.

**Asbes'tos.** (Λαβεστος, inextinguishable; from, à, neg.; σβείννεμ, to quench. F. asbeste; I. asbesto; G. Asbest, Beraflachs, Federalaum.) A term for certain fine fibrous varieties of several of the bornblende family, as actinolite, augite, and tremolite, found in connection with serpentine; also, called Amianthus and Byssolites. There are many varieties in texture and substance; in some the fibres are long, parallel, and compact; in others they are loose and silky.

The asbestos of Dioscorides was calx viva, or

quicklime.

Those who work much with asbestos, especially the finer and more silky varieties, suffer from great redness and itching of the skin. Asbestos is used as a felting material, to make gloves for holding heated substances, and as a support for beakers over lamps.

A., com'môn. A dense variety, with little

flexibility.

A., elas'tic. A felted fibrous form; also called mountain cork.

A., lig'niform. (L. lignum, wood; forma, form.) A dense, woody-looking, brown variety; also called mountain wood.

**A. scall.** ('A $\sigma\beta$  $\varepsilon\sigma\tau\sigma\sigma$ s, inveterate.) Eezema of the scalp. (Dunglison.)

Asbes'tus. See Asbestos.

Asb'iree. Arab. for Myrtus communis.

**Asbolicus.** (' $\Delta \sigma \beta \delta \lambda \eta$ , soot. G. russig.) Of, or pertaining to, soot; so chimney-sweepers' cancer is carcinoma asbolicum.

As bolin. (Same etymon.) An azotised fixed oil, obtained from soot by sulphuric ether, which dissolves it. It is slightly soluble in water.

As'cain. France; a few miles south of Biarritz, near St. Jean de Luz. A cold chalybeate spring.

Ascalabo'tæ. ('Λοκαλαβώτης, a spotted lizard.) A Family of the Suborder Crassilingues, Order Sauria, distinguished by their biconcave vertebræ. The Genns Gecho forms the type.

Ascalo'nia. (Ascalon, a city of Palestine, from which it was first brought.) Term employed by Pliny to indicate the Allium ascalonicum, or shallot.

Ascalonitas. Term employed in the Capitularies of Charlemagne to indicate the Allium ascalonicum, or shallot.

Ascardamyc'tus. ('Ασκαρδάμυκτος, not blinking; from ά, neg.; σκαρδαμύσσω, to blink.) One who is incapable of closing his eyes, or who stares with wide-open eyes; lagophthalmus.

Ascarici'da anthelmin'tica. (As-

caris; cado, to kill; άντί, against; ελμινς, a worm.) The Vernonia anthelmintica.

A. in'dica. (L. indica, Indian.) Ternonia anthelmintica. Ascar'icide. (Ascaris; cado, to kill.) A

destroyer of ascarides.

Ascarida ria. (Ascaris.) Applied by Blauville to a section of Microzonia that resemble ascarides in the general form of their body, and, according to him, belong indubitably

to the class of apodous worms.

Ascarid'ee. (Ascaris, G. Spulwürmer.)
A Family of the Order Nematoda, Class Nemathelmintha, Subkingdom Vermes. They are moderately compressed, and present at their anterior extremity three sucker-like projections, the so-called lips, which enclose a tubular or prismatic oral cavity. One of the lips is dorsal, the two others are ventral, and in close apposition. The outer wall of the dorsal lip has two, whilst the other lips have a single, tactile papilla. The oral cavity is lined with a enticle, oceasionally presenting chitinous outgrowths. A powerful dental apparatus is often contained in the bulb formed by the posterior extremity of the pharynx. The lateral ridges of the body not unfrequently form lam lke, especially near the head and the male genital aperture. The tail of the male is curved towards the belly, and usually possesses two moderately developed spicula. The vulva is in front of the middle of the body, and leads into a bifid uterus of considerable length, the two arms of which in the larger species are directed backwards. The development and life-history of the Ascarides are so diversified that it is difficult to make any general statements, but in many cases there is an intermediate host; there are others which develop directly, and others which in their early period lead a free life in the Rhabditis form.

**Ascaridiasis.** (Ascaris.) Disease consisting in being infested by ascarides.

Ascarid'ii. Same as Ascaridaria. **Ascaridocnes'mus.** (Ascaris; κνησ-μός, an itching. F. ascaridocnésme.) Excessive itching from the presence of ascarides, as in the

anus, or vulva.

As'caris. ('Aσκαρίς; from à, euphon; σκαρίζω, to leap; from their irritating motion.) A Genus of the Family Ascarida. White or yellowish worms, of cylindrical form, with four opaque, longitudinal lines placed opposite to opaque, tongruumar interpretation each other, and corresponding to the divisions of the muscular mass. Skin leathery, transversely striated. Head with three distinct valves, which are split internally, and are armed Mouth opening with microscopic dentations. between the lips, and continuous with a mussnlar æsophagus, which has a triangular lumen. Stomach indistinctly marked off from the œsophagus; intestine sometimes possessing a cæcum or pyloric appendage. The tail in both sexes presents the form of a short cone. The male is The tail in both sexes shorter than the female, and has the tail recurved, naked, or provided with two lateral membranous alæ, or with two series of papillæ, rarely with a sucker; two more or less curved spicula. Female with straighter and longer tail; vulva situated in front of the middle, or even of the junction of the middle with the anterior third; vagina simple; uterus simple at first, but dividing into two or more long filhform cornua rolled round the intestine, and forming the oviduet and ovary. Ova elliptical or globular, covered with a hard shell, hatching sometimes in the body of the mother. The embryo is short-tailed, and instead of the valves and lips at the fore part of the body presents a conical dental process.

A. acanthocauda'ta. (L. acanthus, a thorny shrub ; cauda, tail.) Found in Lota molva.

A. a'cus. (L. acus, a point.) Found in the intestines and abdomen of Belone acus, larva of this species is the same as the Trichina cyprinorum of Diesing.

A. acu'ta. (L. acutus; from acuo, to make sharp.) Found in the intestines of Rhombus barbatus.

A. acutis'sima. (Same etymen.) Found in the cacum of Sciurus vulgaris.

**A. adipo'sa.** (L. adeps, fat.) Found in the abdominal eavity of Esox lucius.

A. adun'ca. (L. aduneus, booked.) Found in the stomach and intestines of Alosa vulgaris. A. ag'ilis. (L. agilis, that which is easy

to move.) Found in Crocodilus rulgaris.

A. ala'ta. (L. alatus, winged.) femal s have once been found by Bellingham in the intestine of man, and perhaps also previously by J. V. Thompson. Female 88 mm. in length; auterior extremity inflected, with two semitransparent membranous wings, 3 mm. long, larger behind; tail conical, marked by a black spot. Cobbold believes he has proved it to be identical with A. mystax.

A. alau'dæ. (L. alauda, the lark ) Found in Anthus arboreus.

A. al'bulæ. (L. albulus, dim. whitish.) Found in Coregonus albula.

A. aliena ta. (L. alieno, to make one person another.) Found in Nasua socialis.

A. ammody'tis. ('Αμμοδύτης, sandereeper.) Found in Vipera ammodytes.

A. an'atis cygnoï'deæ. (L. anas, a duck; cygnus, a swan.) Found in Anas cygnoidea.

A. angula'ta. (L. angulo, to make angular.) Found in the intestines of Lophius piscaturius.

A. angulival'vis. (L. angulus, bent, erooked; valvæ, the leaves of a folding-door.) Found in the intestine of Balænoptera rostrata.

A. angusticol'lis. (L. angustus, narrow; collis, the neck.) Found in Butes vulgaris.

A. anoura. ('Aν, neg.; οὐρά, a tail.) Found in Constructor bivittatus.

A. anterospira is. (L. anterior, fore-most; spira, a coil.) Found in the stomach of the Felis concolor.

A. ar'deæ. (L. ardea, the heron.) Found in the peritoneum of Ardea cinerea.

A. argenti'na. (L. argentum, silver.) Found in the abdomen of Scopelus Humboldtii.

A. aspidoph'ori. ('Ασπιδοφόρος, shieldbearing.) Found in the intestines of Aspidophorus europaus.

A. astroph'idis ti'gridis ma'jor. ('Αστροφος, without twisting; L. tigris, a tiger; major, greater.) Found in the intestines of Python tigris.

A. astroph'idis ti'gridis mi'nor. Αστροφος; L. tigris; minor, less.) Found in Python tigris.

A. atheri'næ. ('Αθερίνη, a kind of smelt.) Found in the intestines of Atherina nepsetus.

A. attenua'ta. (L. attenuatus, part. of attenuo, to make thin.) Found in the intestine of Python tigris.

A. auc'ta. (L. auctus, enlarged, abun-

dant.) Found in the intestine of Zvarces vivi-

parus.

A. auricula'ta. (L. auricula, the outer ear.) Found in the intestine of Ophiomorphus miliaris.

A. barbat'ulæ. (L. barbatulus, having a small beard.) Found in the intestine of Cobitis barbatula.

A. bic'olor. (L. bicolor, of two colours.)

Found in Trichecus rosmarus.

A. biuncina'ta. (L. bis, twice; uncinatus, furnished with hooks, barbed.) Found in the stomach of Zeus faber.

A. Boddaer'tii. Found in the intestine

of Herpetodryas Boddaërtii.

A. boo'pis. (Βοῶπις, ox-eyed, large eyed.) Found in the peritoneum of Box vulgaris. A. bra'mæ. Found in the stomach of

Brama Rayi.

- A. ca'nis lagop'odis. (L canis, a dog: lagopus, hare's foot.) Found in the intestine of Canis lagopus.
- A. capsula'ria. (L. capsula, a small box.) Found in the intestines, and encapsuled in the peritoneum, of Clupea harengus.

A. cas toris. (L. castor, beaver.) Found in the intestine of Castor fiber.

A. centris'ci. (Κεντρίσκος, a kind of fish.) Found in the peritoneum of Centriscus scolopas.

A. cephalop'tera. (Κεφαλή, the head;

πτέρυξ, wing.) Found in the intestine of Vipera redii.

A. chara'drii. (Χαραδριός, probably the golden plover.) Found under the skin of \_Egialites fluviatilis, and in the intestine of Egialites hiaticula.

**A.** chelo'niæ. (Χελώνη, a tortoise.) Found in tubercles in the assophagus of Chelone mydas.

A. cico'niæ al'bæ. (L. ciconia, a stork; albus, white.) Found in the stomach and proventriculus of Ciconia albu.

A. circumflex'a. (L. circumflexus, part. of circumflecto, to hend about.) Found in the stomach and duodenum of Felis pardus.

A. clava'ta. (L. clavatus, part. of clavo, to nail.) Found in the intestine of Gudus æglefinus.

A. clu'peæ. (L. clupea, a shad.) Found in the intestine of C'upea sprattus and C'apea harenaus.

A. clupea'rum. (L. clupea, a shad.) Found in the abdomen of Clupen harengus.

A. colla'ris. (L. collare, a hand for the neck.) Found in the intestine of Rhombus maximus.

A. columna'ris. (L. columnaris, rising in the form of a pillar.) Found in the intestines of Mephitis chinga.

A. com'par. (L. compar, like, or equal to, another.) Found in the intestine of Tetrao urogallus.

A. conoso'ma. (Kwos, a pine-cone; σωμα, the body.) A term applied by Joërdens to the larva of the common house fly, Musca domestica, by mistake.

A. constric'ta. (L. part. from constringo, to bind together.) Found in the peritoneum of

Gadus luscus.

A. cornel'yi. Found in the vulturine pintado, Humida vulturina.

A. corni'cls. (L. cornix, a erow.) Found in the stomach and intestines of Corvus cornix.

A. cor'vi frugil'egi. (L. corvus, a raven;

frugilegus, fruit gathering.) Found in the intestine of Corvus frugilegi.

A. cor'vi glanda'rii. (L. corvus ; glandarius, of, or belonging to, an acorn or gland.) Found in the intestine of Garrulus ylundarii.

A. crassicau'da. (L. crassus, thick; cauda, a tail.) Found in the intestine of Crenilabrus tinca.

A. crena'ta. (L. crena, a notch.) Found in the intestine of Sturnus vulgaris.

A. crista'ta. (L. cristatus, tufted, crested.)

Found in the intestine of Esox lucius.

A. cuneifor'mis. (L. cuneus, a wedge; forma, form.) Found in the intestine of Gobius Auviatilis.

A. cuspida'ta. (Part, of cuspida, to make pointed.) Found in the intestine of Cercopithe. eus sabæus.

A. cyclopte'ri. (Κύκλος, a circle : πτερόν, a wing.) Found in the intestine of Cyclopterus lumpus.

A. cynæ'di. Found in the peritoneum of

 $Labrus\ cynadus.$ 

A. cypri'ni erythrophthal mi. (Κυπρίνος, a kind of carp; ἐρυθρος, red; ὀφθάλμός, the eye.) Found in the intestine of Scardinius erythrophthalmus.

A. denta'ta. (L. dentatus, toothed.) Found in the intestine of Aspro vulgaris, and of Squalius

cephalus.

A. depres'sa. (L. depressus, part. of de-primo, to depress.) Found in the intestine of Vultur cinereus.

A. dis'par. (L. dispar, unequal.) Found in the intestine of the goase.
A. ecauda'ta. (L. e. without; candatus,

tailed.) Found in the perisoneum and intestine of Conger vulgaris. A. echina'ta. (L. echinatus, beset with

prickles.) Found in the intestine of Platydactylus quitatus.

elonga'ta. (L. clongatus, part. of Found in the intestine of Ateles declacbuth.

A. emberi'zæ. Found in the intestine of  $Emberiza\ hortulana.$ 

A. ensicauda'ta. (L. ensis, a sword; candatus, tailed.) Found in the intestine of Salicaria turdides, and of Turdus iliacus, T. merula, T. musicus, and other Turdi.

A. entom'eles. ('Εντός, within; μελας, black.) Found in the lungs of Rana helicina.

A. fa'bri. (L. faber, a smith.) Found in the stomach of Zeus faber. A. fe'rox. (L. ferox, wild.) Found in the

intestine of Hyrax capensis and H. syriacus. A. fila'ria. (L. filus, a thread.) Found in the abdomen of Python tigris.

A. fissila'bium. (L. fissus, part. of findo, to split; labum, a lip.) Found in the intestine of Sturnus vulgaris.

(L. fucundus, fertile.) A. fœcun'da. Found in the large intestine of Truchycepharus occipitalis.

A. fulig'ulæ. (L. fuligo, soot; gula, gullet.) Found in the intestine of Fuligula cristata. A. ga'di æglefi'ni. (Γάδος, a kind of fish.) Found in the fauces of Galus æglefinus.

A. ga'di merlan'gi. (l'ácos; E. merlan, a whiting.) Found in the abdomen of Merlangus vulgaris.

A. ga'di minu'ti. (Γάδος; L. minutus, part. of minuo, to lessen.) Found in the abdominal cavity of Gadus minutus.

**A.** gasteros'tel. (Γαστήρ, the belly; oction, a bone.) Found in the intestine of Gasterosteus aculeatus.

A. gibbo'sa. (L. gibbosus, hunch-backed.) Found in the intestine of Gallus gallinaceus.

A. glare'olæ. (L. glarca, gravel.) Found in the cacum of Glarcola austriaca.

A. graciles'cens. (L. gracilesco, to become slender.) Found in the peritoneum and intestine of Engraulis enchrasicholus.

A. granulo'sa. (L. granulum, a small grain.) Found in the esophagus and stomach of Tachypetes aquila.

A. gulo'nis. (L. gulo, a glutton.) Found in the jejunum of Gulo arcticus.

- A. halicoris. ("Als, the sea;  $\kappa \phi \rho \iota s$ , abug.) The males measured  $2\frac{1}{4}$ ", the females 4" to 5", in length (Owen). Found in the heart of Rhytina stelleri.
- A. helici'na. (L. helix, ivy; from ελιξ, wound, twisted.) Found in the stomach of Crocoditus acutus.
- A. hel'opis. (L. helops, the sword-fish, or the sturgeon.) Found in the intestine of Acipenser stellatus.
- A. heterop'tera. ("Ετερος, different; πτέρυξ, a wing.) Found in the intestine of Ibis albicollis.
- A. heterou'ra. ("Ετερος, different; οὐρά, a tail.) Found in the intestine of Hemantopus melanopterus.
- A. hippocam'pi. (Ίππόκαμπος, a monster with horse's body and fish's tail.) Found in the intestine of Hippocampus guttatus.

A. hirsu'ta. (L. hirsutus, shaggy.) Found in the intestine of Osmerus eperlanus.

- A. holop'tera. rolop'tera. ('Ολόπτερος, whole Found in the intestine of Testudo winged.)
- A. hu'milis. (L. humilis, lew.) Found in the lung of Tropidonotus sirtalis.
- A. hys'trix. (L. hystrix, the porcymine.) Found in the rectum of Podocnemis entor' cephulus.
- A. inci'sa. (L. incisus, notched.) Found in the peritoneum, and encapsuled in the stomach, of Sorex tetragonurus, and encapsuled in the peritoneum of Talpa curopæa.

  A. inerassa'ta. (L. inerassatus, part.

from incrasso, to make stout.) Found in the

stomach of Trygon brueco.

A.incres'cens. (L. increscens, part. from incresce, to increase.) Found in the osophagus and stomach of Lophius piscatorius.

A. incur'va. (L. incurvus, bent.) Found in the esophagus and stomach, and in thereles of the walls of the intestine, of Xiphias gladius.

A. infec'ta. (L. infectus, part. of inficio, to impregnate, to taint.) A mature nematode infesting Passulus cornutus.

A. inflex'a. (L. inflexus, part. from inflecto, to bend.) Found in the intestine of the common fowl.

- A. isehnop'tera. ('Ισχνός, dry; πτερόν, a wing.) Found in the large intestine of Struthio camelus.
- A. jac'chl. ('laκχος, mystic name of Bacchus.) Found in the intestine of a species ("lakxos, mystic name of of Hapale.
- A. labia'ta. (L. labia, a lip.) Found in the intestine of Anguilla vulgaris.
- A. la'bri lus'ci. (L. labrum, a lip; luscus, one-eyed.) Found in the abdomen of Labrus luscus.

A. 12e'vis. (L. lavis, light.) Found in the intestine of Arctomys monux.

A. lanio'rum. (L. lanius, a butcher.) Found in the intestine of Lanius collurio.

A. la'ri. (L. larus, a gull.) Found in the intestine in Larus ridibundus.

A. laticau'da. (L. latus, broad; cauda, a tail.) Found in the small intestine and execum of Dicholophus cristatus.

A. leptop'tera. ( $\Lambda i\pi \tau \sigma s$ , thin, fine; πτερόν, a wing.) Found in the esophagus and stomach of Felis leo, and many other Felidae.

Also, in Rudolphi's classification, a synonym of A. mustax.

A. leucis'ci i'di. (Λευκίσκος, the white mullet.) Found in the intestine of Idus mola-

A. linguat'ulæ. (L. linguatulus, dim. of linguatus, provided with a tongne.) Found in

the mesentery of Solea vulgaris. A. lobula'ta. (Λοβος, the lobe of the ear.) Found in the large intestine of Platanista

gangetie i. A. lonchop'tera. (Λογχός, the head of a javelin; πτερόν, a wing.) Found in the biliary

ducts and duodenum of Elephas indicus.

A. lon'ga. (L. longus, long.) Found in the intestine of Tantalus loculator.

A. lumbricoid'es. (L. lumbricus, an intestinal worm. F. ascaride lombricoide, lombrie; G. Spulwurm, Rundwurm, Springwurm.) A purasite of man, the ox, and pig. It is cylindrical, of considerable size, becoming attenuated at both extremities of the body, but rather more in front than behind, brownish or reddish grey in colour. The head is naked, mouth small, lips with a circular constriction at their base. The teeth very fine, never measuring more than 0.0035 mm., and about 200 in number. Male 15-17 centim. in length; caudal extremity conical, dorsally reflected, with two short, sharp, curved spiculæ. Ou the right and left sides of the abdomen are two irregularly arranged longitudinal rows of papillie, numbering at least 70 on each side. Female from 20-25 centim. in length, 5.5 mm. thick; vulva in adults just behind the anterior third, in young specimens near the middle of the body; ovaries two, filiform; ova 0.075 mm. in length, 0.058 mm. in breadth; shell thin, smooth, covered with a transparent, muriform, white envelope, semiopaque, and becoming brown after extrusion, their number estimated at several millions. In development the whole of the vitellus undergoes segmentation, and the process may occupy a year. The embryo does not escape spontaneously from the ovum, and its existence may be prolonged for five years.

This worm is found in the small intestine, and is especially prevalent in children. It is found in all parts of the world. It has a peculiar and

unpleasant odour.

The symptoms of ascarides are that children, in whom they most frequently occur, suffer from want of appetite, from colie, and have a white tongue, foul breath, with alternations of constipation and diarrhea, tickling of the pose and anus. These worms sometimes produce dilatation of the pupil, impaired vision, and strabismus. In adults, they may be the cause of incontinence of urine, spermatorrhoen, palpitation of the heart, cough. and various conditions of cerebral disturbance, as cephalalgia, vertigo, delirium, coma, hysteria, and epilepsy.

The treatment consists in the administration of

purgatives and various anthelminties. Amongst the former calomel used to be the most frequently employed. Amongst the latter the Semen contra, or, preferably, its active principle, santonin, is now in the greatest favour; kousso and oil of male fern have also been employed. Other remedies mentioned by Bouchut are saoria, half to one ounce, in powder; tatzé, two drachms to one ounce, in syrup; the juice of pagimirioba injected into the anus; the powdered seeds of the Chenopodium anthelmintieum, in 15 to 30-grain doses, in form of electuary; moncenna, eamphor, decoetion of onion, and the animal oil of Dippel. It has been supposed that a bitter infusion, such as that of quassia, is useful in preventing the return of the worms.

A. ly'ræ. (L. lyra, a harp.) Found in the mesentery of Trigla lyra.

A. macrop'tera. (Μακρός, long; πτερόν, a wing.) Found in the stomach of Jacare nigra.

A. maculo'sa. (L. maculosus, spotted.) Found in the intestine of the pigeon; a specimen has been seen two inches and a half long.

A. mæ'næ. (Maivy, a small sea-fish.) Found in the intestine of Mana vulgaris.

A. ma'nidis. (Mavis, a crescent.) Found as a vesicle in the stomach of Manis brachyura. A. mar'ecæ. Found in the intestine of

Anas penelope.

A. margina ta. (L. marginatus, part. from margino, to furnish with a border.) Found in the intestine of the dog and wolf. Head with convex lobes, each hearing a projecting papilla in the centre of their convexity, and having a thin dentated border at their margin; two semielliptical lateral alæ. Length of male 5-9 centimeters; caudal extremity with two narrow ale, having 15 papillæ on each side. Length of the female 9-12 centimeters. Vnlva situated in front of the anterior fourth of the body. Ova almost globular, reticulated on the surface. These ova only develop after having undergone a certain amount of desiccation.

Also, in Rudolphi's classification, a synonym

of A. mystax.

A. marit'ima. (L. maritimus, maritime.) An immature female has been found in the stomach of man.

A. mar'tis. (L. martes, a marten.) Found in the small intestine of Mustela martes.

A. mas cula. (L. masculus, male.) Found in the intestine of Pscudophis bivittatus.

A. megaloceph'ala. (Μέγας, large: κεφαλή, head.) Found in the small intestine of Bos taurus and of Equus caballus; also, in the ass, mule, and zebra. Head with three large rounded, and very prominent valves. Male 24 centimeters in length; tail with two lateral alæ. Female 20-32 centimeters in length; tail conoidal, mucronate; vulva situated at the anterior fourth; ova globular, diameter 0.09 mm. to 10 mm.; embryo from 0.23 mm. to 0.28 mm. in length. It was at one time supposed to be identical with A. lumbricoides, but this has now been

A. mer'gi. (L. mergus, a diver.) Found

in the esophagus of Mergus merganser.

(Mikpos, small; A. microceph'ala. κεφαλή, head.) Found in the intestine and abdominal eavity of Ardea comata.

A. microla bium. (Mikpos, small: L. labium, lip.) Found in the stomach of Fulco coronatus.

**Δ. minu'ta.** (L. minutas, small.) Found in the intestines of *Platessa paser*.

A. mucrona ta. (L. mucronatus, pointed.) Found in the stomach of Lota rulgaris.

A. mul'li. (L. mullus, the red mullet.) Found in the intestines of Mullus rubescens.

A. mustela rum. (L. mustela, a weasel) Found in the intestine of Mustela frina and M. martes.

A. mys'tax. (Vέσταξ, the moustache.) Found in the intestine of man, and various Carnivora, as the wild and domestic cat, tiger, and lion. Head inflected, with two membranous semioval ale; valves of the mouth small, rounded. Male 3-6 centimeters in length; posterior part of the body with two slightly projecting ale, and two rows of 13-15 papillae; spicules recurved. Female 5-10 centimeters in length; vulva situated near the anterior fourth; two oviducts and ovaries; ova almost globular, and having a thick reticulated or alveolated investment.

A. nasuta. (L. nosutus, large-nosed.) Found in the esophagns and stomach of Pele-

canus onocrotalis.

A. neglec'ta. (L. neglectus, part. from negligo, to neglect.) Found in the intestine of Diodon maculo-striutus.

A. nigroveno'sa. (L. niger, black; rena, a vein.) Found in the lung of Anguis fragelis and in Rana.

A. nodulo'so-stria'ta. (L. nodulus, a little knot; striatus, streaked.) Found in the

A. novac'ulæ. (L. novacula, a sharp knife.) Found in the peritoneum of Xyrichthy's cultratus.

A. nu'da. (L. nulus, naked.) Fennd in the intestine of Crotalus adamanteus.

A. obcon'ica. (L. ob, near; conus, a cone.) Found in the Uranops angulatus.

A. obtusocauda'ta. (L. obtusus, part. from obtundo, to blunt; cando, a tail.) Found in the stanach and intestine of Trutta fario.

A. oc'uli ra'nzo. (L. ocubis, the eye;

rana, a frog.) Found in the vitreous humour of the eye of the Rana esculenta.

A. ophid'ii barba'ti. ('Ochis, a snike: L. barbatus, bearded.) Found in the mesentery of Ophidium burbatum.

A. ophid'ii imber'bis. ('θφις, a snake. L. imberbis, beardless.) Found in the mesentery of Fierasfer imberbe.

A. orthagoris'ci. ('Ορθαγορίσ os, a Found in the intestine of the sucking pig.) Orthagoriscus mola.

A. oscula'ta. (L. osculatus, part. of osculor, to kiss.) Found in the wsophagus, stemach, and intestine of Halichurus grypus. L ptomyx monachus, Phoca barbata, P. grwnlindica, P. annellata, and P. vitulina.

A. ovis. (L. ovis, a sheep.) Found in the intestine of Ocis aries.

A. papillosa. (L. papilla, a nipple.) Found in the intestine of Corvus cajanus.

A. pastina cæ. (L. pastinaca, a parsnip.) Found in the intestine of Trygon pastinaca.

A. paucip'ara. (L. pancus, few ; pario, to produce.) Found in the intestine of Testudo

A. pe'dum. (L. pes, a foot.) Found in the stomach and intestine of Scomber scombrus.

A. pellu'cida. (L. pellucidus, transparent.) Found in the investment of the liver in Upupa epops.

A. perspicil'lum. (L. perspicio, to see through) Found in the intestine of the turkey.

A. phy'cidts. Found in the pylorie appendage of Phycis mediterranea.

A. pi'ca. (L. pica, a magpie.) Found in the intestine of Pica caudata.

A. procella'riæ. (L. procella, a hurricane.) Found in the bladder of Procellaria anylorum.

**A.** pteroph'ora. ( $\Pi \tau \epsilon \rho \delta \nu$ , a wing;  $\phi o \rho \epsilon \omega$ , to bear.) Found in the intestine of Dicholophus Marcgraft.

A. pusil'la. (L. pusillus, insignificant.) Found encapsuled in the peritoneum of Erinaccus

A. quadrangula'ris. (L. quadrangulus, four-cornered.) Found in the stomach of a species of Crotalis.

A. quadricor'nis. (L. quatuor, four; cornu, a horn.) Found in the stomach and duodemun of Naju haje.

A. radio'sa. (L. radiosus, emitting many rays) Found in the stomach of Echidnu rhinoccrotis.

**A. ra'jæ.** (L. raia, a ray.) Found in the stomach and intestines of Raja batis.

A. reclina'ta. (L. reclinatus, part. of reclino, to bend back.) Found in the excum of Crotophoga ani and C. major.

A. rhyt'inæ. Found in the stomach and

duodenum of Rhytina stelleri.

A. rig'ida. (L. rigidus, stiff.) Found in the stomach and intestine of Lophius piscuto-

A. retunda'ta. (L. retundatus, part. of rotundo, to make round.) Found in the peritoneum of Gadus morrhua.

A. rubicun'da. (L. rubicundus, ruddy.) Found in the esophagus and stomach of Tython molurus.

A. rugo'sa. (L. rugosus, shrivelled.) Found in the intestine of Bubo maximus.

A. sala'ris. (L. salar, a trout.) Found in the intestine of Gadus morrhua.

A. salmo'nis. (L. salmo, a salmon.) Found in the pylorie appendages of Salmo autumnalis.

A. salvi'ni. Found in the intestine of Oreophasis Derbyana,

**A. sau'ri.** (Σαύρα, a lizard.) Found in the mesentery of Saurus saurus.

A. sciæ'næ. (Σκίαινα, a sea-fish like a grayling.) Found in the peritoneum of Umbrina

**A. scorpæ'næ.** (Σκόρπαινα, a kind of fish.) Found in the intestine of Scorpæna serofa.

A. semite'res. (L. semis, half; teres, round.) Found in the intestine of l'anellus cristatus.

A. scrpen'tulus. (L. dim. of serpens, a serpent.) Found in the intestine of Grus cinerea.

A. siluri. (L. silurus, the sheat fish.) Found in the intestine of Silurus glanis.

A. sim'ilis. (L. similis, like.) Found in the intestines of various species of Phoca.

A. sim'plex. (L. simplex, simple.) Found in the stomach of *Phocæna communis*.

**A.** sma'ris. ( $\Sigma \mu a \rho i s$ , the pickerel.) Found in the intestine of *Smaris vulgaris*.

A. sole'æ. (L. solea, the sole.) Found in the intestine of Solea vulgaris.

A. spi'cree. Found in the peritoneum of Sparus spiera.

A. spiculig'era. (L. spiculum, a point; gero, to bear.) Found in the assophagus of Mergus merganser.

A. spira'lis. (L. spira, a coil.) Found in the intestine of Nyctale Tengmalmi, Ulula aluco, Aegolius brachyotus and otus, Surnia nyetea, Bubo maximus, Strix flammea, and Picus comatus.

A. squa'li. (L. squalus, a kind of sea-fish.) Found in the intestine of a species of Squalus.

A. stephanos'toma. (Στέφανος, a crown;

 $\sigma \tau \delta \mu a$ , a mouth.) A term applied by Lenz and Jördens to the larva of the blowfly.

A. ster'næ hirun'dinis. (L. hirundo, a swallow.) Found in the intestine of Sterna hirundo.

A. ster'næ ni'græ. (L. niger, black.) Found encapsuled in the intestines of Sterna

A. subula'ta. (L. subula, a pointed instrument, an awl.) Found in the exeum of Cuculus cayanus, C. melacoryphus, and other Cuculi; in the excum of Nyctibius athereus and N. grandis, and in the intestines of various Cu-

A. succi'sa. (L. succisus, part. of succido, to cut off.) Found in the intestine of Cyclopterus lumpus.

A. suil'la. (L. suillus, belonging to swine.) A species found in the pig, proved by Schneider to be identical with the A. lumbricoides of man.

A. sulca'ta. (L. sulcatus; part. of sulco, to plough or furrow.) Found in the intestine of Geochelone Schweiggeri.

A. tentacula'ta. (L. tento, to touch.) Found in the exeum of the American opossums, Didelphus.

A. tenuicol'lis. (L. tenuis, thin; collum, the neek.) Found in the stomach and intestine of Alligator Mississipiensis.

A. tenuis'sima. (L. sup. of tenuis, thin.) Found in the intestine of Merlangus vulgaris.

A. tetrap'tera. (Υέτρα, from τέσσαρα,

four; πτερόν, a wing.) Found in the intestine of the mouse.

A. ti'gridis. (L. tigris, a tiger.) Found in the intestine of Felis tigris. A. to'dari. Found beneath the peritoneum

of Loligo todarus.

A. torpe'dinis. (L. torpedo, sluggishness, the electric ray.) Found in the stomach of Torpedo marmorata.

A. transfu'ga. (L. transfuga, a deserter.) Found in the intestine of Ursus arctos, U. Americanus, U. labiatus, and U. maritimus.

A. tribothrio des. (Τρίς, thrice; βόθρος, a pit; είδος, like.) Found in the intestine of Anas obscura.

A. trigonu'ra. (Τρίγονος, three-angled; οὐρά, a tail.) Found in the peritoneum of Cobitis burbatula.

A. trique'tra. (L. triquetrus, three eornered.) A synonym of A. mystux.

A. trito'nis. (L. Triton, a son of Neptune.) Found in the Triton twniatus.

A. truncat'ula. (L. trunco, to maim, to cut off.) Found in the intestine, and encapsuled in the liver and muscles, of Perca fluviatilis.

A. unguicula'ta. (L. unquis, a nail.) Found in the large intestine of Lepidosternon microcephalus.

A. ungula'ta. (L. ungula'us, having hoofs.) Found in the intestine of Lubrus miculutus

**A. uranosco'pi.** (Οὐρανός, the heavens; σκοπέω, to look at.) Found in the peritoneum of Uranoscopus scaber.

A. valdemucrona'ta. (L. valde, strongly; mucronatus, pointed.) Found in the stomach and proventriculus of Ciconia maguari.

A. vermicula'ris. (L. vermiculus, a little worm.) The thread- or maw-worm. A synonym of Oxyuris vermicularis.

A. vesicula ris. (L. vesiculo, a little bladder.) Found in the intestine of the common fowl, and in the turkey.

A. vim'bæ. Found encapsuled in the intestinal walls and in the liver of Abramis

vinher

Ascarop'sis mor'rhuæ. ('Ασκαρίς, an intestinal worm:  $\delta \psi_{is}$ , appearance.) A sexually mature nematoid entozoon, found by v. Beneden in the intestines of Gadus morrhua.

As'celes. ('Ασκελής; ά, neg.; σκέλος, the

leg.) In Teratology, destitute of legs.

Ascella. (L. ascella, the bosom of man.)
The Axilla.

Ascellus. (L. dim. of ascus; from aσκός, a wine skin.) A synonym of Ascus.

Ascendens. (L. ascendens, part. of ascende, to climb. F. ascendant; G. aufwurts, steigend, aufsteigend.) Rising up; ascending.
Ascending. (L. ascende, to climb. F.

ascendante.) Mounting up.
The Anatomy, applied to structures passing to

the upper parts of the body.

In Botany, applied to a stem which rises upwards. Also, to ovules attached a little above the base of the ovary, and directed obliquely upwards. Also, to the metaphorphosis of the floral organs when it occurs in the higher direction, as from sepal to petal, from stamen to carpel.

A. aor'ta. See Aorta, ascending portion

of arch of.

A. current. The electric current when transmitted through an animal body by means of an arrangement in which the positive electrode is towards the periphery and the negative towards the central part of the animal.

A. fi'bres. See Fibres of brain.
Ascen'sus. (L. ascensus, an ascending or climbing up, an ascent.) Applied by Libavius and others to the act or process of sublimation, formerly termed Distillatio per ascensum. Applied, also, to the increase of a disease.

Asce'sis. ('Ασκησις, from άσκεο, to exer-

cise.) Exercise.

Asch'erson's ve'sicles. (L. resicula, a little blister.) The small cell-like bodies that are formed when oil is agitated with an albuminous finid. Each drop of oil becomes surrounded by a layer of albumen, which Ascherson thought represented a cell.

As'chil. The Scilla maritima.

**Aschistodac'tylus.** ('Ασχιστος, undivided'; δάκτυλος, the finger. F. aschistodactyle.) In Teratology, a simple arrest of development, in

which the digits are webbed.

('Aorós, a bag) Sac-like bodies Asci. forming the final ramifications of branches which arise from the fertilised ascogonium or female organs in certain Fungi, e.g. in the Ascomycetcs. They appear, in the first instance, as oblong cells filled with colourless protoplasm, which is gradually taken up by the sporidia. Asci dehisce either by a simple fissure or by an operculum, and the four or eight sporidia are set free.

As'cia. (L. σερία, an axe, akin to 'αξινη, an axe.) A great hatchet. Applied (σκέπαρνου) by Galen, de Fract. iii, 40, to a kind of bandage, from its supposed resemblance to a hatchet, when properly adjusted.

Ascia no. Italy, in Tuscany. A mineral water containing sodium chloride 4 grains, magnesium chloride 2, sodium sulphate 3, calcium sulphate 9, calcium carbonate 4, and a considerable amount of carbonic acid, in 25 ounces. Used in lithic acid diathesis, and in chronic catarrh of

the alimentary mucous membrane.

Ascid'ia. ('Aσκίδιον, for άσκίον, a dim. of ἀσκός, a leather bag, a wine skin. F. ascidie; G. Montelthiere.) A Group of animals belonging to the tunicate or ascidioid Division of the Mollusca, represented by Appendicularia, Pyrosoma, Salpa, Cynthia, and Phallusia. Some are free. some social or compound. Interesting because, on Haeckel's theory of anthropogeny, they constitnte a type of one of the stages of the development of man. The body in many of the genera is enclosed in a test containing cellulose. The branchial or pharyngeal sac is fenestrated, and opens below by a short æs phagus into a stomach and intestine, with hamal curvation. There is a heart, and the direction of the blood-current undergoes periodic reversal. A nerve ganglion anteriorly sends branches to the body. Sexes united or separate; development, either by ova or by gemmation from a stolon.

Ascidia'cca. A synonym of Ascidioida.
Ascidia'rium. ('Λσκίδιον.) The common mass formed by the aggregation of the zooids in the compound Ascidians. There is no fusion of the inner structure, but the tests he-

come united to each other.

Ascidiate. (Associos. G. schlauchar-tig; F. ascidus.) A term applied to leaves which have a portion of their structure developed into an urn-shaped hody, or Ascidium.

Ascid iform. (Ascidium; L. forma, likeness. G. schlauchformig.) Applied to bractea when in form of a cup.

Ascidig'erous. (Ascidium ; L. gero, to Supporting or presenting ascidia.

Ascidiocar pous. (Ασκείου, for ασκίου, dim. of ασκός, a leather bag; καρπός fruit. G. sehlanchfruchtig.) Applied to Hepa-

ticæ, the fruit of which is open at top, as Riccia.

Ascidioï'da. ('Aσκίδιου; είδος, likeness.) A synonym of Tunienta.

('Aσκίδιον, a small leathern

Ascidium.

bottle.) A bottle.

Applied to a hollow foliaceous appendage resembling a small bottle. It has been chiefly applied to cavities or hollow organs, sometimes with and sometimes without an operculum, exhibited by certain leaves of Nepenthes, Sarracenia, and Cephalotus. In Nepenthes the leaf, in the first instance, presents a luminar expansion, supported on a short petiole. The median nervnre is prolonged beyond the ex-pansion in the form of a tendril-like cylindrical body, which bears at its distal extremity an urnlike cavity lined with glands, and having a small operculum attached to one point of the rim. In Sarracenia purpurea the petiole is nearly cylindrical, and forms a conical alate receptacle, opening by an oblique orifice, which is surmounted by a dorsally-placed operculum. In Cephalotus folticularis the ascidiated leaf presents a cylindrical petiole, with an ovoid urn at its extremity, the opening of which is superior, surrounded by a fleshy margin, and closed by a rounded operculum. The outer surface of the urn has three ake, a bilabiate median one, and two lateral and simple

ones, all supporting stiff hairs.

Much difference of opinion exists amongst botanists in regard to the homologies of the several parts of the organs termed ascidia. Some, with De Candolle and Lindley, regarding the ascidia of Nepenthes and Sarracenia as being constituted by the coalescence of the edges of the petioles; others, with C. Morren, considering the urn of Nepenthes as formed by the lamina of the leaf, whilst the inferior phyllomorphous organ represents the petiole, and the opereulum is formed by the terminal portion of the lamina, which remains free. Griffith, again, with Hooker, looking to the development of the organ, maintains that in its rudinentary state it is a mere depression on the upper surface of the leaf, which terminates in a slight oval depression, that is, a simple gland. The part of the leaf below this becomes contracted, and forms the hasilar or laminar part of the organ, whilst the opereulum is formed by the distal portion. Lastly, Faivre and Baillon are of opinion that, in all the instances mentioned above, the urn represents a peltate foliar expansion, the edges of which develop more than the central portion, and thus the superior surface of the leaf constitutes the lining of the urn, and is destitute of stomata. whilst the inferior surface forms its exterior, and presents stomata and hairs. In Maregravia and Norantea floral bracts are transformed into ascidia.

**As'ciform.** ('Ασκός, a leathern bag; L. forma, likeness. G. schlauchformig.) Applied by Link to leaves which, placed upon themselves and joined by their edges at their inferior part, remain open superiorly, and thus produce a sort of vase, as the terminal ascidium of Nepenthes.

Ascig'eri. ('Agros. L. gero, to earry.) A term applied in Botany to Fungi which have their spores contained in theese, and hence more generally named theeasporous.

Also, a synonym of the Tuberaceæ amongst the Gasteromyceta.

Also, a synonym of the Sphæriaceæ amongst the Pyrenomyceta.

Ascig'erous. (Same etymon. F. ascigire; G. schlauchtragend.) Applied to mushrooms, the reproductive corpuseles of which are

As'cii. ('A. neg; σκία, a shade.
Schattenlose.) Applied to the int Applied to the inhabitants of the torrid zone, who, having the sun perpendicular above their head, are for two days in each year without shadow.
Ascilla. The Axilla.

Ascites. ('Ασκίτης; from ἀσκός, a bag. L. and S. ascitis; F. and I. ascite; G. Banchwassersucht.) A collection of serous fluid in the peritoneal cavity. The eauses are neute or chronic or tubercular inflammation of the peritoneum, or, very frequently, disease of one or more of the vi-cera of the abdomen, which either induces inflommation of the peritoneum, or subjects the veins to pressure, and thus retards, or altogether arrests, the flow of blood through the yena cava, vena portæ, or their tributaries. It is hence seen in cancer of the liver, stomach, and uterus; in aneurysms; in tumours of the pancreas, mesen-

teric glands, and other organs, pressing on the vena portæ; it occurs in circhosis and other diseases of the liver, heart disease, and Bright's disease. It also appears to result from some alteration in the constitution of the blood, as in fevers, seurvy, and phthisis, and in some anæmio conditions. In uncomplicated cases it may remain stationary for many years, but more commouly the primary disease, of which it is only symptomatic, proves fatal. The fluid varies considerably in character, being sometimes clear yellow, at others turbid, whey-like, or mixed with lymph and blood. It is usually alka-line, sometimes neutral; its sp. gr. varies from 1008 to 1018; it contains a few leucocytes, often converted into masses of fatty granules, epithelial scales from the peritoneal folds, occasional red blood dises, and plates of choleste.in. Its chemical composition is somewhat that of the serum of blood, but it varies considerably, the amount of water in 1000 parts averaging from 930 to 980, and of solids from 70 to 20, the difference consisting chiefly in the greater or less amount of albumen, which may vary from 5 to 60 parts in 1000; in addition, it contains small quantities of fibrin, fat, and urea, and often of paralhumen, leuein, uric acid, zanthin, cholesterin, sugar, biliary colouring matters, and acids; the saline constituents average from 7 to 10 parts in a thousand, and consist chiefly of sodium ehloride, with some sodium carbonates, with alkaline phosphates and sulphates, and calcium phosphate.

The symptoms are uniform enlargement of the abdomen, fluctuation, dulness on percussion, the highest part being resonant when the patient lies on the back or sides, owing to the floating of the intestines, thinning of the skin, with great venous development, and generally anasarca of the lower extremities. In extreme cases the respiratory and cardiae movements are seriously interfered with, impairment of the general health occurs, and there is thirst, loss of appetite, flatulence,

scanty urine, and confined howels.

In regard to treatment, when ascites arises from debility, the administration of diure-tics, with iron and quinine, is recommended, the most serviceable diuretics being nitrate or acctate of potash, scoparium, squills, juniper, and digitalis. In other instances drastic purgatives, as elaterium, gamboge, hellebore, podophyllin, and eroton oil, may be given; or the patient may be subjected to the action of sudorifics, as hot and vapour baths, and jaborandi. The value of diaphoretics, diuretics, and purgatives has been much doubted. Other remedies that have been suggested are copaiba, iodide and bromide of potassium, the juice of the bark of the elder, parsley, decretion of Pyrola umbellata, the application of electricity to the walls of the abdomen, frictions of mercurial ointment, with camphorated oil. Lastly. paracentesis may be resorted to.

A.abdominalis. (L. abdomen, the belly.)

The same as Ascites.

A. adipo'sus. (L. adeps, fat. F. ascite huileuse.) A form in which the effused fluid is white and opaque, from suspended oil globules; it is observed in some eases of peritoneal cancer or tubercle. The fatty matter has been observed

A. chylo'sus. (Xe\sigma'cs, chyle.) A form in which the effused fluid is milky, from rupture

of some lacteal vessel.

A. hepatocys'ticus. (' $\Pi \pi a \rho$ , the liver;

κύστις, the bladder.) Dropsy of the gall-bladder; great distension of that organ.

A. ova'rii. (Ovarium.) Ovarian dropsv. A. purulen'tus. (Ilvov, matter, pus.) Purulent effusion into the abdominal cavity.

A. sacca'tus. (Σάκκος, a bag.) A term applied to ovarian or other abdominal cysts containing fluid.

**A. uteri'nus.** (L. uterinus, belonging to the womb.) A term for Hydrometra.

Ascites, active. A term given to those cases of ascites which suddenly occur in persons of previously good health, after exposure to cold and wet, and which rapidly recover. In these there is probably some peritoueal inflammation.

A., chron'ic. Aseites depending on a eause other than acute peritonitis.

A., hepat'ic. ('Ηπατικός, of the liver.)

Ascites depending ou liver disease.

A., rheumatic. A term that has been applied to ascites which appeared to be metastatic, or a coincident manifestation of a rheumatic diathesis, or which seemed to have rheumatic inflammation of the peritoneum as its cause.

Ascit'ic. ('Ασκίτης, dropsy of the belly. F.

ascitique; G. wassersuchtig.) Having, or per-

taining to, ascites.

('Ασκληπιάς. Asclepiada ceæ. asclepiadacees; G. Seidenpflanzengewächse.) The milk-weeds. An Order of epipetalous corollifloral Exogens. Shrubs or herbs, often twining, geuerally with a milky juice; leaves entire, exsti-pulate; calyx 5-partite, persistent; corolla 5partite, deciduous; stamens five, alternate with the lones of the corolla; pollen, when the auther dehisces, cohering in masses, and sticking to five processes of the stigma singly, hy twos, or by fours; carpels two; stigmas adherent, and forming a fleshy 5-angled head, to gelatiuous processes arising from which the pollen masses adhere.

Asclepi'adai. ('Ασκληπιός; the Latin Æsculapius.) A name given to the desecudants of Æsculapius, who for many centuries appear to have been almost the only Greek physicians. The line stretches from Machaon, who flourished between n.c. 1200 and B.c. 1100, to Dracon the Third, who lived between B.c. 250 and B.c. 150; and it includes the names of Podalirius, Hippoerates, and Aristotle.

Asclepiade'a. The same as Asclepiadacea.

**Asclepi'ades.** ('Ασκλεπιάδης.) A native of Prusa in Bithynia. He flourished at Rome in the end of the second and heginning of the first century before Christ. He founded his practice on a doctrine of atoms and pores, considering that acute diseases depended on narrowing of the pores or their obstruction by excess or false motion of the atoms, and that chronic diseases arose from relaxation of the pores and deficiency of the atoms. He employed sparingly active remedies, but trusted mainly to a fitting diet, exercise, haths, and friction; he used wine freely, and would appear to have been a physician who considered the comforts, and perhaps the fancies, of his patients. He died from an accident when he was an old man.

Asclepi'adin. A substance obtained by macerating the root of Vincetoxicum officinale in strong alcohol. It is yellow, hitter, amorphous, and hygroscopic; it does not contain nitrogen, and is not alkaline, but has emetic properties.

**Ascle'pias.** ( $\Lambda \sigma_t \lambda_0 \pi_t \hat{\omega}_s$ , F. asclepiade; G. Scidenpflanze, Schwalbenwurtz.) A Genus of the Nat. Order Asclepiadaeca. Calyx small; corolla rotate, generally reflexed; staminal coronet consisting of five cucullate processes, with a subulate process on its inside; pollinia five pairs.

A. al'ba. (L. albus, white.) The Vince-toxicum officinale.

A. amœ'na, Michx. (L. amænus, pleasant.)

A. aphylla. ('Δ, neg.; φώλλον, a leaf.) The Surcostemma aphyllum.

A. apoc'ynum. ('Απόκυνου, from ἀπό, from, against; κύων, a dog.) The A. syruteat.

A. asthmat'ica, Roxb. ( Λσθματικός, afflicted with shortness of breath.) A synonym of Tylophora asthmatica.

(L. bicolor, two-coloured.) A. bic'olor.

The A. curassavica.

A. contrayer'va. A species said by some to supply the purgative root Mechoaean.

A. cornuta. (L. cornutus, horned.) A. syriaca.

A. cris'pa. (L. crispus, curled.) The Gomphocarpus crispus.

A. curassavica. (Curassavia, the island of Curaçoa.) Bastard ipecacuan, or white ipecacuau of St. Domingo, the leaves of which are used as an emetic; the root is mixed with that of ipecacuan, and has similar powers, but less in degree. It is said to be authelmintic. Dose 20-40 grains.

A. cynanchol des. The Surcostemma glaucum.

A. decum'bens. (L. decumbo, to lie down.) A species the root of which is used as a cathartic, expectorant, sudoritic, and diuretic; it is also said to have tonic properties. Externally it has been used as an irritaut.

A. gigante'a. (L. giganteus, of, or belonging to, the giants.) A synonym of Calotropis

gigantia.

A., flesh-col'oured. The A. incornata. A. incarna'ta, Willd. (G. fleischfurbige Schwalbenwurzel.) Flesh-coloured mikweed. Hab. North America. Stem erect, downy; leaves opposite, nearly sessile, lanccolate, downy; flowers in crowded, erect umbels. The root is officinal in U.S. Ph., and has been used as an emetic and cathartic iu catarrb, asthma, rheumatism, syphilis, and intestinal worms.

A. lactif era, Linn. (L. lac, milk; fero. to bear.) The milky juice of this species is used

as food.

A. linea'ris, Linn. (L. linearis, consisting of lines.) A Mexican species; used as an emetic and cathartic.

A. obova'ta. (L. ob, near; ovatus, egg-

shaped.) The A. syriaca.

A. proce'ra. (L. procerus, tall.) A somewhat doubtful Egyptian plant, the leaves of which are applied to indolent humours, and the milky juice used as a caustie. Probably a Calotropis.

A. prolif'era. (L. proles, off-pring; fero, to hear.) An emetic; has been used in hydro-

A. pseu'do-sar'sa. (Ψευδής, false; sarsa, sarsaparilla.) A synonym of Hemidesmus indicus.

A. ro'sea, Roxb. (L. roscus, rose-eoloured.) The Oxystelma esculentum.

A. seto'sa. (L. setosus, bristly.) A Mexican species, having diaphoretic and tonic properties.

A. stipita'cea, Forsk. An Arabian species, the young shoots of which are eaten as

food.

A. syriaca, Willd. (L. Syriacus, Syrian.) Common silk-weed, common milk-weed, Syrian dox-bane. A plant widely distributed in the United States. Stem simple; leaves opposite, petiolated, lanccolate-oblong, downy underweath; follicle prickly, full of silky down. The root possesses anodyne properties, it promotes expectoration and diaphoresis, relieves pain, cough, and dyspuwa. It has also been used in scrofula, and is an excellent alterative in hepatic affections. The tineture is made by macerating two ounces of the fresh root in one pint of spirit. The silky down has been used for stuffing beds and pillows, and in the manufacture of hats.

A. tomento'sa. (L. tomentum, a stuffing

for cushions.) The A. syriaca.
A. tubero sa, Willd. (L. tuberosus, full of lumps; G. knollige Schwalbenwurzel.) Butterfly-weed or pleurisy-root. A plant indigenous to the United States. Stems many, round, hairy; leaves oblong-lanceolate, with short petioles; fruit an erect lanceolate folliele. root, which is the only part used, and is officinal in the U.S. Ph., is large, irregularly tuberous, branched, fusiform, fleshy, externally brown, internally white and striated, with a subacrid, nauscous taste. It is diaphoretic and expectorant. It is largely employed in the Southern States in catarrh, pneumonia, pleurisy, and other pectoral affections. It has also been found useful in diarrhea, dysentery, and rheumatism. Dose, 20 to 60 grains. Also, a synonym of A. decumbens.

A. verticilla'ta. (L. verticillus, the whirl of a spindle.) Hab. North America. A decoction of the plant has been used, it is said with success, in the bites of snakes and venomous

insects.

A. vincetox'icum. (F. asclepiade domptevenin.) Swallow-wort, or tame poison; formerly esteemed as alexipharmic, diuretic, and deobstruent. The Vincetoxicum officinale.

A. volu'bilis. (L. rolubilis, that which is rolled round.) The Hoya viridiflora.
Asclepias mus. A term for hamor-

rhoids.

Asclep'idin. A product of the Asclepias tuberosa and A. vincetoxicum. Used as au expectorant and diaphoretic. Dose, 1-4 grains.

Asclepiei'on. ('Δσκληπιείου, a temple of Esculapius.) The temples of Esculapius, to which the sick resorted to be treated by the priest who possessed some knowledge of medicine, were so-called; they were usually situated in healthy places, and those who were cured deposited an account of their case and recovery.

**Ascle pion.**  $C_{20}H_{34}O_3$ . A substance obtained from the milky juice of *Asclepias syriaça* by treating it with other. On evaporating the ethereal extract it is left in white, cauliflowerlike tufts of needles, which are without smell or taste. It fuses at 104° C. (219°2° F.), decemposes at a higher temperature, dissolves readily in other, but not in water or alcohol.

Ascle'pios. ('Ασκληπιώς, Æsculapius.) A name formerly given to several different medi-

Ascobasid'ium. ('Λσκός, a leathern bag; basideum; G. Askobasidie.) A basidium, from the top of which a chain of spores, like a theca, **Ascobol'ei.** ('Λσκός, a leathern bag; βάλλω, to throw.) A Group of the cup-shaped Discomycetes, or of the fleshy Ascomycetes.

Ascococcus. ('Agros; Kokkos, a kernel.) A term applied to a mass of zooglesa containing micrococci and bacteria, and invested by a more or less distinct coat. According to Billrotb, it is one form of the development of his Coccobacteria septica.

**Ascogo'nium.** ('Ασκός, a leathern bag; γόνος, offspring.) The female organ in Fungi, formed by the termination of a mycelium thread. This statement of De Bary has been disputed.

As coli. Italy; in the Abruzzi. A mineral water, of 30° C. (86° F.), containing saline sulphates, some iron, and a hydrogen sulphide; there are also carbonated saline springs containing sodium sulphate.

Asco ma. ('Aσκωμα, a leathern padding for the hole in a ship for the oar.) A term applied by some botanists to the pileus and lamellæ

of Agaries.

Also, an old term for the Mons veneris, or eminence of the female pubes at puberty.

(Quincy.)

**Ascomyce tes.** ('Λσκός, a leathern bag; μυκής, a mushroom.) A very widely distributed Family of Fungi, containing numerous genera and species, all agreeing in producing sporidia, contained in certain cells called asci, which are developed from the hymenium. Examples are met with in the true truffles, Tuber asticum, T. macro- and melanosporum, T. brumale, in Helvella and Peziza, in Morchella and Geoglossum. In some instances paraphyses are present, and in some investing mucilage.

**As'cophore.** ('Ασκός', φορέω, to bear.) Term applied to those hypha branches in Fungi which penetrate between the ends of the paraphyses, and develop into club-shaped asci.

(Same etymon. Ascoph orous.

Schlauchführend.) Bearing au ascophore.

Ascorum. (Aoxós. F. uscore.) Name by Nees von Esenbeck for the portion of the pileus of mushroous containing the elytra; also called Stratum theeigerum.

Ascospo'ræ. ('Λσκός; spora. F. asco-Lichenes having their reproductive corpuscles

contained in utricles.

As'cospore. ('Aσκός, a leathern bottle; σπόρος, a seed.) The ripe spores of the ascomycetous Fungi (yeast plauts, truffles, &c.). These spores are formed in the eight-spored asci, which arise after the conjugation of the antheridium, with the corkscrew-like end of a brauch

of the mycelium, or ascogonium. **As cula.** (Λσκός, a leathern bag.) One of the stages in the development of a sponge. It is a sac-like body resembling a gastrula, from which, indeed, it only differs in being fixed by its aboral pole. It is unciliated, and consists of two layers

of cells.

('Aσκόs, a leathern bottle.) The As'cus. swollen sac-like terminal cell of a branch of a hypha or mycelium in Fungi, in which the spores develop.

As cyphous. ('Λ, neg.; σκύφος, a cup. G. becherlos.) In Botany, that which is destitute of the cup which, in certain Lichens, supports the organs of fructification, and in Marchantia the propagula.

As cyrum. (Aσκυρου.) The herb St. Peter's wort, Hypericum quadrangulum or H. ascyron. It was formerly esteemed as an aperient and cholagogue. It was used locally to burns, and the seeds were given in sciatica.

A. crux-Andreæ, Linn. St. Andrew's s. Hab. North America. Has the same eross. reputation as Ascyrum.

Asdeni'g1. See Asedenigi. A'se. (Άση, nausea, from αω, to satiate.) Old term, used by Hippocrates, Aph. v, 61, for loathing of food; also, a sense of heaviness about the heart or stomach; also, restlessness of body.

A'seb. (Arab.) Old name for alum. (Ruland and Johnson.)

Asedenigi. Arabic for the hæmatites, or blood-stone. (Ruland and Johnson.) Also, an old name for alumen.

A'sef. (Arab.) Name for pemphigus; also termed Albasef. See Assph.

Ase'gen. Arabie for dragon's blood. (Ru-

land and Johnson.)

Ase'gon. Same as Asegen.

Aselli. (L. asellus, an ass's foal. F. cloportes des caves ; G. Asseln, Kellerwürmer.) old term for wood-lice, the Oniscus asellus. They

were used in dropsy.

Au Italian anatomist, born Asel'li, G. Au Italian anatomist, born 1581, died 1626. He discovered the lacteals, and

wrote a book on the subject

A., pancre'as of. The right extremity or head of the panereas when separated from the rest. Called also the lesser pancreas.

Asellus. (Dim. asinus, the ass.) ass's colt; formerly sometimes used for Asinus. Also, an old term for the eod, Gadus mor-

Aselou'ri. A plant mentioned by Dioscorides, which has been identified with the

Atriplex halimus.

Ase'ma cri'sis. ('A $\sigma\eta\mu\sigma$ s, from  $\dot{\alpha}$ , neg.;  $\sigma\tilde{\eta}\mu\alpha$ , a sign;  $\kappa\rho i\sigma\iota s$ , the turning-point of a disease.) A crisis occurring unexpectedly, and without the usual precursory symptoms, or when

heyond all reasonable expectation.

**Asema'sia.** ('A, ueg.; σημαίνω, to show by a sign.) A term proposed by Dr. Hamiltou as a substitute for aphasia, which he objects to as too limited in meaning, and as confining the view to speech defects, to the exclusion of loss of power of gestienlation, of singing, of reading, and of writing, which are also often affected in the disease thus named.

**Ase'mia.** ('A, neg.;  $\sigma \tilde{\eta} \mu \alpha$ , a sign.) A term suggested by Steinthal to indicate loss of the power of forming or of understanding any sign or symbol of thought, whether spoken,

written, or acted.

A. graph'ica. (Γραφικός, belonging to writing.) Loss of power of forming or of understanding writing.

A. mim'ica. (L. mimicus, mimie.) Loss of power of forming or of understanding thought expressed in action.

A. verba'lis. (L. verbalis, belonging to words.) Loss of power of speaking, or of understanding speech.

As'eph. Arabie for Alumen plumosum, or A. scissum. (Ruland and Johnson.)

**Asep'ta.** ('Aσηπτοs, undigested, from a, neg.; σήπω, to putrefy.) Term applied to substances not liable to putrefaction.
Also, to undigested matters.

**Asep'tic.** ('Λσηπτος, undigested.) Not liable to putrefy. Also, undigested.

Asep'ton. Same as Asapes.

Aserumb'drue. Ashantee name of a species of Piper, the leaves of which are given in soup to relieve abdominal swellings. (Waring.)

Asex'ual. (L. a, neg.; sexus, sex, or gender. G. geschlechtlos.) Having no sexual

Applied to those modes of reproduction which do not take place through sexual intervention, as fission, budding.

Also, formerly applied to Crypt gamia.

A. reproduc'tive cell. (G. Keimzelle.) A term applied in Botany to those reproductive cells which are capable of development without further contact or connection with other cells.

Asex'us. Same as Asernal.

As'fe. A synonym in Dioscorides of the Atriplex halimus.

As'fos. Egyptian name of the Bullota fætida.

Asgund. Hind. for Physalis somnifera. Ash. (Sax. esc. F. frène; t. frassino; G. Esche.) The Fraxinus excelsior. A. bark. The bark of Fraxinus excelsior.

A., bitter. Quassia, Pievana excelsa.
A., blue. The Fraxinus quadrangulata.
A., com'mon. The Fraxinus excelsiar.

A., Europe'an. The Fraxinus excelsion.
A., flow'ering. The Fraxinus ornus.
A., moun'tain. The Pyrus aucuparia.

A., moun'tain, Ameri'can. The Sorbus americana.

A., moun'tain, Europe'an. The Pyrus aucuparia.

A., poi'son. The Rhus toxicodendron.
A., prick'ly. The Xanthoxylon fraxineum; also, the Aralia spinosa.

A., prick'ly, shrub'by. The Xanthoxylon fraxmeum.

A., round-leav'ed. The Frazinus rotundifolia.

A., stink'ing. The Ptelea trifoliata.
A. tree. The Fraxinus excelsior.

A. weed. The Egopodium podagraria. A., white. The Fraxinus americana.

Ash'by-de-la-Zouche. Leieestershire; a town about twelve miles from Derby. Here is a mineral spring, containing, in one pound, calcium chloride 94.5 grains, magnesium chloride 1.7, sodium chloride 911, magnesium and sodium bromide 868 grain. It is employed chiefly in scrofulous diseases.

Ash'es. (Sax. asea. F. cendre; G. Asche) The residual substance after burning anything. The common name for the vegetable alkali, potash.

A., an'imal. The residue of the burning of such substances as hartshorn and boue.

Ashkila. An Abyssinian plant; a species of smilax, regarded as astringent; the wood is used as a toothbrush. (Waring.)

Ashko'ko goo'man. A plant of South Abyssinia, employed in the treatment of epilepsy; perhaps a species of Brassiea. (Waring.)

Ashoo-kuchoo. Beng. for Arum colo-

Ashoovri'hi. Sansk for Oryza sativa. Ash'tcad. Surrey; two miles from Epsom. Here is a mineral water containing magnesium sulphate.

Ash'wa. Sansk, for Physalis somnifera, Ash'wa. Sausk, and Beng, for Physalis somnifera.

Ashwer'tha. Beng. for Urostigma reli-

Asia'lia. ('A, neg.; σίαλον, spittle. f.

asialie; G. Speichelmangel.) A deficiency or absence of saliva.

**Asial'ochous.** ('Λ, neg.; σίαλον; χίω, to pour. F. asialique.) Not secreting or pouring out saliva.

Asialorrhœ'a. ('A, neg.; σίαλον, saliva;

ρέω, to flow.) Defective flow of saliva.

Aslatic. ('Ασιατικός.) Of, or helonging ti, Asia.

A. chol'era. See Cholera, epidemic.

A. pills. Arsenious acid one part, black pepper 80 parts. Mix with treacle, and divide into pills containing the dose required.

Asiat'icum bal'samum. A synonym of the Balsamum gileadense, or balm of Gilead. Asigi. Arabic for verdigris. (Ruland and

Johnson. Asimina. (F. asimine.) Applied by Desvaux to a compound fruit, the fleshy carpels of which are more or less joined together.

**A. trilo ba.** (Τρείς, three; λόβος, the lobe of the ear.) The Carica papaya, or Uvaria trelobo. An anthelmintie.

Asinalung a. Italy; in the valley of Orcia. A mineral water springing from the chalk, of a temperature of 15° C. (59° F.), and containing two grains of iron oxide and lifteen of calcium carbonate, with much free carbonic acid, in sixteen onnees.

Asingar. Same as Asigi.

Asinus. (L. asinus, the ass; akin to ovos, ass. F. ane; G. Esel.) The ass, Equus asinus. Its milk is preferable to that of the cow and some other animals, in cases of phthisis and debilitated stomach, being more easy of digestion; and for infants. See Milk, ass's.

Asi'phonate. ('Λ, neg.; σίφων, a sphon.) A term applied to the shells of those

Gastropods which have no siphon.

**Asiphonia'ta.** (Same etymon.) An Order of the Class *Lamellibranchiata*. Acephalons molluses having no respiratory siphon; lobes of the mantle free; pallial line simple.

Asiphon'ida. Same as Asiphoniata. Asiracos'tum. Same as Siracostum.

Asir'acus. ('Λσίρακος.) Old name for a kind of locust; also called ονος, according to Dioseorides, ii, 57, and Asinus; it was believed to possess virtue against the sting of the scorpion, as confirmed by Galen, de Sim. Fac. xi, & Draco-

Asit'ia. ('A, neg; σῖτος, food. F. asitie; G. Appetulosiykeit, Nichtessen.) According to some, a term for loathing of food; but more probably and more correctly a want of food.

Asius la'pis. See Assius lapis. Asja'gan. (Ind.) Name for a tree growing in Malabar and the East Indies, the juice of which is used against cohe.

Asjo gam. Same as Asjagan.
Askel'ia. ('A, neg.; σκέλος, a leg. F.
askelie.) Term by Breschet for a kind of organie deviation, or partial agenesis, characterised by the absence of legs.

As'ker. A synonym of Eschar.
As'kern. Yorkshire; near Doneaster. A mineral water containing calcium and magnesium sulphate, calcium and magnesium carbonate, calcium chloride, and hydrogen sulphide. It is used in theumatism and skin diseases.

Aski'da. A synonym in Dioscorides of Veratrum album.
The same as Asciles.

Askites. The same as Ascites.
As'koc. Norway. An island of the Nor-

wegian Archipelago, some leagues from Bergen. It contains a remarkable spring, known to geographers as the Agatha spring. It is hot in winter and cold in summer.

Askola'me. Arabic name for the Asphodels.

**As'kosaire.** ('Λσκός, a bag.) A term formerly employed in France to designate the tetrachænium of Labiata boragineæ.

Asko'sis. ('Ασκός, a leathern bag.) Term applied to the fruit of the Cyperaceæ, some Polygonacem, and Chenopodiacem. It only differs from the achenium in being superior, and in the base of the calyx not entering into the formation of its walls.

The Arabic name of the iris. As'meni. As'miar. Arabic for verdigris. (Ruland and Johnson.)

As'monich. The Peruvian name of Lasionema rosea (Don), or Cinchona rosea (R. et Pay.), the bark of which is slightly bitter, and very astringent.

Aso des. ('Ασώδης, attended with nansea; from any, nausea. F. asode; G. Brechfieber.) Old term applied to a fever attended with great restlessness, nausea, vomiting, thirst, anxiety, and sense of internal heat.

Aso'por. Old name for Fuligo, or soot.

(Ruland and Johnson.)

Asoua'ton. The Indian name of the Ficus indica.

Asp. ('Aσπίs, an asp. F. aspic; I. aspide; S. aspid.) Common name for the Cerastes hasselquistii, or the Naja haje; also called

Also (G. Otter), a name for the common viper, Pelias berus.

('Λ, neg.; σπαδίζω, to Aspadia'lis. draw off.) Ancient term for a suppression of urine, from the urethra being imperforate. (Quincy.)

Aspalaso'ma. (' $A \sigma \pi d \lambda u \xi$ , a mole; . σωμα, a body.) In Teratology, defective development of the lower part of the abdomen, so that the generative apparatus and rectum open by three distinct orifices, as in the mole.

Aspal'athus. ('Λοπάλαθος.) A name for a thorny shrub, mentioned by Greek and Roman writers, supposed to be the Cytisus lanigerus, or the Anthyllis Hermannia.

A. canarien'sis.

The tree, Genista canariensis, which yields one kind of Lignum rhodium.

Aspal'tum. The same as Asphaltum. Asparage'æ. (F. asparagies.) Applied by Bartling to a Tribe of Smilaceae, having tho Asparagus for their type.

Also, a synonym of Smilaceæ.

Aspar'agi. The young shoots of asparagus; used in medicine, or as food.

Asparagic acid. The same as Aspartic acid.

Asparagin. (F. asparagine, agedoite; G. Spargelstoff, Althain.) C<sub>4</sub>H<sub>8</sub>N<sub>2</sub>O<sub>3</sub>, or, when crystallised, C<sub>4</sub>H<sub>8</sub>N<sub>2</sub>O<sub>3</sub>+H<sub>2</sub>O. The amide of asparaginic acid. A peculiar vegetable principle obtained from the plant asparagus by evaporation of its juice. It is also contained in Althea, the roots of Symphytum officinale (Comfrey), Convallaria majatis (Solomon's seal), and Paris quadrifolia; in the tubers of potatoes and dahlias; in the fruit of the Castanea vesca (sweet chestunt), the leaves of belladonna, the sprouts of hops, and the milky juice of Lactuca sativa (lettuce), and

the shoots of many leguminous plants. It occurs in shining, transparent, rhombic prisms, moderately soluble in hot water, insoluble in alcohol and ether. It communicates a peculiar odour to the urine. It is said to be sedative to the heart, producing slowness and intermittency of the pulse,

and duretie. Dose, 1—6 grains.

A., bil'iary. (F. asparagine biliaire.) A term which has been given to the substance otherwise called Taurin, because it possesses

many of the properties of asparagin.

Asparagin'eæ. A family of plants established by A. Jussieu, the characters of which agree in all essential points with the Liliace e, except that the fruit is a berry instead of a

capsule.

Aspar'agus. ('Ασπάραγος; probably from ά, abund ; and a root akin to σπαργάω, to be full to bursting; by some derived from άσπαίρω, to hiccough.) A Genus of the Nat. Order Liliaceæ. Lilies, with a succulent fruit. Canlescent; flowers scattered; sepals and petals

herbaceous, partially united into a tube; style 1; stigmas 3, reflexed.

The ' $\Lambda\sigma\pi\alpha\rho\dot{\alpha}\gamma$ os of Dioscori les is referred by Sibthorpe to Asparagus acutifolius, Linn. roots and seeds were regarded as dinretic, lithontriptic, and gently aperient, and were administered in affections of the kidneys, liver, splcen, and nterus, and locally in toothache and clephantiasis, Dioscor. l. ii, e. 51; Panlus Ægineta, l. vii; Pliny, l. xx, c. 42; Celsus, l. ii, c. 31, and l. iv, (Waring.)

A. acutife'lius, Linn. (L. acutus, pointed; folium, a leaf.) The young shoots are eaten as food in Southern Europe. Probably the A.

petræa.

A. aphyl'lus, Linn. ('Λ, neg.; φύλλον, a leaf.) A species the young shoots of which are eaten as food.

A. ascen'dens, Roxb. (L. ascendo, to climb.) A species used in India like the A. sar-(L. ascendo, to mentosus.

A. dra'co. The Dracana draco.
A. dul'cis. (L. dulcis, sweet.) A species the young shoots of which are used as food in

Japan.

A. officina'lis. (L. officina, a workshop. F. asperge; 1. sparagi; G. Spargel.) Asparagus. Stem unarmed, branched; false leaves like bristles; true leaves membranous; peduncles lay, drooping, uniflorous; root unbranched; young shoots scaly. The root has been considered dinretic and aperient, and is an adulterative of sarsaparilla. The young shoots form the well-known article of diet. A spirit has been distilled from the fermented juice of the berries. The root is officinal in the French Codex. The juice of the young shoots contains Asparagin; the berries contain a red colouring matter, Spargine.

A. petræa. (L. petræus, belonging to Arabia Petræa. F. corrude.) Rock asparagns. A species the young shoots of which are eaten, and the roots used as an aperient, diurctic, and

lithontriptic.

A. racemo'sus, Willd. (L. racemosus, clustered. Hind. and Duk. Shakakul; Tam Tannir-muttan; Tel. challa-gaddula; Mal. Shatarali; Beng. Sat-muli.) A very fragrant Indian plant. The root, free from bark and boiled, used in bilious affections. The leaves, mixed with ghee, are applied to promote suppuration.

A. sarmento'sus, Linn. (L. sarmentosus, full of twigs.) An Indian plant, having an inert,

tasteless root, which is named by the natives Atis, a term they also apply to the tubers of the Aconitum heterophullum.

A. scaber, Brign. (L. scaber, rough.) Used, along with A. officinalis, to make the syrup

of asparagus,

A. verticilla'ris, Lam. (L. verticillus, the whirl of a spindle.) The young shoots are eaten as food.

Asparam'ic ac'id. The same as Aspartie neid.

Aspar'amide. A name for aspara from its analogy with the examide of Dumas. A name for asparagin,

Aspar'mic ac'id. A synonym of Aspartie acid.

Aspar'tate. Term for the combination of aspartie acid with a base.

Aspar'tic. Of, or belonging to, aspara-

A. ac'id. C4H7NO4. A substance obtained by the action of hot sulphuric acid or alkalics on asparagin. It is kevogyrous, crystalli-able in small rhombic prisms, but little soluble in water; when dissolved in acids it becomes dextrogyrous. Aspurtic acid and asparagin are two amides of malic acid, or combinations of malic acid and ammonia. It is found among the products of the decomposition of albumins, and it occurs in the animal organism as a result of the action of the pancreatic secretion on the fibrin of blood.

Aspa'sia. Old term for a medicine formerly used for constringing the vagina, consisting of wool soaked in infusion of galls; described by

Capivaccius.

(Sax. æpse, æsp. F. tremble; I. As'pen. (Sax. tremula; G. Espe.) Common name of the Populus tremula. A., Amer'ican. The Populus tremu-

Inides.

A., Europe'an. The Populus tremula.

**As'per.** ('A, neg.;  $\sigma\pi\delta\rho\nu s$ , seed; in reference to land so rugged as to be unfit for culture; or a, neg.; spes, hope, as opposed to prosper, successful.) Rough to the touch, from little inequalities in any part.

As'pera arte'ria. See Arteria as-

Aspera'go ægypti'aca. A name for

the lyeopsis, or wall-bugloss Aspera'tum specil'lum. (L. asperatus, part. of aspero, to furnish with a wounding

edge; specillum, a probe.) An old term for a brush for the eye, made of the awns of barley or of rye; it was used to let blood by drawing it across the inner surface of the eyelid.

Aspergettes. (Fr.) The young shoots

of Ornithogalum pyrenawum, which are used as food in the neighbourhood of Geneva.

Aspergilla'ris. (L. aspergo, to sprinkle. G. sprengwedelig.) Pertaining to an aspergillum, or sprinkler.

Aspergilliform. (L. aspergo; forma, likeness. G. sprengwedelformig.) Resembling a sprinkler in form; applied to stigmata, &c.

Aspergil'lus. (L. aspergo, to scatter; so called from its likeness, when fully developed, to the aspergillus, or brush for sprinkling holy water. F. gonpillon.) AGenus of Hyphomycetons Fungi. See Eurotium.

A. auricula'ris. (L. auricula, the car.)
A doubtful species described by Meyer as having been found in the wax of the ear and on the tympanum of man. It consists of long filaments, isolated or in bundles, transparent, having a terminal gradual enlargement; the fructification consists of a rounded greenish capitulum covered with spores. Probably \_1. glaucus.

A. flaves'cens. (L. flavesco, to become golden yellow.) A species which has been observed in the meatus auditorins externus. Pro-

bably A. glaucus.

A. glau'cus. (L. glaucus, bluish grey.) Ordinary blue mould. A fungus or mould very common on preserved fruits, appearing to the naked eye as a woolly, fleecy crust, at first purely white, then gradually becoming covered with little firm glaucous or dark green dusty heads. Microscopical examination shows branched cylindrical filaments, with rounded ends, containing protoplasm, constituting the mycelium. From the superficial filaments of the mycelium rise vertically, at intervals, thicker fruit filaments (carpophores) or conidia filaments. These swell at their upper extremity, and give off numerous rayed divergent protuberances, termed sterigmata, and every sterigma bears on its apex a chain of ten or more round bodies or spores, which are so much older the farther they stand from the sterigma. From other filaments of the mycelium springs a second kind of fructification. A spiral filament rises, becoming a hollow screw, at the end of which a globose conceptacle is formed, consisting of a thin wall of delicate cells and an enclosed mass of cells. These last, for the most part, form asci, in the interior of each of which eight sporidia are developed. By the bursting of the conceptacle the sporidia are set free. It is the fruit-bearing stage of the Eurotinm herbariarum.

Mühlenbach has described two cases of apparent poisoning, accompanied by vomiting, headache, and vertige, in coopers who had brushed out a cask covered with this fungus. It was contained in a yellowish-green secretion on the membrana

tympani.

It has been found in the lungs of a plover dead of phthisis; in the aërial sacs of the eider duck.

A. mucoroid'es. A species found by Virehow in the lungs of persons the subjects of tubercular disease or pulmonary gangrene.

A. ni'ger. (L. niger, black.) A species the mycelium of which is one of the most active agents in the gallic acid fermentation.

A. nigres'cens. (L. nigresco, to become black.) It has been found in the aerial sacs of the pheasant, Phasianus colchicus.

A. ni'gricans. (L. nigricans, blackish.) The species described as producing Mycomyrin-

gitis. Probably A. glaucus.

A. polymor'phus. (Πολύς, many; μορφή, form.) The name given by Pouchet to the fungus of yeast, Torula, or, more recently, Saccharomyces cerevisiæ, in consequence of the extremely variable form of its fructification. Asper'gula. Same as Asperula,

Aspericollis. (L. asper, rough; collum, the neck. F. aspericolle; G. rauhhalsig.) Having a rough neck or corselet, as Apute aspericollis.

Asperifolia'eeæ. (L. asper, rough; folium, a leaf. F. asperifolies.) A synonym of Boragineæ.

Asperifo'liate, (L. asper, rough; folium, a leaf.) Rough-leaved.

Asper'itas. (L. asperitas.) Roughness. A. arte'riæ as'peræ. (L. arteria, the windpipe; asper, rough; so arteria aspera, the windpipe.) Hoarseness.

Asperitu'do. (L. asperitudo, roughness.)

A term applied to granulations of the cyclids, or trachoma.

Asperity. (L. asperitas, roughness. F. aprete, asperite; G. Rauhigkeit.) Roughness, harshness, hoarseness.

In Botany, it is applied to surfaces covered with short, stiff hairs, like those of the stems and leaves of cordia and borage, which were hence named by Linnaus Asperifoliacea.

In Anatomy, applied to roughnesses and in-

equalities of bone.

Asper'ma. ('Λ, neg.; σπέρμα, seed.) Absence of semen.

Asperma'sia. ('Λ, neg.; σπέρμα, seed.) Term for a want or deficiency of semen.

Aspermatic. Same as Aspermous.

Asperm'atism. ('Λ, neg.; σπίρμα, seed. F. aspermatisme; G. Samenmangel.) Term for the absence, or uon-emission, of the semen, owing to its reflux into the bladder, otherwise termed Dyspermatismus refluus.

Asperm'atous. ('A, neg.; σπίρμα, seed.) Wanting, or without, seed.

Asperm'ia. ('Λ, neg.; σπέρμα, seed.) Want of semen.

Aspermous. (A, neg.; σπέρμα, seed. F. asperme; G. Samenlos.) Term applied by Turpin to plants, destitute of seeds, which do not appear to be able to reproduce themselves.

**Asper'sion.** (L. aspergo, to besprinkle. F. arrosement, aspersion; G. Besprengung.) Applied to the sprinkling of the body with a liquid medicinal substance or powder; a besprinkling.

Another term for catapasma, the sprinkling of

a part with a powder. Also, a term for a fomentation.

Aspe'ruck. Hind. for Melilotus officinalis. Asperu go. (L. asper, rough.) A plant mentioned by Pliny, l. xxvi, e. 66, as one of the ancient remedies for gout. It has been referred to Asperugo procumbens, Linn, ; but Fée remarks that, from its resemblance to mollugo, to which Pliny likens it, the plant must be sought amongst the Rubiaceæ, and not among the Boragineæ. (Waring.)

A Genus (G. Schurfkraut) of the Nat. Order

Boraginaceæ.

A. procum'bens, Linn. (L. procumbo, to lie prostrate.) German madder, great goosefoot. The root is said to be sudorific, and has been nsed with oil as a dressing for wounds.

Asper'ula. (L. asper, rough. F. asperule; G. Waldmeister.) Nat. Order Rubiaceae. Woodruff. Flowers in terminal or axillary cymes; corolla funnel-shaped; stamens 4; fruit without distinct margin to the calyx, dry, or rather fleshy.

Also, a name of the Galium aparine. A. cynan'chica, Linn. (Κυνάγχη, dog quinsy, sore throat; from κύων, dog; άγχω, to strangle. F. herbe a l'esquinancie, petite garance, garance de chien rubéole, etranglé chien; I. schinanzia.) Small woodruff, squinancy wort. Leaves linear, four in a whorl, narrow-linear, mucronate, rigid, recurved, not ciliate; upper whorls with two opposite leaves reduced to stipules; flowers blue-June and July. A plant formerly held to be efficacious in curing quinsy,

in the form of poultiee, or infusion, or gargle.

A multiflo'ra, Lap. (L. multus, many; flos, a flower.) The A. cynanchica.

A. odora'ta, Linn. (L. odoratus; from odoro, to smell. F. muguet des bois, pétit muguet, hepatique etoilée, h. des bois, reine des bois; G.

Waldmeister, Sternleberkraut.) Sweet woodruff. Leaves about eight in a whorl, oblong-lanceolate, cuspidate, ciliate; flowers panieled, on long stalks, white. Flowers May and June. Whole plant very odorous when dried. It has been recommended as diuretic, deobstruent, cordial, and vulnerary. Infused in boiling red wine it forms the Maitrank of Rhenish Germany.

A. tincto'ria, Linn. (L. tinctorius. relating to a dyer.) Said to be aperient. The roots

contain a red colouring matter.

Asper'ulus. (L. dim. of asper, rough.) Slightly rough to the fouch.

As'phalt. See Asphaltum.

A., Eng'lish. The residue left in the retort

after the distillation of amber.

A. var'nish. Asphalt 4 oz., india-rubber  $\frac{1}{2}$  a drachm, mineral naphtha 10 oz. Dissolve by the aid of heat. Used to make cells on glass slides for the reception of objects for the microscope; and to attach cover-glasses over them, either alone or over a coating of gold size.

**Asphaltias.** (Ασφαλτίας, unfailing; possibly from άσφαλίζω, to make secure; or ά, neg.; σφάλλω, to overthrow.) Term for the last lumbar vertebra, according to Gorræus; the first,

as stated by Castellus.

Asphaltitis. See Asphaltias.
Asphaltum. (Άσφαλτος, bitumen. F. asphalte; l. asfalto; G. Asphalt, Judenpech.) Jew's pitch. Name for a smooth, hard, brittle, black or brown substance, which easily melts by being heated; found in a soft or liquid state on the surface of the Dead Sea, which is therefore called Lacus asphaltites, and growing dry and hard by keeping; it is found in other localities, and also as a mineral product in different parts of Europe, Asia, and America. It was used in many affections of the chest, intestines, and uterus, and by the Egyptians for embalming their dead, under the name Mumia. It was used formerly in stimulating plasters and ointments.

Asphari'ne. A synonym of the Galium

aparine

As'phodel. ('Ασφόελος. L. asphodelus; F. asphodele; I. asfodillo; S. asfodelo; G. Asphodille, Affodill.) A plant helonging to the Group Asphodeleæ, Nat. Order Liliaceæ. The asphodel of the ancients is generally referred to Asphodelus ramosus, or king's spear, but by some to Narcissus podicus. It was regarded as an emmenagogue, diuretic, discutient, and alexipharmic; and was employed in a great variety of tiseases, especially locally in alopecia. The bulbs were used as food. Dioscor. l. ii, c. 199; Paul. Eg. l. vii, s. 3; Pliny l. xxii, c. 32, l. xxi, c, 68; Celsus l. v, c. 27. In Algeria alcohol is obtained from them. The asphodel of earlier English and French poets is Narcissus pseudonarcissus.

A., bog. The Narthecium ossifragum.

A., Lan'cashire. The Narthecium ossifragum.

A., Scotch. The Toficidia painstris.
A., white. The Asphodelus ramosus.
Asphodel'eæ. A Family of Liliacea, characterised by having a regular perianth; a capsular or bacciform fruit; a straight or incurved embryo, with radicle looking towards the umbilicus.

Asphode'lus. A Genns of the Tribe Anthericea, Nat. Order Liliacea. The flowers are regular and hermaphrodite.

Used hy some for Asphodeloï'des.

Asphodelus.

A. lu'teus, Linn. (L. luteus, yellow. F. Baton de Jacob) Hab. Sieily. Roots duretie.

A. ramo'sus. (L. ramosus, branching. F Baton royal; I assala reght; G. astiger Affold.) White asphodel. Hab. South Europe, Algeria, The root is said to be diuretic; it has been used in itch, and as an ointment for syphilitic sore of the mucous membrane of the nose; as a substitute for squills; and, after boiling in water, the starch has been made into bread.

A. ve'rus al'bus. (L. rerus, true; albus,

white.) The A. ramosus.

A. ve'rus luteus. (L. verus; luteus, yellow.) The A. luteus.

Aspho'ta. Sansk. for Clitorea ternata. Asphyc'ta. ('Λσφυκτος, pulseless.) Λ term for an invertebrate group containing Acal-phæ, Echinoidea, and others,

Asphyc'tic. (Asqueros, without pulsation. G. pulslos, schemodt.) Having no pulse.

Belonging to Asphyxia.

Asphyc'tous. (Same etymon.) Pulse-

less, lifeless; not causing pulsation.

Asphyx'ia. ('Ασφυξία, a stopping of the pulse, from a, neg.; σφυξις, the pulse. F. asphyxie; I. asfissia; S. asficsia; G. Scheintod Pulstosigkeit, Asphyxie.) The condition into which the body is thrown when the access of oxygen to the blood is prevented, either by compression of the chest (suffocation), pressure on the trachea (hanging), or occlusion of the mouth and nostrils (smothering), or by submersion in a fluid (drowning), or when the subject is compelled to breathe air containing an insufficient amount of oxygen, or none at all. In the latter case it is most commonly observed to occur in man from the respiration of air charged with carbonic acid or other irrespirable gas, the result of fermentation or combustion. It may, however, he a consequence of paralysis of the respiratory centres. In asphyxia from me-chanical causes a period of quiescence occurs, lasting for a few seconds, succeeded by violent voluntary, and then by violent involuntary and convulsive, efforts to inspire. These gradually diminish in force and frequency, and ultimately cease. The blood-pressure usually rises for a time, and then gradually falls. It indicates a curious infelicity of etymology that the pulse in asphyxiated animals continues to beat long after all signs of respiratory effort have ceased.

In the early stages of asphyxia the failure of the interchange of gases, leading to the absorption of oxygen and the elimination of carbonic acid, causes the blood to stagnate in the pulmonary capillaries; as a result, the left side of the heart receives an insufficient supply of arterialised, whilst the right side becomes overcharged with venous, blood. The organs of the body generally are in a similar condition to the right cavities of the heart. The respiratory centres, powerfully stimulated by the imperfectly aerated blood, for some time liberate strong muscular efforts to respire, but the brain rapidly loses its functional activity, and loss of consciousness results.

The treatment of asphyxia must vary with the cause. Some cases are incurable, as when an aneurysm of the aorta or innominate presses upon the trachea; but the general proceedings to be adopted in cases of sudden asphyxia from any cause have already been stated under the head of Artificial respiration. The head should be raised, fresh air he admitted to the room, vigorous friction, with stimulants, applied to the limbs, hot towels to the helly, and an injection of whisky

or brandy into the rectum. Electrical currents should be applied to the neck and epigastric region, to excite the phrenic nerve, and through it to cause the diaphragm to contract. If the cause of the asphyxia be situated above the larynx, tracheotomy must be performed. If a stone or coin have slipped into the trachea, the instruments for tracheotomy should be at hand, but an attempt may be made to remove it by placing the patient in the prone position over the end of a sofa, directing him to take a deep breath slowly, and to make a violent expiration, at the same moment striking him a sharp blow on the back. In asphyxia from hanging or strangulation, a slight bleeding often proves very serviceable by unloading the congested right side of the heart.

A. by drown'ing. See Drowning.

A. by heat. Sunstroke.

A. by strangula'tion. See Haming.
A., cuta'neous. (L. cutis, the skin.) The asphyxia that results in rabbits from shaving off the hair from the body, and covering the skin with varnish. There is a great fall of temperature, deficient arterialisation of the blood; many nervous symptoms, such as tremers, perverted sensibility, and cramps, precede death; gastrie uleers and nephritis have also been observed. External heat delays the occurrence or relieves the acuteness of the symptoms. The condition was at one time believed to depend on suppression of the cutaneous secretion, and was looked on as a ferm of asphyxia. The doctrine is not now generally held, and the symptoms are thought to be caused by the retention in the blood of some cutaneous secretion.

tion in the blood of some cutaneous secretion.

A. from cold. This may either be general or partial. General asphyxia is due to contraction of the cutaneous capillaries, causing engargement of the vessels of the brain and of the viscera of the chest and abdomen, whilst at the same time the capillaries of the lungs are probably contracted from the action of the cold air inspired, the due aeration and circulation of the blood is interfered with, and asphyxia is the result. This must be combated by frictions, warm, or perhaps alcoholic, drinks, and artificial heat carefully and not too suddenly applied. Partial asphyxia is seen in the impeded circulation occurring in the extremities on exposure to intense cold, the fingers, toes, nose, and ears becoming first red, then blue, The treatment consists in and finally white. friction with ice, cold water, or snow, or alcohol; if heat be too suddenly applied the part becomes gangrenous.

A., paralytic. (Παραλυτικοs, affected with paralysis.) A term applied by Barnes to that form of asphyxia neonatorum in which, from compression of the head, there is injury to the brain tissue, or meningeal haemorrhage, or congestion of the pons Varolii and medulla oblongata.

**A.**, **syn'copal**. ( $\Sigma \nu \gamma \kappa \sigma \pi \eta$ , a swoon.) A form in which the cavities of the heart are found empty.

Asphyxia al'gida. (L. algidus, cold.) Asphyxia caused by intense cold.

A. demerso'rum. (L. demersus, from demergo, to immerse in water.) Asphyxia from drowning.

A. elec'trica. Term for asphyxia produced by lightning or electricity.

A. ex compressu. (L. ex, from; compressus, a pressing together.) Asphyxia from crushing. A. ex cor'pore superincuban'te. (L. er; corpus, the hody; superincubans, part of obsolete superincubo, to lie upon. G. Erdrücken.) Asphyxia from overlying, as of a baby by a grown-up person.

A. ex obtura'tis spir'itus itiner'ibus. (I. ex; obturo, to stop up; spiritus, the air; iter, a passage.) Asphyxia from plugging of the

air passages by a foreign body.

A. ex suspendio. (L. ex; suspendium, a hanging.) Asphyxia from hanging.

A. ex vapor ibus pestiferis. (L. ex; vapor, an exhalation; pestifer, pestilential.)

Asphyxia from gaseous poisons.

A. idiopath'ica. (Totos, pertaining to one's self;  $\pi a \theta$  os, affection.) A term proposed for a-phyxia, or sudden death, with pulselessness, occurring without the presence of manifest cause.

A. mephitica. (L. mephiticus, pestilential.) Asphyxia produced by the inhalation of carbonic acid, or other non-respirable gas.

A. neonato'rum. (Néos, new; L. natus, part. of nascor, to be born.) A form of asphyxia occurring in new-born infants, resulting, in protracted delivery, from compression of the funis, or from separation of the placenta, or from imperfect aeration of the blood of the mother before the first efforts of respiration are made, or from some cause preventing the respiration of the infant after delivery. The position of the cord may sometimes be shifted. Mucus should be cleared from the mouth and fauces, and artificial respiration commenced. See Apnwa neonatorum.

A. neophyto'rum. (Νεόφυτος, newly planted.) Λ synonym of Α. neonatorum.

A. siderato'rum. (L. sideratus, starstruck.) A term for the coma caused by narcotic poisons.

A. strangulato'rum. (L. strangulator, a strangler.) Asphyxia from strangling.

A. suffocationis. (L. suffocatio, a choking.) Asphyxia from suffocation by hanging or drowning.

Asphyx'ial. (Same etymon.) Relating to asphyxia.

Asphyxiate. (Same etymon. F. asphyxier.) To produce a state of asphyxia.

Asphyx'iated. ('Ασφυξία. Γ. asphyxie'; G. asphyktisch, scheintodt, ohne Palsschlag.)
Labouring under asphyxia.

As'pic. (F. from a corruption of spica.)
The French lavender, Lavandula spica.

The same as Asp. Aspidechid'nei. ('Λσπίς, a round shield: ἔχιονα, a viper.) Applied to a Family of Ophidii, including venomous serpents that have plates on their head.

Aspidie'æ. ('Ασπίδιον, a small shield.) A Subfamily of the Family Polypodiaecæ. Sori single, dorsal, roundish, with shield- or kidney-

shaped inclusium.

As'pidin. (Aspidium.) A substance by some regarded as the active principle of the root of the male fern; by others considered to be Filicia acid; most probably a mixture of several of the constituents of the root.

Aspid'ioid. ('Λσπίς, a round shield; tičos, likeness. G. schildahnlich.) Resembling a shield: clypeal; peltate; scutiform; thyroid. Aspid'ion. ('Λσπίδιον, a small shield.)

**Aspidion.** (' $A\sigma\pi i\delta ion$ , a small shield.) A synonym of  $A^{j}ypum$ , because its fruit resembles a buckler.

Aspidiopsori'asis. ('Λσπίς; psoriasis. G. Schildründe.) Term for psoriasis scutellata.

**Asplido ta.** (A $\sigma\pi$  is. F. asplidote.) Applied by Latrelle to a Group of Crustace, the body of which is covered with a kind of shield.

**Aspidiph'ora.** (' $A\sigma\pi is$ ;  $\phi i\rho \omega$ , to hear. **F.** aspidiphore; **G.** schildtragend.) Applied by Latreille and Cuvier to a Family of Crustacia, having the body covered with a shell.

**Aspidisci'na.** ('Λοπιδίσκος, the boss of shield. F. aspuliscine.) Applied by C. G. Ehrenberg to a Tribe of Polygastrica, having the Aspidisca for their type.

Aspatisa for their type.

Aspatisa for their type.

Aspatisions, (' $\Lambda \sigma \pi i \delta i \sigma \kappa \sigma$ , the boss of the shield.) Used by Col. Aurelianus for the sphincter of the anus, from its shape.

Aspatition. (' $\Lambda \sigma \pi i \delta i \omega \nu$ , a small shield G. Schildfarm.) A Genus of the Tribe Iolypodice, Nat. Order Filices. Shield fern. Itab. various. Sori dorsal, globose; involuere superior, orhicular, peltate.

A. athaman'ticum. (Athamanta.) IIab. South Africa. A species the root of which is used as an anthelmintic. It is called panna in Europe, inkomankomo, or uncomocomo, by the Kaffirs.

A. bar'ometz. The Cibotium barometz.
A. coria'ceum. (L. corium, a skin.) The Polypodium calaguala.

A. depas'tum. (L. depastum, part. of depasco, to feed upon.) The Nephrodium filix-

A. dis'color. (L. discolor, of various colours.) The Polypodium calaguala.

A. ero'sum. (L. crosus, part. of erodo, to gnaw off.) The Nephrodium filix-mas.

A. ferrugin'eum. (L. ferrugineus, rnstcoloured.) The Polypodium calaguala.

A. fi'lix-foe'mina. The Asplenium filix-

fæmina. A. fil'ix-mas. (L. filix, a fern; mas, a male.) The male fern, or polypody. A synonym of Nephrodium filix-mas. See, also, Filix mas.

A. margina'le, Schwartz. (L. margino, to furnish with a border.) Hab. United States. The oil has been successfully used in the treatment of tapeworm.

**Aspidoachi'ri.** (' $\Lambda \sigma \pi ls$ ; à, neg.;  $\chi \epsilon l \rho$ , the hand. F. aspidoachire.) Applied by J.  $\Lambda$ . Ritgen to a Family of saurian reptiles, having the hody covered with scales, and two hind feet only.

**Aspidobranch'ia.** ('Aσπίς; βράγχια, the gills. F. aspidobranche; G. schildfishohriq.) A synonym of Rhipidoglossa.

Aspidoceph'ali. ('Ασπίε; κεφαλή, a head. F. aspidocephale; G. schildkopfig.) Applied by J. A. Ritgen to a Section of ophidiau reptiles, having the head furnished with plates.

Aspidocephalus. (Ασπίς; κεφιαλή.) A Genus of the Order Nematoidea, Class Scolecida, Subkingdom Vermes.

A. scoleciform'is. (Σκώληξ, a worm; L. forma, shape.) A sexually mature nematoid entozoon found in the intestine of the Dasypus sexcinctus.

**Aspidochi'ri.** ('Λσπίς; χείρ, the hand. F. aspidochire; G. schildhandig.) Applied by J. A. Ritgen to a Family of saurian reptiles, having the body covered with scales, and two fore feet only.

Aspidocol'obi. ('Aσπίς; κολοβός, mutilated. F. aspidocolobe.) Applied by J. A. Ritgen to a Family of saurian reptiles, having the body covered with scales, and more or less mutilated as to the limbs.

Aspidocot'ylus. ('Aσπίε; κοτόλη, a hollow.) A sexually mature trematode worm.

A. mutab'ilis. (L. mutubilis, variable.) A species found in the intestine of the fish named Cichla temensis.

Aspidogas'ter. ('Λσπίε; γαστήν, the

belly.) A sexually mature trematode worm.

A. ascid'ize. ('Λοκίδιον, a little bag.) Α species believed to inhabit the sac of the tunicate Ascidia.

A. conchyc'ola. (Κώγχη, a mussel shell; L. colo, to inhabit.) A species found in the Univ pictorum.

A. limacoï des. (L. limar, a slug; ricos, like.) A species found in the intestine of Squalus ecphalus

Aspidoph'ora. ('Aσπίs, a buckler; φορέω, to bear.) A synonym of Branchiopoda. Aspidoph'orous. (Same etymon. G. hildtragend, beschildet.) Provided with a schildtragend, beschildet.) shield, or with a scaly integument.

Aspido'ta. Same as Aspidiota. Aspil'ia latifo'lia. Haemorrhage plant. plant in use in West Africa for arresting bleeding. The pounded leaves and flowers are applied to the bleeding part.

**Aspilonotus.** (A $\sigma \pi \lambda os$ , spotless;  $v \tilde{o}_{\sigma} \tau os$ , the back. F. aspilonote.) Applied to a Medusa, the Chrysoura aspilonota, because its umbel is entirely white.

As'pirates. A division of continuous consonants, produced by a rush of air either through the nearly closed lips, labial consonants; through a small slit formed by the approximation of the tip of the tongue to the back of the front upper teeth, or the anterior part of the hard palate, dental consonants; or, in the throat, by the approximation of the root of the tongue to the soft palate or pharynx, guttural consonants.

A., den'tal. (L. dens, a tooth.) S, l, sh, and the hard th, formed without the voice; and z, zh, as in azure, and the soft th formed with the voice. See Aspirates.

A., gut'tural. (L. guttur, the throat.) The sound of ch, as in loch, without the voice; and gh, as in tough, produced with the voice. See Aspirates.

A., la'bial. (L. lubia, a lip.) These are f and v, the former produced with the voice, the latter without it. See Aspirates.

Aspiration. (L. aspiratio, a breathing upon, from ad, to; spiro, to breathe. F. aspiration; 1. aspirazione; S. aspiracion; G. Einathmen.) A term for inspiration.
Also, the act of using the Aspirator.

Also, synonymous with imbibition.

Also, the act of pronouncing a letter with the rough breathing.

A., contin'uous. (F. aspiration continue.) mode of treatment of wounds, proposed by Maisonneuve, to prevent traumatism or pyamia from external contamination. The apparatus employed consisted of an envelope of india-rubber, which closely fitted the stump of an amputated limb, communicating by a tube with a bottle capable of being exhausted of air by a syringe. The effused fluids were thus not retained in the wound, but expelled by atmospheric pressure

The removal of fluid A., pneumatic. from a cavity by means of the pneumatic instrument called an Aspirator.

As'pirator. (L. aspiro, to breathe out. F.

aspirateur.) An instrument for the evacuation of the contents of an absecss without admitting air. One form consists of a bottle fitted with an indiarubber cock, through which a tube passes, dividing above into two arms, to each of which a stop-cock and a piece of india-rubber tubing is connected. One of these pieces ends in a fine trocar, the other in an exhausting syringe. In using the instrument the trocar is inserted into the cavity containing the fluid it is desired to withdraw, and the stopcock between it and the bottle is closed. The air is then exhausted from the bottle by the syringe, and the stop-cock on this side is closed. The bottle is now in the condition of an exhausted receiver. On opening the first stop-cock the fluid is expelled by atmospheric pressure from the eavity, and no air need be allowed to enter on withdrawing the trocar.

Also, in Chemistry, an apparatus for drawing a current of air through a tube or vessel. An ordinary form is a closed tin vessel, of the dimension of a cubic foot, communicating with the chamber through which air is to be drawn by an clastic tube, and having a tap at its bottom; being filled with water, and the tap opened, the water runs out and air passes in through the chamber

to supply its place.

A., pneumatic. (Pneumatic.) The surgical instrument now called simply Aspirator.

A .- trocar'. The same as Aspirator, the surgical instrument.

**Aspirous.** ('A, neg.;  $\sigma \pi \epsilon i \rho a$ , anything wound round. G. spiralfaserlos.) Not spiral. In Botany, used to express the absence of a spiral fibre.

As'pis. ('Λσπίς, an asp; Heb. NDS, asap, to collect together; or from  $\dot{\alpha}$ , neg., and  $\sigma\pi\epsilon\tilde{\iota}\rho\alpha$ , a circle; or from  $\dot{\iota}\delta$ , poison.) A venomous serpent.

Also ( $\alpha \sigma \pi i s$ , a round shield), a shield, as of ferns.

A. intestina'lis. See Callophis intesti-

**Aspis'tes.** ( $\Lambda \sigma \pi is$ . F. aspistes.) Applied by J. A. Ritgen to a Suborder of Reptilua, comprising serpents, the body of which is covered with plates.

**Asplenie'æ.** (Asplenium.) A Subfamily of the Family Polypodiaccæ. Sori below, longish or linear; indusium lengthened, attached along its whole length to the side of the nerve.

Asplenioi dew. (Asplenium. F. aspleniude.) Applied by G. F. Kaulfuss to a Section of Polypodiacee, having the Asplenium for their type

**Asple'nium.** ('Ασπλήνιος, from ά, neg.; σπλήν, the spleen; because it was believed to remove disorders of that organ. G. Milzkrant, Streifenfarn.) A Genus of the Tribe Aspleniew, Suborder Polypodiacew, Nat. Order Filices. Fronds herbaceous, or membranaceous and coriaceous, simple lobed, bijunnate, or decompound; sori dorsal on the veins, industate, linear, short, or clongate; the receptacles lateral on the anterior side of the veins; indusium linear and membranaceous; veins simple or forked, from a central eosta.

A. adiau'tum ni'grum, L. ('Adiautos, nnwetted; L. niger, black. F. capillaire nour, capillaire comman; G. Frauenhaarstreiffarn, schwarzes Frauenhaar.) The leek fern, or black maidenhair. The maidenhair fern. Frond deltoid-ovate, two or three pinuate; pinnules petioled, inciso-pinnatifid, serrate. Used as astringent and pectoral.

A. au'reum. (L. aureus, golden.) The A. ceterach.

A. cet'crach, Linn. (An Arabic word. F. doradille; G. Mulzfarn.) The herb spleen-wort, or milt-waste. Fronds creet or spreading, leathery, clothed underneath with rusty, ovate, toothed scales; sori linear, covered by the scales. Grows on old walls and rocks. It has a mucilaginous, rough taste, and has been recommended in diseases of the ehest and in nephritic and calculous complaints. A decoction of the leaves in vinegar was considered of great value in reducing indurations of the spleen, the leaves being also applied externally, Dioseorid. l. iii, c. 141; Paul. Æg. lib. vii, § iii; Pliny, l. xxvii,

A. alix-foe'mina, Bernb. (L. filix, a fern; famineus, or, more properly, femineus, female. F. fougere femille, pteride.) Female fern. Fronds large, 2-3-pinnate; pinnules numerous, crowded, subsessile, oblong, serrate. Rhizome has been used as that of Nephrodium filix-mas.

A. hemioni'tis. ('Hµiovos, a mule.) The mule's fern. Used, like the Scolopendrium vulgare, as demuleent and pectoral, and as an astringent.

A. latifo'lium. (L. latus, broad; folium, a leaf.) The A. ceterach.

A. mura'le. (L. muralis, belonging to a wall.) The A. ruta-muraria.

A. obtu'sum. (L. obtusus, blunt.) The A. ruta-muraria.

A. officina'rum. (L. officina, a workshop.) The A. ceterach.

A. ru'ta-mura'ria. (L. ruta, rne; murus, a wall. F. sauve-rie, rne des murailles; G. Mauerstreiffarn, Mauerraute.) The wall rue, or tent-wort. Frond oblong or ovate, rigid, irregularly bipinnate, tip rounded or truncate, toothed. Grows on walls and rocks. Used as a demulcent and expectorant. It has nearly the same qualities as the A, adiantum nigrum, and has by some been supposed specific in the cure of ulcers of the lungs, in the form of decoction.

A. scolopen drium. The Scolopendrium rulgare.

A. trichom'anes. (Τριχομανής, from θρίξ, hair; μάνος, thin. F. capillaire rouge, pulytric des officines; G. Steinfarn, rother Streiffarn.) The common maidenhair, or Fronds linear, pinnate; rachis snleen-wort. rigid; sori oblique, short. Grows on walls and rocks. Used as a demulcent and expectorant. Its leaves have a mucilaginous, subastringent taste, sweetish, but without any particular flavour, and are esteemed expectorant and deob-

A. trichomanoï des. (θρίξ; μάνος;

είδος, likeness.) The A. trichomanes. **Asple'num.** (Λεπληνος, the spleenwort.) The same as Asplenium.

**Aspondyloïd'ea.** ('A, neg.; σπόνον-λος, a vertebra. F. aspondylonde.) Without vertebra; proposed by G. Fisher as a substitute for Invertebrata.

**Asporomyce'tes.** (A, neg.; σπόρος, seed; μόλης, lungus.) A term formerly applied by Wallroth to the first Order of Fungi (Mycetes). Supposed to be characterised by the absence of spores.

Aspo'rous. ('Λ, neg.; σπόρος, a seed. F.

aspore; G. ohne Keimkorn.) Having no spores or reproductive corpuscles.

Aspre'do. (L. aspredo, roughness; from asper, rough. G. Rauhigkeit, Unchenheit) The same as Trachoma, which was used by Galen, in Def. Med., for a roughness of the eyelids.

Also, the ruff, a fish, from the inequalities of

its scales.

A. milia'cea. (L. milium, a millet seed.)

Miliary fever.

Asprella. (L. asper, rough.) A name formerly used for the plant Equisetum majus, or the rough horsetail.

Aspretu'do. The same as Aspredo. As pris. (L. asper, rough.) The holm oak, or holly, Ilex aquifolium.

An article of the Indian Aspur'ka. Materia Medica. Said to be nseful in drops.

'Talcef Shereef,' p. 14, No. 46. (Waring.)

Ass. Arab. for the Myrtus communis.

Ass. Common name of the Equus asinus. Said to be useful in dropsy.

A.'s milk. See Milk, ass's.

As'sa dul'cis. (L. dulcis, sweet. F. assa doux.) Ancient name of benzoin.

A. odora'ta. (L. odoratus, sweet-scented.) A synonym of Storax, or gum benzoin.

As'sab. See Asab.

Assa ba. A plant growing in Gninea. The leaves considered useful in dispersing buboes. Assaba'tus. Name for the disease boro-

zail, when it affects females. See Borozail.

As'sac. (Heb. pdn. Arab. asak.) Gum animoniacum.

The Brazilian name of the As'sacou. Hura braziliensis.

Assafe'tida. A synonym of Assafatida. Assafœ'tida. (F. asafætida; G. Stinkasant, stinkender Asant, Teufelsdreck; Sans. Hinga; Beng, Hind., Dec. Hing; Tam. Perungyum; Tel. Ingoova; Arab. Hiltet, Sumughulmehroos; Pers. Ungooseh; Mal. Angoo.) A gum resin, the product, it is believed, of two umbelliferous plants, Narthex asofwida and Scorodosma fwidum. The pharmacopæial name (B. Ph., L., E., D. and U.S.A.) of the concrete gum-resin which is obtained by exudation from the transversely cut root of the plant Ferula assafutida, or Narthex ferula (L.), or Narthex assafutida (U.S.A.), and probably Ferula persica (E.). About the end of April, when the plants have eased to gray about in the plants for the plants. have ceased to grow, about eight inches of the roots are exposed by removing the soil; a month later the crown of the root is removed, and the juice that exudes, called shir, i.e. milk, is colleeted, and mixed with a soft earth. In the course of a few days, when fresh slices are removed or incisions made, a thicker exuda-tion is obtained, called *pispaz*. Some roots yield scarcely half an ounce, others as much as two pounds. Freshly imported the drug forms a clammy, yet hard, yellowish-grey mass, in which opaque, white, or yellowish milky tears, sometimes an inch or more in length, are more or less abundant. By exposure to air it acquires a bright pink, and then a brown hue. The tears have a conchoidal fracture, and if the freshly exposed surface be tonched with nitric acid, sp. gr. I 2, it assumes for a short time a fine green colour. The drug has a powerful and persistent alliaceous odour, and a bitter, acrid, alliaceous taste. It dissolves readily in vinegar, weak alcohol, and yolk of egg. Assafætida is composed of resin 65°, bassorine 11°66, soluble gum 19°44, essential oil 3°60, salts, &c., 0.30; it also contains a small quantity of

ferulic acid, with traces of malic, acetic, formic, and valerianic acids; the resin contains ferulaic acid; the volatile oil, containing feruly I sulphurets, is probably the active principle. It is used as an antispasmodic in hysteria and hooping-cough, a carminative in tympanitis and flatulence in the intestines, an expectorant in chronic bronchitis, and as an adjuvant to purgatives in flatulence and constipation. In the East it is used as a condiment instead of garlie. Dose, 5-20 grains in pill.

A. disgunen'sis. A synonym of Ferula assafutida.

A. pulvera'ta, Helv. Ph. (L. pulvero, to reduce to powder.) Assafutida exposed to a freezing temperature, or rendered quite dry by the help of caustic lime, and then reduced to a tine powder.

 $\mathbf{A}$  res'in.  $C_{g_0}H_{52}O_{10}$ . It forms 65 per cent. of the gum resin. It dissolves with decomposition in warm concentrated nitric acid, but is not wholly soluble in either chloroform or ether. It contains ferulaic acid.

Assai'eret. A compound of bitter. stomachic, and purgative remedies in the form of a pill. (D.)

Assa'kur. Sugar.

As'sal. Syrian and modern Egyptian for the honey bee.

As'sala. Arabic for the nutmeg. (R. and J.)

Assal'ia. In Bombay the name of the Lepidium sativum, or common cress.

**Assa'liæ.** Old name for worms growing within wood. Same as *Xylophagi*.

Assali'ni. An Italian surgeon. Works dated from 1785—1815. Invented a tenaculum.

A., tenac'ulum of. (L. teno, to hold.) A pair of small forceps furnished with a spring eatch, whereby when they are closed they are retained in that position until the spring is released. They are used for holding arteries during

As'samar. (L. asso, to roast; amarus, bitter.) A term applied by Reichenbach to the bitter substance formed in bread, malt, sugar, coffee, and other similar substances, by reasting. It is also obtained from tar. It is obtained as a yellow transparent solid, or as a reddish-yellow syrupy liquid; it is soluble in water, and neu-

**Assam'odum.** A Cingalese name of several exciting Umbelliferæ, amongst others the A Cingalese name of Ammi majus.

Assarabac'ca. See Asarabacca. Assa'ra-re'wund. Arabic and Persian for gamboge

Assari'um. Same as Assarius.

Assari'us. A Greek weight (Gr. ἀσσά-ριον), used by Galen, l. de Pond. et Mens., of two drachms, or the fourth part of an ounce; also called As.

Assa'tio. (L. asso, to broil. F. assation, I. assazione; G. Braten, Rosten.) The preparation of food as modifies in the control of food as modifies in the control of food as modifies as the control of food as modified as the control of tion of food, or medicine, in their own juice, without the addition of any liquid.

Assay'. (F. essayer, to prove or try.) Term for an operation for determining the quantity of precious metal in any mineral or metallie mixture, by ascertaining how much of the particular metal in question is contained in a determinate quantity of the material under examination.

Assella. The Axilla.
Asserac. A species of bhang; used in

Eastern countries, and the same as Assis. See Cannabis indica.

Asser'culum. (L. asserculum, a small

stake) A splint. (Dunglison.)
Ass'es eye bean. The seeds of the Mucuna urens, which are used in French Guiana as a remedy for hæmorrhoids.

As'sident. (L. ad, to, at: sedeo, to sit. F. assident.) Associating with or sitting by others; concomitant; it is accessory applied to symptoms.

Assiden'tia sig'na. (F. symptomes assidentes.) Term formerly used for accessory symptoms, or those which are, for the most part. but not always, present to disease; hence they are distinct from such as are pathognomonic.

Assidera'tion. (L. assido, to sit down.) Homicide, and especially infanticide, by assideration consisted in the forcible immersion and retention of the body in a bath of icc-cold water.

Assid'uus. (L. assiduus, unremitting, constant.) A term employed synonymously with continuous; assiduus febris, being the same as continued fever.

**Assimilabil'ity.** (L. assimulo, to make like. F. assimilabilité.) According to Burdach, a quality of alimentary substances which enables them to acquire, while still in the intestine, a condition similar to that of the blood.

Assim'ilable. (Same etymon.) Capable of being applied to the purposes of nutritiou.

Assim'ilate. (L. assimulo, to make like. F. assimiler; I. assimigliere; G. verahuliehen, assimiliren.) To perform the process of Assimilation.

Assim'ilating. (Same etymon.) Capable of effecting such changes in raw material as may fit it for the nutrition of the body.

Assimilation. (L. assimilatio; from assimulo, to make like. F. assimilation; I. assimilazione; G. Gleichmachung, Anahn-lichung.) The process by which food is prepared for the nutrition of the tissues. In its widest sense it may be applied to culinary operations, by which food is divided, softened. more or less altered in composition, and rendered more sapid and digestible. It may also be applied to the changes which are effected in food by the operation of the digestive organs and fluids, starchy compounds being converted into dextrin and sugar; oils and fats being emulsified and saponified; and albuminous compounds being changed into peptones. The term is, however, more properly limited to the changes that the solids and fluids ingested as food undergo after being absorbed into the lymphatics in their passage through the mesenteric and other glands, and after absorption into the blood-vessels of the intestines in their passage through the liver. In one sense each tissue and organ of the body, in taking up from the blood the materials fitted for its own nutrition or secretion, prepares the blood for the nutrition of other parts, and may, therefore, be said to exert an assimilative action

A., destruc'tive. A term formerly used to express what is known now as Metabolism.

Assim'ilative. (Same etymon.) Capable of being applied to the nutrition of the body; capable of taking up materials for the purpose of nutrition.

A. fac'ulty. (L. facultas, capability. F. faculté assimilatrice.) A term applied to the power that all living organic matter has of assimilating; that is to say, of rendering outside matter like to itself.

Assim'ilatory. (Same etymon.) Tending to assimilate.

A. prop'erty. The power possessed by organised beings of converting food into their own substance.

Assim'inum. A name applied by Desvaux to an autocarpic fruit, the ovaries of which are numerous, bacciform, monolocular, proceeding from a single flower, and united into a spherical fruit, as in the fruit of the Anonese.

As'sios is'chas. A purgative and emetic root of the ancients, synonymous with Raphanos

agria, the wild radish.

As'sis. Old name, said to have been either the same as opium or meconium, or a powder made from the leaves of the Cannabis sativa, mixed with water, of which five bolnses, or more, about the size of a chestnut, were swallowed, and produced intoxication, eestacy, and delightful visions. See Asserac.

Under this name Prosper Alpinus mentions a medicament in use amongst the Egyptians as a stimulant. It consisted of the powdered leaves of Indian hemp made into boluses with water.

Arabic name for hemp.

Assis'tens. (1. ad, to, at; sisto, to stand,

stop.) Aiding; standing by.

Assisten tes glan dulæ. (L. assisto, to stand by; glandula, dim. of glans.) The assisting glands. An old term for the lobes of the prostate gland.

Assius la'pis. (Assos, a city of Troas, in Asia Minor , lapis, a stone.) Term for a soft sandstone, friable and loose, anciently said to have the power of destroying fungous growths without causing pain. It was also called Sarcophagus, a consumer of flesh, because the dead buried in graves made of it were entirely consumed within forty days, the teetb only excepted.

Associated. (F. associé.) Combined. connected with each other.

A. move'ments. A term given to movements having no connection with the essential act calling them forth, but coincident or consensual with it; such is the knitting of the brows and the fixature of facial muscles in strong bodily effort.

Asso'ciating. (L. associo, to make one's companion; from ad, to; socius, a fellow.) Uniting together.

A. fi'bres. A term applied to those fibres of the brain which unite parts of the same bemi-sphere to each other. They are also called collateral.

Association. (L. associatio; from ad, at, to; socius, companion.) The act of uniting; combination; union. Used wherever union, or combination, or connection of any kind, occurs; but, as a special term, it is most common in mental philosophy or psychology, where it applies to the connection existing in the mind between impressions which have previously coexisted, or which are similar. Any idea tends to bring into the mind its associated ideas, in accordance the two great laws of association, the law of contignity and the law of similarity.

Asso'des. See Asodes.

As'sos. Arabic for Alumen, or alum. (R.) Allspice, the Eugenia pi-Assour'on.

Assu'etude. (L. assuesco, to accustom.) Habit, custom.

As'sula. (L. assula, a small board. F. assule; G. Feld, Schildchen.) Name by Illiger for each piece of the cuirass of Mammifera when composed of many scales united in a kind of arcolated table.

Also, a term for a spliut.

Assultus. (L. assultus, part. of assulto, to leap.) The attack or onset of a disease.

Assumption. (L. assumo, to take to one's self. G. Aufnahme.) The laying hold of a thing; prehension.

Assur'gent. (L. assurgo, to rise np. G. anfrichtend, erhebend.) Rising up, that is, first

As'taci fluvia'tilis concre-men'ta. (L. concrementum, a concretion; from concresco, to grow together.) The concretions

from the crayfish, Astacus fluvuatilis; formerly used in medicine, and known as Crabs' eyes.

Astac'idæ. ('Λστακος, a species of crab. F. astacides.) A Family of the Tribe Macrura, Suborder Decapoda, Order Podophthalma. Body slightly compressed; tail rather long; carapace with a transverse suture; dermal skeleton hard

and solid; branchise in tufts.

As'tacus. ('Αστακος.) A Genus of the Family Astacidæ, Tribe Maerura. Frontal appendage triangular; last thoracie ring movable; pincers of the first pair of feet greatly enlarged on their convex surface; male appendages attached to the first abdominal ring.

A. fluvia'tilis, Rond. (L. fluviatilis, belonging to a river. F. cerevisse d'Europe; 1. gambero; G. Bachkrebs.) The crayfish, the river crawfish. It furnishes the concretions

called Crabs' eyes.

A. mari'nus. (L. marinus, belonging to the sea.) The lobster. See Homarus gammarus.

Term, by Paracelsus, de Astakil'los. Ulcer., c. 18, for a gangrenous ulcer of the feet encroaching upon the legs, from the abuse of mercury. Also ealled Arancus, and Ulcus

Astan'tes. (L. asto, to stand by; from ad, to; sto, to stand.) Term formerly used for those who were at hand to minister to the sick and take charge of them.

As'taphis. ('Aσταφίς, for σταφίς, a raisin.) A comfit, a raisin, or confected raisin.

Astar'zof. An ointment or liniment made of litharge, frog's spawn, juice of leeks, and the white water-lily, used by Paracelsus.

Also, applied to a mixture of rose-water and

camphor.

Asta'sia. ('Αστασία, unsteadiness; from ά, neg.; ἴστημι, to stand. G. Unruhe.) Inquietnde, restlessness.

Astasiæ'æ. (F. astasié.) Applied by E. G. Ehrenberg to a Tribe of Polygastrica,

having the Astasia for their type.

Astathe. ('Ασταθής, unstable. F. astathe, asthate, le couche secondaire interne, membrane cellulaire secondaire.) Hartig has applied this term to the internal layer of cellulese of the cells, which swells up under the action of sulphurie acid.

Astatic. (A, neg.; στατικός, causing to stand. G. unbestandig.) Having no fixed posi-

A. cir'cuit. An electric circuit which is so arranged about its axis of rotation as to neutralise the directive action of the earth's magnetism.

A. nee'dle. (F. arguille astatique.)

magnetic neelle so arranged as to be unaffected by the earth's magnetism; this may be accomplished by placing a magnet at such a distance from it, and in such a position, as to neutralise the terrestrial force.

A. sys'tem. Two magnetic needles of equal force, fixed parallel to each other, with their poles in opposite directions; they set at

right angles to the magnetic meridian.

Astchachilos. A term applied by Paracelsus to a malignant gangrenous ulcer which spreads from the feet upwards. Some call

it Arancus. (Quincy.)

Asteato'des. ('A, neg.; στέαρ, tallow; ώδης, a termination signifying fulness.) Defective secretion of sebaceous matter by the sebaceous glands of the skin. It occurs in syphilitic cases, and also in dirty and ill-fed people, and renders the skin harsh and dry. The treatment consists in alkaline baths, inunction of oil, good food, tonics, and cod-liver oil.

Asteatosis. Same as Asteatoles. A. cu'tis. (L. cutis, the skin.) Deficiency

of the secretion of the sebaceous glauds of the

Aste'ghoon. A Hindustani nostrum, prepared by adding to rice or congre water, rock salt, assafætida, coriander, ginger, and peepul. It is described as an excellent drink in fevers and bilious affections. It improves the appetite, and gives tone to the kidneys and bladder. 'Talvef Shereet,' p. 14, No. 48. (Waring.)

Astelia. A Genns of the Nat. Order

Juncaceæ.

A. alpi'na. (L. alpinus, alpine.) Hab. Tasmania. The blauched portion of the base of the inner leaves of this sedgy plant is an article of diet.

Aster. (Λοτήρ, a star. G. Sternblume.) A Genus of the Tribe Asteroideæ, Suborder Corymbeferæ, Nat. Order Compositæ. Unt of Britain a large genus, especially in America. The Michaelmas daisies of the horticulturist belong to it. The China and German asters belong to a closely allied genus. The claim of any of the asters to be considered as medicinal plants is of the slightest, the few that have any at all belonging to some allied family. See Erigeron and Inula.

Also, a name for a kind of white earth, which was anciently used as an astringent in hiemate-

mesis.

A., heart-lea'ved. The A. cordifolius.
A., rough-stem'med. The A. puni-

ceus. As'ter amel'lus, Linn. (L. amellus, the Latiu name of the plant. F. wil de Christ.) Hab. Sonth Europe. Used as a vulnerary and disentient, and in sore throat.

A. argophyllus. ('Αργός, shining; φύλλον, a leaf.) A species the silvery leaves of which supply a stimulating aromatic like musk.

A. at'ticus. (L. atticus, Athenian.) Probably the Pallenis spinosa.

A. cordifo lius. (L. cor, the heart ; folium, a leaf.) The heart-leaved aster. An inhabitant of America, possessing aromatic properties.

A. dysentericus. The Inula dysente-

A. hele'nium. The Inula helenium.
A. inguina lis. (L. inguinalis, belonging to the groin.) The Eryngium campestre.

A. officina'lis. (L. officina, a shop.) The Inula helenium.

A. peruvia'nus. The Peruvian aster.

An old name for the Jerusalem artichoke, Helianthus tuberosus.

A. puniceus. (L. puniceus, Carthaginian, purple red.) Hab. United States. The rootlets are said to be aromatic, bitterish, and astringent. and have been used as a stimulating diaphoretic in rheumatic and catarilial affections.

A. thalassius. (Θαλάσσιος, belonging to the sea.) Name for a certain marine zoophyte, otherwise called Stella marina; recommended by Hippocrates, de Nat. Mal. xxix, 85; and l. ii, de Morb, Mul. lxxix, 7, with cabbage and perfumed wine, for the womb, and for hysterical poins.

A. tortifo'lius. (L. tortus, twisted; folium,

a leaf.) The Sericocarpus tortifolius.
A. tripo'lium. The Tripolium vulgare. A. un'duius, Mönch. (L. undo, to wave.) The Inula dysenterica.

Asteracan'tha, Nees. ('Αστήρ; ἄκανθα, a thorn.) A Genus of the Nat, Order Acantha-

A. iongifo'iia. (L. longus, long; folium, a leaf, Tan. Neer-moolliv; Tel. Neer-goobte; Hund. Gokshura; Beng. Kanta Koolika; Mal. Wahel-schalli.) Long-leaved barleria. An indian annual. The decoction of the leaves and roots is tonic and diuretie. It is given in dropsy and gravel.

Also, called Hygrophila spinosa.

Astera ceæ. A synonym of Compositæ.
Astera les. ('Αστήρ.) A cohort of epigynous Gamopetalæ. Flowers regular or irregular, often unisexual, and collected into involuerate capitola; stamens equal to the lobes of the corolla, epipetalons; ovary inferior, unilocular. It includes Compositæ, Valerianacew, and Dip-

**Asteran'tium.** ('Λστήρ, a star; ἄνθος, a flower, from the star-like form of its flowers.)

The Authemis pyrethrum, or pellitory of Spain.

Astere'æ. (F. astere.) Applied by H. Cassini and Kunth to a Tribe of Synantherea, by Lessing to a Subtribe of Asteroidea, having the Aster for their type.

Aste'ria. Same as Asterias.

A. gem'ma. (L. gemma, a precious stone.)

The same as Asterias.

Aste'rias. ('Λστήρ, a star.) A fossil stone which presents, on section, rays like a star, found in India; also called Astroites, and Astrios. It was used as a charm against mother's marks,

A. lu'tea. (L. luteus, orange yellow.) The Gentiana lutea.

**Aste'riated.** ('Λστήρ, a star.) Radiated,

**Aster'icum.** ('A $\sigma \tau \dot{n} \rho$ , a star; from the form of its flowers.) A name for a Species of

Anthemis, or pellitory. **Aste'rion.** ('Αστήρ.) A synonym of Hemp. (Dioscorides.)

Also, an uncertain species of starwort, aster. Also, a term employed in Craniometry to designate a point situated behind the mastoid process, where the parietal, occipital, and temporal bones meet. (Topinard.)

Asteris'cus. ('Αστερίσκος, a small star. σsterisque; Ι. asteriseo; G. sternformiger Hornhautflech, Sternehen.) A name for a starshaped corneal opacity.

Also, an uncertain species of aster. **Asternal.** (A, neg.; στέρνον, the breastbone. F. asternal.) Not connected with the sternum,

A. ribs. (F. côtes asternales.) The lower five pairs of ribs; so called because their cartilages do not join the sternum.

Aster'nia. (A, neg.; sternum, F. asternie; G. Mangel des Brustheins) Term by Breschet for a kind of organic deviation, or partial agenesis, characterised by the absence of the sternum.

Asteroceph'alus succi'sa, Wall. ('Αστήρ, a star', κεφαλή, the head; L. succisus, part. of succide, to cut through.) The Scabiosa succisa.

Asteroid. ('Λστήρ; είδος, form.) Starlike.

Asteroid'a. (Same etymon.) A synonym of Alcyonaria.

Also, a synonym of Stellerida.

Asteroidea. An Order of the Class Stellerma, Subkingdom Echinodermata. Body star-shaped or pentagonal, consisting of a hollow disc, from which radiate five or more hollow arms, which receive prolongations of the viscera; on the ventral surface of the arms is the ambulacral groove, from which project the ambulaeral tubes; the larva is vermiform, and without a skeleton.

Asteroïd'eæ. ('Αστήρ; εἶδος, ferm.) Α Tribe of the Nat. Order Compositæ, having a cylindrical style, with linear arms, flat on the outer, and downy on the inner, surface.

As'thenes. ('Ασθενής, without strength. G. schwach.) Infirm, weak.

Astheni'a. ('Λοθένεια, from å, neg.; σθένος, strength. F. asthévie; G. Schwache, Unkraft.) Want or loss of strength; debility.

A. deglutitio'nis. (L. deglutio, to swallow down.) Difficulty of swallowing from imperfect paralysis of the pharynx or esophagus.

A. pannon'ica. (L. punnonicus, Pannonian.) The same as Amphimerina hungarica. A. pectora'lis. (L. pectoralis, belonging

to the breast.) Angina pectoris. Asthemia, death by. See Death by

asthenia.

('Aσθενικός, weakly, F. Asthen'ic. asthonique; G. schwach, kruftlos.)

or deficient in, strength; adynamic.

A. fe'ver. (V. fiévre asthénique; G. asthénisches Fieber.) An old term for a fever in which there is great weakness.

Asthenicopy'ra. Same as Asthenopyra.

Asthenicopy'retus. Adynamic fever. See Asthenopyra.

**Asthenogen'ia.** ('Λσθένια; γίνομαι, to be born. F. asthώnogénie.) The advance of asthenia, or want of strength.

Asthenology. ('Ασθένεια; λόγος, a discourse. F. and G. asthénologie.) The consideration, or doctrine, of diseases arising from debility

Asthenomacrobiotica. ('Ασθένεια, want of strength; μακρός, long; βίος. life.) The means whereby weakly lives may be prolonged.

Astheno'pia. ('Λ, neg.; σθένος, strength; anfr, eye. F. asthénopie; G. Schwachsichtigkeit, Gesichtsermidung.) Impairment of vision from defective power, the sharpness remaining normal. There are three forms-Accommodative asthenopia, muscular asthenopia, and retinal asthenopia.

A., accom'modative. (G. accommodatiren Asthenopie.) This form occurs in hypermetropic patients, and results from the constant exertion they have to make in contracting the ciliary muscle, even for the distant vision of remote objects, and much more, consequently, for near objects. The symptoms are that, for a short time, and especially after rest, the vision for near objects is good, but as soon as the power of contracting the muscle fails, objects become hazy and confused, and further attempts to read or work induce pain, lachrymation, and conjunctivitis. The affection is cured by the use of appropriate convex glasses.

A., appa'rent. A condition existing in myopia, and in hyperæmia of the optic disc and retina.

**A., binoc'ular.** A term employed by Giraud Teulon, synonymous with A., muscular.

A, mus'cular. (G. musculäre Asthenopie.) This term is applied to a condition in
which there is imperfect power of convergence
of the two eyes, owing to insufficiency of the
internal recti. It is recognised by slowly
approximating a small object towards the median
line, when, on arriving at a certain point, one
or both of the axes of the eyes, hitherto fixed
upon it and converging, will he observed to diverge
suddenly. It is observed in myopes and in those
who are constantly engaged in fine work. In
emmetropic patients it requires treatment by
prismatic glasses; in myopic by appropriate
concave glasses; and in hypermetropic by appropriate
concave glasses; the action of which may
be aided by placing the centre of the concave
glasses a little outside, and of the convex a little
inside, the optic axis, thus making them act
slightly as prisms.

A., ner vous. The same as A., retinal.
A., retinal. (G. nervose Asthenopie.) A form which is due to hyperasthesia of the retina.

A., true. A synenym of A., accommoda-

**Asthenopy ra.** (A $\sigma\theta$ s $\imath$ is, without strength;  $\pi\bar{\nu}\rho$ , a fever. F. asthénopyre.) Asthenie fever.

**Asthenopyre'tus.** The same as Asthenopyra.

Asthma. ( $\Lambda \sigma \theta \mu a$ , panting, from  $\delta \omega$ , to blow. F. asthme; I. asma, bolsaggine; S. asma; G. Enghrüstigkeit, Bronchialkrampf.) An affection characterised by a peculiar intermittent dyspuæa, bronchial exudation, and a secondary lesion of the pulmonary vesieles or emphysema.

The attack is occasionally preceded by premonitory symptoms, as unusual buoyancy or depression of spirits, lethargy or sleeplessness, or free discharge of pale urine; often there is some slowly growing chest oppression, or thickness of breathing, or cough; often, on the other hand, the parexysm is sudden in its assault. It most usually commences two or three hours after midnight, with a more or less intense feeling of suffocation, which causes the sufferer to sit or stand in a fixed position to get leverage for the respiratory muscles; the face is pale or dusky, and, with the trunk, is bathed in perspiration; the nostrils are dilated, the mouth open, the eyes staring; the pulse quick, small, weak, and sometimes irregular; the extremities cold. The respiration is not much quickened, the inspiration is short and jerky, the expiration long, and running at once, without a pause, into the next inspiration; in spite of the violent action of the breathing muscles there is little real movement of the chest, but it remains in a state of over-expansion. The percussion note is resonant, and the respiratory murmur is replaced by loud, dry, sibilant rhonehus, of various shades of whistling, cooing, snoring, loudest in expiration; these abnormal sounds are not always to be heard all over the chest, but sometimes are more or less local in manifestation; occasionally, and especially if there have been antecedent bronchitis, moist rhonehi are heard. As the paroxysm declines, and it may last minutes, hours, or days, the cough herins to come on, at first dry, but afterwards with the expectoration of transparent pearly masses of nucus, sometimes streaked with blood, the breathing becomes easier, and the patient recovers with some soreness and stiffness of chest, more or less eough and expectoration, and a sense

of weariness from labour.

The disease is the result of spasm of the muscular tissue of the smaller bronchial tubes, probably eaused by some disturbance of nervous A paroxysm may be produced by the breathing of certain dusts, or vapours, or smells, as the pollen of grasses, the smell of a cat; by weather alterations of the air, as fog, or east wind; by unknown climatic or other conditi us applicable to certain localities, and then not the same for all asthmatics, but peculiar to the special case. Asthma may be produced by certain articles of diet, perhaps in consequence of their indigestibility, perhaps as a result of their absorption into the blood. It may be caused by broughial irritation or inflammation; the action of certain gases; reflex irritation of vagus, of stomach and intestines, of ovario-uterine system, of the skin, and nerves of special sense; irritation of central organs of the nervous system; alteration of the blood; the toxic influence of certain metals, of aleohol, of marsh air, of syphilis; constitutional disease, as gout and rheumatism. There is an hereditary predisposition to it. Five or six men are attacked to one woman. In regard to age, the order of frequency is the first twenty years, old age, and lastly, the middle period of life. In the treatment, air is to be admitted freely into the room, all constriction is to be removed from the body; if there is evidence of a loaded stomach, ipecacuanha to vomiting is to be given, tobacco or datura is to be smoked, or the fumes of burning nitre paper inhaled; lobelia may be administered; helladonna, or opium, or chloral, or conium, or amyl nitrite, strong black coffee, ether, alcohol, or other stimulant, may aid; potassium bromide and arsenic have been given with advantage. In prevention, care is to be taken as to the selection of a residence, as to the food and to the times of taking it, and as to the avoidance of special causes of an attack.

A., bron'chial. Asthma accompanied by, and interdependent on, bronchitis.

A., bronchitic. Same as 1., bronchial.
A., cardiac. (Kapčia, the heart.) Any dyspnoa depending on disease of the heart, was formerly called eardiac asthma. Modern authors restrict the term to cases of asthma accompanying heart disease, and probably caused by the lung-congestion arising therefrom.

A., congestive. Asthma accompanied by some congestion of lung or small brouchial tubes.

A., dry. Asthma without bronebial secretion.

A., dyspep'tic. The same as A., peptic. A., grind'ers'. (F. phthisic des aigniseurs; I. asma degli arrotini; G. Asthma der Schleifor.) See Grinders' asthma. A., hay. (F. asthme de foin, asthme d'été; G. Henfieber) See Hay asthma.

A., hu'morai. (L. humor, liquid.) Asthma

with bronchial secretion.

A., idiopath'ic. ('Iδιος, peculiar; πάθος, affection.) Ordinary spasmodio asthma, unaccompanied by any other affection.

A., Rop'pian. A synenym of Thymic

asthma; from its describer.

A., mi'ners'. (F. asthme des mineurs; I. asma de minatori; G. Asthma der Bergleute.) See Miners' asthma.

A., moist. Asthma with expectoration. A., ner'vous. A synonym of ordinary

Spasmodic asthma.

A., non-organ'ic. Asthma not depending on any structural disease, such as ordinary spasmodic asthma; or asthma depending on stomach derangement.

A., organ'ic. Asthma caused by brenchitis

or heart disease.

A., pep'tic. (Πεπτικός, assisting digestion; but here used for relating to digestion.) Asthma depending on undigested food in the stemach, or other disturbance of the digestive organs.

A., pitu'itous. (L. pituita, phlegm.)

Asthma with bronchial sceretion.

A., pri'mary. Simple uncomplicated

asthma.

A., re'nal. (L. ren, the kidney.) A form of dyspnora which occurs in Bright's disease. It is paroxysmal, and occurs after a meal or during the night; there are sometimes loud sibilant râles to be heard, but generally only loud puerile respiration; the breathing is very difficult, and the heart's action quick and weak. It has been suggested that the dyspnoa may be caused by spasm of the pulmonary arterioles, and the consequent hindrance to the circulation. Digitalis in full doses, potassium bromide, chleral, and ether, have been recommended. A., sec'ondary. Asthma having its origin

in some other affection.

A., spasmod'ic. (Σπασμός, a spasm.) A

term for Asthma.

A., symptomat'ic. Asthma taking erigin in some other disorder or disease, as in derangement of stomach, or disease of brenchial tubes or heart.

A., thy'mic. (F. asthme thymique.) Dyspnæa from spasm of the glottis, supposed to depend on enlargement of the thymus gland. A synonym of Laryngismus stridulus.

A., uræ'mic. (Uræmia.) A synonym of

A., renal.

A. weed. The Lobelia inflata.

Asth'ma acu'tum. (L. acutus, violent.) A synonym of Laryngismus stridulus.

A. aë rium. (L. aërius, belonging to the

air.) A synonym of Pneumothorux.

A. aë'rium ab emphysem'ate pulmo'num. (L. pulmo, a lung.) Dyspnæa from emphysema of the lungs.

A. arthrit'icum. ('Αρθριτικός, gouty.) Angina pectoris. (Schidh., 1793.)

Also, asthma depending on gout.

A. bronchia le. (Βρόγχια, the bronchial tubes.) Ordinary asthma.

Also, see Asthma, bronchial.

A. convulsi'vum. (L. convulsus, spasmodie; from convello, to tear. F. asthme convulsif.) Ordinary spasmodic asthma.

The term has also been applied to angina

pectoris. (Elsner, 1778.)

A. cultrario'rum. (L. cultrarius, pertaining to a kuife.) Grinders' asthma.

A. diaphragmaticum. (Διάφραγμα,

the diaphragm.) Angina pectoris.

A. dolorificum. (L. dolor, pain; facio, te make.) Obsolete name for Angina pectoris. (Darwin, 1781.)

A. dyspep ticum. (Δύς, difficult; πεπσις, digestion.) Asthma proceeding from disturbance of the digestive organs, or appearing concomitantly with cardialgia or with worms.

A. emphysematicum. (Εμφύσημα, an inflation.) A synonym of Preumothorax.

A. ex foenisic io. (L. ex, from; fanisic-

ium, a hay field.) Hay asthma.

(Έξάνθημα, an A. exanthemat'icum. eruption.) Asthma arising from the recession of an eruption.

A. gyp'seum. (L. gypseus, of gypsum.)
A synenym of grinders' asthma, or a similar discase from dressing stones and such like.

A. herpeticum. ("E $\rho\pi\eta s$ , herpes.) A form of asthma stated by Waldenburg to be connected with the occurrence of herpes.

A. hu'midum. (L. humidus, moist. F. Asthma accompanied with asthma humide.)

expectoration.

A. idiopath'ica. ('Ιδιοπάθεια, from τδιοs, peculiar; and παθοs, affection. G. essentiell
Asthma.) Ordinary asthma.

A. idiosyncraticum. ("lôtos, peculiar; σύγκρασις, a mingling.) Asthma induced by psychical impressions, or by impressions made upon the organs of special sense, especially upon the olfactory nerves. Hay asthma is an example of this form.

A. infan'tum. (L. infans, a young child.)

Croup.

A. infan'tum spasmod'icum.  $(\Sigma \pi a \sigma$ μός, a spasm.) Laryngismus stridulus.

A. larynge'um infan'tum. the larynx; L. infans, a young child.) Laryngismus stridulus.

A. metallario'rum. (L. metallarius, a miner.) Miners' asthma.

A. Mil'iari acu'tum. (L. acutus, severe.) Millar's acute asthma; probably laryngismus stridulus.

A. monta'num. (L. montanus, belonging te a mountain.) A synonym of Grinders'

Also, a term for difficulty of breathing ocenrring in high elevations.

A. nervo'sum. (L. nervosus, full of sinews.) Ordinary or true asthma.

A. noctur'num. (L. nocturnus, belonging to the night.) A synonym of Nightmare.

A. pletho'rum. (Πληθωρικός, pletheric.) Asthma caused by a suppression of any usual eva-

cuation of bleed, or from spontaneous plethora.

A. saturni'num. (L. Saturnus, Saturn; an old name of lead.) Asthma caused by chronic lead poisoning, or the inhalation of dust containing lead.

A. sic'cum. (L. siccus, dry. F. asthme sec.) Asthma without, or with little, bronchial secretion.

A. spasmod'icum infan'tum. ( $\Sigma \pi a \sigma$ μός, spasm; L. infans, a young child.) A syuonym of Laryngismus stridulus

A. spas'tico-arthrit'icum incon'-(Σπαστικός, from σπάω, to eausestans. convulsion; ἀρθρῖτις, gout; L. inconstans, capricious.) Angina pectoris.

**A. spas'ticum.** (Σπαστικός, from  $\sigmaπάω$ , to cause convulsion.) Ordinary spasmodic asthma.

A. spas'ticum infan'tum. (L. infans, a yonng child.) Laryngismus stridulus.

A. sponta'neum. (L. spontaneus, voluntary.) Asthma arising without manifest cause or being accompanied by any other disease.

**A. stomach'leum.** (Στομαχικός, belonging to the stomach.) Spasmodic asthma caused by indigestible or other irritating matter in the stomach.

A. symptomatica. (L. symptoma, a sign. G. symptomatisch, or reflectorisch Asthma.) Asthma in indirect connection with pathological affections of the respiratory and other organs, which are, nevertheless, not of that kind that occasion sudden dyspnea.

A. typ'icum. ( $Tv\pi\iota\kappa\dot{o}s$ , conformable.) Asthma having definite periods of return.

A. u'teri. (L. uterus, the womb.) A sy-

nonym of Hysteria.

A. uteri'num. (L. uterinus, belonging to the womb.) Asthma caused by disturbance of the nterine functions.

A. vermino'sum. (L. vermino, to he troubled with worms.) Asthma caused by intestinal worms.

Asthmatic. ('Ασθματικόs, asthmatic. F. asthmatique; G. engbrüstig.) Of, or belonging to, asthma. Having, or labouring under, asthma

Also, as a noun (F. asthmatique; G. Asthmatiker), one afflicted with asthma.

Asthmatophthisis. (F. asthmatophthisie; G. Schwindsucht mit Asthma.)
Asthmatic phthisis, or phthisis with asthma.

Asthmatos ciliaris. A name applied by Dr. Salisbury to a rhizopodous organism supposed to be the cause of "bay fever" or "hay athma." Each animal is armed on one side with cilia, in the midst of which is a slender process or proboscis terminating in a cilium.

Asthmorthopnœ'a. (F. asthmorthopnæ', G. Brustsleckung.) Asthmatic orthopnæa. Difficulty of breathing from causes inside the chest, as hydrothorax.

**Astigmatic.** ('Δ, neg.; στίγμα. a mark, a spot.) Relating to, or exhibiting, Astigmatism.

Astig matism. ('A, neg.; στίγμα, a point. G. Brennpunktmangel.) The word was devised by Whewell, though the defect had heen observed, and the appropriate remedy employed,

A structural defect of the refractive media of the eye, in which homocentric rays of light are not brought collectively to a common focus on the retina. It is essentially due to a difference in the curvature of the cornea in different meridians, the curve of the vertical meridian being usually sharper than that of the horizontal meridian. The existence of the defect can be recognised by directing the patient to look with one eye-the other being closed-at a card on which a circle has been drawn with radii at a distance of about 10° or 15° from each other. To the healthy eye the definition of all the radii is equally good, but in astigmatism some of the lines are blurred when others are distinct, whatever may be the distance at which the card is held. The most defective meridian of the eye is at right angles to that line which is most distinctly seen. Astigmatism is expressed in Ophthalmology by the symbol As. It is corrected by cyliudrical glasses.

A., acquired. (G. acquirirten Astigmatismus.) Astigmatism resulting from injuries to, or operations upon, the eyes.

A.. compound. (F. A. compose; G. zusammengesetzter astigmatismus.) That form of astigmatism in which the two chief meridians of the eye are metropic; both may be myopic, or both may be hypermetropic. Relief may be obtained by correcting with a cylindrical glass that meridian which is the most myopic or the most hypermetropic of the two meridians.

A., congen'ital. (L. congenitus, born together with.) Astiguatism existing from birth; it is generally regular and dependent on asym-

metry of the cornea.

A., cor'neal. (G. Hornhaut-astignatismus.) Astignatism arising from differences in the curvature of the different meridians of the cornea. This is the most common cause of astignatism.

A., hypermetrop'ic. (G. hypermetropischer Astigmatismus.) Astigmatism occurring in hypermetropia or associated with a long-sighted eye. It is represented by the formula Ah. The highest degrees of astigmatism are almost always associated with hypermetropia.

A., hypermetropic, compound. (G. zusammengesetzter hypermetropischer Astigmatismus.) That form of astigmatism in which the refraction of the eye is hypermetropic in all meridians, but to a greater degree in one meridian than in the others. It is represented by the formula H+Ah.

A., hypermetrop'ic, sim'ple. (G. cinfach hypermetropischer Astigmatismus.) Astigmatism resulting from hypermetropic refraction in one meridian of the eye, the others being emmetropic. It is represented by the formula Ab

A., irreg'ular. (F. astigmatisme irregulier; 1. astigmatismo irregulare; G. unregelmussige Astigmatismus.) That condition in which the several segments of any meridian of the eye have not the same enrvation; it is generally the result of irregularity of lens structure. The defect in this form is irremediable by glasses.

A. lenticular. Astigmatism arising from differences in the curves of the different meridians of the lens.

A., mixed. (F. astigmatisme mixte; G. gemischter astigmatismus.) That form of astigmatism in which one chief meridian is hypermetropic and the other myopic.

A., myop'ic. (G. muopischer astigmatismus.) Astigmatism complicated with myopia, or occurring in a short-sighted eyc. It is represented by the formula Am.

A., myop'ic, com pound. (G. zusammengesetzter myopischer Astigmatismus.) That form of astigmatism in which the refraction of the eye is myopic in all meridians, but to a greater degree in one meridian than in the rest. It is represented by the formula M+Am.

A., myopic, sim'ple. (G. einfach myopisch Astigmatismus.) That form of astigmatism in which the refraction of the eye is myopic in one meridiau, and emmetropic in the others. It is represented by the formula Am.

I. astignatismo regolare; G. regelmasine regulier; I. astignatismo regolare; G. regelmasine Astigmatismus.) That condition in which, although the various meridians of the eye differ from each

other in their curvation, each meridian preserves the same curvation throughout its whole length. The defect in this form is capable of being remedied by glasses.

A., sim'ple. The form in which the refraetion of one meridian is emmetropic, and of the

other myopic or hypermetropic.

Astigmatismus. Same etymon and meaning as Astigmatism.

Astigmom'eter. ('Λ; στίγμα; μέτρου, a measure.) An instrument for determining the presence and the amount of astigmatism.

As'tites. (L. adsto, to stand by; because by or near the neck of the bladder.) An old term for the lobes of the prostate gland.

Astoch'ados. The Arabic name for the

Lavandula stuchus.

**Asto'mæ.** ('Λ, neg.; στόμα, mouth.) Persoon has grouped under this term the Sphæriæ, of the Division Simplicis, the ostiole of which is not apparent.

Asto'mata. (Same etymon.) A Division of the Protozoa, comprising the Gregarinidæ and Rhizopoda, and distinguished by having no

Asto'matous. (Same etymon.) Same as Astomous, and the more correct form. Both forms

are used by Owen.

As'tome. (Same etymon.) In Botany, this term is applied to mosses in which the urn does not open by the detachment of an operculum closing an orifice or stoma, but when mature dehisces irregularly to give issue to the spores. Phaseum and Archidium burst in this way.

**Asto'mia.** ('A, neg., στόμα, a mouth. F. astomie; G. Mangel des Mundes.) Absence of

a mouth.

**Astomous.** (A, neg.; στόμα, a mouth. F. astome; G. mundlos.) Having no mouth; mouthless. Without an opening.

Astoures. (Fr.) Seeds possessing a toxic influence on fishes, and which, according to Bose,

belong to two verbaseums.

Astragale'æ. ('Λστράγαλος.) A Subfamily of the Family Papilionaccæ. Upper stamens free; pod more or less completely divided by a suture into two compartments; leaves generally unequally pinnate.

Astrag'alo - calca'neal ments. The ligaments uniting the astragalus

to the os calcis; they are:

An interesseous ligament, lying between the groove separating the anterior and posterior articulating surfaces of the astragalus, and a similar groove in a corresponding condition of the os calcis; it is a broad and strong fibrous mass.

A posterior ligament, attaching the hind border of the astragalus to the upper surface of the os calcis; it is membranous, with short oblique

fibres.

An external ligament, passing vertically downwards from the outer surface of the astragalus to the outer side of the os calcis; it is a thin slip running parallel to the internal lateral ligament of the ankle.

A .- calca'neum. The name given to the single bone of the tarsus in some lizards and other animals, which is the representative of the two bones, astragalus and os calcis of man.

A. sca'phoid lig'ament. A thin fibrous structure on the dorsum of the foot, between the anterior extremity of the astragalus and the upper surface of the scaphoid bone.

Astragaloï'des. ('Αστράγαλος, the milk-vetch; elčos, shape.) Resembling the Astragalus, or milk-vetch; applied to a kind of bastard milk-vetch.

A. syphilitica. The Astragalus exscapus.
Astrag'alos. ('Αστράγαλος.) A plant of the ancients, regarded as astringent, and given in dysentery, diarrhees, and other fluxes; it was also considered diuretic, and was applied locally to ulcers and gumboils (Dioscorides l. iv, c. 62; Panl. Æg. l. vii, s. 3; Pliny, lib. xxvi, c. 29). It is referred by Sprengel to Orobus tuberosus, or bitter vetch; by Littré to O. serpilifolius; and by Fée to Lathyrus tuberosus. (Waring.)

Astrag'alus. ('Αστράγαλος, a die

originally made of a knuckle-bone, or of the ankle-bone of sheep, now known by this name. F. astragale; I. and S. astragalo; G. Sprungbein.) Name of the ankle-hone; the upper hone

of the foot, on which the tibia rests.

It is irregularly 6-sided in form. surface presents a rough surface for ligaments, and a convex surface, broader in front than behind, for articulation with the tibia. The inferior surface presents two facettes, separated by a deep groove, for articulation with the os calcis. The groove rnus forwards and outwards, and contains the interesseous ligament. The outer surface has a large triangular surface behind, for articulation with the lower extremity of the fibula, and a rough surface in front, for ligaments; the inner aspect presents above an oval or reniform surface. articulating with the malleolar process of the tibia. The anterior surface articulates with the scaphoid, and the posterior is deeply grooved for the tendon of the flexor longus politicis, ossi-fication from one centre appearing about the seventh month of feetal life.

In frogs it is so much elongated as to form a long bone; in lizards it joins with the os calcis, and forms a single bone, the astragalo-calcaneum, in some Saurians with the navicular, and in some Batrachians and other animals it is represented by two bones, which have received the names of tibiale and intermedium by Gegenbaur, who also considers that the astragalus represents the coaleseed scaphoid and lunar bones of the wrist.

Also, an old name for the atlas, or first cervical vertebra.

Astrag'alus. ('Αστράγαλος.) A Genus of the Nat. Order Leguminosea. Herbs, shrubs, or small trees. Leaves imparipinnate; flowers in axillary spikes, or in clusters, sometimes solitary or in umbels; calyx gamosepalous, tubular or ventricose, 5-toothed; petals unguiculate; andræcium diadelphous; ovary sessile or stipitate; pod continuous, two-celled by the expansion of the dorsal suture.

A. aculea'tus. (L. aculeatus, thorny.) A

name for the Astragalus verus.

A. adscen'dens, Bois, and Hausk. adscendo, to climb.) Stem at first prostrate, then ascending and shrubby; leaves alternate, with triangular stipules, tementose at the base, glabrous at the summit; leaflets folded, oblonglinear, mucronate, silky; bracts oval, acute; inflorescence multiflorous, axillary; calyx with lanceolate teeth; ovary surmounted by a glabrous style, and containing an indefinite number of campylotropous ovules in two vertical rows. Supplies tragacanth and a manna. By some it is said to be identical with A. verus.

A. ammody'tes. ('Λμμοδύτης, sand-creeper.) The properties of this plant are said by l'allas to be identical with those of liquorice.

A. arista'tus. (L. aristatus, having an awn. The species said by Sieber to yield true

tragacanth.

A. bæ'ticus. (L. Bæticus, belonging to Bætica, a province of Southern Spain, consisting of Andalusia, a part of Granada.) The roasted grains of this plant are said to be an extremely good substitute for coffee, and are known as Swedish coffee.

A. Boissie'ri, Bunge. The A. ereticus. A. brachyca'lyx, Fisch. (Βραχύς, short; κάλυξ, the calyx.) Very like A. adscendens, but differing in its larger and elliptical leaflets, its oval ob use bracts, and its calyx with triangular

teeth. Supplies a form of tragacanth.

A. creticus, Lam. (L, Creticus, of, or belonging to, Crete.) A plant originally growing in Crete and the Ionian Islands, which was probably known to Theophrastus. According to Theodore de Martius, this species yields gomme à tragante vermiculée, the vermicular or Morea tragacanth. Leadets oblong, folded, terminated with spines, covered with whitish hairs; flowers arranged in twos to form globular capitula.

A. cylle'neus, Boissier and Heldreich. (Κυλλήνη, a mountain in Arcadia.) Hab. Greece. Leaflets in five pairs, oblong, obtuse, with a longish terminal spine; stipules lanccolate, acuminate, glabrous, ciliate; flowers in oval capitula. It is the almost exclusive source of the tragacanth

collected about Vostizza and Patras.

According to some, a variety of A. parnassii. A. denuda'tus, Stev. (L. denudo, to lay

bare.) The A. microcephalus. A. eriocaul'os, De Cand. (Έριον, wool; καυλός, a stem.) The A. microcephalus.

A. esca'pus. (L. e, out of; scapus, a stem.)

See A. exscapus.

A. exsca'pus. (L. ex, out of; scapus, a stem. F. astragale sans tige.) Stemless milkvetch. A plant growing in the Alps. The part used is the root, which has many heads, is cylindrical, 1 to 1 inch thick, 10 or 12 inches long, tough, very fibrous, externally greyish brown, internally pale brown, with radially fissured wood and bark. It contains, according to Fleurot, a feebly bitter substance, a fermentable sugar, starch, fixed oil, aromatic resin and salts. Used as a remedy for the sequelæ of syphilis, and also as an antirheumatic and diuretie.

A. florulen'tus, Bois. and Hau-k. florulentus, abounding in flowers.) Furnishes, along with A. adscendens, a manua, which is made up into sweetmeats, known in the bazaars

of Persia as Gaz Anjabin.

A. glycyphyllos. (Γλυκύς, sweet; φύλλον, a leaf. F. fausse-réglisse, règlisse bâtarde, r. sauvage, chasse-vaches.) A plant common in woods in Germany and in the vicinity of Paris. Several stems rise from one root, and are recumbent and smooth; leaves 5-6 paired; leadlets oval, clusters axillary, stalked, elongated, oval, shorter than the leaves, with dirty yellow flowers. It has been recommended in cases of retention of urine, colic, strangury and dartrous affections.

A. gum'mlfer. (L. gummi, gum; fero, to

bear.) Same as A. gummifera.

A. gummif era, Labil. (L. gummi, gum; fero, to bear. G. Syrische Tragunth.) White tragacanth. A spiny bush; leatlets smooth, in 4-6 pairs, oblong, linear; flowers 3-5, axillary, sessile; calyces woolly, 5-cleft. Hab. Koordistan. Observed by Labillardière on Mount Libanus. It yields the gum named pseudo-adragante by Guibourt, and the Syrische traganth of the Germans.

A. kur'dicus, Bois. (Kurdistan, a region Western Asia.) A shrub, three or four feet high, inhabiting the mountains of Cilicia and Cappadocia, and extending thence into Kurdistan. Leaflets smooth, or slightly folded, short, straight, terminated by a long silvery spine; stipules lanceolate; flowers on a short spike; teeth of the calyx less velvety than the tube. It is the chief source of the aintab tragacanth.

A. massilien'sis, Lam. The A. tragacanthus.

**A. microceph'alus,** Willd. (Μικράς, small: κεφαλή, the head.) Leaves 5—8 pairs, oblong, lanceolate, terminating in a spine, villous, whitish; stipules acuminate, ciliated; flowers in small oval or oblong capitula; spines spreading. Supplies a form of tragacanth.

A. nuda'tus, Bunge. (L. nudo, to make

naked.) The A. kurdicus.

A. parnas'sii. A variety of this species,

A. cylleneus, yields a tragacanth.

A. pycnocla dus, Bois, and Hausk. (Πυκ-νάς, close-packed; κλάδος, a young snoot.) Hab. Persia. Very like A. microcephalus, from which it is distinguished by its slender close-set spines and its folded, almost accoulate, short and green leaflets. Supplies a tragacanth.

**A. pycnophyl lus,** Sted. (Πυκνός, close-packed; φύλλον, a leaf.) The A. microcephalus. A. sempervirens, Lam. (L. semper, always; viree, to be green.) The A. aristatus.
A. strobilif'erus. (L. strobilus, a pine-

cone; fero, to bear. G. syrische Traganth.) tragacanth. A spiny bush; leaflets woolly, in 3 pairs, aristate; flowers in sessile, axillary, ovate cones; calyx feathery. Hab. Koordistan. Supplies a gum.

A. stromato'des. (Στρῶμα, a mattress; ώδηs, postfix signifying fulness.) Very similar to A. kurdicus, differing only in its globular inflorescence and its larger flowers.

A. syri'acus. (L. Syriacus, belonging to Syria.) A species the roots of which are astringent and diuretic.

A. tragacanthoid'es. (Γραγάκανθα, goat's thorn.) A species which is employed by the Kalmucks to cut short an attack of intermittent fever.

A. tragacan'thus, Linn. The species formerly, but erroneously, supposed to be the

source of gum tragacanth.

A. ve'rus, Olliv. (L. verus, true. F. astragale vraie: G. Smyrnær, Blattertraganth.) Goatshorn, milk-vetch. A plant originally growing in Armenia, Persia, and Asia Minor, and which yields, according to Ollivier, the true gum tragacanth. Leadets linear, folded, hispid, borne on a sleuder common petiole; stipules lanceolate, smooth when adult, velvety while young; flowers in groups of two to five, sessile; calvx tomentous, with five obtuse teeth.

Astral. (L. astrales, belonging to the stars.) Of, or belonging to the stars. This term was formerly applied to the influence of the planets, when astrology was taken into account among the speculations of the ancient physicians.

**Astran'tia.** ( $\Lambda \sigma \tau \rho \sigma \nu$ , a star. from the star-like umbels.) A Genus of the Nat. Order Umbelliferæ.

A. dispen'sia, Scop. (L. dispensus, distributed.) The Sanicula europæa.

A. ma'jor. (L. major, greater.) Nat. Order Umbelleferec. Black masterwort. Hab. South Germany and Switzerland. The root, which is the part used, is annulated, about three inches in length and a quarter of an inch thick; blackish brown externally, whitish internally, with thin black rootlets. The cortex is rather thick, lined internally with a series of lactiferous vessel; medulla large. The parenchyma cells contain starch. The root possesses an acrid quality, and was formerly used as a purgative.

Also, a synonym of the masterwort, Imperatoria ostruthium.

A. ni'ger. (L. niger, black.) A synonym of 1 major

A. vulgaris. (L. vulgaris, common.) A

synonym of A. mujor.

As trape. ('Αστραπή, a flash of light-ning.) Lightning. Regarded by Galen as one of the remote causes of epilepsy.

Astrapho'bia. ('Λστραπή, lightning; φόβος, fear.) Fear of lightning.

('Λστρικός, belonging to the As tric. stars.) Relating to the stars, especially as to their supposed influence on human life and health.

Astric'ta al'vus. See alleus astricta. Astriction. (l. ad, to; stringe, to bind.) Term for the act of using, or the state produced by the use of, astringent medicines; also, for constinution.

Astricto'rlus. (L. astrictorius, from astringo, to gird or strengthen. F. astriction; 1. astrizione; S. astriccion; G. Zusammenziehung.) Astringent; astrictive, or having power to bind.

Astringent. (L. astringo, to gird or raighten. F. astringent; I. astringente; G. straighten. zusammenziehend.) Having power to produce shrivelling and contraction of organic structures.

A. prin'eiple. A term for tannin. A. root. The Comptonia asplenifolia.

Astringentia. See Astringents. Astringents. (Same etymon.) Medieines which produce contraction of living structure. The nature of their action is very various. Some, as tannin and alum, act by producing coagulation of albumen; some, as alcohol, by absorption of water; others by producing reflex muscular contraction; probably none by produc-ing simple contraction. They are usually divided into vegetable and mineral astringents. They are used to restrain hamorrhage and mucous or other discharges, and topically to produce contraction of a too relaxed structure.

As'trion. ('Αστριου, a little star.) An old name for a species of the milk-vetch, Astrag-

alus, or of a species of Stellaria.

Al-o, an old name (Gr. ἄστριον) for the astragalus or ankle-bone. Johnson, Ingrassias, Comm. in Gal. l. de Ossib. p. 164.

As trios. (Λοτριον, dim. of ἀστήρ, a

As trios. star.) Same as Asterias.

**As'trobles.** (Άστρον, a planet or star; βάλλω, to strike.) Blasted; planet-struck. An old term (Gr. αστροβλής), used for apoplectic. (Gorrieus.)

Astrobole'sia. ('Αστροβολησία.) Same as Astrobolismus

Astrobolia. ('Αστροβολία.) Same as

**Astrobolis mus.** ('Λστροβολίζομαι, to be struck by the sun.) A blasting; the being star-stricken. A term given to a sudden paralysis attributed to astral influence.

Also, a synonym of Apoplexy. Also, a synonym of Gangrene.

Also (G. Sonnenstich), a term for sunstroke. Astrobolis'mus. ('Αστροβολίζομαι, to be hlasted.) A blasting. A term (Gr. άστρο-βολισμός), used by Math. Flacius, de Vit. et

Mort. ii, 24, p. 96, for Sphacelus, although properly referring to plants that perished under the Dog star, as if stricken by it; also, used for apoplexy. See Diss. div. ii, s. vi, t, 7.

Astrob'olus. A term for Asterias.

Astrocar'yum vulga're. ('Αστήρ, a star; κάρυον, a nut; vulgaris, common.) Nat. Order Palmacea. A plant growing in French Guiana, the root of which is used as an antisyphilitic remedy.

**Astroites.** ('Λοτήρ, a star.) Λ species of madrepore, formerly employed, in doses of from 12-24 grains, as an alexipharmic, to purify the blood, and to prevent apoplexy. The Asterius.

Astroi'tis. (Αστρου, a star.) The same

as Astroites.

Astrolo'bium scorpioi'des. Ornithopus scorpioides.

Astrol'oger. ('Αστρολόγος, an astro-nomer. G. Sterndeuter.) One who practised divination by the stars. Also, formerly used

synonymously with astronomer.

Astrology. (Λοτρον, a star or planet; λόγος, a discourse. F. astrologie; G. Astrologie, Sterndeuterkunst.) Term for the doctrine of the heavenly bodies, their nature and distinctions, and thus synonymous with Astronomy; also applied, however, to the so-called science which pretended to explain the phenomena of nature by astral influences, and to tell of the future by a scrutiny of the stars, planets, and constellations, their aspects and relative positions, thus constituting what was called judicial astrology. merly, it formed a prominent part of medicine. A person's temperament was held to be determined by the planet under which he was born, and the virtues of herbs, gems, and medicinal substances, were believed to be attributable to the influence of their ruling planets.

**Astrolo ma.** ('Αστρον, a star; λωμα, a fringe.) A Genus of the Nat. Order Epacrida-

A. humifu'sum. (L. humi, on the ground; fusus, part. of fundo, to spread out.) The Tasmanian cranberry. Used as an esculent fruit.

Astroman'cy. ('Αστήρ, a star; μαντεία, a divination.) Astrology.

Astroman'tia. (Άστρον; μαντεία, α prophesying. F. astromantie; G. Sterndeuterei.) Divination from the aspect of the stars, and so, similar to astrology.

Astro'nium. A Genus of the Nat. Order Terebinthacoa, Tribe Anacardiacea. Large trees, with alternate imparipinuate leaves; flowers disposed in very ramified, axillary, or terminal branches; hermaphrodite or polygamous; pentamerous; ovary sessile, uniovulated; fruit a drupe. Hab. Tropical America.

A. fraxinifo'lium. (L. fraxinus, the ash; folium, a leaf.) This plant yields a turpentino

and an astringent wood.

A. grave'olens. (L. graveolens, strong smelling.) The fruit of this plant is used as a medicine in New Granada.

Astron'omy. (Λστρον, a star; νόμος, a law. F. astronomie; G. Himmelskunde, Sternkunde.) Term for that branch of science which treats of the heavenly bodies.

A., phys'ical. Term for that division of astronomy which investigates the causes of the

motions, &c., of the heavenly bodies.

As'trop. Northamptonshire; five miles west of Brackley. A chalybeate water containing magnesium sulphate; used in skin diseases

Astro'trichus. ('Αστρον; θρίξ, hair. F. astrotriche; G. sternhaarig.) Applied to Clidesmia astrotricha, because most of its hairs are parted at the top into branches, disposed so as to

present a star.

As'truc. A French physician, born at Sauve, Departement du Gard, March 19, 1684; died May 5, 1766. He was a professor in the Universities of Montpellier, Tonlouse, and Paris. He wrote numerous works on fermentation, digestion, fistula, plague, midwifery, diseases of women, as well as on metaphysies, natural history, and theology; his great book was on the venereal disease.

As'trum. (L. astrum, a star.) The olden chemists used this word to signify the virtue or power which accrues to a medicinal substance by reason of a special mode of preparation, as in

its reduction to a fluid condition.

A. duplica'tum. (L. ustrum, a star; duplico, to double. G. Doppelgestirn.) A stomachic nostrum, composed of antimony, coral, amber, and musk.

Astru'ni. Italy; near Naples. A sulphur spring, which is said also to contain alum. Astru'thium. The Peucedanum ostru-

thium.

Astuc'cio dell' ippocam'po. Ital. (I. astucchio, a case.) Part of the sphenoidal cornu of the lateral ventricles; it is roofed in above by the posterior part of the corpus callosum and posterior pillars of the fornix. It really corresponds with all the space of the inferior cornu which is in relation with the hippocampus major.

Asturian. (Asturias, one of the ancient provinces of Spain, now called Oviedo.) Belong-

ing to Asturias.

A. rose. (F. rose des Asturies; I. rosa delle Asturie; G. Asturische Sommerseuche.) A skin disease, endemic in the Province of Asturias, pro-

bably a species of pellagra. **Asty'lis.** (A, neg.; στύλος, style.) One

of the ancient names of mistletoe.

Also, a variety of lettuce, which was anciently recommended for its anaphrodisiac properties. In this sense the word is probably a misspelling of Astytis.

Astylous. (Same etymon. F. astyle; G. sticlios.) Term applied by Waehendorf to plants the flowers of which have no style.

Astyph'ia. erect.) Impotence. ('A, neg.; στύω, to make

Asty'ra. Turkey. The ancient name of a place, now called Kirkgheuz (i.e. forty eyes), mentioned by Pausanias, where the mineral water issues by about forty fissures from the soil. The temperature varies, now rising to 50° C. (122° F.) and even 60° C. (140° F.), now falling to 40° C. (104° F.), and 30° C. (86° F.) The water is highly saline, and is in repute for visce-

ral engorgements and in scrofulous diseases. **Astys'ia.** ('Λ, neg.; στύω, to make stiff. F. astysie; G. das männliche Unvermögen.) Male impotency.

Astytic. (Same etymon.) Incapable of erection. Applied to the penis.

Asty'tis. ('Aστυτίς, impotent.) Term applied to lettuce by the ancients, on account of its anaphrodisiae properties.

Asuar. The Myrobalanus indica.

Asu'gar. (Arab.) An old name for verdigris. (Quincy.)

A'sul. Arab. and Hind. for Tamarix furas. Asul'ci. Old name for the lapis lazuli, or azure-stone. (Ruland and Johnson.)

Asu'na. The vernacular name in India of

the Briedelia spinosa. Asuo'li. (Arab.) Old name for fuligo, or soot; also for atramentum, or ink. (Ruland and Johnson.)

Aswagand'hi. Tel. for Physalis somni-

fera.

Asy'lum. (L. asylum, a place of refuge; from ἀσυλος, safe from violence. F. asile; 1. and S. asilo; G. Zufluchtsurt.) A place of refuge. A place for the safe keeping of those who need help and shelter from the world, as the blind and insane.

A., lu'natic. (L. lunaticus, an insane person. F. maison d'aliéné; I. manicomio; G. Irrenanstalt Irrenhaus.) A place for the cure of

insanity, and the safe keeping of insane persons. **Asymbolia.** (A, neg.; σύμβολου, a sign.) A term, snggested by Finkelnburg as being more general and comprehensive than aphasia, to indicate loss of power of forming or comprehending any sign or symbol of thought, whether spoken, written, or acted.

Asymmetran'thous. ('A. neg.; συμμετρία, symmetry; ἀνθος, a flower. F. asymmetranthe.) Applied by G. Allman to plants the flowers of which are without symmetry; not

forming equal halves.

Asymmet'ric. (Same etymon. F. asymmetrique.) Not symmetrical. In Botany, an organ is said to be asymmetric when it cannot be divided into two similar balves by a vertical plane. A flower is asymmetric when any of the whorls which form it is asymmetric, or when each whorl is symmetrical in itself, but not symmetrical with the others. The flower of Centranthus ruber, for example, is asymmetric, notwithstanding the ealyx, corolla, andrecium, and gyneeium have each a plane of symmetry, for each plane differs from that of the rest. The term compound asymmetric fruits has been applied to those fruits in which the number of carpellary leaves differs from the number of the leaves of the perianth, and these are divided into fructus ex defectu asymmetricus when the number of carpellary leaves is less than that of the petals, as in Digitalia and Country and talis and Carrot, and fructus ex excessu asymmetricus when the carpellary leaves are more numerous than the divisions of the perianth, as in Anona and Magnolia. Multiple fruits, or fruits formed of several distinct carpels, are similarly said to be asymmetric when the number of the carpels differs from that of the leaflets of the perianth. Thus, Ranunculus and Adonis represent a multiple fruit, asymmetric by augmentation, and Agrimony a multiple fruit, asymmetric by diminution.

A. sys'tem. A term for Triclinic system of crystallography.

Asymmetrical flowers. ('A, neg.; συμμετρία, harmony.) Term applied to entirely irregular flowers.

**Asyminetrocar' pous.** ('A, neg.; συμμετρία, symmetry; καρπόs, fruit. F. asymmetrocarpe.) Applied by G. Allman to plants

the fruit of which, cut in two, does not present symmetrical halves.

**Asymmetry.** ('A. neg.; συμμετρία, symmetry. F. asymmétrie; I. assimmetria; G. Unregelmassigkeit.) Want of symmetry in parts which should be symmetrical.

Asym phytous. (' Ασύμφυτος. nicht verwachsen.) Not grown together; dis-

**Asympto'tous.** ('Ασύμπτωτος, empressed G. nicht zusammenfallend.) (' Ασύμπτωτος, not immenfallend.) Not close together; remaining loose or separate.

**Asynech'ia.** ('A, neg.; συνεχής, continnous. F. asynéchie; G. Mangel an Zusammenhang.) A defect of continuity.

Asynech'ic. (Same etymon.) Not continuous.

Asyner'gia. ('A, neg.; συνεργία, jointwork, co-operation. F. asynergie; G. Mangel an Mitwirkung.) Want of combined action of the various organs of the system.

A., progres'sive locomo'tor. A term for locomotor ataxy.

Asyne'sia. ('Aσυνεσία, want of understanding. F. asynésie; G. Dunmheit, Einsichts-losigheit.) Want of intelligence; witlessness; stupidity.

Asyn'esis. (Same etymon.) A synonym of Aphasia.

Asyn'etous. ('Ασύνετος, void of understanding. G. dumm, cinsichtlos.) Stupid, foolish.

Asyngam'ia. ('A, neg.; σύν, with; γάμος, marriage.) Term applied to flowers in which the special conference consequences. which the male and female organs are not simultaneously mature or ripe for fecundation. It is believed by the Darwinists to be a condition favorable for the development of new

species. Asynod'ia. ('A, neg.; συνοδία, companion-ship. F. asynodie; G. Mangel des Beischlafs, Unvermögen zum Beisehlaf.) Want of, or impotency for, sexual intercourse.

Asynodic. (Same etymon.) Impotent. Asynovia. ('A, neg.; synovia. F. asynovie; G. Mangel der Gelenkfeuchtigkeit.) Defect of synovia.

Asyn'thesis. ('A, neg.; σύνθεσις, a pulling together. F. asynthèse.) Defect of joining or juncture.

**Asyn'trophy.** ('A, neg.; σύντροφος, brought up together.) A term, employed by Mr. Gardiner-Brown, to denote a deficient or retarded growth or development of one of a pair of symmetrical bones, such as the temporal; or of one half of a bone having two symmetrical halves, as the inferior maxilla.

Asystole. (A, neg.; συστολή, a contraction. F. asystolie; G. mangelnde Zusammenziehung.) A term applied by Beau to a condition in the progress of heart disease in which the systole or contraction of the left ventricle is insufficient to unload the beart of the blood which flows to it. In this condition the face is turgid and injected, the eyelids puffy, the neek swollen; the jugular veins pulsate; the pulse is small, and often irregular, the cardiac contractions are feeble; there is often between the third and fifth ribs on the left side of the sternum a soft, systolic, diffused nurmur, due to tricuspid regurgitation. In advanced cases the cardiac impulse is very weak, and a humming sound replaces any murmurs that may have been present. Digitalis is the chief remedy, with rest, nutritive food, and stimulants.

Asys'tolism. Same etymon and meaning as Asystole.

A'tac. Old name for tale, or nitre. (Ruland and Johnson.)

Atac'tic. ('ATAKTOS, out of order, irregular.) Irregular. Usually applied to want of co-ordination of the muscles; thus, in atactic aphasia, the loss of speech is due to the want of co-ordinating power over the muscles of articu-

**A.** apoph'yses. (' $\Lambda \pi \delta \phi \nu \sigma \iota s$ , an offshoot.) An old term for the ultimate subdivisions of a vein.

Atac'tically apha'sic. ('Ατακτος: άφασία, speechlessness.) A term applied by Küssmaul to one who is able to form the sounds and syllables of familiar words, but unable to re-group these sounds and syllables in any other unfamiliar way.

Atactomorpho'sis. (Ατακτος; μορφή, form. F. atactomorphose.) The case where a larva passes from its state of nympha into the almost absolute paralysis, from which it does not change till arrived at the condition of a perfect insect.

Atac'tos. (Ατακτος, from å, neg.; and τάσσω, to put in order. G. unordentlich, re-Erratic; disorderly; undisciplined. gellos.)

Atal'lec. Arabic name for Acacia gummifera.

Atan'ta. A species of Rhus, resembling R. tomentosum, used in Guinea as a tonic.

A'tap. The fruit of the Indian plant Nipa utricans.

Ataractapoie'sia. ('A, neg.; ταρακτός, troubled; πωίω, to do.) Intrepidity; presence of mind. A quality which, according to Hippocrates, should be possessed by the physician.

Atarax'ia. ('Arapagía, coolness. Geistesruhe, Gemüthsruhe, Seelenruhe.) Freedom from passion; calmness; tranquillity; firm-

At'avism. (L. atavus, a forefather. F. atavisme.) A term given to the reappearance in an individual or a group, whether plant or animal, of some anatomical, physiological, or pathological condition which has been present in an ancestor, not the immediate parent.

A'tax. A Genus of the Family Hydrachnia, Order Acaridea; parasitic on Lamellibranchiate Mollusca.

**Ataxacan'thous.** ('Αταξία, want of order; ἄκανθα, a spine.) Having spines dispersed without order upon the branches and petioles.

**Atax'ia.** ('Αταξία, disorderliness; from ά, neg.; τάσσω, to order. F. ataxie; G. Unordnung.) A term for irregularity; want of order, especially of the pulse. See Ataxy.

A. mo'tus. (L. motus, motion.) A synonym of Ataxy, locomotor.

A., progres'sive locomo'tor. Ataxy, locomotor.

A. spirituum. (L. spiritus, spirit.) The

nervous diathesis.

Ataxic. ('Arazia, want of order. ataxique; G. unordentlich.) Of, or belonging to, ataxy, as occurring in the progress of diseases, or in the natural animal functions; irregular.

A. apha'sia. See Aphasia atactica. A. fe'ver. An order of fevers with great weakness, according to Pinel.

Also, an old term for an irregular form of

fever, in which the brain and nervous system are

chiefly affected.

Atax'mir. (Arab.) A term used by Albucasis to signify the treatment of a disease of the eye, arising from the presence of supernumerary eye-lashes growing under the natural

**Atax'o-adynam'ic.** ('Αταξία, want of order; άδυναμία, debility.) Relating to ataxy and advnamy.

A .- fe'ver. (F. fièvre ataxo-adynamique.)

Typhus fever of cattle.

Ataxodyn'amy. ('Αταξία, want of order; δύναμις, power.) Irregularity in the action of any part; defective co-ordination of the movements of a part.

('Aταξία; φημί, to Defective co-ordina-Ataxophe mia. speak. F. ataxophemie.)

tion of the words; a kind of aphasia. **Ataxy.** ('Αταξία, from ἀ, neg.; τάξις,

order.) Irregularity; want of order.

A., hyster'ical. An hysterical simulation

of progressive ataxy.

A., locomo'tor. (L. locus, place; motus, motion.) A want of the power of co-ordinating the voluntary movements, indicated by a peculiar unsteadiness in their performance, usually pre-ceded by pains of various parts. The disease ceded by pains of various parts. usually commences in the lower limbs, and gradually extends to the arms. The patient totters, walks, sometimes with short and quick steps, sometimes with his legs more widely separated than usual. In the advanced stages of the disease he cannot stir without keeping his eyes fixed on his feet. Similar loss of control is observed over the movements of the arms. In addition there are sudden jerking movements, rendering it difficult for the patient to carry food to the mouth. Other affections of the nervous system are commonly present, as pain, anæsthesia, analgesia, paralysis, incontinence of the urine, dysuria, spermatorrhœa, anaphrodisia, ocular and aural affections. Occasionally serious, though painless, disease of the joints supervenes, commencing with extensive effusion into and around the joint-cavity, and proceeding to erosion of the cartilages, absorption of the joint-ends of the bones, and complete destruction of the joint. Now and then The disease is there is spontaneous fracture. progressive. The causes are those that depress the nervous system, as cold, wet, fatigue, bad or insufficient food, depressing mental emotions, masturbation. The pathological conditions found after death are congestion and thickening of the membranes of the cord, sclerosis with atrophy and disjutegration of the posterior columns and posterior roots of the nerves, with hypertrophy of the connective tissue and the presence of corpora amylacea. Many of the blood-vessels of the cord are loaded or surrounded with oil globules. According to Charcot, the specific seat of the disease is in a band of white matter lying between the posterior pyramid of the cord and the posterior roots of the nerves with the adjacent part of the posterior cornu of the cord.

Atch'ar. Name for a condiment used in India, composed of several green fruits, garlie, ginger, pimento, and mustard, pickled in vine-

A terminal syllable which, added to Ate. the name of an acid ending in the syllable ic, expresses a combination of that acid with a base; as nitrate of silver, or a combination of nitric acid with the base silver.

gar.

Ate'bras. (Arab.) Ancient name for a subliming vessel. (Ruland.)

Atechnia. ('A. neg.; τέχνη, an art. F. atechnie; G. Ungeschieklichkeit, Unbeholfenkeit.) Want of art; Hippocrates, de Art. vii, 5. Used by Lindenus, S. M. Ex. ix, § 22, the same as Anaphrodisia; and as Agonia, according to F. Platerus, Prax. ii, 19.

Atechnous. (Ατεχνος, without art. G. Kunstlos, Einfach.) Simple; artless.

Atec'nia. (Ατεκνος, without offspring; sterile. F. atecnie; G. Unfruchtbarkeit.) An old term for the want of children, or of the power to procreate.

A'tees. The name of the root of the Aco-

nitum heterophyllum.

Atelæmorrhoïd'es. ('Ατελής, imperfeet; aimoppois, piles) Blind piles or hamorrhoids.

Atelec'tasis. ('Ατελής, imperfect; ἔκ-τασις, expansion. F. atélectasie; I. atelettasia; G. unrollkommene Ausdehnung.) A term applied to a state of imperfect expansion or dilatation in general, but especially to that of the air-cells of the luugs in new-born children. It is not due to disease of the structures, but to imperfection of the respiratory effort caused by injury to the nerve-centres from pressure, or by weakness from repeated placental hæmorrhage, or from premature birth.

A., acqui'red. Collapse of the air-cells of the lungs, the result of debility or disease. See

Pulmonary collapse.

A. acquis ita. (L. acquisitus, part. of acquire, to get in addition.) Acquired atelectasis. Collapse of the air-cells of the lung, the result of brouchitis or other disease. See Pulmonary collapse.

A. adna'ta. (L. adnascor, to grow to.) Congenital atelectasis. Persistence of the feetal condition of the air-cells of the lungs. See Ate-

lectasis.

A., congen'ital. Non-inflation of the aircells of the lungs from birth. See Atelectasis.

A. pulmo'num. (L. pulmo, a lung.) See Atelectasis.

Ateleobranch'ia. ('Ατελής; βράγχια, the gills.) Having imperfect branchize; applied to Amphibia.

Ateli'a. ('Ατέλεια, imperfection. F. atélie.) In Teratology, the absence or defective development of some part of the body.

**Atelocar'dia.** ('Ατελής, incomplete; καρδία, the heart.) Imperfect development of the heart.

Atelocheil'ia. ('Ατελής, imperfect; χεῖλos, the lip.) A term for imperfect development of the lip.

('Aτελής, imper-Ateloencephalia. (' $\Lambda \tau \epsilon \lambda \eta s$ , imperfect;  $\epsilon \gamma \kappa \epsilon \phi a \lambda o s$ , that which is in the head, here meaning specially the brain.) A term for imperfect development of the brain.

**Ateloglos** sia. (' $\Lambda \tau \epsilon \lambda \dot{\eta} s$ ;  $\gamma \lambda \dot{\omega} \sigma \sigma \alpha$ , the tongue.) Imperfect development of the tongue.

**Atelognath'ia.** ('Ατελής; γνάθος, the jaw.) Imperfect development of the jaw.

**Atelomyel'ia.** ('Ατελής; μυελός, the marrow.) Imperfect development of the spinal cord.

Ateloproso pia. ( Ατελής: πρόσωπου, the face.) Imperfect development of the face.

Atelorachid'ia. ('Ατελής'; ράχις, the spine.) Imperfect development of the spine. **Atelostom'ia.** ('Ατελής; στόμα, the mouth.) Imperfect development of the month.

A'ten. A shruh of the Moluccas, perhaps a species of Heriticra. The kernels of the fruit are used as a tonic.

A'ter. (L. ater, black. F. noire; I. nero; S. negro, G. schwarz.) Of the deepest black colour.

A. suc'cus. (L. succus, juice.) Black juice. An old term for melancholia and atra bilis.

Ateram nia. ('Ατεραμνία, harshness, hardness. G. Harte, Unverdauliehkeit.) Indigestibility.

Ateram'nus. ('Ατέραμνος, unsoftened, harsh, bitter. G. Unzerreiszbar, unverdaulich, hart.) Indigestible; bard.

Athala'mia. ('A, neg.; θάλαμος, a couch.) A term formerly employed to designate

the naked Foraminifers. Athal'amous. (Same etymon.) Applied to lichens which have no conceptaeles.

Athal'line. (L. a, neg.; thallus.) Having no thallus

Athallous. (L. a, neg.; thallus.) Without a thallus,

Athaman'ta. ('Adauas, a mountain of Thessaly, where the plant was first found; or 'Aθάμας, son of Eolus, who first named it. G. Augenwurz.) A Genus of the Nat. Order Umbellifera.

A.an'nua. (L. annus, a year.) A synonym of A. cretensis.

A. aureoseli'num. The same as A. orcoselinum.

A. creten'sis. (L. Crete, an island in the Mediterranean. F. dancus de Crête; G. Kandischer Mohrenkümmel, Beerwurzsamen; Dut. Kandische belwortel.) The systematie name of the Dancus creticus, or Candy carrot, brought from the Isle of Candy. The fruit is elongated, cylindrical, velvety, yellowish, and aromatic, has a slightly pungent flavour, and is employed as earminative, diuretic, and autihysteric.

A. cre'tica. The A. eretensis.
A. flexuo'sa. (L. flexuosus, full of turns.)

The Peucedanum palustre. A. leucosper'mum. (Λευκός, wl σπέρμα, a seed.) The Seseli leucospermum. A. libano'tis. The Seseli libanotis. ( \tevkos, white:

A. macedon'ica. The Bubon macedoni-

cum. Hab. Alps of Central A. matthi'oli.

Europe. Roots acrid, emetic, and purgative. A. me'um. A name for the Meum athamanticum, or baldmoney.

A. oreoseli'num. ('Ορεσσίλινον, mountain parsley. F. persil de montagne; G. Bergpetersilie.) The systematic name for the black mountain parsley; also called Daucus alsaticus, Deposition of the black mountain parsley; also called Daucus alsaticus, Deposition of the black mountain parsley. D. montanus, D. selenoides. Formerly used, and highly esteemed, as aperient, attenuant, deob-struent, and lithontriptie; an ethereal oil distilled

from the seed formed a remedy in toothache. **A. pisa'na.** The Pencedanum palustre. Athaman'ticus. ('Αθάμας, a mountain of Thessaly.) Of, or belonging to, Athamas.

Athaman'tin. C24H30O7. An indifferent crystalline substance obtained from the root and seed of the Athamanta orcosclinum. It is absent in the leaves. It has a soup-like odour, and an aerid, bitter, rancid taste. It is insoluble in water, but is easily soluble in alcohol and other. When heated with muriatic acid it breaks up into valerianic acid and oreoselon.

Athana'sia. ('Atlavagia, immortality. F. athanasie; G. Unsterblichkeit.) An old term applied by Galen, de C.M. sec. Loc. viii, 7, &c., to various antidotes, medicaments, compositions.

Also a name of tansy, because, when stuffed in the nostrils of a corpse, it was supposed to hinder putrefaction.

Also, a Genus of the Nat. Order Compositæ.

A. ama'ra. (L. amarus, bitter.) Hab. Mexico. A species the leaves of which are tonic and anthelmintie.

A. marit'ima. The Diotis maritima. Athanasie'æ. A Tribe of the Nat. Order Compositæ.

Atha'nor. ('Aθανήι, undying.) Name for a kind of digesting furnace used by the alchemists, by means of which a geutle and uniform heat

The case of which a getter and hinter in hear could be long maintained. (Ruland, Libavius.)

Atha'ra. ('Αθάρα, a kind of porridge.)

Groats, or catmeal, or porridge made of it.

Atheca'ta. ('A, neg.; θήκη, a case.) A

synonym of Gymnoblastea.

**Athelas mus.** (A, priv.; θηλασμός, a snekling.) Inability to give suck, particularly from defect or malformation of the nipples.

Atheles. ('A, neg.; θηλή, the nipple.)
Applied to a child that has been weared, or who has not sucked the breast.

Also, without a nipple.

Athe'na. ('Αθήνη, the goddess of wisdom. Minerva.) Ancient name for a highly reputed plaster composed of oxide of copper, galls, verdigris, myrrh, ammoniaeum, galbanum, wax, pitch, colophony, &c., and used for wounds of the head, described by Oribasius, Aëtius, Ægineta, according to Gorraus.

Athenato'rium. Old name for a kind of glass cover for a eucurbit, used for sublimations of glass cover for a eucurbit and the sublimations of glass cover for a eucurbit and the sublimations of glass cover for a kind of glass c Old name for a kind Th. Chym. vol. iii, 33. (Castellus.) tion.

Athenio'nis catapo'tium. νιου, the name of the inventor; καταπότιου, a pill, a bolus.) Old term for a pill made of myrrh, pepper, easter, and opium, anciently recom-mended against a cough.

Athenip'pium. (Athenippus, its inventor.) Ancient term (Gr. αθηνίππιον) for a collyrium made from pompholyx, oxide of copper, saffron, myrrh, spikenard, hematite, white pepper, opium, and Chian wine, according to Scribonius Largus, n. 26, 27, and Rhodius. (Gorræus.) Athenip'pum. Same as Athenippium.

Athenor. See Athanor.

A ther. ('Aθήρ.) The extreme point of the spike of barley; also, by translation, the sharpened point of an arrow, or its beard; Hippoerates, iii, de Morb. xxx, 4.

Athera. ('Αθήρα, for ἀθάρα, of Dioscorides (lib. 2, c. 114) corresponds with the Puls, Pulmentaria, or Pulticula of the Romans (Pliny, l. xviii, c. 19, and l. xxii, c. 58), with the Bouillio of the French, and the pap of English nurses. G. Weizengraupen.) A porridge or gruel prepared from various substances, as wheat, barley, rice. Besides being employed for food, it was used in the formation of cataplasms.

Atherapeu tus. ('A, neg.; θεραπεύω, to cure.) Incurable; ineapable of treatment.

**Ather mancy.** (A, neg.; θερμαίνω, to heat.) The possession of the power of arresting or preventing the transmission of heat rays,

Ather manous. ('A, neg.; θερμαίνομαι, to become hot.) Term applied to substances which do not transmit rays of heat. **Ather'mic.** ('A, neg.; θίρμη, heat.)

Term applied to substances which arrest the rays of beat, as alum.

Athermosystal'tic. συσταλτικόs, drawing together.) Term applied to striated muscle, because it does not contract notably with slow or moderate changes of tem.

**Athermosystatic.** ('A; θέρμη; συστατικός, drawing together.) Term applied to those museles to which heat is not a direct excitant.

**Athero'des.** ('Αθερώδες, bearded like ears of corn; from άθήρ, an ear or spike; ώδης, postfix meaning fulness. F. athéreux; G. ah-

Atheroid. (Abip; éldos, likeness. G. ährenformig, voll Ahren.) Having, or full of, spikes.

Atheroid. (Abip; éldos, likeness. G. ährenformig, breiähulich.) Resembling an ear

or spike.

Athero'ma. ('Αθάρα, gruel, or panada. Breigeschwullst, Grutzbeutelgeschwulst.) Term for an encysted tumonr containing a soft substance of a pultaceons consistence, or like panada; also for the substance itself.

This term is also used alone to signify a different disease, atheroma of the arteries. See

Arteritis.

A. arteria'le. (L. arteria, an artery.) Atheroma or fatty degeneration of the arterial coats, a result of chronic arteritis. See Arteritis.

Atheroma'sia. (Atheroma.) The pro-

cess of conversion into atheroma.

Athero'matous. (Atheroma, an encysted tumonr, composed of a soft substance like panada.) Of the nature, appearance, or consistence of the contents of Atheroma.

A. ab'scess. A term applied to that stage of retrogressive change in chronic arteritis in which the cells of the new deposit become fatty, and the intercellular substance softens, so that a soft yellowish matter is formed beneath the tunica intima.

A. ul'cer. A term applied to the stage following an atheromatous abscess in chronic arteritis, in which the tunica intima gives way, and, the pultaceous contents being swept away by the current of blood, an excavation is left.

Athero'sis. The same as Atheroma.

**Atherosper'ma.** ('Λθηρος, repelling noxious animals; σπέρμα, a seed.) A Genus of

the Nat. Order Monimiaceae.

A. moscha'ta. (Μόσχός, musk.) Hab. Sonth Australia. Anstralian sassafras. The bark is curled on its long axis, or in rolls, hard, heavy, 1-8th to 1-4th inch thick, dark greyish brown externally, with longitudinal sinnons ridges; pale brown internally, with musky odour and taste. It contains Atherospermin, tannin, resin, wax, fatty and ethereal oils, sugar, butyric and oxalic acids, starch, and gum. The volatile oil obtained from the bark of this tree is said to be diaphoretic, diuretic, and sedative to the heart's action. Dose, one to two minims twice a day.

Atherosperma'ceæ. A Nat. Order of monochlamydous Exogens. Trees with opposite exstipulate leaves; flowers axillary, in short racemes, with short deciduous bracts; calyx tubular, with several divisions; male flowers with numerous perigynous stamens; anthers opening by recurved valves; female flowers with aborted stamens; fruit, consisting of achenia, enclosed in the tube of the calyx, with the adherent styles converted into feathery awns; seed solitary, erect; embryo minute, at the base of soft fleshy albumen.

Atherosper'meæ. The same as Atherospermaceæ.

Atherosper'meæ. Applied by A. Richard to a Tribe of the Family Monimiee, in which the anthers open from base to summit by means of a valve, and the seeds stand erect.

Atherosper'min. C<sub>30</sub>H<sub>40</sub>N<sub>2</sub>O<sub>5</sub>? A white or grey powder, of alkaline reaction and basic properties, obtained from Atherosperma mos-chata. It has a pure bitter taste, melts at 128° C. (262.4 F.), dissolves with difficulty in ether,

but easily in water.

**Atheto'sis.** (' $\Lambda\theta\eta\tau\sigma\sigma$ 's, without fixed position.) An affection resembling paralysis agitans, first described by Hammond in 1871, characterised by an inability to retain the fingers and toes in any position in which they may be placed, and by their continual motion. The disease appears to be associated with some organic disease of the brain and spinal cord, being preceded or accompanied by various cerebral symptoms, such as epileptic paroxysms, mental debility, headache, tremnlousness of the tongue, numbness of the affected side, pain in the spasmodically affected muscles, and complex movements of the fingers and toes, with a tendency to distortion, but no paralysis; one limb alone may be affected. The movements cease during sleep; and in the few cases that have been observed it has occurred most frequently in men in middle life. It is by many considered to be a post-hemiplegic condition, or secondary to other diseases of the nervous system, and so to be looked upon as a symptom and not as a separate disease.

Athletic. ('Λθλητικός, from άθλητής, an athlete, or one who contended in the public games of the ancieuts.) Having strong muscular development, as in those who exercised in the

ancient games.

**Athoraceph'alous.** ('Λ, neg. ; θώραξ, the chest: κεφαλή, the head.) Λ term in Teratology, applied to a monster without head or chest.

**Athoracica.** (A, neg.;  $\theta \omega \rho a \xi$ , the chest. F. athoracique.) Applied by Blanville to an Order of Devapoda apparently without a thorax.

Athrep'sia. ('A, neg.; τρέφω, to nourish. F. Athrepsie; G. Atrophie in Folge von Dyspepsie.) A term used to denote a profound disturbance of the nutritive functions in children, consequent on neglect of hygienic measures, and especially on defective supply of wholesome food. It presents three stages, the gastro-intestinal, the hamatic, and the encephalopathic; the early symptoms are thrush, vomiting, and diarrhea, followed by anamia, and ultimately by convulsions and trismus. The relative number of the blood-corpuscles is at first increased, sometimes amounting to seven millions in a cubic millim., owing to the escape of fluids, but towards the close of life it falls below the normal. The urine is always turbid, acid, of a deep colour, small in quantity, sp. gr. 1009—1013. The sediment, which is almost always deposited, contains variously formed casts, fatty elements, and pigment. The urea is much augmented, viz. on the average, 3.20 gramme per kilogramme of body higher

A'thrix. ('Λ, neg.; θρίξ, hair. F. athrix.)

A deficiency of hair; baldness.
Also (G. haarlos), used as an adjective, hair-

A. dep'ilis. (L. depilis, without hair.) Baldness.

Athroopom pholyx. ( Λθρώσς, erowded together, πομφολοξ, a bubble. F. athroopom-pholyx; G. der gehaufte Blusenausschlag.) Name for Pompholyx confertus.

Athrozophy tum. (' $\Lambda\theta\rho\sigma(\chi_{\theta})$ , to gather together;  $\phi\sigma\tau\sigma$ , a plant.) Applied by Necker to  $Alg\omega$ , the fronds of which accumulate by the

effect of successive and continued evolution. Athym'ia. ('Atoula, from à, neg.; the state of the s jection of spirits; despondency; melancholy. See Euthymia.

A. pleonec'tica. ('Aθυμία, want of heart: πλεονέκτης, greedy, selfish.) Insanity accompanied by inordinate desire for gain.

Athyrion. The Asplenium ceterach. Athyr'ium filix-fœ'mina. The Asplenum filix-famina.

A. fi'lix-mas. The Nephrodium filix-mas.

A. molle. (L. mollis, soft.) The Asplenium filix-fæmina.

A. ova'tum. (L. oratus, egg-shaped.) Tue Asplenium filix-fæmina.

A. trif'idum. (L. trifidus, three-eleft.) The Asplenium filex-famina.

Atin'car. (Arab.) Old name for borax. (Ruland and Johnson.)

Atin'kar. Same as Atincar.

A tis. An Indian name applied to the tubers of Acoustum napellus and A. heterophyllum, and

also to the inert root of Asparagus surmentosus. **A'tisin.**  $C_{46}H_{74}N_2O_5$ . A bitter alkaloid obtained from the root of the Acontum heterophyllum.

Ativish'a. A Sanskrit name, signifying supreme poison, for the root of the Aconitum ferox.

Atlan'tad. (Atlas.) A term applied by Dr. Barclay in the same sense as Atlantal used adverbially, or towards the atlantal aspect.

Atlantal. (Atlas, the first vertebra. F. atlantal.) Of, or belonging to, the atlas; applied by Dr. Barclay, of Edinburgh, in his proposed nomenclature, as meaning towards the atlas, in treating of the aspects of the neck.

A. as'pect. Looking towards the atlas. A. extremities. The upper limbs.

Atlan'tidæ, (Atlantic ocean ) A term under which Dr. Latham has included the Semitic and African races, which he considers closely allied.

Atlantion. The atlas.
Atlanto-axial. (Atlas; axis.) Belonging to the atlas and axis.

A .- ax'ial lig aments. The same as Atlo-

axoid ligaments.

Atlas. ( $A\tau\lambda as$ , one of the older family of gods who bears up the pillars of heaven; or Atlas, a mountain in Mauritania, in Libya, on which the heavens were supposed to rest.) The first or uppermost cervical vertebra, which is destitute both of body and spinous process. The centre of ossification, which in other vertebræ forms the body of the bone, here becomes attached to the subjacent vertebra, and forms the odontoid process of the axis. The atlas forms a ring, composed of an anterior and posterior arch and two lateral masses. The lateral masses present a pair of superior oval and concave articular facettes for the reception of the condyles of the occipital bone, and a pair of inferior circular and flattened facettes for articulation with the axis. The superior articulation permits the nodding movements, and the inferior the rotatory movements of the head. The inner and opposed surfaces of the lateral masses present a tuberele on each side for the attachment of the transverse ligament, which divides the spinal canal into two parts, an anterior, lodging the odontoid process, and a posterior, occupied by the spinal cord and its membranes.

Behind each superior and inferior articular process is a groove, corresponding to the superior and inferior intervertebral notch; the upper one transmits the vertebral artery and suboccipital nerve, the lower one the second cervical nerve. The posterior arch terminates posteriorly in a tuberele, to which the rectus capitis posticus minor is attached. The anterior arch, about half the length of the posterior, presents an articular surface posteriorly for the odontoid process, and gives attachment centrally to the longus colli and rectus capitis anticus minor. The transverse processes are strong, not bifurcated, perforated at the base for the vertebral artery, and give attachment to the rectus lateralis, obliquus superior and inferior, splenius colli, levator anguli scapulæ, interspinous, and intertransverse muscles. Development from two primary centres and one or two epiphysial centres.

The atlas is without a body in all vertebrata above the Ichthyopsida; in birds and some reptiles it presents post-zygapophyses; its shape varies much in the lower animals, and it becomes in some fishes anchylosed to the occipital bone or to

the axis. A. wood. A kind of rosewood from the Ferolia quianensis.

Atle. Egyptian name for the Tamariscus, or Tamarix Gullica.

At'lo-ax'oid articula'tion. applied to the articulation between the first two cervical vertebræ, which is effected, in the absence of any intervertebral substance, by two articular processes, and by the articulation of the odontoid process with the back of the anterior arch of the atlas. There are no ligamenta subflava. There are anterior and posterior ligaments, and a transverse ligament, passing from one side of the atlas to the other, behind the odontoid process. There are four synovial membranes: one between each of the articular processes, one between the odontoid process and the transverse ligament, and one between this process and the arch of the atlas.

A. lig'aments. See Atlo-axoid articula-

Atlody mus. (' $A\tau\lambda as$ , the first vertebra;  $\delta a\delta \phi_{\mu} as$ , a twin.) In Teratology, a monster with one body and two heads.

Atloid. Relating to the atlas or first cervical vertebra.

Atloidoax'oid. The same as Atlo-

The same as Atlo-A. articula'tion. axoid articulation.

A. lig'aments. The same as Atlo-axoid

Atloudo-occipital. See Occipito-atlantal.

A. mus'cle. The rectus capitis posticus major. Atloïdo-odon'toïdarticula'tion.

The articulation between the atlas and the axis. See Atlo-axoid articulation.

At'miatry. ('Ατμός, vapour; laτρεία,

medicinal treatment. G. Athmungsheilkunde, Luftheilkunde.) A method of treatment which consists in directing a current of vapour or gas on the part affected. In the atmiatric pulmonaire of Martin Solon, iodine, bromine, chloring, the vapours of ammoniacal salts, oxygen, earbonie acid gas, arsenic, water charged with essences, the smoke of stramouium and helladonna, were recommended as being especially serviceable in phthisis and asthma.

At'mic. ('Aτμός, vapour.) Belonging to,

or arising from, vapour.

Atmidiatrics. (Άτμίς, the vapour of a fomentation; ιατοικός, pertaining to medicine. F. atmidriatique; G. Dampfheilkunde.) Terru for the treatment of diseases by subjecting the hody, or any part, to the action of vapour either of water or other fluid, simple or medicated.

**Atmidom'eter.** ('Λτμίς, or ἀτμός, a vapour; μέτρου, a measure. G. Ausdünstungsmesser.) Name for an instrument by which the amount of vapour exhaled from a humid surface in a given time may be measured.

Atmismom'eter. Same etymon and

meaning as Atmidometer.

Atmister'ion. ('ATMis, the steam of a fomentation.) The vaporarium, or heated airbath.

**At'mograph.** ('Δτμός, vapour; γράφω, to write.) to write.) An instrument for measuring the extent and frequency of the movements of respiration. It consists of a girdle and an elastic cylinder, the changes in the capacity of which, produced by respiration, are registered by means of a lever and style.

**Atmog'raphy.** ( $\Lambda \tau \mu \delta s$ , vapour;  $\gamma \rho \delta \phi \omega$ , to write. G. die Beschreibung der Dünste.) Λ

description or history of vapour. **Atmologia.** ('Ατμός; λόγος, a discourse.) The science of vapour.

Atmolu'tron. The same as Atmolutrum.

Atmolu'trum. ('Ατμός; λουτρόν, α bath. F. atmolutron; G. Dampfbad.) A vapour bath.

**At'molyser.** ('Aτμός, vaponr; λύω, to loosen.) An instrument for the performance of atmolysis.

Atmol'ysis. (Same etymon.) A method of separating oue gas from another by diffusion through a plate of graphite or porous earthenware into a vacuum.

Atmomech'anë. ('Ατμός, vapour; μηxavn, machine. G. Dampfmaschine.) A steam engine.

**Atmom'eter.** ('Ατμός ; μέτρον, a measure. G. Verdunstungsmesser.) A meteorological instrument to determine the quantity of water which evaporates in a given time when freely exposed to the air. It consists of a thin sphere of porous earthenware, into which is fixed a graduated glass tube. Being filled with water and the outlet of the tube closed, the apparatus is exposed to the air; the water passing through the porous earthenware evaporates from the surface, and the quantity, during a given period, is marked by the graduated tube.

At mos. ('Armos, vapour.) The breath.

Atmosphærology. (Atmosphere; λόγοs, a discourse.) The science of atmospheric

**Atmosphere.** ('Ατμος, a vapour; σφαίρα, a globe or sphere. G. Dunstkreis.) The

thin elastic aëriform fluid encompassing the earth, in gradually diminishing density, to a height which is not well ascertained, but judged to he from forty to forty-five miles, and accompanying it in its axial and orbital mo-tions. Its weight at sea level in the latitude of England is equal to that of a column of mercury, at 0°C. (32°F.), of 760 millimeters in height, and thus it exerts a pressure of 1033°3 grms, on a square centimeter of surface, or about 11′7 pounds to the square inch. Regnault determined that the liter of strengthering at 6°C. mined that a litre of atmospheric air, at 0° C. (32° F.), under a pressure of 760 mm., weighed 1.293201 grm. at the latitude of Paris. Inequalities in the temperature of the atmosphere give rise to winds. Atmospheric air consists essentially of a mixture of oxygen and nitrogen, but contains also aqueous vapour, carbon dioxide, ozone and ammonia, as normal constituents, and, as accidental impurities, various locally-formed gases and vapours, and minute particles of solids, such as sodium chloride, ammonium nitrate, and substances of animal and vegetable origin. average percentage of oxygen is 20:924 volumes; on the sea-shore and mountains it may rise to 20.999, in towns it may be as low as 20.82, in living rooms and theatres it may sink to 20.28, and in mines to 20.26. The average amount of carbon dioxide is 4 volumes in 10,000, on the seashore about 3 volumes, and in towns it may amount to 6 or 7 volumes. The amount of aqueous vapour varies greatly; the average may be taken as '84 per cent. Ammouia is present, in combination with carbonic and other acids, and is in very small quantity. Ozone is usually present, but in small quantity, as from its powerful oxidizing properties it is soon removed. inorganic impurities consist of fine particles of unineral matter, varying with the locality. organic impurities are unorganised and organised; the former consisting chiefly of the products of destruction of animal bodies given off in respiration and perspiration, and of products of decomposition of animal and vegetable structures; of the latter are the germs of low vegetable life. which, according to recent experiments, are by most authorities believed to be the cause of pntrefactive and vegetative changes

A., compres'sed. See Bath, compressed

(Same etymon. Atmospheric. atmospharisch.) Relating to the atmosphere. A. air. See Atmosphere.

A. precip'itates. (G. atmosphürische Niederschlage.) Term applied to dew, rain, hail, aud snow.

A. pres'sure. The pressure which the weight of the air exerts on everything; it is equal in all directions, and amounts to 1033.3 grms. on each square centimeter of surface, or nearly fifteen pounds to the square inch at sea-level, with a temperature of 0°C. (32°F.)

Atmospherilia. ('Armos; σφαίρα.)
The gaseous constituents of the atmosphere:

oxygen, nitrogeu, carbon dioxide, aqueous vapour, ammonium carbonate and nitrate, and ozone.

Atmospheriza tion. ( Δτμός, σφαίρα, a sphere.) The result of exposure of the blood to the air; hæmatosis.

**Atmospherol'ogy.** ('Ατμός, vapour; σφαίρα, a sphere; λογος, a discourse.) A term synonymous with meteorology.

**Atmospo'reus.** (Ατμός; σπείρω, to scatter. F. atmospore; G. Dampfverbreiter.)

Name by J. Corrigan for a disseminator of vapour, or vaporiser.

Atmostatics. ('Ατμός; στατικός, causing to stand.) The art, doctrine, or science of the comparative weight of aëriform bodies.

**Atmozo'micus.** ('Λτμός; ζώμα, that which is girded.) Applied by Blackadder to a hygrometer of his invention, consisting of two thermometers, one of which indicates the external temperature, while the other has its bowl covered by muslin kept continually moist with water, which flows drop by drop from a bottle.

Atocia. ( Λτοκος, barren. F. atocie; G. Unfruchtburkeit.) Barrenness; sterility. word formerly much used, the same as Atecnia.

Also, a term for remedies or means to produce

barrenness in women.

**Ato'cium.** ('Ατόκιος, eausing barrenness.) A name for the *Lychnis sylvestris*, becruse its flowers were said often to bear no seed. Formerly applied to a medicament which destroyed or took away the faculty of conceiving, or caused barrenness.

At'okous. ( Δτοκος, barren. G. unfrucht-

bar.) Barren.

Atolmia. ('Ατολμία, cowardice.) Want

of confidence; discouragement.

At'om. ("Ατομος, from ά, neg.; τίμνω, to cut; because it cannot be further divided. G. Urstofftheilehen.) The smallest particle of matter, which is incapable of further division; a partiele.

When used in Chemistry, the word is regarded as expressing the smallest portion of matter which

can enter into a chemical compound.

A., component. Term for that which unites with another atom of a different nature to form a third or compound atom, as the atoms of sulphur and oxygen are component atoms of sulphurie acid.

A., com'pound. Term for an atom composed of two or more atoms of different nature

and bearing itself as a simple atom.

A., elemen'tary. Term for the atom of a substance which has not been decomposed; also called primary atom.

A., organ'ic. Term for the atom of a substance found only in organic bodies.

A., primary. See A., elementary.
Atomic. (Same etymon. F. atomique;
G. atomisch.) Belonging to atoms or particles.

A. bonds. In modern Chemistry it is assumed that each of the elementary atoms has a certain definite number of bonds, and that by these alone it can be united to other atoms. Thus, the hydrogen, sodium, and chlorine atoms have only one bond or pole, and hence, in combining with each other, they can only unite in pairs. The oxygen atom has two bonds or poles, and can combine, therefore, with two hydrogen atoms, one at each pole. Again, the atom of carbon has four bonds, which may be satisfied by either four atoms of hydrogen, or four atoms of chlorine, or two atoms of oxygen, or, lastly, one atom of oxygen and two of hydrogen. Finally, the chromium atom binds six atoms of thorine, or three of oxygen, or two of oxygen and two of chlorine.

A. form'ula. A chemical formula which expresses simply the number of atoms of each constituent contained in a compound. It is described by using the symbols of each element, and a small figure on the right hand of each when the number of atoms is greater than one.

A. heat. The capacity of an atom for heat, or the quantity of beat necessary to raise the temperature of an equal number of atoms of different substances one degree. This amount is the product obtained by multiplying the atomic weight of a body by its specific heat, and is for most substances between 6.1 and 6.5. According to Dulong and Petit, the atomic heat is a constant quantity for all bodies. Further experiments have not proved the truth of the conjecture, but it is probable that the removal of some known sources of error might explain the discrepancies.

A. propor'tion. A term indicating the fact that elements combine with each other in definite proportions, according to the weight of

their atoms.

A. satura'tion. The condition in which an element is combined with the full possible

number of atoms of another element.

A. the'ory. (G. Atomtheorie.) specially applied to a theory by Dalton, which, taking into account the hypothesis that matter is composed of extremely minute indivisible particles or atoms, and that the weight of an atom of each individual element is not alike, but is different for each element, concludes that the relative atomic weights of the elements are the proportions by weight in which they combine. Modern Chemistry distinguishes between the divisibility of matter by mechanical means, which leads to moles, and the ideal divisibility resulting from the action of physical forces, which leads to the conception of molecules, which, however, are no longer perceptible to sense. Each separate substance is composed of a number of similar molecules. But, with the exception of some simple gases or vapours, every molecule can, by chemical means, be divided into at least two indivisible atoms, and the molecules of the simple bodies contain, as a rule, two atoms. The atom of an element is the smallest weight which can enter into a chemical composition; the molecule, on the other hand, is the minimum weight which can exist in the free state. Many elements combine with one another in single atoms, as hydrogen, chlorine, potassium, silver. In others, one atom combines with two atoms of the former class, as oxygen, sulphur, calcium, magnesium. In others, one atom combines with three atoms of the former, as in the case of nitrogen, phosphorus, arsenic, and antimony. And there are still others one atom of which combines with four atoms of the former, as silicon and carbon. In accordance with this the atoms of the elements are termed monad or univalent, diad or bivalent, triad or trivalent, and tetrad or tetravalent.

A. val'ue. The same as Quantivalence. A. vol'ume. The product of the division of the atomic weight by the specific gravity of an element.

A. weight. (G. Atomgewicht.) The weight of an atom of an element, which is its combining weight, expressed in figures, calculated from the assumption that the atom of hydrogen represents

Atomic'ity. (Same etymon.) The capacity of absolute saturation of any element. By an assumption made by Dumas and Lockyer, all metals and metalloids are simple modifications of a single substance, probably hydrogen, the atoms of which form different molecular groupings. Each of these atomic groupings has its own energy and affinities, and is called a molecule. The atom of potassium or sodium can only fix or saturate one

atom of chlorine or bromine; calcium and barium, in order that their attractive power may be saturated, require two atoms of chlorine. The former metals are monoatomic, the latter diatomic. Phosphorus can saturate five atoms of chlorine, and is therefore pentatomic. Those irregularities in the capacity of saturation constitute the otomicity of each kind of atom, designating by that expression especially the maximum capacity of saturation. The capacities of inferior saturations are termed quantivalences. (Letourman.)

At'omism. (Same etymon.) The doctrine of atoms in regard to the constitution of matter.

Atomis mus. (Same etymon. F. atomisme.) The system in which is explained the formation of the universe by means of atoms.

At'omist. (Same etymon.) A believer in

Atomis'tic. (Same etymon.) Having relation to atoms, or the atomic theory.

Atomiza'tion. (Same etymon.) production of a fine spray of fluid by means of an atomizer.

Also, synonymous with Pulverisation.

Atomizer. An instrument by means of which a current of fluid, issuing from a pipe, is converted into a fine spray.

Atomogyn'ia. ('Ατομος, infinitely small; γυνή, a woman.) Applied by Richard to an Order of Didynamia, having a capsular point, and corresponding to the Angiospermia of Linnæns. **Aton ia.** ('Ατονία, languor.) Atony.

A. ventric'uli. (L. ventriculus, the stomach.) Weakness of digestion.

Atoniatonbleph'aron. ('Ατονέω, to be relaxed; βλέφαρον, the eyelid. G. Augenliedererschlaffung.) Laxity of the eyelid; ptosis.

Atonic. ('A, neg; τόνος, tone or tension') Without

sion.) Without, or having diminished, tone or

Also, applied to a remedy having power to allay excitement.

Atonics. (Same etymon. F. atoniques.) A term proposed by Hardy to replace that of emollients, and, including poultices, warm lotions, and fomentations.

**At'ony.** ('A, neg.; τόνος, tone or tension. F. atome; G. Atonie, Erschlaffung, Schwache.) A term for the want, or diminution, of muscular tone or power.

Ator cular. A term applied to those cerebral sinuses which do not enter the Torcular herophili.

Ato'sia. A misspelling of Atocia.

Atotia. A misspelling of Alocia.
Atoxic. ('A, neg.; τοξικόν, poison to smear arrows with.) Not poisonous. Applied to scrpents that are not venomous.

Atrabilia'rious. (Atrabilis.) Afflicted with melancholy.

Atrabil'iary. (L. ater, black; bilis, bile. F. atrabiliaire; 1. atrabiliare; G. gallsüchtig.) Belonging to atrabilis or black bile.

Applied to the renal or supra-renal glands, or capsules, and to the arteries and veins by which they are supplied.

A. arteries. The supra-renal arteries.
A. cap'sules. The supra-renal capsules

or adrenals. A. veins. The supra-renal veins.

Atrabilis. (L. ater, black; bilis, bile. Μέλαινα χολή; F. atrabile; G. schwarzgallig, schwarze Galle.) Black bile. A term anciently used for an imaginary fluid thick, black, and aerid, supposed to be the cause of melancholia. when existing in excessive quantity; it was supposed to be secreted by the adrenals. Also called Ater succus.

Atrache lia. (A, neg.: τράχηλος, neck. G. Kurzhalogheit.) The condition of having no neck or a short neck.

Also, a Division of the Heteromers, Order Colcoptera, having the head not exserted, nor narrowed behind into a neck.

Atrachelius. Same as Atrachelous.

Atracheloceph'alus. ('A. neg.; τραχηλος, α neck; κεφαλή, the head.) In Teratology, a monster with imperfectly formed or defective neck.

Atrache'lous. ('Λ, neg.; τράχηλος, the neek. F. atrachele; G. halslos, kurzhulsig.) Wanting the neck; short-necked.

Atracten chyma. ( Ατρακτος, a spindle; χύμα, that which is poured out.) A term for the variety of proseuchyma of plants, which consists of fusiform cells.

Atrac'tis dactylu'ra. ("Ατρακτος, a spindle; δάκτυλος, a finger; δυρά, a tail.) A synonym of Ascaris duc/yluris. A sexually mature nematoid entozoon found in the large intestine of Testudo graca.

**Atractoso matous.** (Atractos, a spindle;  $\sigma \tilde{\omega} \mu a$ , a body.) Applied by Duméril to a family of fishes having fusiform bodies.

Atractoso'mous. Same as Atractosomatous.

Atractyl'ic ac'id. An acid said to exist in the root of the Atractylis gummiferu, in combination with potassium.

Atrac'tylis. ('Ατρακτυλίε, a thistle-like plant used for making spindles; probably Carthamus creticus, or C. lanatus. G. Spindelkraut.) A Genus of the Nat. Order Compositie, Suborder Cynaroideæ, Family Carlineæ. Outer bracts of the involuere large and foliaceous, inner erect; style scarcely bilobed; achenia oblong, hairy.

A. gummif'era, Linn. (L. gummi, gum; fero, to bear. F. chamæleon blanc.) The gummy-rooted atractylis, or pine-thistle. Hab. Mediterranean region. The root possesses poisonous properties, and is used by Arab women to kill their husbands. The leaves and the receptacle are boiled and used as a food in Morocco and Algeria.

A. hu'milis. (L. humilis, lowly.) Ilab. South Europe. Dinretic and diaphoretic.

Atrag'enc. A name for the Clematis vit-Also, a Genus of plants (G. Alpenrebe) of the

Nat. Order Ranuaculacea, separated by some botanists from the Genus Climatis.

A. alpi'na. (L. alpinus, belonging to the Alps.) The Clematis viticella.

Atramen'tal. (L. atramentum, ink.) Black, like ink.

Atramen'tary. (L. atramentum, a black quid, ink.) That which has the appearance or liquid, ink.) taste of ink.

Atramen'tous. (Same etymon.) Of the colour or character of ink.

Atramentum. (L. atramentum, ink. G. Schwarze, Tate.) Ink. Also, applied to blacking, to experas or vitrial, to the black fluid of the cuttle fish, and, somewhat enigmatically, as a name for the philosopher's stone.

A. suto'rium. (L. sutorium, of, or belonging to, a shoemaker.) A term for iron sul-

Atrano'ric ac'id. (G. atranorsäure.) An acid obtained from hehens, Usnea barbata,  $L_{canora}$  atra, and others, growing on einchona

Atraphax'is. ('Ατράφαξις.) Ancieut

name for the Atriplex, or orach.
Also, a Genus of the Nat. Order Polygonaceæ. A. spino'sa. (L. spinosus, thorny.) A plant yielding a kind of manna, brought from Herat, and known by the ancient writers on Materia Medica as Shir-Khisht.

Atra'tus. (L. ater, black. G. geschwärzt.) In Botany, applied to parts having a brown colour

inclining to black.

Atresely'tria. ('A, neg.; τετραίνω, to pierce; ἔλυτμον, a cover, a sheath.) Term by Breschet for imperforation of the vagina.

Atresente ria. ('Α; τετραίνω; εντερον, the intestine.) Imperforation of the intestine.

Atre'sia. ('A, neg.; τετραίνω, to per-

forate.) Old term for the absence of any natural opening or canal, either from congenital malformation, or occlusion, the effect of disease or injury; so used by Pechlinus, in Observ. i, 25.

A. a'ni. (L. anus, the fundament.) Im-

perforate anus.

A. a'ni adna ta. (L. anus; adnascor, to be born in addition.) Congenitally imperforate

A. a'ni vesica'lis. (L. anus; vesica, the

bladder.) Vesico-rectal fistula.

A. i'ridis. (L. iris, a rainbow.) Closure, by lymph, of the aperture of the pupil of the eye.

A. vagi'næ. (L. vagina, a sheath, the vagina.) Imperforate hymen. The term is usually employed to designate more or less complete occlusion of the canal of the vagina, resulting from imperfect development, or from mechanical, chemical, or pathological changes. The result is more or less complete retention of the menses, with its consequences.

Atresoblepharia. (Α; τετραίνω; βλίφαρον, the eyelid.) Adhesion of the eyelids. Atresocysia. (Α; τετραίνω; κόσος, any hollow, the vagina, the anns.) Imperforation

of the vagina, or of the anns.

**Atresocys'tia.** ('A; τετραίνω; κύστις, a bladder.) Imperforation of the bladder.

Atresogas tria. ('A; τετραίνω; γασ- $\tau \dot{\eta} \rho$ , the stomach.) Imperforation of the stomach.

Atresole'mia. ('Α; τετραίνω; λαιμός, the throat.) Imperforation of the pharynx, or œsophagns.

Atresome tria. ('A; τετραίνω; μήτρα,

the womb.) Imperforation of the womb.

Atresopsia. ('Λ; τετραίνω; ὤψ, the eye.) Occlusion of the pupil.

Atresorhin'ia. ('Λ; τετραίνω; ρίς, the nose.) Imperforation of the nostrils.

Atresostom'ia. ('A; τετραίνω; στόμα, the mouth.) Imperforation of the mouth.

Atresure thria. ('A; τετραίνω; οὐρή- $\theta \rho a$ , the urethra.) Occlusion of the nrethra.

Atretelyt'ria vagi'næ. ('Aτρητος, unpierced; ελυτρον, a sheath; L. vagina, a sheath, the vagina.) Imperforate hymen.

Atretente ria. ( Ατρητος; έντερον, the intestine.) Imperforate condition of some part of the intestine.

Atretis mus. ('Λτρητος.) Imperforation. Permanent condition of atresia.

Atretoblepharia. ( Ατρητος; βλέφapov, the eyelid.) Non-separation or persistent adhesion of the cyclids to each other. Absence of the palpebral fissure.

Atretoceph'alus. ('Ατρητος; κεφαλή, the head. F. atrétocéphale; G. Missgeburt mit mangelnden Öffnungen am Kopfe.) A monster feetus without any opening in the head, as the mouth.

**Atretocor**'mus. (Ατρητος; κόρμος, trunk.) In Teratology, a feetns in which one or other of the openings of the trunk, as the vulva, anns, or urethra, are imperforate.

Atretocys'ia. ('Δτρητος; κυσός, anus.) Imperforate anus.

Atretocys'tia. ("Ατρητος; κύστις, the bladder.) Imperforation of the bladder.

Atretogas'tria. ("Ατρητος; γαστήρ,

the stomach.) Imperiorate stomach. Atretole'mia. ("Ατρητος; λαιμός, the roat.) Imperforate condition of the upper

throat.) part of the alimentary canal, as of the pharynx and œsophagns.

**Atretome tria.** ( Λτρητος; μήτρα, the womb.) Imperforation of the womb.

Atretop'sia. ('Ατρητος; ωψ, the eye.) Imperforate condition of the pupil.

Atretorrhin'ia. (Atontos: pis, the nose.) Imperforate condition of the nostrils. ( Ατρητος; στόμα,

Atretostom'ia. month.) Imperforate condition of the mouth. Atreture thria. ( Ατρητος; οὐρήθρα,

the nrethra.) Imperforation of the urethra. ('Aτρητος, unpierced.) Atretus. perforate. Old term, used by Galen, de Sympt. Caus. iii, 4, applied to one of either sex whose

anus or genitals are imperforate, whether congenitally malformed or the effect of diseased action.

A'tria. (L. atrium, a hall.) The auricles of the heart.

A. mor'tis. (L. mors, death.) A term applied to the brain, lungs, and heart, because death was believed to commence in one or other of them, in the form of death by coma, by asphyxia or apnœa, and by asthenia, or anæmia, or syncope.

A'trial. (Same etymon.) Belonging to the

Atrium of Tunicata.

A. cham'ber. The same as the Atrium of Tunicata.

A. sys'tem. A system of branched excretory tubes, seen in Brachiopoda. They are situated within the pallial lobes, anastomose with one another, and end in caeal extremities. system communicates with the perivisceral eavity by means of two or four organs, called Pseudo-hearts.

A. tu'nic. The lining membrane of the atrium of Tunicata.

Atricapillous. (L. ater, black; capillus, bair.) Black-haired.

A'trices. ('A, neg.; θρίξ, hair.) Ancient term applied to small tumours around the anus, that are without hairs, as hamorrhoids or eondylomata; spelled with double t, Attrices, by

('A, neg.; θρίξ, hair.) A trichæ. Section of the Subdivision Lumprospora, of the Division Endosporæ, of the Class Myxomycetes. The sporangia are destitute of capillitium.

Also, a synonym of Amaboidea. Atrich'la. ('A, neg.; θρίξ, hair. I atrichie; G. Haarlosigkeit.) Loss of the hair. hair. F.

A. adna'ta. (L. adnascor, to grow to.) Congenital alopecia.

A. senilis. (L. senilis, belonging to old people.) Baldness of old age.

A'trichus. (Ατρίχος.) A hairless person.

A'trici. (L. atrium, a hall.) Old term for wounds or sinuses at the extremity of the rectum, but whose concavity does not perforate the intestine.

Atrioventric'ular. (Atrium; ventricle.) Pertaining to the auricle and ventricle of the heart.

A. valves. (G. Atrioventricularklappen.) The valves closing the auriculo-ventricular aper-

A'triplex. ('Ατράφαξις. G. Melde.) The plant orache. A Genus of the Nat. Order Chenopodiaceæ.

A. al'imus. See A. halimus.

A. ambrosioid'es, Crantz. The Chenopodium ambrosicides.

A. angustifo'lia. (L. angustus, narrow; folium, leaf.) Narrow-leaved orache. Indi-

genous. A variety of A. patula. A. anthelmint'ica, Crantz. The Chenopodium anthelminticum.

A. botrys, Crantz. The Chenopodium

botrys. A. delto'idea. (Δ, the fourth letter of the Greek alphabet; εἶδος, form.) Triangularleaved orache. Iudigeuous.

A. erec'ta. (L. erectus, upright.) Spear-leaved orache. Indigenous. A variety of A. patula.

A. foe'tida. (L. fwtidus, stinking.) A name for the Chenopodium vulvaria, or stinking orache.

**A. hal'imus.** ("Αλιμος, belonging to the sea.) The orache. The A. littoralis.

A. horten'sis. (L. hortensis, belonging to a garden. F. chenopode des jardins, arroche, bonne dame.) Orache. Λ pot-herb. Its infusion is regarded as an emetic. The plant and seeds are extincentation. are antiscorbutic.

A. lacinia'ta. (L. lacinia, a fringe.) Frosted sea orache. Indigenous. Used for making

a pickle.

A. littora'lis. (L. littoralis, belonging to the sea-shore.) Indigenous. The grass-leaved sea orache, formerly considered antiscorbutic, its leaves and young shoots being pickled and eaten like samphire. Also called A. halimus.

A. mari'na. (L. marinus, belonging to

the sea.) A variety of A. littoralis.

A. mexica'na. The Chenopodium ambrosioides.

A. odora'ta. (L. odoratus, sweet-smelling.) The Chenopodium botrys.

A. ol'ida. (L. olidus, stinking.) Chenopodium vulvaria.

A. pat'ula. (L. patulus, from pateo, to be open.) Delt orache, lamb's quarters, fat hen, spreading orache. Indigenous. A species the leaves of which are eaten like spinach, and also used as a pickle.

A. peduncula'ta. (L. pedunculus, a small foot, a foot-stalk.) Marsh orache. Indigenous.

Used as a pickle.

A. portulacoi'des. (L. portulaca, the plant purslane; ɛlōos, form.) Shrubby or sea purslane. Indigenous. Formerly esteemed antiscorbutic. The leaves and shoots are sometimes

used for pickles. Also called Portulaca marina.

A. purslia'na. The A. patula.

A. sati'va. (L. sativus, that which is

sown.) The systematic name of the orache. The herh and seed were formerly exhibited as antiscorbutic. Also called A. hortensis.

A. sylves'tris. (L. sylvestris, belonging to a wood.) The Chenopodium album, var. viride. Atriplex'um. Formerly used for Atri-

Atriplic'eæ. A synonym of Chenopo-

Atriplicin'ea. A synonym of Chenopo-

Atritostom'ia. See Atresostomia. A'trium. (L. atrium, the fore-court, or hall; probably from Atria, a Tuscan town, where this style of architecture originated.) The entry,

porch, or hall of a house; a court-yard. Applied to the auricles of the heart, but more especially to that main part of the auricle into which the veins directly pour their blood, as distinguished from the appendix auriculie.

Also, a term for the large cavity into which the intestine opens in Tunicata; itself has au external opening, and is lined by a membrane, which is reflected like a serous sac on to the viscera.

A. ante'rius. (L. anterior, in front. G. rechte Vorhof, Hohlvenensack.) The right The right auriele.

A. cor'dis dex'trum. (L. cor, the heart; dexter, on the right side.) The right auricle of the heart.

A. cor'dis sinis'trum. (L. cor; sinister, on the left side.) The left auricle of the heart.

A. dem'trum. (L. dexter, the right. G. rechte Forhof.) The right auricle.

A. poste'rius. (L. posterior, hehind. G. linke Vorhof, Lungenvenensack.) The left auricle.

A. sinis'trum. (L. sinister, the left. G. linke Vorhof.) The left auricle.

A. vagi'nae. (L. vagina, a sheath, the vagina.) The vestibule of the vulva.

Also, the upper part of the sinus urogenitalis of the female human embryo, into which open the urethra and the united lower portion of Müller's ducts.

A'trix. The singular number of Atrices Atrocha. ('A, neg.; τροχός, a wheel.)
A term applied to those larvæ of Polychæte worms in which the cilia form a broad zone encircling the body, but leaving at each end an area, which is either devoid of cilia, or, as is frequently the case, has a tuft of long cilia at the cephalic

At'ropa.  $(\Lambda \tau \rho o \pi o s)$ , one of the three Fates, whose special duty it was to cut the thread of life; because of its deadly effects. F. bella-done; G. Tollkirsche, Tollkraut, Wolfskirsche.) A Genus of the Nat. Order Solanacea, or of the Nat. Order Atropaceæ. Leaves entire; flowers solitary or few, peduncled; calyx five-partite; corolla campanulate, regular; stamens five, arising from the bottom of the tube of corolla; filaments filiform; anthers with slits; ovary twocelled; style simple; stigma peltate; berry two-

celled, many-seeded, not filled with pulp.

A. belladon'na, Linn. (I. bella, handsome; donna, woman; in allusion to the flowers. F. belle dame, morelle furicux, permentan, belladone; S. belladonna; G. Nachtschatten, Wolfskirsche, Tollkirsche, gemeine Wolfskirsche, tödtlicher Nachtschatten; Dan. Natakade; Dut. Doodkruid, Doodelyke nachtshade; Swed. Wargbaer; Arab. Inubas saleb, Amrea; Ind. Sagunggor; Pers. Rubah turbue; Pol. wileza wisnia; Rus. Krasa vitsa; Turk. Ghiuzel avrat.) The belladonna; deadly nightshade, death's herb, great morel or dwale. An indigenous, aunual, herbaceous plant, found in woods. Stems 3-5 feet high, branched, downy, reddish; leaves ovate, entire, often in pairs, of unequal size; flowers stalked. solitary, drooping, about one inch long; corolla campanulate, greenish towards the base, dark purple towards the extremity; berries shining, black, the size of a small cherry, two-celled, with many small reniform pitted seeds, enclosed by, but not lying in, a mawkish tasting pulp. plant is largely used in medicine as a remedy in nervous and other diseases. See Atropia and Belladonna.

A.mandrag'ora. (Μανδράγορας, possibly from μάνερα, a stable; ἀγορέω, to denote; because it grows near cattlesheds. F. mandragore; 1. and S mandragora; G. Alram; Dut. alrain; Arab. Jabora, Ustrang; Turk Insankenku; Egypt. Apemon; Beng. Yehraj; Tam. Kantjulie; Per. Merdum quah; Pol. Pokrzyś-zele.) Dudaim of the Old Testament. The mandrake. A stemless plant, with a large forked, fleshy, perennial root; leaves lanceolate; flowers concealed among the leaves, pale violet; corolla campanulate, plaited; stigma capitate; stamens enclosed in the tube of the calyx; berry two-celled, surrounded by the enlarged calyx. Hab, South Europe. An aeronarcotic and purgative. The peculiar forked form of the root has led to the term anthropomorphon and of semihomo being applied to it, from its likeness to a man's legs, a circumstance which was taken advantage of in ancient times by the mountchanks, who, by a little artificial preparation of the upper portion, sold the roots to the credulous as possessed of marvellous virtues, especially as incentive to love. It was formerly employed in Europe, and still is in China, as an anæsthetic. It is regarded as an aphrodisiae, and is sometimes used in the form of cataplasm to disperse strumous and seirrhous tumours

A. physalo'des. The Nicauda physa-

Atropa ceæ. (Atropa.) A Nat. Order of corollidoral Exogens, separated by Miers from the Solunaceæ and the Scrophulariaceæ. They are distinguished by their imbricated astivation, by the unequal size of the lobes of the corolla, and by the longitudinal dehiscence of the anthers. It includes Atropa, Datura, Hyoscyamus, Naco-

tiana, and Mandragora.

Atropal. (Λ. neg.: τρίπω, to turn. G. germlaufig.) A term applied to an oxule which retains, when fully developed, the original relation of the parts, the nucleus straight, and the micropyle opposite the hilum. This condition is also called orthotropal.

Atropeæ. Applied to a Tribe of Solanacea, having the Alropa for their type.

Atroph'ia. ("Ατροφια, want of nourishment; from a, neg.; τρέφω, to nourish. G. Inarsucht.) Atrophy. A Genus of di-case of the Order Marcores, Class Cachexia, of Cullen's nos dogy; consisting in emaciation and loss of strength, without heetic fever.

A. ablactato'rum. (L. ablacto, to wean.) A term by Cheyne for the wasting and diarrhoea which occurs sometimes in newly-weaned chil-

A. acu'ta jecin'oris. (L. acutus, violent; jecur, the liver.) Acute atrophy of the liver.

A. cacochym'ica. (Κακοχυμία, badness of the juices.) Atrophy from corrupted food.

A. cer'ebri. (L. cerebrum, the brain.) Atrophy of the brain.

A. cor'dis. (L. cor, the heart.) Atrophy of the heart.

A. debil'ium. (L. debilis, debilitated.) Atrophy proceeding from a deprayed state of the function of nutrition, without previous or ex-cessive evacuation, or deprayed state of the humours.

A. den'tis. (L. dens, a tooth.) Atrophy of the teeth.

A. famelico'rum. (L. famelieus, a famished person.) Atrophy from defect of nourishment.

A. glandula'ris. (L. glandula, a gland.) Strumous disease of the mesenteric glands.

A. hep atis. (H $\pi a \rho$ , the liver.) Atrophy of the liver.

A. inanito'rum. (L. inanitus, part. of inanio, to empty out.) Atrophy from excessive evacuation.

A. infant'um. (L. infans, a young child.) Strumous disease of the mesenteric glands.

A. ingraves cens musculo rum. ingravesco, to increase; musculus, a muscle.) Progressive muscular atrophy.

A. intestino'rum. (L. intestina, the intestines.) Atrophy of the conts of the intes-

A. lactan'tium. (L. lactans, she who gives suck.) A term for the dehibity and loss of flesh which occasionally occurs during lactation.

A. latera'lis crucia'ta. (L. cruciatus, part. crucio, to crucify. G. gekreuzte halbseitige Atrophie.) Atrophy of the nerves, museles, and bones of one side of the body, resulting from imperfect development of one hemisphere of the cerebrum and the opposite half of the cerebellum and spinal cord.

A. lie'nis. (L. lien, the spleen.) Atrophy

of the spleen.

A. linea'ris. (L. linearis, consisting of lines.) The lines indicating excessive tension of the skin, seen on the abdomen and breasts of women who have been pregnant.

A. mesenter'ica. A term for Tabes me-

senterious.

A. musculo'rum progressi'va. musculus, a muscle; progredior, to proceed.) See Atrophy, progressive muscular.

A. musculo'rum progressi'va pseu**dohypertroph**'ica. (Ψευδής, false; υπέρ, above: τροφή, nutrition.) See Pseudohypertrophia musculorum.

A. spina'lis. (L. spinalis, belonging to the spine.) A term for Ataxy, locomotor.

A. testic'uli. (L. testiculus, a testicle.) Atrophy of the testicle.

A. un'guium. (L. unquis, a nail.) Atrophy of the nails. Atrophic. (Same etymon.) Ill-nourished;

wasted; relating to atrophy.

A. paralysis. A synonym of Atrophy, progressive muscular.

Atroph'ici mor'bi. (Ατροφος, illfed: L. morbus, a disease.) Diseases of nutrition, characterised by loss of desh and strength.

Atrophol'ysis. (Ατροφίος, pining away; λόσις, a loosing. G. atrophische Auflosung) Term for atrophic solution, or wasting.

**Atrophy.** (Ατροφια, want of nourishment, G. Durrsucht.) Term for wasting or

emaciation of the body, with loss of strength, unaccompanied by fever; defect of nutrition.

Also, applied to diminution in the size and weight of an organ or tissue with loss of func-

tional power.

Atrophy is said to be simple or numerical, general or partial; in its later stages it is accompanied usually by change of structure, such as fatty degeneration. It may be caused by a deficient supply of nutrient matter, as in starvation, stricture of esophagus, obstruction of theracic duet, pressure on blood-vessels, or of retained secretion, or disease of mesenteric glands; from excessive waste, as in hæmorrhage, suppuration, diarrhæa, diabetes, fever, or inordinate use of an organ; it may be caused by disuse of an organ, by inflammation, hy injury to the nerve supply, and by certain drugs, such as iodine, bromine, and

In Botany, the term atrophy is generally used synonymously with arrest of development or

abortion.

A., acciden'tal. Wasting of an organ or part of the body from pressure on itself or on its source of untrient supply.

A., Cruveil'hier's. A term for A., pro-

gressive muscular.

A., gen'eral. Atrophy or emaciation of the whole body. A., lin'ear. (L. linearis, consisting of lines.)

A form of morphæa in which the deposit takes

place in lines.

More usually applied to the glistening, bluish-white bands, half an inch or more in width and much more long, seen in more or less parallel curves about the hips and thighs; they are caused by atrophy of the papillary layer of the skiu and of the subjacent fatty tissue. See, also, Atrophia linearis.

A., necrobiot'ic. (Necrobiosis.) The same as A., numerical.

(Νευρά, a nerve.) A term A., neu'ral. synonymous with Chronic neuritis.

A., numer'ical. A term applied to the form of atrophy of an organ in which the number, as well as the size, of its histological elements is diminished, some of them being utterly destroyed.

A., par'tial. Wasting of an organ or a

tissue only.

A., par'tial fa'cial. A condition described by Romberg, in which there is atrophy of the structures of the lower part of one side of the face, without anæsthesia. The skin becomes tense, glistening, and white; sometimes there is atrophy of the corresponding side of the tongue. The electric contractility of the muscles is not lower, but there is some diminution of temperature. disease is probably of a trophic nature and of central origin.

A., physiolog'ical. Wasting of an organ from disuse, or when no longer needed, as of the umbilical vessels in the new-born child, the thymns in infancy, the ovaries after the cessation

of menstruation.

A., progres'sive muscu'lar. paralysic amyotrophique; G. progressive Muskelatrophie, progressive Muskellahmung.) Cruveilhier's atrophy. The essential feature of this disease is a slowly progressive wasting of the voluutary muscles, ending in complete annihilation of the functions of the muscles affected, very rarely curable, and in many cases leading to death. It is characterised anatomically by the nature of

the pathological changes in the muscles, consisting in chronic myositis, interstitial proliferation of connective tissue, with secondary destruction of the muscular fibres, and, finally, fibrous degeneration, conditions that are associated with various changes in the nervous system. The disease presents a distinct tendency to heredity. It is more common in men than in women, and in adults of thirty to fifty years, than in youth or age. Its occurrence is favoured by acute exhausting diseases, as typhoid and measles, and by certain dyscrasice, such as lead poisoning, syphilis, and rheumatism. It usually commences in the upper extremities, sometimes in the lower, and rarely in the facial muscles. The interessei, and especially the first dorsal intero-seous muscle. are first affected, then those of the thumb and little finger, then special groups of museles of the fore and upper arm. The muscles affected lose their vigour, and either emaciate, or retain their volume by undergoing fatty degeneration. They present fibrillary contraction, and ultimately permanent contractures and deformities are developed, such as the clawed hand. They cease to respond to electrical currents, whether faradaic or constant. Pain is sometimes felt in them, followed by partial paralysis of sensation and formication, sensation of cold, and the like. The temperature may at first be somewhat increased, but soon falls one or more degrees centigrade below the normal. Vaso-motor and trophic disturbances have often been observed, such as local sweatings, painful swelling of joints, and atrophy of the integuments. The disease is associated with disease of the anterior and lateral columns of the cord, and by the appearance of granular exudation masses replacing the ganglion cells in the anterior cornua of the grey matter. Various changes have also been described in the sympathetic nerves and peripheral nerves. The proguosis is unfavorable.

A., pul'monary.  $\Lambda$  condition occurring in senile atrophy and after arrested lung-diseases ; the air-cells are dilated. In these cases the chest looks fixed, the diaphragm is depressed, there is epigastric pulsation, the lung covers the heart, and the percussion note is tympanitic.

A., qual'itative. Atrophy accompanied by degeneration of tissue.

A., quan'titative. Simple atrophy unaccompanied by change of structure.

A., rheumatic. Loss of size and strength of muscles after rheumatism.

A., rig'id. Atrophy of museles, combined with rigidity.

A., se'nile. The emaciation which accompanies old age.

A., sim'ple. The diminution in size only of the histological elements of an organ, without or with little change in structure.

A., spi'nal. A synonym of Ataxy, loco-

motor.

Atro'pia. See Atropin.

Atropiæ sul'phas, B. Ph. Sulphate of ropin. This is directed to be prepared with atropia 120 grains, distilled water 4 tl. drachms, diluted sulphuric acid a sufficiency. The solution is evaporated to dryness. It is a colourless powder, soluble in water, forming a neutral solution, which dilates the pupil. It leaves no ash when burnt.

A. sulphas li'quor, B. Ph. Solution of sulphate of atropin. This contains 4 grains in 1 fl. ounce of water.

(G. Atropasäure.) Atropic acid.

 $C_9H_8O_2.$  An acid obtained by boiling atropin with caustic soda, when a sodium atropate is formed, which being decomposed by muriatic acid, the acid appears in the form of oily drops, melting at 98° C. (208.4° F.), and volatilising at 105° C. (221° F.), with an odom of benzoic acid. It dissolves in 692.5 parts of water at 19.1° C. (66.38° F.), and can be crystallised in tahlets belonging to the clinorhombic system. It is iso-

meric with cinnamic acid.

Atropin, C<sub>17</sub>II<sub>23</sub>NO<sub>3</sub>. An organic base, obtained from the Atropa belladonna, in which it probably exists as a malate; and, as an isomeric compound, is contained in Datura stramonium. It appears in the form of colourless, odourless, acicular crystals, with silky lustre and bitter taste. It has an alkaline reaction. It dissolves in 299 parts (Planta) or 500 parts (Geiger) of cold water, 30 parts of hot water, in 8 parts of rectified spirit, and 1 part of ether. The solution is optically inactive, but if it contains, as is often the case, daturin, it rotates polarised light feebly to the left. It melts at 90° C. (194° F.), and volatilises, at the same time decomposing, at 140° C. (284° F.). Its solution in water gives a citron yellow precipitate with terchloride of gold. It dissolves in sulphnric acid, giving a red, and ultimately black, colour to the solution. On addition of bichromate of potash to the solution, the mixture acquires a green colour from the production of peroxide of chromium. It is not precipitated by pierie acid. It is precipitated from its solutions by caustic alkalies, and also by ammonia, the precipitate with ammonia redissolving in slight excess of the reagent. Hydrobromic acid saturated with free bromine gives a yellow precipitate, insoluble in the mineral acids and caustic alkalies, and in acetic acid. Solution of iodine in iodide of potassium gives a reddish-brown precipitate, insoluble in potash or in acetic acid. Gold chloride and carbazotic acid give yellow precipitates, the former insoluble, the latter soluble, in potash. Tannic acid gives a white amorphous precipitate, soluble in caustic alkalies (Woodman and Tidy). In regard to its physiological properties, Schroff found, fifteen minutes after the administration of 0.005 gramme (0.772 of a grain) of atropia, violent frontal headache; after thirty minutes, wide dilatation of the pupil; after forty minutes, heat and dryness of the hands, and formication of the skin, drvness of the throat, increasing rapidly, till swallowing could not be performed. pulse at first fell about ten beats, but quickly increased in frequency till, ninety minutes after the dose had been taken, it was forty beats above the normal. The muscular power was weakened, so that the gait was staggering. There was con-siderable mental excitement. The after-effects, chiefly expressed in dilatation of the pupil and debility of mind and body, lasted three days. A drop of a solution containing only 1 part to 129,600 of water is sufficient to affect the pupil sensibly. The effects on the pulse appear to be due to the fact that atropin first stimulates and then paralyses the inhibitory fibres of the vagus, or perhaps paralyses an inhibitory centre in the heart itself. The respiration is accelerated with small, but is greatly retarded with large, doses of atropin; and in accordance with this the animal heat is at first slightly increased, then lowered. Atropin exalts the reflex excitability of the spinal cord. Atropin neutralises the action of physostigmin, muscarin, pilocarpin, aconitin,

hydrocyanic acid, and bromal, in greater or less degree; its antagonistic influence on morphia is very doubtful. As an internal remedy it has been used in phthisis to diminish sweating; also, in various acute infectious diseases, as searlet fever, in which it has been supposed to cut short the attack, though the evidence on this point is very unsatisfactory, crysipelas, measles, and hooping-cough. In dysentery it is said to relieve the tenesmus, and it has been employed in intermittent fever and in hydrophobia. It has been found useful in neuralgie affections, in rheumatism and gout, in constipation and spasmodic diseases of the anus, and of the genito-urinary apparatus. It is serviceable in the incontinence of urine of children; and in various neuroses, as cpilepsy, chorca, and tetanus. Tronsscau recom-mended it in the vomiting of pregnancy, and in asthma. As an external remedy the alkaloid is chiefly used in ophthalmic surgery to effect dilatation of the pupil, which it effects by paralysing the thirl nerve, sphincter iridis, and perhaps also by stimulating the sympathetic fibres supplying the dilator iridis. The ciliary muscles are also paralysed, hence there is loss of the power of accommodation. The action, when a solution of 1 to 120 is employed, commences in the adult in fifteen minutes, attains its maximum in twenty or twenty-five minutes, and lasts for ten or eleven days. It acts strongly on the cat, dog, or frog, slightly on rabbits and birds, and not at all on fishes. In ophthalmic diseases it is commonly used to dilate the pupil, in order that a searching ophthalmoscopic examination of the media and fundus may be made, but it is also used as a therapeutic agent in cases of wounds near the centre of the cornea, to prevent engagement of the margin of the iris. In keratitis to relieve the irritability of the conjunctiva and the intolerance of light. In ulceration of the cornea. especially when the ciliary neuroses are severe. In iritis, to prevent adhesion of the iris to the capsule of the lens. In cases of posterior synechiæ, to break down the adhesions that have formed between the iris and capsule of the lens, in consequence of iritis. In cases of central maculæ, to enable light to penetrate into the interior of the eye at the margin of the opacity. In cases of spasm of the accommodation caused by too prolonged a strain of the eye on close work. means of determining the refraction of longsighted eyes, when it renders evident the latent hypermetropia. In the treatment of myopia. And finally, as a preparatory proceeding in many operations on the lens and iris, which it facilitates by affording more space for the introduction and use of instruments. See, also, Belladonna.

A. discs. (Chartæ atropinisata.) Small discs punched out of a sheet of gelatin impregnated with atropin. Used by oculists as a convenient means of carrying atropin, and of applying a known quantity.

a known quantity.

A. o'leate. Two parts of atropin dissolved in 98 parts of oleic acid. Used externally as an

anodyne.

A. pa'per. Books of bibulous paper impregnated with solution of atropic sulphas, and marked out into squares of about one eighth of an inch. Used chiefly by oculists as a ready and convenient means of dilating the pupil.

A. pot'soning. See Belladonna poisoning.
A. salicyl'ate. A salt obtained by mixing
16.2 grm. of atropin with 7.8 grm. of salicylic

acid. It is a powerful mydriatic, and does not irritate the eye.

Atropinum. Atropin.
A. pu'rum, G. Ph. (L. purus, pure.) Dose,
0:0003—0:0009 gramme. The same as Atropia. A. salicyl'icum. See Atropin salicy-

A. sulfu'ricum, G. Ph., Aust. Ph., Russ. Ph. (G. schwefelsaures Atropin.) The same as Atropiæ sulphus.

A. valerian'icum. (F. valerianate d'atropin; G. valeriansaures Atropin.) A salt, easily soluble in water, smelling of valerianic acid. Used in the same way, and in the same doses, as Atropiæ sulphas.

Atropism. The poisonous effects of atropin, or helladonna. See Belladonna, poisoning

by.

Atropurpu'reus. (L. ater, black; purpureus, purple. F. d'un pourpre noirâtre, Of a dark blackish-purple colour.

Atroru'bens. (L. ater; rubens, part. of rubeo, to redden.) Of a reddish-black colour.

Atrosanguin'eous. (L. ater; sanguineus, bloody. F. d'un rouge sanguin noirâtre.) Of a dark blood-red colour.

Atro'sia. A false synonym of Atrophia. Atrosin. A red colouring matter obtained from the root and the fruit of Atropa belladonna.

Atrovirens. (L. ater, black; virens, part of vireo, to he green. F. d'm vert noirâtre; G. schwartzgrün.) In Botany, greenish black.
A'try. (L. ater, black.) Purulent; contain-

ing matter; applied to a discharging sore.

(As if attinga, from attingo, to At'ta. touch lightly.) Old term used by Festus for one who, by reason of the gout or other disease of the legs or feet, touches rather than treads the ground. (Castellus.)

Attack'. (F. attaquer, to attack.) invasion of, or sudden seizure by, a disease.

Also, the existence of a disease, as an attack of

At'tagas. (Αττάγας, or αττάγην.) bird much esteemed as food by the ancients. It was a little larger than a partridge, and of variegated plumage. It was probably the Tetrao bonasia, L., the Italian francolino, a kind of grouse. Some believe it to have been the lesser

bustard, others the red grouse.

Attage'na. (L.) A synonym of Attagas.

Attalea. A Genus of the Nat. Order
Palmacee. Lofty palms of the cocoa-nut tribe. The kernel, when rubbed in water, forms an emulsion, used in medicine, both externally and internally. The central bud is used as food.

Atta'leth. The name in Morocco of the tree producing Barbary gum. It is believed to

be the Acacia gumnifera.

At'tar ghul. The otto or attar of roses.

A. of ro'ses. The volatile oil of roses. See Oleum rosæ.

Attelle. (L. assula, ferula. F. attelle; G. beinlade, beinschiene.) A splint. An instrument used in the treatment of fractures.

Atten'tion. (L. attentio; from ad, to; tendo, to stretch. F. attention; G. Aufmerksamkeit.) The sustained and continued concentration of the consciousness, or of the mental faculties on some particular object or question. The closeness of the application, the extent to which it is pro-longed, and the relevance of the whole train of thought to the object or question under notice, give the measure of the amount and extent of the attention. In difficult cases the mind is said to be on the stretch, and this is the meaning of the word attention, as translated into English. Attention may be considered, according to Hamilton, as the opposite pole to abstraction in the same mental act.

A., automatic. ('Αυτόματος, of one's own accord.) That form of attention which is secured

by the attractiveness of the object.

A. volit'ional. (L. rolitio, will.) That form of attention which is obtained by an effort of the will.

Attenuant. (L. attenuo, to make thin. F. attenuant; G. verdannend.) Applied to that which, it is supposed, can impart to the blood or the secretions a thinner or more fluid consistence, as water, whey.

Atten'uants. (Same etymon.) Medicines which produce attenuation of the blood and thinning of the body.

A., direct'. A term applied to mercury, iodine, the alkalies and fucus vesiculosus.

A., in'direct. A term which includes purgatives, especially saline purgatives, diaphoretics, and diureties.

Atten'uate. (Same etymou.) Tapering gradually to a point.

Attenuated. (L. attenuo, to make thin. F. attenué; G. verdunnt, geschwacht.) Become slender: thin.

Attenua'tion. (L. attenuatio, a dimiuisbing. G. Verdunnung.) A making thin; a dilution.

Also, applied to fluids when they become of lighter specific gravity from internal chemical action, or by the addition of water.

A., foe'tal. (F. attenuation fatale.) A term applied to describe a method of reducing the size or arresting the growth of the fœtus when, from pelvic deformity or other cause, it is believed that a full-grown child could not be born alive; it consists chiefly in low diet, occasional bleedings, and iodine.

At'ti a'lu. The Malabar name of the Ficus raecmosa.

At'tich. (Ger.) The Sambucus ebulus. Attin'car ven'eris. (Venus, the goddess of love, an old term for silver. An alchemical term, used by Paracelsus, Manual, i, for the whitening of copper, to transmute it into silver.

Attin'gat. (Arab.) Old name for verdi-(Ruland and Johnson.)

At'tisholz. Switzerland, near Solothurn. A mineral water, of a temp. 15° C. (59° F.), containing calcium and magnesium chloride. is used in gout and rheumatism, in gastric diseases, and chronic diarrhea.

Attitude. (F. attitude; G. Leibesstellung, Stellung.) Term for the different positions which the body can assume by the action of its muscles; the position of the body in disease often presents very important indications.

Attol'lens. (L. attollo, to raise up.) Raising up; elevating. Applied to certain muscles.
A. au'rem. (L. auris, the ear. G. Ohr-

The A. auriculam.

A. auric'ulam. (L. auricula, the external ear.) A small fan-shaped muscle, arising from the tendon of the occipito-frontalis muscle, and inserted into the inner or cranial surface of the pinna of the ear; supplied by the occipitalis minor, and auricular branch of the facial nerves, and by the temporal artery.

A. hu'merum. (I. humerus, the shoulder.) The deltoid muscle.

A. oc'uli. (L. oculus, the eye.) The

superior rectus muscle of the eye.

Attonitus. (L. attono, to make astomshed. F. ctonne.) Properly, thunderstruck, but used synonymously with surprised or amazed; astonished.

A. mor bus. (L. morbus, disease.) formerly applied to apoplexy, from the sudden and overwhelming nature of its attack.

Attouch'ement. (F. a, to; toucher, to handle.) A French term for masturbation.

Attraction. (L. attraho, to draw to. F. attraction; G. Anziehung.) A drawing to another. That universal power by which matter attracts matter; it is exerted at all distances; is directly proportional to the amount of the masses, and inversely proportional to the square of their distances.

A., cap'illary. See Capillary attraction. A., chemical. The same as Affinity, chemical.

A., elec'tive. That apparent process of selection by which certain substances will combine with only certain, and not all, others.

A., elec'tive, doub'le. A term the operation or agency by which, when two bodies, each compounded of two principles, are applied to each other, and mutually exchange a principle of each, two new bodies or com-pounds are produced, of a different nature from the original compounds. Also, termed double

A., elec'tive, sim'ple. That hy which, when a simple substance is applied to another compounded of two principles, it unites with one so as to exclude the other. Also termed simple,

or single, affinity.

A., elec'trical. The tendency to touch each other which exists in two bodies charged with opposite electricities. This attractive force is exerted in the inverse ratio of the squares of the distance of their centres from each other, and in the direct ratio of the amount of electricity with which they are charged.

A .. electrodynam'ie. The mutual attraction exerted between electric currents moving in

parallel lines.

A., magnetic. The attraction exerted by a magnet on pieces of iron. This force is greatest near the extremities, least at the centre, of the

magnet.

A., molec'ular. (L. moles, a mass, dim. molecule.) The force which attracts molecules towards each other and aggregates them in masses; it is exerted only at infinitely small distances. To different aspects of the same force are given the terms adhesion, chemical affinity, and cohesion.

A. of affin'ity. The tendency towards each other of different elements or compounds in such wise as to form a new compound. See

Affinity, chemical.

A. of aggrega'tion. A synonym of Cohesion.

A. of cohe'sion. The tendency of molecules to adhere to each other, so as to form masses. See Cohesion.

A. of gravita'tion. The tendency of See Gravitation. bodies towards the earth. See Gravitation.

A., univer'sal. The tendency of all

masses of matter to approach each other. See Attraction.

Attrac'tive. (L. ad, to; traho, to draw.) The same as Attrahent.

Attracto'rius. Same etymen and meaning as Attrahent.

Attrahens au'rem. (L.ad, te; traho, to draw; auris, the ear. G. Anzieherdes Ohres.) The A. auriculam.

A. auric'ulam. (L. auricula, the external ear.) A small muscle of the external car, arising from the fere part of the aponeurosis of the occipite-frontalis muscle, and inserted into the front of the helix. It is supplied with blood by hranches of the temporal artery, and with nerves by the temporal branch of the facial nerve, and by the auricular branch of the auricule-temporal brauch of the fifth pair of nerves.

Attra'hent. (L. attraho, te draw unte. F. attractif ; G. anziehend.) Drawing ; applied to medican ents which produce irritation of the surface to which they are applied, thereby attracting the fluids to the part, as blisters, sinapisms; synonymous with Epispastie.

At'trie. (L. ater, black.) Purulent; containing matter.

Attri'ta. (L. attritio, friction.) Chafing. Attritio. (L. attritio, friction.) Chafing. Attrition. (L. attritio, from attero, to rub against. F. attrition; G. Anreibung, Aufreibung.) Term for an abrasion or solution of continuity of the cuticle.

Also, for a severe kind of cardialgia, or heartburn, accompanied with great pain and sense of

suffication.

Term for the violent crushing of a part. (L. attritus, a rubbing.) Attri'tus. Chating.

A'tum condina'dum. The commer-

cial name of the Lycopodium rubrum.

Aturion. The Greek name of the eeterach; a fern that was formerly used as a bechie and lithontriptic.

At'ya. Austria-Hungary; in the County of Weissenburg. An earthy alkaline water, containing calcium carbonate 5.5 grs., magnesium carbonate 5 grs., magnesium chloride 6 grs., with much free carbonic acid, in 16 ounces.

Atypia. (Λ, neg.; τύπος, a type. F. atypic; G. der Mangel an Regelmassigkeit.) De-

fect or irregularity in the usual appearance.

Atypic. ('A, neg.; τύπος, a type. G. Unregelmussig.) Irregular, not according to

In Morphology, net conformable to the ordinary type, presenting exceptional characters. Thus, for example, as a rule, two vomers exist in all Batrachia, but only one in Dactylethra, which so is atypic.

An intermittent fever with A. fe'ver. irregular exacerbations.

Atypomorpho'sis. ('Λτυπος, conforming to no distinct type; μόρφωσις, a shaping.) A kind of metamorphosis in which the larva entirely lose their primitive form, and contract into a small ball without any external appearance of the insect they contain, as in most of the Diptera.

At'ypos. ('A, neg.; τύπος, a type. F. atypique; G. atypisch, unregelmässig.) Having no regular form or type. Applied by Galeu, de Typis. iv, to fevers that have no regularity in their periods.

Alse (G. undeutlich sprechend), speaking inarticulately, stammering.

Atypus. Same as Atypos.

**Auan'te.** (Λὐαίνω, to dry.) Old name (Gr. αὐάντη), used by Hippocrates, l. ii, de Morb. lxiv, i, for a disease attended with emaciation, supposed to proceed from an acid ferment in the stomach, and a morbid state of the pancreatic juice. Also called Auapse.

Auap'se. The same as Auante.

Auaremote mo. See Pithecolobium anaremotemo.

Auber'gier's syr'up. A syrup of lactucarium, containing rather more than three grains to the ounce. Used as a sedative.

Aubergine. (Fr.) The egg-apple; the

cylindrical, reddish, edible fruit of the Solanum esculentum, or S. melongena.

Au'bier. (Fr.) The alburnum, or outer

Aubifoin. (Fr.) The Contaurea cyanus.

Aubifoin. (Fr.) The Centaurea cyanus.

Aubletia. A Genus of the Nat. Order

A. trifo'lia, Rich. (L. tres, three; folium, a leaf.) A Brazilian species, said to be a source of a kind of jaborandi.

Aucella. (L. avicella. G. Vögelehen.) A little bird.

Auch'en. (Λύχήν.) Old term for Cervix, or Collum ; the neck.

Auchena tes. (Λύχήν. F. auchénates.) Name by Degeer for an Order of Aptera, having a neck or a head distinct from the corselet.

**Auche'nia.** (Αὐχήν, neck.) A Genus of the Group Tylopoda, or Family Camelidæ, Suborder Artioductyla, Order Ungulata.

A. Ila ma. (G. Kamcelziege.) The llama. A South American unhorned ruminant. One of the animals producing the occidental bezoar.

A. vicun'na. (G. Schafkameel.) The

vicuna. One of the animals producing the occidental bezoar.

**LEAUCHENIA Tria.** (Αυχήν; *laτρεla*, a healing. G. *Halsheitkunde*.) Treatment of diseases of the neck.

**Auchenis'ter.** (Αυχευιστήρ, a halter; from αὐχευίζω, to behead.) An instrument devised by Scanzoui for decapitating the fœtus in order to effect delivery under certain circumstances.

(Λύχήν.) Name by Auche'nium. Illiger for the region of the neck below the nape.

**Auchenoptera.** (Λύχην; πτέρον, a wing. F. auchinoptere; G. Kehlflosser-halsflugelicht.) Applied by Duméril to a Family of fishes the inferior fins of which precede the thoracic, and are situated under the neck.

**Auchenorhyn'chi.** (Λὐχήν; ῥύγχος, a beak. G. halsschnabelig.) Applied by Dnméril to a Family of Hemiptera, the base of the beak of which seems to grow from the neck.

Auchenorrheu'ma. (Δύχήν; rheuma. G. Hals-rheumatismus.) Rheumatism of the neck.

**Auchenos'chisis.** (Αὐχήν; σχίσις, a cleaving. F. auchénoschisis; G. eine Spaltung des Halses.) Fissure of the neck. **Auchenosphinx is.** (Αὐχήν; σφίγξις, constriction.) Term for strangulation. See De-

caposphinxis. Auchenostran'gale. (Αὐχήν; στραγ-

γάλη, a halter.) Same as Auchenosphinzis. **Auchenozos'ter.** (Αὐχήν; ζωστήρ, a girdle. G. Halsgürtel.) Term for herpes zoster of the neck.

Aucheny'drocele. (Auxhv; hydrocele. F. auchenydrocele; G. Blasenkropf.) Hydrocele of the neck, or cystic goitre.

Auche ticus. (Aὐχήν, the neck. G. prahlend, prahlerisch.) Wry-neeked or stiffnecked.

Auckland'ia. A Genus of the Nat. Order Composita

**A.** costus, Falconer. (Κόστος, an Oriental aromatic plant. Sausk. Koostum, Koot; Hind. Koost, Patchuk; Tam. Kustum, Kostum; Arab. Kust-hindee; Pers. Kust-lutk; Malay. Sepudday.) Hab. The mountains of Cashmere. The roots are met with in pieces from 1 to 3 in. in length and \(\frac{1}{4}\) to \(\frac{1}{2}\) in. in thickness, wrinkled, brownish red outside, lighter brown within; transverse section with radiated lines, often hollow. Taste aromatic, and more or less bitter. They are used as incense in the temples of the gods, and to protect the shawls of cashinere from the attacks of moths.

Also, a synonym of Aplotaxis auriculata. Auc'toville. France; Calvados, Arrond. de Bayeux. Here are cold bicarbonated ferruginous waters. Temp. 22° C. (71.6° F.)

Auctum'nus. (L. auctumnus, the autumn. G. das Herbst.) The autumn.

Auctus. (L. aucto, to increase. F. aceru, augmente; G. vergrossert.) Increased; augmented. Applied to a ealyx having a series of distinct leaves around its base, shorter than its

Au'dē. (Αὐδή, voice. G. die Stimme, der

Laut.) The voice.

Audim'eter. Same as Audiometer.

Au'dinac. France; Ariége, Arrond. de Saint-Girous, about six miles from Saint-Girous. Here is a well-appointed bathing establishment, situated in the middle of a large park. There are two springs: first, the Source des Bains, which contains sulphate of lime, with magnesia and iron, and has a temperature of 22.7° C. (72° F.); and, secondly, the Source Louise, or Source froide, which is about two or three degrees colder. The quantity discharged daily from the Source des Bains is estimated at 40,000 gallons. The waters are recommended in functional disturbances of the digestive and urinary organs.

Audiom eter. (L. audio, to hear; μίτ-οου, a measure.) Hughes' instrument consists of two Leclanche's cells, a simple microphonic key connected with the cells and with two fixed primary coils, and a secondary or induction coil, the terminals of which are attached to a telephone. The induction coil moves on a bar between the two fixed coils, and the bar is graduated into 200 parts, by which the readings of sound are taken. In using the instrument the induction coil is moved along the scale from or towards the larger primary, and the degree or units of sound are read off from the figures on the scale, the sound being made by the movement of the microphonic key between the battery and the primary coils.

Au'diphone. (L. audio, to hear ; φωνή, a sound.) An instrument for improving the hearing; invented by Mr. Rhodes, of Chicago. It consists of a thin elastic plate of ebonite of about the size and shape of a palm-leaf fan. attached to its upper edge serve to bend it into a curved form, and a small clamp at the handle fixes the string. When thus bent the instrument is pressed against the upper front teeth of the deaf person, the convex surface outwards. sounds received on the plate cause it to vibrate, and the vibrations are conducted through the teeth and the boncs of the head to the anditory

Audition. (L. auditio, from audio, to

hear. F. audition; I. udito; S. audicion; G. Gehor.) The act of hearing.

Au'ditory. (L. audio, to hear. F. auditif; G. das Gehor, or das Ohr betreffend.) Belonging to the organ, or the sense, of hearing. The same as Acoustic.

A. ar'tery, inter'nal. (G. innere Ohrarterie.). A small branch that is given off from the hasilar artery, and entering the internal auditory meatus with the auditory nerve, is distributed to the vestibule, the semicircular canals, and the cochiea.

A. bulb. (F. bulbe auditif.) A term applied to the membranous labyrinth and cochlea collectively.

A. ca'nals. The same as Meatus auditorius

externus and internus.

A. cap'sule. The case containing the third organ of special sense, that of hearing, at first, in all vertebrata, a distinct membranous pouch, which chondrifies, and in most cases ultimately ossifies, by a variable number of special osseous centres. It is situated on each side of the head above the first post-oral eleft, between the primary exit of the fifth and seventh nerves in front, and the ninth and tenth behind; the eighth is distributed in it. The largest number of intrinsic ossifications is found in the osseous fishes, where they are named the prootic, opisthetic, epictic, pteretic, and sphenotic. The last two are seldom present outside the class of osseous fishes. The first three are found permanently separate from each other, though often uniting with other and surrounding bones, in reptiles and in birds, and in man they exist at an early stage, but subsequently coalesce with each other, with the squamosal, and with the tympanic hone, to form the temporal bone.

A. cen'tre. The superior temporo-sphenoidal convolution of the brain, according to late observations.

**A.** gang'lia. (Γάγγλιον, a tumour under the skin.) A synonym of A. nuclei.

A. hairs. The long, fine hair-like processes which project from the crista acustica into the endolymph of each ampulla of the membranous labyinth. Their exact relationship is not settled. According to one view, they are nerve-fibrils, which pass through and project from the spindle-cells lying between the columnar epithelium which covers the crista acustica; according to another view, they are borue on the cells of columnar epithelium itself, which, at their deep and narrow end, are directly connected with a nerve-fibril.

A. mea'tus. See Meatus auditorius.
A. nerve. (L. audio, to hear. F. nerf acoustique; G. Gehornerve.) The eighth pair, or the portio mollis of the seventh pair of cranial nerves. Each arises from two nuclei, forming a continuation upwards of the pneumospinal ganglion-cells in the upper part of the floor of the fourth ventricle. Fibres proceed from the posterior, and partly from the anterior nucleus, which curve round the side of the medulla, and form a well-known transverse band; this unites with other fibres springing from the outer nucleus, and emerging in front of the restiform body forms a large flattened nerve that, after a short course, enters the internal auditory meatus, at the bottom of which it perforates the spiral foraminated portion of bone, and divides into two branches, an anterior for the cochlea, and a posterior vestibular for the labyrinth. The ves-

tibular branch supplies—(1) the utricle and the ampullary enlargements of the superior vertical and horizontal membranous semicircular canals; (2) the sacculus; and (3) the ampulla of the posterior vertical semicircular canal. The cochlear branch runs along the base of the spiral lamina, and is distributed in the scala media, terminating, it is believed, in the spindle cells of the organ of Corti. The nerves minister to the sense of hearing.

A. nu'clei. (L. nucleus, a nut.) The centres of origin of the auditory nerves. There are two on each side, an anterior and a posterior, the cells of which communicate. They lie opposite the broadest part of the floor of the fourth ventricle. Some of the fibres proceeding from the anterior nucleus enter the peduncle of the cerebellum of their own side, and probably minister to the preservation of the balance of the body; others, the striæ medullares, which run transversely on the floor of the ventricle, enter the cerebellar peduncle of the opposite side; others, again, run in the cerebral peduncle to the occipital lobes of the hemispheres.

A. os'sicles. (L. ossiculum, a small bone.)
The bones of the ear: malleus, stapes and incus.

A. pit. The depression on the epiblastic surface of the embryo which forms the rudiment of the labyrinth of the ear, situated on a level with the first postoral cleft.

A. pro'cess, exter'nal. (G. äusserer Ohrfortsatz.) The lower curved border of the external opening of the meatus auditorius externs, to which the cartilage of the pinna is attached.

A. verti'go. See Vertigo, auditory.
A. ve'siele. (L. vesica, a bladder.) The small eavity which results from the closure of the mouth of the A. pit. In the chick this occurs on the third day of incubation.

Audi'tus. (L. audio, to hear. F. audition; G. Gehor.) The sense of hearing.

Au'erbach. A German anatomist.

A's. plex'us. A gangliated plexus of nerves lying between eircular and longitudinal muscular layers of the intestinal coat throughout its entire length. It is mainly composed of non-medullary fibres; it gives off fine fibres, which supply and form a plexus around the muscular fibres, and many branches to join Meissner's plexus.

Au'ge. (L. augeo, to increase.) Some of the older anatomists gave this term to a reservoir into which liquids flow in an interrupted manner, so that it is alternately full and empty. Such are the auricles and ventricles of the heart. (Dunglison.)

Also (Αὐγή, bright light. G. Glanz), radiance,

brightness, as of the eye.

Augen'trost. (Gcr.) The Euphrasia officinalis.

Aug'gere. (L. augeo.) Intermittent fever. (Dunglison.)

Augmentation. (L. augmento, to increase.) The development or increase of the symptoms of a disease.

Augment'ing. (L. augmento, to increase or enlarge.) Increasing.

A. fibres. The same as A. nerves.
A. nerves. The same as Accelerating nerves.

Augmen'tum. (L. augmento, or augeo, to increase, F. augment; G. Vermehrung, Zunehmen.) A term applied to the period between

the commencement and height of a fever; the

augmentation, or increase.

Aug'nat. France; l'uy-de-Dôme, Arrond. d'Issoire. Here are two cold bicarbonated ferruginons springs. They are recommended in cases of chlorosis, anæmia, congestion of the liver and spleen, and in calculous affections.

Augnathus. (Λό, again; γυάθος, the jaw.) A term by Geoffrey St. Hilaire for a monster with two heads, the additional head so defective as to consist of little more than the

jaws.

Augus'ta Co. America; Virginia, at the foot of the Alleghany mountains. Here are

warm sulphuretted springs.

Augustholz'bad. Switzerland; on a height 2100 feet above sea-level, near the Baldegger Lake. An indifferent water, of a temperature of 15° C. (59° F.) Used in chronic rheumatism.

Augus'tusbad. Saxony; not far from Dresden. A chalybeate spring. Used in amemic

affections.

**Aulacome'le.** (Λόλαξ, a furrow; μήλη, a prohe. F. aulacomèle; G. Hohlsonde.) Δ grooved probe.

The same as Aula. Aulacos'toma.

stoma.

**Aulædibranch ia.** (Αὐλός, a flute; βραγχια, the gills. F. aŭlædibranche.) Applied by Ficinus and Carus to a Family in which the branchiæ communicate with the exterior by lateral openings, like those of a flute; by Latreille to a Family of Ichthyodera.

Aulas'toma. (Åὐλή, a courtyard; στόμα, the mouth.) A Genus of the Family Gnatho-

bdellidæ, Subclass Hirudineæ.

A. nigrescens. (L. nigrescens, part. nigresco, to become black.) A species of leech. Body elongated, with many segments, very soft, greenish black, with the abdominal surface yellowish. The mouth has four longitudinal folds, and anteriorly three very small and rudimentary jaws. Eyes as in the true leeches.

Aulis'cus. (Ablos, a pipe. F. entérenchyta; G. Harnzapfer, Katheter, Klysterspritze.)

Old term for a catheter, or clyster-pipe.

Aul'née. (Fr.) The Inula helenium.

Aulobranch'iæ. (Abdés, an aperture; βράγχια, gills.) Term applied to the cartilaginous fish, like the rays and sharks, which have several labial gill openings.

Aulostom ides. (Λύλός; στόμα, a mouth. F. aulostomides.) Applied to a Family having the head prolonged so as to form a long

tube like a flute.

Au'lus. France; Puy de Dôme. A village where are three saline charybeate springs. Temp. 20° C. (68° F.) Diuretic and tonic. Season lasts throughout the year.

Also (Αὐλός, a fistula, or pipe), a canula, a fistulous passage, a foramen, an orifice.

A. vaginæ. (L. vagina, a sheath, the vagina.) The external opening of the vagina. Auma'le. (F. formerly Albemarle.)

town of Normandy, on the river Bresle, I3 miles from Neufchâtel. Here are ferruginous springs. Au'mure. (F. from al, to, and murus, a

wall.) The Parietaria officinalis.

Au'ne. (Fr.) The Betula alnus.
A. blanc. (F. blanc, white.) The Betula

A. noir. (F. noir, black.) The Rhamnus frangula.

Au'née. (Fr.) The Inula helmium. Aun'werd. The Hindu name for the Phyllanthus emblica.

Au'ra. (Aw, to breathe. F. aura; G. Luttchen, Lufthauch.) A soft and gentle wind. A subtle vapour, or exhalation. A sensation in the body as of a breath of air.

A. cervi'na. A term signifying a pack of wine skins; the word aura being the same as averta, a saddle-bag, and cervina being an abbre-

viation of cella vinaria.

A. elec'trica. A term for the sensation experienced when electricity is received from a sharp point, or when the electrical whirl is approached when in motion, as if a cold wind were blowing on the part exposed; the electrical air.

A. epileptica. ( $E\pi i \lambda \eta \pi \tau i \kappa \delta s$ .) Term for the peculiar sensation felt by persons affected with epilepsy, as of a cold fluid rising from some part of the body, or from the extremities, to the

head; the epileptical air.

A. hysterica. Term for the sensation as if a stream of cold air were ascending to the head, similar to that experienced in epilepsy, then called A. epileptica, and said sometimes to

occur in hysteria; the hysterical air.

A., mo'tor. The convulsive phenomena which sometimes precede an attack of epilepsy. This may be variously displayed; ordinarily as a spasm in the region of certain muscles or groups of muscles, which is generally of a clonic, or, more rarely, of a tonic, nature, sometimes also as a trembling or shaking motion. The extremities are most commonly affected, then the muscles of the face.

A. podag'rica. (Ποἐδγρα, gout in the feet.) A term applied by Mason Good to a peculiar glow sometimes felt over the body, which produces no ill-effect, and occurs on the repulsion of gout by a cold foot-bath.

A. san'guinis. (L. sanguis, blood.) The odour exhaled by freshly drawn blood.

A. semina'lis. (L. semen, seed. G. Samenhauch.) Term for the supposed subtle and vivifying principle of the Semen virile, which was believed to ascend through the Fallopian tubes, thereby to impregnate the ovum in the ovarium; the seminal air.

A. sem'inis. Same as A. seminalis.

A. sen'sitive. The sensitive epileptic aura is characterised by tickling sensations, or by dragging, tearing pains, which seldom extend along the definite course of a nerve, but generally over a whole extremity, usually extending from the periphery towards the head; or there may be headache, or pain in the epigastrium, with or without a tendency to vomiting. The opposite may also occur, a decrease of sensitiveness.

A. vasomo'tor. This form of epileptic aura usually commences with a feeling of numbness or formication. The affected parts become pale and cold, and their sensibility blunted; shivering or transient burning sensation, with

redness in spots, have been observed.

A. vertigino'sa. (L. vertiginosus, one who suffers from giddiness. G. Schwindelangst.) Sudden sensation of swimming in the head, occurring in hypochondria, hysteria, epilepsy, and other neuroses, probably connected with local anæmia.

A. vita'lis. (L. vitalis, belonging to life. G. Lebenshauch.) A term for the vital principle.

Aura'da. The same as Auradina.

Auradina. A white crystallisable sub-

stance, allied to myricin and cerain, soluble in ether, found in the volatile oil of orango flowers

after contact with alcohol.

Au'ral. A stearopten containing oxygen, obtained in the proportion of one per cent. from oil of neroli by spirit of wine (90 per cent.), which dissolves the oil and leaves aural. It is tasteless, has no smell, and is insoluble in water, and soluble with difficulty in ether.

Also (L. auris, the ear), belonging to the ear.

A. vertigo. See Vertigo, auditory.

Auran cum. Old term for egg-shells. (Ruland and Johnson.) See Avraneum.

Aurantia. (Mod. Gr. νερανζι; I. aran-cia; S. Naranja; Sans. Nagaranda; Hind. Narangi; Pers. Narank and Taranj; Hung. Naranes; Venet. Narangi; Port. Laranja; Basque Laranya.) Orange. It seems that the initial consonant was first dropped in the Italian; and the notion arose that it was from its golden colour that the plant took its name. It certainly took it from the colour, but not from the colour of the metal. In India, where the name originated, and from whence the tree was first diffused, the word Naranga was applied to the carrot. In the first notice of it in an English book it is associated with the pomegranate, or Pomum grana-

A. curassaven'tia. (F. orangettes; G. unreife Pomeranzen.) Curassoa oranges or apples, orange berries. Applied to immature oranges, the growth of which has been somehow accidentally checked; when dried they are from one eighth to three quarters of an inch in diameter, greenish black, very hard, of a pleasant aromatic flavour, bitter, but without acidity; infused in wine or brandy, they form a good stomachie; and reduced in size and made smooth by turning, they are employed as issue peas.

A. hispalen'sis. (L. hispalensis, belonging to Hispalus, a Spanish town, now called Seville.) The Seville orange, the fruit of Citrus

bigaradia.

A. immatu'ra. (L. immaturus, unripe.)

The same as A. curassaventia.

Aurantia'ceæ. (L. aurantium, the orange. F. aurantiaees.) An Order of thalamidral Exogens; or, according to Lindley, an Order of the Alliance Rutales. Fruit consolidated, succellent, and indehiseent; petals imbricated; stamens equal in number to, or some multiple of, the petals, hypogynous; leaves alternate, dotted, exstipulate.

Aurantia ceous. (L. aurantium, the orange. G. pomeranzengelb.) Of an orange colour, as the flowers of the marigold and nas-

Aurantiæ bac'cæ. (L. bacens, a berry.) The immature fruit of the orange tree; also called

Aurantia curassavica.

Auran'tii ama'ri cor'tex, U.S. Ph. (L. amarus, bitter; cortex, riud.) Bitter-orange peel; the rind of the fruit of Citrus vulgaris.

A. cor'tex, B. Ph. (L. cortex, the bark or rind. F. ecorce d'orange umères; G. Pomeran-zenschale.) Bitter-orange peel. The dried outer part of the rind of the Citrus bigarudia. It is of a dark orange colour, and has an aromatic bitter taste, and a fragrant odour. Orange peel contains gum, albumen, some fixed oil, resin, a volatile oil, a principle like tannin, and, in the white part, hesperidin. It is an aromatic, stomachic, and carminative.

A. dul'cis cor'tex, U.S. Ph. (L. dulcis, sweet. F. ccorce d'orange douce; G. Apfelsinenschale.) Sweet-orange peel; the rind of the fruit of the Citrus aurantium. It differs from bitter-orange peel only in being lighter in colour, and less bitter in taste.

A. flo'res, U.S. Ph. (L. flos, a flower. F. fleurs d'oranger; G. Orangenblüthen, Pomeranzenblüthen.) The flowers of Citrus aurantium and C. vulgaris. They consist of a cup-shaped, five-toothed calyx, five white, or, when dry, brownish, oblong, obtuse, glandular petals; about 20 statuens, united at the base into three or more bundles; and a cylindrical style. They are very fragrant, and contain the volatile oil of neroli, gum, hitter extractive, acetic acid, and salts. They are used to make a distilled water, and are supposed to be a mild nerviue tonic.

A. 20'ris a'qua. Orange-flower water. A. o'leum. (L. oleum, oil.) The same as

Neroli, oil of.

Auran'tiin. A bitter substance obtained from unripe oranges by brandies. It accompanies the precipitate which is thrown down when hydrogen sulphide is transmitted through an infusion of unripe oranges, to which lead acctate has been added.

Auran'tin. Same as Aurantiin.

Auran'tium. (Supposed aurum, gold, from its rich colour; see also, Aurantia. F. orange; G. Orange, Pomeranze.) The name of the fruit of the Citrus bigaradia, and C. aurantium (Ph. L.), of the C. rulgaris (E.), of the C. rulgaris, or C. aurantium (U.S.A.). The orange; also termed Arantia.

A. ama'rum. (L. amarus, bitter.) The

Seville, or hitter orange, Citrus valgaris.

Aura'ric. (Arab.) Old term for Mercuris.
(Ruland and Johnson.) See Azoch, Avraric. Au'rate. Term for a combination of auric

acid with a base. A. of am'monia. The substance otherwise called fulminating gold. See Aurum ful-

minans. Au'rated. (L. auris, the ear.) Ear-shaped. or having cars, or ear-like appendages.

Aurea Alexandri'na. Term for a kind of opiate, named either after Alexander, a physician, or Alexandria, where it was first used.

Aurelia. (L. aurum, gold.) A term for the chrysalis, pupa, or nympha of Lepidoptera, on account of some exhibiting a golden lustre.

Aurclia'na canaden'sis. The Panax quinque folium.

Auren san. France; Departement du Gers. Feeble bicarbonated, calcie, and ferruginons waters. They deposit a mud, which is used externally.

Aure'ola. (L. aureolus, golden.) A term applied by Chaussier to the inflammatory blosh around the base of a vesicle.

A. mam'mæ. (L. mamma, the breast. G. Warzenhofe.) The coloured ring which surrounds the nipple in pregnancy.

Au'reous. (L. aurum, gold. F. d'or; G. goldig, goldgelb.) Belonging to, or of the colour of, gold; golden. Of a golden yellow colour, as in the dandelion and sunflower.

Au'reum o'lum. (L. olus, a garden or kitchen herb.) The golden herb, a term for the Atriplex, or orache.

Au reus. A weight of a drachm and a halt. A. ar'abum. (L. arabs, an Arab.) A weight of about the seventh part of an ounce; the same as the Roman denarius

A. ra'mus. Alchemical term for the art of making gold.

Au'ri chlorc'tum. (L. aurum, gold.)
The A. chloridum.

A. chlore'tum cum chlore'to na'trii.

The A. et sodii chloridum.

A. chlori'dum. AuCl3. Auric chloride, or eldoride, or trichloride of gold. It is obtained by dissolving pure gold in nitro-muriatic acid, evaporating, dissolving in water, filtering, and again evaporating. It is a red, crystalline, deliquescent substance, soluble in water, alcohol, ether, and volatile oils, and decomposing at 150° C. (302° F.) It has been used as a caustic in lupus and cancer.

.A. cyani'dum. AuCy3. Aurie cyanide, or cyanide of gold. A lemon-yellow precipitate, produced by adding a solution of potassium eyanide to one of gold chloride. It has been

used in syphilis and scrofula.

A. cyanure'tum. The A. cyanidum.

A. et ammo'nii chlori'dum. Ammoniochloride of gold. Equal parts of gold chloride and ammonium chloride are dissolved in water, acidulated with hydrochloric acid, and then evaporated to dryness. Used as Auro-natrium chloratum.

A. et na'tri chlorure'tum. The same as A. et sodii chloridum.

A.etso'dii chlori'dum, NaAuCl4+2H2O. Chloride of gold and sodium, sodium chlor-aurate. The Chloruretum aurico-sodicum, Fr. Codex; the Auro-natrium chloratum, G. Ph.

A. iodi'dum. AnI<sub>3</sub> Iodide of gold. A dark-green precipitate, obtained by adding a solution of potassium iodide to one of auric chloride. It has been used in scrofula and secondary syphilis.

A. iodure'tum. The A. iodidum.

A. mu'rias. The A. chloridum.

A. nitromu'rias. Probably the double chloride of gold and hydrogen obtained in the

process of making chloride of gold.

A. oxi'dum. Au(OH)<sub>3</sub>. Oxide of gold, gold trihydroxide, auric acid. It is obtained by heating a solution of gold trichloride with an excess of magnesia or oxide of zinc, and washing the precipitate with nitric acid. When dry it is a blackish-brown powder, which decomposes with evolution of oxygen on exposure to light. It forms salts, called anrates. It has been given in syphilis, by friction on the sides of the tongue, or in pill. Dose, one tenth of a grain.

A. pul vis. Powdered gold. Gold leaf triturated with 10 or 12 times its weight of potassium sulphate, or other hard soluble substance, until the metallic lustre is lost, when the medium is dissolved out. It may also be obtained by ndding ferrous sulphate to a solution of gold chloride. It was employed in syphilis, by friction on the tongue, in doses of one fifth of a grain to

three grains daily.

A. terchlori'dum. The same as A. chloridum.

A. tercyani'dum. The same as A. eyanidum.

A. teroxi'dum. The same as A. oxidum. Au'ric. (L. aurum, gold.) Of, or belonging to, gold.

A. ac'id. Gold trihydroxide, or oxide of gold. See Auri oxidum. Also, a term applied by some to A. oxide.

A. chlo'ride. See Auri chloridum. A. cy'anide. AuCy<sub>3</sub>. This compound is said by some authors not to exist in the free state; but for a preparation known by this name see Arri cy midron.

A. ful'minate. See Aurum fulminans.

A. i'odide. See A or modedom.

A. oxide. Au.O3. Gold trioxide. A blackish-brown powder, obtained by heating auric trihydroxide, otherwise auric acid, to 100°C. (212°F.) If strongly heated it gay som oxygen, and metallic gold, in a brown powder, is left; this is the old calx of gold.

Aurichal cum. (L aurum, gold; χαλ-κός, brass or copper. G. Messang.) An old term for a composition of copper and zine similar to our brass, or pinchbeck; also called Orichalcum

and Chrysochalcos.

Auricle. (L. auricula, the outer ear. F. auricule; G. aussere Ohr.) The outer ear, cousisting of the pinna and the meatus auditorius externus.

Also (F. auricule du cœur, orcillette; G. Vorhof), a chamber at the base of each side of the heart.

The auricles of the heart are two in number, right and left, and are the chambers that are intermediate between the veins and the ventricles. The general form of the right auricle is rounded, but it presents a process which clasps the right side of the pulmonary artery, and is named the appendix auriculæ. The left is more cubical, but has a similar process embracing the left side of the aorta. The internal surface of both appendices presents an almost cavernous aspect, owing to the presence of numerous musculi pectinati, but the rest of the interior of both auricles is smooth, except the anterior and external wall of the right auricle and the part surrounding the entrance of the coronary vein. The walls present small depressions between the muscular fasciculi, as well as the openings of minute veins, both of which are included under the name of foramina Thebesii. The openings into the right auricle are those of the superior vena cava, which opens above, and has no valve; of the inferior vena cava, which opens below and behind, and which is guarded imperfectly in the adult by the Eustachian valve: of the auriculo-ventricular passage, guarded by the tricuspid valve; of the coronary vein, which opens below and in front of the inferior vena cava, and is guarded by the valve of Thebesius; and the more or less completely closed interauricular opening, or foramen of Botalli, which is surrounded by the annulus of Vieussens. The vein of Galen, or the vein of the right side of the heart, and the vein of the infundibulum, also open into the anterior and inferior part of the right auricle. The openings into the left auricle are five-namely, four openings of the pulmonary veins, which have no valves, and the auriculoventricular opening, guarded by the bicuspid valve. In addition to these principal openings, numerous small veins open into each auriele.

Auricled. (L. auricula, the outer ear.)
Having ears; ear-like.

Aurico. A prefix employed by Berzelius in compound epithets applied to double salts, resulting from combination of an auric with another salt, indicated by the remaining portion of each epithet, as aurico-ammonicus, anricobaryticus.

Auric'ula. (L. auricula, the outer ear, dim, of auris, the ear. F. auricule, oricule; G. aussere Ohr.) A little ear, or auricle. The name

usually given to the external ear, as only a part of the auditory apparatus.

Also, to each auriele of the heart.

In Botany, applied to certain parts of plants resembling an car.

Also, the Primula auricula.

A. cor'dis. (L. cor, the heart.) The auriele of the heart.

A. cor'dis dex'tra. (L. cor, the heart; dexter, right. G. rechte Herzohr.) The right auricle of the heart; also, the right auricular appendix.

A. cor'dis sinis'tra. (L. cor; sinister, the left. G. linke Herzohr.) The left auriele of the heart; also, the left auricular appendix.

A. in fima. (L. infimus, lowest. G. Ohrlappehen.) The lobule of the external ear.

A. ju'dæ. (Judas, one of the Apostles. G. Hollunderschwamm, Judasohr.) Jew's ear; a name for the Hirmola auricula juda. A fungus growing on the clder. It is gelatinous, thin, concave above, bald, blackish-brown, and undulating, adherent near the centre of the inferior surface, which is yellowish. It assumes a cartilaginous consistence on drying, but imbibes water, and then swells considerably. It has neither taste nor smell, and is applied as a cooling agent in inflammation of the eye.

A. lep'oris. (L. lepus, a hare.) ear; a name for the Buptcurum rotundifolium.

A. mu'ris. (L. mus, a mouse.) Mouse's ear; a name for the Hieracium pilosella. A. mu'ris ma'jor. (L. mus; major,

greater.) The Hieracium murorum.

A. ur'si. (L. ursus, a bear.) mula auricula.

Auriculæ. (L. auricula.) Ear-shaped perforated processes which project over the ambulaera of Echinoids.

Auric'ular. (L. auricula, the external ear. F. auriculaire, oriculaire; G. zum Ohr gehorig.) Of, or belonging to, the ear.

A. ang'le. See Angle, auricular.

A. ante'rior nerve. A synonym of the

Auriculo-temporal nerve.

A. appen'dage. (F. appendice auriculaire, auricule; G. Herzohr.) The ear-shaped or tongue-shaped muscular portion of each auricle. of the heart; also called the true auricle. The appendage of the left auricle projects from its anterior and superior angle over the root of the aorta. It is more posterior, as well as longer and narrower, than that of the right. That of the right auricle projects from its left side, towards the right, over the pulmonary artery. The interior presents musculi pectinati.

A. appen'dix. The same as A. appen-

A. ar'teries, ante'rior. (G. vordere Ohrarterien.) Two or more branches of the temporal artery arising above the middle temporal branch. They supply the anterior auris muscle, the lobe of the auricle, and a part of the meatus externus; they anastomose with the posterior auricular.

A. ar'tery, poste'rior. (G. hintere Ohrschlagader.) A small branch of the external carotid just above the occipital. It gives off branches to the parotid gland and to the neigh-bouring muscles, a stylohyoid branch, aurien-lar branches to the back of the ear and its muscles, and an occipital branch, which anastomoses with the occipital artery, and it divides into terminal branches, the anterior of which anastomose with the temporal, the posterior with the occipital artery.

A. cartilag'inous plate. of cartilage uniting the auricular surfaces of the ilium and sacrum. When forcibly torn asunder it usually separates into two plates, which often enclose a small cavity, sometimes containing a glairy fluid.

A. fing'er. (G. Ohrfinger.) A term for the little finger, because, from its small size, it can be introduced somewhat into the auditory

canal.

A. fora'men. (L. foramen, an opening, from foro, to bore.) The opening of the external auditory meatus.

A. mus'cle, ante'rior. A synonym of the Attrahens wurem muscle.

A. mus'cle, poste'rior. A synonym of the Retrohens aurem muscle.

A. point. The centre of the opening of the external auditory meatus.

A. ra'dii. (L. radius, a spoke of a wheel.) A term in Craniometry for lines drawn from the auricular point to certain parts of the eranium, as the supra-orbital projection, the point of the lumbdoid suture, the bregma, and others: the lines then bear the names auriculo-supra-orbital, auriculo-lambdoidal, auriculo-breguiatic, and such like, respectively.

A. sur'face of il'ium. (G. Ohrober-flüche.) The inferior smooth, uneven surface of the posterior part of the inner aspect of the ilium, which articulates by means of cartilage with the

A. sur'face of sa'crum. (G. Ohrober-flüche.) The anterior part of the outer aspect of the upper part of the sacrum, which is united to the ilium by cartilage.

A. veins. A few small anterior or superficial veins which arise in the anterior part of the auricle of the ear; there are also some deeper veins, which spring from the auditory meatus and neighbouring parts, and, descending, open into the posterior facial nerve.

Auricula'ria. (L. auricula, a little ear.) The Dysophylla auricularia.

A. sambuci'na. (L. sambucina, a female player on the sambuea; sambueus, an alder or elder tree.) A synonym of the Auricularia juda.

Auricularia'ceæ. (L. auricula. G. Rindenschwamme.) A Family of the Suborder Hymenomycetes. Receptacle variously formed, often membranous, with smooth or slightly warty hymenium.

Auricula'ris. (L. auricula, the external ear.) Belonging to the ear.

A. ante'rior. (L. anterior, in front.) The Attrahens aurieulam musele.

A.mag'nus nerve. (L. magnus, large. F. branche auriculaire du plexus cervical; G. grösser Ohrnerv.) Formed from branches of the second and third cervical nerves. It perforates the deep fascia at the posterior border of the sterno-mastoid muscle, and ascends parallel to and heneath the posterior part of the platysma as far as to the angle of the jaw, crossing the fibres of the sterno-mastoid nearly at right angles. At this point it gives off some filaments, which are partly distributed over the paretid gland and partly penetrate the gland, and join the facial. The terminal branches are the external and internal auricular. The former supplies the inferior part of the ear, the concha, the helix, and the antihelix. The latter or mastoid branch, running in the substance of the parotid gland, crosses the mastoid process obliquely, anastomosing with the auricular branch of the facial, and terminates in a branch supplying the upper part of the auricle and an occipital branch.

A. poste rior. (L. posterior, hinder.)

The Retrahens auriculan musele.

A. supe'rior. (L. superior, upper.) The Attollens auriculam muscle.

Auriculate. (L. auricula, the external ear. F. auriculé; G. ohrformig, geohrt, kleingeöhrt.) Having ears; shaped somewhat like the external ear.

Applied to a leaf when it has a lobe on each

side of its base; eared.

Auric'ulately-sagit'tate. (L. auricula; sagitta, an arrow.) Applied to a leaf, when arrow-shaped, with two ear-like lobes at the base.

Auriculatopin'nate. (L. auricula; pinnatus, feathered, pinnate.) Applied by Link to pinnate leaves the folioles of which are auriculated.

Auriculif'erous. (L. auricula ; fero, to bear. F. auriculifere ; G. ohrtragend.) Bearing

auricles.

Auric'uliform. (L. auricula; forma, likeness. F. auriculiforme; G. ohrformig.) Formed like a small ear, as the suckers of the Tetrarhynchus.

Auric'ulo. (L. auricula, an auricle.) This word, used as a prefix in compound adjectives, denotes relation to, or connection with, the auricles of the heart.

A.-orbicula'ris. (L. auricula; orbicula-ris, circular.) A circular muscle surrounding the base of the auricle in some vertebrate ani-

A.-tem'poral nerve. (F. nerf auriculotemporal; G. Ohrschläfennerv, vorderer Ohrnerv, oberflächlicher Schlafennerv.) Arises by two roots, between which the middle meningeal artery passes, from the inferior maxillary nerve of the fifth pair. It lies at first beneath the external pterygoid muscle as far as to the inner side of the articulation of the lower jaw. It then turns upwards with the temporal artery between the external ear and condyle of the jaw and beneath the parotid gland. Its terminal branches are the anterior and posterior temporal. In its course it gives off branches to the meatus auditorius; to the articulation of the lower jaw; the inferior auricular branch to the external ear, which gives off twigs to the sympathetic surrounding the maxillary nerve; parotidean branches to the gland; branches passing to the external earotid arteries and communicating with the facial and sympathetic nerve; and filaments arising near the origin of the trunk to the otic ganglion.

A.-tempora'lis. (L. temporalis, belonging to the temples.) A name by Cruveilhier for the combined attrahens auriculam and retrahens aurieulam muscles.

A .- ventric'ular o'pening. (F. orifice auriculo-ventriculaire; G. Atrioventricularöffnung.) Term for the opening of the communication between the auriele and ventricle of each side of the heart.

A .- ventric'ular ring. The same as A .ventricular opening

A .- ventric'ular valves. (F. valvules auriculo-ventriculaires; G. Atrioventricularklappen.) The mitral and tricuspid valves at the auriculo-ventricular apertures.

A. zygomat'icus mus'cle. A synonym of the Attrahens aurem musele.

Au'rides. (F. aurides.) Name by Beudant for a Family of minerals comprehending gold and its combinations.

Auriferous. (L. aurum; fro, to bear. F. aurifere; G. goldhaltig.) Containing gold.

Aurif'ic. (L aurum; facio, to make. I. aurifique; S. aurifico; G. goldmuchend.) Producing or containing gold.

A. tinc'ture. The Tinctura antimonii, so

called on account of its colour.

Aurification. (L. aurum; facio, to make.) The stopping of a tooth with gold. Auriform. (L. auris, au ear; forma,

shape.) Ear-shaped.
Auriga. (L. auriga, a waggon.) Aucient

name for the fourth lobe of the liver.

Term used by Galen, de Fasc, n. 100, for a kind of bandage for binding the side, so called because of its likeness to the traces of a waggonhorse.

Aurig'erous. (L. aurum, gold; gero, to bear.) Gold bearing or containing.

Aurig'inous. (L. auriginosus, jaundiced. F. aurigineux; S. aurignoso.) Having, or being of the colour of, jaundice.

A. fe'ver. A term by Vogel for jaundice.
Auri'go. (L. aurum, gold; from its colour.
G. Gelbsucht.) A former term for icterus, or jaundice; also spelled Aurugo, Scribonius Largus, n. 110.

Also, see Epichrosis aurigo.

A. calculo'sa. (L. calculus, a small stone.) An old term for jaundice from gall-stones.

A. neophyto'rum. (Νεύφυτος, newlyplanted.) Jaundice of the newly-born.

Au'rilave. (L. auris, the ear; lavo, to wash.) An instrument for cleansing the external auditory meatus.

Au'rin. (Ger.) The Gratiola officinalis. Auripigmen'tum. (L. aurum, gold; pigmentum, paint; from its colour, and its use. F. orpiment; G. Auripigment, Operment.) Old name for yellow sulphuret of arsenic, or king's yellow.

A. ru'brum. (L. ruber, red.) Old term for realgar.

Auripunc'ture. (L. auris, the ear; puncturu, a prick.) A term for puncture of the membrana tympani.

Auris. (As if ausis, from οὐs, ἀτός, Cretice aὐs, ἀντός, the ear; hence autis, ausis, and auris. F. oreille; G. Ohr.) The organ of hearing; the ear.

Auriscal'pium. (L. auris, the ear; scalpo, to scrape. F. auriscalpium, cure-orcille; G. Ohrloffel.) Old name of an instrument for

cleansing the ear; an ear-pick. See Melotis.

Au'riscope. (L. auris, the ear; σκοπίω, to explore, or inquire.) Name of an instrument, resembling a flexible stethoscope, the bell-end being large enough to cover the auriele of the patient, for ascertaining the condition of the Eustachian passage.

Aurist. (L. auris, the car.) One who specially devotes himself to the study of the pathology and therapentics of the car.

Auritus. (L. auritus.) Eared. Aurium fluctuatio. (L. auris, the ear; fluctuatio, a wavering motion.) Buzzing in the ears.

A. marmora'ta. (L. marmoro, to incrust with marble.) An old term for the cerumen of the car.

A. sib'ilus. (L. sibilus, a hissing.) A singing in the ears.

A. son'itus. (L. soni/us, a noise.) Buzzing in the cars.

A. sordes. (L. sordes, dirt.) The cerumen of the ear.

A. susur'rus. (L. susurrus, a murmuring.) Noise in the cars.

Auroferrif'erous. (L. aurum; ferrum, iron; fero, to bear. F. auroferrifere.) Applied to a mineral accidentally containing gold and

Au'ro na trium chlora tum, G. Ph. (G. Chlorgoldnatrium.) Chloride of gold and sodium. Made by dissolving 65 parts of gold in 260 parts of nitromuriatic acid, evaporating until it solidifies, on cooling mixing it with 100 parts of powdered sodium chloride, and drying in a vapour bath. It is an orange-yellow powder. It is used as a caustic; or, when diluted, is rubbed into the tongue in syphilis. Dose, one tenth of a graiu.

Aurone. (Fr.) The Artemisia abrota-

Auroplumbif'erous. (L. aurum, gold; plumbam, lead; fero, to bear.) Applied to a mineral accidentally containing gold and lead.

**Auropubes'cent.** (L. aurum; pubes, soft hair.) Ilaving small leaves of a golden

yellow.

(L. aurora. Auro'ra consur'gens. the daybreak; consurgo, to arise.) A doubtful term used by the alchemists to express the vegetation of their gold. Th. Chym. vol. i, p. 161.

A. sur'gens. (L. surgo, to arise.) Same as A. consurgens.

Auro'reous. (L. aurora, the dawn of morning. F. aurore.) Having the yellow colour of saffron.

Auro'rous. Same as Aurorcous.
Auro'sus. (L. aurum, gold. F. aurum.) Applied by Berzelius to the first degree of exidation of gold, or Oxydum aurosum; the first degree of sulphuration of it, or Sulphuretum aurosum; to Oxysales aurosa, having the aurous oxide for their base.

Au'rous. (L. aurum.) Belonging, or

relating, to gold.

A. chlo'ride. AuCl. Gold monochloride. A yellowish powder obtained by heating aurie chloride to 185° C. (365° F.)

A. ox'ide. Au<sub>2</sub>O. Gold monoxide. Obtained by adding cold solution of caustic potash to aurous chloride. It is a violet-black or greenish

Auru'go. (L. aurum, gold, from its colour.) An old name for icterus, or jaundice. The same

as Aurigo.

Au'rum. (Aŭpov, gold. L. aurum; F. or; I. oro; G. Gold; Arab. Tibr, Zeheb, Dahab; Pers. Tilla, Zir; Sansk, Swarna, Swarna; Chin, Kin; Runic Cyn; Duk, Ind, Suna; Mal, Mas; Tam. Promn; Tel. Bungarum; Turk. Altoun.) Gold. A yellow metal found native, sometimes pure, but oftener alloyed with silver or copper. See Cab, Daid, Deheb, Dehebeb, Fida, Obrysum, Orizeum, Orogamo, Seb, Secur, Sol, Tricor, Zaras, and Gold.

A. chlora'tum. The Auri chloridum.

A. chlora'tum natrona'tum. The same as Auro-natrium chloratum.

A. chlora'tum officina'le. The same as Anno-metrium chloratum.

A. crystal'liuum. (Κρύσταλλος, crystal.)

Used for stopping teeth.

A. cyanatum. The Auri cyanidam.
A. cyanatum. The Auri cyanidam.
C. foliatum. (L. foliatus, leaved. G. Blattauld.) Gold leaf. Formerly much used for wrapping up pills in, or gilding them, as was said.

A. ful'minans. (L. fulmino, to lighten. G. Knallyold.) Fulminating gold. A term for a brown precipitate formed by adding liquid ammonia to a concentrated solution of chloride of gold, then collected on a filter, washed with a little water, and carefully dried at the temperature of 100°C. (212°F.) It was recommended in scarlet fever. Also called Aurale of ammonia and Ammoniaret of peroxide of gold.

A. horizonta'le. (Unigon, the horizon.)

Old term for a preparation, said to have been the Mercuriae auri, or essential part of gold fixed by the alcahest; also said to have been an Olcosaccharum or Elecosaccharum, made with the oil of

cinuamon.

A. hydrocyan'icum. The Auri cyanidum.

A. in libellis. (L. in, in; libella, a level.) Gold leaf.

A. in mus'culis. Cuttings of gold leaf ground with gum water, and spread on the inside of mussel shells.

A. ioda'tum. The Auri iodidum.

A. lepro'sum. (L. leprosus, leprous.) An old term for antimony.

A. lima'tum. (L. limo, to file off.) Gold

filings. Formerly administered in medicine.

A. muriat'icum. The same as Auronatrium chloratum.

A. muriat'icum natrona'tum. The Auro-natrium chloratum.

A. musi'vum. (L. musivus, artistic.) Mosaic gold. A compound of tin and sulphur, being a bisulphuret of tin, emissting of one equivalent of tin and two of sulphur. It was used in medicine.

A. natrona'to chlora'tum. AuClaNaCl  $+4\Lambda q$ . The same as Auro-natrium chloratum.

A. nitromuriaticum. See Auri nitro-

A. oxyda'tum. The Auri oxidum. A. oxyda'tum muriat'icum. The Auri

chloridum. A. potab'ile. (L. potabilis, that which may be drunk. G. Trinkqold.) Old term for a preparation of gold by pouring some volatile oil on a solution of nitro-muriate of gold; the oil, floating at the top, deoxydised the gold, and held it suspended in a state of minute subdivision; the oil containing the gold was separated from the remaining liquor, and alcohol added. Potable gold was highly esteemed as a cordial medicine.

A. sali'tum. (L. salitus, salted.) The  $Auri\ chloridum.$ 

A. sophis'ticum. (Σοφιστικός, fallacious.) Old term for brass.

Also, a name of bronze powder. Used as a means of producing a gold colour.

A. stan'no para'tum. (L. stannum, tin; paratus, part. of paro, to prepare.) A synonym of the compound known as the Purple of CasA. vegetab'ile. (L. vegetabilis, animating.) Vegetable gold. An old name for saffron.

Aurungze'be. A term for Delhi boil; from the celebrated Moghul Emperor of Hindustan, who suffered from this disease.

Aur'uret. (L. aurum.) An alloy of gold and another metal in definite proportions.

Au'rus brazilien'sis. A name for the Calamus aromaticus.

Aus'cultate. (L. auris, anciently written ausis, the ear; callto, to till often, or cultivate. G. auscultiren, zuhören.) To listen, or give ear. Applied particularly to listening to the sounds of the action of the lungs or heart, or to those produced by the chest or abdomen, when struck in practising percussion, in health or disease.

Ausculta'tion. (L. ausculto, to listen with attention. F. auscultation; G. Zuhoren.) Term for the act of listening to the sound given by particular parts of the body when struck (the doing so is termed percussion), or to the sound of the movements of the lungs or heart, or other organs, in order to form a judgment of their condition. In auscultation of healthy respiration a soft vesicular murmur is heard; most distinct during inspiration, and becoming less audible in congestion, whether acute or chronic, in pleurisy, and in compression of the bronchi by thmours. It cannot be heard in cases of extensive effusion into the pleural cavity, because the lungs are then compressed, and little or no air enters them. The cause of the sound is believed to be the passage of air through the trachea and bronchi, as well as the separation of the walls of the smallest tubes. In bronchitis the presence of mucus, more or less inspissated, gives rise to dry sounds or râles termed rhonchus, or to whining and singing sounds, termed sibilus. Mucus in all tubes, except the finest, gives rise to coarse cracking or bubbling sounds, called large crepitation; fluid in the finest tubes and air-cells, to a peculiar crackling sound—small crepitation—such as may be produced by rubbing the hair between the fingers close to the ear. The presence of large spaces or eavities containing more or less fluid is characterised by gurgling sounds, metallic tinkling, and cavernous respiration.

In auscultation of the voice in health, through the walls of the chest, a general resonance, varying in intensity in different parts, and in men vibration is felt. In disease the voice is more or less modified. See Bronchophony, Ægophony, and

Pectoriloguy.

In auscultation of the heart in health, two sounds are heard, the first dull and prolonged, the second shorter and sharper. The first is usually attributed to the sudden tension of the auriculo-ventricular valves, and of the museular walls of the contracting heart. The second is due to the sudden tension of the semilunar valves of the aorta and pulmonary artery. The first sound is heard best at the apex of the heart in the fifth intercostal space, a little below and to the inner side of the left nipple, the aortic second sound over the second right intercostal space, and the pulmonary second sound over the third left costal cartilage. When the valves of the heart are affected the natural sounds of the heart are prolonged or obscured, or replaced by certain bruits, souffles, or murmurs, and the nature of the disease can, with care and attention, be diagnosed with considerable accuracy. Thus, a systolic murmur, heard most distinctly at the base of the heart, and propagated along the aerta, indicates obstruction at the aortic orifice. A similar systolic murmur, heard over the third left eartilage, and propagated upwards and to the left, has its origin in the pulmonary artery, and is usually hemic. A systolic murmur, heard most distinctly at the apex, and outwards into the axilla, and at the inferior angle of the left scapula, indicates insufficiency of the unitral valve or mitral regurgitation. Tricuspid regurgitation, which is usually secondary to other valvular disease, is indicated by a systolic marmur audible down the left side of the ensiform cartilage.

A diastolic bruit, audible at the base, but propagated down the sternum, or towards the apex, indicates insufficiency of the aortic valves; whilst a murmur immediately preceding the systole (præsystolic), usually vibratory in character, heard over a limited area to the inner side of the apex, and often accompanied by a thrill, indicates obstruction at the mitral orifice. A soft murmur is sometimes heard in chlorotic states at the base of the heart, which is prolonged along the aorta and the vessels of the neck, and also outwards along the second left intercostal space, without organic disease of the organ.

In auscultation of the pericardium. When this membraue is indamed the natural sounds of the heart become enfeebled and accompanied by a friction sound, sometimes termed a to-and-fro sound or bruit de cuir neuf, which often disappears as fluid is poured out, separating the opposed surfaces of the membrane. It may reappear on absorption of the duid.

Auscultation of tunours. Arterial aneurysms often present a loud systolic blowing sound, the aneurysmal bruit. Arterio-venous aneurysms are accompanied by a continuous bruit.

are accompanied by a continuous bruit.

Auscultation of the abduman. Employed to determine the existence of pregnancy, the position of the placenta and of the child, and the presence of twins. It is also used as a means of diagnosing the presence and position of obstruction of the intestines at any point, whether by intussusception or adhesions.

Auscultation of fractures. Employed as a means of diagnosing the existence and seat of

fracture in obscure cases.

**A.**, cephalic. (Κεφαλή, the head.) Auscultation of the head to ascertain the presence of vascular murmurs.

A., imme'diate. Term for that mode in which the ear of the practitioner is placed close to the part examined, without the aid of the stethoscope or other instrument.

A., me'diate. Term for that mode in which a stethoscope, a piece of ivory, or hard wood, or the like, is placed between the part examined and the practitioner.

A., obstetrical. (L. obstetrix, a midwife.) Auscultation of the lower part of the abdomen in a pregnant female, to ascertain the presence of placental murmur, or the sound of the feetal heart.

Ausculta tor. (L. ausculto, to listen.)
One who practises auscultation.

Auscul'tatory. (Sameetymon.) Having relation to anscultation.

A. percussion. A term for Acouopho-

Aus'see. Austria; not far from Ichl, 2100

feet above sea-level, situate in a beautiful district of the Salzkammergut. There is a very strong salt spring, and the whey-cure is carried 511f.

Auste're. (Λέστηρός, making the tongue dry and rough; from aoo, to dry. G. herbe, ranh.) Of a harsh, astringent, or subsoid taste Aus'tral. (L. auster, the south wind.)

Belonging to the south.

A. pole. A term applied by some, especially French, thy-icists, to the end of the magnetic needle which points north; it is so called on the assumption of the existence of a terrestrial magnet, each pole of which would necessarily attract its opposite magnetism.

Aus'tralenc. The terebenthene of the Pinus australis. It turns the plane of polarisation

to the right.

Australia. An island-continent. Taken as a whole, it is characterised by an arid climate and a deficiency of water. Its fauna and flora are yery peculiar. The only non-aquatic Mam malia of other parts of the world it possesses are the Bats and the Rodents. The Quadrumana, Carnivora, and Ungulates, are replaced by the Marsupialia and Monotremata. Many widespread Families of birds, as Finches, Vultures, and Pheasants, are absent, and there are many peculiar to itself, as Bennett's Cassowary, the Emu, Menura, and Seythrops. There are but few Reptiles, Amphibia, or Fish, that are peculiar to it.

In works treating of the distribution of animals, Australia, or the Australian province or region, includes, together with the Continent of

Australia, Polynesia.

Australian gum. A kind of gum arabic imported from Australia. It is in large yellowish or reddish-brown tears, having a rough surface, a vitreous fracture, and a slightly astringent taste. It is the product of Acacia decurrens and A. dealbata.

A. gum tree. The Encalyptus globulus. A. sas'safras. The Atherosperma moschata.

Australians. The aboriginal inhabi-ents of Australasia. They are a degraded type, tants of Australasia. with marked negroid features, but with smooth

Australis. (L. auster, the south wind. F. austral; G. sudlich.) That which is situated, in relation to us, beyond the equator. Same as Meridionalis.

Austraterebenth'ene. The same as Australine.

Autal'gia. (Λυτός, self; άλγος, pain.) Pain in the body.

A. doloro sa. (L. dolorosus, painful.) A term applied to neuralgia of the face, and to pleurodynia.

A. prurigino'sa. (L. pruriginosus, from pruryo, an itching.) Severe itching.

A. vertigo. (L. vertigo, a turuing round.)

Giddiness.

**Autarci'a.** (Λυτάρκεια, sufficiency in one's self. G. Scibstandigkeit, Selbsthodang-lichkeit.) Tranquillity of mind.

Autech'oscope. (Λύτος, self; ηχή, a sound; σκοπέω, to examine.) An instrument for examining, or listening to, sounds in one's own body.

Auteme'sia. (Λύτος; ἔμεσις, vomiting. F. auteme'sw.) Spontaneous or idiopathic vomiting.

Autempres mus. (Λύτός; ἐμπρησμός, a conflagration.) Spontaneous combustion of the human body.

Au'tenrieth. A German physician of the

early part of the nineteenth century.

A's. poma'de. Powdered tartarized antimony 10 grains, benzoated lard 30 grains; mix. Rubbed into the skin to produce a pustular eruntion

Authemeros. (Abros, itself; imipa, a day.) Ot, or belonging to, the same day.

Formerly applied to a medicine which takes effect the same day on which it is exhibited; it was termed αυθήμερον φάρμακαν.

**Authe merus.** Same as Authemiros. **Authep'sa.** (Λύθέψης, from εψω, to cook. G. Selbstkocher.) An apparatus for cooking, like a coffee or tea urn.

Authygian'sis. (Αὐτός; ὑγίανσις, a making well. F. authygiansis; G. die Heilkraft der Natur.) The healing power of nature.

Authypnobate sis. (Λύτός; ϋπνος, sleep; βαίνω, to walk.) Spontaneous hypnobadisis, or somnambulism.

Autites. (Λύτός, self.) A substance or medicine that is pure and unadulterated.

Au'to-au'dible. (Λύτός; L. audio, to hear.) To be heard within himself.

A. mur'murs. Vascular murmurs, whether

venous, arterial, or cardiac, which may be heard by the patient himself.

Autocar pian. (Αὐτός; καρπός, frnit, F. autocarpien; G. alleinfruchtig.) Applied to fruit when the ovary is developed without contracting any adherence to surrounding parts, or being immediately covered by them, and the fruit unmodified by any addition of parts.

**Au tochir.** ( $\Lambda \dot{v} \tau \dot{o}s$ ;  $\chi \epsilon i \rho$ , the hand. G. ein Selbstmorder.) A self-murderer; one who

has committed suicide.

**Autochiria.** (Λύτός; χείρ, the hand. F. autochirue; G. Selbstmord) Self-murder, or suicide; a laying hands on himself.

Autochirus. Same etymon and meaning as Autochir.

**Autoch'thonous.** (Αὐτός; χθών, the rth. G. cingeboren.) Aboriginal, indigeearth.

A. clot. A blood-clot, or thrombus, in a blood-vessel, formed at the spot where it is

Autocine'sis. (Λύτός: κινήσις, from κινέω, to move. F. autocinese; G. Selbstbewegung.) Voluntary movement.

Also, motion without the agency of muscles or

apparent contractile fibres.

Autocrateia. (Λύτός, itself; κράτος, power. F. autocratie; G. Selbstherrschaft.) Independent, self-existent force. A term applied to the vital principle, on the hypothetical idea that it is self-acting. Also, synonymous with L'is medicatrix natura.

A. naturae. (L. natura, nature.) cording to Stahl, the power or controlling force which nature, or the vital principle, exercises on the progress and the duration of diseases.

Autocrato ria. (Αυτοκρατορία, absolute sway.) The same as Autocratcia.

A. physiatrice. (Physiatrica.) Vis medicatrix natura.

Autocton'ia. (Λύτοκτονίω, to slay one's self.) Suicide.

Autogenes. (Λύτος; γίνομαι, to beget) Term applied to bulbous plants, like the Narcissus, which begin to sprout before being planted, so that they seem to spring from themselves.

Autogen'esis. (Αυτός; γένεσις, production; G. Selbsterzeugnorg.) Self-production. Applied to the origin of tissues from a blastema which contains no parent of like nature; and also, to the origin of animals or plants by spontaneous generation.

Autogenetic. (Same etymon.) Self-generating. Applied by Barnes to a form of puerperal fever, in which the poisonous matter causing the disease is believed to be generated in the woman's system under the strain of labour.

Autogen'ia. (Autos; γένος, offspring.)

Same as Autogenesis.

Autog'enous. (Same etymon.) Term applied by Prof. Owen, in his Ilomologies, to the parts, or processes, which are usually developed from distinct and independent centres

The term has also been applied to denote the essential elements of morbid tissues, in contradistinction to those which are occasional or

accidental.

**Autogno'sis.** (Λυτόs; γνῶσις, know-ledge. F. autognose; G. das Erkennen durch eigene Untersuchung, durch Selbstsehen.) Knowledge from actual observation, or self-seeing.

Autog'ony. (Αντός; γόνος, offspring. F. autogonic.) One of the modes of spontaneous generation. That in which there is the production of a very simple organised being in a liquid containing, in solution, the simple materials necessary for the development of the organism, such as earbonic acid, ammonia, salts. The other form is called Plusmogony.

Autoinocula tion. (Aèrós; L. inoculo, to implant) The inoculation into the body of a person suffering from a disease of the virus of

the disease obtained from himself.

Auto iques. (Fr.; from αὐτός, the same; οἶκος, a house.) Term applied by the French to eryptogams which complete their whole circle of development on the same host plant.

**Autol'abis.** ( $A\dot{\nu}\tau\dot{\sigma}s$ ;  $\lambda a\beta is$ , a holder.) Small pincers which are self-closing.

Autolaryngos'copy. (Autos, self;  $\lambda \alpha \rho \nu \gamma \xi$ , the larynx;  $\sigma \kappa \sigma \pi i \omega$ , to examine.) The examination of the larynx by one's self. The ordinary laryngoscope, properly illuminated, is introduced into the throat, and the observer stands in front of a looking-glass. Garcia and Czermak made extensive use of this method to determine the movements of the larynx.

Autolithot'omus. (Abros; \lambde \text{ibos}, stone; τέμνω, to cut.) One who cuts himself for

stone.

Automatic. (Αὐτοματίζω, to act spontaneously, or without compulsion. F. automatique; G. automatische, selbstbeweglich.) Having power of self-motion; instinctive; involuntary. Applied to functions that are performed without the aid of the will, as digestion, the heart's

Autonom'ia. (Λυτός; νόμος, a law. F. autonomie.) The faculty of tracing the laws

according to which one acts.

Auton'omous. (Same etymon.) Selfgoverned. Applied to plants that are perfect and complete in themselves, especially in sexual development.

**Auton'omy.** (Αυτονομία, independence: from αυτός, self; νόμος, government.) Term applied in Biology to whatever has laws of its own which are not subject to a higher law. Thus,

the several tissues of the body, as the muscles and nerves, have some properties which they possess in common with all the other tissues, and others which are peculiar to themselves, governed by special laws, and not subject to the laws affecting the rest of the system. In this respect they have an autonomy of their own. In a more general sense, anatomy and physiology are autonomous, since the phenomena pre-ented by animals and plants are not at pres at referable to chemical, physical, or other laws. The phe-nomena of pathology, on the other hand, are subject to the laws of physiology acting under different conditions.

In the philosophy of Kant, a term employed to designate the absolute sovereignty of reason

in the sphere of morals.

Autonosograph'ia. (Λύτος; νόσος, a disease; γραφω, to write. F. and G. autonosographie.) A description of one's own diseases.

Autonyctobate'sis. (Λύτώς; νύξ, night , βαίνω, to walk. G. Nachtwandeln.) Som-

nambulism.

Autopep'sia. (Αὐτός; πέπτω, to digest. F. autopepsie.) Self-digestion, as of the stomach after death.

Autoph'agi. (Autós, self; payeir, to eat.) A term applied to those birds which, like the common fowl, can obtain their own food as soon as they are hatched.

Autoph'agous. (Same etymon.) Self-

devouring. See Autophagy. **Autoph'agy.** (Δύτός; φαγείν, to eat.)
The feeding on one's self, as in starvation.

A., artific'ial. A term applied to the starvation of an animal, and the giving it daily meals of its own blood. By this means life is prolonged to a greater extent than is possible under total deprivation of food.

A., sponta'neous. The mode by which life is sustained in animals deprived of all food,

that is, by absorption of the ti-snes.

Aut'ophie. (Fr.) A term used by some French writers synonymously with Intopsia. See Autopsy.

**Autophil'ia.** (Λύτός; φιλέω, to love. G. Selbstliebe.) Love of self.

Autophon'ia. (Αυτοφονία, self-murdering. F. autophonie; G. Selbstmord.) Term for self-mnrder.

**Autopho'nia.** (Αὐτός; φωνή, sound of the voice. F. autophonie; G. Silbststrmme.) See Autophony.

Autophonoma'nia. (Λύτοφώνος, a self-murderer; µavia, madness.) Suicidal insanity.

**Autoph'ony.** (Λὐτός, one's self; φωνή, voice. F. autophonie; G. Selbststimme.) The conditions of resonance and other characters of the observer's own voice when, in the examination of a patient, he places his head on the chest and speaks in a loud tone. Where there is a large cavity the resonance or tone of the voice is intensified.

**Autophos'phorus.** (Αὐτός; φωσφόρος, giving, or hunging, or bearing, light.) A synonym of *Phosphorus*.

**Autophthal moscope.** (Αὐτός, self; ὁφθαλμός, the eye; σκοπέω, to see.) An instrument constructed to enable a person to see his own eye. See Autoscope.

Autophthalmos'copy. (Abros, self; δφθαλμός, the eye; σκοπέω, to see.) examination of his own eyes by any man.

**Autophyllog'eny.** (Λύτος; φυλλόν, a Icaf; γεννάω, to produce.) The growth of a leaf upon another leaf.

Autophysiotherapei'a. φόσις, nature; θεραπεία, medical treatment.) Self-cure of a disease by natural forces alone.

Autoplas'tic. (Autoplasty. F. auto-astique.) Of, or belonging to, autoplasty. plastique.

Applied to the operations so termed.

Au'toplasts. (Λύτός, one's self; πλάσσω, to form.) Bodies resembling nuclei, but without differentiated cell areas around them. bodies are found in the ova of Cephalopods; they become branching contractile cells, by which the rhythmical contractions of the yelksae are effected.

**Autoplasty.** (Λυτός, himself;  $\pi$ λάσσω, to form. G. Selbstbildung.) A term for several operations, by which a variety of lesions of the face or body are repaired by means of healthy parts being taken from the neighbourhood of the lesion, and made to supply the deticiency caused by wounds or disease. The particular operations are further distinguished according to the locality in which they are performed, as rhinoplasty, the repair of the nose.

Autopsia. (Αὐτός, himself; ὅψις, the act of seeing. G. Selbstschen.) Self-inspection; evidence actually present to the eye. See

Autopsy.

A. cadaver'ica. (L. cadaver, a dead

body.) A post-mortem examination.

A. cadaver'ica lega'lis. (L. cadaver; legalis, belonging to the law.) A post-mortem examination for judicial purposes.

Autop'sides. (Αὐτός; ὅπτομαι, to see. F. autopsides.) Applied to a class of metallic substances naturally endowed with metallic lustre in one or more of their states.

Autopso'rin. (Λύτός, himself; ψώρα, the itch, or a cutaneous disease.) A term in homeeopathic language for that which is given in administering to a patient some of his own virus by way of remedial treatment, as in cases of itch,

smallpox, cancer, and syphilis.

Au'topsy. (Auros; ours, the act of seeing. F. autopsie; G. Antopsie, Selbstschen.) Evidence presented to the eye; ocular demonstration; but this word formerly comprehended the things observed, not only by the sight, but by the other external senses also. It has of late been used to signify the dissection of a dead body.

A. wound. A dissection wound. **Autopy'ros.** (Λύτός, itself; πυρός, wheat.) Term for wheaten bread, the bran not having been removed from the flour.

Autopy rus. Same as Autopyros. Autosatura'tion. (Abrós, self; saturo, to saturate.) The capacity possessed by the atoms of some bodies, as by those of carbon, to saturate themselves.

Au'toscope. (Αὐτός, self: σκοπέω, to sec.) An instrument invented by Coccius for the self-examination of the eye. It consists of a perforated plane mirror, which is placed in front of one eye, and throws the light of a laterally placed lamp on a concave mirror. The light reflected from this is directed into the opposite eye. The rays returning from this eye undergo the same reflection, and enable the fundus to be

Autoscop'ia. (Αὐτός; σκοπέω, to explore. G. Selbstuntersuchung.) The same as Autopsia.

Autos'copy. (Samo etymon.) The investigation of one's own disease, as by the autolaryngoscope.

Au tosite. (Aůrós; σῖτος, food.) A fatal monstrosity, which is capable of being nourished by the agency of its own organs after separation from the mother. See, in opposition, Omphalo-

Autosi'tous. (Λύτόσιτος, bringing one's own provisions. F. autositaire.) A term applied by Geoffroy St. Hilaire to those double monsters which are equally developed, and each by their organs contribute to the common life.

Autosteth oscope. (Αυτός; στηθος, the breast; σκοπέω, to explore. F. autostethoscope; G. Selbstbrustuntersucher.) An instrument for examining the condition of one's own chest; a kind of flexible stethoscope corresponding

to the Tolystethoscopium.

Autosty lic. (Αὐτός, himself; στῦλος, a pillar.) A skull is said to be autostylie when, as in the Amphibia and higher Vertebrata, the mandibular arch is suspended by its own proper pier, the quadrate, as in reptiles and birds.

Autotherapi'a. (Αὐτός; θεραπεία, medical attendance.) The self-eure of a disease,

the Vis medicatrix natura.

Autotransfu'sion. (Abros; L. transfundo, to pour over.) Term applied to the introduction, or, more properly speaking, the retention, of blood in the vessels of the more important parts of the system, as in those of the brain and of the viscera of the chest and abdomen, after severe hæmorrhages, by the systematic application of bandages to the limbs, and by position.

Au'tumn. (L. autumnus, from auctus, an increasing. Φθινότωρον; F. automue; 1. autumno; S. otoño; G. Herbst.) The season of the year which commences on the day the sun enters Libra, and ends on the day he enters Capricorn; which times, in this latitude, are September 23rd and December 22nd.

Autum'nal. (Same ctymon.) Relating, or belonging, to autumn.

A. cro'cus. The Crocus sativus.

A. fe'ver. A term for intermittent fever, because of its prevalence at that season.

A. gen'tian. The Gentiana amarella.
A. hawk'bit. The Leontodon autumnale.
Auxenom'eter. The same as Auxiometer

Auxe'sis. (Αὔξησις, growth, increase. G. Vermehrung, Wachsthum.) Increase. The augmentation or exacerbations of a disease

Auxilia'ris mus'culus. The auxiliary muscle; a name of the pyramidalis abdominis muscle.

Auxil'iary. (L. auxilier, to help, or snecour. F. auxiliaire; I. ausiliario; S. auxiliar; G. helfend.) Assisting; assistant. Applied to muscles that aid others in their action.

Also, applied to a medicine given at same time with another to aid its effect.

Auxiom'eter. (Αυξω, to increase; μέτpor, a measure. F. auxometre.) An instrument for measuring the magnifying power of an optic apparatus; the increase of power of a limb during effort; or the increasing size of a member.

**Aux'ospores.** ( $\Lambda \tilde{v} \xi \omega$ ;  $\sigma \pi \tilde{o} \rho o s$ , seed.) A product of development found amougst the *Bacillariacea*. The cells of these plants, by a continuous process of fission into two, diminish till their size is reduced to a mini-

mum. A formation of spores-termed by Pfitzer auxospores—now occurs, which cheeks the regular process of division, and leads to the formation of cells possessing the maximum size of the species, and in all other respects precisely similar to the mother-cells. These primary cells commence anew the same process of division, which continuously gives birth to generations of cells, each more diminutive than the preceding. In some cases the auxospores are produced by actual copulation (Suriraya), like the zygospores of the Conjugatæ; in others, by a simple reproductive effort of individual cells (Melosireæ), like the swarm-spores of the Œdogomiæ; and several intermediate conditions have been described by

Schmitz, 'Quart. Jour. Mic. Sci.,' 1873.

Au'zon. France; Departement du Gard. Athermal waters, containing calcium sulphate

and some hydrogen sulphide.

Also, the name of a mineral spring near Brionde, Departement de la Haute-Loire. It

contains sodium bicarbonate.

A'va. An intoxicating beverage, produced in the Sandwich Islands from the Piper or Macropiper methysticum by chewing the rhizome and allowing it to ferment in water.

Avagoo'da. The Telngu name of the

Trichosanthes palmata.

Avail'les. France; a village near Poitiers. The waters contain iron, sodium and calcium chloride, and sodium sulphate. Also called Absac.

Av'alanche the'ory. According to Pfluger, the result of stimulation of a nerve, as, for instance, the muscular contraction produced by irritation of a motor nerve, is greater the further the place of stimulation is removed from the organ excited; he explains this by the avalanche theory, according to which nervous influence gathers force as it descends. The facts on which the hypothesis is raised have been doubted.

Ava'loo. The Telugu name for the species of mustard.

Ava'nak. The Bengali name for the Ricinus communis.

The Tamul name for Cassia Ava'ray. auriculata.

Ave'late. (L. a, neg.; velum, a veil.) Without a veil or indusium.

Avella'na. (Avella, a city of Campania, which abounded with hazel nuts. F. noisette; G. Haselnuss.) The hazel nut. See Corylus avellanna.

A. cathar'tica. (Καθαρτικός, purgative.) Name for a purgative seed or nut, the produce of the Jatropha cureas. Also, of the nut of the Jatropha multifida.

A. in'dica. (L. indieus, Indian.) Name for the Balanus myrepsica, or ben-nut.

A. mexica'na. Name for the seed of the cacao tree, or the Theobroma cacao.

A. purga trix. (L. purgatrix, purifying)
The systematic name of the garden spurge. Also, of the Jatropha multifida.

Avella'næ græ'cæ. (Avellana; Græ-s, Greeian.) An ancient term for sweet cus, Greeian.) almonds.

Avellana'rius. (Avellana.) Applied to the grains of a granular rock when of the size of a small nut.

Ave-ma'voo. The Tamul name for Careya arborea.

Ave'na. (L. avena, oats. F. avoine; I.

avenu; G. Hafer.) The oat. The pharmacopeial name (E.) for the seeds of the Avena sativa.

A Genus of the Nat. Order Graminea, having subterete spikelets; flower glumes not keeled; lowest flower bisexual, fruit hairy at apex.

A. excortica'ta. (L. ex, out of, from; corticatus, provided with a bark. G. Hafer-grütze.) Groats.

A. fat'ua, Linn. (L. fatuus, foolish.) Wild oats.

A. nu'da. (L. nudus, naked.) Pill corn, short oat, naked oat. The variety preferred for making groats.

A. sati'va, Linn. (L. sativus, that which is sown. F. aroine; I. arena; G. Hafer.) The common oat. Panicle loose, equal-sided; glumes two-flowered, longer than the florets; florets smooth, bifid. The seeds are called oats. See Outmeat.

A. strigo'sa, Schreb. (L. strigosus, fall of furrows, thin.) The Spanish oat. Cultivated

as the common oat.

Avena'ceæ. (L. avena.) A Tribe of the Family Gramineæ. Spikelets multiflorous, hifid or trifid; the terminal flower often rudimentary; glumella and glume membranous; awn, when present, dorsal and twisted.

Ave'næ farina. (L. farina, meal.) The pharmacopæial name (U.S.A.) for oatmeal.

A. se'men. (L. semen, a seed.) The seed of the oat, Avena sativa.

Ave'nain. (G. avenain.) Name by Hermbstadt for the gluten of the Avena.

Ave'ne. The same as Avesne.

A'venheim. (Ger.) A village near Strasburg, where an aperient saline spring arises.

Ave'niform. (L. avena, oats; forma, like-

ness.) Having the form and size of an out.

Ave'nin. The uitrogenous principle of the oat. It is obtained by washing oatmeal on a sieve, allowing the liquid to deposit the starch, heating it to 98.8° C. (209.8° F.) to throw down the albumen, and then precipitating the white avenin by means of acetic acid. It is composed chiefly of casein.

Aven'nes. A village in the Department Hérault. Here is a saline spring; temp. of Hérault. 29° C. (84·2° F.)

Ave'nous. (L. a, neg.; vena, a vein. G. aderlos.) Without veins or nerves; veinless, nerveless.

A'vens. (Mod. L. avancia, or avencia, a barbarous unintelligible synonym, now obsolete.) A name for the herb Geum urbanum.

A., com'mon. The Genm urbanum.
A., pur'ple. The Genm rivale.
A., wa'ter. The Genm rivale.
A., white. The Genm rivale.

A., yellow. The Genn urbanum. yenzo'ar. The name of two eminent Avenzo'ar. Arabian physicians, father and son, who flourished in Spain during the twelfth century. The most important work of the former, the author of several treatises long held in high e-teem, is the 'Taisir, or Introduction,' one of the most valuable works of the Arabian physicians. The younger Avenzoar, called by his Arabian biographer Alhafid, or the Descendant, was the pupil of his father, and succeeded him as chief physician to the Sultan Abdu-l-Mumen. He wrote several works on medicine, among others, one on the

works on meutate, treatment of the eyes.

A'verich. A term for sulphur.

Ave'ric. The Tamul name of the Indigofera tinctoria.

Averoyne. An old name for southern-wood, Artemisia abrotanum.

Aver'rhoa. A Genns of the Nat. Order

A. ac'ida. (L. acidus, sour.) The Cicca disturba.

A. bilim'bi. An Indian tree. Juice of fruit subacid; given in fevers

A. caram'bola. A beautiful Cingalese tree. Fruit contains an acid watery pulp. Used as a pickle and in curries.

Aver'rhoes. An Arabian physician, born at Cordova in 1126, died at Morocco 1198. A great expounder of Aristotle.

Aver'sion. (L. averto, to turn away.) This familiar word was formerly used in the same sense as derivation or revulsion.

The same as Inverte-Aver'tebrate.

Aver'tin. A name in France for the vertigmous disease of sheep, more generally called tournis. Applied in common language to craziness, or sullenness, being said to be a disease of the mind, in which the patient becomes obstinate or furious.

Aves. (L. avis, a bird. F. oiseaux; I. ucelli; S. ave. paxaro; G. Vigeln; Port. passari.) A term employed to designate the class of birds in Zoology. They are characteristic for the class of the class of birds in Zoology. terised as feathered Vertebrata, with warm red blood, elliptical blood-corpuseles, complete double circulation, the heart possessing two auricles and two ventricles. They breathe by lungs. The bones of the skull are thin, but compact, and almost completely coalesced. The skull articulates with the spine by one articular process only. The jaws are destitute of teeth. The limbs consist of two wings and two legs. They sit on their eggs, and provide for their young when hatched.

A. cyp'riæ. See Aviculæ cypriæ. Aves'ne. France; Department Hérault. A cold alkaline and saline mineral water; employed in diseases of the skin, syphilis, and scrofula. Scason from the loth June to the loth September.

Avicenna. An Arabian philosopher and physician, who acquired a European reputation; born in a harulet near Bokhara, A.D. 980 (A.H. 370), and died in June, 1037, near Hainadau. He wrote, amongst many other treatises, the 'Kitâb al-Kânâu fi'l-Tibb, or Book of the Canon in Medicine,' two volumes of which treat of physiology, pathology, and hygiene, two of the methods of treating disease, and the fifth of the composition and preparation of remedies.

Avicen'nia. (Avicenna, the celebrated Arabian physician.) A Genus of the Nat. Order Myoporaciæ.

A. resinif'era. (L. resina, resin; fero, to bear.) The A. tomentosa.

A tomento'sa. (L. tomentum, a stuffing for cushious.) The systematic name of the white mangrove of Brazil, growing there, in Cochin China, and the Antitles. The fruit, boiled in water is eaten, and the leaves are employed as emollient cataplasms.

Avic'ulæ cyp'riæ. (L. avicula, a little bird, cyprus, Cyprian) Old name for certain aderiferous candles, said to have been made for burning in times of pestilence.

Also, sticks of wax of various colours, used for sealing letters.

A. hermet'icæ. ('Πρμής, Mercury.) Name

formerly given to a pretended univeral salt collected from dew.

Avicula'ria. (L. avicula, a little bird.) Bodies shaped like birds' heads, with a movable mandible, which snap incessantly, and are either sessile or are sealed upon slender and flexible peduncles found on the cells of many Polyzoa.

Aviga'to pear. Name of the fruit of the Persen gratissima.

A'vigna. Sanskrit name for Carissa carandas.

The name of the fruit of the Avi'la. Femiliea cordifolia. A eucurbitaceous plant growing in the Antilles. The seeds, and the oil expressed from them, are emetic and purgative; they are used against the bites of serpents and in poisoning by the manchineel tree, Hippomane mancineua.

Aviros'trate. (L avis, a bird; rostrum, a beak.) Resembling a bird's beak.

A'vis. (L. arıs, a bird. F. oiseau; G. I'ogel; Gr. opus.) A bird. Applied in the plural to a class of the oviparous vertebrata.

A. med'ica. (L. medicus, healing.) The medical bird. An old epithet of the peacock, Puvo cristatus, which was anciently used in medicine.

Avoca'do pear. The fruit of the Persea gratissima.

Avoca'tier. (Fr.) The Persea gratis-

Avoga'dro, Amade'o. Au Italian physicist, 1811.

A., law of. The different gases, both elementary and compound, under like conditions of temperature and pressure, contain in equal volumes the same number of molecules. This law, though first enunciated by Avogadro, is often connected with the name of Ampère.

Avoirdu pois weight. to have: du poids, weight, or some weight.) 27:34375 gr. = 1 dr.; 437.5 gr. = 16 dr. = 1 oz.; 7000 gr. = 256 dr. = 16 oz. = 1 lb.

A'von springs. United States of America; New York State. Saline springs, of which three contain sulphur and one iodine.

Avran'cum. Old term for egg-shells.

See Auraneum. (Quiney.)

Avraric. Old name for hydrargyrum, or mercury. See Auraric. (Quiney.)

Avul'sion. (L. avulsio, from avello, to tear away. G. Abreissen, Trennung.) A tearing off, as of a polypus, from its root.

Also, a wrenching away, as of a tooth, from its socket.

Awa'muri. A spirituous liquor, prepared in Nepaul from corn.

Awl-sha'ped. (F. aléné; G. pfriemen-formig.) Tapering to a slender point. Applied

to leaves, receptacles.

Awn. (Sw. agn, chaff. F. arète; G. Awn. (Sw. agn, chaff. F. arete; G. Granne.) The sharp point or beard of the palex,

or, more rarely, of the glumes of grasses.

Awn'ed. (F. aristic.) Having aristic, or awns : aristate.

Awulgoon'dur. Deccan name for the pecies of Boswellia, from which olibanum is

Awus'ada-nel'li. The Cingalese name of the Phyllanthus emblica.

Ax. France; Department Ariége. A sul. phurous sodic mineral water, issuing by a large number of springs, the temporature of which varies from 25° to 70° C. (77° to 158° F.) It is employed in the form of baths, and internally in cases of contracture, rheumatism, gont, and gravel, in chronic diseases of the skin, chronic bronchitis, and scrofulous affections. The climate is mild in summer and autumn, but the variations of the temperature are rapid, and the rain-fall great.

Ax'ea commissu'ra. axle-tree; commissura, a joint.) Old term for that kind of articulation otherwise called Trochoides, in which one bone turns on the pivot of another, as in the atlo-axed articulation.

Ax'ia. Name of a shrub in Cochin China, said to be tonic and diaphoretic.

Ax'ial. (L. axis.) Belonging to an axis.

A. em'bryo. Same as Axile embryo. A. skel'eton. (Σκελετόν, a dried body.) The whole number of vertebræ, true and false, with their appendages and the cranial bones.

Axif erous. (L. axis, the point on which a wheel revolves; fero, to bear.) In Botany, applied to plants consisting solely of an axis without appendages.

Azifugal. (L. axis, an axle-tree; fugo, to tly.) Same as Contrifugal.

A. force. The tendency which a rotating body possesses to fly from the axis around which it is turning.

Ax'il. (L. axilla, the arm-pit.) The arm-

In Botany, the angle formed by the axis and

any one of it's lateral appendages.

A. flow'ering. Flowering in the axils of the leaves.

Ax'ile. (L. axis, the axle-t standig.) Belonging to the axis (L. axis, the axle-tree. G. achsel-

A. bodies. The touch corpuscles.

A. em'bryo. In Botany, an embryo which has the same direction as the axis of the seed.

Axil'la. (As if Axis ale; from axis, the point on which a wheel revolves; ala, a wing, also the arm-pit itself; because the movements of the arm, which is analogous to the wing of a bird, proceed from this point or axis. F. aisselle; G. Achselhohle, Achselgrube.) Name for the cavity under the upper part of the arm and shoulder; the arm-pit.

Also, the angle formed by the stem of a plant

and one of its lateral appendages.

Axil'lans. (L. axilla, the axilla. F. axillant.) Term applied to the leaf, in the axilla of which a bnd develops, to distinguish it from other leaves.

Axilla'ris. (L. axilla, the arm-pit. F. axillaire; G. achselstandig.) Of, or belonging to, the axilla or arm-pit.

A. gem'ma. (L. gemma, a bud.) The gem or bud proceeding from the axilla of a plant. Axil'lary. (Same etymon.) Belonging to the axilla.

In Botany (G. blattwinkelständig), growing in,

or springing from, the axil.

A. arch'es. Museular bands which stretch from the border of the latissimus dorsi across the axilla and unite with the tendon of the pectoralis major, the fascia, the coraco-brachiahs, or the biceps muscles.

A. ar'tery. (G. Achselschlagader.) axillary artery is a continuation of the subclavian, and extends from the lower border of the first rib to the lower border of the tendon of the teres major, where it becomes the brachial. It is covered in front by the pectoralis major and minor, and its relations to the last-named muscle permits it to be conveniently divided into three parts, that above the pectoralis minor, the portion beneath it, and that below it. The part above the pectoralis minor is covered in front by the skin and superficial fascia branches of the clavicular nerves. Pectoralis major, costo-coracoid membrane, with branches of superior and acromial thoracic arteries, and the cephalic vein behind, is the first intercostal space, the first digitation of the serratus magnus, and the long thoracic nerve of Bell. To its inner side is the axillary vein, and to its outer side the brachial tlexus. The part beneath the pectoralis minor is covered by the pectoralis major and minor in front; behind are the sub-capularis muscle and posterior cord of the brachial plexus. To the inner side are the axillary vein and inner cord of the plexus, and to the outer side is the outer cord of the plexus. The part below the pectoralis minor has at first the pectoralis major in front, but afterwards is superficial, being covered only by the skin and fascia. Behind are the subscapularis, the tendons of the latissimus dorsi and teres major, and the musculo-spiral and circumflex nerves; to the inner side the axillary vein, with the ulnar and internal cutaneous nerves; and to the onter side the coraco-brachialis, the median and musculoentaneous nerves. The branches of the artery are the superior thoracic and the acromial thoracie, which are given off above the pectoralis minor, the alar thoracic and long thoracic from the artery beneath the muscle, and the anterior and posterior circumflex arteries below the muscle. In about one ease out of every ten the artery gives off a large branch, which either forms one of the arteries of the forearm or a large muscular trunk. (Gray.)

A. fas'cia. A dense layer of connective tissne extending from the thorax to the arm, and forming the base of the axilla, when the arm is abducted. It is continuous internally with the thoracic fascia, and externally with the brachial fascia; anteriorly with the fascia covering the pectoralis major, and posteriorly with that covering the latissimus dorsi and teres muscles

A.glands. (G. Achseldrusen.) The lymphatic glands of the axilla; they are númerous, but vary considerably in size. They are for the most part in close contiguity to the vessels. They receive branches from five sources: from the superficial and from the deep lymphatics of the arm, from the lymphatics of the lumbar region of the back and of the posterior part of the neck, and from the antero-lateral portions of the trunk.

A. nerve. The eircumdex nerve of the

A. plex'us. (G. Armgeflecht.) A name for the brachial plexus of nerves, formed by the three last cervical and the first dorsal. See

Brachral plexus. A. space. This is an irregularly conical space with the base below, bounded internally by the first four ribs and intervening intercostal muscles, with the corresponding portion of the serratus magnis; posteriorly by the subscapilaris, teres major and latissimus dorsi muscles; anteriorly by the two pectorals; and externally by the humerns, with the coraco-brachialis and biceps muscles. The base is closed by a dense aponeurosis, and the apex lies between the upper margin of the scappla and the first rib. The space is crossed by the axillary artery, vein, and brachial plexus of nerves, and contains numerous lymphatic glands and vessels.

A. vein. (G. Achselblutader.) This vein is a continuation of the basilie. As it ascends it lies on the inner side of the axillary artery. has almost the same general relations as the artery. It receives successively the circumflex, long and alar thoracie, and subscapular veins, the vense comites of the brachial artery, and near its termination the cephalic vein opens into it. The vein has a pair of valves opposite the lower border of the subscapularis muscle, and valves are also found at the mouth of the cephalic and anbscapnlar veins.

**Ax'illated.** (L. axilla.) Having an axis disposed around a common axis.

Axilliflo rous. (L. axilla ; flos, a flower.)

Having flowers in the axils.

Ax'in. An oleaginous product, employed as a soothing ointment, yielded by the large Mexican cochineal, Coccus axinus, which lives on the manihot, Jatropha curcas. It contains laurostearic acid, a little stearic or palmitic acid, and axinic acid.

Axi'ne. ('Aξίνη, an axe.) A sexually mature

form of trematode worm.

**A. belo'nes.** (Βελόνη, a sharp point.) Found in the branchiæ of Belone acus.

A fatty acid found in Axin'ic ac'id. Axin.

(Arab.) Old name for fat Axirnach. formed in the upper eyelids of children. Albu-

casis, M.M. ii, 10, p. 55.

Ax'is. ('Αξων, an axle-tree. L. vertebra dentata epistropheus; F. axis; I. asse; G. zweiter Halswirbel.) The second cervical vertebrais strong and triangular; the body is marked by a ridge, on either side of which is a depression, to which the longus colli muscle is attached. It is characterised by the vertical tooth-like process called the odontoid process, which ascends from the upper surface of the body to occupy the anterior esteo-fibrous ring of the atlas. This apophysis is about three fifths of an inch in height, and presents a smooth surface in front to articulate with the atlas; another behind, to play on the transverse ligament; and is rough above for the attachment of ligament. The superior articular processes, looking newards and outwards, support the atlas, and are anterior and internal to the lower ones, which articulate with the third cervical vertebra. The superior notches are behind the articular processes. The transverse processes are small, and neither bifurcated nor grooved. The passage for the vertebral artery runs obliquely upward, outward, and backward. The lamina are thick and prismatic. The spinons process is large and strong, deeply channelled on the under surface, and tubercular at the extremity, for the insertion of the recti capitis, postici majores, and obliqui inferiores. The vertebral foramen is kidneyshaped. The bone has an extra point of development for the odontoid process (Ward). rotatory movements of the head on the spine are effected by the rotation of the atlas and head, supported on the articular processes of the axis, round the odontoid process.

Also, a synonym of the modiolus of the

cochlea.

In Betany, applied to the stem and root of a plant.

Also, applied to an imaginary line from the base

to the apex of a pericarp.

Also (F. axe; G. Achse), name given to a right line, real or imaginary, passing through the centre of any body, being, as in the case of a wheel, the object on which it acts or turns, or may be supposed to turn. The axis of the earth is that diameter about which it performs its dinrnal revolution.

Also, applied to the centre of a mountain

group.

**A., anticli'nal.** ('Αντί, opposite; κλίνω, to slope.) Term for a longitudinal ridge of rock from which the strata decline on both sides, usually at very high angles; termed also an axis of elevation.

A., ascend'ing. The stem of a plant.

A., cer'ebro-spi'nal. (L. cerebrum, the brain; spinalis, belonging to the spine. I. asse The central nervons system, cerebrospinale.) consisting of cerebrum, cerebellum, medulla oblongata, and medulla spinalis, and occupying the axis of the body.

A. coch'leæ. (L. cochlea, a snail shell, the cochlea of the ear. I. asse della chiocciola.) The medielus.

A., cœ'liac. See Cæliac axis.

A. cord. A term by Ilis for the place of fusion of the epiblast and mesoblast of the embryo beneath the primitive groove.

A. cor puscle. The same as Tactile corpuscle.

A., cra'nio-spi'nal. (Kpaviov, the skull.) The same as A., cerebro-spinal.

A. cyl'inder. See Cylinder-axis.
A. descend'ing. The root of a plant.
A. hæ'mal. (Alμα, blood.) The aorta.
A. hypocotyle'donous. (Υπό, below; cotyledon. F. axe hypocotyle'. That part of

the axis or stem of a plant which lies between the cotyledons and the uppermost radicles; from it neither roots nor buds are ever developed.

A., na'ked. (F. axe nu.) A condition of peripheric nerve-fibre in which the cylinder-axis alone appears to remain and to anastomose with other similar fibrils; it presents small cells in its course, or at the points of union, fusiform in the former case, and polygonal in the latter, which appear to be peripheral nerve-cells.

A., neural. (Νεῦρου, a nerve.)

same as A., cerebro-spinal.

A. of eleva'tion. A term for the anticlinal axis.

Also, a synonym of Fault.

A. of electric ity. A term given to the line connecting the poles of certain minerals when exhibiting the phenomenon of pyroelectricity. The poles are opposite to each other, one being the place where positive electricity is most intense, the other where negative electricity is most manifest.

A. of lens. The straight line connecting the centres of curvature of spherical lens; and in the case of a plano-convex lens the perpendicular let fall from the centre of the spherical face to

the plane face.

A. of mag'net. The shortest line con-

necting the two poles of a magnet.

A. of turn'ing. A term used to designate an imaginary line on which the eye turns on the contraction of one of its muscles; it is perpendi-

eular at this point to the muscle plane.

A., op tic. (F. axe de l'ail; I. asse ottico; G. Augenaxe, optischer Axe.) The axis of the dioptric system of the eye; the anterior extremity of this corresponds to the centre or apex of the cornea, and the posterior extremity to a point situated between the yellow spot and the entrance of the optic nerve. It is not identical with the

visual line or axis.

Also, in a doubly refracting crystal, a line which represents a direction in which the double refraction does not occur. All crystals of this nature possess one such axis, and so are uniaxial;

some possess two, and are biaxial,

A., pel'vic. (Pelvis. G. Beckenachse.) An imaginary line drawn at right angles to the planes of the brim, the several segments of the cavity, and the outlet of the pelvis, through their central points. It is a curved line, its upper extremity looking upwards and forwards towards the umbilious; its lower extremity downwards and forwards.

A., syncli'nal. (Σύν, together; κλίνω, to slope.) Term for a longitudinal depression or trough, towards which strata of a hill or mountain

chain decline.

A., thorac'ic. See Thoracic axis.
A., thy'roid. See Thyroid axis.
A. vis'ual. (F. axe visuel, ligne visuel;
I. asse visuale; G. Schaxe, Gesichtslinie.) The line of direction drawn straight from the object through the nodal point to its image formed at the yellow spot. The visual axis outside the eve lies above and to the inner side of the optic axis, and its posterior extremity on the retina consequently lies a little to the outer and lower side of the optic axis.

Ax'oid. (L. axis; είδος, likeness.) Relating

to the axis.

Axoido-at'loid. See Atlo-axoid.

A.-atloide'us. (Axis; atlas.) The Ob-liquus capitis inferior muscle.

A .- mastoide us. (Mastoid process.) The Obliquus capitis inferior muscle.

A .- occipita'lls. (Occipital bone.)

Rectus capitis posticus major muscle.

Ax'olotl. The male or female tailed larva or tadpole of the Amblystoma. One of the Urodele Batrachians.

Axon'ophyte. (Άξων, an axle; φυτόν, a plant.) An amentaceous plant the flowers of which surround a common axis.

Ax'ophyte. (Same etymon.) The axis

of the nutritive organs of a plant.

Axot'omous. ('Αξων, the axis; τέμνω, to cut.) Cleavable in one direction. Applied to cleavage, when it appears as a single plane, or face, perpendicular to the axis.

Axunge. A synonym of Adeps prapa-

ratus.

Axun'gia. (L. axis, an axle-tree; unguo, to smear; because used for that purpose. F. axonge; G. Schmalz, Schweinfett.) The pharmacopæial name (E.) of the fat of the Sus scrofa; the Adeps (L.), or Adeps suillus (D.), or hog's lard. The hardest and firmest part of the fat of animals. See Adeps præparatus.

A. articula'ris. (L. articularis, belonging

to the joints.) Synovia.

**A. balsam'ica.** (Βάλσαμον, the balsam tree.) The Adeps benzoatus.

A. benzoa'ta, Belg. Ph. Benzoated lard. Powdered benzoin 40, fresh lard 1000 parts; place in a vapour bath for two hours, and strain. henzoin prevents rancidity.

A. benzoina ta. The Adeps benzoatus.
A. cas'toris. (L. castor, a beaver.) The soft, unctuous contents, formerly officinal, of a pair of oil sacs, terminating in the cloaca of the male beaver, Castor fiber. It is different from

A. de mu'mia. (Arab. mumia, a kind of bitumen.) Old term for marrow or fat of bones; also called mumia de medullis. (Dornæus, Ruland, and Johnson.)

A. ga'di. (Γάδος, a kind of fish, perhaps the hake; whence gadus, the generic name of the

cod.) Cod-liver oil.

A. lu'næ. (L. luna, the moon.) Name formerly given to a species of white bole. (Quincy.)

A. oxygena ta. The Unquentum oxygenatum.

A. pe'dum tau'ri. (L. pes, a foot; taurus, a bull ) Neat's foot oil. See Oleum bubulum.

A. pisci'na mari'na. (L. piscinus, belonging to a fish; marinus, belonging to the sea.) Cod-liver oil.

A. por'ci. (L. porcus, a pig.) Lard of the

A. porci'na. (L. porcinus, of a hog. G. Schweinefett.) Another term for Adeps suillus, or hog's lard.

A. porci'na depura'ta, Belg. Ph. Purified hog's lard. Lard melted in hot water and strained through linen.

A. so'lis. (L. sol, the sun.) Name formerly

given to a yellow species of bole.

**Axylæ.** (Αξυλος, without wood. G. holzlos.) Applied to those plants which do not develop woody fibre.

(Same etymon. G. holzlos.) Ax'ylous. Without wood, or without woody fibre.

Ayal'ly. Name of a kind of grass in St. Domingo; used as a laxative.

Ayaloo'gi. A name of Aloes wood.

Ay'a-pa'na. The Eupatorium aya-pana. Aybor zat. (Arab.) An old name for galbanum. (Quincy.

(Arab.) Old term for burnt Ayca'pher.

copper. (Quincy.) Ayco phos. (Arab.) Old term for the Æs ustum, or burnt brass. (Ruland and Johuson.)

Ayden'dron. A Genus of the Nat. Order Lauraceæ.

A., Cuju'mary, Nees. The plant from which Cujumary beans are obtained; they are aromatic, and employed in indigestion.

A. laur'el, Nees. The Ocotea pichurim, which is supposed by some to produce Pichurim beans.

Aye-green. An old name of house leek, Sempervivum tectorum.

A'ylous. ('Aülos, without matter.) Incorporcal, immaterial.

Aÿp'nia. ('Αϋπνια. G. Schlaflosigkeit.) Sleeplessness.

Ayp'nous. (Same etymon. G. schlaflos.)

Ay'ri. A synonym of Aibi. Azaa. (Arab.) Ancient name for the Terra rubra, or red marl. (Ruland and Johnson.)

A'zac. Arabian name for the gum ammoniacum. (Quinev.)

Azad-i-du'rucht. Persian for Azadirachta indica.

Azadirach'ta. A Genus of the Nat. Order Meliaciæ.

A. in'dica, Juss. (F. margousier; Mal. Aria bepon; Tam. Vaypum; Tel. Vepa.) The neem or margosa tree. An Indian tree, 20 feet high. The bark, hitter, is used as a substitute for einchona in intermittent fevers and chronic rheumatism. The bruised, fresh, or dried leaves, applied on common poultices, are said to prevent glandular tumours from coming to maturity, and rapidly remove psora and other pustular affections. On the decline of smallpox the natives cover the body with the leaves of this tree. From the pericarp of the seed an acrid bitter oil is expressed, which is useful in leprosy and rheumatism, and is anthelmintic and stimulant. Used also externally in bad ulcers, and as a limiment in headaches. The bark of the roots, the leaves, and nuts, as well as an alkaleid, azedarin, extracted by Piddington, are used in the Antilles as a febrifuge.

Aza'gor. (Ara verdigris. (Castellus.) (Arab.) Ancient name for

Az'alar. A name of the Peruvian cin-

**Aza'lea.** ('Λζαλέος, dry; from άζαίνω, to make dry.) A Genus of the Nat. Order Erica-

A. arbo'rea. (L. arbor, a tree.) The A.

A. pon'tica. (L. ponticus, belonging to the Black Sea.) The systematic name of a plant generally supposed to be the agolethron of the ancients; it yields by exudation a nectareous juice having intoxicating and poisonous qualities, and was supposed to be the cause of the pestilence which killed so large a number of the soldiers in the retreat of Xenophon, by means of the honey then eaten. See Chamarhododendron.

A. procumbens. (L. procumbo, to prostrate one's self.) The Loiseleuria procumbens.

Azalein. The same as Fuchsin.
Aza'mar. (Arab.) Old name for minium, or the red oxide of lead; also for the hydrargyri sulphuretum rubrum, vermilion, or native cinnabar properly prepared. (Ruland.)
Aza'ne. (Arab.) Term for a drop. (Quincy.)

A zar. Same as Azune.

Azara'khee. A name applied by Avieenna to Strychnos nux romica.

Azar'net. (Arab.) Old name for auripigmentum, or orpiment. (Ruland and Johnson.)

Az'arole. The Cratægus azarolus. Az'arum. The same as Asarum.

A. cab'aret. The Asarum curopæum.
Azci. (Arab.) Old name for atramentum,
or ink. (Ruland and Johnson.)

Azed'arach. The Azadirachta indica. Also, the pharmacopæial name (U.S.A.) for the bark of the root of the Azadirachta indica, or Melia azedarach.

Azed'arin. An alkaloid obtained from the Azadirachta indica; proposed as a substitute for quinine.

**Azede'grin.** (Arab.) Old name for the Lapis hamatites. (Ruland and Johnson.)

Azedera'cha amœ'na. (L. amænus, pleasant.) The Azadirachta indica.

(Arab.) Old name for Allumin A zef. scissum, or scissile. (Ruland and Johnson.)
A'zeg. (Arab.) Old name for vi Old name for vitriol.

Azeg. (Ruland and Johnson.)

Azcloin'ic ac'id. The same as Enanthylic acid.

Azema'for. (Arab.) Old name minium, or the red oxide of lead. (Quincy.) Old name for

Azema'sor. (Arab.) Old name for vermilion, or native cinnabar. (Ruland and Johnson.)

Azensa'li. (Arab) Old term for moss

growing on stones; also, for a certain black stone found among gold. (Ruland.)

Azimar. (Arab.) Ancient name for Æs ustum, or burnt copper. (Ruland.)
Azius. (Arab.) Old name for a stone on

which salts grows. (Ruland.)

A'zob. (Arab.) Old no Old name for Alumen succharmum. (Rulánd.)

Azoben'zene. Same as Azobenzide. Azoben'zide.  $C_{12}H_{10}N_2$ . Name given to a substance obtained by heating a mixture of nitrobenzine and sodium amalgam. It crystallizes in readish plates, sparingly soluble in water, easily in alcohol and ether.

Azocarbic. A synonym of Cyanic. Azocarbide. A synonym of Cyanide. A. hy'dric. A synonym of Hy trocyanic acid.

Azocarbon'ic. A synonym of Picric.
Azocarbu'ric. A synonym of Cyanuric.
A'zoch. (Arab.) A word applied formerly to the Mercurius philosophorum, or quicksilver extracted from any metallic body. See Auraric.

A'zock. Same as Azoch. Azo'ic. ('A, neg.; ζωή, life.) Having no

Azolit'min. According to Kane, one of the colouring matters of litmus.

Azolleæ. A Tribe of the Family Rhizocarpea, according to some botanists, having the

sexual organs located on the petiole. **Azoodynam'ia.** (Λ, neg.; ζωή, life; δύναμις, power. G. Lebensthatigkeit.) Loss, or lessening, of the powers of life.

**Azoog'eny.** ('A, neg ; ζωων, an animal; γεννάω, to produce.) The generation of imperfeetly developed progeny.

Azoosperm'ia. ('A; ζωή, life; σπίρμα, seed ) Loss or diminution of vitality of the spermatozoa, or their absence from the ejaculated fluid.

Azorella. A Genus of the Nat. Order Umbellifere, growing in the neighburhood of the Straits of Magellan. The different species supply a gum-resin, which is used as an aromatic and stimulant.

A'zores. Islands in the Atlantic Ocean, some 800 miles off the coast of Portugal. The climate is like that of Madeira, being temperate and equable, but the moisture of the atmosphere is very great.

Azosul'phate. A synonym of Nitrosulphate.

Az'otate. (Azotr.) A synonym of nitrate. Azota'tion. (Azote.) A term for the fixation of atmospheric nitrogen by plants, herbivorous animals, and carnivorous animals deprived of albuminous substances, or subjected to starva-

Az'ote. ('A, neg.; Yon', life; because untit for sustaining life. F. azate; G. Azot, Netrogen, Stickstoff, Sticklaft.) Another name for nitrogen gas.

Azotene'ses. A term for a class of diseases, including scorbutns, gangrene, and cancer, supposed to depend on excess of azote or nitrogen in the tissues.

A'zoth. (Arab.) The same as Azoch; also, a name for brass; also, a panacca made from mercury, gold, and silver.

Azot'ic. (.1zote. G. azotisch, Sticksloff-haltig.) Belonging to azote or nitrogen. A. ac'id. A synonym of Nitric acid.

Az'otised. (Azote.) Nitrogenised; charged with nitrogen.

A. sub'stances. The immediate constituents of the animal body containing nitrogen; they are albumin, fibrin of blood, myosin, syntonin, casein, globulin, gelatin, chondrin, salivin, kreatin, kreatinin, pepsin, muciu, keratin, pigment, hæmoglobin, urea, urie acid, hippurie acid, inosruic acid, sarcin, leucin, tyrosin, lecithiu, neurin, and the biliary nitrogenous compounds.

Az'otite. (Azote.) The same as Nitrite. Az'otous. (Azote.) The same as Nitrous. Azo'tum. Same etymou and meaning as Azote.

**Azotu'ria.** (Azotum, azote or nitrogen, which is the chief constituent of urea; uring, the urine.) Term for a class of diseases characterised by a great increase of urea in the urine. Also, a synonym of Diabetes insipidus.

Azo'tus. (Azote.) A synonym of nitrate.
A. argenticus. The Argenti nitras.

A.argent'icus fu'sus. (L. fusus, melted; from fundo, to pour out.) The Argenti nitras

A. hydrargyr'icus liq'uidus. hydrargyrus, mercury; liquidus, liquid.) The Hydrarqyri nitras.

A. hydrargyro'so-ammon'icus. The Mercurius solubilis Hahnemanni.

(L. hydrargyrus, A. hydrargyro'sus.

mercury.) Mercury nitrate. A. plumb'icus. (L. plumbum, lead.) Nitrate of lead.

A. potas'sicus. Potassium uitrate. A. so'dicus. Sodium nitrate.

Azra'gar. (Arab.) Old term for verdigris.

AZFagar. (Ruland and Johnson.)
(Ruland and Johnson.) Old name for alumen or

alum. (Ruland and Johnson.) Azu bo. (Arab.) Name formerly given to

a certain chemical vessel. (Ruland and Johnson.)

A'zuc. (Arab.) An old name for red coral. (Ruland and Johnson.)

**Az'ulene.**  $C_{16}H_{13}O$ . A blue liquid of sp. gr. 910, boiling at 302.2° C. (576° F.) It is supposed to cause the blueness of volatile oils, and with resin the greeu or brown colour. Also called Carulcin.

Azul'mic ac'id. (G. Azulminsäure.) Name given to a black substance deposited during the spontaneons decomposition of hydrocyanic acid, which is very similar to ulmic acid.

Another term for azulmic Azul min. aeid.

Az'ur. A name of coral. Az'ure. A name of smalt.

Also (F. azur, azurė; G. azurblau, himmelblau), of an azure-blue colour, like ultramarine, and brighter than Caruleus.

A. stone. (F. lapis lazuli; G. Lasurstein.) A name for the Lapis lazuli, from its colour.

Azu'rium. Old term for a preparation of two parts mercury, one third part sulphur, and Albertus Magnus, one fourth sal ammoniac.

Chymia, in Th. Chym. vol. ii, p. 437.

Az'yges. ('A, neg.; zvyós, a yoke.) The same in all respects as Azygos. Formerly applied to the sphenoid bone, as having no fellow.

A. proces'sus. (L. processus, a projection.) The rostrum of the sphenoid bone.

Azygos. ('A, priv.: ζυγόs, a yoke. F. azygos; G. ungepaart.) Without a fellow, or corresponding part; unyoked.

This word has hitherto had no distinct character assigned to it, being unintelligibly used sometimes as a name of a muscle, &c., and presented per se, as if it were an indeclinable noun. It is an adjective as here stated, and so agrees with musculus, processus, vena, one of which must always be expressed or understood, in its employment in medical language.

A. ar'tery. (A, neg.; ζυγός, a yoke. I. arteria articularis genu media; F. artere articulaire moyenne; G. mittlere Kniegelenkarterie.) Generally a branch of the popliteal artery given off opposite the back of the knee-joint, but occasionally of one of the superior articular arteries. It penetrates the posterior ligament of the joint, and supplies the ligamentous structures, the fat, and the synovial membranes.

A. gland'ulæ thyroï'deæ.

vator thyroideæ musele.

A. pharyng'is. A small muscle lying in the middle line between the upper and middle constrictors of the pharynx; it arises from the pharyngeal spine of the basilar bone, and is inserted into the median raphe of the pharvnx.

A. processus. Term for a process of the sphenoid bone, called the Rostrum sphenoidale.

A. u'vulæ. (Dim. of uva, a grape. L. Pa-lato-uvularis, palato-staphylinus, staphylinus, or epistaphylinus; F. musele azugos de la luette; G. Zapfenmuskel.) Occupies the middle line of the soft palate. It arises from the spine of the palate bone, and extends backward to the tip of the uvula. A thin layer of the palato-pharyngeus covers its upper surface; it elevates and shortens the uvula.

A. veins. These are three in number, one larger on the right side, two smaller on the left. The right, or larger vena azygos, commences by small branches coming from the upper lumbar vertebræ. It enters the thorax by passing through the aortic orifice on the right side of the aorta and thoracic duct, ascends on the right side of the bodies of the dorsal vertebræ till it reaches the level of the third intercostal space, when it arches forward over the right bronchus, and joins the superior vena cava just above the pericardium. It has one valve at the point where it arches forward. It receives in front the right bronchial and some esopbageal and mediastinal branches, on its right side the eight inferior right intercos-tal veins, and on its left side the lesser azygos vein and the common trunk formed by the left superior intercostal veins. At the level of its entrance into the superior vena cava the three superior right intercostals sometimes open into it a single trunk.

by a single trunk.

The left lower, or small azygos vein, begins, like the right, in the upper lumbar veins, and often communicates with the left renal vein. Entering the thorax through the aortic opening, and through the crus of the diaphragm, it receives the four or five left inferior intercostal veius, and crosses at the level of the eighth dorsal vertebra, behind the aorta and thoracic duet, to join the right azygos, though it occasionally runs up to the left innominate vein. It receives some @so-

phageal and mediastinal branches. The left upper azygos vein (Ellis and Breschet) is formed by offsets from the spaces between the superior intercostal and the highest branch of the lower azygos. Receiving three or four branches, the trunk either joins the lower azygos of its own side, or crosses the spine to open sepa-

rately into the right vein.

The vena azygos major is the persistent upper part of the right vena cardinalis of the embryo. The upper part of the left vena cardinalis remains as the left upper azygos vein, or as the left snpcrior intercostal.

A. ve'na. See A. veins.

Azygous. (Same ctymon.) Without a fellow.

A. gan'glion. (Γάγγλιον, a tumour under the skin.) A gauglion of the sympathetic nerve, situated on the coccyx, and formed at the junction of the two terminal filaments of the great sympathetic nerve.

A. mus'cle of the thy roid gland. The

Levator glandulæ thyroideæ.

Azy'mar. (Arab.) Old name for vermilion,

or native cinnabar.

Azymia. ('A, neg.; ζύμη, ferment. G. Ungegohrenheit.) A condition of non-fermentibility, or of absence of fermentation, or of crudity.

A. humo'rum. (L. humor, a liquid.) An old term for crudity of the humours.

Azy'mic. (Same etymon. G. ungegohren, ungesauert.) Unfermented, unleavened.
Azy'mos. ('A, priv.; ζύμη, ferment.) Old term applied to unfermented or unleavened bread, as sea-biscuit, &c.; having no ferment. Azy'mous. Same as Azymic.

B.

B. A contraction of Beaumé, and having reference to his arcometer.

Also, of balneum, a bath. B. A. A contraction of balneum aquæ, a water bath.

Also, of balneum arenæ, a sand bath.

B. M. The initials of balneum mariæ, or maris, a bath of water; a water bath.

These letters, in formulæ and prescriptions, are the initials of the words balneum marinum, a

hath of the sea, or sea-water bath. **B. V.** These letters, used in formulæ and pre-criptions, are the initials of the words balneum vaporis, a bath of vapour, or vapour bath.

The symbol of the metal barium. Ba. Ba'al-she'men. Royal oil. Term ap-

plied to the baim of Gilead.

Baa'sen. Hungary, near Mediasch; situated in a pleasant valley, surrounded by woods and vineyards. Salt springs, containing iodine and bromine. Temp. 15° C. (59° F.) to 19° C. (66° 2° F.); one spring is cold. The sodium iodide amounts to about half a grain to a pint, and the sodium bromide to one third of that amount. Used in chronic rheumatism, scrofulous enlargement of glands, uterine and ovarian congestions, syphilitic joint and periosteal affec-

Bab'che. The Hindustani name of a plant found near Umritzir, which is used as an oiutment in itch, and, in decoction, as an application

to unhealthy ulcers. Also, a small dark-coloured aromatic seed, which has been used in India in lepra. (Wa-

Babern. Russia; Government of Courland. A place about ten miles from Riga and from Mittau. Here are sulphuretted waters, containing 10.5 cub. in. of hydrogen sulphide, 1.4 gr. of sodium sulphate, 2.7 grs. of magnesium sulphate, 1.2 gr. of calcium sulphate, and 1.6 gr. of sodium chloride in one pint.

Bab'la. Bengali for Acacia arabica.

Bablah. An Indian name of the fruit of the species of A-acia.

B. of Egypt. The legumes of the Acacia

B. of In'dia. A commercial name of the legumes of the Acacia nilotica, or A. arabica. They contain much gallie and tannic acids. A powerful astringent; used for tanning purposes.

B. of Sen'egal. The legumes of the Acacia seval.

Ba'bo-mant'su. A Tribe of the Saan Family of the Hottentot race inhabiting the western region of the Ngami Sea.

Bab'ouny. The flowering heads of the Santolina fragrantissima. Used in Egypt, in infusion, as a stomachic.

Babreny. The Hindustani name of the seed of the Embelia ribes. Used as a vermi-

Ba'buckr. A Tribe of Negroes inhabiting the West of Abaka and Luba and the East of Sandeh (Nyamnyam), probably belonging to the Nuha race.

Bab'ul bark. The bark of the Acacia arabica. It is coarsely fibrous, of a mahogany colour, and of a bitterish and astringent taste. A decoction of Biss to Oj of water is used, as an injection, in leucorrhœa, piles, and prolapsus ani, as a gargle in relaxed throat, and internally in

chronic diarrhea, in doses of 5ij twice daily. **Babu'na ka phul.** Hindustani name of chamomile flowers.

Babung'era. A synonym of the Sandeh

Tribe of Negroes. **Babu'ta.** The Malay name of a low shrubby tree of Penang. Used in cutaneous affections. (Waring)

Babuzica rius. (Βαβάζω, to speak inarticulately.) An old term for cphialtes, incubus, or nightmare, from the indistinct attempts to cry out in this affection.

Babylo'nians. The race of men inhabiting Mesopotamia. They are of Semite origin.

Baca'ris. A synonym of an ointment,

mentioned by Galen, named the ointment of Lydia.

Bac'ca. (L. bacca. Gr. κόκκος; F. baue; I. bacca; S. baya; G. Beere.) An inferior, indehiseent, one-celled pulpy fruit, with parietal placentæ, having the seeds attached at first only to the placentæ, afterwards loose in the pulp.

B. compositta. (L. compositus, put to-gether.) A compound berry; one composed of small aggregated berries.

B. orienta'lis. (L. orientalis, eastern.) The fruit of the Cocculus indicus.

**B. pyrena'ta.** (Πυρήν, the stone of fruit.

G. Steinbeere.) A drupe.

B. spu'ria. (L. spurius, false. G. Scheinbeere.) A spurious berry, a pseudocarp, formed by the development of some part other than the ovary, as of the receptacle in the strawberry.

Bac'cæ ac'tes. (L. bacca; acte, a shrub good for the dropsy.) The fruit of the Sumbucus edulis.

B. alkeken'gi. The ripe fruit of the Physalis alkekengi.

B. arbu'tl. The fruit of the whortleberry, Arctostaphylos or Arbutus uvæ ursi.

B. aurant'ii immatu'ræ. See Aurantia immatura.

B. berber'idis. The fruit of the berberry, Berberis vulgaris.

B. ber berum. (G. Berberisbeeren.) The fruit of the berberry, Berberis vulgaris.

B. bermu'dae. The fruit of Sapindus saponaria.

B. cap'sici. The same as Capsici fructus. B. chamæmo'ri. The fruit of the cloud-

berry, Rubus chamamorus. B. coccogni'dil. The fruit of the meze-

reou, Daphne mezereum. B. cube'bæ. The unripe fruit of Cubeba

officinalis. See Cubcha. B. dac'tyli. The fruit of the date-palm,

Phonix dactylifera.

B. eb'uli. The fruit of the elder tree, Sambucus ebulus. B. fraga'riæ. The fruit of the strawberry,

Fragaria vesca.

**B. halicac'abi.** ('Αλικάκαβον, the alkekengi.) The fruit of the *Physalis alkekengi*. B. junip'eri. The fruit of Juniperus com-

munis. See Juniper.

B. lau'ri. See Lauri fructus.

B. lau'ri tos'tæ. (L. tostus, part. of torreo, to roast.) Laurel berries baked in dough (L. tostus, part. of and reduced to powder. Used as a stomachic and carminative.

B. mo'ri. The fruit of the mulberry, Morus niger.

B. myr'ti. Same as B. myrtillorum.

B. myrtillo'rum. Name for the fruit of the Vaccinium myrtillus.

B. norland'icae. Name for the berries of the Rubus arcticus, or shrubby strawberry.

B. oxycoc'ci. (G. Kransbeeren.) The fruit of the eranberry, Oxycoccus palustris.
B. par'idis. The fruit of the Paris qua-

drifolia.

B. phytolac'cæ. See Phytolaccæ bacca.
B. pi'peris gla'bri. (L. piper, pepper; glaber, smooth.) A synonym of Cubebs.

B. piscato'riæ. (L. piscatorius, belonging to fishermen.) Fisherman's berries. A synonym

of Cocculus indicus. B. rham'ni cathar'tici. The fruit of the Rhamnus catharticus.

B. ri'bes ru'bri. (G. Johannisbecren.)
The fruit of the current, Ribes ruber.

B. ri'bium. Same as B. ribes rubri.

B. ru'bi frutico'si. (G. Brombecren.)
The fruit of the blackberry, Rubus fruticosus.

B. ru'bi idæ'i. (6. Himbecren.) The fruit of the raspberry, Rubus idæus.
B. sambu'ci. The fruit of the elderberry,

Sambucus niger. B. spi'næ cervi'næ. (L. spina, a thorn; cervinus, belonging to a deer.) The fruit of Rhamnus catharticus.

Bacca'lis. (L. from bacca, a berry. G. Beerentragend.) Bearing berries.

Baccanella. Italy; in Tuscany, near Pondera. A richly carbonated iron water, of temp. 16° C. (60.8° F.), springing from blue clay mixed with tufa. It also contains traces of sulphurous acid and of sulphuric acid. Used in the sequele of gout and nervous affections, in chronic skin diseases, and in ulcers.

Bac'car. Same as Baccharis.

Bacca'ta cap'sula. (L. bacca, a berry; capsula, a small box.) A capsule, the inner layers of which are succulent.

Bac'cate. (L. baccatus, from bacca. F. baccien; G. beerenartig.) Having bacce or berries; having a pulpy fruit.

Bac'charis. (Βάκκαρις.) A fragrant herb used by the ancients in their garlands against enchantments; supposed by some to be an Asarum, by others, variously, Valeriana celtica, Nardum rusticum, Gnaphalium sangaincum, and several other plants.

A Genus of plants of the Nat. Order Compositæ, several of the species of which are tonic and

stimulating.

B. articula'ta. (L. articulatus, jointed, distinct. Braz. carqueja.) Hab. Brazil. An extract is used in dyspepsia, debility, and anæmia. (Waring.)

B. brazilia'na. The bruised leaves are used in oplithalmia in Brazil.

B. cunneifo'lia. A synonym of B. halimifolia.

**B.** gandichaudia'na. (Braz. ca doce.) Used as B. articulata. (Waring.) (Braz. carqueja

B. genistelloïd'es, Pers. Hab. Brazil. The bitter extract is used in intermittents, and as an anthelmintic.

B. halimifolia. (Halimus, the plant of that name; L. folium, a leaf.) A decection is used in the United States of America as a deunulcent in cough and phthisis. It is believed to be of value.

B. in'dica. Hab. Java. An aromatic and stimulant plant. Used as an addition to baths in atrophy of children. (Waring)

B. ivæfo'lia. An infusion of the leaves is used in Peru as a stomachic.

B. oblongifo'lia, Spreng. (L. oblongus, oblong; folium, a leaf.) Hab. South America. Used as a vulnerary.

**B.** ochra'cea. ( $\Omega \chi o \alpha$ , yellow of Used in Brazil as a vulnerary. (Waring.) yellow ochre.)

B. prostra'ta, Pers. (L. prostratus, part. of prosterno, to prostrate one's self.) A native of the Peruvian Andes, where it is employed, in decoction, in dysuria.

B. trim'era. (Τρείς, three; μέρος, a part. Braz. carqueja amarayoso.) Used as B. articu-

B. vene'ta. The Haplopappus discoideus. B. veno'sa. (L. venosus, full of veins.) Hab. South America. Used in intermittents.

B. visco'sa, Lam. (L. viscosus, sticky.) The Psiadia glutinosa.

Baccharoldes anthelminitica, Monck. The Vernonia anthelmintica.

Bac'chia. (Bacchus, the god of wine. F. bacchie.) The pimples on the face of a drunkard. See Acne rosacea.

Bac'chica. The Hedera helix, ivy, so called because sacred to Bacchus.

Bac'chus. (Lat.) A sea fish; by some thought to be the mullet, Mugil cephalus.

Bac'ci. A learned Italian physician. Born at Milan in the early part of the sixteenth century, died at Rome in 1567. He wrote on wines, poisons, baths, and many non-medical subjects.

Baccif crous. (L. bacciferus, from bacca, berry; fero, to bear. F. baccifere; G. becrentragend.) Bearing or producing berries.

Bac'ciform. (L. bacciformis, from bacca, herry; forma, shape. F. bacciforme; G. beerenforming.) Having the shape of a berry.

Baccinia. A synonym of Vaccinium.

Baccin'ium. A synonym of Vaccinium. Bacciv'orous. (L. bacea; voro, to devour. F. baccivore; G. becrenfressend.) Living on berries.

Bac'cula. (L. baccula, a small berry. G. Berrehen.) A little berry.

Baccular. (Same etymon.) Having the fruit composed of numerons distinct bacciform ovaries.

Bacelus. (Βάκηλος, a cunnch in the service of Cybele.) A ennuch; one who is casfrated.

Bach'elor's but'ton. A name of the Ranunculus aconitifolius, and also of the Lychnis vespertina.

Ba'cher. A French physician, born 1709, died in Paris, date nnknown.

B.'s pills. There are several formulæ represented by the following .- Extract of black hellebore, myrrh, of each one part, earduus benedietus three parts; mix, and divide into pills of a grain each. A tonic; dose, 2-6, three times

a day. Ba'chet. France; Isère, Arrondissement de Grenoble. Near this town is a small spring of cold sulphuretted sodie water.

Bach schweife. Switzerland; Canton Unterwalden. A sulphnrons water of not much

Bacht'elenbad. Switzerland; Canton Solothurn. Situate in a pleasant valley in the Jura Mountains, 1360' above the sea. The water, of a temperature of 9° C. (48.2° F.), springs from argillaceous ironstone and limestone. It contains calcium and magnesium carbonate, as well as potassium and magnesium chloride. There is also a whey-cure establishment.

Bachtia'ri. One of the Eranian family of men inhabiting the country extending eastward to Burndschird, Feridun and Tsehahar Mahal, two days' journey from Ispahan; westward to the hills and to the plains above Dizful Schuster and Ram Hormnz; northward to the river Dizful, and southward to a line drawn from Deh Jur and Felat to the region of Kumish.

Ba'cia. (G. Abtritt, Kloake.) An outlet, a eloaca.

Bacillar. (L. bacillum, a stick.) Club-

Bacillaria'ceæ. (Same etymon. G. Stabthierchen.) Synonymous with Diatomacea. Bacilla'riæ. Same as Diatomaceæ.

Bacilla rious. (L. bacillum, dim. of baculum, a stick. G. stubchenformig.) Staffshaped; rod-like.

Bacilla'ris. (Same etymon.) Staffshaped; rod-like.

Bacillary. (L. bacillarius, bacillaris, from bacillum, a small staff. G. stubchenformig.) Having the form of a small rod.

B. lay'er. The layer of rods and cones. one of the layers of the retina.

Bacilli. (L. bacillum, a little stick.) The narrow plates or valves of diatoms.

Bacilliform. (L. bacillus, a small staff; forma, likeness.) Rod-shaped.

Bacillum. (L. dim. of baculum, a stick. G. Knebel.) A little stick. A name applied of old to several iron implements.

Also (G. Arzeneistängelehen), a cylindrical

troche, or pastile, Candela fumatis.

A surgical instrument carrying a sponge. The rods of the membrana Jacobi of the retina.

The valve of a diatom.

B. canden tium. (L. candeo, to be glowing hot. G. Brennstift.) A caustic brush or pencil.

B. escharot icum. (Ἐσχαρωτικός, fit to form an eschar. G. Atzstübehen.) A bacillum made with flour or gum and some caustie, as nitrate of silver, caustic potash, or chloride of zine. Used to destroy cancerons or other tumonrs by insertion to a hole made by a knife.

B. fer'reum. (L. ferrens, made of iron. G. Naget, Brecheizen, Steckeisen.) A nail, a

B. lodoform'ii. Iodoform mixed with gum, and introduced into one of the canals of the body to relieve pain.

B. liquirit'iæ. (L. liquiritia, liquorice. G. Hustenstangen.) Pastiles containing liquorice and sugar. Used as a demulcent in hourseness or cough.

B. resolvens. (L. resolvo, to loosen, to disperse.) A bacillum containing iodine.

B. tan'nicum. (G. Tanninstift.) Tannic acid mixed with gum or bread-erum and rolled into proper shape. A local astringent for the urethra or nterns.

B. tan'nicum glycerina'tum. Made as B. tannicum, with the addition of glycerin.

Bacillus. (L. bacillum, a little stick.) A Genus of the Tribe Desmobacteria, of the Family Bacteriacea, in Cohn's classification. It includes some of the Bacteridia of Davaine. Distinguished from the other genus of the same tribe, Vibrio, by the straightness of the rods.

B. amylobac'ter. ( Λμυλον, starch; βακτηρία, a rod.) A club-shaped form of Bacillus, described by Ph. v. Tieghem. It is coloured by

iodine, and is motionless.

**B.** anthra cis. ( $^{\circ}A\nu\theta\rho\alpha\xi$ , a carbuncle. G. Milzbrandbacillen.) The Bacteridium anthracis of Davaine. Found in the blood and diseased structures in milzbrand, or splenic fever of animals. It is homogeneous and unjointed when fresh, developes spores, and is probably a variety of B. subtilis.

B. le'præ. (L. lepra, leprosy.) A form of uncertain existence, supposed to be the cause of leprosy.

B. mala riæ. (I. malo, bad; aria, air.) A form discovered by Krebs and Tommasi-Crudeli in the air and soil of malarious districts, specially in the Pontine marshes, and believed by them to be the cause of intermittents. It consists of small, narrow, longish-cylindrical spores, about half a micro-millemeter long, and rods of about the same breadth, and seven micromillemeters in length. In the body of animals the spores develop into long filaments, which subsequently undergo transverse segmentation, so as to form a chain, in the segments of which new spores grow. They develop most freely in the spleen and the medulla of the bones.

B. min'imus. (L. minimus, least.) A form found in the pneumo-enteritis or typhoid of pigs. The rods are finer and more delicate than those of B. subtilis.

B. sub'tilis. (L. subtilis, slender, G. Heubacitten.) The Vibrio subtilis of Ehrenberg. Very thin and flexible filaments, accompanying or eausing butyric acid fermentation. It possesses active habits.

B. trem'ulus. (L. tremulus, trembling.) An elongated elub-shaped Bacillus with spores, described by Cohn. It occurs frequently in putrefying vegetable infusions, in such quantities as to form a mucous scum. It has a peculiar trembling rotating movement. Both extremities are provided with a whip.

**B. ul'na.** (L. *ulna*, the elbow.) Short, stiff, and thick filaments, with dense, finely granular plasma, occurring singly, or in two- or

four-jointed straight or zig-zag chains.

Back. (Sax. bac. L. dorsum; Gr. νῶτος; F. dos; I. and S. dorso; G. Rucken.) The posterior surface of the trunk of the body; the part opposite to the belly. In animals it is usually the upper surface.

Back'bone. The vertebral column. **Back'stroke.** A term given by Dr. Hope to the diastolic impulse which occasionally is felt, especially in hypertrophied hearts, in consequence of a sudden relaxation of the ventricles after a powerful contraction.

Also, a term applied to the inverse discharge of electricity from the earth to one end of a cloud, to restore the equilibrium when the other end of the cloud has discharged to the earth the direct discharge. It is not so violent or destructive as

the direct discharge.

**Ba'con.** (Old Dut, backe, a pig; old Fr. bacon. F. lard; I. lardo; G. Speck.) The salted and dried flesh of the pig. Pavy gives as its pereentage composition nitrogenous matter 8.8, fat 73.3, saline matter 2.9, water 15.

Baco'pa. A Genus of the Nat. Order

Scrophulariaceæ.

**B. aquat'ica.** (L. aquaticus, belonging to water. F. herbe uux bralures.) Used in Cayenne, as an emollient and eleatrizant in burns.

Bac'sko-ra'ho. Hungary; near Szigeth The water, which springs from the granite and gneiss, contains sodium, iron, and calcium earbonates, sodium sulphate and chloride, and some iodide. Used in splenic and hepatic enlargements in gout, rheumatism, serofula, chronic

skin diseases, and syphilis.

Bacteria cea. (Βακτήριον, a little staff. F. Bacteriens; G. Bacterien.) A Family of the Order Schizomycetes. The individuals consist of chlorophylless cells of spherical, oblong, or cylindrical, sometimes twisted or wrinkled, shape, which increase exclusively by transverse division, and live either separately or in cell-groups. They are divided by Cobn into four tribes:

1. Sphærobacteria (G. Kugelbacterien), in

which the cells are spherical;
2. Microbacteria (G. Stabchenbacterien), in which the cells are short and cylindrical;

3. Desmobacteria (G. Fadenbacterien), in which the cells are filamentous,

4. Spirobacteria (G. Schraubenbacterien), in which the cells are torthous or screw-shaped.

Bacteridium. A Genus of the Family Vibriones, according to Davaine, and described by him as filiform, straight or bent, more or less distinctly articulated, in consequence of an imperfect spontaneous division, always motionless. Other members of the Bacteridia have been included under this name, not filiform but globular. The filtform Bacteridia are described by Cohn under the head Bacillus, and the globular ones under Micrococcus.

B. authra'cis. ('Ανθραξ, a malignant pustule.) The Bacillus anthracis

B. auranti'acum. (Mod. L. aurantia-ccus, of the orange, as in colonr.) The Micrococcus aurantineus

B. brun'neum, Schröt. A doubtful species.

B. cyan'eum. (Κυάνεος, dark blue.) The Micrococcus cyaneus.

B. fermenti. (L. frmentum, ferment, yeast.) Described by Davaine as occurring in the leaven of wheat and borley. Generally short and slender, two-jointed, straight or bent, immobile, or having a Brownian motion. Occasionally they are composed of three or four joints bent at an angle.

B. glareo'sum. (L. glareosus, gravelly.)
Davaine describes under this head certain minute,

slender hyaline filaments.

B. intestina lis. (L. intestina, the intestines.) According to Davaine, this variety is found in the intestinal canal of many birds. filaments are short and thick, having often a clear central space.

B. lu'teum. (L. luteus, vellow.) The

Micrococcus luteus.

B. prodigio sum. (L. prodigiosus, wonderful.) The Micrococcus produgiosus.

B. viola'ceum. (L. violaceus, violet

coloured.) The Micrococcus violaceus

Bacte'rium. (Βακτήριον. a little staff.) Defined by Dujardin as filiform, rigid, more or less distinctly articulated by imperfect division, having a vacillating, but not an undulatory, movement.

According to Lucrssen, a Genus of the Family Bacteriaceae, of the chlorophylless Section of the

Order Schizomycetes.

According to Cohn, Bacterium is the single Genus of the Tribe Microbacteria, of the Family Bueteriuceæ. Bacteria are short cylindrical or elliptical cells, hanging together in pairs whilst undergoing transverse division; occasionally in fours when the second cells have divided before the primary separation has been completed. When under favourable nutrient conditions, and well supplied with oxygen, they move very freely at times. They form no chains or threads, but they propagate in a connecting gelatinens mass, zooglea, in regard to which they are distinguished from the sphærobacteria by the firmness of the intermediate substance, and by the absence of any finely granulated appearance. Cohn describes two species only, B. termo and B. lineola.

B. ærugino'sum. (L. æruginosus, verdigris coloured.) A species supposed to be the active agent in the production of the pigment of

blue pus.

B.articula'tum. (L.articulatus, jointed.) A species, described by Ehrenberg, of doubtful existence.

**B.** capita'tum. (L. capitates, having a head.) A doubtful species described by Davaine.

B. carbuncula're. (L. carbunculus, a little coal.) A form of bacillus stated by Davaine to be found in the blood of men and animals who have died with carbuncle. They are motionless, flat, straight, highly refractile, without inflexion

when short, and with one or two inflexions when long. They may attain a length of 0.05.

B. eate'nula. (L. catenulo, a small chain.) A doubtful species described by Dujardin, said to

have been found in typhoid fever.

B. cunea'tum. (L. cuncatus, wedge-shaped.) A form described by Rivolta, and stated to exist in putrefying blood, in the intestine of horses and dogs dying from putrefactive diseases, and in the blood in the sentic metritis of cows.

**B. euche'lys.** (Εΰ, well; χηλή, a crab's claw.) A doubtful species described by Ehren-

B. lac'tis. (L. lac, milk.) A bacterium described by Lister as the cause of lactic fermentation in milk. It is motionless, most commonly occurring in pairs, sometimes in threes,

fours, or even more.

B.line'ola. (L. lincola, a little line.) The Vibrio lincola of Ehrenberg. Larger than B. termo; found in stagnant water, and where there is no putrefaction. The cells are distinctly cylindrical, about four times longer than broad, ·0038-0052 mm. broad, seldem curved, and possessing strongly refracting soft contents, beset with dark points. They are separate or united in pairs. Their movement is effected by a terminal flagellum.

**B. punc'tum.** (L. punctum, a point.) A doubtful species described by Dujardin.

B. putre'dinis. (L. putredo, rottenness.) Probably B. termo.

**B.** syncy'anum. (Σόν, with; κυάνεος, dark hlue.) A species supposed to be the active agent in the production of the pigment of blue

B. ter'mo. (L. termo, a boundary.) The Monas termo of Ehrenberg. Cylindrical, two to five times as long as broad, about 0015 mm. long; often two-jointed, with a vacillating movement, produced by a terminal flagellum. It is found wherever putrefaction of either animal or vegetable matter is going on, and by many is believed to be the active agent of that process, putrefaction ceases they cease to be found. When

E. trilocula're. (L. tris, three; loculus, a little place.) The Bacterium lineola.

B. xanthi'num. (Ξανθός, yellow.) species supposed to be the active agent in the production of the pigment of yellow milk.

**Bacteroid.** (Βακτήριου, a little staff; είδος, likeness.) Having the appearance of a small rod, or resembling a bacterium.

Bactria nus. (L. Bactrianus, relating to Baetra. G. baktrianisch, baktrisch.) Baetrian. Growing in, or belonging to, Bactria, an ancient country of Central Asia, lying south of the river Oxus, and extending to the Hindu Knsh.

Bac'tris. A Genns of the Nat. Order

Palmacea. Several kinds of this genus of palm, growing in Trinidad and New Grenada, yield

good amadou. (Waring.) **B. mi'nor,** Willd. (L. minor, less.) Fruit contains an acid juice, from which a wine is

B. rotun'da. (L. rotundus, round.) The B. minor.

Bactyrilo'bium fis'tula. The Cassia

**Baculif'erous.** (L. baculum, a stick; fro. to bear.) In Botany, cane-bearing, as the bandoo.

Bac'uliform. (L. baculum; forma, shape.) Rod-like.

Bac'ulus fer'reus. (L. bacelus, a staff; ferreus, of iron.) An instrument for supporting a vessel.

Bac'zuch. Hungary. An alkaline carbonated chalybeate water, of 8° C. (46.4° F.), springing from the granite and mica slate. It is tonic and diuretic.

Bada'gar. A tribe of the Kanarese group of the Dravidical race inhabiting the Nilagiri woods between Maisnr and Koimbatur.

Bada'ward Shookai. The Hindustani name of the twigs, leaves, and flowers of Caealia sonchifolia, growing in the Himalayas. Used as a stimulant and expectorant. (Waring.)

Badel'la. The same as Bdella.

Ba'den. Austria; near Vienna, in a broad valley at the foot of the Wienerwald, 670 feet above sca level. The Thermæ pannonicæ of the Romans. The mineral waters spring from the foot of the Calvarienberg dolomitic limestone and eonglomerate by thirteen sources, which vary in temperature from 35° C. to 40° C. (95° F. to 104° F.) They contain ealeium, sodium, and maguesium earbonate, calcium, potassium, and sodium sulphate, sodium and magnesium chloride, carbonic acid, and a little sulphuretted hydrogen, with nitrogen and oxygen. The accommodation is good, and many of the baths very large, affording accommodation for nearly two hundred bathers at once, who remain in for a long time. The waters are little used internally, and then chiefly mixed with milk, whey, or other mineral waters. They are used in chronic entarrh of the bronchial tubes and of the bladder, in chronic skin diseases, in chronic rheumatism, and scrofula. Mud baths are used in chronic lymphatic swellings, in serofulous nleers, in caries and neerosis, in chronic joint diseases, in rheumatic stiffenings, and chalk-stones.

Ba'den in Aar'gau. Switzerland: near Zürich; a pleasant, quiet place, beautifully situated at the foot of a hill on the left bank of the Limmat, 1180 feet above sea level, with a mild winter and a hot summer climate. Mineral waters springing from the Jurassie formation, at a temp. of about 46° C. (114.8° F.), and containing calcium, sodium, and magnesium sulphate, sodium chloride, a little lithium chloride, calcinni and magnesium carbonate, carbonic acid, nitrogen, and a little sulphuretted hydrogen. Many Algae are found in the water, which are referred to the Genus Beggiatoa. They are used in to the Genus Beggiatoa. chronic rhenmatism, gout, scrofula, neuralgia, menstrual troubles, hemorrhoidal disorders, and chronic mercurial poisoning.

Ba'den-Ba'den. Germany; in the Grand Duchy of Baden, at no great distance from Strasburg. A very pleasant town on the river Oos, at the outskirts of the Black Forest. The arrangements for visitors are excellent; the climate is mild, but somewhat variable. Indifferent waters of no active properties, and of a temperature of 46° C.—71° C. (111.8° F.—159.8° F.), containing small amounts of calcium, magnesium, and ammonium carbonate and sodium chloride, with carbonic acid. Lithia and arsenic are found. but in such small quantities as to be inefficacious. The water is drunk pure, or with milk, wbey, or other mineral waters, and is used internally and as a bath in chronic bronchial eatarrh, especially in scrofulous and gouty persons, in gout, jointcontractions, chronic rheumatism, and scrofula. Extract of fir leaves is often used as an adjunct.

Baden is also used as a winter residence on

account of its mildness.

Badenweil'er. Germany; Grand Duchy of Baden, near Mühlheim, in the Black Forest. A beautifully-situated place, 1450 feet above sealevel, in a mild and equable climate, where the west wind predominates; it is used on this account as a climatic resort. Indifferent waters, of a temperature of 27.5° C. (77.5° F.), containing small quantities of sodium, potassium, and calcium sulphate, calcium chloride, and calcium and magnesium carbonate. Algæ of the Genera Hupheothrix, Stigeoclonium, and Ulothrix are found in the waters. They are used in chest affections.

Ba'dezahr. The same as Bezoar.

Bad'ger. (F. blaireau; I. tasso; G. Dachs.) The Meles taxus. Its flesh is said to be good.

Bad'humn. A cereal resembling millet, inhabiting Ceylon, and used as food.

Badia ga. A marine Alga, the powder of which is used in Russia to procure the absorption of ecchymoses.

Bad'iane. (Fr.) The seed of the star

anise, Illicium anisatum. Badiera. A Genus of the Nat. Order

Polygalacea.

B. diversifo'lia. (L. diversus, separate; folium, a leaf.) Hab. West Indics. The wood is used as a substitute for guaiacum. The seeds contain an aromatic oil.

Bad'iri. An urticating plant of Amboyna.

Used as a whip to make infants walk.

Bad'isis. (Βαδίζω, to walk. herschreiten.) Walking. Galen, J Galen, Meth. Med. i, 6.

Badis'mus. (Βαδίζω, to walk. G. Einherschreiten.) Walking.

Ba'dius. (G. kastanienbraun.) Brown or

chestnut colour.

Bad mug-baya. The Hindustani name of Melissa repens. Used as a scent and a carminative. (Waring.)

Bad scho. A synonym of Wadscho. Badstofuh'ver. Sweden. An alkaline saline water of 83° C. (1814° F.), springing to the height of 36 feet. It contains sodium sulphate, chloride, and carbonate, with a considerable amount of silicic acid.

Baduc'ca. A caper, the Capparis baducea.

Baduk'ka. Same as Badneea.
Bad'ula. A Genus of the Nat. Order Myrsinacea.

**B. micran'tha.** (Μικρός, little; ἄνθος, a dower.) Hab. Bourbon and the Manritius. The leaves and root are used in urinary disorders, and

as a diuretic in dropsy.

Bad'ulam. The Ardisia humilis of Ceylon, where its fruit yields a syrup, which is used to

allay heat and thirst in fevers.

Bad'zar. The same as Bezoar. Bæck'ea. A Genus of the Nat. Order Myrtaceæ.

B. u'tilis. (L. utilis, useful.) Hab. Australia. Proposed as a substitute for tea.

Ba'el. See Belæ fructus.

B. In'dian. See Belæ fructus.

Bænodac'tylous. (Baino, to walk; δάατυλος, a finger.) Having feet fit for walking. Bæobo'trys. (Baics, little; βότρος, cluster of grapes.) A Genus of the Nat. Order

Myrsinacea.

B. lanccola'ta. (L. lanceolutus, furnished with a point, lance-shaped.) A synonym of B. meta.

B. pic'ta. (L. pictus, painted.) Abyssima. A species the dried fruit of which is used as a vermicide, and called Saoria.

Baer, Von. A Russian physiologist. Born 1792 in Esthonia. His chief work was De ovi Mammalium et Hominis,' published in

1827; died 1876.

Von Bacr's Classification of Animals (1828) is founded on their development. Commencing with the lowest, he divides them into-(1) those developing from a germ, or (2) from an egg containing a germ. Of the former he appears to have known no type; the latter he divides into (a) animals with radiate development, (β) with complex or convoluted (gewindene) development,  $(\gamma)$  with symmetrical elongated type of development, and (8) with double symmetrical development, which last are represented by the Vertebrata. These have a vertebral column, dorsal and ventral laminæ, nerve tube, brauchial slits, and possess (A) branchiae or (B) a urinary sac growing forwards. Group A either have no true lungs or possess lungs. Those with no true lungs, and in which the skeleton does not ossify, are the cartilaginous fishes; but if the skeleton ossify, the osseous fishes. Those with lungs are represented by the Amphibia; if the branchie persist, we get the Sireuidæ; if they persist externally, the Urodeles; if they become enclosed, the Anura. Group B is divisible into (a) those without an umbilical cord, and (b) those with an umbilical cord; a either have no wings or air saes—Rep. tilia; or have wings and air-sacs, and constitute Aves; b are Mammalia, and are again divisible into those in which the umbilical cord soon separates, either (as he then thought) without connection with the mother—Monotremata; or after a brief period of connection with the mother— Marsupials; or the umbilical cord remains for a longer period. In this case the yolk-sac may grow considerably or may grow but little. If it grow considerably, and the allantois increases slightly, Rodentia; moderately, Insectivora; to a great extent, Carnivora. If the yolk-sac grow but little, and the allantois grows but slightly, whilst the umbilical cord is very long, Apes, Man. If the allantois grows very long, and the placenta is in separate masses, Ruminantia; if expanded, Pachydermata and Cetacea-

B., cav'ity of. (G. Keimhohle.) The cleavage cavity; the segmentation cavity. The cavity formed, in all animals above the Protozoa, by the segmentation of the yolk and the formation of a double layer of cells at the periphery,

which enclose a cavity.

B., vc'sicle of. The ovum of the human female, described by Von Baer in 1827, but said to have been seen previously by Von Graaf, Prevost, and Dumas.

(L., from Batis, the ancient Bæticus. name for a part of Spain now called Andalusia and Granada.) Originally the word was applied to the inhabitants, or the products, of Batis, and especially the wool; but of late it has been used to denote a blackish colour.

Ba'us. (Bur's, little.) Small.
Ba'fu Keng. A tribe of Bechuana
Caffres inhabiting the interior of the South African Continent.

Bag. A tribe of Circassians inhabiting the northern side of the mountain chain of that country, near the origin of the rivers Kehods and Urup.

Bag. (Sax. balg, a bulge; Gael. balg, a bag.) That which bulges out, a pouch, a sack. B. of wa ters. The amnion and its con-

tained fluid.

Ba'ga. A race of Western Africa, allied to the Negro, inhabiting the coast district to the north-west of the embouchure of the Rio Pougas.

Baghir'mi. A race of men, allied to the Negro, inhabiting the region of Western Africa to the south of Bornu, below the Tsad Sea. They are the representatives of a special group of lan-

Baglivi. An Italian physician born at Ragusa in 1669, died 1707. He advanced a soldist theory of disease, in opposition to the humoral pathology of the day, and considered that the membranes of the brain were the great source of force or power over the solids and

liquids of the body.

Bagnac'cio del Colomba'jo. Italy; near Valagli. Chalybeate waters springing from grey chalk, in which sulphur is found. Incrustations of iron sulphate are observed in the neighbourhood. They are of a temperature of 18°C. (64.4° F.), and contain calcium, aluminium, sodium, and irou sulphates, with free carbonic, sulphuric, and sulphurous acids.

Bag'ne-bad. Switzerland. A sulphur bath in the Canton Valais. It was lost after an inundation, but has again been discovered.

Bagnè'res a'dour. The same as

Bagneres-de-Bigorre.

Bag'nères de Bigor're. France: at the foot of the Pyrences, in the valley of the Adour. A pleasant, clean town, 1850 feet high, in a beautiful district, with a mild and pretty equable climate; it is used as a winter residence. The waters contain magnesium and sodium chloride, calcium and sodium sulphate, calcium, magnesium, and iron carbonate, carbonic acid, nitrogen, and a little oxygen; they have a temperature of 13° C.—51° C. (55.4 F.—123.8° F.), according to the spring. Used in chlorosis, anemia, neuralgia, non-inflammatory catarrh of bronchial tubes and bladder, and in dyspepsia.

Bag'nères de Lu'chon. Arrondisement de St. Gaudens, in the Pyrenecs, close by the Spanish frontier. Aqua convenarum of the Romans. A well-appointed town, 2000 feet high, beautifully situated, with a mild but changeable climate. Strong sulphur waters, of a temperature of 17.5° C.—56° C. (63.5° F.—132.8° F.), containing sodium, iron and manganese sulphate, sodium chloride, sodium, potassium and calcinm sulphate, sodium, calcium, roagnesium, and aluminium silicate, and much sulphuretted hydrogen. Used in chronic rheumatism, skin diseases, chronic ulcers, convalescence from brain affections, as paralysis, and in metallic poisoning.

Bagne'res-saint-Fe'lix. Lot, Arrond, de Gourdon. The mineral waters contain 15 grs. of magnesium sulphate in one litre.

The temperature is 19° C. (67° F.)

Bagnette'. (Fr., from 1. bacchetta, a rod.) A term applied to the curved rods or spermatozoa which lie in bundles in the seminal capsule or nucleolus of some of the Infusoria, as

the Parameeium, during conjugation. **Bag ni a Ac'qua.** Italy; not far from Pisa. Several springs of earthy waters, with some iron, from the muschelkalk and trayertine. both forms of limestone, of a temperature of 36° C. (96.8° F.) They contain a large quantity of calcium sulphate, with sodium and magnesium sulphate, calcium, magnesium, and iron carbonate. They are not drunk, but are used as baths in rheumatic and gouty affections, and in paralysis.

Bag'ni a Mor'ba. Italy; in the valley of Possera. Fourteeu springs arising from the grey limestone; iron sulphides and quartz are also present in the neighbourhood. The bath arrangements are good. The temperature of the water varies in the different springs from 20 °C. (68° F.) to 49° C. (120.2° F.). They contain calcium sulphide, calcium, magnesium, and sodium chloride, calcium, magnesium, and iron carbonate; in two or three the iron is wanting; four contain sulphuretted hydrogen; and most of them carbonic acid gas. The springs Leopoldo and della Cappella are used in calculous affections and abdominal congestions, and as injections in lencorrhea, menorrhagia, and dysentery. The springs S. Desiderata, S. Caterina, and S. Giuseppe are used in rheumatic affections and in paralytic affections, when there is no brain disease progressing. The springs della Scala and ease progressing. S. Francesco are used in chronic ulcers, cedema, and joint affections, in the form of baths and douches. The indifferent hot springs, del Piano and della Fossa, are used in rhenmatic contractions. The springs S. Adelaida, S. Raimondo, S. Cammillo, del Cacio, and della Perla, most of which contain sulphuretted hydrogen, are used in skin diseases.

Bag'ni, Ac'qua dei. Italy; a spring in the Temple of Serapis at Puzzuoli; there are also other springs. Muriated alkaline waters, arising from tufa and other formations. They contain calcium and magnesium bicarbonates, sodium sulphate and carbonate, sodium chloride, silica and iron. Used in intestinal catarrh, jaundice, liver diseases, kidney and bladder disorders, diabetes, rhenmatic and neuralgic affections.

Bag'ni dei Val'li di Diav'olo. Italy; in the Val d'Arno. Alkaline iron waters, springing from the limestone, of a temperature of 185 C. (64.4° F.) The right spring contains iron and addium sulphate, free sulphuric acid, and carbonic acid. It has been used in mercurial eachexia. The left spring contains calcium and magnesium sulphate, sodium and magnesium chloride, iron and calcium carbonate, and carbonic acid.

Bag'ni del'la Scarpet'ta. A village in Italy, at the foot of the Apennines. Here is a cold sulphuretted spring. The mnd baths of this place are in repute for entancous affections.

Bag'ni di Cra'na. Switzerland; Canton Ticino. Altitude 3270 feet. Sulphur waters of a temperature of 35°C. (95°F.) Badly arranged and not much used.

Bag'ni di Luc'ca. See Lucca.

Bag'ni di Sant'Ele'na. Italy; near Battaglia. Hot sulptur waters, springing from lava rocks. Three springs, varying in temperature from 40° C. (104° F.) to 71° C. (159° S° F.) Pleasant neighbourhood, and comfortable arrange-ments. They contain sodium, magnesium, and calcium chlorides, sulphates and carbonates, traces of iron, iodine, and bromine, sulphuretted hydrogen, and carbonic acid. Used externally in skin diseases and scrofula; internally, simple or with milk, in scrofula, atony of stomach, and constipation.

Bag'ni di St. Agne'sc. Italy; on the

left bank of the Savio. Hot sulphuretted waters springing from the quartz, mica, lime, and slate rocks, of a temperature of 40° C. (104° F.) to 44° C. (111.2° F.). Two springs contain sodium chloride, sulphate, and carbonate, calcium and magnesium carbonate, nitrogen, carbonic acid, and one sulphuretted hydrogen. Used in gout, sciatica, rheumatism, joint and urinary affections, and lymphatic enlargements.

Bag'nigge Wells. Two mineral springs, which were discovered in A.D. 1760 in the garden of Bagnigge House, Clerkenwell, London. water was much used at one time, but is now lost. One appears to have contained magnesium sulphate and sodium chloride, and the other was

a chalybeate.

Bag'nio. (I. bagno, a bath.) In olden phrase a sweating-house; a kind of precursor of the present Turkish bath.

Bag'no. Italy; near Antrodoco, in the

Abruzzi. A very hot spring, but not used.

Bag'no a Baccanel'la. Italy; in
the Valley of Agra, near the Arno. An alkaline chalybeate water, 17° C. (62.6° F.), springing from the blue clay. It contains calcium and aluminum sulphate, sodium chloride, magnesium, calcium, and iron carbonate, and free carbonic acid. Used internally in atony of the stomach and indolence of intestinal action; externally, in rheumatic gout and skin diseases.

Bag'no Bos'sole. Italy; near Siena. Hot chalybeate water, 39° C. (102.2° F.), springing from the calcarcous slate. It contains sodium and calcium sulphate, sodium and calcium chlo-

ride, and magnesium and calcium carbonate.

Bag'no d'Apol'lo. Italy; in the Valley of Paglia. An alkaline chalybeate water, 35° C (95° F.), springing from calcareous slate and schist. It contains calcium carbonate and sulphate and chloride, calcium and magnesium chloride, iron carbonate, earbonic acid, oxygen, and nitrogen. Used in liver congestions, jaundice, and relaxations of mucous membranes.

Bag'no del Proch'io. Italy; near Pitigliano. An alkaline iron water, 39° C. (102.2° F.), springing from the limestone and travertine. It contains sodium chloride and sulphate, calcinm chloride, sulphate, and carbonate, magnesium and iron carbonate, and free carbonic acid. Used in abdominal congestions and constipation.

Bag'no di Col'le. Italy; near Amagnolo. Sulphur water of a temperature 31° C. (87.8° F.) It contains sodium chloride and sulphate, magnesium chloride, snlphate and carbonate, calcium sulphate and earbonate, iron carbonate, sulphnretted hydrogen, and much carbonic acid. Used

in gravel and kidney affections.

Bag'no di Mie'mo. Italy; not far from Pisa. Saline waters, at 23° C. (73.4° F.) to 31° C. (87.8° F.), springing from the mountain chain of Miemo, which consists chiefly of green

serpentine.

Bag'no d'Is'chia. Italy; near Iselna. Saline chalybeate waters, containing sodium bicarbonate, sulphate and chloride, and iron bicarbonate, with a little potassium iodide, and traces of bromine. Used in articular rheumatism, gout, sciatica, glandular enlargements, and skin affec-Mud baths are used in joint-swellings, anehyloses, and chronic ulcers.

Bag'no fres'co. Italy; Ischia, at the entrance of the Val Tamburino. A weak car-

bonated water.

Bag'noles. France; in Normandy. Height 545 feet. A quiet place, situated in a valley surrounded by a rocky forest. Air warm, but often chill and damp in the evening. Waters sulphurous, of a temperature of 25 C. (77 F.) There are also iron waters. Used in dyspepsia, skin diseases, rheumatism, and paralysis.

Bagno'li. Italy; near to Naples. A sulphurous mineral water, of a temperature of 45°C. (113°F.) Used in rheumatism and skin

diseases.

Bagnolino dei Rachiti'ci. Italy; in Tuscany. A mineral water, containing sodium carbonate 12 grs., calcium carbonate 10, and half a grain of exide of iron, with 36 volumes of carbonic acid, in 25 ounces. Used in rickets as a

bath, in which the patients stay for long periods.

Bag'nols. France; near Lozère. Height 2317 feet. Sulphur waters, of a temperature of 31°C. (87.8°F.) to 42°C. (107.6°F.) The baths are large, and commonly employed while a current of water is running through them. Used in chronic rheumatism and skin diseases.

Bag'ola. (I., from L. baccula, a little berry.) A small berry. Applied to the fruits of the Myrtle and Amelanchier by Casalpinus.

Bagrim'ma. A synonym of Baghirmi. Bag'uenaude. (Fr.) Term applied to fruits containing air in their interior, like those of the Colutea arborescens and Physalis alke-

Baguenau'dier. The Colutea arbor-

Baguet'te, tiges-a. (Fr.) Term applied to stems which, whilst very slender, rise perfectly straight to a great height.

Baha'mas. West India Islands. garrison is composed of black troops, and the rate of mortality from phthisis is very great; out of 100 deaths 60 were from diseases of the lungs; miasmatic diseases are very prevalent. winds are often dry and cold, and the alternations of temperature rapid.

(G. bahamisch.) Be-Bahamen'sis. longing to, or growing in, the Bahamas.

Baharut'se. A tribe of the Bechuanas inhabiting the region of South Africa to the west of the Kaffirs.

Ba'hel. The Columnia longifolia.

Ba'hel schul'li. The Genista spinosa

Bahi'a pow'der. A synonym of Goa

Bahla'pi. A tribe of Bechuanas inhabiting the country westward of the Kaffirs.

Bahlok'wa. A tribe of Bechuanas inhabiting the region of South Africa to the west of the Kaffirs.

The Hibiscus esculentus.

Bah'mia. The Hibiscus esculentus. Bah'ne. (Ger. a path.) Applied to the nerves through which motor impulses or seusory impressions travel.

Saho'bah. See Baobab. Bahu'rai. The Bengali name of the fruits of the Cordia myxa and C. latifolia

Bai'a spirit. A spirit distilled from the flowers of the Bassia latifolia. It has an odour as of Irish whisky and a pungent taste. When new it is highly deleterious, but when matured is a useful alcoholic stimulant.

Bai'ac. Cerussa, or plumbie carbonate. (Ruland and Johnson.)

Bai'æ. Italy; ten miles west of Naples. Recommended as a winter resort for pulmonary invalids. The climate is mild and not very variable, but it is very moist.

Baie. (Fr., from L. bacca, a berry.) A

Bailey's itch oint'ment. nitre, sulphate of zine, of each It oz.; vermilion to oz.; sweet oil to pint; lard I lb.; oils of aniseed, lavender, and origanum, q. s. to perfume.

Baillement. (Fr.) Sighing.
Bains. France; in the Vosges Mountains, near Plombières and Épinal. Indifferent waters, of 29° C.—50° C. (81°2° F.—122° F.), springing from the sandstone, and containing very small quantities of sodium sulphate and chloride, and sodium and calcium carbonate. Drunk and used as baths in chronic rheumatic and gonty affections, paralysis, chronic intestinal catarrh and skin diseases

Bains de la Reine. Algeria; Province of Oran. Salt waters, of a temperature of 35° C. (95° F.), recommended in rheumatism, scrofula, chronic hepatitis, and the sequelae of malarious fevers. Used as a military establishment.

Bains Llu'pia. France; Departement des Pyrenèes orientales, not far from Perpignan. A mineral water, of a temp. of 38° C. (100 4° F.), springing from felspathic granite. A water containing sodium sulphide. Used in skin diseases, bronchial and other macous relaxations.

Bains Ma'met. France; Departement des Pyrenèes orientales. Mineral water, uot far from, and very like in composition to those of,

Bains Llupia.

Bains près Arl'es. Another name of Amelie les bains.

Baj'falu. Austria-Hangary; in the County of Szatmar. A strong sulphur water. Used in rheumatism and skin diseases.

Baj mocz. Hungary. A town twentyfive kilometers from Kremuitz, on the Neutra. Here are thermal mineral waters, containing sodium sulphate, which were anciently, and are still, in repute.

Ba'jor. Asstria-Hungary; County Saros.

A mild sulphur water.

Bajorva'gas. Austria-Hungary; County

A sulphur spring.

j'ra. The Hindustani name of the small Baj'ra. millet, Panicum vulgare.

Baj'ree. The same as Bajra.

Baju. The native name of the inhabitants of the Nicobar Islands. The word signifies "Men." They believe themselves to have come originally from Laoi or Great Nicobar.

Bajuva'ren. A German tribe believed to be identical with the ancient Marcomanni.

Baka'a. A tribe of Bechnanas inhabiting the country to the west of the Kaffirs.

Baka'ki. A tribe of men inhabiting Fernando Po.

Baka Tahari. A synonym of the Balala.

Baka'lai. A synonym of the Bakele. Ba'kas. The Justicia adhatoda.

Bakchee. The Babche.

Bakele. A race of men inhabiting the west coast of Southern Africa. Their language is closely allied to that of the M-pongwe of the west coast and to the Ki-suaheli of the east coast of South Africa.

Ba'kers' itch. A disease of the skin. occurring on the fingers and wrists of bakers; by some, called psoriasis diffusa, by others, eczenia or lichen agrius.

B's. salt. A term for carbonate of am-

monia, because it is used as a substitute for yeast in the making of bread.

Bakhat'la. A tribe of Beehuanas inhabiting the country to the west of the Kaffirs.

Bakka. Indian name of Cannabis sativa. Bakwe'na. A tribe of the Beehnanas inhabiting the region to the west of the Kaffirs in South Africa, and between 28°-16° south lat.

Bala. The Hindustani name of Paritium

Bala. The Hindustani name of Paritium tortuosum. Used as a febrifuge and as an em-

brocation.

Also, a name of the Andropogon muricatum.

Balade'a. A synonym of New Caledonia. Balæna. (Φάλαινα, οτ φάλλαινα, a whale. G. Wallfisch.) A Genus of the Family Balanida, Order Cetacea.

B. macroceph'alus. (Μακρός, long, large; κεφαλή, the head.) A synonym of Physeter

macrocephalus.

B. mystice'tus. (Moorag, the upper lip; κήτος, a huge fish. G. gronlandische Walfisch.) The Greenland, or right whale. The chief source of whalebone and of oil.

Balæna'ta vir'ga. (L. virga, a rod. G.

Fischbeinstab.) A rod of whalebone.

Balæna'tus. (L. balæna, a whale.) Belonging to, or obtained from, a balæna or whale.

Balænoïd'ea. (L. balæna, whale; elòos, likeness.) A Group of the Order Cetaceu. Nasal chambers communicate externally by two spiracles, and are unconnected with sphintegumentary sacs over the skull; ribs united to the bodies of the vertebrae by ligament only; sternum unites with first rib only; skull large, nearly symmetrical; nasal bones short, but longer than in other Cetacea; maxilla extends in front of supra-orbital process of frontal; lachrymal bone present; rami of mandible united at the symphysis by ligament only; teeth present in feetal state, but soon give place to whalebone or the baleen plates.

Balænol'ogy. (L. balæna, a whale; λόγος, a discourse.) The description and science of whales.

Balænopter'idæ. (L. balæna, a whale; πτερόν, a wing.) A Family of the Suborder Mystacocctic, Order Cetacca. The rorquals, or fin whales. They possess a dorsal fin; the ventral surface of the fore-part of the body closely marked with longitudinal farrows.

Bal'ais ru'by. The rose-coloured ruby, a species of curbunele, to which many virtues were attributed: the reconciling of friends; the bringing health to the body, specially in diseases

of the eyes and liver.

Bala'la. A tribe of Bechaanas inhabiting the country to the west of the Kaffirs, between 26° and 16° south lat.

Ba'lam poo'lie. The Tamarind, Tamarindus indicu.

Balana'tus. (L. balanus, a balsam nut. G. einbalsamirt.) Asointed with balsam.
Bal'ance. (L. bilanx, from bis, two, and lanx, a plate. Gr. Tourdon; F. balance; I. bilance; S. balance; I. bilancia; S. bulanza; G. Wage.) An instrument for determining weights, consisting of a lever, supported in its centre by a knife edge, and having suspended at the end of each arm a scale

B., hydrostatic. The hydrometer.
B. of O'dier and Blache. A form of

scales for the weighing of an infant without inconvenience.

B., tor'sion. See Coulomb's torsion balance. Balance ment. (F. balancement, balancing.) A term by Geoffroy St. History to describe the available to the state of the st describe the condition in which inequalities of size of organs are halanced, one small organ being compensated by another large one, and vice versa.

Bal'ancers. The Halteres of insects.
Balanda. (Βάλανος, an acorn.) The beech tree.

Balane'um. (Balaveĩov, a bath.) A bath.

**Balaneu'tria.** (Βαλανεύτρια. G. Badevfrau, Badewarterin.) Α female attendant at a bath.

Bal'anide. (Fr.) A name given by some hotanists to the fruit of the chestnut and beech. which is composed of two or three achania contained in the same involuere,

Balaniferous. (L. balanus, an acorn; fero, to bear.) Bearing acorns or nuts.

Balani'nus. (L. balanus, a balsam nut.) Prepared from halsam.

Balanis'mus. (L. balanus, a supposi-

tory.) The application of a balanus or suppository.

Balani'tes. A Genus of the Nat. Order Amuridacea.

B. ægypti'aca. (Beng. Hingen; Tam. Nunjoond; Tel. Gara; Arab. Hilelge, Haledsch; Egypt. Egleeg; by Negroes Soum, and the fruit Lalob.) Hab. North Africa and India. This is the Persea of the ancient Egyptians sacred to Athor. The nut is covered by a soft pulp, which, when unripe, is very bitter, and of an offensive greasy taste; when ripe it is eaten by the negroes. The unripe pulp is used as a purgative, the leaves as an anthelmintic.

Balani'tis. (L. balanus, the glans penis; itis, suffix indicating inflammation. F. bolanite; I. balanitide; S. balanitis; G. Eichelnentzündung, Eichelntripper.) Inflammation of the surface of the glans penis, with purulent discharge. It may be simple or gonorrheal. Mr. Erichsen uses the term to denote inflammation of the prepuee; other authors include inflammation of both prepuce and glans penis.

Also, an acoru-shaped fruit. **B. diabe'tica.** (Διά, through; βαίνω, to go.) A form occurring in diabetes, and due to the lactic acid and acetic acid fermentation of the saccharine urine in the præputial sac leading to the development of fungi.

Balanoblennorrhæ'a. (L. balanus, the glans penis; blennorrhæa. G. Eichelfluss.) Blennorrhæa of the glans penis.

Balanocas'tanum. (Bálavos, an acorn; κάστανος, a chestnut tree.) The Bunium bulbocastanum.

**Bal'anoïd.** (Βάλανος, an acorn; είδος, likeuess.) Resembling an acorn.

**Balanoph'ora.** (Βάλανος, an acoru; φορέω, to bear.) **A** Genus of the Nat. Order Balanophoraceæ.

B. fungo'sa. (L. fungosus, spongy.) A native of Tahiti, where it is used as a mild purgative. (Waring.)

B. gigante'a. (L. giganteus, belonging to the giants.) Hab. Ava and North India. parasitical plant, used as an astringent in Burmah. (Waring.)

Balanophora cea. (Bálavos, an aeorn; φορέω, to bear.) An Order of Mono-chlamyda, or a Family of the Order Serpentaria. Leafless root-parasites, having amorphous fungoid stems of various colonrs; peduncles scaly; flowers in spikes; ovary inferior, one-celled; styles two; ovules solitary, pendulous; fruit oneseeded.

Balanophor'eæ. The same as Balano. phoracea.

Balanoposthi'tis. (Bálaves, the glans penis; πόσθη, the foreskin.) Indammation of both glans penis and propuce.

**Ealanorrha** gia. (Βάλανος, the glans penis: ρήγνυμ, to break forth ) Λ synonym of Gonorrhae.

Balanorrhœ'a. (Βίλανος, the glans penis; ρέω, to flow. G. Eicheltripper, Vorhautcatarrh.) Purulent inflammation of the mucous membrane of the glans penis.

Bal'anos phœ'nicos. (Bálavos, date: poīvig, a Phœnician.) The Date palm. (Bάλανος, a

Balantes. A tribe of Western Africa, allied to the Negro, inhabiting the region be-tween the rivers Geba and Casamanza.

Balantid'ium. A Genus of the Family Bursaridæ, Suborder Heterotricha, Class Infusoria. Peristome at the anterior extremity of the body, like a chink, enlarged in front, without or with only a rudimentary asophagus.

B. co'li, Malmst. (Colon, the intestine of that name) A translucent, egg-shaped species found in the mucus of the colon of man and in that of the pig.

B. duode'ni. A species found in the duo-

denum of the green frog.

Balan'tion. The same as Balantium. **Balantiophthal mic.** (Βαλάντιον, a hag; ὀφθαλμός, an eye.) Having the eye poneh-

Balan'tium. (Balávriov, a hag.) The

Bal'anus. (Bá\avos, an acorn. F. bu-lane; G. Meereichel.) A Genus of the Balanida. Acorn shell. The shell is formed by calcification of the first three eephalic segments of the animal. which is fixed head downwards to a plate, the basis, which closes the lower opening. The basis is fixed to some external object. The shell is limpet-shaped, or conical, and is open at the top, but capable of being closed by a lid, operculum. The animal has six thoracic segments, each bearing a pair of ciliated limbs, the currhi, which, being protruded through the opening of the shell, and being in action, bring food. No special respiratory organs. For development see  $\hat{N}$ auplius.

The glans penis and glans clitoridis.

Certain suppositories and pessaries were so called from their form.

Also, in Botany, a synonym of a Glans or

B. myrep'sica. (Μυρεψικός, aromatic.) The Ben nut, Moringa pterygosperma.

Balaruc. France; Departement Herault; near Montpellier, on the border of a salt lake, and with a mild climate. Strong salt waters, of 58° C. (136 4° F.), containing sodium and magnesium chloride, calcium and potassium sulphate. calcium carbonate, and a little magnesium and sodium bromide. Douches, and mud and vapour baths are employed. Used in scrofula, rheumatism, and paralysis.

Bala'sius la'pis. The Balais ruby. Bala'ta. A substance closely allied to atta percha. It is the inspissated exudation of gutta percha. It is the inspissated exudation the Sapota Mulleri, growing in Guiana.

softens at 50 °C. (122° F.), and melts at 160° C. (302 F.) It is soluble in benzol, carbon bisulphide, and hot oil or turpentine; is somewhat acted on by absolute alcohol and ether, and is insoluble in alkalies and hydrochloric acid; trong nitric and sulphuric acids decompose it.

Balaton Fured. See Fured. Bala'tus. The inspissated juice, like gutta percha, of the Achous mulleri.

Bala'tus. (L. balo, to bleat.) The bleating of a sheep or a goat, or a similar sound.

Balaus ta. (Βαλαύστιον, the flower of the wild pomegranate. F. balauste; S. balaustia; G. Granatapfel.) The botanical name of the fruit of the Punica granatum, or pomegranate. It is an inferior, many-celled, many-seeded, indchiscent fruit, with a hard pericarp crowned by the teeth of the calyx. Seeds irregularly attached to the walls or centre.

Balaus'tine. (Βαλαύστιον, the flower of the wild pomegranate.) Belonging to, or resembling, the balaustium, or pomegranate flower, which themselves are called balaustines.

Balausti'nus. (Βαλαύστιον, the pomegranate flower. G. hochroth, granatroth.) Bright red; like the pomegranate flower in colour.

**Ealaus'tium.** (Same etymon. G. Granatblüthen.) The flower of the Punica granatum,

or pomegranate.

Balbia'ni. A living French embryologist. B., nu'cleus of. (F. vésicule embryogène, noyau de Balbiani; G. Balbianische Kern.) A nucleus stated by its discoverer to be present in all ova, in addition to the germinal vesicle. Its function he believes to be to cause the separation of the contents of the ovum into a germinal part and a nutritive part. Balbiani's nucleus accumulates around it the materials destined to form the plastic part or germ, which subsequently becomes the embryo, whilst the nutritive material remains around the germinal vesicle.

**Balbi dodes.** (Βαλβιδώδης, with two projecting edges.) Used by Hippocrates, in Muchlico, for the cavity in the lower end of the hnmerus into which the oleeranon process of the

ulna is received.

Bal'bis. (Βαλβίς, a starting-point.) Any oblong cavity with a bar or stop. Foësins, in Œcon., p. 118.

Balbis'ia. A Geuns of the Nat. Order Commistie.

B. berte'rii. Hab. Juan Fernandez. Yields an odoriferous resin.

Balbi'todes. Same as Balbidodes. Bal'bus. (G. stammelnd, lallend.) Stammering, stuttering.

(L. halbutio, to stammer. Balbu'ties.

Heb. halbel, to stutter.) Stammering.

Bal'char. The Hindustani name of a species of Nardostachys. Used as a scent and a stimulant. (Waring.)

Bal'chus. A term of Bdellium.

**Bald.** (S. pelado. Φαλακρός; F. chauve, pele.; L. calvas; I. calvo; G. kahl.) Having no hair on the head.

B. ring worm. A term applied to tinea tonsurans when it produces smooth, shining, hairless patches of skin.

Baldi'ni, Ac'qua di. Italy; near Monte Catiui. A sulphated, saline water, containing much sodium chloride. It is a purgative.

Bald'money. (Said to be a corruption of L. valde bona, very good.) The Ethusa meum.

Bald'ness. (Finnish, paljas, bare. L. calvities; Gr. φαλακρότης; F. calvitie; I. calvezza; S. calvicie; G. Kahlheit.) The absence of hair on parts where it should be. This may be congenital, which, as a rule, is a transitory condition, or acquired. Acquired baldness is divisible into senile, or calvities, and premature. In senile baldness the hairs turn grey, and then fall out, as a result of the shrivelling of the tissues and interference with the nutrition of the hair follicles. Premature baldness is produced by attacks of fever or other exhausting diseases. See Alopecia, Trickorexis nodosa.

B. of tongue. Applied

Applied to syphilitie

psoriasis of the tongue.

Bal'docz. Austria-Hungary; Connfy Zips. A mineral water, containing calcium carbonate and free carbonic acid; one spring has an astringent taste.

Baldrian'ic ac'id. A synonym of Valeric weid.

Bald win's phos phorus. Calcium nitrate. Prepared by evaporating a watery solution of the salt to dryness, continuing the heat till it fuses, breaking it into fragments while warm, and putting it into a close stoppered bottle; after exposure to the sun's rays for some time it will emit light in the dark.

Balee'n. (L. bulwna, a whale.) Whale-

B. plates. The horny plates of whalebone which occupy the palate of the whale. They are triangular, with a thick smooth outer edge, which is nearly vertical; and are attached to a transverse elevation of the gum which occupies the palate. The third side is filamentous and somewhat concave; into it the tongue fits, so that when water is taken into the capacious mouth, the tongue is pressed against the whalebone, the water expelled through it, and the food of the animal, consisting of minute Mollusca, Crustacea, and fishes, is strained out and swallowed.

Balg'drusen. (G. Balg, a bag; Drüs; a gland.) Follicular glands, like those at the root of the tongue and pharynx.

Balibabulah. The local name of the gum of the Acacia farnesiana.

A race of Kaffirs inhabiting Balili'pa. Fernando Po.

Balimba'go. The Thespesia populnea. Bal'inese. A tribe of Malays inhabiting the Island of Bali, near Java.

Bali'olus. (G. braunlich.) Dark, swarthy, chestnnt-coloured.

Baliosperm'um. (Baλιός, spotted; σπέρμα, a seed.) A Genus of the Nat. Order Euphorbiaceæ.

**B. monta'num,** Muller. (L. montanus, belonging to a monntain.) Ilab. India. A species which furnishes seeds, which are cathartic. The leaves are in great repute as a vulnerary.

Balitiste'ra. Red earth. (Ruland and Johnson.)

Ba'lius. The same as Badius.

Ball and sock'et joint. Same as Enarthrosis.

Ballabol'la. An aboriginal tribe of the North-West Coast of America inhabiting the mainland to the east of Queen Charlotte's Island.

Ballis'mus. (Βαλλισμός, from βαλλίζω, to dance.) A synonym of chorea; also, of tremor and of paralysis agitans.

Ballis'two os. (L. ballista, a military

engine, like a bow for throwing projectiles; os, a bone.) The Astragalus.

Ballo di san Vito. (Ital.) Chorea.
Balloo'n. (F. ballon. L. anpulla; 1.
boccia; S. recipiente; G. Ballon.) A spherical glass receiver, used in distillation, with one or two necks for adaptation to a retort, or to a second balloon when requisite.

**Ballo'ta.** (G. Schwartzeandorn.) Horehound. The βαλλωτή of Pliny and Dioscorides. A Genus of the Nat. Order Labiata. Calyx salver-shaped; corolla with tube included; upper lip erect, lower one trifid; anthers opening longi-

tudinally; achenes rounded at end.

B. africa'na. Hab. Cape of Good Hope. Has an aromatic bitter taste. Used as a tonic and expectorant in pulmonary diseases, especially in asthma. (Waring.)

B. fce'tida. (L. fatidus, stinking.) The

B, nigra.

B. lana'ta. (L. lanatus, woolly. F. ballate cotonneuse; G. wollige Ballotte, Wolfshappkraut.) An aromatic plant growing in Siberia. It contains tanuin and an aromatic resinoid matter, picro-

ballotin. Used in gont, rheumatism, and dropsy.

B. ni'gra, Linn. (L. niger, black. F. marrube noir, ballote; I. cimiciotto crbu lavunda murrobiastro; G. schwarze stinkende Andoru.) Black horehound. Stem pubescent; leaves petiolated, ovate, crenate; cally x teeth longer than tube of corolla. Has a disagreeable odour. Used as an antispasmodic and vermifuge; and in hysteria.

B. suave'olens. (L. suaveolens, sweet smelling. F. ballote odorante.) Jamaica spikenard. Found in St. Domingo. Used as an emmenagogue, antihysterie, expectorant, and vermifuge; added to baths as an aromatic.

B. vulga'ris. (L. vulgaris, common.) The B. nigra.

Ballottement. (F. from ballote, a ball.) The movement of a body which is pushed. A mode of diagnosing pregnancy. The woman being in a semi-recumbent, or other position, and the fundus uteri being steadied by pressure on the abdomen, the forefinger is introduced into the vagina, so as to touch the front part of the uterus near the cervix. a smart and sudden push is then given, and the finger held steady, a firm resistant substance is felt to move away, and in a short time to return on to the finger. This procedure proves the existence of a resistant body floating in a fluid, and it may certainly be inferred that the firmer substance is a feetus. Ballottement can only be practised from about the fourth month to the eighth, as before that time the feetus is too small to give the desired sensation, and in the last few weeks it fills up the eavity of the uterus.

Balls'ton Spa. A village in Saratoga County, New York. The water contains sodium iodide, sodium chloride, sodium bicarbonate, magnesium bicarbonate, calcium carbonate, iron carbonate and silica. There is also a sulphur spring. (Dunglison.)

Ballynahinch. Ireland; Co. Down. A weak chalybeate water, with a little sulphuretted hydrogen, in a hilly and pleasant country, with fair accommodation.

Ballyspel'lan. Ireland; near Kilkenny. A disused chalybeate spring.

Balm. (F. baume.) A contraction of Bal-80.112

Also, the Melissa officinalis.

Also, a fragrant or highly esteemed ointment. Also, an application or remedy for the relief of

B., bas'tard. The Melittis melissophyl-

B., com'mon. The Melissa officinalis. B., horse. The Collinsonia canadensis. B., In dian. The Trillium latifolium.

B., moun'tain. The Melittis melissophyllum, and the Monarda coccinea.

E. of Gil'ead. See Bulsam of Gilead. B. of Mee'ca. Same as Bulsam of Gilead.

B., stink'ing. The Hedeoma pulcaioides. B. tea. An infusion of the leaves of Melissa officinalis. Used as a diaphoretic drink in fevers and an emmenagogue.

B., Turkey. Oil of the Dracocephalum moldaricum.

B. wa'ter. The Aqua melissa.

Also, the Eau des carmes, the Alcoolatum melissæ compositum.

Balmap ple. The Momordica bulsamica. Balmany. The Chelone glabra. Balnca d'Avignone. See Vignoni.

Bal'neæ. (Lat.) Spas, and also officinal baths.

B. econo'see. (L. balneum, a bath; cornosus, boggy.) Mud baths, as used at several mineral water places.

**Balnea ria.** (L. balnearia, G. Badege-eth.) The utensils and implements requisite ruth.)for bathing.

Also, bathing rooms.

Balnea'ris. (L. balneum, a bath.) Of, or belonging to, a bath.

Balnea'tion. (L. balneum, a bath.) The act of bathing.

**Balneog'raphy.** (L. bulneum, a bath; γράφω, to write. G. Buderbeschreibung.) Λ description of baths.

Balneol'ogy. (L. balneum; λόγος, a discourse.) A treatise on, or the science of, baths.

Balneotech'ny. (L. balneum; τίχνη, art. G. Badbereitungskunst.) The art of medical treatment by baths.

Balneotherapei'a. The same as Balneotherapy.

Balneother apy. (L. balnenm; θερα-πεία, tending in sickness.) The knowledge of baths as curative agents.

Bal'neum. (L. balneum. Heb. balan; F. bain; L. bagno; G. Bad.) A bath.
B. amyla'tum. (L. amylum, starch.)

B. amyla'tum. See Bath, starch.

B. anima'le. (L. animalis, living.) See Bath, animal.

B. a'quæ. (L. aqua, water.) A water bath. See Bath, water.

B. are'næ. (L. arena, sand. F. bain de sable; G. Sandbad.) A sand bath. See Bath, sand. B. areno'sum. Same as B. arena.

B. arens. (L. arens, dry. F. bain de sable; G. Sandbad.) A sand bath. See Bath, sand. B. aromat'ieum, Fr. Codex. (L. aroma-

ticus, composed of spices. F. bain aromatique.) Species aromatica 500 grms., boiling water 10 litres. Infuse for an hour and strain. Used in diarrhea, rheumatism, and phthisis.

B. bareginen'se, Fr. Codex. (F. bain de Bareges artificiel.) Artificial Baréges water bath. Sodium sulphide 60 grms., sodium chloride 60, dry sodium carbonate 30, added to the water

necessary for a bath.

B. cin'eris. (L. cinis, ash. G. Aschenbad.) A bath of hot ashes piled around the body to restore the heat.

B. cum ac'ido chlorhy'drico, Fr. Codex. (F. peddure chlorhydrique.) Hydrochloric acid 100 grms., tepid water 6 litres. To be used as a 100 grms., tepid water 6 litres. foot bath.

B. cum carbona'te so'dleo, Fr. Codex. (F. barn alcalin.) Sodium earbonate 250 grms.

to sufficient water for a bath.

**B.** cum chlorure'to hydrargyr'ico, Fr. Codex. (F. bain de sublime corrosif.) Bichloride of mercury 20 grms., alcohol 50, distilled water 200; dissolve, and add to sufficient water for a bath. Used in venereal diseases.

B. cum chlorure'to so'dico, Fr. Codex. (F. bain de sel marin.) Sea salt 5000 grms. dissolved in sufficient water for a bath.

B. cum hydrarg'yro bichlora'to cor-

rosi'vo. See Bath, mercurial.

**B.** efferves'cens sali'num. (L. sal, salt.) The same as B. efferveseens simplex, with the addition of sodium chloride 1000 grms.

B. efferves cens simplex. (L. effervesco, to foam up; simplex, simple.) Sodium carbonate 500 grms, is added to the bath water, and then hydrochloric acid 500 grms.

B. fer'ri carbon'ici efferves'cens. (L. effervesco, to foam up.) Sodium carbonate 500 grms, is added to the water of the bath, and, when the patient is in it, ferric sulphate 15 grms., dissolved in water 225 grms., and dilute sulphuric acid 15 grms., is poured in, and then hydrochloric acid 500 grms.

B. frig'idum. (L. frigidus, cold.) A cold

bath.

B. gelatino'sum. See Bath, gelatinous. B. glutino'sum, Fr. Codex. (L. glutinosus, gluey. F. bain gelatineux.) Gelatin 500 grms., soak in two litres of cold water for an hour, then dissolve by the aid of heat, and add to the bath water.

B. ioda'tum. See Bath, iodine.

B. iodura'tum, Fr. Codex. (F. bain iodura'.) See Bath, iodine.

B. lacon'icum. (L. laconicum, the sweating room in a hot bath. A semicircular alcove in the Roman hot bath, in which the temperature was kept very high for the purpose of producing perspiration. G. Schwitzbad.) A vapour bath

nsed to induce sweating. **B. mari'æ.** (F. bain marie; G. Wasserbad.) A water bath. The word is probably a corruption of bain de mer, or balneum maris.

See Bath, water.

B. ma'ris. (L. mare, the sea. F. bain de mer; G. Wasserbad.) A water bath. See Buth, water.

B. medica'tum. (L. medicatus, healing.) A medicated bath; one which contains, or to which is added, some substance of the nature of

B. mercuria'le. See Bath, mercurial. B. plumba'rium, Fr. Codex. (F. bain dit de Plombieres.) See Bath, artificial Plom-

B. ro'ris. (L. ros, dew.) A vapour bath. See Bath, vapour.

B. sic'cum. (L. siccus, dry.) A dry bath, as a sand bath, a hot-air bath, a bath of hot ashes.

B. sinapisa'tum, Fr. Codex. (L. sinapis, mustard. F. pidiluve sinapisc.) Mustard flour 150 grms., tepid water 6000. For a foot-bath.

B. stim'ulans. (I. stimulo, to rouse up.) Solution of ammonia, camphorated spirit, of each 400 grms., common salt 6000; mix with the bath water.

в. sulfura'tum, Fr. Codex. (F. bain sulfure.) Potassium sulphide 100 grms. dissolved

in the water of a bath.

B. sulfura'tum gelatino'sum, Fr. Codex. (F. bain sulfuro-gelatineux.) l'otassinm sulphide 100 grms., gelatine 250; dissolve and add to a bath.

B. sulfura'tum liq'uidum, Fr. Codex. (L. liquidus, fluid. F. bain sulfure liquide.) Potassium sulphide 100 grms., water 200; dissolve and add to a bath.

B. sulphu'reum. A sulphur bath. See

Bath, sulphur.

B. vapo'ris. (L. rapor, steam. G. Dampfbad.) A vapour bath. See Bath, vapour.

B. vicien'se, Fr. Codex. (F. bain artificiel de Vichy ) Sodium earbonate 500 grms. dissolved in the water of a bath.

Balo'ko. A tribe of Kaffirs inhabiting Fernando Pa.

**Bal'sam.** (Βάλσαμον. L. balsamum; F. baume; I. and S. balsamo; G. Balsam. Calmet derives the word from Baal-shemen, royal oil.) A vegetable juice, often exuding naturally, either fluid, or solid from inspissation, consisting of resin mixed with volatile oils. Balsams are of two classes :

1. Simple solutions of resin in volatile oil, as copaiba balsam;

2. Similar solutions, with the addition of benzoic or einnamic acid, as balsam of Tolu.

Balsams have an aromatic, agreeable odour, and a strong penetrating taste; they are insoluble in water, almost entirely soluble in alcohol, and partially soluble in ether and oil. Balsams are natural and artificial.

B., ace'tic. Soap made with marrow, camphor, of each 154 grains, volatile oil of thyme 30 drops, acetic other 1235 grains. An embroca-

tion for rheumatic pains.

**B., acous'tic.** ('Ακουστικός, helonging to the sense of hearing. Bulsamum acousticum.) Tinetures of benzoin, easter, and opium, of each 1 oz., essential oil of assafortida 5 drops. There are several similar compounds. Used in deaf-

B., Amer'ican. The Myroxylon peruiferum, or Perurian balsam.

B., an'isated sul'phur. (Balsamum sulphuris anisatum.) A solution of sulphur in oil of anisced, with er without oil of turpentine.

B., an odyne, of Bate. (Balsamum anodynum Batei.) A preparation very similar to the Linimentum saponis compositum.

B., an'odyne, of Guy. (Balsamum ano-dynum Guidonis.) A vulnerary balsam of ancient repute, by Guy of Caliac, composed of aloes, amber, ammoniacum, balsam of Peru, bdellinm, caranna, eastor, galbanum, labdanum, myrrh, olibanum, storax, taeamahaca, and Venice turpentine, digested in alcohol.

B., antiarthritic. The B. of Sanchez.

B., apoplec'tic. (Balsamum apoplecticam, E. Ph., 1744.) Oil of nutmeg 1 oz., oils of cloves,

lavender, and rosemary, of each \( \frac{1}{2} \) dr., oil of amber 10 drops, balsam of Peru I dr. Used to anoint the head and nostrils of apoplectic patients, and believed to be of great power.

B. ap plo. The Momordica balsumina.

B., Asiatic. The Balsam of Gilead,

B., Brazil'ian. The B., copaiba.

B., Cai'ro. The B. of Gilead.

B., Cal'aba. The resin of the Calophyllum

culaba. See Tucamahaca.

B., Canada. A pale yellow, viseid oleoresin, of agreeable balsamic odour and slightly bitter taste, the product of Abics balsamea and A. canadensis. Used in gleet, leucorrhea, eystitis, and chronic bronchitis. Dose, 5 grains. Used for mounting microscopic objects.

B., Cana'ry. A fragrant essential oil distilled from the Dracocephalum moldavicum.

B., capi'vi. The same as B., copaiba. B., Carpa'thian. The essential oil distilled from the cones and young shoots of the Pinus cembra. It is a thin, light, turpentine. Also, called German oil, Carpathian oil, and Riga balsam.

B., cephal'ic. (Κεφαλή, the head. Balsamum vephalicum saxonicum.) A preparation of the essential oils of amber, lavender, marjoram, nutmeg, pennyroyal, rue, and sage.

B., Chi'na var'nish. The exadation of Augia sinensis; highly fragrant. Used as a varuish in China. It abounds in benzoic acid.

(Balsamum com-B., comman'der's. mendatoris.) The tinethra benzoini composita,

Friar's balsam.

B., copai'ba. The oleo-resin of the Copaifera multijuga, C. officinalis, and other species. Of the consistence of olive oil, and of a pale yellow colour, but varying in both these characters; sp. gr. 940-996; transparent, perfectly soluble in an equal volume of benzol, of a strong odour, and bitter burning taste, mixes with absolute alcohol and oils, dissolves in ether. Eliminated by the genito-urinary and bronchial mucous membranes, and the skin. Used in generrhea and chronic cystitis, in chronic bronchitis, in dropsy, and in some skin diseases; in the latter also externally.

B., copalm'. The product of Liquidambar styraciflua. It is a yellowish, thickish fluid, which has been used instead of storax.

B., Egyp'tian. The B. of Gilead.

B., fe'male. (Balsamum embryonum.) An infusion of mistletoe, civet, musk, and various other arematics, in a mixture of wine and several kinds of distilled waters, which is then itself distilled. It was used both externally and internally to prevent abortion, by strengthening the fœtus and the womb.

B., Fioravan'ti's. A product of the distillation of turpentine, myrrh, elemi, canella, cloves, ginger, and such like, which have been macerated for some days in alcohol. The first product of distillation in a water bath is the Spirituous balsam, liquid and strongly terebin-thinate. The second product, the Oily balsam, is obtained by subjecting the residue, in an iron vessel, to an open fire. A third product, the Black balsam, is obtained by subjecting the mass to a still greater heat.

Also, a synonym of Alceolat de Fioravanti, Fr. Codex.

B. fir. The Pinus halsamea.
B., Fo'cot. The resin of Calophyllum inophyllum.

B., Fri'ar's. Tinetura benzoini composita. B., Gen'oa. The B., Locatelles.

B., Gou'lard's. The B., saturnine.

B., green. (Balsamum viride.) Gum elemi 1 lb., verdigris 3 oz., linsced oil 6 lbs. Used as a detergent.

B., guai'acum. (Balsamum quasacinum) Gum guaiacum 1 lb., halsam of Peru 3 drs., rectified spirit 1 quart. Used in agues and rheumatism. Dose, 30-60 drops.

B., Gurjun. The Garjan oil.

B., Guy's. See B., anodyne, of Guy, E., Hunga'rian. An exudation from the

cut twigs of the Pinus pumilio. It is thin, transparent, and yellowish. Called also, Hungarian turpentine.

**B., hypnotic.** ("Y $\pi vos$ , sleep.) A liniment prepared with opium, saffron, and oil of black nutmeg, the juice of some narcotic plants, and an oily menstruum. Used locally to produce

sleep.

B., hyster'ic. (G. Mutterbalsam.) Bitumen, aloes, galbanum, laudanum, of each 62, assafeetida 186, castor, opium, of each 31 grs., oils of rue and amber, of each 10, oils of worm-wood, savin, and petroleum, of each 12 drops, butter of nutneg 23 grs.

B., In'dian. The B. of Peru.

B., iod'uretted. Animal soap 60, potassium iodide 42, alcohol 500, essence of lem n 4 parts. Used in goirre locally. (Dunglison.)

B., Jews'. The B. of Gilead.

B., lead. The B., saturninc.

B., Locatelles. (Balsamum locatelli.) Yellow wax 4 oz., red sanders 4 drs., Strasburg turpentine 6 oz., balsam of Peru 2 drs., sherry 5 oz., olive oil 6 oz. Used in phthisis and chronic coughs. Dose, half a drachm. Also used as a mild stimulating ointment.

B., Luca'telles. The same as B., Loca-

telles.

B., mercu'rial. The Unguentum hydrargyri nitratis.

B., Wex'ican. Peruvian balsam.

B., ner'vine. (F. baume nerval.) Beef marrow 350, oil of sweet almonds 100, oil of nutmeg 450, eil of rosemary 30, oil of cloves 15, camphor 15, balsam of toln 30, alcohel 60 parts. In sprains and rheumatic pains.

B. of Acou'chi. The produce of Icica

aracouchini.

B. of Alpi'nus. The B. of Gilcad. B. of am'ber. The Oil of amber.

B. of Arcæ'us. (Balsamum arcæi.) An oiutment like the Unguentum elemi compositum. It contained mutton fat 120 parts, turpentine 150, elemi resin 150, oil 100.

**B.** of Carthage'na. A synonym of B.

of Tolu.

B. of Chi'ron. Olive oil, yellow wax, turpentine, camphor, and black balsam of Peru, coloured with alkauet root. Used in atonic ulcers.

B. of Con'dom. The B. of Lectoure. B. of Four croy. The B. of Laborde.

B. of Genevie've. Olive oil 360, yellow wax 60, red sandal wood 16, turpentine 120 drs. Digest at a gentle heat, and add, when cold, camphor 2 drs. A vuluerary.

B. of Gil'ead. (Bomb. Oud-i-balessan; Arab. Akooyeelase moon roome; Pers. Reoghenhalsam; Egypt, Balessan.) An oleo-resin of the Balsamodendron gileadense, or perhaps the E. opobulsamum. It is the balm of the Old Testament, the Βάλσαμον of Dioscorides. It is in commerce a solid of a golden colour, a delicate aromatic odour, a bitter, somewhat astringent taste. Formerly used as an antiseptic, stimulant, nervine, and vulnerary; its fumes were supposed to cure barrenness. It is so highly prized by the Turks that very little is sent to England, and

that only of an inferior quality

B. of Gil'ead, false. A factitious balsam is made by mixing benzoin, storax, tolu, and Canada balsam together, and scenting with oils of lemon, cassia, resemary, nutmeg, and vanilla.

B. of hon'ey. Gum benzoin 5 oz., balsam of tolu I oz., honey 8 oz., alcohol 3 pints. Digest

for ten days, and filter. Used for coughs.

B. of Labor'de. Olibanum, turpentine, storax, benzoin, juniper, theriaeum, infused in olive oil. For chapped hands and cracked nipples.

B. of Lausan'ne. The B., induretted.
B. of Lec'toure. A mixture of essential oils holding in solution campher, saffron, musk, and ambergris. A stimulant and sudorifie. Used as an aromatic, and burnt in rooms.

B. of life. (F. baume de vie.) Compound decection of aloes.

B. of life, Hoff'man's. See Balsamum riter Hoffmanni.

B. of liq'uorice. The Tinctura camphoræ composita, strongly impregnated with oil of aniseed.

B. of Mari'a. The product of Verticillaria avuminata.

B. of Mec'ca. The B. of Gilead.

B. of Metz, green. Verdigris 24 parts, sulphate of zinc 12, Venice turpentine 120, aloes 16, essential oil of juniper 30, of clove 58, clive oil 365, linseed oil 335, and oil of laurel berries 60 parts. In fungous ulcers.

B. of Mindere'rus, vul'nerary. Turpentine, elemi, oil of hypericum, and wax, mixed,

and used as a dressing to wounds.

B. of Myn'sicht, paralytic. A mixture of the essential oils of different aromatic plants with oils of turpentine and amber.

B. of need'les. The B. of steel.

B. of Parei'ra. Balsam, resin, muriate of ammonia, and powdered pareira root, mixed, and used as a diuretic. (Dunglison.)

B. of Per'mes, Comman'der's.

banum, myrrh, balsam of tolu, benzoin, Cape aloes, angelica root, and hypericum tops, dis-

solved in alcohol. Used as a vulnerary. **B. of Peru'.** (F. banne de Peru; G. Perubalsam.) An exudation from the trunk of the Myroxylon percire, after the bark has been scorched and removed. A dark reddish-brown liquid, of sp. gr. 115, of balsamic odour, and acrid taste. Soluble in five parts of rectified spirit. Used in chronic bronchitis. Dose, 10-15 minims. Applied to indolent ulcers.

B. of Peru', red. The B. of Tolu.

B. of Peru', white. A thick, yellowishwhite liquid obtained by subjecting the fruit of the Myroxylon percire to pressure; it contains myroxoearpin.

B. of San'chez. Animal scap, oils of nutmeg, cloves, and mint, mixed with acctic ether. External stimulant.

B. of Scnner'tus, cor'dial. The essential oils of citron, cloves, and cinnamon, musk, and ambergris. Used as a stimulant.

B. of St. Thom'as. The B. of Tolu.
B. of steel. (F. baume d'acier, or B.

d'aignelles.) Steel filings 8, nitrie acid 32 parts. Dissolve, and add rectified spirit and olive oil, of each 32 parts. Used in joint pains.

B. of the Samar'itan. (F. baume de Sa-

maritain.) A mixture of wine and oil. Used by the ancients in the treatment of wounds.

B. of Tolu'. (F. baume de Tolu; G. Tolu-

balsam.) A balsam obtained by incisions into the bark of the Myroxylon toluifera. It is a soft, light-brown solid, of fragrant odour and pleasant sweetish taste, perfectly soluble in alcohol, ether, and chloroform. It is used as an expectorant in chronic coughs. Dose, 5-25 grains.

B. of Vince guerre. The B. of Lectoure.
B., pa'ra. The B., copaiba.
B., Per'sian. The Tinetura benzoini com-

posita, Friar's balsam.

B., polychrest. (Πολύς, many; χρηστός, nseful.) Same as Jesuits' drops.

B., Racazzi'ra. The same as B., raka-

siri.

B., Rakasi'ri. A balsam probably obtained from the Bursera balsamifera, but may be factitions; brought from India in gourds. It is of slightly bitter taste, adheres to the teeth when chewed, indorous when cold, when heated smells like balsam of Tolu. Used as copaiba balsam.

B., Rhadasiri. The same as B., rakasiri.

B., Ri'ga. The same as B., Carpathian. B., San Pao'lo. The B., copaiba.

B., San Sal'vador. The B., Peruvian of commerce. Dark in colour.

B., sat'urnine. (Balsamum saturni. Saturnus, Saturn, an old name of lead.) llot oil of turpentine, saturated with lead acetate. Applied to foul uleers.

B., Sax'on. (F. haume Saxon.) Butter of nutmeg, mixed with several aromatic oils.

B., soap. The Linimentum saponis com-

positum.

B., sul'phur. (Balsamus sulphuris, balsamum sulphuris erassum, balsamum sulphuris simplex, oleum sulphureum.) One part of sulphur dissolved in eight of olive or linseed oil. Used in eatarrh and other chest affections, and applied to foul ulcers.

B., sul'phur, an'isated. Oil of anise 5

parts, sulphur balsam I part.

B., sul'phur, Barba'does. (Balsamum sulphuris barbadense.) Sulphur boiled with Barbadoes tar.

B., sulphur, terebinth'inated. (Balsamum sulphuris terebinthinatum.) A mixture of balsam of sulphur with 3 parts of oil of turpentine.

B., Syr'ian. The B. of Gilead.

B., Thi baut's. A tincture of myrrh, aloes, dragon's blood, hypericum tops, and turpentine. Diuretic and vulnerary

B., trang'uillising, Fr. Codex. (F. baume tranquille.) The fresh leaves of belladonna, hyoscyamus, black nightshade, tobacco, poppy, and stramonium, of each 200 grms., are simmered in 5000 grms, of olive oil, and in this the dry tops of wormwood, hyssop, marjoram, peppermint, hypericum, and thyme, the dried leaves of tansy, rosemary, rue, and sage, of each 50 grms., and the flowers of lavender and elder, of each 50 grms., are infused. It is employed in frictions in rheumatic and other pains. **B., traumatic.** (Τραυματικός, relating

to wounds.) A vulnerary balsam very like Friar's

balsam, Tinctura benzoini composita.

B. tree, yel'low-flow'ered. The Clusia

B., Turkey. The Oil of Dracocephalum moldavicum.

B., turp'entine. The reddish resin left after the distillation of turpentine. B., umi'ri. A balsamic exudation from the stem of the Humirium fleribundum. It is a fragrant, pale yellow, oily liquid, and is said to combine the properties of the balsams of copaiba and tolu.

B., univer'sal. (Balsamum universale.)

The Ceratum plante compositum.

B., Venezue'la. The B., copaiba.

Paring Compound time

Compound tineture of B., Ver'vain's.

E. weed. The Impatiens fulva.

B., white, of San Sona te. A granular, vellowish substance, having an odour of cloves, obtained from the fruit of the Myrospermum peruiferum by expression. From it is obtained Myrocarpine.

Ealsamade'na. (Βάλσαμον, balsam; άδήν, a gland.) The internal oil-bearing glands

of the leaves of plants.

Balsama'tion. (L. bulsamatio, balsamum, balsam. G. Einbalsamirung.) (L. bulsamatio, from balming.

Balsamelæ'on. (Βάλσαμον, balsam; Exacov. oil.) The Balm of Gilead.

Balsamel'la. A synonym of Balsame-

Balsam'eous. (L. balsamens. G. balsamisch.) Of the nature of balsam, or belonging to balsam.

Balsami o'leum. (L. balsamum; oleum,

oil.) The Balm of Grhad.

Balsam'ic. (L. bulsamicus. F. balsamique; I. and S. bulsamico; G. balsamisch.) Of the nature and properties of a balsam.

Ealsam'ica. (Same etymon.) Medicines

of a resmous and fragrant nature.

Balsam'ico-ama'rus. (L. balsamicus; amarus, bitter. G. bitterbalsamisch.) Having (L. balsamia bitter balsamic taste.

B .- aromaticus. (L. aromaticus, fragrant. G. gewurzigbalsamisch.) Having an aromatie balsamic taste or smell.

**B.-empyreumat'ieus.** ('Εμπύρευμα, a coal to preserve a smouldering fire; and so applied to the substances obtained from the dry distillation of organic substances. G. brenzlichbalsamisch.) Having a burnt empyreumatie taste or smell.

Balsamif'era brazil'iensis. balsamum, balsam; fero, to bear.) The Copaifera officinalis.

B. indica'na. The Myroxylon percira,

yielding Peruvian balsam.

Balsamif erous. (L. balsamum, balsam; fero, to bear. F. balsamıfere; G. balsamfuhrend.) Yielding balsam.

Balsamif'luæ. (L. balsamum; fluo, to flow. G. Balsambaume.) A synonym of the Altingiacea, or liquidambars.

Balsamif luous. (L. balsamifluus, from balsamum; fluo, to flow. G. balsamführend.) Yielding balsam.

Balsamifluus duc'tus. (L. ductus, from duco, to lead. G. Bolsamgang.) The canals in which balsam is deposited

Balsami'na. See Impatiens balsamina. Balsamina'ceæ. (G. Balsaminenge-wuchse.) An Order of thalamidoral Exogens, or a Family of the Order Gruinales. Herbaceous plants, with a succulent stem and watery juice; leaves simple, exstipulate; flowers very irregular, unsymmetrical, and without an involucre; sepals 3, one spurred, with an imbricated estivation; petals with a convolute astivation; stamens 5, alternate with the petals, nearly distinet; fruit dehiseing by elistic valves; seeds exalbuminous

Balsamin'cæ. The same as Balsami-

Balsam'inous. (L. halsaminus, made of balsam.) Composed, or consisting of, balsam.

Balsamita. A Genus of the Family Arter , Suborder Tohn florer, Nat. Order Composeta.

B. femin'ea. (L. femineus, female.) A synonym of the mandlin tan-y, Achalla ngera-

E.major. (L. mojor, greater.) A synonym of B. surveolens.

B. mas. (L. mas, a male.) A synonym of B. suorcolens.

E.mi'nor. (L. minor, less.) The maudlin tansy. Achillea ageratum.

B. odora'ta. (L. odoratus, having an odour.) A synonym of B. suavecleus.
B. suave'olens. (L. suavecleus, sweet

smelling. F. wenthe coq, grande banne; 1. erba di San Pietro; S. yerba romana; G. breithlattriger Rainfarra, Francumcinze.) Hab, France. An herbaceous plant, with an odour like that of mint, and a bifter hot taste. The leaves and flowering tops were formerly used in France as a tonic, antispasmodic, and vermifuge.

B. vulga'ris. (L. vulgaris, common.) A

synonym of B. suaveolens.

Balsami'to. Tineture of virgin balsam. Made by digesting the fruit of the Myroxylon percire, deprived of its winged appendages, in rum. It is a fragrant liquid, in high repute through Central America as a stimulant and vulnerary, and as a diuretic and authelmintic. It is used to excite uterine contraction, to resieve spasm, and to check diarrhea and vomiting.

Raisa'mo blan'co. White balsam. A semisolid substance obtained by pressing, withont heat, the interior of the fruit and the seeds of the Myroxylon percira. It is not to be confounded with Tolu balsam.

B. ne'gro. Name of the Balsam of Peru

in San Salvador, whence it is obtained.

B. re'al. The resinous balsamic exudation of a species of Fagara indigenous in British Guiana. It is of a greenish or golden colour, subacrid, bitterish, and very fragrant. It is used to old ulcers, and in phthisis and spasmodic disorders. (Waring.)

Balsamoden'dron. (Βάλσαμον, balsam; δένδρον, tree. G. Balsambaum.) A Genus of the Nat. Order Amyrida ea. Sexus sometimes imperfect; calvx four-toothed, cup-shaped; petals four, induplicate-valvate; stamens eight, insert∈d under a cup-shaped dise; ovary two-celled; style short, four-lobed; drupe hard, one- or twocelled.

B. africa'num, Arnott. A species yielding African bdellium. A synonym of Hendelotia aframa, A. Rich.

B. agallocha. ('Αγάλλοχου, the bitter aloe.) A synonym of Amyris commuphora, Royb.

B. Ehrenbergia'num. A synonym, or,

perhaps, a variety, of the B. myrrha,
B. giliaden'se, Kunth. Hab. Arabia and India. A species which supplies the Balsam of Gilead,

B. ka'fal. A native of Arabia. The balsamic exudation of the tree is very fragrant, and is used as a purgative. (Waring.)

B. ka taf, Kunth. The B. myrrha.

B. mu'kul, Hooker. A species yielding Indian bdellium.

B. myr'rba, Nees. Hab, Arabia and Abyssinia. A shrub with spiny branches; ternate icaves; obovate leadlets; solitary, nearly sessile flowers; 1-toothed ealyx; four petals; eight stamens; 2-celled ovary; smooth, brown, ovate, acuminate drupe; from its bark exudes the gumresin Myrrh.

B. opohal'samum, Kunth. A small tree of Arabia, by some regarded as a variety of B. gileadense, and, like it, yielding a fragrant bal-

B. puhes'cens. (L. pubesco, to be covered.) A species yielding a fragrant gum-resin, and whose inner bark peels off in thin white layers, which are used as paper. It is said to be one of the sources of Gugul, Indian bdellium.

B. Rexburgh'ii. A species supplying Indian bdellium.

**Balsamo'des.** (Βαλσαμώδες. G. balsamartig.) Like balsam; balsamic.

Balsamosac'charum. (Βάλσαμον; σάκχαμον, sugar.) A synonym of Eleosaccha-

Bal'samum. (Βάλσαμον, the balsam tree. Hebrew, Bualsamen, the prince of oils. F. baume; G. Balsam.) A balsam.

B. aarwangien'se. The Tinctura ben-

zoini composita.

- B. ai'hum. (L. albus, white, S. bulsumo blanco.) White balsam. Said to be obtained by expression from the fruit of Balsamum peruif erum, but this is doubtful. It is semifluid, somewhat granular, and separates, on standing, into a white crystalline deposit, and a more fluid portion. It is similar in use to the balsam of Peru. It contains a resinous body, Myroxocar-
- B. al'bum flu'idum america'num. (L. albus, white; fluidus, liquid.) An old name of copaiba balsam.
- The Balsamum gileadense, B. alpi'ni. called after Prosper Alpinus, who wrote about it. B. arcæ'i. The Unguentum elemi compo-
- silum B. aromat'icum. The B. vitæ Hoffmouni.
  - B. canaden'se. See Balsam, Canada. B. capi'vi. The Balsam of coparba.
- B. carpat'icum. See Balsam, Carpathian.
- 2. catholieum. (Καθολικός, general.) The Tinctura benzoini composita.
- B. chim'icum. A synonym of Balsam, Fioraranti's.
- **B. commendato'ris.** (L. commendator, one who commands.) See Balsum, commander's.
- B. constantinopolita'num al'hum. (L. albus, white.) The Balsam of Gilead.
  - B. copai'væ. See Balsam, copaiba.
- B. copai've inspissa'tum. (L. inspisso, to thicken.) The Resina copaibæ.
- B. copai'væ parisien'se. The Resina
- B. copai'væ sie'cum. (L. siccus, dry.) The Resina copacha.
- B. copai'væ solidifica'tum. (L. solidus, firm; furro, to make.) Copaiba balsam 16 parts, magnesia usta I part. Mix and form into pills.
- B. dipterecar'pi. A synonym of Gurjun od, the product of Dipterscarpus lavis.

- B. embrye'num. ( Εμβρυον, the embrye.) Same as Balsam, female.
  - B. Fenille'ti. The B. viride.
- B. Fioravan'ti. The Alcoolat de Fioravanti, Fr. Codex.
- B. Frah'mii. The Unguentum terebinthinæ, G. Ph.
- B. fus'cum. (L. fuscus, dusky.) Balsum of Peru.
  - B. game'lo. The Balsam of copaiba.
- B. Genove'fæ. See Balsam of Geneviève. B. genui'num autiquo'rum. (L. ge-
- nuinus, natural; antiqui, the ancients.) The Balsum of Gilead.
- B. gileaden'se. The Balsam of Gilead.
  B. Guido'nis. See Balsam, anodyne, of
- B. hispan'icum. (L. hispanicus, Spanish.) An old name of a balsam; probably balsam of Toln.
- B. hungaricum. See Balsam, Hungarian.
- B. hyperici sim'plex. (L. simplex, simple.) See Oleum hyperici.
- B. in'dicum. Indian balsam; a term for Balsam of Peru.
- B. in'dicum ni'grum. (L. niger, black.) A term for l'eruvian balsam.
- B. juda'icum. (L. Judaicus, Jewish.) The Balsam of Gilead.
- 3. lib'ani. (Λίβανος, the frankincense tree.) The Balsam, Carpathian.
- B. majora'næ. (Mod. L. majorana, the marjoram, G Majoranbalsam.) Oil of marjoram 2 parts, oil of nutmeg 5. Used as an infliction in colic and chronic nasal catarrh of children.
- B. mas. (L. mas, male.) The Balsamita suaveolens, officinal costmary, or alccost.
- B. men'thæ. An old name for the essence of spearmint, Mentha viridis.
- B. mercuria'ie. The Unguentum hydrargyri nitratis.
- B. meten sium. See Balsam of Metz, arren.
- B. nu'cis moscha'tæ. The oil of nutmeg, or, as it is often called, of mace.
- B. nucis'tæ. (Mod. L. nucista, a nnt-
- meg-) The expressed oil of nutmeg. B. ophthal micum. ('Οφθαλμικός, for the eyes.) The Unguentum hydrargyri oxidi rubri.
- B. ophthal'micum ru'brum. (' $O\phi\theta u\lambda$ μία, a disease of the eyes; L. ruber, red.) Tho Unguentum hydrargyri oxidi rubri.
- B., opodel'doch, Fr. Codex. (F. baume opodebloch.) Common soap, 300 grms., are dissolved in 2500 grms, of alcohol, by the aid of a water-bath; camphor in powder, 240 grms., are added, and, when this is dissolved, oil of rosemary The fluid is 50 grms., and oil of thyme 20 grms. decolourized by animal charcoal, 100 grms. of a solution of ammonia are added, and the whole rapidly filtered. A stimulating embrocation in rheumatism.
- B. opodel'doch ieda'tum. See Linimentum saponato-rodatum.
- B. per'sicum. (L. persicus, Persian.) The Tinctura benzoim compositum.
- B. peruvia'num. See Balsam of Peru. B. peruvia'num ni'grum. (l. myer, black.) The Balsam of Peru.
- B. sapena'ceum. (L. sape, seap.) See Balsam, soup.
  - B. Scherz'eri. The B. vita Hoffmanni.

**B.** stemach'icum. ( $\Sigma \tau o \mu \alpha \chi i \kappa \acute{o}_{S}$ , belonging to the stomach.) The B. vite Hoffmanni.

B. styra'cis. A synenym of Styrax.

B. styra'cis benzoin'i. Gum benzoin. B. suc'cini. (L. succinum, amber.) Oil of amber.

B. sulfu'ris terebinthina'tum. See Balsam, sulphur, terebinthinated.

B. sulphu'ris anisa tum. See Balsam,

sulphur, anisated.

B. sulphu'ris sim'plex. (L. simplex, simple.) See Balsam, sulphur.

**B.** sympath'ieum. (Συμπάθεια, like-feeling.) An ointment composed of human fat, raspings of a human skull, and blood. Anciently used to smear a cutting instrument for the purpose of curing a wound which had been inflicted by its means.

B. syri'acum. (L. Syriacus, Syrian.)

Bulsam of Gilead.

B. toluta'num. See Balsam of Tolu. B. Trah'mii. Turpentine of the larch 12

parts, yellow wax 3. spirit of turpentine 1.5.

B. tranquil'lans, Fr. Codex. See Balsam, tranquillising.

**B. traumaticum.** (Τραυματικός, relating to wounds.) The *Tinctura benzoes com-*(Τραυματικός, reposita.

B. universa'le. (L. universalis, universal.) The Ceratum plumbi compositum.

B. ve'rum. (L. verus, true.) The true balsam, Balsam of Gilead.

E. vir'ide. (L. viridis, green.) Same as Balsam, green.

Also, the Balsam of Metz, green.

B. vir'ide meten'sium. See Balsam of

Metz, green.

B. vi'tæ. (L. vita, life.) Benzoin, liquid storax, of each 12 oz.; balsam of tolu, extract of liquorice, of each 4 oz.; balsam of Peru 2 oz.; aloes, myrrh, angelica root, of each 1 oz.; spirit of wine 7 pints. Used as a rubefacient, and as a stimulant and pectoral.

B. vi'tæ exter'num. White soap and turpentine, of each 6 parts, mixed with 1 of potassium carbonate. The Sapo terebinthinatus,

B. vi'tæ Hoffman'ni, Ger. Ph. (L. vita, life.) Hoffmann's balsam of life. Oils of lavender, cloves, einnamon, thyme, citron, mace, orange flower, of each 1 part, balsam of Peru 3, alcohol 240. Mix, allow to stand for several days, and filter.

B. vi'tæ Rolan'di. The Oleum terebinthinæ sulfuratum, G. Ph.

Bal'samus palus'tris. (L. paluster, belonging to a marsh.) 'The Mentha palustris.

Balu'gas. A mixed Papuan race inhabiting the Province of Pangasinan, and proceeding from the union of the curly-haired Negritos with the straight-haired Malays. **Ba'lux.** (Sp.) Gold dust. Used by Pliny

for sand in which gold was found. Also called

Chrysammos.

Bal'zach. Switzerland; Canton St. Gall. A mineral water, containing sulphur, iron, calcium carbonate, and chlorides. It is used in discases of the skin and lymphatics, and in chronic gout and rheumatism.

Balzoin'um. The Benzoin.

Bamangwa'to. A tribe inhabiting the region of South Africa to the west of the Kaffirs. Baman'tati. A tribe inhabiting the region of South Africa to the west of the Kathrs.

Bama'pela. A tribe inhabiting the region of South Africa to the west of the Kuffirs.

Bamatlaru. A tribe inhabiting the

region of South Africa to the west of the Kaffirs. Bamba. A mixed race of Thibet and

Hindoo blood, inhabiting the Himalayan region west of Gandaki.

**Bambaceu'tria.** (Βαμβακεύτρια. G. giftige Arznewstoffe.) The use of poisonous medicinal substances, or the substances themselves.

**Eambacia.** (Βαμβακεία. G. Giftmischerei.) The same as Bambaceutria.

Bamba'cion. A term for cotton wool. Bamba'gium. A term for cotton wool. Bamba'lio. (Βαμβαίνω, to chatter with the teeth.) Stammering.

Bambara. A race allied to the Negro and to the Mandingo, inhabiting the west coast of Africa from the River Nunez to the Scarcias.

**Bamba'tus.** ( $B\dot{a}m\tau\omega$ , to dip in water. G. cingetaucht.) A term signifying immersed. **Bam'biz.** A Negro race in subjection to the Sandeh in the west coast of Africa.

Bambi'ri. A Negro race in subjection to

the Sandeh. Bamboo'. The Bambusa arundinacca.

Bambu'lio. (Βαμβαίνω, to chatter with the teeth.) A stammerer, or one who lisps.

Bambu'sa. (G. Bambusrohr.) A Genus of the Nat. Order Graminacea.

**B.** arundina'cea, Retz. (F. bambou; I. bambu; G. Bambusrohr.) The bamboo. The leaves are used in India and China as an emmenagogue and oxytocie, and as a diuretic and diaphoretic. In the interior of the stem of the female plant white siliceous concretions are found, called Tabasheer.

B. baccif'era. (L. bacca, a berry; fero, to bear.) Probably the female plant of the B.

arundinacea.

A tribe inhabiting the region to Bame'ri. the west of the Kaffirs in South Africa.

Bam'ia. See Bammia. Bam'ma. See Embamma.

Bamma'tus. (Βάμμα, from βάπτω, to dip in water. G. eingetaucht.) A teim signifying immersed.

Bam'mia. The Abelmoschus esculentus.
B. moscha'ta. The Abelmoschus mos-

The Coffea arabica, coffee plant; Ban. called also Bon.

An Egyptian name for the Salix agyptiaea, or

Bana'na. (F. banane; G. Paradiesfeige, Adamsfeige.) The fruit of the Musa supientum. It is pleasant to the taste, and is largely eaten as food in tropical countries. An analysis of Brazilian banana gives water 73.9, vegetable albumin 4.82, cellulose 2, fatty matter .632, sugar, organic acid, and traces of starch 19.657, phosphates of soda and potash, carbonates of soda and potash, chlorides of potassium, earthy phosphates, silica, and iron '791.

An alcoholic solution of B. es'sence. acetate of amylic ether with butyric ether.

An isolated race inhabiting Siam. Ban'ar. Banaus'ia. (Bavavoia, handieraft. G. Marktschreierei.) Charlatanry.

Ban'coul oil. The oil of Alcurites triloba. Band. (Sax. banda, from bindan, to bind. F. bande; I. banda, G. Band.) That which binds; a bond; a cord; a narrow strip.

B., flat'tened. The cylinder-axis of white nerve fibre.

B. of a tooth. Same as Cingulum.
B. of Re'mak. The cylinder-axis of white nerve fibre.

B. of spec'trum. The bright lines seen in the spectrum of ignited gases and vapours.

B., primitive. The cylinder-axis of white

nerve fibre. B., vas'cular, of coch'lea. The Stria

vascularis.

Ban'dage. (L. deligatio; Gr. επίδεσμος; F. bandage; 1. fasciatura; S. renda; Port. atadura; G. Verband, Wundverband.) An appliance of cotton, linen, flaunel, or other material, used for wrapping, in a methodical manner, round any part of the body, for the purpose of supporting or compressing it, or of retaining in position apparatus or local applications.

The ends of a bandage are called the tails; when partially rolled up, the roll is the head, the remainder the body; the free end by which the bandaging is begun is the initial extremity, the other end inside the head is the terminal ex-

tremity.

Bandages are simple in which the appliance is continuous, and compound in which it is made up of several parts.

The application or putting on (G. bandagiren)

of a bandage.

B., an'nular. (L. annulus, a ring.) That mode of applying a simple bandage or roller in which the upper rounds come exactly over the undermost.

B., bed'y. (F. bandage de corps.) A towel or strip of calico rolled one or more times round the body and then fixed. It is used to maintain the position of dressings or other applications, to restrain the movements of the parts, to compress the abdomen in paracentesis or in labour, or to

retain protrusions.

B., cap'eline. (L. capistrum, from caput, the head. F. capeline, bandage recurrent; S. capelina.) A bandage which is so applied as to form a sort of hood or cap. It was applied to a stump after amputation, to the shoulder, or to the head, and in the latter case was called the cap or mitra of Hippocrates (bonnet d'Hippocrate). It consisted in applying the bandage alternately in a circular and in an opposite direction in such a manner that the whole head was covered, and the longitudinal folds of the bandage were held tight by the pressure of the circular folds on their ends.

B., cir'cular. (F. bandage circulaire.) A band of cotton or other material wrapped round a part in circular fashion, so that each turn more or less completely covers the one underneath.

B., com'pound. (F. bandage compose.) A bandage which is made up of several distinct

pieces. B., compres'sing. (F. bandage compressif.) A simple bandage applied circularly or spirally.

B., contain'ing. A handage applied for the purpose of retaining medicines or dressings upon the affected parts.

B., divi'ding. (F. bandage divisif.) A bandage so applied as to produce retraction, and prevent a wound uniting, as in tenotomy.

B., doub'le-head'ed. (F. bandage à deux globes.) A bandage which is rolled up from both ends.

B., eight'een-tail'ed. (F. bandage d dix-huit chefs.) A compound bandage consisting of a longitudinal strip, to which are attached by their centres eighteen transverse pieces, arranged in an imbricated fashion.

B., elastic. (G. Schnürbinde.) See Langenbeck's and Esmarch's bandage.

B., Esmarch's. See Esmarch's bandage. B., expel'ling. A bandage exerting pressure, so as to aid in expulsion of the contents of the structure compressed.

B., fig'ure-of-eight. (F. handage en huit de chiffre, b. croisé.) A simple roller applied over the joints and from shoulder to shoulder in such a manner that the folds cross each other on the same side of the limb in the fashion of the

figure 8.

A piece of cotton of B., four-tail'ed. sufficient length to go one and a half times round the member to which the handage is applied, and split up the middle at each end to within a few inches of the centre, so that there are two tails on each side.

B., Ga'len's. (L. fascia Galeni, f. pauperum; F. bandage des paueres.) A piece of cotton, split at each end, to within a few inches of the middle, into three pieces. The middle part is placed on the crown of the head, the two anterior pieces are fastened at the back of the neck, the two posterior on the forehead, and the two middle pieces under the chin.

B., Gen'ga's. Same as B., Theden's.

B., glue. Applied as the gum bandage; a watery solution of glue, to which some spirit has been added, being used instead.

B., gum. A spiral bandage having been applied, a mucilage of gum is rubbed in and allowed to dry. Chalk may be mixed with the

gum. B., gyp'sum. An open bandage, having previously had gypsum or plaster of Paris rubbed into it, is applied to the limb on to which a flannel bandage has been previously rolled; it is then wetted with water by the hand, and a recently made paste of plaster of Paris and water is smoothly rubbed in. It dries very hard.

B., her'nial. A truss.

B., immov'able. A bandage made with gum, plaster of Paris, starch, or such like material.

B., incar'native. (L. incarno, to clothe with flesh.) A synonym of the uniting ban-

B. in'guinal. (L. inquen, the groin.) It consists of a pelvic and a thigh band, united at the groin, and having there a triangular compress.

B., invag'inated. (L. in, into; vagina, a sheath.) A broad band, with tapes or tails at each end, and a set of holes, through which one set of tails may pass in order to tie with the other.

B., knet'ted. A long bandage rolled from each end, used to keep a compress on the temporal artery when wounded. The middle of the bandage is placed over the compress, the two ends wound in opposite directions round the head till they meet again over the compress; they are then erossed, so as to form a knot over the compress, carried one under the chin, the other over the vertex, and tied.

B., man'y-tail'ed. A series of slips of a roller, each long enough to go one and a half times round a limb, are stitched, in imbricated fashion, on to a piece of a roller as long as the limb, and so arranged that when the lower slip is applied first, the second one will wrap a little over it, and so on to the top.

B., Martin's. See Martin's bandage.

B., mus'tard. A flannel bandage covered with a thin paste of mustard and water. Applied to the abdomen or a limb when an active stimulant is required.

B. of sep'arate strips. Same as B.,

Scultetus'.

B. of the poor. Same as B., Galen's. B., per'manent. A gum, starch, or gypsum bandage.

B., plas'ter-of-Pa'ris. See B., gypsum.
B., Pott's. The same as B., many tailed.

B., ram'pant. (F. ramper, to creep.) A bandage applied in such a way that the ascending or descending turns of the spiral do not touch each other, but leave intermediate spaces uu-

B., reinver'sed. This term is applied to a bandage when the change in form of the limb, as of the leg, requires the roller to be inverted or half twisted at each round to make it sit tight,

smooth, and evenly.

B., Rib'bail's. A spica bandage for the

instep.

B., roller. (F. bandage roulé.) A simple continuous strip, applied spirally or circularly to

a part.

B., Sculte'tus'. (F. bandage de Scultet, bandage à bandes separées.) Pieces of bandage, long enough to go one and a half times round the limb, are applied separately and successively, beginning from below (ascending), or from above (descending).

E., Seu'tin's. See Splint, Scutin's.

B., sil'ica. Applied as the gum bandage, a solution of silicate of soda being used instead.

B., sim'ple. A bandage consisting of one

B., so'lar. (L. sol, the sun.) A synonym of the knotted bandage.

B., spi'ca. (L. spica, an ear of corn. L. fascia repens; F. spica; I. spiga; S. espica; G. Ahrenverband.) So called because the regnlar folds of the bandage resemble an ear of corn. It is a spiral bandage, in which the bandage is regularly folded on itself, like the letter V.

B., spi'ral. (F. doloires.) A roller spirally applied, so that each succeeding turn overlaps the

half of the preceding one.

B., splint. An immovable bandage of gum, gypsum, or such like.

B., starch. Applied as the gum bandage, starch being substituted.

B., Star'tin's. A bandage applied like the gum bandage, the strengthening material being paraffin and stearin.

B., stellar. (L. stella, a star.) A synonym

of the knotted bandage.

B., suspen'sory. Used for supporting the scrotum, and consists of a pelvic band and a scrotal bag, attached to the middle of the front part of the bandage.

B., T-sha'ped. This consists of two pieces of bandage attached to each other in the form of the letter after which it is named; the one band encircles the pelvis, the other, depending behind, is passed between the thighs and fastened

in front, so as to retain perineal applications.

B., The'den's. A bandage beginning at the fingers, and continuing up the arm. Used in brachial aneurism.

B., une'quai. A simple bandage applied

circularly, but so that the turns do not quite cover each other.

B., uni'ting. (F. bandage unissant.) bandage so applied as to cause the lips of a wound to approximate

Ban'daging. (Enilerous.) The act or process of applying a bandage.

Ban'dolier fruit. The fruit of the Zanomra indica.

Bandu'ra. Hindoo name of the Nepenthes

Ban'dy-leg'ged. (F. baneal; G. krumm.) The bending outwards of the tibia and fibula from rickets.

Bane'berry. (Eng. bane, a poison.) The Actea spicate, U.S. Ph.

B. root. (F. ravine de St. Christophe; G. Wolfswarz, Christophswarz.) The root of Actwa spicata. It resembles that of Actwa racemosa, but the rootlets are shorter, thinner, and of a blackish-grey colour; the taste is first bitter, then aerid and sweetish.

Bane wort. The Ranunculus flammula, because it is said to be poisonous to sheep.

Also, a name of nightshade, Atropa belladonna.

Bang. The Cannabis indica.

Eange. The Cannabis indica.

Bangue. The Cannabis indica.

Bangwellget'ta. Cingalese name of

Ban'ian tree. See Banyan tree.

Ban'ica. A synonym of Pastinaca sativa. Banil'la. See Vanilla.

Banil'las. The Vanilla. Banil'loes. The Vanilla.

Baniste'ria. A Genus of plants of the Nat. Order Mulpighiaccæ.

B. angulo'sa. (L. angulosus, full of corners.) A Brazilian plant, used as a sudorific, and as an antidote in snake-bites.

B. caa'pi. An intoxicating drug, used by the Indians of many parts of South America.

B. leo'na. Used in Sierra Leone, when dried and powdered, to destroy pediculi, and, mixed with water, to relieve the headache of fever. (Waring.)

Ban ja. Bulgaria. A warm, saline sulphur water.

Banjalu'ka. Bosnia. A salme water

Bank cress. The Sisymbrium officinale.
Bankoul oil. See Bancoul oil.

Banks oil. A term given to the cod-liver oil obtained after the first or Straits oil has been drawn from the livers before putrefaction has gone on long; the residue, after being exposed to the heat of the sun in the fishing-boats, is, on their return to shore, put into boilers, heated, and the oil extracted and removed. This oil is very dark and offensive.

Bank'sia abyssin'ica. A synonym of the Brayera anthelmintica.

B. specio'sa. (L. speciosus, beautiful.) The Costus arabicus.

Ban'na. The Abyssinian name for the taneworm.

Ban'ner. The vexillum or upper petal of

a papilionaceous flower.

Ban'os. Spain; Province Estremadura. A mineral water springing at the foot of the Malagados mountain, having a temperature of 23° C. (73.4 F.), and containing alkaline carbonates. It is used in nervous diseases, joint pains, scaly skin diseases, and syphilis.

Ban'os de Be'jar. Spain; near Salamanca. A sulphur spring of 38° C. (100 4° F.) Used in gout, rheumatism, scrofula, and skin diseases.

Ban'os de Tier'mas. Spain; in Navarre. A sulphur water of a temperature of 41°C. (105.8°F.)

Ban'tingism. A dietetic plan for the diminution of corpulence, named after the author of the pamphlet by which it was made known to the public. It consisted essentially in complete abstinence from saccharine foods and drinks, and almost complete abstinence from farinaceous foods.

Ban'tus. A tribe of Negroes of South and Middle Africa. Their language is peculiar in the

nse of defining prefixes.

Ban'yan tree. The Ficus bengalensis.

Ba'o. A variety of Curare. It is a darkbrown, dry, hard substance, partially soluble in water and alcohol.

Ba'obab. The Adansonia digitata.

Baph'ia. A Genus of the Suborder Cæsal-

pinieæ, Nat. Order Leguminosæ.

B. nit'ida. (L. nitidus, shining.) Hab. Sierra Leone. Furnishes cam wood, from which is obtained a red dye of the character of that of red sandal wood.

**Baph icus coc'cus.** (Βαφικός, fit for dying; from βάπτω, to dye.) The kermes berry: galls of a coccus of the Quereus coccifera.

Baphorrhi za. (Βάπτω, to dye; ρίζα, a root.) A synonym of Anchusa.

B. tincto'ria. (L. tinctorius, belonging to a dver.) A synonym of Anchusa tinctoria.

Baptis'ia. A Genus of the Suborder Papilionaciæ, Nat. Order Leguminosæ. Wild indigo.

B. al'ba. (L. albus, white.) Prairie indigo. Said to have the same properties as B. tinctoria. B. leucanth'a. (Λευκός, white; ἀνθος, a flower.) Hab. United States. A species said to

have the same properties as B. tinctoria.

B. tincto'ria. (L. tinctorius, belonging to a dyer.) Hab. United States. Stem smooth, branching; leaves small, ternate, euncate-obovate; flowers yellow. The root, which is the most active part, is dark brown, with a nauseous, somewhat aerid, and bitter taste. Laxative in small doses, emetic and eathartic in large doses. Used in searlet fever, typhus, gangrene, and dysentery. Externally, as a lotion or poultice to foul or gangrenous ulcers. It supplies a pale blue colouring matter, which is used instead of indigo.

Bap'tisin. An impure resin obtained from the Baptisia tinctoria. Purgative and

emetic. Dose, 2-5 grains.

Baptiste rium. (Βαπτιστήριον, a bath-

ing place.) A cold plunge bath.

**Baptorrhœ'a.** (Βαπτός, infected, dyed; from βαπτω, to dye; ρίω, to flow.) A generic term proposed by Dr. Mayne instead of Gonor-

Baptorrhœ'al. Belonging to, or of the nature of, Baptorrhwa

Baptothecorrhœ'a. feeted;  $\theta \eta \kappa \eta$ , sheath, and so the vagina;  $\rho \epsilon \omega$ , to flow.) Term proposed by Dr. Mayne for genor-

rhora in women. Baptothecorrhœ'al. (Same etymon.) Belonging to, or of the nature of, Baptorrhwa.

Bapturethrorrhœ'a. (Βαπτός, infeeted; οὐρήθρα, the urethra; ρέω, to flow.) Term proposed by Dr. Mayne for gonorrhea in men.

Eapturethrorrhœ'al. (Same ctymon.) Belonging to, or of the nature of, Bapturethrorrhwa.

Bap'tus. (Βάπτω, to colour.) A species of soft bituminous fossil of agreeable smell, so named because a tiucture made of it was coloured with alkanet root.

Bar. (Sax. beorgan, to protect.) A bolt, a

stop, a hindrance.

B. of neck of blad'der. A ridge at the outer part of the neck of the bladder, and obstructing the flow of the urine from the one side, and the passage of a eatheter from the other. It depends on growth of the prostate gland, or, occasionally, it is non-prostatie.

Barac. Same as Barach panis.

Bar'ach pa'nis. An Arabic name for nitre. (Ruland and Johnson.)

Barac'za. Hungary, County Gömör. A mineral water, temp. 23° C. (73.4° F.), containing calcium sulphate and carbonate, and a little iron. Used as a tonic.

Baræsthesiom'eter. (Bápos, weight; aισθησιε, perception by the senses; μέτρου, a measure.) An instrument devised by Eulenberg to estimate the sense of pressure, by means of a spiral spring acting on an index.

Baraquet te. Infinenza. An epidemic, which was prevalent in 1761, was described under

this name by Razous.

Bar'as. Arabic name for lepra alphos. Bara'thron. An old name for the juniper.

Bara'thrum. (Bá $\rho$ a $\theta$  $\rho$ o $\nu$ , a pit.) synonym of Antrum.

Barb. (L. barba, a beard. F. barbe.) The recurved part of an arrow-head or a fish-

The lateral processes from the shaft of a feather. They are narrow plates, pointed at their free eads, and contain the pigment granules in coloured feathers. They bear on their free edges the barbules.

In Botany, a strong hair with a single or double hooked point, or a backward projecting bristle at

Bar'ba. (Lat.) The Beard.

B. aro'nis. The Arum maculatum.
B. ca'præ. (L. capra, a she-goat.) Tho goat's beard, or meadow-sweet, Spirea ulmaria.

B. hir'ci. (L. hircus, a he-goat.) The Tragopogon pratense.

B. Jo'vis. The heard of Jupiter. The name of several plants, among others the Anthyllis barba Jovis, the Sempervivum tectorum.

A deposit in the neek of the retort which occurs in the distillation of the Fuming liquor of

Libavius.

Barba'does. West Indies. Partly mountainous, partly a lower country, consisting of a series of terraces; open, cultivated, no marshes. Climate equable, limited; hottest month October, coldest January; hurricanes in Angust; dry season December to May, rain chiefly in autumn. Water good, vegetables seanty. Barracks not good. Yellow fever occurs; dysentery uncom-mon; elephantiasis common. Used as a resort for pulmonary invalids from the United States.

B. al'oes. See Alocs, Barbadocs. B. ce'dar. The Cedrela odorata.

B. cher'ry. The fruit of the Maipighia glabra and M. punicifolia.

B., green min'eral naph'tha of. Same as B, tar,

B. leg. The Elephantiusis arabum. B. mil'let. The Sorghum bicolor.

B. nut. The seed of the Jutropha cureas.

B. pride. The Poinciana pulcherrima. B. rock oil. Same as B. tur.

B. tar. (Pix liquida barbadensis, petroleum barbadense.) A dark liquid bitumen or petroleum exuding spontaneously from the earth in Barbadoes and other places.

Barbal'oin. C17 II 2007. The bitter principle of Barbadoes aloes; it occurs in small yellow prismatic needles, sparingly soluble in cold water, freely in warm water and alcohol. Bromine produces a deposit of yellow needles of bromaloin; heated with nitric acid it yields aloctic, oxalic, pierie, and chrysammic acids. See Aloin.

Barbamen'tum. (L. barba, the beard;

mentum, the chin ) A term for the chin. Barbare'a, Br. (Dedicated to St. Barbara. G. Barbarakraut.) A Genus of the Tribe Arabidea, Nat. Order Crucifera. Biennial. Stem angular; leaves entire, lobed, or pinnatifid; pods linear, straight, stiff; valves keeled or ribbed; stigma capitate, or two-lobed; seeds one-serrate; cotyledons accumbent.

The officinal name, when it was in use, of the

Erysimum barbatum.

B. præ'cox, Br. (L. præcox, ripe before its time. F. cresson d'Amerique; G. Amerikanischer Winterkresse.) American cress, Belle Isle cress. Leaves pinnatifid; petals three times as long as the sepals; pods long, thin; style short. Grows by rivers. Used as an antiscorbutic.

B. stric'ta. (L. strictus, close.) A variety

of B. vulgaris; used for the same purposes.

B. vulga'ris, Br. (L. vulga'is, common. F. herbe de St. Barbe; I. erba di Santa Burbura; S. ruqueta; G. Barbenkraut.) Winter rocket, common winter cress. Leaves toothed, or pinnatifid at the base; pods short, four-angled, acuminate; pedicels slender; style distinct. Somewhat bitter. Used as an antiscorbutic, a lithontriptic, and in coughs; externally applied to bruises.

Barbar'ia. A term for rhubarb.

Barbarossa's pills. One of the earliest mercurial preparations; made of mercury, rhubarb, musk, amber, seammony, and some other matters.

Bar'barum. An agglutinant plaster applied to bleeding wounds; Scrib. Largus, n., 207. **Barbary.** That part of Northern Africa which includes the States of Morocco, Algeria,

Tunis, and Tripoli.

B. gum. The same as Mogador gum, the produce of Acacia gummifera, and A. seyal.

B. mas'tich. The product of Pistacia atlantica.

Barba'ta. (L. barbatus, bearded.) woman possessing a beard.

(L. barbatus. F. barbe; G. Bar bate. bürtig, bebartet.) Bearded, having thin long hairs.

Barbatima'o bark. A name given in Brazil to the astringent barks of several leguminous trees, among which are Acacia angica, A. jurema, Pithecollobium auaremotemo, and Stryphnodendron barbatimao. The bark is used in infusion as an application to herniæ, and to

the mamme of women, to give the flesh firmness.

Sarbatulus. (L. dim. of barbatus, bearded. G. schwachbärtig.) Having a small

Ear'baty. The Dolichos catiang.

Bar'bazan. France; Departement Haute Garonne. A water, containing calcic sulphate and iron, at a temperature of 19° C. (66.2° F.). with a large quantity of carbonic acid. Tonic and slightly laxative. Used in chronic rheumatism, the sequelæ of malarious fever, and chronic urinary diseases.

Bar'bel. (F. barbeau; I. barbio; S. barbo; G. Barbe, Flussbarba.) Cyprinus barbus. An edible fresh-water fish. The roc is said to produce vomiting, especially in the spring.

Barbella. (L. dim. of harba, a beard. F. barbelle.) Short, stiff, straight, cylindrical, and

thick hairs, as in the Centaurica.

Barbellate. (F. burbellé.) Applied to any surface furnished with short stiff hairs, or barbellas.

Barbel'lulate. (F. barbellulé.) Applied surfaces or organs when provided with bar-

Barbellule. (Dim. barbella. F. barbellule.) A very small, conical, pointed, spinelike hair, less than a barbella.

Barberie. France; Departement Loire luférieure. An acidulous ferruginous water, used as a tonic.

Barberi'na. A Genus of the Nat. Order Styracacue.

B. tetran'dra, Mart. (Τέτρα, four : ἀνήρ, a man.) A Brazilian tree, used in intermittent

Barbern. Russia; near Riga. A mineral water containing sodium, magnesium and calcium sulphate, magnesium and calcium carbonate, and hydrogen sulphide.

Bar berry. The Berbris vulgaris.

B., American. The Berheris canadensis.

B. bark, U.S. Ph. The bark of the root of Berberis vulgaris. See Berberis.

B., Indian. A name given to Berberis asiatica, B. aristata, and B. lycia.

B., Nepaul'. The Berberis aristata.

B. oak. (Pers. Buloot-ul-malk.) Quereus ballota.

B., ophthal'mic. The Berberis lycium. Barbia'na. A Genus of the Nat. Order

**B. hypogæ'a.** (Y $\pi \delta$ , beneath;  $\gamma \hat{n}$ , the earth.) A plant growing at the Cape of Good Hope, the roots of which are eaten by the

Bar'bicel. (Dim. of L. barba.) Hooklike teeth on the barbules of feathers, which serve for interlocking.

Barbicor nate. (L. barba, a beard; cornu, a horn. F. barbicorne; G. barthornig.) Having a fasciculus of hair at the base of the auteunæ, as the males of the Ceratopogon barbicornis.

Probably a modification of Barbiers. the word beriberi. A paralytic disease of India and the Malabar coast; most prevalent in the first three months of the year, and said to be caused by sleeping in the open air, exposed to the winds which blow from the mountains about sunrise. The paralysis begins in the limbs, and is followed by loss of voice, emaciation, and great weakness.

Barbig'erous. (L. barba, a beard; gero, to carry. F. barbigere; G. barttragend.) Having a beard; applied to petals that are hairy all

Barbiner'vate. (L. barba; nervus, a nerve. F. barbinervé; G. bartnervég.) Having the

B. hir'ci. (L. hireus, a he-goat.) The hairy growth on the tragus of the auricle.

B. tra'gi. (Tpayos, a goat.) The same as

Barbulate. (L. harbula. F. barbulé.) Having barbules.

(L. barbula, dim. of barba.) Barbule. The inner teeth of the peristome of mosses.

Also, a series of pointed, often serrated or hooked, processes, arising from the edge of each barb of a feather, filling up the interspace between the barbs and interlocking with their fellows of adjacent barbs by means of the barbicels, so as to fix one barb to another, and preserve the continuity of the vane.

Also (G. Bartehen), a small beard. Barbu'ra. The Acacia arabica.

Barcelo'na. Spain; on the shores of the Mediterranean. Climate very variable; only partially protected from the north winds, which alternate with moist southerly breezes in the winter. It has been recommended as a winter residence for consumptive or other chest sufferers. who can bear a somewhat stimulating climate, but it is probably a risky place.

Bar clay's antibilious pills. Resinous extract of jalap 1 dr., almond soap 1½ dr., extract of colocynth 2 drs., guaiaeum 3 drs., potassio-tartrate of antimony 10 grs., oil of juniper 10 drops, oils of caraway and rosemary of each 4 drops, syrup of buckthorn q. s. Mix; divide into 4-grain pills. Dose, 1-3 at bed-time.

Barda'dia. An Arabic term for the Libra

or pound weight. (Ruland and Johnson.) **Barda'na.** (L. bardus, foolish; so called, perbaps, because the burs are often foolishly thrown at others. G. Klette.) The Arctium lappa. It was recommended for the cure of gout by Ilill and Crine, about the middle of the 18th century.

B. mt'nor. (L. minor, less.) A synonym of the Xanthium strumarium.

Barda'uæ o'leum. (G. Klettenwurselol.) Oil of the burdock root, Arctium lappa, used in Germany as an antidyscratic.

B. ra'dix, Belg. Ph. (L. radix, root. G. Klettenwurzel.) The root of the Arctium lappa. Eardan'næ ra'dix. The same as Bardana rudix.

Bare'ges. France; Department of Hautes-

Pyrénées. A village, 4000 feet above sea-level in a ravine among high mountains, uninhabitable in winter, and having a cold and variable climate. Mineral waters from nine sources, of 31° C. to 45° C. (87.8° F. to 113° F.), containing small quantities of sodium sulphide, sulphate, carbonate, chloride, and silicate. Used alone, or with milk or whey, internally, but chiefly in baths or piseince (baths through which a stream is running) in diseases of the bones and joints, old wounds, skin diseases, chronic rhenmatism, and scrofula. Active congestions and lung diseases are contra-indications. The water contains Baregine,

Baregine. (F. baregine, glairine; I. glairine; S. baregina, glarina; G. Baregin, glarein.) This substance has received many names: this from Bareges, zoogene, vegeto-animale, glairigene, glairinine, zoïodine, geline, thermoline, pyrèneine, luchouine, duxine, saint-salverine, nerissine, viridine, sulfurose, sulfurine, hydrose, sulfurhydrine, sulfomucose, sulfodiphtherose, and many others. It is a glairy, organic substance, found in many mineral waters when they have heen exposed to the air for some time, especially in sulphurous and thermal waters. It varies in colour according to its source, and in it many low vegetable and animal forms are developed. Its origin is unknown.

Bar'estrand Sys'sel. Iceland. A hot spring, temp. 103'3' C. (218' F.) Used in rheumatism and other diseases.

Barga'da. The Ipoma pes-capra. Ba'rl. Hungary, County Zemplin. A cool sulphur spring.

Bari'ga. A name for that variety of Borneo camphor which occurs in grains or small scales.

Barig'lia. See Barilla. Ba'rii bromi'dum, See Barium bro-

B. carbo'nas. See Barium carbonate. B. chlori'dum. See Barium chloride.

B. iodi'dum. See Barium iodide.
B. sul'phas. See Barium sulphate.
Baril'la. (F. barille.) The impure alkali resulting from the burning of several plants, principally of the Genera Salsola, Salicornia, Chenopodium, and Atriplex. These are cultivated for the purpose, and when ripe are burned on iron bars laid across pits. The ash is thu. fused into a bluish-grey and porous substance. It is made in Spain and the Levant, and is used in the manufacture of soap and glass, but is not in so much demand for the manufacture of sods. as formerly.

B. al'icant. Impure soda, from the asher of the Mesembryanthemum nodiflorum, Chenopodium setigerum, and several species of Sal-

B., Carthage'na. Impure soda, obtained from the ashes of the species Salicornia and

B., Sic'ily. Impure soda, obtained chiefly from the ashes of Sacola sativa.

B., Tur'key. Impure soda, obtained from the ashes of Mesembryanthemum copticum.

Barillor. The same as Barilla. Bar'isart. Belgium; close to Spa. chalybeate water containing much carbonic acid. Used in debility after exhausting diseases, and in chronic leucorrhœa.

Ba'rium. (Bapús, heavy. F. baryum; I. and S. baruo; G. Baryum.) Atomic weight 137. Symbol Ba. A dyad metal of an alkaline

Of silvery whiteness, which speedily tarnishes from its easy oxidation in the air; it decomposes water; it is malleable, and melts below a red heat, and burns with a red flame; sp. gr. 4.7. Its soluble salts are poisonous.

B. ac'etate. BaC2H3O2. A soluble salt. Efflorescent crystals of bitter acrid taste. Poisonous. Has been employed as B. chloride.

B. ar'senate. Ba<sub>3</sub>(AsO<sub>4</sub>)<sub>2</sub>. A solution of barium chloride is added to one of sodium or potassium arsenate; the resulting precipitate collected, dried, washed, dissolved in a solution of arsenic acid, and crystallised. Recommended in skin diseases and tubercular phthisis. Dose,

one sixteenth to a quarter of a grain. **B. ar'senite.** Ba<sub>3</sub>AsO<sub>3</sub>. Used as *B. ar-*

B. bro'mide. (F. bromure de baryum; G. Brombarium.) BaBr2. 2H2O. Molecular weight 333. Obtained by dissolving barium carbonate in hydrobromic acid; it forms colourless rhombic plates, freely soluble in water and alcohol. It has an offensive taste. Used in scrofula.

B. car'bonate. BaCO<sub>3</sub>. Sp. gr. 4.3. Found native as witherite. A solution of barium chloride is precipitated by an alkaline carbonate. A heavy white powder, sparingly soluble in water, undecomposed by heat; tasteless. Poisonous, inasmuch as it is soluble in the gastric juice.

B. carbon icum. See B. carbonate.
B. chlorate. Ba(ClO<sub>3</sub>)<sub>2</sub>. Obtained by saturating aqueous chloric acid with barium carbonate. It crystallises in monoclinic prisms, very soluble in water.

Also, a synonym of Barium chloride. B. chlora'tum. See B. chloride.

B. chloride. BaCl<sub>2</sub>.2H<sub>2</sub>O. Barium sulphate is exposed to a red heat with coal or potassium carbonate; the resulting sulphide is treated with hydrochloric acid, the solution filtered and crystallised. Flat quadrangular tables, colourless, transparent, of an acrid taste. Very poisonous. A solution of one part to three of water is used (U.S. Ph.) iu scrofula, worms, and skin diseases. Dose, five drops three times a day. Externally in corneal opacities and pulsating ulcers.

B. chlo'ride, solu'tion of. One part in ten of water. Used as a test for sulphuric acid

and its salts in solution.

B. diox'ide. BaO<sub>2</sub>. Made by exposing barium monoxide at a red heat to oxygen.

B. by'drate. The B. hydroxide. B. hydrox'ide. Ba(OII)2. A white powder, obtained by the slaking with water of barium monoxide, or by decomposing a hot concentrated solution of barium chloride with a solution of caustic soda. In contact with water it crystallises; its solution is baryta water.

B. i'odate. Ba(103)2. Used in the preparation of iodic acid.

B. ioda'tum. See B. iodide.
B. i'odide. Bal, 2H<sub>2</sub>O. Formed by the action of iodine on harium sulphide. Slender deliquescent needles, giving up iodine in the air. Has been used in scrofula. Dose, one eighth of a grain; as an ointment 4 grs. to lard I oz.

B. monox'ide. BaO. Barvta. Sp. gr. 4. A grey spongy mass prepared by decomposing barium nitrate by neat. In contact with water it evolves heat, and becomes hydrate of baryta,

or barium hydroxide. **B. mu'riate.** The *Barium chloride*. **B. ni'rtate.** Ba(NO<sub>3</sub>)<sub>2</sub>. Prepared as the chloride, but with nitrie acid. Transparent octa-

hedral auhydrous crystals. Used, in solution, as a test for sulphuric acid and the soluble sul-

**B. ox'ide.** The B. monoxide. **B. per'oxide.** The same as B. dioxide.

B., pois'oning by salts of. All the soluble salts are poisonous. Great abdominal pain, vomiting, diarrhæa, palpitation, and convulsions. Extreme times of death one hour and seventeen hours. Stomach and duodenum are much inflamed, brain, lungs, and kidneys congested, and great congestion of rectum. Perforation of stomach has been recorded, but it is doubtful if this were not the result of previous disease. Sodium and maguesium sulphate should be freely given in solution, along with emetics, and the stomach-pump used if justifiable. Death has resulted from a drachm of the chloride. Barium salts give, with sulphuric acid, a white precipitate, insoluble in acids and alkalies. Heated on a platinum wire they burn with a green flame.

B. protoxide. The Barium monoxide.
B. sul'phate. BaSO<sub>4</sub>. Found native as heavy spar, or barytes. Sp. gr. 4.5. Prepared by adding sulphuric acid to a solution of barium chloride. Bevilled tables or six-sided prisms; inert; used as a pigment.

B. sul'phide. BaS. Made by exposing barium sulphate, mixed with coal, to a red heat.

Thin colourless plates.

B. superoxide. The B. dioxide.

Bark. (Dan. bark. L. cortex; Gr. φλοιός;
F. ccorce; I. corteccia; S. corteza; G. Rinde.)

The outermost part of the stem of an exogen surrounding the wood, to which it is united by the cambium and the medullary rays. The bark consists originally of four distinct layers: the liber, the cellular or green layer, the subcrons layer, and the epidermis, which is soon lost.

The liber is the innermost, and is composed of

connected cells or bast tissue, mixed with laticiferous tissue and pareuchymatous cells. It is mited to the wood by the cambium, and gives passage to the medullary rays. Called also inner

bark and endophleum.

The cellular layer is the middle layer; its inner surface unites with the medullary rays, which have passed through interstices in the bast tissue of the liber; it consists of loosely connected, angular parenchymatous cells, containing chlorophyll; some laticiferous vessels are usually to be found. Called also green layer and meso-

The subcrous layer is the outer layer of the bark of all but very young plants and twigs; it is composed of layers of tabular, closely united, cells, usually of a brown colour. In some trees. as the Quereus suber, the cork tree, this layer is enormously developed. In young plants and twigs small brown projections, called lenticular glands, are found; they are not glandular, but development of the suberous tissue; from them roots may spring under favorable circumstances. Called also cork layer, epiphloum, and periderm.

The epidermis consists of layers of tubular cells, united to each other. It is only found in young formations, and is soon lost on the stem and

brauches.

The bark grows by accretions to the inner surface of each layer. The cellular and suberous layers cease growing after a tree is a few years old, but the liber grows as long as the tree lives, and is the essential structure of the bark. The

acryures of the leaves furnished with hairs on the under surface, either only at the extremity, or in all their length upon the sides.

Barbiros trate. (L. barba; rostrum, beak. F. barbirostre; G. bartschnubelig.) Having the proboscis covered with bairs.

Barbit'ium. (L. barbitium.) The beard. Barbituric acid. C, H, N2O3. Obtained by heating a solution of alloxantiu with strong subdurie acid. It crystallises in large colourless prisms, slightly soluble in cold, easily in hot,

Bar'botan. France; Departement Gers. Acadulated iron and sulphur waters, varying in temperature from 32° C. (89.6° F.) to 38° C. (100.4 F.) There are many springs in the valley, and mud baths are employed. They are little used now, but were formerly in vogue for rheumatism and paralysis.

Barbotine. A synonym of Semen con-

Bar'bula caprina. (L. barbula, a small beard; caprinus, belonging to a goat.) A synonym of Spiraeu ulmaria.

B. hir'ci. (L. hireus, a he-geat.) The bairy growth on the tragus of the auricle.

B. tra'gi. (Τράγος, a geat.) The same as B. hire

Barbulate. (L. barbula. F. barbule.) Having barbules.

(L. barbula, dim. of barba.) Barbule. The inner teeth of the peristome of mosses.

Also, a series of pointed, often serrated or hooked, processes, arising from the edge of each barb of a feather, filling up the interspace between the barbs and interlocking with their fellows of adjacent barbs by means of the barbicels, so as to fix one barb to another, and preserve the centinuity of the vane.

Also (G. Bartchen), a small beard. Barbu'ra. The Acacia arabica.

Barcelo'na. Spain; on the shores of the Mediterranean. Climate very variable; only partially protected from the north winds, which alternate with moist southerly breezes in the winter. It has been recommended as a winter residence for consumptive or other chest sufferers, who can bear a somewhat stimulating climate, but it is probably a risky place.

Bar clay's antibilious pills. Resinous extract of jalap 1 dr., almond soap 1½ dr., extract of colocynth 2 drs., guaiaeum 3 drs., petassio-tartrate of antimeny 10 grs., oil of juniper 10 drops, oils of caraway and rosemary of each 4 drops, syrup of buckthern q. s. Mix; divide into 4-grain pills. Dose, 1-3 at bed-time.

Barda'dia. An Arabic term for the Libra or pound weight. (Ruland and Johnson.)

Barda'na. (L. bardus, foolish; so called, perhaps, because the burs are eften foolishly thrown at others. G. Klette.) The Arctium lappa. It was recommended for the cure of gout by Hill and Crine, about the middle of the 18th century.

B. mt'nor. (L. minor, less.) A synonym of the Xanthium strumarium.

Barda'næ o'leum. (6. Klettenwurselol.) Oil of the burdock root, Arctium lappa, used in Germany as an antidyscratic.

B. ra'dtx, Belg. Ph. (L. radir, root. G Klettenwurzel.) The root of the Arctium lanna. Eardan'næ ra'dix. The same as Bardana radix.

Bare'gos. France; Department of Hautes-

Pyrénées. A village, 4000 feet above sea-level in a ravine among high mountains, uninhabitable in winter, and having a cold and variable climate. Mineral waters from nine sources, of 31° C. to 45° C. (87.8° F. to 113° F.), containing small quantities of sodium sulphide, sulphate, carbonate, chloride, and silicate. Used alone, or with milk or whey, internally, but chiefly in baths or piscine (baths through which a stream is running) in diseases of the bones and joints, old wounds, skin diseases, chronic rheumatism, and scrofula. Active eengestions and lung diseases are contra-indications. The water contains Baregine.

Bar'egine. (F. baregine, glairine; I. glairina; S. baregina, glarina; G. Baregin, glarein.) This substance has received many names: this from Bareges, zoogene, vegeto-animale, glairigene, glairinine, zeïodine, geline, thermoline, pyrèneine, luchonine, duxine, saint-salverine, nerissine, viridine, sulfurose, sulfurine, hydrose, sulfurhydrine, sulfomucose, sulfodiphtherose, aud many others. It is a glairy, organic substance, found in many mineral waters when they have been exposed to the air for some time, especially in sulphurous and thermal waters. It varies in colour according to its source, and in it many low vegetable and animal forms are developed. Its origin is unknown.

Bar'estrand Sys'sel. Iceland. A hot spring, temp. 103.3° C. (218° F.) Used in rhoumatism and other diseases.

Barga'da. The Ipomea pes-capra. Ba'rl. Hungary, County Zemplin. A cool sulphur spring.

Bari'ga. A name for that variety of Bornee campher which occurs in grains or small scales.

Barig'lia. See Barilla. Ba'rii bromi'dum. See Barium bro-

B. carbo'nas. See Barium carbonate. B. chlori'dum. See Barium chloride.

B. iodi'dum. See Barium iodide.
B. sut'phas. See Barium sulphate.
Baril'la. (F. barille.) The impure alkali resulting from the burning of several plants, which is the Grand School. principally of the Genera Salsola, Salicornia, Chenopodium, and Atriplex. These are cultivated for the purpose, and when ripe are burned on iron bars laid across pits. The ash is thu. fused into a bluish-grey and porous substance. It is made in Spain and the Levant, and is used in the manufacture of soap and glass, but is net in so much demand for the manufacture of sods. as formerly.

B. al'icant. Impure soda, from the asher of the Mesembryanthemum nodiflorum, Chenopodium setigerum, and several species of Salsola.

B., Carthage'na. Impure soda, obtained from the ashes of the species Salicornia and

B., Sic'ily. Impure soda, obtained chiefly from the ashes of Sacola sativa.

B., Tur'key. Impure soda, obtained from the ashes of Mesembryanthemum copticum.

Barillor. The same as Barilla. Bar'isart. Belgium; elose to Spa. chalybeate water containing much carbonic acid. Used in debility after exhausting diseases, and in chronic leucorrhœa.

**Ba'rium.** (Βαρύς, heavy. F. baryum; I. and S. baruo; G. Baryum.) Atomic weight 137. Symbol Ea. A dyad metal of an alkaline

Of silvery whiteness, which speedily tarnishes from its easy oxidation in the air; it decomposes water; it is malleable, and melts below a red heat, and burns with a red flame; sp. gr. 4.7. Its soluble salts are poisonous.

B. ac'etate. BaC2H3O2. A soluble salt. Efflorescent crystals of bitter acrid taste. Poisonous. Has been employed as B. chloride.

**B. ar'senate.** Ba<sub>3</sub>(AsO<sub>4</sub>)<sub>2</sub>. A solution of barium chloride is added to one of sodium or potassium arsenate; the resulting precipitate collected, dried, washed, dissolved in a solution of arsenic acid, and crystallised. Recommended in skin diseases and tubercular phthisis. Dose,

one sixteenth to a quarter of a grain. **B. ar'senite.** Ba<sub>3</sub>AsO<sub>3</sub>. Used as *B. ar*.

B. bro'mide. (F. bromure de baryum; G. Brombarium.) BaBr2. 21120. Molecular weight 333. Obtained by dissolving barium carbonate in hydrobromic acid; it forms colourless rhombic plates, freely soluble in water and alcohol. It has an offensive taste. Used in scrofula.

B. car'bonate. BaCO<sub>3</sub>. Sp. gr. 4·3. Found native as witherite. A solution of barium chloride is precipitated by an alkaline carbonate. A heavy white powder, sparingly soluble in water, undecomposed by heat; tasteless. Poisonous, inasmuch as it is soluble in the gastric juice.

B. carbon'icum. See B. carbonate.
B. chlo'rate. Ba(ClO<sub>3</sub>)<sub>2</sub>. Obtained by saturating aqueous chloric acid with barinm carbonate. It erystallises in monoclinic prisms, very soluble in water.

Also, a synonym of Barium chloride. B. chlora'tum. See B. chloride.

B. chloride. BaCl<sub>2</sub>.2H<sub>2</sub>O. Barium sulphate is exposed to a red heat with coal or potassium carbonate; the resulting sulphide is treated with hydrochloric acid, the solution filtered and crystallised. Flat quadraugular tables, colourless, transparent, of an acrid taste. Very poisonous. A solution of one part to three of water is used (U.S. Ph.) in scrofula, worms, and skin diseases. Dose, five drops three times a day. Externally in corneal opacities and pulsating ulcers.

B. chlo'ride, solu'tion of. One part in ten of water. Used as a test for sulphuric acid

and its salts in solution.

B. diox'ide. BaO2. Made by exposing barium monoxide at a red heat to oxygen.

B. hy'drate. The B. hydroxide. B. hydrox'ide. Ba(Oll)<sub>2</sub>. A white powder, obtained by the slaking with water of barium

monoxide, or by decomposing a hot concentrated solution of barium chloride with a solution of caustic soda. In contact with water it erystallises; its solution is baryta water.

B. i'odate. Ba(IO3)2. Used in the preparation of iodic acid.

B. ioda'tum. See B. iodide.
B. i'odide. Bal .2H<sub>2</sub>O. Formed by the action of iodine on barium sulphide. Slender deliquescent needles, giving up iodine in the air. Has been used in scrofula. Dose, one eighth of a grain; as an ointment 4 grs. to lard I oz.

B. monox'ide. BaO. Baryta. Sp. gr. 4. A grey spongy mass prepared by decomposing barium nitrate by neat. In contact with water it evolves heat, and becomes hydrate of baryta, or barium hydroxide.

B. mu'riate. The Barium chloride.

B. ni'trate. Ba(NO<sub>3</sub>)<sub>2</sub>. Prepared as the chloride, but with nitric acid. Transparent octa-

hedral anhydrous crystals. Used, in solution, as a test for sulphuric acid and the soluble sul-

**B. ox'ide.** The B. monoxide. **B. per'oxide.** The same as B. dioxide.

B., pois'oning by salts of. All the soluble salts are poisonous. Great abdominal pain, vomiting, diarrhea, palpitation, and convulsions.

Extreme times of death one hour and seventeen hours. Stomach and duodenum are much inflamed, brain, lungs, and kidneys congested, and great congestion of rectum. Perforation of stomach has been recorded, but it is doubtful if this were not the result of previous disease. Sodium and magnesium sulphate should be freely given in solution, along with emetics, and the stomach-pump used if justifiable. Death has resulted from a drachm of the chloride. Barium salts give, with sulphuric acid, a white precipitate, insoluble in acids and alkalies. Heated on a platinum wire they burn with a green flame.

B. protoxide. The Barium monoxide.
B. sul'phate. BaSO<sub>4</sub>. Found native as heavy spar, or barytes. Sp. gr. 4.5. Prepared by adding sulphuric acid to a solution of barium chloride. Bevilled tables or six-sided prisms; inert; used as a pigment.

B. sul'phide. BaS. Made by exposing barium sulphate, mixed with coal, to a red heat.

Thin colourless plates.

**B. superoxide.** The B. dioxide. **Bark.** (Dan. bark. L. cortex; Gr. φλοιός; F. écorce; I. corteccia; S. corteza; G. Rinde.) The outermost part of the stem of an exogen surrounding the wood, to which it is united by the cambium and the medullary rays. The bark consists originally of four distinct layers: the liber, the cellular or green layer, the subcrous layer, and the epidermis, which is soon lost.

The liber is the innermost, and is composed of connected cells or bast tissue, mixed with laticiferous tissue and parenchymatous cells. It is united to the wood by the cambium, and gives passage to the medullary rays. Called also unner

bark and endophloum.

The cellular layer is the middle layer; its inner surface unites with the medullary rays, which have passed through interstices in the hast tissue of the liber; it consists of loosely connected, angular parenchymatous cells, containing chlorophyll; some laticiferous vessels are usually to be found. Called also green layer and meso-

The subcrous layer is the outer layer of the bark of all but very young plants and twigs; it is composed of layers of tabular, closely united, cells, usually of a brown colour. In some trees. as the Quereus suber, the cork tree, this layer is enormously developed. In young plants and twigs small brown projections, called lenticular glands, are found; they are not glandular, but development of the suberous tissue; from them roots may spring under favorable circumstances. Called also cork layer, epiphlaum, and periderm.

The epidermis consists of layers of tubular cells, united to each other. It is only found in young formations, and is soon lost on the stem and

branches.

The bark grows by accretions to the inner surface of each layer. The celinlar and subcrous layers cease growing after a tree is a few years old, but the liber grows as long as the tree lives, and is the essential structure of the bark. The

bark acts as a protection to the parts which it surrounds. Its inner part conveys the claborated sap from the leaves to the different structures to supply material for nutriment, and for the special deposits in the wood, or its own substance.

The term is often used to signify specially

Cinchona bark. B., Arl'ca. See Arica bark.

B., ash-coloured. The same as B.,

B., bit'ter. The Pinckneya pubens.

B., Bogo'ta. A synonym of B., Carthagena.

B., Calisaya. See Calisaya bark.

B., Carabaya. A bark imported from the Province of Carabaya, through the ports of Islay and Arica; probably the produce of Cinchona orata, and its variety rufinervis.

B., Caribæ'an. A false Cinchona bark,

the product of Exostemma caribaa.

B., Carthage'na. Certain non-officinal einchona barks are known under this name. The hard, or hard yellow, or common yellow Carthagena bark is the product of Cinchona cordifolia; the fibrous, or fibrous yellow, or spongy Carthagena bark is obtained from the Cinchona lancifolia; and the brown Carthagena, or hard Pitaya bark, is the growth of the Cinchona nitayinsis.

B., cher'ry, wild. The bark of Prunus virginianus.

B., coquet'ta. The same as B., Bogota.

B., crown. The same as B., Loxa.
B., Cus'co. Imported from the Province of Cusco, in the South of Peru. The produce of Cinchona scrobiculata, var. Delondriana.

B., doom. The bark of Erythrophlaum quincense.

B., elk. The bark of Magnolia glauca. B., essen'tial salt of. A watery extract of Peruvian bark.

B., Flor'ida. The bark of Pinckneya pubens.

B., Fusagasu'ga. A variety of the Carthagena bark.

B., Georg'ia. The bark of Pinckneya

B., grey. The bark of Cinchona cinerea, C. micrantha, C. nitida, and C. peruriana, and,

perhaps, other species. B., Huamil'ies. One of the pale Cinchona barks; probably the product of Cinchona pubescens.

B., Huana'co. The bark of Cinchona micrantha, C. nitida, and C. peruviana.

B., Indian. The bark of Magnolia glanca.

B., i'ron. The Eucalyptus resinifera.

B., Ja'en. The product of Cinchona ovata.

B., Jamai'ca. The bark of the Cinchona caribaca.

B., Jes'uits'. A synonym of Cinchona

B., LI'ma. This bark is of two kinds, fine and coarse; the former obtained from the Cinchona nitida, the latter from the C. micrantha.

B., Lox'a. The most highly esteemed of the pale Cinchona barks; the produce of Cinchona condaminea and its varieties, and, perhaps, some other species.

B., Maracay'bo. One of the varieties of Curthagena bark.

B., noom. The bark of the Azaderachta indica.

B., oak. The bark of a species of Quercus. B., oak, white. The bark of Quercus

B. of cot'ton root. See Gossypii radicis cortex.

B. of St. Ann. A synonym of B., Cusco. B., orde'al. The bark of Erythrophicum guineense.

B., pale. The bark of the Cinchena offici-

nalis, var. condaminea.

B., Peru'vian. General term for the bark of various species of Cinchona.

B., Pitay'a. A synonym of the Brown Carthagena bark.

B., red. The bark of the Cinchona succiruhra.

B., roy'al. The bark of Cinchona cordifolia.

B., San'ta Mar'tha. A variety of the Carthagena bark.

B., sas'sy. The bark of Erythrophlaum guincense.

The bark of the Cinchona B., silver. cincrea.

B., St. Lu'cia. The bark of the Cinchona floribunda. The bark of the Cinchona

B., yel'low. calisaya. Barle'ria. A Genus of plants of the Nat.

Order Acanthacea. B. buxifolia. (L. buxus, the box tree; folium, a leaf.) The B. obovata. The plant supposed to be the Cara schulli of Malabar.

B. cilla ta. (L. cilium, an eyelash.) Hab. Bengal. The seeds are used in snake bites. (Waring.)

B. longifo'lia, Linn. The Asteracantha longifolia, Nees.

B. obova'ta. (L. ob, near; ovatus, eggshaped.) Hab. India. A decoction is given in dysuria, and the powdered plant, mixed with vinegar, is applied to anasarcous swellings.

B. prioni'tis. (Πριονίτις, the plant betony.) Hab. India. The juice is bitter, and is used by the Ilindoos in the febrile eatarrhal affections of children. The dried plant is used in dropsies. (Waring.)

Barley. (Welsh, barlys, from bara, bread, and llys, a plant. L. hordeum; Gr. κρίθη; F. orge; I. orzo; S. cebada; G. Gerste.) The seeds of Hordeum distichon, H. vulgare, H. hexastichon, and H. zeocitron, the first being the officinal one. Barley was the original prize of the victors in the Eleusinian games. The Egyptians are stated by Herodotus to have used a wine prepared from it. Barley is very nutritious, but somewhat laxative. Dr. Parkes has found it very unsuitable for dysenteric cases. According to Einhoff, barley contains—meal 70.05, husk 18.75, water 11.20 per cent. In 100 parts of barley-meal Von Bibra found water 15, nitrogenous matter 12:98, gum 6:744, sugar 3:2, fat 2:17, starch 59:95. The ash of barley contains, according to Schmidt, potash 20.91, magnesia 6-91, lime 1.67, iron oxide 2.10, phosphoric acid 38.48, silica 29.10, per cent.

A principle called hordeine was supposed by Proust to exist in the husk of barley, but it is only the finely divided bran, or a mixture of cellular tissue, starch, and gluten. Mult is made from barley

B., bat'tledore. The Hordeum zeocriton.

B., caus'tic. The seeds of the Asagraa

officinalis. See Ceradilla.

B., pearl. (L. hordeum decorticatum, or perlatum; F. orge perle; G. Perlengruupen.) Decorticated barley, rounded and polished in a mill; it is white, and retains a trace of the longitudinal furrow. Used for making Decoctum hordei, barley water. **B.**, Scotch. (L. hordeum mundatum; F.

orge mondé; G. Gerstengraupen.) The seeds

deprived of the bran, but not rounded.

B.-sug'ar. The Saccharum hordeatum. B. wa'ter. Two ounces of washed pearl barley boiled for twenty minutes in a pint and a half of distilled water and strained. See Decoctum hordei.

B., win'ter. The Hordeum hexastichon.

Barm. (Sax. beorma.) Yeast.
Barnet. Hertfordshire. The mineral waters were once in high repute; they contain

magnesium sulphate and sodium chloride. Bar'olite. (Βάρος, weight; λίθος, a stone.)

The native Barium carbonate.

**Barol'ogy.** (Bápos, weight;  $\lambda \delta \gamma os$ , doctrine.) That section of physics which relates to weight.

Baromacrom'eter. (Βάρος, weight; μακρός, long; μέτρου, a measure. F. baromacro-mitre; G. Kindermesswage.) An instrument invented by Stein to ascertain the weight and

length of new-born infants.

Barometer. (Βάρος, weight; μέτρου, measure. F. barometre; 1. and S. barometre; G. Wetterglas, Luftscheckmesser.) An instrument for assertaining the weight of the atmosphere. and for measuring heights and for foretelling the weather. The mercurial barometer, the first instrument of the kind, was invented by Torricelli in A.D. 1643. The simplest form consists of a glass tube, 36 inches long, one end of which is sealed; it is filled with mercury, and then inverted into a glass vessel or distern containing mercury. The mercury in the tube will fall until balanced by the pressure of the atmosphere on the mercury in the cistern. The column will be about 30 inches high, and the upper part of the tube will be empty, constituting the Torricellian vacuum. Any other fluid may be used, but mercury is most convenient, because of its weight, which makes the column shorter and the instrument more portable. The shapes of the instrument are various, and the cistern is usually the lower end of the tube turned up and dilated, but the principle is the same. In the manufacthre great care is needed to ensure the expulsion of all air from the mercury, and a perfect vacuum at the top.

B., an'eroid. See Aneroid barometer.
B., cis'tern. That form in which there is a cistern or reservoir at the lower end of the tube containing the same material as itself contains.

B., sy'phon. A barometer, with a tube bent in the shape of a syphon, with a long and

short leg, the latter open, and serving as a cistern.

B., wheel. A syphon barometer, in the shorter leg of which is a float on the surface of the mercury, to which is attached a string, which passes round the pulley, and has a weight somewhat lighter than the float at the other end; an index is attached to the pulley, and, moving with it, shows the variations of the level of the mereury.

Baromet'ric. (Same etymon.) Relating

to the barometer.

**Baromet**'rical. (Βάρος; μίτρου, a measure.) Of, or belonging to, a harometer. **Barometrograph.** (Βάρος; μέτρου;

γράφω, to write. G. Schwermassbeschreiber.) A barometer so constructed as to register its own variations; either by means of a lever, which is moved by the mercury, and which carries at its long end a style, which marks blackened paper; or by means of a screen with a perforation, through which light falls on photographic paper.

Baro'nes. A term for small worms. Baros'aneme. (Βάρος, weight; ἄνεμος, wind.) An instrument which indicates the force

of the wind.

**Bar'oscope.** (Βάρος, weight; σκοπέω, to ascertain.) An instrument for determining the loss of weight of bodies in air, consisting of a scale beam, having a hollow copper sphere at one end and a solid counterpoise of exact balance in the air at the other end. When placed under the receiver of an air-pump, and a vacuum produced, the equilibrium is destroyed, the copper sphere being the heavier. When balanced in the air the real weight of sphere was not apparent, inasmuch as from its greater surface it was more buoyed up by the air.

Also, an instrument which is only a barometer sensible to the slightest atmospheric variations, and so especially applicable to marine purposes.

Also, an instrument, invented by Esbach, to determine amounts of urea. It is a bent tube. with one arm dilated into the bulb, into which the gas evolved from the decomposition of urea by the hypochlorites is received, and the amount is calculated, under different pressures, by meaus of tables.

Barosel'enite. (Bápos; sclenite.) A

synonym of native Barium sulphate.

Baros ma. (Βάρος, weight; ὁσμή, a smell. G. Bukkostrauch.) Plants of the Suborder Diosmer, of the Nat. Order Rutarea, with opposite, coriaccous, simple leaves, having pellucid oilbearing glands; solitary flowers, five petals; ten stamens, five of which are abortive; five carpels united into a five-celled ovary; five-lobed stigma; oblong smooth seeds in a fruit composed of five follicles, adherent at the axis and dehiseing at the summit. Natives of the Cape of Good

B. betuli'na, Bartl. (L. betula, the birch.) One of the species affording Buchu, with obovate, apically recurved, serrated leaves and pink

B. cam'phor. A stearopten, obtained from the oil of the buchu leaves. It crystallises in needles, having an odour of peppermint.

B. crenata. (Mod. L. crenatus, from crena, a noteh.) The B. crenulata.

B. crenula'ta, Hook. (Mod. L. crenulatus, dim. of crenatus.) Also supplies Buchu. It has ovate-lanceolate, obtuse, crenate leaves, and pedicels with two bracts close under the flowers.

B. ecklonia'na, Berg, The B. creunlata.
B. ericifo'lia, Andr. (L. erica, heath; folium, a leaf.) A species the leaves of which have been found amongst the buchn leaves of commerce.

B. pulchel'la. (L. pulchellus, dim. of pulcher, beautiful.) Hab. Cape of Good Hope. Used by the Hottentots, mixed with grease, to smear their bodies.

B. serratifo'lia, Willd. (L. serratus, notched on the edge; folium, a leaf.) Another source of Buchu. Leaves linear, lauceolate, serrulate; pedicels with two bracts about the middle; flowers white.

Baros'mæ fo'lia. Same as Buchu folia. Baros'min. The same as Barosma camphor.

Baro'tes sall'tus. (1. salitus, part. of satto, to salt.) A synonym of Barium chloride.

Barr. An intoxicating drink, prepared from the milk-sap of the Calotropis gigantia, by the tribes inhabiting the Western Ghauts of India.

Barras. (Fr.) White resin; that portion of the turpentine which concretes around wounds of the tree, and is removed during the winter.

Barre. Germany; near Strasburg. Ferruginous thermal waters. Used as a diurctic and tonic.

Bar'ren. (Old F. baraigne; or Breton, brec'han.) Sterile.

In Botany, applied to a stem that produces no branches.

Bar'renness. Sterility, unfruitfulness. B. of im'potency. See Aphoria impo-

B. of incongru'ity. See Aphoria in-

congrua.

B. of irrespond'ence. See Aphoria impercita.

B. of mismenstrua'tion. See Aphoria

Barrenwort, al'pine. The Epime-dium almanum.

Barres'will. A French chemist, who died in 1873.

B.'s solu'tion. A test for diabetic sugar in the urine. Acid potassium tartrate 50 grams, sodium carbonate 40 grams, are dissolved by heat in a third of a litre of water; to this 30 grams of cupric sulphate, in powder, are added; the mixture is boiled, and, ou cooling, 40 grams of caustic potash, dissolved in a fourth of a litre of water, is mixed with it, and the amount brought up to a litre by the addition of water. The solution is blue. Diabetic urine, boiled with a little of this test fluid, deposits a reddishyellow oxide of copper.

Barringtoneæ. Same as Barring-tonucca.

**Barringto'nia.** A Genus of the Nat. Order Myrtueva. Ornamental trees, chiefly tropical.

B. acutang'ula, Gaertn. (L. acutus, sharp; angulus, an angle.) A riverside tree of India. The juice of the leaves is used as an ointment in scables; the seeds are used in diarrhea, jaundice, and tenesmus, and as an emetic.

B. neo-caledon'ica. The fruit of this

B. neo-caledon'ica. The fruit of this species is used, to intoxicate fishes, by the natives in New Caledonia.

B. racemo'sa. (L. racemosus, clustering.) Hab. India and Burmah, on rivers. The powdered fruit is used as a sternutatory in headache and hemierania, and is given in diabetes, jaundice, and mesenteric affections. The bark of the root is given in colic and amenorrhea.

**B.** specio'sa. (L. speciosus, splendid.) Hab. Moluccas, Singapore, Fiji Islands, by rivers. Used by natives as B. racemosa.

Barringtonia'ceæ. An Order of epigynous corolliforal Exogens, or an Order of the Alliance Grossabs. Fruit pulpy or fibrous; placente axile; style one; stamens numerous; calyx imbricated.

Bar'ros. A synonym of Terra portugal-

**Bar'rowdale.** England; Cumberland. A salt water, formerly used as a purgative.

Barte mont. France; Departement Alpes Maritimes. A mineral water said to contain oxygen. It is dirretie, and is used in lithiasis and vesical catarrh.

Bart'feld. Hungary; on the northern slope of the Carpathiaus. Chalybeate waters, containing sodium hicarbonate 16 to 24 grains, sodium chloride 5 to 8 grains, iron hicarbonate 67 grains, and carbonic acid 45 cubic inches, in 16 ounces of water. Used in chronic catarrh of the mucous membranes.

Bar'tholin, Thomas. Boru at Copenhagen in 1619; died 1680.

Bartholinitis. Inflammation of the duct of Bartholin's glauds.

B., duct of. One of the ducts of the sublingual gland, which runs alongside Wharton's duct, and opens into or close by it. It is often also connected with the submaxillary gland.

B., glands of. (G. Bartholinische Drüsen.)
Two reddish-yellow, round or oval acinous glands, of the size of a small bean, situate one on each side of the external opening of the vagina, between it and the bulbo-cavernosus muscles, in such manner that the upper fibres of this muscle surround the glands; they lie in front of the transverse perineal muscles and beneath the superficial fascia. The duets open on the inner surface of the nymphæ in front of the place of origin of the hymen.

The name has also been used to signify the sublingual glands.

Barton. An American surgeon of Philadelphia.

B's. anchylo'sis opera'tion. (Same origin.) The cutting down on the trochanter major, and sawing through the hone, or cutting out a V-shaped piece, in angular anchylosis after hip-joint disease.

B's. frac'ture. An oblique fracture of the lower end of the radius, beginning in the articulating surface and running out an inch or more higher up. (Dunglison.)

Bartramia'ceæ. A Family of the Suharder Aerocarpa, Order Stegocarpæ. Leaves with papilla; capsule spherical, without fissured openings.

Bartung. (Hind.) An angular glossy seed, imported into India, and used as an astriugent in diarrhea. Probably the seed of *Plantago timecolata*. (Waring.)

Barurac. Arabic name for glass.
Baruria. (Βαράς, heavy; οὖρον, urine.)
The condition of the urine when the specific gravity is high.

Ba'rus cam'phor. The same as Bornco camphor.

Bar'wood. The Baphia nitida.

Baryacoc'calon. (Βαρώς, heavy, strong in smell; κόκκαλος, the kernel of the fir-cone.) The Datura stramonium, from its narcotic properties.

Barycoc'calon. See Baryacoccalon, Baryc'tica. (Βαρύς, heavy. F. baryctique; G. Baryctik.) The doctrine of weight.

Baryctice. Same as Bryctica.

Baryccoi'a. (Βαρύς, heavy; ἀκοή, heaving. G. Schwerhorigkett.) Dulness of hearing.

Barycncephalia. (Βαρύς, heavy; εγκέφαλος, the brain.) Imbecility.

Baryglos'sia. (Βαρύς, heavy; γλῶσσα,

the tongue. F. baryglossie; G. Schwerzüngigkeit.) Slow or heavy utterance.

Baryglot'tia. Same as Baryglossia. Baryl hydras ioda'ti. The Barium iodide.

Baryla'lia. (Βαρύς, heavy; λαλιά, talking. F. barylalıe.) Dull, heavy speaking.
Baryma'zia. (Βαρύς, heavy; μαζός, the

breast.) A condition in which the breasts are

**Barym'etry.** (Βαρύς, heavy; μέτρου, a measure. F. harymétric.) The measuring of weight or thickness.

(Bapús, heavy, strong; Baryod mia. οδμή, smell. F. baryodmie.) A heavy, oppressive, and disagreeable smell.

Baryod yne. (Βαρύς, heavy; ὁδύνη, pain. F. baryodynte.) A heavy, deep, excessive pain. Baryos ma odora ta. (Βαρύς; δσμή, The Dipterix odorata. smell.)

B. ton'ga. (Βαρύς; ἀσμή, odour.) The

Dinterix odorata.

**Baryphonia.** (Baρύs, heavy; φωνή, the voice.) Difficulty of speech.

Barypic ron. (Baρύs, heavy; πικρός, bitter.) A species of absinthium.

Baryplo teres. (Βαρύς, heavy; πλωτήρ, a swimmer. F. baryploteres.) Name by J. A. Ritgen for a Family of aquatic birds remarkable for the heavy manner in which they swim.

Barysomatia. (Βαρύς, heavy; σώμα, a body. F. barysomæ; G. Schwerfalligkeit des Korpers.) Great weight and hulk of the body.

Baryso'mia. Same as Barysomatia. Bary'ta. (Bapúrns, weight. F. baryte, barote, terre pisant; I. barite; S. barita; G. Baryt, Schwererde, Schwerspath.) BuO. The Barium monoxide.

B. ace'tica. The Barium acetate.

B., car bonate of. The Barium carbonate. B. carbon'ica. The Barium chloride.
B., hydri'odate of. The Barium iodide.

B. hydriodica. The Barium iodide.

B., hydrochlo rate of. The Barium chloride.

B. hydrochlor'ica. The Barium chlo-

B., mu'riate of. The Barium chloride. B. muriatica. A synonym of Barium chloride.

B. ni'trica. The Barium nitrate.

B., sul'phate of. The Barium sulphate.
B. sulphu'rica. A synonym of Barium sulphate.

Bary'tæ arse'nias. See Barium arsenate.

B. ar'senis. See Barium arsenite.

B. carbo'nas. See Barium carbonate. B. hydri'odas. See Barium iodide.

B. mu'rias. See Barium chloride.
B. sul'phas. See Barium sulphate.
Bary'tes. (Βαρύτης, weight.) The Ba-

rium sulphate.

Barythy'mia. (Βαρύς, heavy; θῦμος, ne mind. F. barythymie; G. Schwermuth.) the mind. Deep melancholy.

Barytic. (L. baryticus; G. harythaltig.) Of the nature of, or containing, barium or its compounds.

Barytif'erous. (Baryta; fero, to bear. F. barytifere; G. baryttragend.) Containing barvta.

Baryt'ina. A name given to a supposed alkaloid obtained by Simon from the white helle-

hore, Veratrum album, so called because, like baryta, it was precipitated from its solution in acetic or phosphoric acids by sulphuric acid.

Baryt'ium. A synonym of Barium. Ba'ryum. A synonym of Barium. B. chlora'tum. See Barium chloride.

B. ioda'tum. See Barium iodide. Bar'zud. Arabic name for Galbanum officinale.

Bar'zun-Bareg'es. France; Hantes-Pyrénées, near to Bareges. A sodium sulphide water, of 31° C. (87.8° F.), containing nitrogen and a little earbonic acid, with much baregine. It is said to be calmative, and in this respect differing from Baréges. Used in skin diseases and in uterine catarrhal affections, even when in a somewhat inflammatory stage.

Bas. The native Indian name of Tabasheer.

Ba'saal. The Embelia ribes. Ba'sal. (Báois, a step, a base.) Belonging to, or arising from, a base.

B. op'tic gan'glion. A mass of grey matter lying on the onter side of the tuber cincreum, and which gives origin to some fibres of the deep attachment of the optic nerve of the same side.

B. pro'cess. The straight, thick process given off from the external hair-cells of the organ of Costi, and attached by a small threecornered prominence to the basilar membrane.

Basa'lia. (Báois.) The basal cartilages of the fins of Elasmobranch fishes.

Ba'sal-nerv'ed. Applied to a leaf in which all the nerves spring from the base.

Ba'salt. (L. basaltes, a dark, hard marble from Ethiopia.) An igneous rock occurring in the trap and volcanic series, consisting essentially of angite and felspar. It is of fine texture, dark colour, and usually columnar.

Basal'tes. (L. basaltes, a dark, hard marble in Ethiopia.) Basalt.

Basanastrag'ala. (Βασαναστραγάλα,

plague of the joints, as in gout.) Pain iu the ankle-joint; gout in the foot.

Basanis'mus. (Basaviζω, to crossquestion.) Investigation of a disease, or examination of a patient.

Basanites. The Basanus.
Bas'anus. (Βάσανος, a touchstone.) A species of basalt formerly used to try the purity of gold and silver, and of which apothecaries' mortars were made.

(Βασκάνιον, an amulet.) Basca'nium. (Bas A charm against witchcraft.

Bascula'tion. (F. bascule, a swing.) A term applied to the movement hy which retroversion of the uterus is remedied when the fundus is pushed up and the cervix is pulled

Bas'cule move'ment. (F. bascule, a swing.) A term signifying recoil of the heart in systole.

(Báσιs, a foundation. F. basie; 1. Base. and S. base; G. Basis.) That which serves as a foundation or groundwork.

In Anatomy, it signifies the foundation or lower part, as base of brain.

In Botany, in like manner, the term base is used in contradistinction to summit; the part by which an organ is attached to its support.

In Chemistry, it is employed to designate those bodies, whether metallie oxides, or hydrates, or alkaloids, which, entering into combination with an acid, form salts.

In Dentistry, it is used for the plate which supports the artificial teeth.

In Pharmacy, it signifies the most important ingredient of a prescription.

B., organ'te. A term applied to the large class of organic compounds containing nitrogen, which unite with acids.

Base broom. The Genista humilis. Base dow. A German physician.

B.'s disea'so. A synonym of Exophthalmic bronchocele.

Base ity. A synonym of Basicity.

Bascila. (L. basella, a small base, F. haselle.) A tennus of plants of the Nat. Order Chenopodiacec.

B. alba. (L. albus, white.) Malabar night-shade. A common East Indian plant, pos-Malabar sessing demulcent properties. It is a variety of

B. cordifo'lia. (L. cor, the heart; folium, a leaf.) An Indian plant, used as a sudorific and lavative, in cutaneous diseases, and as a pot-

B. ru'bra, Linn. (L. ruber, red.) Leaves caten like spinach. Supplies a purple dye. Juice of the leaves used in catarrh.

B. tubero'sa. (L. tuberosus, full of swellings.) A native of New Granada. Eaten by women to increase their feeundity.

Basellaceae. An Order, according to some, of climbing shrubs, distinguished from Chenopodiace@ by having a coloured calyx, with two rows of sepals, and perigynous stamens.

Base ment mem brane. (F. membrane intermediaire; G. Basalmembran.) A fine transparent layer lying between the epithelium and the fibrovascular layer of mucous membranes. It is in connection with the latter structure, but is not penetrated by its blood-vessels; it consists of flattened epithelioid connective tissue. It is most prominent in villous or glandular processes of the mucous membrane. but is not visible on perfectly flat mucous surfaces. It is found in most glands, and is said to be present in the skin.

Baserock'et. The Reseda lutea.

Bash'kirs. People of the Central and

Southern Ural Mountains, with the physical characteristics of the Finnish race, but speaking a Turkish language.

Basi. The Bali name of Charica siriboa. Also, an intoxicating drank made in the Philip-

pines from the sugar-cane.

Basia lis. (F. basial.) Applied by Robineau-Desvoidy to a body which is the eentral piece of the nine, of which the vertebra of articulated animals is composed.

Ba'sians. A small tribe of Turkish people

living near Mount Elbruz.

Basiarachni'tis. (Básis, a foundation; arachnetis. F. basiarachnete.) Inflammation of the arachnoid membrane at the base of the skull.

Basia'tio. (L. from basio, to kiss.) Coition. (Dunglison.)

Basia tor. (L. basio, to kiss.) Orbicularis oris muscle.

Basibranch'ial bonc. A series of bones lying along the ventral surface of the throat in Ganoid and osseous fishes, conjugating the right and left moieties of the branchial arches, of which they form the inverted key-stones. Rudiments of these are found in all Vertebrata above fishes. The rudiment in man is the body of the hyoid,

with its two thyrohyals or cornua majora; these latter represent the hypobranchial segments of the first branchial arch of a fish.

B. car'tilages. A series of eartilages corresponding to the basibranchial bones of osseous

fishes. Found in sharks and skates.

Ba'sic. (Báois a foundation. F. basique; G. basisch.) Having the nature of a base. With the prefix mono, bi, tri, it is used to describe the unture of an acid in regard to the number of atoms of hydrogen, replaceable by a metal, which they contain.

B. im'pulse. A condition of very rare occurrence, in which the heart's impulse is greater about the third than at the sixth left costal in-

B. ox'ides. See Oxides.

B. salts. A term applied to those salts in which a part of the acid radical of the normal compound is replaced by exygen or hydroxyl. (Tilden.)

The term is also applied to neutral salts which

do not redden litmus paper.

B. wa'ter. Water which is an essential constituent of a compound, and replaceable by another substance with change of property.

Basicerite. (Βάσις; κέρας, a horn.) The second segment of the antenna of an Arthropod,

counting from the base.

Basicity. (Βάσις, a base. F. basicité; G. Basicitat.) A property of certain chemical compounds which enables them to act as a base.

A term applied to acids to denote their power of entering into combination with bases, the basic proportion being dependent on the number of atoms of hydrogen replaceable by metals; thus nitric acid, HNO3, is monobasic; phosphoric acid, H<sub>3</sub>PO<sub>4</sub> is tribasic.

Basicra'nial. (Βάσις, a foundation; κρανίον, the skull.) Pertaining to the base of the skull.

**B. ax'is.** (Βάσις, ground; κρανίον, the skull; axis, an axle.) A line drawn from the anterior margin of the foramen magnum to the front end of the middle part of the upper or cerebral surface of the sphenoid bone.

B. fontanelle, poste'rior. An oval space lying between the parachordal cartilages in the

cmbryo of many vertebrate animals.

1. plate. Same as Basilar plate.

Basidiomyce'tes. (G. Basidienpilze.)

An Order of Fungi distinguished by having spores supported on the branches, usually four in number, of the Basidia.

Basid'iospore. (Basidium; σπόρος, seed.) A spore which is supported by a basidium. They are found both in hymenomycetaus and gasteromycetous Fungi. They are solitary and naked; sometimes they acquire a dense and dark-coloured outer coat.

Basidiospo'rem. (Same etymon.) A former Division of Fungi, distinguished by the spores being supported on basidia. They were divided into Ectobasidæ, in which the spores covered the surface, and Entobasidæ, in which the spores were enclosed in the interior of the organism.

Basidiospo'rous. (Same etymon.) Bearing basidiospores.

Basid'ium. (Báous, a step. F. baside: G. Basidie.) A pedestal; a process of the hymenium or gills of certain Fungi, often composed of a single cell, which carries on its summit one or many conical points, on each of which is developed a spore.

Basifa'cial. (L. basis, a base; fucies, the face.) Relating to the base of the cranium and the face.

B. ax'is. (L. basis, a base; facialis, facial; axis, an axle.) A line drawn from the middle part of the upper or cerebral surface of the sphenoid bone to the front part of the alveolar margin of the maxilla. In man the basicranial and basifacial axes form an angle, which varies from 90° to 120°.

Basifix'ed. (L. basis; figor, to be fastened. F. basifixe.) Applied by Mirbel to a part attached by its hase.

Basigenic. (Βάσις; γεννάω, to produce.)

Base producing.

B. el'ements. A term applied to metals. **Basig'enous.** (Βάσις, a step, the base; γεννάω, to engender.) Same as Amphi-

Basig'enus. (Βάσις; γεννάω, to generate. F. basigene; G. grundhervorbringend.) Applied by Berzelius to electro-negative bodies which do not neutralise metals, but, on the contrary, produce with them compounds, electro-negative (acids) and electro-positive (bases); as oxygen, sulphur, selenium, and tellurium.

Basigy'nium. (Βάσις, base; γυνή, female.) A synonym of Podogynium, Carpophore,

or Thecaphore.

Basihy'al. (L. basis, a base; hyoid.) The two bones of this name, one on each side, form the body of the Hyoid bone. According to some, the basinyal is the whole mass of the body of the hyoid bone.

**Bas'il.** (Βασιλικός, royal. F. basilie; I. bassilico; S. albahaca; G. Basilicum.) The Ocymum basilicum, citron, sweet basil.

or the 0. minimum.

ortron. The Ocymum basilicum. B., bush. The Ocymum caryophyllatum,

B., cow. The Saponaria vaccaria. B., field. The Calamintha clinopodium.

B., holy. The Ocymum sanctum. B., small. The B., bush.

B., sweet. The same as Basil.
B. thyme. The Calamintha acinos.
B., wild. The Calamintha acinos; the Cunila mariana, the Chenopodium vulgare, and also the Pycnanthemum incanum.

The adverbial form of Dr. Bas'ilad. Barelay's use of Basilar aspect.

Bas'ilar. (L. busilaris. F. basilaire, basilar; I. basilare; S. basilar; G. grundstundig.) Of, or belonging to, or arising from, the base of a thing.

B. apoph'ysis. ('Απόφυσις, an offshoot.) The basilar process of the occipital bone.

B. artery. (F. A. meso-cephalique; G. Grundschlagader.) Formed by the junction of the two vertebral arteries at the hinder border of the pons Varolii; it extends along the pons to its front border, and there divides into the two posterior cerebral arteries. Its branches are the transverse given off on each side to supply the pons and the adjacent parts of the brain; a branch which supplies the auditory nerve; the anterior cerebellar arteries, which arise near its commencement, and supply the fore-border of the under surface of the cerebellum; and the superior cerebellar arteries, which, arising near its end, wind round the crus ccrebri, and ramify on the upper surface of the cerebellum; they supply also the pineal gland, the valve of Vieussens, and the velum interpositum.

B. as'pect. A term used in Dr. Barclay's nomenclature in regard to the aspects of the head, and meaning towards the base of the skull.

B. bone. Variously used by authors. According to some, the sacrum; to others the sphenoid; and also applied (G. Grundbein) to the basilar process of the occipital bone, the basioccipital bone.

B. fos'sa. (L. fossa, a ditch.) The upper

surface of the basioecipital hone.

B. mem'brane. The fibrous prolongation of the lamina spiralis to the outer wall of the cochlea.

B. plate. The cartilaginous mass formed by the coalescence of the parachordal cartilages of the embryo, from which the basioccipital bone takes origin.

B. pro'cess. The part of the occipital bone in front of the foramen magnum.

B. re'gion. The base of the skull. B. si'nus. The Transverse sinus.

B. surface. The lower face of the basioccipital bone.

B. ver'tebra. The last lumbar vertebra.

Bas'ilate. (F. basilé.) Applied to hair which is raised on a basis, or a cellulous mammilla, as in the Urtica dioica.

Basilei'on. (Basileiov, royal.) An eyewater mentioned by Aetius, I. vii, according to Gorræus, and efficacious against dulness of sight.

Basilei'um. The Basileion.

Basil'ic. (Baσιλικός, royal. F. basilique; I. and S. basilica.) A name given by the older anatomists to veins which were supposed to be of great importance in the animal economy.

Also applied, in like fashion, to other structures, and to medicines of excellence.

B. pow'der. See Pulvis basilicus.
B. vein. (F. cubitale-cutanie; G. Konigsader.) A large vein formed by the junction of the anterior and posterior ulnar cutaneous veins with the median basilic vein in front and at the inner side of the elbow; passing upwards on the inner side of the biceps a short distance it perforates the deep fascia, ascends in front of the brachial artery, and joins one of its venæ comites or the axillary vein. Of old it was believed that the right basilic vein was in direct communication with the liver and the left with the spleen, and they were named respectively hepatic and splenie vein.

B. vein, me'dian. The inner branch of the median vein which joins the basilic vein at the bend of the elbow; it lies above the brachial artery, separated from it by the biceps fascia, and is enclosed by several filaments of the internal cutaneous nerve.

Basil'ica nux. (L. basilicus, royal; nux, a nut.) The fruit of the Juglans regia, the walnut.

Basil'ici herba flo'rens, Belg. Ph. (Basilicum; L. herba, springing vegetation, a herb; florens, flowering.) The plant Ocymum basilicum when in flower.

**Basil'icon.** (Βασιλικός, royal. I. basilico; S. and F. basilicon; G. Konigsalbe.) A name given to several cerates and ointments, indicating their excellence.

B. oint'ment. Yellow wax, yellow resin, Burgundy pitch, of each 1 lb., olive oil 16 fl. oz.; melt, and then stir in common turpentine 3 oz.

B. oint'ment, black. Resin, black pitch, and beeswax, of each 11 oz., ohve oil 1 pint.

Verdigris 1 oz. B. oint ment, green. basilicon cintment 8 cz., clive cil 3 fl. cz. Used for syphilitie and fungating ulcers.

B., yellow. The Ceratum resina.

Basil'icum. (Basil\(\kappa\), oyal. G. Basilunkraut.) A synonym of the Ocymum basilicum.

B. citra'tum. (L. curacio, ...
The Ocymum basilicum. (L. citratus, furnished with citron leaves.)

B. ma'jus. (L. major, greater.) Ocymum basilicum.

Basilidion. (Basilis, a queen.) An eye water described by Galen, de C. M., sec. loc. vii, ad fin., according to Gorraeus.

Also, an eintment for the itch. Basilis. (Same etymon.) mentioned by Galen. (Hooper.) An eve-water

(Βασίλισκος, little king.) Basilis'cus. The philosopher's stone

Also, hydrargyri perehloridum, corresive snb-

Also, an old term for syphilis.

Eas'ilisk. (Baσιλίσκος, little king; perhaps from the white spot on the basilisk's head like a crown. F. basilic; I. basilisco: G. Basilisk.) A fabulous animal, the cockatrice of the Hebrews, to which most malignant powers were attributed.

A Genus, Basiliscus, of the Suborder Iguanidæ,

Order Sauria.

**Basil'ysis.** (Βάσις, a base: λύσις, a loosening or disengaging.) The complete dismemberment of the base of the fœtal skull by compression

or laceration.

**Bas'ilyst.** (Βάσις; λύσις.) An instrument suggested by A. R. Simpson to effect the reduction in size of the base of the feetal skull by the complete dismemberment of the bones. It consists of a strong gimlet, with a screw half an inch in length; a shoulder prevents penetration beyond this. One side is excavated to receive a branch, which is jointed to the main stem, about four and a half inches from the shoulder. On screwing the instrument home, the branch penetrates with it, pressure on its handles will then push it out. and dilaceration of the eranial floor at the point of perforation must ensue.

Ba'sin. (F. bassin, from Celt. bac, hollow. I. bacino; G. Becken.) The doubly sloping area which supplies or retains the water of a river,

lake, or ocean.

Also, the hollow formed by the dipping of

strata of rocks to a common centre.

Basiner'vate. (L. basis, a base; nervus, a nerve.) Applied to leaves the veins of which run from the base to the apex or margin without any branching

Basioccip'ital. (L. basis, base; occi-Belonging to the pitulis os, occipital bone.) occipital bone and the base of the skull.

B.bone. The basilar process of the occipital bone. It articulates with the sphenoid arteriorly, forms the front part of the foramen magnum, and supports the medulla oblongata. It is a separate bone in many of the lower vertebrata, and forms, with the basisphenoid, what has been called the central axis of the skull. It may give off a median descending process. It is the hinder-most selectione of the cranium. It is formed by ossification round the posterior part of the eranial notochord, which extends into the basal cartilaginous plate right and left. It is restricted laterally by the exoccipitals, and anteriorly by the basisphenoid. Posteriorly it is covered by the cartilage of the single or double condyle. It is found in the more ossified Ganoids—the Holostei and in Teleostei, is aborted or suppressed in Amphibia, and is well developed in all the Ammiota. It enters into the formation of the occipital foramen, forming the threshold of the foramen magnum between the condyles. It lies mesiad of the nerve passages, which perforate the exoccipitals.

B. tooth. A bony projection into the pharynx of certain fishes, as the tench, being a prolongation of the median process of the B. hone.

Basioceratochondroglos'sus.

(Bάσις, base; κέρας, a horn; χονόρος, cartilage; γλῶσσα, the tougue.) The Hyoglossus muscle.

Basioceratoglos sus. (Βάσις, a base; κεράς, horn; γλῶσσα, the tongue.) The Basioceratoglos'sus. hyoglossus muscle, so called from its attachment to the base and cornu of the byoid bone and the tongue.

Basioces trum. (Βάσις, a base; κέστρα, a pick-axe, a pointed instrument. G. Kopfborer.) A species of arrow-headed cephalotome for perforating the feetal skull in ntero.

**Basioglos'sus.** (Βάσις; γλώσσα, the ngue.) The portion of the hyoglossus musele tongue.)

attached to the base of the hyoid bone.

Ba'sion. (Βάσις.) A term used in Craniometry, to denote the central point in the median line of the anterior border of the occipital foramen.

Basiopharynge'us. (Βάσις; φάρυγξ, the gullet.) Certain fibres of the constrictor pharyngis medius muscle, which arise from the body of the byoid bone.

(Βάσις; όφθαλ-Basiophthal'mite. μός, the eye.) The first joint of the eye-stalks of Crnstacea.

Basipe'tal. (L. basis, the base; peto, to direct one's course to.) Growing or proceeding from the apex to the base.

**Basipod'ite.** (Βάσις; πούς, a foot.) The second segment of the leg of an Arthropod, counting from the body.

**Basipteryg'ium.** (Βάσις; πτέρυξ, a ing.) The bisal central cartilaginous rod of wing.)

the primitive limb or pteryginm.

Basipter'ygoid plate. (Βάσις; πτέρυξ, a wing; εΙδος, likeness.) A process extending from each side of the basisphenoid bone to the inner aspect of the pterygoid in some Vertebrates, as the lizards.

Ba'sis. (Bάσις, ground, from βαίνω, to step.) The base; that on which anything rests.

B. cer'ebri. (L. cerebrum, the brain.) The base of the brain.

B. cor'dis. (L. cor, the heart.) The base of the heart.

B. coro'næ radia'tæ. (G. Wurzel des Stabkranzes.) The narrow part of the corona radiata at the surface of the corpus striatum and optic thalamus.

B. cor'poris. (L. corpus, the body.) The sole of the foot.

B. era'nii. (L. cranium, the skull. G. Schadelgrund.) The base of the skull.

B. ling'uæ. (L. lingua, the tongne. G. Zungengrund.) The root of the tongue.

B. maxil'læ inferio'ris. (L. maxilla, the jaw; inferior, lower.) The horizontal ramus of the lower jaw.

B. patel'læ. The broad upper border of

B. pedun'culi cer'ebri. (G. Grund-flüche der Hirnstiele.) The lower fibres of the peduncle of the brain, derived from the anterior pyramid of the medulla oblongata.

B. prosta'tæ. The posterior border of the prostate gland, which is directed towards the

bladder.

Basisphe'noid. (L. basis, the base; sphenoid, the bone of that name.) The posterior part of the body of the spheuoid bone. It varies much in different animals, in some fishes being merely rudimentary, in birds sending out a long anterior process, and inferior and diverging processes in some mammals. It is the next sclerotome of the cranium to the basioccipital. It commences, as a rule, as an ossification of the cartilage which surrounds the apex of the notochord, and spreads right and left into the basal plate like the basioccipital. It passes beneath the pituitary body, forming the floor of the sella turcica, and also in front of it, forming the anterior clinoid region, The pituitary part of this bone is prochordal. Behind it is restricted by the basioccipital, laterally by the alisphenoids, and anteriorly by the presphenoids. It is imperfectly developed in even the most highly ossified tishes, is not developed in Amphibia, but is well developed in all the Ammiota. In birds the bone is very complex, being primarily formed in three subcutaneous splints, divisions of the parasphenoid, which graft themselves upon the overlying cartilage. additional ossicles in man, called the lingulæ sphenoidalis bones, that are of considerable size in some mammals, as the guinea-pig, are evidently homologous with the two hinder bones (the basitemporals) of the bird.

Belonging to the Basisphenoid.

B. oc. dolor.

B. os'sicles. (L. ossicula, a little bone.) Two osseous deposits in the base of the skull of the embryo of birds, one on each side of the pituitary space.

Basitem'poral bone. (Báois; temporal bone.) A wing of the parasphenoid bone developed in the middle of the periotic region.

B. wing. The same as B. bone.

Bas'ket. (Welsh basged, or basgawd, from basg, a netting or plaiting, as of twigs.) A receptacle of wickerwork.

B. of lam'prey. A cartilaginous areolated framework which, in the lamprey, supports the gills anteriorly, and the heart posteriorly. It is attached to the cartilaginous spine.

B. of ret'ina. See Fibre-basket. Basourin'ha. The Scoparia dulcis. Basques. A people living in the southwest of France and the north-east of Spain. They have the physical characters of the Mediterranean race, but their lauguage differs entirely.

Bass. The same as Bast.
Basse're, La. France; Departement
Hautes Pyrenées, near Bagnères de Bigorre. A n.ineral water, springing from the granite and tufa, containing sodium sulphide 35, sodium chloride 1.58, calcium silicate 33 in 1000 parts. Temp. 13° C. (55° 4° F.) Used in chronic laryng al and bronchial catarrh.

Bas'si, col'ica. Name of a medicine composed of aromatics and honey, invented by

Julius Bassus.

Bas'si, F. An Italian botanist in Bologna, died 1774.

Bas'sia. (After Bassi.) A Genus of the Nat. Order Sapotaceæ.

**B. butyra'cea**, Roxb. (Βούτυρου, butter.) Indian butter tree. Nepaul. The kernels yield on pressure a concrete white oil, Choorie or Fulwa butter, which is used externally in rheumatism and contraction of the limbs, and for chaps. Sugar is obtained from it in Rohilcund.

B., Dja've. A plant indigenous in Gaboon, which yields 56 per cent. of oil, of a dirty white Used in rheumatism by the natives.

B. latifo'lia, Roxb. (L. latus, broad; folium, a leaf. Sansk. Madooka; Hind. Mahwa; Dec. Mourah; Tam. Caat.) Bengal. Fatty oil from the ripe kernels is used in skin diseases; the residuum is an emetic. The flowers and fruit are edible. A spirit, Bain or Mahwa spirit, distilled from the flowers, is largely used, and resembles Irish whisky.

B. longifo'lia, Linn. (L. longus, long; folium, a leaf.) Leaves ovate-lanceolate, entire; calvx of two opposite pairs of leaflets; corolla 8-cleft; stamens 16-20, filaments almost absent; fruit olive-shaped, 8—9-seeded. Malabar. The gum which exudes from the bark is used in rheumatism. A decoction of the bark is astringent, and is used in itch. The oil of the seeds, Illipe oil or butter, is used as that of the other species.

B., Noun'gou. A plant indigenous in Gaboon, which yields a pure white oil. Used in

rheumatism by the natives.

B. Park'ii. A species which produces the Shea or Galam butter.

Bassil'itas. (Βάσσων, Doric comp. of βαθύς, thick.) Corpulence.

Bas'sinets. (F. bassinet, a skull-cap.) A name given to the species of Rauunculus, from the shape of the flower.

B., bra've. The Caltha palustris.

Bassora gum. A gum obtained at Bassora, on the Persian Gulf, in wrinkled drops, without taste or flavour. It consists chiefly of bassorin, and is probably derived from the Sterculia urens.

Bas'sorin. (G. Traganthstoff, Pflanzenschleim.) C12H20O10. A substance found in bassora gum and other gums. It is inodorous, colourless, trauslucent, and insoluble in water, in which it becomes gelatinous.

Bas'sulus. (Dim. of bassus.) Somewhat corpulent.

Bas'sus. (Βάσσων, Doric comp. of βαθύς, thick. G. dichleibig.) Heavy-bodied, corpulent. Bass'wood. The Tilia americana.

Bass'wood. The Tilia americana.

Bast. (Sax. bæst, a lime tree. G. Bast, bloem.) The liber or inner bark of Exogens. Phloem.) See Bark.

Also, a name of the common lime, Tilia intermedia.

B. cells. Same as Liber cells.

B. fibres. Same as Liber cells.
B. tis'sue. The tissue of plants composed of liber cells.

B. tubes. Same as Liber cells.

B. ves'sels. The laticiferous vessels of the bast.

Bastard. (Welsh, basdardd; basu, to lower; tardd, an issue; more probably from old F. bast, a pack-saddle. L. nothus; F. batard.) Spurious.

B. ce'dar. The Guazuma tomentosum.
B. chi'na. The Senecio pseudo-china.
B. dit'tany. The Dictamnus albus.
B. meas'les. The Roseola, epidemic.

B. pel'litory. The Achillea ptarmica, or succese-wort.

B. peripneu'mony. The Peripneumonia notha.

B. pleu'risy. Same as B. peripneumony. B. pox. Same as Lucs syphilodes.

B. saf fron. The Carthamus tinctorius.

B. sa'go tree. The Caryota arens.
B. sen'na. The Colutea arborescens, or B. sen'na. Senna pauperum.

The Halcyoneum.

B. sponge. The Haleyoneum.

Ba'syl. A body, simple or compound, which acts as a chemical base.

According to Graham, the metallic element of

the base of a salt.

Ba'ta. The Musa paradisaica.

Bata'ta di pur'ga. (Braz.) The roots of Convolvulus operculatus and C. mechoacana. Used as a purgative. See Mechoacan.

Bata'tas. (Span.) The Peruvian name of the tuberous roots of the potato-plant, Solanum tuberosum, and of the Batatas edulis.

A Genus of the Nat. Order Convolvulacea.

B. beta'cea. (L. betweeus, relating to the beet.) The beet-rooted sweet potato. Used as the B. edulis.

B. ed'ulis, Choisy. (L. edulis, entable.) Sweet potato. Stem creeping; leaves angular or lobed; sepals five; corolla campanulate; peduncles 3—5 flowered. The tubers are used as food, but are slightly laxative.

B. jala'pa. A species the root of which is

said to be purgative.

B. panicula'ta, Chois. (L. panicula, a tuft, a panicle.) Hab. East Indies. Root large and tuberous. Used as a cathartic.

B. peregri'na. (L. peregrinus, foreign.) The Ipomwa quamoelit, the eathartic potatoplant.

Batavineboo. The Hindoo name of the

shaddoek.

Bate'man's pec'toral drops. A compound of variable composition. The following is one of the formulæ:-Castor 1 oz., oi. anisi 1 dr., camph. 5 drs., coccus 1½ dr., opium 6 drs., sp. vini 1 gallon. (Gray.)

Bate's an'odyne bal'sam. preparation closely corresponding with the Lini-mentum saponis compositum of the Pharmaco-

Bath. Somersetshire. The Aquæ solis of the Romans. A well-built, beautifully situated town, 100 feet above sea-level, on the right bank of the river Avon; it is on the Oolite. Climate mild in winter; hot, and somewhat relaxing, in summer. The town is protected by hills from the north and east winds. The hotel and other accommodation is very good. The waters contain sodium and magnesinm chloride, potassium, magnesium, and calcium sulphate, and a little iron carbonate. They vary in temperature from 40° C. to 49° C. (104° F. to 120°2° F.) They are used in chronic gout and rheumatism, in ordinary and lead paralysis, in sciatica, and in chronic cezema and lepra.

Bath. (Sax. bæth. L. balneum; Gr. βα-λαιείου; F. bain; I. bagno; S. bano; G. Bad.)

A bath, or bathing room.

Also (L. labrum, solium, piscina; F. haig-noire; I. hagno; S. hano; G. Badewanne), the vessel or bath in which to bathe.

Also, the medium in which the body is more

or less immersed during bathing.

Also, a place where natural waters containing

some special saline or gaseous constituent are used for therapeutic purposes.

Baths, as therapeutic agents, are classified in various ways: according to the amount of immersion, as complete, partial; according to the character of the medium, as water, vapour; according to the temperature, as hot, cold; according to the purpose, as medicinal, nutritive; according to the source of the material, as natural, artificial. The special objects, uses, and actions of baths will be set out under the different headings which follow.

In Chemistry, a bath is a vessel containing sand, oil, water, or other substance, into which another vessel, containing the material to be heated, is placed for the purpose of exposing it to a temperature which is uniform and definite.

B., ac'id. See Balneum cum acido chlor-

hydrico. B., air. An arrangement whereby a vessel containing the substance to be dried is suspended or placed in a chamber, which itself is heated

from the entside. B., air, cold. The exposure of the body to the cold air, partly secured by a loose dressing

gown, formerly used as a strengthener.

B., air, compress'ed. A chamber capable of containing sufficient air is so arranged that air may be forced into it, and the exit so regulated by valves that any amount of air pressure exceeding that of the atmosphere may be produced. Respiration is increased in frequency, the heart's action is made slower, and the pulse becomes smaller. The effect on the amount of carbonic acid given off is not settled, but there seems to be little increase; the amount of oxygen taken up is greatly increased. It is used in many pulmonary disorders, especially where deficient oxygenation of blood is present. It is said to stop hæmoptysis and nose bleeding, to be useful in emphysema, chronic catarrh, neuralgia, and other disorders.

B., air, hot. The exposure of the body to dry heated air, which may be breathed or not. The temperature may be 55° C. (131° F.), or higher if the air be not breathed. It produces great perspiration. A lamp under a blanket will accomplish the purpose. Used where rapid and intense sweating is needed in anasarea and

B., air, ra'refied. In a closed chamber the air is removed by an air-pump, and not renewed in the same proportion. This has been recommended in the treatment of lung affections.

B., al'kaline. Potassium or sodium earbonate 12 oz., dissolved in 60 gallons of water. Used in scabies, prurigo, scaly diseases of skin, and gont.

B., al'um. Alum, I to 2 lbs., in 60 gallons of water. In burns, vesicular skin diseases, piles, and diarrhœa.

B. al'um springs. Situated in Bath Co., Virginia, United States of America. Chalybeate and sulphated waters. Used in dyspepsia, scrofula, and chronic diarrhœa.

B., ammo'nium chlo'ride. Ammonium ehloride, 1 to 4 lbs., in 60 gallons of water. In glandular enlargements, rheumatic affections of joints, leucorrhæa, and frost bites.

B., an'imal. The newly-flayed skin of a

sheep or other animal wrapped round the whole or part of the body. Formerly held to be a potent restorative.

B., antimo'nial. Antimony and potassium

tartrate, 1 or 2 oz., in 60 gallons of water. In lumbago, and as a counter-irritant.

B., antipso'ric. The B., sulphuretted. B., antisyphilitic. The B., mercurial. B., arm. A bath for the arm only.

B., aromat'ic. A decoction of balm, chamomile, lavender, mint, rosemary, thyme, angeliea, valerian, and any other aromatic herbs, is a lded to the simple bath, or to the alum, or salt, or ammonium chloride bath. Used in skin discases, chronic rheumatism, diarrhœa, spermatorrhoea, and hysteria.

B., arsen ical. Half a drachm to 2 drachms of sodium arsenate in 60 gallons of

water. Used in rheumatoid arthritis.

E., astrin'gent. Alum, 2 to 4 lbs., in a sufficient quantity of whey. Used in extensive

burus.

B., balsam'ic. A bath to which benzoin, tolu, myrrh, lavender, and such like, have been added. Also, Bordeaux turpentine, tar, of each 3 lbs., hot water 6 gallons; stir till cold, pour off the clear liquid into 50 gallons of water. Used in prurigo and eczema.

B., Bareg'es, artific'ial. Sodium sulphide 200 grains, sodium chloride 200 grains, boiled water 23 oz. Dissolve and keep in a wellcorked bottle. Add to 60 gallons of water for a

bath.

B., benzo'ic. Half a pound of powdered benzoin iu 60 gallons of water. In hysteria.

B., blood. A bath in warm blood, which is supposed to be a very powerful tonic in great debility from long-continued diseases, in weakly children, and in anamic girls.

B., bran. (F. bain de son.) Bran 5 lbs., boiled in 2 gallons of water for a quarter of an hour, strained, and mixed with 60 gallons of water. Emollieut in irritable skin diseases.

B., cal'omel. See Mercurial fumigation. R., cam'phor. Camphor, 3 or 4 drs., on a plate heated with boiling water, placed near the bather that he may inhale the fumes. In spasmodic asthma and irritable cough.

B., carbon'ic ac'id. Carbonic acid gas applied by a bag or other apparatus to the body, the head being excluded. Diaphoretic, stimulant, and antiseptic, in amenorrhœa, hysteria, and foul and cancerous ulcers.

Or, the gas dissolved in water, applied to fonl

B., chalyb'eate. Ferrous sulphate, 1 or 2 lbs., in 60 gallons of water. Recommended as a tonic where the stomach will not hear iron, and in piles.

B., chlo'rine. Chlorine gas dissolved in water, or applied by means of a bag to the body.

In liver diseases, seables, and foul nleers.

B., cold. Water from 0° C. (32° F.) to
15° C. (59° F.) The morning bath is usually taken by healthy persons in water at the temperature of the chamber, whatever that may be, and so long as reaction is complete and immediate it is a good practice. For delicate persons such higher temperature should be used as does not permanently chill. Under all circumstances the process should be short.

**B.**, **cool.** Water from 16° C. (60 8° F.) to 24° C. (75.2° F.).

B., douche, alternate. This consists in the frequent alternation of hot and cold jets, and is a valuable mode of treatment in thickenings about joints, and, according to some, in spinal paralysis.

B., douche, cold. (F. douche; I. doccia; G. Sturzbad, Giessbad.) A stream of water of varying size, more or less forcibly driven against any part of the body. The mechanical effect of the douche is greater or less according to the force used, and ranges from reddening to almost contusion. oldness of the water adds to the effect produced. The douche is descending, ascending, or lateral, according to its direction, and has received appellations according to the organ treated, uterine, ocular. The after-effect is said to be increased tissue change. The douche is used in various atonic diseases of the surface, as connective-tissue thickenings, exudation around joints, and to the head in cases of drunkeuness and opium poison-

B., douche, warm. Hot water used as in the cold douche. There is little reaction, and Hot water used as it is used in cases where this result is not de-

B., dry. Ashes, sand, salt, or other dry materials, piled around the body. Much used of

B., dung'hill. (F. bain de fumier chaud; G. Mistbad.) A popular remedy in some districts for rheumatism and for restoring to life persons who are frozen. The dunghill must be hot. **B.**, earth. The sand bath.

B., East'ern. The Turkish bath.
B., Egyp'tian. The Turkish bath.
B., electric. The patient, placed on an insulated stool, is connected by means of a wire with the prime conductor of an electrical machine, when the bath is intended to be electro-positive, and with the rubber if it is to be electro-negative. Used in chronic rheumatism.

Or, the patient is placed in a wooden bath, with his arm in a small vessel; one of the poles of an interrupted current is plunged in the small vessel, and the other into the bath. The muscles of the body become intermittently contracted.

B., ter'ro-arsen'ical. Half to 2 drs. of ferric arsenate to 60 gallons of water. Recommended in rheumatism in anæmic persons.

B., ferru'ginous. A bath to which some soluble salt of iron has been added.

B., foot. A bath into which the feet only are put. Hot water, with or without mustard, is used as a revulsive in colds, and in menstrual difficulty at the period.

B., gelatinous. Gelatine 3 to 4 lbs., dissolved in hot water and added to a warm bath of 60 gallons. Emollient in eczema and irritable conditions of skin.

B., gen'eral. In which the whole body is immersed, except the head.

B., glyc'erine. Glycerine, 2 lbs., gum acacia 1 lb., in 60 gallons of warm water. In prurigo and irritable scaly skin discases.

B., haif. A hip bath.
B., hand. The Manuluvium.
B., head. The Capitiluvium.
B., hem'lock. Dried hemlock leaves 5 or 6 handfuls, or extract of hemlock 2 oz., in 30 gallons of water. In irritable skin discases, gout, and cancer.

B., hip. (F. bain de fauteuil, b. de siege; G. Sitzbad.) A bath with a back so constructed that the patient can sit with his legs out and the water covering the lower part of the abdomen and the hips. Useful in uterine disturbances and lumbago.

B., hot. (F. bain chaud.) Water of a temporature of 37° C. (98.6° F.) and upwarts.

It is employed for the purpose of relaxing spasm in the urethra or elsewhere, and for producing

perspiration.

B., hydrochlo'ric ac'id. Hydrochloric acid, 2 to 3 lbs., mixed with 60 gallons of water. Used in liver diseases; in a more diluted form in zkin diseases.

B., hydrosulphuret'ted. See B., sul-

phuretted.

B. iodide of iron. Half an ounce to 2 ez, of iron iodide to 60 gallons of water. In umenorrheea, scrofula, and leucorrheea.

B., i'odide of potas sium. Ten ounces of potassium iodide in 60 gallons of water. In

rheumatism and secondary syphilis.

B. I'odine. Three drachms of iodine and 6 drs. of potassium iodide in 60 gallons of water In scrofula, joint affections, and indolent skin

- B., lamp. A mode of inducing profuse perspiration. The patient is placed naked on a wicker chair, with his feet on a stool; a lighted spirit-lamp is placed under the chair and the patient covered with blankets, the head being outside.
- B., lime. Slaked lime 3 lbs., added to 60 gallons of water. Used in gout, lithuria, and scabies.

- B., med'icated. The B., aromatic.
  B., mercu'rial. Two to 4 drs. of mercuric chloride dissolved in 60 gallons of water, with or without the addition of hydrochloric acid, I dr., or ammonium chloride, 4 drs. Used in syphilis, joint diseases, obstinate skin diseases, sealies, and to destroy parasites. See Mercurial fumi-
- B., met'al. In chemical processes, when great heat is required, mercury, tin, or lead is employed as the contents of a bath. A temperature of upwards of 315° C. (599° F.) may be attained.
- B., met'alline. A bath to which the scorize of some metal, as iron, has been added.
- B., milk. At a moderate heat it is cmolhent. It is probably not nutritive.

B., moor. The B., peat.
B., mud. (F. bain de limon; I. bagno di fango; S. limo; G. Schlammbad.) In many places the mud or deposit of the mineral water is used as a local application, and in some cases the warm mud is piled over the patient in a small chamber. This bath produces much determination of blood to the skin and profuse perspiration, and is used in chronic joint affections and rheumatism.

B., mud. sall'ne. Same as B., mud.

B., mus'tard. From 6 oz. to 2 lbs. of mustard, according to the effect desired, infused in a gallon of warm water, the juice expressed, and added to 60 gallons of hot water. Used to excite reaction in the collapse of cholera.

- B., narcotic. Thirty-five ounces of a mixture of narcotic herbs, such as belladonna, stramonium, common morell, henbane, and poppy heads, are boiled in 21 pints of water for an hour, and the strained liquor added to the bath. Used in painful piles, peritonitis, uterine inflammations, cystitis, spasmodic stricture, and such like.
- B., nitromuriat'ic ac'id. Dr. Scott's formula is nitrie acid 2 fl. oz., hydrochloric acid 8 fl. oz , water 5 fl. oz.; mix. An ounce and a half or two ounces to be added to each gallon of water for a general bath; and three ounces to a

gallon of water for a foot, knee, or spange bath. Used in liver diseases. Often produces tingling of skin and salivation. The patient should bathe for a quarter of an hour daily.

E. oak-bark. Ten or twelve handfuls of oak bark boiled in water and strained. The liquid added to 60 gallons of water. Used in

hæmorrhoids, leueorrhæa, hernia, and phthisis. **B. of herbs.** (G. Kräuterbäder.) Same

as B., aromatic.

B. of lees of grapes. (F. bain de marc de raisin.) The residue after the expression of the juice of the grape is put in a heap for a few days, until it becomes of a temperature of 25° C. (77° F.) to 35° C. (95° F.), when a hole is made in the heap, the patient put into it, and the fermenting material is piled around him to his neck. He remains about an bour, and then goes into a warm bath of simple water. A free current of air must play over the mass of lees to dilute and drive off the carbonic acid. Used in chronic rheumatism, neuralgia, spinal paralysis, and chronic joint diseases.

B. of lees of olives. The residue, after the expression of the oil, is treated as that of grapes, and is used for the same pur-

poses.

B., oil. Baths of warm obve oil are used as calmatives in rheumatism, as emollients in inflammatory affections and in anchylosis. In the East baths of olive oil, in which ambergris and vanilla bave been digested, and to which oils of cloves, cassia, nntmeg, cedron, and juniper, have been added, are used as a preservative against the plague.

In Chemistry, linseed oil in a vessel, on which floats the dish containing the substance to be heated. Heat being applied it will attain a temperature of 300° C. (572° F.)

B., oxygen. A local bath of oxygen gas

has been used in senile gangrene, but without

very definite result.

B., peat. Peaty soil is saturated often with the mineral water of the place, and exposed to at least one winter's frost. The mineral water is added until it is of a consistence of pea-soup and a temperature of 35° C. (95° F.) The chemieal composition has been much examined, and humus, humic acid, resin, silica, alumina, iron, and the other constituents of the mineral water found; in addition, in some peat, formic acid has been found; they usually contain carbon dioxide and hydrogen monosulphide. These baths produce congestion of skin and great perspiration. They are used in the removal of thickenings about joints, in splenic tumours, anæmia, and hysterical spine.

B., peat-wa'ter. The brown water which runs from bogs or mosses is used as a bath, and has been used in similar cases to the

peat baths.

B., Pennes. A factitious mixed salt, with some volatile oil, to be added to a bath, and which is asserted speedily to produce the thermic fever of bath physicians, and so materially to aid in the absorption of chronic deposits both articular and visceral.

B., pine-leaf. The baths are composed of water, to which is added a decoction of pine leaves, and also a greenish-brown balsamic fluid distilled from the fresh green leaves of the different species of pine, and which contains resin and formic acid. The effect is stimulating, and they are useful in chronic rheumatism and nenralgia; also, in chronic bronchitis, for the sake of

the halsamic vapour.

B., Plom bieres, artific lal. Sodium sulphate 531 grains, sodium earbonate 1690, sedium bicarbonate 620, sodium chloride 620, gelatine 1690, in 40 gallons of water.

B., plunge. A cold bath where, for the pleasure of the thing, a bather dives head foremost.

B., pneumatic. See B., air.

B., potas'sium sul'phuret. See B.,

sulphuretted.

B., Roman. The bath as used by the ancient Romans was a very elaborate process. The rooms were in a complete establishment :-1. The apodyterium or spoliatorium, where the bathers undressed; 2, the alipterium or unetuarium, where they were anointed; 3, the frigidarium or cool room, where was the piscina or baptisterium, the cold bath; 4, the tepidarium, a moderately heated room, where the bathers rested; 5, the calidarium or hot room, over the hypocaustum, the furnace; this had at one end tae alveus, the warm bath, and at the other, 6, the sudatorium or laconium, which had a large vessel containing water, the labrum, from which the bathers sprinkled themselves to remove the perspiration. The order in which the rooms were used varied, but commonly the bather sweated a little first with his clothes on in the tepidarium, undressed, was anointed, and then passed on to the calidarium; having sweated freely, he had water, first warm, gradually cold, poured over him, or he went at once into the oold bath; he was then scraped with the strigil, and lastly, rubbed and audinted.

B., Rus'sian. Steam is produced by throwing water over hot stones in a room the temperature of which is raised from 50° C. 122° F.) to 60° C. (140° F.), when the bather is whipped with birch rods and soaped; after a longer or shorter sojourn, he plunges into cold

water. See, also, B., Turkish.

B., sali'ne. Common salt 36 oz., water 60 gallous, as a substitute for sea bathing.

B., sali'ne, gelatinous. Common salt and glue, of each 1 lb., dissolved in water and added to the bath. Used in scrofula and de-

bility. B., sand. (F. bain de sable, arenation.) Employed on the coast of Normandy and the Mediterranean shores. The body, or the part affected, is covered with damp sand, and exposed to the sun's rays. Considerable irritation of the skin is produced and free perspiration. Artificial sand baths are used in Dresden, Köstritz, and Berka, at a temperature of 47°C. (116.6°F.) to 50°C. (122°F.) The sand is heated to a uniform temperature on hot iron plates, and piled over the body in thin layers only over the trunk. The sand bath is used in chronic rheumatism, scrofula, and paralysis.

In Chemistry, a vessel containing rather coarse sand, in which is pluuged another vessel containing the matter to be heated. Used when a high, but not a definite, temperature is

needed. B., Scott's. See B., nitromuriatic acid.
B., sea. Sea water contains a varying B., sea. proportion of saline matter in different places. According to Dr. Schweitzer, the water off Brighton contains, in 1000 parts, sodium chloride 27, potassium chloride 76, maguesium chloride 366, magnesium bromide 029, maguesium sulphate 2.29, calcium sulphate 1.4, calcium carbonate '033, and traces of iodine and ammoniacal salts. The temperature was about 20° C. (68° F.) Sea bathing is a tonic in persons who are simply weak, where there is no weakness of heart, congestion or advanced organic disease of lungs, disease or indolence of liver, ulceration of stomach. In scrofula it is of great service, in some forms of neuralgia, and in muscular rheumatism. The best time for bathing is from two to three hours after breakfast.

B., sea-mud. This bath is much valued in the North of Europe. It is a more stimulating

form of sea bath or than the sool bath.

B., sea-wa'ter, warm. Sea water may be used, warm or hot, for the same purposes as simple water. From its more stimulating property it is of more service in chronic rheumatism.

B., sea-weed. Fucus resiculosus, bruised and infused in water, added to a sea-water bath. Used in struma, chronic rheumatism, and thick-

ened joints.

B., show'er. (F. douche; I. doccia; G. Schauerbad.) An apparatus by means of which water may be poured on the body in a set of fine streams, as out of a watering-can. shock is greater than in the cold bath, and the reaction, if it occurs, more intense. Used as a tonic, but care should be taken that the func-tions be not too depressed to ensure sufficient reaction.

B., sitz. Same as B., hip. B., soap. Two or 3 lbs. of soap dissolved in 30 gallons of water. Used in scabies and other skin diseases.

B., solu'tion. A mode of applying definite heat in chemical processes by means of saturated solutions of salts; these boil at different tempera-

B., sool. (G. Soolbad.) The name by which baths of the salt springs of Germany are known. The effect is very similar to that of sea bathing, but the action on the skin can be increased or diminished by the addition of water or of the

B., sponge. The use of water by means of a sponge.

B., spray. (F. bain d'hydrofere; G. Staubbach.) An apparatus, the hydrofere, invented by Mathieu de la Drôme, pulverises the water and throws it on to the body of the bather. Water, either simple or mineral, is supposed to have a greater influence when used in this way, as it is believed by the inventor that it is only the water which immediately touches the body which is of use, and by this means it is constantly renewed.

B. springs. Situated in Berkley Co., Virginia, United States of America. Mild carbonated water. Temperature 23° C. (73.4° F.) Contains some of the salts of lime and magnesia. Used in skin diseases. (Dunglison.)

B., starch. Two to 4 lbs. of starch dissolved in boiling water, and added to the bath. Used in eczema.

B., steam. The B., vapour. B., steel. The B., chalybeate.

B., succes'sion. A bath where hot and cold water are alternated.

B., sul'phur. A pound of flowers of sulphur, agitated frequently for twenty-four hours in 2 gallons of water, and then added to a bath. In skin diseases.

B., sul'phur va'pour. See B., sulphurous word.

B., sul'phuretted. Potassium, or sodium, or calcium sulphide, 3 oz., in 40 gallons of water. Used in scabies and in chronic eezema.

B., sulphurous ac'id. The exposure of a limb or the body, carefully excluding the head, to the vapour of burning sulphur. Used in scabies and psoriasis.

B., sweating. The Achieolum.

B., tan. See B., oak-bark.

B., tem'perate. A bath of a temperature of 24° C. (75.2 ° F.) to 30° C. (86° F.)

B., tep'id. A bath of a temperature of

30° C. (86° F.) to 33° C. (91.4° F.)

B., transition. Same as B., succession. B., tum'ble. A shower bath in large volume.

B., Tur'kish. In the modern bath which goes by that name the bather is first placed in a hot room until he perspires freely; he is then rubbed down and shampood, and afterwards has cold water poured over him. Used in gout, rbcumatism, and as a tonic generally.

B., turpentine. Four to 8 oz. of rectified oil of turpentine, 2 lbs. of sodium carbonate, dr. of oil of rosemary, in 30 gallons of water.

Used as a diaphoretic.

B., vale'rian. A pound of valerian root is infused in hot water, and added to the bath.

Used in hysteria and neuralgia.

B., va'pour. The exposure of the body to steam. A convenient plan is to seat the patient without any clothes on a chair, under which is placed a lighted spirit lamp under a vessel of hot water, the whole is closely enveloped in blankets, the head of the patient only being left outside; copious perspiration ensues. Used in congested kidney, gout, rheumatism, or whenever free sweating is needed.

B., warm. A bath of a temperature of 34° C. (93°2° F.) to 37° C. (98°6° F.) Very refreshing after great fatigue. Used in chronic

rheumatism, eczema, and psoriasis.

B., wa'ter. A vessel containing water, on which floats a dish containing the substance to be heated. Used in chemical manipulation, when it is desired not to exceed a temperature of 100° C. (212° F.) If sodium chloride is dissolved in the water to saturation, the temperature may be brought to 107.5° C. (225.2° F.), and if calcium chloride be used the heat will rise to 125° C. (257° F.)

B., wa'ter, sim'ple. As its name. B., wa'ter, min'eral. The different baths

are described under their several names.

B., whey. The serum of milk after the removal of the casein and butter. The bath is taken at a temperature of 25° C. (77° F.) to 31° C. (87.8° F.) for an hour at a time, gradually increasing to three hours. Used in anamia after loss of blood, for rickety children, and in con-

valescence from disease, as a tonic and nutritive.

B., wine. Wine is added to baths, for the purpose of stimulation, in feeble, rickety, and scrofulous children, in chronic rheumatism, and

in extreme debility. **Bath'mis.** (Βαθμίς, a step; from βαίνω, to step.) Term used by Hippocrates, de Fract. i, 10, for the cavity of a bone which receives the articular extremity of another bone; as the fossa of the humerus, which receives the olecranon, Seamnum Hippocraticum.

Bath mos. Same as Bathmis.

Bath'mus. Same as Bathmis.

Bathom'eter. (Βάθος, depth; μετρέω, to measure. F. bathomètre.) An instrument, proposed to be substituted for the ordinary sound, to measure the great depths in the ocean.

Bath'ron. (Βάθρον, a bench. F. banc d'Hippocrate; G. Hippokratische Bank.) An instrument formerly used for reducing luxations by extension. It consisted of a frame, on which the patient was laid, having at each end a wooden axis, to which was attached a cord or strap, which was fastened to two opposite points of the body between which lay the dislocation; the axis, being rotated by means of a wooden handle, extension was made, and the dislocation reduced. (Gorræus.) **Bath'rum.** The same as Bathron.

B. hippoc'ratis. See Bathron.

Bathyb'ius. (Βάθος, deep; βίος, life.) A gelatinous substance found at great depths in the sea, and at one time supposed to be formless masses of protoplasm containing numerous coccoliths and discoliths, but without nuclear or cell structure. It is generally believed to be not a living organism, but probably a flocculent preci-

ming organism, our product, a necessity a necessity printer of sulphate of time by strong alcohol.

Bathycente'sis. (Βαθύς, deep; κέντησις, a pricking. F. bathycentese; G. Tiefstechen.) The deep puncture of a part.

(Βαθύς; μέτρον, a Bathymetrical. measure.) Relating to Bathymetry.

B. zone. A term applied to certain zones of animal and vegetable life on the sea-shore and in deep sea, which vary according to the depth of water.

Bathym'etry. **m'etry.** (Βαθύς, deep; μέτρον, The measuring of the depths of measure.)

eavities.

**Bathymorph**'ia. (Βαθύς; μορφή, form.)

Increase in shape. **B. bul'bi.** (L. bulbus, a bulb.) Increase of the lougitudinal diameter of the globe of the

cyc, a chief cause of myona. **Bathypic'ron.** (Βαθός, deep; πικρός, pungent, bitter.) A Species of Absinthium, wormwood.

**Bathyrhyn'ehus.** (Βαθύς, thick; ρύγχος, a beak. F. bathyrhynque; G. diekschnabelig.) Having a thick beak.

Bathystix'is. Same as Bathycentesis. Ba'tia. A retort or cucurbit with a recurved neek, according to Morley, Coll. Chem. Leidens. proleg. c. 2.

Batia'tor root. The root of an undetermined plant used as an emetic in Senegal.

Batida cea. The same as Batidea. Batid'eæ. A doubtful Natural Order included by Lindley among the Euphorbial Alliance. Ovules solitary, ascending; female flowers naked, combined into a succulent cone.

Bat'ides. (Baris, a skate.) A Group of the Order Elasmobranchii, Class Pisces. Branchial apertures on the under surface of the body, forming two rows of openings behind the mouth. The body in the typical species is flattened out into a sort of rhomboidal disc, chiefly consisting of the immensely developed pectoral fins. This group includes the Skates, the Rays, the Torpedo.

Bati'non. The Rubus ideas, raspberry plant.

Ba'tis. A Genus of the Nat. Order Ba-B. maritima. (L. maritimus, belonging to the sea-shore.) A West Indian species used !

in pickle

Batis'se. France; near Clermont. Slightly warm waters, containing sodium carbonate and sulphate, calcium and iron sulphate, magnesium chloride, and calcium carbonate.

Batitu'ra. See Battitura. Batoid'ei. (Βατίς, a skate.) The same as Ratides.

Ba'ton. (Βάτον, a blackberry. G. Brombeere.) A blackberry, the fruit of Rubus fruticosus.

Batoo. Arabic name for the Croton tig-

Ba'tos. (Báτos, a bramble bush. Brombeerstrauch.) The bramble, Rubus fruti-

cosus.

**Batra'chia.** (Βάτραχος, a frog. G. Friosche.) An Order of the Class Amphibia. Tailless and with lungs in the adult state; tailed and with gills in the larval condition; dorsal vertebræ procœlous, with long transverse vertebræ instead of ribs, which are rudimentary; bones of forearm and of leg anchylosed to form a single bone; hind digits webbed; tongue fleshy, fixed to symphysis of mandible; respiration of adult an act of swallowing; oviparous. The Batrachia are divided into the Pipidæ, Bufonidæ, and Ranidae.

Batra chidæ. (Βάτραχος, a frog. G. Froschfische.) A Family of the Group Acantho-ptera, Suborder Acanthopterygii, Order Teleostei, Class Pisces. Skin naked, or covered with fine scales; abdominal fins with two soft rays; dorsal fin with short spines; anal fin long; three branchiæ; pseudobranchiæ absent; teeth coni-cal, large. Marine, tropical, voracious fishes

**Batrachites.** (Βάτραχιτης, from βά-τραχος, a frog. G. Kristenstein.) A stone like a frog in form and colour; the toad-stone. See

Bufonites.

**Batra'chium.** (Βάτραχος, a frog.) The Ranneulus, or crow's-foot, so-called because found in marshy places, or because frogs conceal themselves under its shade.

Bat'rachoid. (Βάτραχος, a frog; είδος,

form.) Frog-like.

Batrachophides. (Βάτραχος, a frog; σφις, a serpent. F. batrachophides.) Applied by Ficinus, Carus, and Latreille to a Division of ophidian reptiles, resembling the Ophidia in the formation of their bodies, and the Batrachia in their skin, without scales, soft and slimy.

Batrachoplas ty. (Βάτραχος, a frog; πλάσσω, to form.) An operation for ranula. Excision of a piece of nuccous membrane of the mouth, and attachment of its borders to the lips of an incision made into the cyst of the ranula.

Batrachosper'meæ. A synonym of Nemalica.

Batrachus. (Bárpayos, a frog.) for a tumour under the tongue, so called because it causes the voice to be hourse and croaking.

Batra'cia. Same as Butrachia. Bat'racine. (Same etymon.) The active principle of the white secretion from the skin of a Batrachian, the Phyllobates chocoensis, which is used by the Indians of New Granada to poison arrows. It is a whitish, alkaloidal, nitrogenous substance, insoluble in ether, slightly soluble in water, very soluble in alcohol. Taken internally it is inactive, introduced into a wound it produces convulsions and speedy death.

Battag'lia. Italy; not far from Padua.

Beautiful neighbourhood; good accommodation. Sulphur waters, of a temperature of 23° C. (73.4° F.) to 71° C. (159.8° F.)

Battalis'mus. Same as Battarismus. Battalus. (Bárralos, or Báralos, a niekname given to Demosthenes in reference to βατταρίζω, to stammer, because he stattered when a young man, and could not pronounce the ρ.) A stammerer.

**Battaris mus.** (Βατταρίζω, to stammer, from Βάττος, Battus, king of Cyrene, who was so afflicted. G. Stottern, Stammeln.) Stammering with hesitation; the affection termed psellismus; the psellismus hesitans of authors.

**Bat'tarus.** (Βατταρίζω, to stammer.) A stammerer.

Batta'ta virginia'na. The potato, Solanum tuberosum.

Batta'tas. Same as Batatas.
Battery. (F. battre, to beat. F. pile; I. and S. pila; G. Saule.) The generic name of certain combinations of metals, or of certain instruments, for the development of electricity in its different forms. The varieties are described under their specific titles.

B., elec'tric. A series of Leyden jars, having their external coatings and internal surfaces respectively joined to each other.

B., gal'vano-caus'tic. See Galvanic cauteru.

B., gas. See Grove's gas battery.

B., con'stant. A galvanie battery composed of two elements, or a series of each, placed in different liquids; so called because their action is somewhat lasting.

B., magnetic.. Two or more magnets connected together by their separate poles.

B., thermo-elec'tric. See Thermo-electric battery.

Bat'tey. An American surgeon.

B.'s operation. The removal of the ovaries by abdominal section for the cure of dysmenorrhea. Also called Oophorectomy.

**Eattignol'les.** France; a suburb of aris. A cold sulphurous water. Used in scro-Paris. A cold sulphurous water. fula, chronic bronchitis, and skin diseases.

Battitu'ra. (F. battiture.) A scale of metal struck off at the forge with a hammer. (Ruland and Johnson.)

Bat'tledore-sha'ped. Same as Spa-

Ba'tus. (Báros, a bramble bush.) Same as Rubus, Sentis.

Bauche, la. France; Savoie. A cold ferruginous spring.

Bau'da. Same as Bayda.

Baud'elocque. A French accoucheur, born 1745, died 1810.

B's. pelvim'eter. (Pelvis; μέτρεω, to measure.) A pair of calipers, with legs straight for some distance, and then curved considerably for a greater length; at the junction of the straight with the curved portion is a scale attached at right angles, so that the distance between the extremities of the two arms may be measured. By this an ontside measurement of the pelvis may be made, and thence the internal diameters may be deduced.

Baudricourt. France. Mild sulphur waters, which are very little used.

Bauereæ. A Tribe of the Family of Nat. Order Saxifragaceæ, having polystemonous flowers, two styles, and opposite, astipulate leaves.

Bauhin. A French anatomist, born 1560, died 1624.

B., valve of. The ileo-caeal valve.

Bauhin ia. A Genus of climbing plants of the Suborder Cosolpiniae, Nat. Order Leguminosæ. Hab. South America. Several species furnish fibres for making ropes, some supply gum.

B. acumina'ta, Linn. (L. acumino, to bring to a point.) Hab. India and the Mauritius. Used in cutaneous diseases, as a carminative and vermifuge. (Waring.)

B. can'dida. (L. candidus, white, glistening.) A variety of B. variegata.

B. emargina ta. (L. emargino, to deprive of its edge.) Supplies a brownish coloured gum.

B. forfica'ta. (L. forfex, a pair of seissors.) Used in Brazil as a mucilaginous, subastringent enema, gargle, or poultice. (Wa-

B. porrec'ta. (L. porrectus, wide-spread.) Used in Jamaica as a lotion for ulcers. The flowers, beaten with pepper, are applied to the forehead in headache. (Waring.)

**B.** purpuras'cens. (L. purpurasco, to grow purple.) A variety of B. variegata.

B. racemo'sa, Vahl. (L. racemosus, clus-

tering.) The B. Vahlii. B. retu'sa, Roxb. (L. retusus, blunted.)

Supplies a brownish coloured gum.

B.scan'dens. (L. scando, to climb.) Hab. India. Used as B. porrecta.

B. tomento'sa, Linn. (L. tomentum, stuffing for cushions.) Hab. India, Ceylou. The seeds and flowers are used in dysentery, and the decoction of the bark in liver diseases, and as a vermifuge.

(L. tuberosus, full of B. tubero'sa. swellings.) The Ipomaa quamoclit.

B. Vah'lii, Wight and Arn. Hab. India

The kernels are supposed to possess tonic and approdisiae preperties. (Waring.)

B.variega'ta, Linn. (L. variego, to make of various sorts or colours.) Hab. India. The bark is astringent and tonic, and an infusion of the flowers is applied to wounds and uleers.

Bau'mé. 'A French chemist, born 1728, died 1804.

**B's. areom'eter.** ('A $\rho$ aιόs, thin, light;  $\mu$ i $\tau \rho o \nu$ , a measure.) An instrument for determining approximatively the concentration of liquids. It consists of a closed glass tube, containing mercury in a small enlargement at the bottom, immediately above that is a bulb, and the scale in the tube above.

**B**'s. hydrom'eter. ("Yôωρ, water; μέτ-ρον, a measure.) The same as B's. arcometer.

Baume vert de Metz. See Balsamum viride metensium.

Baunscheid'ism. A mode of treatment of rheumatic pains, taking a name from its inventor, which consisted in the use of an instrument, revulsenr, furnished with fine needle points, dipped in an irritant oil of mustard and other materials, which caused an almost immediate crop of papules, like the stings of many gnats.

Bau'rac. (Arab.) Nitre, or any salt. The word borax is derived from it. (Ruland.) Bau'rin. France; Department of the

Somme, Strong chalybeate waters,

Bay. The Laurus nobilis. B. ber'ries. The fruit of the Laurus no-

bilis. They are black and wrinkled, and contain a volatile and a fixed oil. They were used as a narcotic, and in infusion in im-

B. cher'ry. The Prunus laurocerasus Called also, poison-laurel, and cherry-laurel.

B., dwarf. The Daphne laurcola. B. laurel. Same as B. cherry.

B.-leav'ed pas'sion flow'er. The Passiflora laurifolia.

B. leaves. The leaves of the Laurus nobilis. They have a fragrant odour and a bitter aromatic taste; they yield on distillation a greenish-yellow volatile oil. They were used as a narcotie.

B., plum. The Psidium pyriferum. B. salt. (F. sel gris; G. See salz.) Impure common salt, in large dark-coloured crystals, obtained by evaporating sea water, in shallow ponds, by the sun's heat; it is brought from France, Spain, and Portugal.

B. sore. An endemic disease at the Bay

of Honduras, considered by Dr. Mosely as a true

cancer.

B., straw berry. The Arbutus andrachne. B. tree. The Laurus nobilis.

B., wild. The Viburnum tinus.

B., wil'low. The Salix pentandra, Bay'berry. The Myrica cerifera. B., alexan'drian. The Ruscus hypophyl-

B. bark. The bark of the Myrica cerifera, Tonie, stimulant, and astringent. Used in dysentery.

B., cas'tor. The Magnolia glauca.

B., rose. The Rhododendron chrysanthemum, or the Nerium oleander.
B., rose, American. The Rhododendron

marinum

B. rum. Rum distilled with the leaves of the Bayberry tree, Myrtus acris. See Spiritus murcia.

B., sweet. The Laurus nobilis.

B. tal'low. The wax obtained from the fruit of the Myrica cerifera. See Myrtle

B. tree. The Myrtus acris.

B., white. The Magnolia glauca; and also, the Magnolia macrophylla.

Bay'da. Arabic for a vessel used by the ancients for distillation. Also spelt Bauda. (Ruland.)

Bayl. An old word for urine. (Ruland an l Johnson.)

Bayn'ton, Thomas. An English surgeon.

B's. adhe'sive plas'ter. Resin 1 oz.,

lead plaster I lb. Melt.

B's. band'age. Name for the application of strips of Baynton's adhesive plaster round the leg, as in B.'s method.

B.'s method. A mode of treating ulcers of the leg by the application of strips of adhesive plaster enclosing the whole circumference and crossing at the ends; each succeeding strip overlies a little the one below it.

**Ba'za.** Spain. Mineral waters; also called the baths of Zujar, of a temperature of 38° C. (100.4° F.), containing sodium chloride .947, sodium sulphate 4 60, calcium sulphate 14, sodium carbonate 25 parts in 1000. Used in hysteria, amenorrhem, chronie skin diseases, scrofula, and renal diseases.

Bdallipodobatra'chii. (Βδάλλω, to suck;  $\pi o \dot{\phi} s$ , a foot;  $\beta d \tau \rho a \chi o s$ , a frog. F. bdallipodobatracien.) Applied by J. A. Ritgen to a Family of the Reptilia, having the toes supplied with suckers, as in the tree-frog.

**Bdal**'sis. (Βδάλσις, from βδάλλω, to milk. G. Melken, Saugen.) The process of milking or

sucking from the female hreast.

**Bdella.** (Βδέλλα, a leveh, from βδάλλω, to suck. G. Blutegel.) The leech, Hirudo medicinalis and H. officinalis.

Also, a Genus of the Family Bdellidæ, Order Acarida. Acarids living in moist places, some of which were formerly erroneously supposed to be parasitic on man.

**Bdella'ria.** (Βδάλλω, to suck. F. bdellaire.) Applied by Blainville to a Family of the Entomozoa apoda that move by means of vents at the two extremities of the body, as the leeches.

**Bdellat'omy.** (Βὸέλλα, a leech; τέμνω, to eut.) The application of the Bdellometer.

Bdellepithe ca. **Bdellepithe ca.** (Βδέλλα; ἐπιθήκη, from ἐπιτίθημι, to put on.) A tubular instrument, of glass or other material, used for the application of leeches to any part. **Bdellepith**'esis. (βδέλλα, a leech;

έπίθεσις, a laying on.) The application of

leeches.

Bdel'lidæ. A Family of the Order Acaridea, Class Arachnida. Body long; rostrum distinctly separated from the rest of the body; a constriction between the two pairs of anterior legs; cheliceræ ending in nippers; palpi large, antenniform; two to six ocelli.

Bdel'lium. (Βδέλλιον, from Heb. b'dolach.) A gum resin somewhat resembling very impure myrrh, the product of various species of Balsa-

modendron.

- B., African. A species of the resin said to be produced by the Balsamodendron africanum. It is translucent, waxy in fracture, and is in tears of a pale yellowish to a brown-red colonr.
- B., Egyp'tian. The produce of Hyphæne thebaica. Formerly used as a dinretic and diaphoretic.
- B., In'dian. A species yielded by Balsamodendron mukul, B. pubescens, and B. Roxburghii. The hest is of a yellowish or dark brown colour, according to its age, unctuous, brittle, but soon softening and growing tough between the fingers; it is somewhat transparent, of a hitterish taste, and moderately strong smell; is slightly deobstruent, and was used as pectoral and emmenagogue, being likewise called Bolchon; externally as a stimulant and for promoting suppuration. It is the Gugul of the Indian Materia Medica.

B., Sicilian. See B. siculum.
B. sic'ulum. (L. siculus, Sicilian.) Δ bitter halsamic exudation from the roots of the Dancus gummifer.

**Bdellom'eter.** (Βδέλλα, a leech; μέτρον, a measure. F. bdellométre; I. and S. bdelometro; G. Bdellometrum.) Mechanical leech. An instrument which serves as a substitute for the leech, consisting of a small cupping-glass to which is connected a scarificator and exhausting syringe.

**Bdelyg'mia.** (Βδελυγμία, from βδελύσ-σομαι, to feel a loathing.) Nausea, or dislike of

food (Hippocrates); an abominable fætor. **Bdes ma.** (Βδέσμα, a stench.) The escape of intestinal flatus.

**Bdol'us.** (Βδόλος, a stench.) The escape of intestinal flatus.

**Bead.** (Sax. bed, genitive gebed, a prayer; so called from their use in saying prayers.) A small ball, perforated so as to be strung on a thread, originally used for counting prayers.

B.-proof. A term denoting the strength of spirituous liquors, as shown by the continuance of the bubbles or beads on the surface for a

certain time. (Hoblyn.)

B., specif'ic gravity. Hollow balls of different densities, the amount being marked on them. Used to determine by their floating the specific gravity of a fluid.

B. tree. The Melia azederach.
Bead'ed. (Eng. bead, from Sax. bed, genitive gebed, a prayer. L. moniliformis; F. moniliform; S. moniliforme; G. rosenkranzformig.) Consisting of beads.

B. roots. Knotted roots, consisting of

alternate enlargements and contractions.

Beaf'steak fun'gus. The Fistulina hepatica.

**Beak.** (A Celtie word, probably from Breton bek, a beak. L. rostrum; Gr.ρόγχος; F. bee; I. becco; S. pico; G. Schnabel.) A bill, a point.

The horny epidermic covering of the ante-

rior extremity of the maudible and maxilla of the ornithorhynchus and of birds and of turtles. The beak of certain fishes, as the scarus, parrotfish, is not epidermic or ecteronic, but dermal or enderonic, and consists of a congeries of long narrow teeth.

In Botany, a long narrow tip. The tubular portion of a retort.

B. of cor'pus callo'sum. (F. bec du corps calleux.) The recurved anterior termination of the corpus callosum of the hrain beyond what is called the knee.

B. of enceph'alon. (F. bec de l'encephalon.) The anterior pointed extremity of the hemispheres of the cerebrum.

Beak'ed. (Same etymon.) Having a long

B. pars'ley. The Anthiscus vulgaris.

Beak'er. (Old Sax. bikeri, a cup; or from low Lat. bicarium, a wine-cup, from Bikos, an earthen wine-vessel.) A glass with or without a heak or spout; used in chemical operations.

Beale, Li'onel. An English physician, now living.

B.'s ophthal'moscope. An ophthalmoscope in which the reflector and lens are enclosed in a tube, to the side of which a small lamp is affixed having a plano-convex lens.

Beam. (Sax. beam, a tree.) A long piece of timber.

Also, a ray of light.

B. of a bal'ance. The horizontal rod which has the fulernm in the middle and a scale pan suspended from each end. The part of the beam from the fulcrum to either end is called an arm, each of which should be exactly equal to the other.

B. tree, white. The Pyrus aria,

Bean. (Sax. bean; Welsh ffaen. from ffa, that which is covered. L. faba; Gr. κύαμος; F. fève; I. fava; S. haba; G. Bohne.) The seed of the Leguminosa, specially the seed of the Esta rulagics. Faba vulgaris.

B., Algaro'ba. See Algaroba bean.

B., bog. The Menyanthes trifoliata. B., bog, fring'ed. The Limnunthemum nymphaoides.

B., Brazilliau. The Paharim bean.

B., broad. A variety of the Faba vulgaris. Broad beans are used as food in the young state; when dried in this condition they contain, according to Payen, nitrogen as matter 29:05, starch 55-85, cellulece 1:05, fat 2, salts 3:65, and water

8.4. in 100 parts.

B., buck. The Menyanthes trifoliata.

B., bush. The kidney bean, Phase The kidney bean, Phasiolus

B., Cal'abar. The seed of the Physostig-ma venenosum. See Physostigmatis faba. B. ca'per. The Zygophyllum fabago. B. cop per. A term for granufated copper.

B., cow. The Cicuta virosa.

B., duf'fin. The Phaseolus lunatus.
B., earth. The Arachis hypogea.

B., Egyp'tian. The Nymphau nelumbo. B., Egyp'tian, black. The Lablab vul-

B., French. The Phaseolus vulgaris. The green pods are eaten as food.

B., garden. The Faba vulgaris.
B., haricot. The ripe seed of Phascolus vulgaris. Used as food. They contain, according to Payen, nitrogenous matter 25.5 parts, starch 55.7, cellulose 2.9, fat 2.8, salts 3.2, and water 9.9, in 100 parts.

B., horse. A variety of Faba vulgaris. Horse beans are used as a cattle food, and to adulterate wheat flour. According to Payen, they contain nitrogenous matter 30 8 parts. starch 48 3. cellulose 3, fat 1.9, salts 3.5, and

water 12:5, in 100.

B., In'dian. The Catalpa bignonioides. B., kid'ney. The Phascolus vulgaris. The green pods are eaten as food when cooked.

B., kid'ney, un'derground. The Ara-

chis hypogira.

B., Malac'ca. The Aricennia tomentosa.
B. ot Carthage'na. The oblong ovalshaped bean produced by the plant Laurus pichurim, and probably also by the Ocotea puchury. It is heavy, brown-coloured, and has a musk-like smell; is aromatic and carminative; famed in South America as an antidote for the poison of all serpents; called, likewise, the Pichurim bean.

B. of St. Igna'tius. See St. Ignatius's bean; the seed of Imatia amara.

B., orde'al, of Cal'abar. The seed of Physostiyma venenatu.

B., Pichurim. See Pichurim bean.

B., Pon'tic. The Nymphaa nelumbo. B., Puch'ury. Same as Pichurim bean.
B., red. The Abrus precatorius.
B., sa'cred. The Nelumbium lutcum.

B., scarlet. (F. haricot d' Espagne.) The Phascolus multiflorus, var. coccineus.

B., snap. The Phascolus vulgaris.

B., string. The Phascolus vulgaris.

B., Ton'ga. Same as B., tonku.
B., Ton'ka. The seed of Dipterix odorata.

B. tree. The Catalpa bignonioides. B. tree, white. The Cruticgus aria.

B.-tre'foil. The Anagyris factida.
B. tre'foil tree. The Cytisus labarnum.

B., vanilla. The fruit of Vanilla plantfolia.

B., Vellore. The Phascolus lunatus. B., wild. The Apios tuberosa.

Beanca pers. The plants of the Nat. Order Zygophy laced.

Bear. (Sax. bera, allied to L. fera, a wild

loast; Gr. apkros; L. ursus; F. ours; I. orso; G. Bar.) A name of the species of the Genus Ursus. Bear's flesh is good food, and the fat is esteemed as an application to the hair.

Bear berry. The Arbutus www ursi. Beard. (Sax. beard. L. barba; Gr. πώγων; F. barbe; I. and S. barba; G. Bart.) The hair on the upper lip, part of the cheeks, and the chin of adult men, and some apes.

The respiratory organs of some molluses. Filamentous appendages, as the awns of

grasses.

Beard'ed. (L. barbatus; F. barbu; G. bartig, langhaarig.) Having a beard, or some beard-like appendage.

B. dar'nel. The Lolium temulentum.

B. pep'per ag'aric. The Agaricus piperatus.

Bear'ing-down. A familiar term applied to the sensation of weight and fulness and pressure downwards in the vaginal canal in certain uterine cases, as prolapsus.

E. pain. The expulsive pains of the uterus

in labour.

Bear's ber'ry. The Arctostuphylos uva

B.'s bil'berry. Same as B.'s berry.
B.'s breech. The Acanthus mollis.
B.'s ear san'icle. The Cortusa mathioli. B.'s ear, yel'low. The Primula auri-

B.'s foot. The Alchemilla vulguris, and also, the Helleborus factidus.

B.'s foot, great bas'tard. The Helleborus fætidus.

B.'s fright. The Heptullon graveolens.

B.'s garlick. The Allium ursinum.
B.'s grass. The Yucca filumentosa.
B.'s whortleberry. The Arctostaphylos ura ursi.

Bear'weed. The Veratrum viride. Bear'wort. (G. Barwurz.) The Meum uthamanticum.

Beat. (Sax. beatan, to beat.) A stroke. Also, a term used to express the condition in which two simple tones alternately strengthen and weaken each other.

B. of heart. The systole of the heart. Bea'tenberg. Switzerland. Above the lake of Thun; 3138 feet high. Comfortable hotels, in a fairly sheltered and very sunny spot. An excellent summer residence for invalids.

Beau. A French physician, born 1806, died 1864. He was a voluminous writer on the liver and spleen, on epilepsy and hysteria, on anaesthesia, hooping-cough, and other subjects.

Beau'gency. France; near Orleans. Tonic and aperient waters, containing sodium, calcium, magnesium, and iron carbonates.

Beau'jolais. An old subdivision of the province Lyonnais, in the Rhone district of Eastern France. It gives its name to a red wine which has more body than claret, but is less full than Burgundy.

Beau'lieu. France; Departement Puy de Dôme. An alkaline gaseous mineral water, containing sodium earbonate 2.5 parts, and ferric carbonate '09, in 1000. Used in the sequelæ ef

ague and in anæmia.

Beau'mont. An American physician, born 1785, died 1853. He is chiefly known by an account of his observations of the process of digestion, especially as observed in the cure of

Alexis St. Martin, who had a fistulous opening into the stomach from a wound.

Beau'mont root. The Gillenia trifo-

Beau'perthuy's method. A plan for treating leprosy, consisting in good hygiene, abstinence from salted meats, soap and water baths twice a day, infrictions over the body of cocoa-nut or olive oil, application of cashew nut oil, and the administration of perchloride of mercury, or, where this is contraindicated, of carbonate of soda.

Beau'preau. France; Departement Maine et Loire. A feeble chalybeate and bicarbonated

water.

Beau'regard-van'don. See Rouzat. Beaurepair'e. See Les Roches. Beau'vais. France; in Picardy. Little

used chalybeate waters.

Beaver. (Sax. befer, form of L. fiber, a beaver.) The Castor fiber. It supplies Custor, and is excellent eating.

B. tree. The Magnolia glauca, and also,

the Magnolia macrophylla.

B. wood. The Celtis occidentalis, and also, the Magnolia glauca.

Bebee'ria. Same as Bebeerin.

B. sul'phate. See Beberia sulphas. Bebeer'ic. Relating to bebeerin.

B. ac'id. (F. acide beberique.) A white, crystalline, deliquescent substance, soluble in alcohol, fusible and volatile, found in the seeds

of Nectandra rodiai.

Bebeer in. (L. bebeeria) An alkaloid, C<sub>28</sub>H<sub>21</sub>NO<sub>6</sub>, found in the bark and seeds of Nectandra rodiæi, the bebeera or green-heart tree of British Guiana. It is whitish, inodorous, amorphous, bitter, very slightly soluble in water, very soluble in alcohol, slightly soluble in ether; forms nucrystallisable salts.

B. sul'phate. See Beberiæ sulphas.

Bebeer'u. The Nectandria rodiai. **Bebe'riæ sul'phas,** B. Ph.  $C_{35}H_{40}N_2$  $O_6,H_2SO_4$ . Sulphate of bebeerin. It occurs in thin brownish scales, yellowish white when pure, soluble in alcohol and acidulated water. Used as a tonic, 1-2 grs.; as an antiperiodic, 5-20 grs. It is also given in periodic headache, neuralgia, dyspepsia, and menorrhagia. Inferior in value to quinine.

Bec. France; near Ronen. Chalybeate

waters little used.

Beccabun'ga. The bunga; also, the V. anagallis. The Veronica becca-

Becca'ria's test. A sign of pregnancy, being intense pulsating pain in the occipital region.

Bechæsthe'sis. (Bi $\xi$ , a cough;  $\sigma\theta\eta\sigma\iota$ s, sensation.) The excitement of a aiothyous, sensation.) e mgh.

Be'chia. (Βήχια; G. Heiserkeit.) Hoarseness, cough.

Be'chias. (Βηχίας.) Same as Bechia. Be'chic. (Βήξ, a cough. F. bechique; I. bechico; G. hustenstillend.) Belonging to

medicines given for a cough.

B. flow'ers. (F. fleurs bechiques.) Equal parts of flowers of Verboscum thapsus, Malva sylvestris, Althwa officinalis, Helichrysum, Tus-silago farfava, and Papaver rheas. Used in infusion.

B. fruits. (F. fruits bechiques.) A term applied to a mixture of dates, the fruit of Rhamnus zisiphus, dried figs, and raisins.

**Be'chica.** (Βηγικά, from βήξ.) Cough medicines

Be'chics. (Same etymon.) Remedies against a cough.

**Be'chion.** (Βήχιον, from βήξ, a G. Hufluttich.) The Tussilayo farfura. (Βήχιον, from βήξ, a cough.

Be chium. Same as Bechion.

Becho'des. (Βήξ, a cough. F. bécheux; G. hustend.) Having, or full of, or pertaining to, congh.

Bechorthopnœ'a. (Big, a cough; δρθός, upright; πνέω, to breathe.) Hooping-

Be'chous. (Bif.) Having, or pertaining

to, a cough.

Beck'enried. Switzerland; Canton Unterwalden. A climatic health resort on the south shore of the Lake of Lucerne, the Vierwaldstädter See.

Becon'guille. A name of the Cephaëlis ipecacuanha.

Bec'querel. A French physician, born 1814, died 1866.

B.'s pills. Sulphate of quinine 1.50, extract of digitalis 0.20, colchicum seeds 0.5 tract of digitalis 0.20, colchicum seeds 0.5 gramme, for 10 pills. Dose, one to three daily

**Becui'ba nux.** (L. nux, a nut.) A nut produced by a Brazilian tree, which yielded a balsam highly esteemed in rheumatism. (Quincy.)

Bed. (Sax. bedd; G. bett; etymology doubtful.) Something to sleep on.

In Geology, a thick layer or stratum; also, the surface of junction of a stratum, as distinct from the line of junction, which is a seam.

B., air. See Air bed.

B. bug. The Cimex lectularius.
B. case. A form of hysteria in which the patient will not leave her bed.

B., hydrostatic. Same as Arnott's bed, the invention of Dr. Neil Arnott.

B. sore. (F. decubitus; G. Wundliegen.) An inflamed spot over the sacrum, hip, or other projecting part liable to pressure, occurring in a person who, from disease or injury, is confined in great measure to one position; the epidermis may be rubbed off, and the skin and subjacent tissues may slough.

B., wa'ter. A term for Arnott's bed, the invention of Dr. Neil Aruott.

Bed e musk. (llind.) The Salix agyptiaca. Cultivated at Lahore for the sake of an aromatic water used in the hot season.

Bed'da nuts. A term for Bellerie myrobalans.

Bed'does, Thomas. Au English physician, born at Shiffnal, in Shropshire, 1754, died 1808. He established a pneumatic institution for the treatment of disease by inhalation of gases. Here, with Davey as the superintendent, the properties of nitrous oxide gas were first demonstrated. He wrote many popular medical works.

Bed'eguar. (S. bedegar, L. fungus rosaceus, sponyia cynobasti; G. Rosenschwamm, Siebenschläfer.) A filamentous gall on roses, produced by the Cynips rose, C. brandtii, a species of Mesoleptus and perhaps other insects. Formerly esteemed as a remedy for the bite of poisonous animals, as lithoutriptic and vermifuge, and was used in scrofula, calculous affections and hydrophobia.

Bed'ford. United States of America; between Philadelphia and Pittshurgh, near the

Alleghany mountains. Saline and sulphurous mineral waters, in an agreeable climate.

Bed'ford willow. The Salix Russel-

Bedlift. A cinvas stretched by a wooden frame, having an aperture in the centre for defaccation, which is placed upon a mattress. By means of a strap attached to each end the frame may be raised with the patient, and kept in this position by wooden rests. In Volkmaun's modiheation pulleys for extension are fastened to this frame

Bed'rest. An inclined plane which can be fixed at any angle by a rack, and which is placed under the pillow to support the head and back. **Bed'straw.** The Galium aparine.

B., cheese ren'ning. The Galium verum.
B., cross-leav'ed. The Galium cruciata.
B., great hedge. The Galium moliugo.

B., greaterla dies. The Galium mollugo.

B., la'dies. The Galium verum. B., rough marsh. The Galium uliqino-

B., sweet-scent'ed. The Galium triphyllum.

B., white. The Galium mollugo.

B., yel'low. The Golium verum.

Bee. (Sax. beó, probably of onomatopoetic origin. L. apis; Gr. μέλισσα; F. abeille; L. ape; S. abeja; G. Biene.) A Genus of Hymen-opterous insects, specially the Apis mellifica, from which honey and wax are obtained. When dried or powdered bees were used as a diurctic.

B. bread. See Propolis.
B. drop. The Oroban he virginiana.
B. drop, Albany. The Pterospora an-

B. drop, false. The Hypopitys lanujinosa.

B. glue. Same as Propolis.

B., hive. The Apis mellifica.

B., hon'ey. The Apis mellifica. B., In'dian. The Apis indica.

B., queen. The female of the Apis mellifica. Beech. (Sax. bice, a probable noun form. G. Buche; F. hitre; I. faggio.) The Fagus

B., Indian. The Pongamia glabra.

B. mast. The fruit of the Fagus sylvatica.

B. mast oil. See Oleum fugi.

B. nut. The fruit of the Fagus sylvatica.

B. nut. The fruit of the ragus sylvatica.
B. nut oil. See Olum fagi.
B. tree. The Fagus sylvatica.
Beef. (Old F. borf, but. F. bowf; I.
manzo; S. vaica, bucy; G. Rindfleisch.) The flesh
of demestic cattle. Good beef should be firm but clastic, of a lively red colour, without lividity; the fat should be firm, of a pale yellowish white colour. The odour should not be unpleasant.

If beef possesses the following characteristics it is unfit for food :-Very pale or purple colour ; wet, sodden, and flabby to the touch; fat looking like jelly or wet parchment; a sickly or cadaverous smell, or one of drugs; the presence of

parasites. (Letheby.)

An average composition, according to Moleschott, is—water 73.4, soluble albumin and harmatin 2.25, insoluble albuminous matters, as fibrin, 15-2, gelatin 3-3, fat 2-87, extractive 1-38, creatin 068, ash 1.6; this ash consists of sodium chloride '31, potassium chloride '154, potash '54, soda '026, lime '051, magnesia '023, iron oxide or phosphate 011, phosphoric acid 435, sulphuric acid '035, silica '011.

B. tape'worm. The Tania mediocanel-

B. tea. A pound of lean meat, cut into small pieces, put into a jar with a pint of cold water, is allowed to stand two hours; the jar is then placed in a saucepan containing water on a fire; the water is allowed to simmer very gently for an hour; the liquid is then strained from the meat, and, with addition of salt or other condiment, is fit for use. Beef tea is commouly employed in the dictary of the sick.

Beef woods. The plants of the Nat.

Order Casuarinaceæ.

Bee'hive top'ped. Having a rounded top, like a beehive; applied to certain vesicles. **Be'en.** The *Centaurea behen*.

Bee'nel. (Mal.) Probably the Croton racemosum. Used in beadache.

Beer. An Austrian surgeon, born 1763, died 1821. His works on ophthalmie surgery and medicine are greatly esteemed.

B.'s cat'aract knife. An instrument used for making the section of the cornea in the extraction of cataract. The blade is triangular in shape, the back on a line with the handle, and the cutting edge forming with it an angle of 18°.

B's. collyr'ium. An eye-water, composed of plumbic subacetate, rose water, and spirit of

rosemary.

(Sax. bear, beer. L. cerevisia; Gr. ζύθος; F. bière; I. birra; S. cerveza; G. Bier.) The product of the vinous fermentation of an infusion of malt and hops. Crushed malt is infused in water, at 77° C. (170° F.), for two hours; during this time the diastase effects the conversion of the starch of the grain into dextrin and sugar. The clear liquor, wort, is boiled with hops, cooled, and then mixed with yeast in fermenting vessels; having been allowed to ferment for some time, but not to its full course, the yeast is removed, and the remainder, beer, is drawn off into casks, where a further process of slow fermentation proceeds. Sp. gr. varies from 1006 to 1030 or more. Beer consists of water; alcohol 1 to 10 per cent.; malt extract (sugar, dextrin, and allied substances) 4 to 15 per cent.; hop extract in small quantity; acids consisting of lactic, acetic, gallic, and malic acids, in variable quantity; albuminous matter 5 per ecut.; alkalive chlorides and phosphates, and earthy phosphates 1 to 2 per cent.; free carbonic acid 1 to 2 per cent. by weight. Beer is stimulating and nutritive. See Malt, Ale, Porter.

B., adultera'tion of. Beer has been adulterated with water, cane sugar, liquoriee, caramel, gentian, chiretta, quassia, wormwood, orange peel, chamomile, pierre acid, cocculus indicus, strychnine, tobacco, opium, ginger, coriander, earaway, cardamoms, grains of paradise, capsieum, ferrous sulphate, alum, salt, chalk, soda,

eream of tartar, sulphuric acid.

B., antiscorbu'tie. (F. sapinette.) Seurvy grass and buds of spruce fir, of each 1 oz., horseradish root 2 oz., new ale half a gallon. Macerate 4 days, press, and strain. Dose, 4-6 ounces, in scurvy. There are other nearly similar formulæ.

B., black. A synonym of B., spruce. B. chow'der. Spruce beer boiled with water and mixed with molasses.

B., cineho'ua. Cinehona bark I oz., brandy 2 oz. Infuse for a day, then add new beer I quart; in three days filter. Dose, 4 to 6 ounces, in ague. There are other formulæ.

B., Jews'. The same as B., tar. B., pine. See B., spruce.

**B., pipsissewa**. Pyrola umbellata (pipsissewa) ½ lb., water 1 gallon. Boil, strain, add sugar 1 lb., powdered ginger ½ oz. Yeast q. s., ferment, strain, and bottle. Dose, half a tumblerful, in scrofulous disease of joints.

B., sarsaparil'la. Sarsaparilla 1 lb., guaiaeum bark 1/4 lb., guaiaenm wood, liquorieo root, of each 2 oz., aniseed 12 oz., mezereon rootbark 1 oz., cloves  $\frac{1}{4}$  oz., moist sugar  $3\frac{1}{2}$  lbs., hot water 9 quarts. Mix, let it stand in a warm room, occasionally shaking, till fermentation sets in, when, after standing a few days, it may be used. Dose, 6 or 8 onuces three or four times a day, as an alterative. There are other for-

B. springs. A term applied to mineral

water containing carbonic acid gas.

B., spruce. (F. sapinette; G. Tannensprossenbier.) Essence of spruce 1/2 pint, pimento, ginger, of each 5 oz., hops  $\frac{1}{2}$  lb., water 3 gallons. Boil for 10 minutes, add moist sugar 12 lbs, warm water 11 gallons; mix, add yeast 1 pint, ferment 24 hours, and then bottle. Diuretic and autiscorbutie.

B., stomach'ic. Centaury tops, Roman wormwood, of each 4 handfuls, gentian root 2 oz., the yellow rinds of 6 Seville oranges, Spanish angelica root, winter's bark, of each loz., new ale 3 quarts. One or two wineglassfuls on an empty stomach.

B., sulphu'ric acid. Sulphuric acid I drachm to 10 pints of mild beer. Let it settle, and use the clear liquid. Used in lead work and in lead colic. A tumblerful two or three times a

day.

- B., Swiss vul'nerary. (G. Falltrank.)
  An infusion of various Alpine aromatic plants, including the species of arnica, achillaa, valeriana, primnla, pyrola, hypericum, asperula, and others, according to the custom of the family or district. Used in all injuries, of whatever kind, as a drink.
- B., tar. Bran 2 pints, tar 1 pint, honey 1 pint, water 6 pints. Mix, simmer for three hours, then add yeast ½ pint, ferment for 36 hours; strain. In bronchitis and phthisis. Dose, a wineglassful before each meal.

B. yeast. See Cerevisiæ fermentum. Bee's-nest. The Drucus carota.
Bee'sha. A Genus of the Nat. Order

**B.rheed'ii.** Hab. India. A large bamboo. A decoction is used as a gargle in toothache, and is given in amenorrhea. It is the chief source of Tabasheer. (Waring.)

Bees'wax. See Cera flava.

Beet. (Sax. bite, from L. beta. Gr. τεῦτ-λου; F. bette; I. bietola; S. acelga; G. Mangold.) A Genus of the Nat. Order Chenopodiacea. See Beta.

B., chard. The Beta cycla.
B., field. The mangel warzel, Beta hybrida.

B., hy'brid. See Beta hybrida.

B., red. See Beta rubra. B., sea. See Beta maritima.

B., white. See Beta alba.

Beet'le. (Sax. bitel, from bitan, to bite.)  $\Lambda$  generic name given to coleopterous insects.

B., blis'tering. The Cantharis vesica-

B., oil. The Meloe proscarabæus. It is an

irritant diuretic, and has been used in gout, kidney diseases, dropsy, syphilis, gonorrhœa, ague, and jaundice.

Beet'leweed. The Galax aphylla.

Beg'bie. A Scottish physician.

B's. disca'se. A name given sometimes to Exophthalmic goitre.

Beg'gars lice. The Galium aparine.

**Beg ma.** (Βῆγμα, from βήσσω, to cough.) Used by Hippocrates, de Morb. l. ii, xliv, 8, for the sputum, or matter expectorated by coughing; also, for the cough itself.

Be'gon. A French botanist, who lived in

Saint Domingo.

Bego'nia. (Begon.) A Genus of the Nat. Order Begoniacea.

B. aceto'sa. (L. acetum, vinegar.) Used as the B. acida.

B. ac'ida. (L. acidus, sour.) Hab. Brazil. Used in vesical cutarrh.

B. acutifolia. (L. acutus, pointed; folium, a leaf.) Hab. Jamaica. Climbing sorrel. Leaves acid, somewhat acrid in taste. A decoction is used in catarrh. (Waring.) **B. bidenta'ta.** (L. bis, twice; dentatus,

toothed.) Anticatarrhal and antiscorbutic. (Wa-

ring.)

B. cuculla'ta. (L. cucullus, a cowl.)
Anticatarrhal. (Waring.)

B. grandino'ra. (L. grandis, great; flos, flower.) The astringent roots are used in Peru against hæmorrhages, chest complaints, and SCHITY V.

B. hirtel'la. (Dim. of L. hirtus, hairy.)

Antiscorbutic. (Waring.)

B. malabar'ica. Used as a potherb.
B. platanifo'lia. (L. platanus, the plane

tree; folium, a leaf.) Antiscorbutic. (Waring.) B. tomento'sa. (L. tomentum, a stuffing for cushions.) Same as B. grandylora

B. tubero'sa. (L. tuberosus, full of swellings.) Used as a potherb.

B. undula'ta. (L. undulatus, waved.)

Antiscorbutic. (Waring.) **Begonia'ceæ.** (F. bégoniacé.) Applied by Bonpland and Kunth to a Family having the Begonia for their type. Succulent plants; leaves alternate, unequal-sided at the base, stipulate; flowers diclinous; calyx superior; male flower with two large external, and two small inner, petals; stamens numerous; anthers 2-celled, clavate; female flowers with 5—8 sepals; ovary inferior, winged, 3-celled; placentas axile; stigmas 3, sessile, 2-lobed; fruit winged, capsular; seeds numerous, without albumen.

Begoniads. The plants of the Nat.

Order Begoniaceæ.

Beg uan. A bezoar or concretion found in the intestines of the Iguana lizard.

Beg'uin's fu'ming liq'uor. A solution of ammonium sulphide; the same as Boyle's fuming liquor.

B.'s sul'phuretted spir'it. Same as B.'s fuming tiquor.

Be hen a biad. The Centauria behen.
B. a'bias. The B. rubrum.
B. ack'mar. The B. rubrum.

B. al'hum. (L. albus, white. I. been; G. morgenlandische weisse Widerstors.) The white behen. The root of the Centaurca behen, found on the Libanus, of an aromatic odonr and rough taste. Reputed a vermifuge and antispasmodic.

B. ha'mer. The B. album.

B. mag'num. (L. magnus, great.) The

seeds of the Jatropha multifida.

B. officina rum. (L. officina, a workshop. F. behen blane; G. Schachtkraut.) The root of the Cucubalus behen.

B., red. See B. rubrum.

B. ru brum. (L. ruber, red. F. behen rouge; G. rothen Widerstors) The roots of the Statice limonium, red behen. Said to be tonic and astringent.

B. vulga'ris. (L. vulgaris, common.) The

Cucubalus behen.

B., white. See B. alhum.

Behen ie ae'id. Same as Benic aeid. Beiahala'len. The Sempervivum teeto-

Beid el os'sar. Asclepias procera. Used in Africa against fever and the bites of serpents. The leaves are used in eataplasms for indolent swellings; the constic milky jniee is employed to disperse venereal nodes, and the down of its seeds forms a kind of tinder.

Beid'elsar. Same as Beid el ossar. Bei'joim. A synonym of Benzoin.

Bejar y Montemay'or. See Montemayor y Beyar.

Beietlan. The fruit of species of the

Genus Lansium.

Bejui'o. The Bean of Carthagena, which

Be'kes. Hungary; County Zemplin. A tepid sulphur water, used only for bathing.

Bekh bunuf sha. Probably the root of Iris florentina, imported from Cabul to Patna. Used as a perfume and stimulant. (Waring.) **Bel.** The same as *Bacl*. The fruit of *Ægle* 

murmelos.

Bel mos'ehus. See Abelmoschus.

Bela. The fruit of Ægle marmelos, which see: also, Belæ fructus.

Bela aye. (Ind.) The bark of the Nerium antidysentericum, Used in Madagascar in dysentery.

Beladam'boc. A Species of Convolvulus which grows in Malabar; containing an acrid juice, which is made, with oil and ginger, into a limiment; used against the bite of a rabid ani-

mal. Be'læ frue'tus. Bael fruit. The dried half ripe truit of Egle marmelos. The fruit is a berry, the size of a large orange, spherical, with a hard, woody rind or shell, containing 10-15 seed-bearing cells, which enclose a large quantity of tenacious mucilage. It is imported in vertical slices, or broken pieces, with a brownish-orange dried pulp adhering to the pale brown rind. It contains mucilage and sugar, but is said to exhibit a mere trace of tannin. It is recommended in chronic dysentery and diarrhea.

The dried fruit of the mangosteen, Garcinia mangostana, is said to be occasionally substituted

for it.

B. liq'uidum extrac'tum, B. Ph. A fluid onnce represents an ounce of bael. Dose, 1-2 drs.

Belake. Same as Bela-aye. Bel'alp. Switzerland; four hours by mule from Brieg, in the Rhone valley. Height 6732 feet. The hotel is heautifully situated above the Great Aletsch Glacier. Splendid summer aircure place for overworked townsmen.

Belamodagam. A Malabar plant of the Genus Scarola, the leaves of which are said to be diuretic and emmenagogue.

Belanger'ea. A Tribe of the Nat. Order Cunoniarea

Bel'belta. An Abyssinian name of an anthelmintic composed of the tops of the Celosia trigyna and C. populifolia. Used for tenia.

**Belem'nite.** (Βέλεμνον, a dart.) Fossil remains of a Cephalopod of the Family Belemnitida, popularly called Thunderbolts and Arrow-stones. They were powdered and used as a remedy against nightmare. The structure which goes under this name is the terminal part of the endoskeleton, and consists of a nearly cylindrical body, the guard, which occasionally contains, lodged in a cavity in its upper end, the alveolus, a chambered cone, the phragmacone, having the remains of the ink-bag in the last chamber, and superiorly being continued as a horny lamiua, the pen or proostracum.

Belemnitidæ. An extinct Family of the Subsection Decapoda, of the Order Dibranchiata, Class Cephalopoda. Shell internal, composed of a conical-chambered portion, with a marginal siphuncle, sometimes produced into a horny plate, and lodged in a cylindrical fibrous

guard.

Belempitol'ogy. (Belemnite; λογός, a discourse. F. and G. belemnitologie.) Term by Faure Bignet for the natural history of the Belemnites.

Belem'noid. (Βέλεμνον, a dart; εΙδος, form.) Dart-shaped.

B. pro'cess. A styloid process.

Belenite. (Βέλος, a dart.) Same as Betemnite.

**Bel'enoid.** (Βίλος, a dart; εἶδος, form. L. belenoides.) Styloid; long, conical, and

Bel'eson. Balsam. (Ruland and Johnson.) Also, the Indian name of the Mussanda frondosa.

Bel'gaum wal'nut. The Aleurites tritoba

Be'li oe'ulus. (L. Belus, an Indian deity ; oculus, an eye.) See Belloculus.

Belil'la. The Mussanda frondosa. Beli'num. The Apium graveolens.

Bell. (Sax. bell, from bellan, to bellow. L. campana, tintinnahulum; Gr. κώδων, χάλκωμα; F. cloche; I. campana; G. Glocke, Schelle, Klingel.) A hollow metallic body, of a cup-shape, used for producing more or less musical sounds. Also, any body having the ordinary shape of a bell.

B., Can'terbury. The Campanula trachelium and C. medium.

B., Cov'entry. The Campanula medium. B.-flow'er. The Campanula; also, Narcissus pseudonareissus.

B.-flow'er, field. The Campanula patula. B.-flow'er, net'tle-leav'ed. The Campanula truchelium.

B.-flow'er, ram'pion. The Campanula ravunculus.

B.-flow'er, spread'ing. The Campanulu patula.

B. flow'er, Syr'ian. The Campanula laciniuta.

B.-met'al. Founders' standard consists of an alloy of copper 77 parts, tin 2, antimony 2. The proportions vary, and zine, iron, and lead are sometimes added.

B.-sha'ped. llaving the shape of a bell. Same as Campanulate.

B. sound. (F. bruit d'airain.) A metallie

ring heard on placing the ear over a large cavity when its surface is percussed or struck by a hammer on a metallic pleximeter. Heard in pneumothorax.

Bell. An American physician.

B.'s dis'ease. A form of mania characterised by a sudden accession of symptoms, with loss of sleep, delirium, loathing of food, and extreme depression after excitement. The disease runs a rapid course.

Bell, Ben'jamin. A Scotch surgeon of the eighteenth century. He wrote a 'System of Surgery,' and treatises on 'Ulcers and on Gonor-

rhœa

**Bell, John.** A Scotch surgeon, born in Edinburgh in 1762, died in Rome 1820. Ilis 'Anatomy and Physiology of the Human Body' and his 'Principles of Surgery' were his most pated writings. noted writings.

Bell, Sir Charles. An English surgeon, born 1774, died 1842. Ilis anatomical researches and his surgical works possess a lasting

reputation.

B.'s law. The doctrine that the anterior roots of the spinal nerves consist of motor fibres, and the posterior roots of sensitive fibres.

B.'s paralysis. Paralysis of the portio dura of the seventh pair of cranial nerves; the facial nerve.

Bell's pow'der. An anthelmintic and purgative composed of equal parts of rhubarb, scammony, and calomel, and three parts of

Belladon'na. (I. bella donna, handsome lady, because the juice was used to improve the skin. L. atropa; F. belladone; S. belladona; G. Tollkirsche, Nachtschatten.) The pharmacopeial name of the leaves and root of the Atropa belladonna. Belladonna produces mydriasis, first accelerates the heart's action, with increase of force, then the pulse becomes weaker, and in a later stage slower, than normal; the temperature is first increased, afterwards lowered; it excites the brain, and afterwards quieteus it, in medicinal doses; it relaxes the circular involuntary muscular fibres, arrests the secretion of saliva and sweat, produces often a red rash on the skin, and increases the secretions of the liver and Belladonna has been much used in kidneys. epilepsy, in chorea and tetanus, in mania, in neuralgia, especially pelvic, as a relaxor of spasm in asthma, spasmodic stricture, during the passage of gall-stones, in spasm of the sphincter ani, in constipation without distension of bowels, in hooping-cough, in scrofulous ophthalmia, in acute inflammation, in acute nephritis, in scarlatina, and in suppression of urine. It has been used in salivation and the night sweats of phthisis, and as an antidote to poisoning by opium or fungi. Locally applied, belladonna is of great service in stopping the secretion of milk, and in relieving pain. Dose of the tincture 5-20 min., of the succus 5-15 min., and of the extract \( \frac{1}{4} \) to 1 or 2 grs. See Atropin.

B. baccifera. (L. bacca, a herry; fero, to bear.) The Atropa belladonna.

B., pois'oning by. Giddiness, sleepiness, dryness of mouth, difficulty in swallowing, strong quick pulse, flushed face, bright eyes, dilated pupils, imperfect sight from paralysis of eiliary muscle, hesitation of speech, unsteady gait, numbness of surface; then delirium, coma, and Or after a sleep the symptoms may rapidly decline. Death usually is within twenty hours. No marked post-mortem signs; dilated pupils, congested brain, perhaps congested stomach. Fatal dose very irregular. Antidotes: emetics, tannin and things containing it, and the stomach-pump; opium has been advised. For tests, see Atropin.

B. rash. A rosy rash, accompanied by fever, dry throat, and dilated pupils, resulting from an overdose, or too long continuance in

medicinal doses, of belladonua.

**B. trichot'oma.** (Τρίχα, threefold; τό-μος, a cut.) The Atropa belladonna.

Belladon'næ folia, B. Ph., U.S. Ph. (L. folium, a leaf. F. feuilles de belladone; G. Tollkirschblätter.) The leaves of Atropa belladonna, and the branches to which they are attached. They are 3'-6" long, ovate, acute, entire, smooth, the uppermost in pairs of unequal size; when dry they are of a dull greenish colour, and have a faint narcotic odour and a sweetish,

subaerid, slightly nauseous taste. **B. ra dix,** B. Ph., U.S. Ph. (L. radix, a root. F. racine de helladone; G. Tollkirschenwurzel.) The root of Atropa belladonna. It is 1'-2' long, 5"-2" thick, round, spiudle-shaped, branched, wrinkled, pale brown on the outside, internally whitish, of little odour, and sweetish

Belladon'nin. An amorphous hase which

accompanies atropin.

Bella gio. Italy; on the Lake of Como. A climatic health resort in lung and nervous dis-

Bel'lain. A Derbyshire term for lead colic.

Bellegu. The Myrobalanus. Belleisle cress. The Barbarea præ-

Belleregi. The Myrobalanus.

The fruit Bel'leric myrob'alans.

of Terminalia bellerica.

Switzerland; Canton Bern, Bel'lerive. on the right bank of the Birs, not far from Basel. A mineral water, of milky appearance and sulphurous taste. Sixteen ounces contains magnesium sulphate 5 grains, sodium sulphate 8.6, and calcium carbonate 3.4. Used in chronic affections of mucous membranes, scrofula, kidney and skin diseases; as a douche in chronic rheumatism and gout.

Belles'me. France; near Montagne.

Chalyheate waters of little note.

Bel'leville. Frauce; a suburb of Paris. A cold sulphur spring. Used in chronic skin diseases, bronchitis, chronic laryngitis, scrofula.

France; Department of Ain. Bel'ley.

Saline aperient waters.

Bellid'eæ. A Tribe of the Nat. Order Compositæ.

Bellideoï'des. (L. bellis, a daisy; sios, form) The Chrysanthemum leucanthemum.

Bel'lieæ. A Tribe of the Nat. Order Com-

Bel'lied. Having a belly. Same as Urccolate and Ventricose.

Belli'ni. An anatomist of Florence. Born I643, died 1704.

B., ducts of. (G. Bellinische Röhren.) The excretory tubes of the kidney opening on the papilla; the Uriniferous tubules.

E., tubes of. The B., ducts of Bellinzo'na. Italy; on the Lago Maggiere. A winter climatic resort.

Bellirica. See Myrobalanus bellirica.

Bellis. (L. bellus, neat.) A Genus of the Nat. Order Compositæ. Achenes compressed; pappus none; receptacle naked, conical, involucrescales obtuse, equal, in a single row.

B. an'nua. (L. amuus, lasting a year.)

The same as B. perennis.

B. horten'sis. (L. hortensis, of a garden.) The B. perennis.

(L. major, greater.) The B. major. Chrysanthemum leucanthemum.

B. mi'nor. (L. minor, less.) The B.

E. peren'nis. (L. perennis, perpetual. F. paquerette; I. maryherita; G. Maszlieb-chen, Ganzeblume.) Common daisy. Scape single-headed; leaves spathulate, obovate, erenate, one-nerved. The leaves and flowers, which are somewhat acrid, were formerly applied to wounds, and used in phthisis and pulmonary affections. The root is antiscorbutic.

B. praten'sis. (L. pratensis, belonging to a meadow.) The Chrysanthemum leucanthe-

B., sylves'tris mi'nor. (L. sylvester, belonging to a wood; minor, less.) The B.

**Bel'loc.** France; Departement de la Gironde. A cold, bicarbonated, feebly chalybeate,

mineral water.

Bel'loc. A French surgeon, who wrote in the middle of the eighteenth century, born 1752,

died 1807. B.'s sound. A metallie cannula open at both ends, and containing a stylet of considerably greater length, which has a plug at one end and at the other a long flexible piece of steel terminating in a ring; when protruded from the cannula the stylet curves on itself. The instrument is used for plugging the posterior nares for the arrest of hamorrhage. It is introduced, with the stylet drawn in, into the nostril from the front as far as it will pass, the handle is then pushed in so that the ringed end protrudes and curves round the soft palate; a string, previously attached to the ring, is caught, and to it is tied a sponge or pad of lint; the stylet is drawn in, and with it the pad is closely applied to the posterior

nares, so as to block up the opening.

Belloc'ulus. (Beli oculus, the eye of Bel.) A gem held sacred to Bel by the Assyrians, who alleged that an eye was visible in it. Believed to be efficacious in removing diseases of

the eve

Bel'lon. (Fr.) A term for lead eolic. Bellos'te. A French surgeon; born 1634,

died 1730.

B.'s pills. Mercury 6 parts, honey 6, cape aloes, powdered, 6, black pepper, powdered, 1, rhubarb, powdered, 3, Aleppo seanmony, powdered, 2. Triturate the mercury with the honey and half the aloes until no globules are seen; add the remainder of the aloes, then the scammony and the other ingredients. into 3-grain pills.

Bello'tas. (Span.) The fruit of the Ilex major. Recommended by Spanish physicians in diseases of the chest accompanied with profuse

expectoration and hemoptysis.

Bel'lows. (Sax. bælig, a bag. F. souff-let; I. soffietto; G. Blaschalg.) An instrument for producing a current of air.

B. mur'mur. See Murmur, bellows.

B. sound. See Murmur, bellows. B. sound, fu'nic. See Murmur, funic.

B. sound, placen'tal. See Murmur, placental.

**Bel'luæ.** (L. bellua, a beast of large size or of great feroeity.) One of the eight Orders of Mammalia, according to Linnaus; it included the elephant.

Bellus. Hungary; County Trentschin. A diuretie and stimulating mineral water, containiug ealcium sulphate and sulphide, sodium sulphate and sulphide, a little iron, and large quan-

tities of carbonic acid and hydrogen sulphide.

Bell'wort, smal'ler. The Uvularia Bell'wort, smal'ler.

perfoliata.

Bell'worts. The plants of the Order Campanulacea.

Bel'ly. (Sax. bælig.) The abdomen; the womb; formerly applied generically to the cavities of the head, thorax, and abdomen. See Abdomen, Alvus, Venter, Cwlia.

B., bound. The Alvus astricta.

B., lax. The Alvus fluida.
B. of a muscle. The fleshy part of a musele.

Bellyroot. The Ligusticum actaifolium. Belmos'chus. The Hibiscus abelmos-

Bel'nileg. A name for the Myrobalanus. **Beloglos'sus.** (Βέλος, a dart; γλῶσσα, the tongue. F. béloglosse; G. pfeilzungig.) Applied by Ranzani to a Family of the Scansores, having the tongue lumbriciform, very long, and protractile, as the magpie.

Bel'oid. (Βέλος, an arrow, a dart; εἶδος, form.) Dart-shaped.

E. pro'cess. A synonym of Styloid process.

**Bel'one.** (Βελόνη, a sharp point.) Α needle

Belo'nia. A Genus of the Nat. Order Gentranacew.

**B. as'pera.** (L. asper, rough.) Hab. Antilles. The bark is used as an astringent and

Bel'onoid. (Βελονοειδής, pointed, needleshaped. L. belonoides, belonodes; G. nadelformig.) Arrow- or needle-shaped. **B. pro'cess.** The styloid processes of the

temporal bone and of the radius.

**Belonos** pasis. (Βελόνη, a needle; σπάσις, a drawing. F. belénospasis.) Term for the irritation produced by applying needles, or Perkins's metallic tractors, upon the skin.

Bels'eye. A synonym of Belloculus. Belt. (Sax. belt. L. balteus, cingulum; Gr. ζώνη; F. ceinture; I. cintola, cintura; G. Leubbinde.) A girdle round the waist or abdo-

B., andom'inal. A broad clastic girth fitted to the abdomen, and worn during pregnancy or for abdominal enlargements, generally to support the muscles and viscera.

B., Hil'dan's. A leathern waistband, which was formerly used in the reduction of dislocations and fractures of the kimbs, whether thoracic or

B., hydropath'ic. A belt of lineu or other material, enclosing lint to be wetted with water, and covered with oil silk on the outside. Used as a compress in hepatie or other disease.

B., hypogas tric. A narrow abdominal belt making pressure only in the hypogastric region.

B., mercu'rial. A woollen waistband, spread with mereurial ointment; used in syphilis and where a mercurial action was desired.

Beltur'bet. Ireland; Co. Cavan. pleasant district near Lough Erne. A chalybeate water.

Belu'ga. The white whale, Delphina-pterus leucos. Also, a term formerly applied to

the sturgeon, Acipenser huso.

**Belul'cum.** (Βέλος, a dart; ἕλκω, to draw out.) An instrument for extracting arrows or darts; it was of various figure; described by

Ambrose Paré, Chirurg. x, 18.

Belvisia cea. (From Beauvois, the discoverer of the genus.) An Order of epigynous, calycifloral Exogens, having a superior, coriaceous, valvate ealyx; a corolla consisting of three whorls of united petals; indefinite monodelphous stamens; a plurifocular ovary; and large, reuiform, exalbuminous seeds, with amygdaloid cotyledons.

Belvisie'æ. Same as Belvisiaceæ. Bel'zoe. A synonym of Benzoin.

Bel'zoim. A synonym of Benzoin. Belzo'inum. Same as Benzoinum.

Bemtam'ara. Same as Bentamara.
Ben, oil of. The thick, inodorous, transparent oil expressed from the seeds of Moringa pterygosperma. Used externally in pains in the lumbs, gout, and rheumatism; internally as a purgative.

B. mag'num. (L. magnus, great.) The

fruit of the Jatropha multifida.

B. moen'ja. Name of a tree of Malabar, a decoction of the roots of which is held by the natives to be efficacious in malignant fevers; its bark in decoction, with sweet flag and rice, is said to stop immediately the vomiting caused by the bite of poisonous serpents.

B. nut. The seeds of Moringa pterygo-

sperma.

B. of judæ'a. Benzoin.

Ben'ath. A term for a pustule. (Dungli-

Ben'birn. A name of Osteocolla.

Bença'o de De'os. The Abutilon escu-

Bencool'en cloves. The unexpanded flowers of Caryophyllus aromaticus, from Sumatra.

B. tea. The produce of Glaphyria nitida.

Ben'dee. The Abelmoschus esculentus.

Ben'di kai. The fresh capsules of Abelmoschus esculentus

Benedekfal'va. Hungary; County Liptan. An alkaline spring containing carbonic acid.

Ben'eden, Von. A Dutch physiologist. B.'s classification of animals. 1. Hypocotyle, the vitellus re-entering by the inferior surface of the hody-Mammals, Birds, Reptiles, Amphibia, and Fishes. 2. Epicotyla, the vitellus re-entering by the superior surface of the body—Insects, Myriapods, Arachnids, Crustaceans, and Rotifers. 3. Allocotylæ, the vitellus re-eutering on neither surface-Molluses, Worms, Echinoderms, Polyps, and Protozoa.

Benede'nia el'egans. (Beneden ; L. elegans, elegant.) A sexually mature form of Trematode worm, found amongst the scales of

Sciæna aquila.

Benedet'ti, Alexan'der. An Italian physician, known as Benedictus, who died in Venice in 1525. He wrote on the plague and on anatomical subjects, and was the first to recognise the mode of formation of biliary calculi.

Benedic'ta her'ba. (L. benedictus, blessed; herba, a herb.) The Geum urbanum.

B. laxati'va. (L. laxo, to loosen.) The Confectio sennæ.

D. sylves'tris. (L. sylvestris, belonging

to a wood.) The Geum rivale.

Benedic'tus. (L. henedico, to bless.) Blessed. This term was anciently much used in reference to the milder purgative medicines, as rhubarb; also, applied to substances of different qualities, as Vinum benedictum, antimonial wine. Also, a name of Benedetti.

Beneficium nature. (L. beneficium, a favour; natura, nature. F. benefice de la nature.) A benefit of nature. Applied to spontaneous recovery from disease without the aid of medicine.

Be'nel. The Croton racemosum. Beneo'lens. (L. bene, well; oleo, to smell.) A fragrant medicine, such as many of the balsams.

Benetut'ti. Italy; on the bank of the Tirsi. A sulphuretted water, of a temperature of 38° C. (100·4° F.)

Benevi'vum. Same as Benzoinum.

Benev'olence. (L. bene, well; volo, to That sort of love which disposes one man to confer a kindness upon another; goodwill. Term for a faculty, found also in the lower animals, but in them limited in a great degree to the production of passive milduess of disposition, producing the desire of the happiness of others, and disposing to compassion and active benevolence. Its organ is, according to the phrenologists, at the upper part of the frontal boue, immediately before the fontanelle.

Beng. A term for Indian hemp

Ben'gal card'amom. The fruit of Amonum maximum, cultivated in the mountains of Nepaul.

B. cat'echu. A variety of catechu, in quadraugular cubes, imported from Calcutta.

B. el'emi. The produce of Canarium com-

B. gram. The Cicer arictinum. B. ipecacuan'ha, white. The root of Tylophora læviyata.

B. ki'no. The Butea kino.
B. mad'der. The produce of Rubia mun-

n. o'pium. The opium produced in Behar and Benares.

B. quince. The Ægle marmelos.

B. root. A name of Cassumuniar.
Ben'galë indo'rum. A term for Cassumuniar.

Ben'gi. The henbane, Hyoscyamus niger. Ben'giri. The Sapium aucuparium. Ben-ha'roun. Algeria; Kabylia. Waters

containing sodium chloride and bicarbonate, of 18° C. (64.4° F.) Used in dyspepsia, urinary deposits, malarial cachexia, and enlargements of the liver.

Ben'ic ac'id. C22H44O2. An acid, according to Völcker, obtained by saponification from a peculiar fatty matter contained in the oil of ben. Sbining white needles, fusing at 76° C. (169° F.)

Benig'n. (L. benignus, kind; contraction of benegenus; from beni, a form of the stem of benus, or bonus, good; and genus, from geno, to beget. Evijus; F. benigne; I. benigne; G. gutartig.) Mild; gentle. Applied formerly to medicines gentle in their operation. Applied also to the mild form of a disease, as opposed to the malignant.

Benig'nity. (Same etymon.) A term

applied in recognition of the mildness and favourable progress of a disease; and also to a tumour which is not cancerons or malignant.

Beninca'sa. A Genus of the Nat. Order

**B. cerif'era.** (L. cera, wax; fcro, to bear.) The white gourd eaten throughout India. The ripe fruit is said to be alexipharmic, and mixed with oil, is given in dysuria; it is looked on as a specific in harmorrhages from the internal organs.

Benjamin. A synonym of Benzoin, gum. B. bush. The Benzoin odoriferum.

B. flow'ers. A synonym of Benzoic acid.

Benja'oy. A synonym of Benzoin, gum. Benjoin. A synonym of Benzoin, gum.

Benjui. A synonym of Benzoin, gum. Benne leaves. The leaves of the Scsamum indicum and S. orientale. They abound in mucilaginous matter. One or two leaves are stirred about in eight ounces of tepid water. Used as a demulcent in diarrhœa and urinary discuses; also, as poultices.

B. oil. The oil of the seeds of the Sesamum indicum and S. orientale. Bland and inodorous; solidifies at  $-5^{\circ}$  C. (23° F.) Laxative.

See Oleum sesami, U.S.

Ben'net. (Dim. of benedictus, blessed.) The Genm urbanum, or berb avens; also the

Geum virginianum.

Bent. (Eng. part. of bend; from Sax. bendan, to bend.) Hanging down; curved; applied to flowers on curved peduncles, that hang towards the ground.

Bent grass. (Sax. beonet.) The grass

Agrostis.

Bentam'ara. The Nymphaa nelumbo. Benth'am and Hook'er's Classifica'tion of Plants. Subkingdom I. Phanerogamia. Class I. Dicotyledons. Subclass 1. Angiosperance. Division I. Polypetalæ, Series 1. Thalamilloræ, Series 2. Discifloræ, Series 3. Calycifloræ, Division II. Monopetakæ, Series I. Epigyme, Series 2. Hypogyme v. Perigyme, Division III. Apetalæ, Series 1. Hypogyme, Series 2. Epigyme v. Perigyme, Subclass II. Gymnospermete. Class II. Monocotyledones. Series I. Epigynæ. Series 2. Coronariæ. Series 3. Nudifloræ. Series 4. Glumales.

Subkingdom II. Cryptogamia. Class III. Aerogens. Class IV. Thallogens. Subordinate to the "series" are "cohorts," or

groups of orders of equal value, though with different limitations, to the "alliances" in Lindley's 'System.'

Ben yus. Hungary; County Sohl. alkaline saline water, with carbonic acid, springing from the granite.

Ben'zal al'cohol. A synonym of Benzył alcuhol.

Benzal'cohol. Same as Benzyl alcohol. Benzal'dehyde. Bitter almond oil. See Aldehyde benzoic.

C<sub>7</sub>H<sub>7</sub>NO. White, flaky Ben zamide. crystals, nearly insoluble in cold water, soluble in boiling water, alcohol, and ether; melts at 125° C. (257° F.), volatilises at 290° C. (554° F.) Formed by the action of ammonia on benzoyle chloride. It is contained in the crude oil of bitter almonds.

Ben'zene. Call . Formed in the dry distillation of many organic substances, and chiefly found in coal-tar oil. It is limpid, colourless, of u strong aromatic odour. Sp. gr., at 15.5° C.

(60° F.), 0 885, boils at 80.5 C. (176.9° F.), and erystallises at 0° C. (32° F.) Nearly insoluble in water; mixes with alcohol and ether; easily dissolves fats and resins, also iodine, sulphur, and phosphorus. Used to remove grease stains; destroys epizoa. Vapour used in hooping-cough. As an external application in rheumatism and neuralgia; internally in trichiniasis. Its vapour is an active narcotic poison.

Ben zidam. A synonym of Aniline.

Ben'zin. A synonym of Benzene.

Benzi'num nitro'sum. A synonym of Nitrobenzol,

B. petro'lei. The benzene of petroleum. See Benzene.

Ben'zo-. This word, used as a prefix in compound terms, means that benzoic acid forms a constituent of the substance denoted.

Benzo'as. Benzoate; a salt of benzoic acid.

B. ammo'nicus. Benzoate of ammonia. B. lith'icus. A synonym of Lithium benzoute.

B. so'dicus. Benzoate of soda.

Benzo'ate. A salt of benzoic acid.

B. of ammo'nia. See Ammonia benzoas.
B. of lime. See Calcium benzoate.

B. of lith'ia. See Lithium benzoute.
B. of so'da. See Solium benzoute.
Ben'zoated. Mixed or charged with benzoin or benzoic acid.

B. lard. See Adeps benzoatus.

Ben'zoe. The former pharmacopolial name of Benzoinum. (D.)

**B. amygdaloï'des.** ('Αμυγδάλη, an almond; εἶδος, likeness.) A variety of benzoin, consisting of whitish tears, united by a reddishbrown material, and so called from the resemblance of the white grains to fragments of blanched almonds. A variety of Sumatra benzoin.

**B.** in sor'tis. (L. in, in; sors, a lot.) Benzoin in sorts. 'The variety which consists of brown or blackish masses, without tears, and B. in sor'tis. usually containing impurities. A variety of Sumatra benzoin.

**Benzo'enil.** A synonym of *Vanilla*. Ben'zoës flo'res. (L. flos, a flower.) Flowers of benzoin, benzoic acid.

Benzo'ic. Of, or belonging to, benzoin.

B. ac'id. (Acidum benzoicum, flowers of benzein or Benjamin; F. fleurs de benjoin; G. Benzoesäure, Benzoeblumen.) C7H6O2. Exists in many balsams, but chiefly in gum benzoin, from which it is obtained by sublimation, and occasionally in the urine of the herbivora. Prepared on a large scale by boiling the urine of cows and horses, which contains hippuric acid, with strong hydrochloric acid. It consists of soft, white, flexible crystals, somewhat nacreous, of a slightly balsamic odour when warmed, melting at 120° C. (248° F.), subliming a little above, and boiling at 250° C. (482° F.) Dissolves in 200 parts of cold and in 25 parts of warm water; very soluble in alcohol. It is not affected by nitric acid. One part benzoic acid and one part of borax dissolve in 100 parts of water. When taken into the system it unites with glycocine and appears in the urine as hippuric acid, and sometimes as succinic acid, except when taken in very large quantities, when some appears nuconverted. Its influence on the exerction of urea and uric acid is doubtful. Contained in Tinct. Camph. co. and Tinct. Opii Ammoniata, B. Ph. Given sometimes in chronic

bronchitis; chiefly used in vesical catarrh, when, by increasing the acidity of the urine, it causes the phosphates to be dissolved. Its utility in uric

ncid deposits is doubtful. Dose, 10—30 grains.

R. al'dehyde. See Aldehyde, benzoic.

B. e'ther. C<sub>14</sub>II<sub>12</sub>O<sub>2</sub> or C<sub>7</sub>H<sub>5</sub>O<sub>2</sub>.C<sub>7</sub>II<sub>7</sub>. One of the constituents of the essential oil of the balsams of Peru and Tolu.

Benzoifera. (Benzoinum, benzoin; fero, to bear.) A name for the Styrax benzoin.

Ben'zoin. C<sub>14</sub>ll<sub>12</sub>O<sub>2</sub>. Prepared by mixing oil of bitter almonds with an alcoholic solution of potassium cyanide. Brilliant crystals, melting at 213° C. (407.4° F.), and dissolving sparingly in water, freely in hot alcohol.

Also, a name of gum benzoin.

B., bel'ly. A term applied to benzoin obtained during the fourth to the twelfth year of the life of the tree producing it; it is brown, and not so much valued as the B., head.

B., flow'ers of. (F. fleurs de benjoin ; G. Benzoeblumen.) A term for benzoic acid when prepared by sublimation.

B., foot. A common kind obtained by splitting the tree and scraping the branches; it

is mixed with bark and debris.

B., gum. (Arab. Benzoah. L. benzoinum; '. benjoin ; I. belzuino ; S. benjui ; G. Benzoe.) The resin of Styrax benzoin, which exndes from incisions made in the bark. Imported from Sumatra, Java, and Siam. It consists of brownish masses, with or without white tears, of fragrant odonr, and somewhat aerid taste. It contains benzoic acid, benzoin, and resin. Cinnamic acid is said to be found in some specimens. It is added to lard (Adeps benzoatus, B. Ph.), to prevent it turning rancid, and is contained in Tinct. Benzoini comp. Said to be useful as a fumigation in hooping-cough. Given in chronic bronchitis with profuse secretion; seldom used. Dose, 5-30

B., head. The benzoin which is furnished during the first three years of the growth of the

B., laur'el. The Styrax benzoin.

B., Penang'. A variety with white tears and a pleasant smell.

B., Si am. (F. benzoin à odeur de vanille.)
The most esteemed kind. It occurs in flattened tears or drops, white, opaque, and smelling of vanilla.

B., Suma'tra. Occurs in aggregated tears, alherent by means of a reddish matter, and opaque. Its varieties are Benzoe amygduloides and B. in sortis.

A Genns of the Nat. Order Ben zoin.

B. odorif'erum, Nees. (L. odorifer, fragrant. F. laurier benzoin; G. Benzoelorbeer.) Spice wood, spice bush, wild allspice, fever bush. Hab. United States. The flowers appear early in spring before the leaves, and are succeeded by clusters of bright crimson berries. All the parts have a balsamic odour. An infusion of the twigs is used as a stimulating aromatic in low fevers, and as a vermifuge; the bark has been used in ague. The berries have been used as an aromatic condiment; they contain a fragrant oil of the eiunamyl series, which is used externally in rheumatism, contusions, and flatulent colic.

Benzoinum. Gum benzoin. See Ben-

zoin, gum.

Ben'zol. A synonym of Benzene. B. ni'trate. Same as Nitrobenzol. **Ben'zoline.** A light hydrocarbon obtained by the fractional distillation of crude petroleum. It is used for lighting purposes.

Benzolum. A name of Benzone in the U.S. Ph. and others.

Benzou'ric ac'id. A synonym of Hip-

pura acid. Ben'zoyl. C7H50. The hypothetical radical of benzoic addehyde and benzoic acid.

B. hy drate. A synonym of Benzoic acid.
B. hy dride. A synonym of oil of bitter almonds. Benzoic aldehyde.

Benzoylglyc'ocol. A synonym of

Hippuric acid.

Ben'zyl al'cohol.  $C_7\Pi_5O_5$  or  $C_6\Pi_5$ . CH2.OH. A colourless, strongly refracting, faintly aromatic oil, of sp. gr. 1.051 at  $14^{\circ}$  C.  $(57.2^{\circ}$  F.), and boiling at  $207^{\circ}$  C.  $(404.6^{\circ}$  F.) It is insoluble in water, soluble in ether, alcohol, and acetic acid. It is formed by the action of nascent hydrogen on benzoic or hippuric acid, and is contained in the balsams of Peru and Tolu.

B. cin'namate.  $C_9H_7O_2.C_9H_9$ . Brilliant prismatic crystals, melting at 39° C. (102.2° F.) Found in Peru and Tolu halsams and in storax.

B. cy'anide. C6H5.CH2.CN. A colourless liquid which forms a large part of the volatile oils of the nasturtium, Tropwolum majus, and the garden cress, Lepidium sativum. boils at 232° C. (449.6° F.)

Benzyl'ic al'cohol. See Benzyl alco-

**B. ben'zoate.**  $C_7H_5(C_7H_7)O_2$ . A colour less oil found in balsam of Peru. It boils at 340° C. (644° F.)

B. cin'namate. See Benzyl cinnamate. Ber. The fruit of Zizyphus jujuba.

Be'ras as'ved. Arabic name for a species

of the Lepra judaica. B. be'jas. Same as Beras asved.

**Be'rat.** (Ar. signifying white spot.) An old term for leprosy.

B. ce'cha. The dark form of leprosy. B. lebe'na. The white form of leprosy

Ber'beral alli'ance. Same as Berbe-

Berberales. (Berberis.) The Berberal Alliance, according to Lindley. Hypogynous Exogens, with monodichlamydeous flowers, unsymmetrical in the ovary, sutural parietal, or axile placenta; definite stamens; and embryo enclosed in a large quantity of fleshy albumen. It includes the Nat. Orders Droseracea, Fumariacea, Berberidacea, Vitacea, Pittosporacea, Olacaceae, and Cyrillaceae.

Berbe'ria. Same as Beriberi.

Berberida'ceæ. A Nat. Order of shrubs or herbaceous plants. Leaves alternate, compound, with stipules often persistent and spiny; flowers generally yellow; sepals 3, 4, or 6, deciduous in two whorls; petals equal to sepals, or double in number, hypogynous; stamens of same number as petals, hypogynous; anthers 2-celled; carpels solitary, free, 1-celled; stigma orbicular; ovules anatropal; fruit baccate, or day and capsular, unilocular, indehiscent; albumen fleshy or

Berberid'eæ. A Tribe of the Nat. Order Berberidacew.

Also, the same as Berberidacea.

Ber'berids. The plants of the Nat. Order Berberulaeea

C20 II 17 NO4. Consists of a Berberin. yellow powder, or bright yellow, needle-like

crystals, obtained from the root of the Berberis rulgaris, also ascertained to exist in the calumba root, Cocculus palmatus, and in calumba wood of Coylon, Minispermum fenestratum, in Hydrastis canadensis, in Xanthorhiza apiifolia, in the Ranunculacee, in Anona polycurpa, in Podophyllum, and in many other species belonging to the Berberacea, Menispermacea, and Rannaculacea. Berberin is of bitter taste, slightly soluble in alcohol and cold water, freely in hot water. Forms, with acids, yellow crystalline salts, which in alcoholic solution yield, with a solution of iodine and potassium iodide, dark green, metallic-looking, dichroic scales. Produces in dogs convulsive tremblings, thirst, and paralysis of the hind legs. Given as a bitter tonic in dyspepsia and mucons diarrhea, and in enlarged spiech. Dose, 2-5 grains.

B. chlo'ride. Has been recommended as an antiperiodic in miasmatic fevers. Dose, I to 10 grains.

B. hydrochlo'rate. Same as B. chloride.

B. hypophos'phite. An aqueous solution of berberin sulphate is heated with litharge for six to twelve hours at 82.2° C. (180° F.), when the liquid is filtered from the resulting plumbic sulphate; any lead left is removed by hydrogen snlphide and filtering; hypophosphorous acid in slight excess is added after evaporation, and the resulting crystals are dried. Used as the other

B. phos'phate. A canary-yellow powder casily soluble in water, slightly in alcohol. Used as a local application in inflammations of the mucous membranes.

B. tree. The Cwlocline polycarpa.

Berberi'na. Same as Berberin. Berberi'num. (Berberis.) Berberin. B. phosphor'icum. The Berberin phos-

Ber'beris. (G. Berberitze, Sauerdorn.) A Genus of the Nat. Order Berberidacea. Sepals 6, with interior scales; petals 6, with 2 glands at the hase; stamens 6, without denticulations; pericarp tleshy, oblong, 2- or 3-seeded; seeds erect,

oblong, with a crustaceous skin.

Also, U.S. Ph. (F. ecorce de racine de berbéride; G. Berberitzenwurzelrinde) the bark of the root of B. vulgaris. It is rather thin, yellowish grey externally, orange-yellow on its inner surface, nearly inodorous, bitter, and when chewed makes the saliva yellow. It contains berberin and oxycanthin.

B. aquifo'lium, Pursk. (L. aquifolium, the holly.) The bark and root used as that of B. vulgaris.

B. arista'ta, De Cand. (L. aristatus, awned.) India. Root bark used in ague and remittents.

B. asiat'ica, De Cand. Root bark used as a fonic.

B. canaden'sis. American berberry. Hab. North America. Used in jaundice, diarrhoa, and dysentery.

B. dumeto'rum. (L. dumetum, thorn bushes.) The B. rulgaris.

B. kunawuren'sis, O'Shaug. A species used for making Rusot.

**B. lyc'ium,** Royle. (L. Lycius, belonging to Lycium, a country of Asia Minor.) Raisin berberry. India. The Lycium indicum of Dioscorides. An extract of the root and stem, Rusot, or Ruswut, is used in India in eye diseases. The

tincture, which contains berberine, is used in fevers of all kinds.

B. nepaulen'sis. Ilab. Northern India. Used as B. lycium.

B. nervo'sa, Pursk. (L. nervosus, having veins.) Bark contains bebeerin. Used as B. vulgaris.

B. oxycau'tha. ('Οξύς, sharp; ἄκανθα,

a thorn.) The B. vulgaris.

B. re'pens, Lindl. (L. repens, part. of repo, to ereep.) Root and bark used as an antiperiodie.

B. sinen'sis. (Mod. L. sinensis, Chinese.) Hab. Northern India, China. Used as B. ly-

B. tincto'ria, Lesch. (L. tinctorius, belonging to a dyer.) Dyers' berberry. IIab. Southern India. Used in intermittent fevers.

B. vulga'ris, Linn. (L. vulgaris, common. F. epine vinette; G. Berberitze, gemeine Sauerdorn.) Barbary. Europe. Spines 3-parted; leaves obovate, with small teeth; racemes drooping, many-flowered; petals entire; berries scarlet. The berries are gratefully acid and moderately astringent, containing malic and citric acids. The root and bark contain berberin. Tonic and aperient; formerly given in jaundice. **B. Wallichia'na.** Hab. Nepaul. Used

as B. lycium.

Ber'berry. The Berberis vulgaris. B. blight. The Ecidium berberidis, a

form, on the berberry, of the Paccinia graminis.

B., dy'ers'. The Berberis inctoria.

B., rai'sin. The Berberis lycium.

Ber'bers. A branch of the Hamite family

of the Mediterranean race of men. They are scattered over Northern Africa, were the aborigines of the Canary Islands, and were the oldest inhabitants of parts of Spain, the basin of the Garonne, and the Mediterranean islands.

Berbi'na. The Berberis vulgaris. Also, a synonym of Oxyacanthin.

Berch'akund. A Species of Batatas. Used in India in affections of the bladder, and to increase the secretion of milk.

Berche'mia. A Genus of plants of the Nat. Order Rhamnaceæ.

B. linea'ta. (L. linea, a line.) Used in China as a hydragogue.

Hab. Cochin China. B. lowreiria'na. Used as a deobstruent and diurctic. (Waring.)

B. volu'bilis, De Cand. (L. volubilis, that which is rolled round.) Hab. North America. Used as an alterative in syphilitic and cachectic affections.

Berchoon'ee. The dried and powdered

fruit of Zizyphus jujubu.

Bere. (Sax. ber.) A name of spring barley,
Hordeum vulgare.

Berenc'ze. Hungary; County Neograd. A chalybeate water.

Beren'daros. The Ocymum basilicum. Berenga'rio. A celebrated Italian anatomist, born at Carpi in 1470, died about 1550. Bereni'ce. A term for amber; from a city

of that name, whence it was brought.

Berenic'ium. An old term for potassium nitrate.

Berenise'cum. The Artemisia vulgaris. Berg. Wurtemburg. A chalybeate water, containing sodium ehloride, of a temperature of 20° C, (68° F.) Baths and drinking. Diuretic, tonic, and laxative. Used in chronic disturbances of the digestive organs.

Berg Giess'hübel. See Giesshübel. Bergamot'. (1. bergamotta, from Turk. beg-urmudi, from beg, prince; armud, pear. G. Fursteubirn.) A fine kind of pear.

Also (perhaps from Bergamo, an Italian town),

the Citrus bergamia.

B. cam'phor. Same as Bergaptene.

B., es sence of. The B., oil of.
B. lem on tree. The Citrus bergamia.
B. mint. The Mentha aquatica, subsp.

hirsuta, var. citrata.

B., oil of. C<sub>10</sub>H<sub>16</sub>. An essential oil contained in the rind of the fruit of the Citrus bergamia, and obtained by rasping it in a kind of mill. The oil is of a greenish-yellow colour, fragrant odour, and hitter pungent taste; its sp. gr. is 0.88. Its only use is to give a perfume to external applications.

B. pear es'sence. Fifteen parts of acetate of amylic ether and half a part of acetic ether

dissolved in I00 parts of alcohol.

B., wild. The Monarda fistulosa.

**Bergap'tene.**  $C_9H_6O_3$ . A waxy matter, which deposits on standing, from Bergamot oil; it crystallises from its solution in alcohol in silky, colourless, inodorous, tasteless needles

Ber'gera. A Genus of the Nat. Order

Aurantiacea.

B. Koenig'ii, Linn. Curry-leaf tree. Hab. Bengal. A small tree, with pinnate leaves, and small white flowers in panicles. Bark, root, and leaves are used as a tonic and stomachic; the root is laxative. The leaves, boiled in milk and bruised, are used as a poultice in poisonons bites. The fresh leaves are eaten in dysentery.

Beribe'ri. (Beri, a Cingalese word for weakness, and, by reduplication, signifying great weakness.) A disease, chiefly of the North of Madras, the Malabar coast, and Ceylon, most fatal among Europeans. The term has been made to include a large number of different diseases, where there is great weakness, by many writers. Beriberi is distinguished by the following features:-It commences with an emic symptoms, cold pale surface, dyspnœa and palpitation on exertion, scanty urine, pallid tongue; then severe general cedema, with stiffness of limbs, anæsthesia, and sometimes paralysis of lower extremities. Effusions into brain, pleura, or pericardium, generally precede death. Usually there is ascites; it may be aente or chronic. After death the connective tissue everywhere and the viscera are found infiltrated with finid, and the serous cavities also. The spinal cord is ædematous or congested; cause nuknown. The relation to barburs is unsettled.

Beribe'ria. Same as Beriberi. Bericoc'ce. A name for the apricot.

Bering erbrunnen. Saxony; at the foot of the Ramberg, 6000 feet above sea level, in a mild elimate. A mineral water, containing sodium chloride 87 grains, calcium chloride 78, magnesium chloride 3-2, aluminium chloride 2-4, and a minute quantity of bromine, in 16 onnees. Temperature 9° C. (48°2° F.) Used in scrofula, glandular swellings, and skin diseases.

Ber'ka. Germany; Saxe-Weimar. Artificial sand baths. Sulphuretted waters, containing calcium sulphate and carbonate. Used in chronic rheumatism. There is also a chalybeate spring.

Berk'ley springs. See Bath springs. Berlin blue. (G. Berliner Blau.) Same as Prussian blue.

Ber'mondsey. England; a suburb of London, on the south bank of the Thames. It

possessed a weak chalybeate water, which is now unknown.

An island in the North Bermu'da. Atlantic. Climate hot, equable, and rather limited. Hottest month, July; coldest, February. Sanitary condition formerly bad; now much improved. Yellow fever occasionally appears. Continued fevers, probably chiefly typhoid, very prevalent. Phthisis, diarrhoa, and dysentery, have much decreased. Pulmonary invalids are sent from the United States; the chief objection being the dry, sharp north-west winds during winter and spring.

The soap-nut, or soap-berry B. ber'ry.

produced by the Sapindus saponaria.

Ber'nard, Claude. ologist; born 1813, died 1878. A French physi-

B.'s canal'. A supplementary duct of the

pancreas, also called Santorini's canal.

Bernardi'no, San. Switzerland; Canton Graubünden, on the Splügen route. Seenery very grand; 5000 feet above sea level. A carbonated water, containing, in 16 oz., sodium sulphate 5.13 grains, calcium carbonate 3.93, calcium sulphate 11.9, magnesium carbonate 1.37, and iron carbonate 21. Used in catarrhs, lymphatic diseases, nervous affections, and skin complaints.

Berna'vi. An electuary used formerly by the Egyptians, but its composition is unknown. It is highly intoxicating, and produced extraordinary symptoms; mentioned by Prosp. Alpinus.

(Hooper.)

Berolinen'sis. Belonging to Berlin.

Beroli'num. Berlin.
Ber'ries, In'dian. A synonym of Coeculus indiens.

B., yellow Tur'key. The dried fruit of the Rhamnus catharticus, often substituted for cabebs.

**Ber'ry.** (Sax. berige, from beran, to bear. L. baeea; Gr. κόκκος; F. baie; 1. baeea; S. baya; G. Beere.) A pulpy, indehiseent, one or more celled, many-seeded pericarp, with parietal placenta, which produce the pulp, and to which the seeds are at first attached; these ultimately lie loose in the pulp. Examples are the grape, gooseberry, and banana.

Bers. An exhibitanting electuary formerly used by the Egyptians; composed of white pepper, white henbane seeds, opium, spikenard, enphorbium, pyrethrum, saffron, and honey; described by Prosp. Alpinus, de Med. Egypt., iv,

122. a.

Berthele'tia. A Genus of the Suborder

Per Condor Commosita. Tubulifloræ, Nat. Order Compositæ. **B. in'dica.** The B. lanceolata.

B. lanceola'ta. (L. lanccolatus, lance-shaped.) Hab. India. Leaves aperient.

A French chemist; born Ber'thollet. 1748, died 1822.

B.'s neu'tral car'bonate of ammo'nia. A name of ammonium bicarbonate.

B.'s salt. Potassinm chlorate.

A Genus of the Nat. Berthelle'tia. Order Lecythidacea.

B. excel'sa, Humb, and Bonpl. (L. excelsus, lofty.) Hab. Brazil, Guiana. The fruit is of the size of the human head, and contains a number of triangular seeds, the Brazil nuts.

B. nob'ilis. (L. nobilis, noble.) The B. excelsa.

Berthollime trum. The ChloromeBer'tin. A French anatomist; born 1712,

n., bones of. The sphenoidal spongy bones.

B., col'umns of. The prolongations iuwards of the cortical substance of the kidney between the pyramids; they extend as far as the sinus and the bases of the papilla.

Bertini sep'ta. (L. septum, a division.)

The same as Ecrtin, columns of.

Ber'tram. (A corruption of L. parthenium.) The Pyrethrum parthenium.

Bertrich. Germany; in a wooded valley in the Eifel district, a little distance from the Moselle. A charming district; very quiet. Waters almost indifferent, of a temperature of 32.5° C. (90.5° F.), containing a little sodium sulphate, chloride, and earbonate. Used in hysteria and nervous affections.

Bertu'a. Spain; near Corunna. mineral water containing sulphur. Used in rheumatism and skin diseases.

Be'ru. France; Champagne. Mild chalybeate waters.

Ber'ula. The Veronica beccabunga.

B. angustifo'lia. (L. angustus, narrow; folium, a leaf.) The Sium nodiflorum.

B. gal'lica. (L. gallieus, Galhe.) Sium

nodiflorum, or creeping water parsnip.

Beryl. (Βήρνλλος, from Arab bilaur, or Pers. bullur.) A pellucid gem or stone of a greenish colour; anciently supposed to have power against disease of the fiver, short breathing, eructatious, fluxion of the eyes, and contusions. It is a variety of the emerald containing no chromium.

Berylla. BeO. Oxide of beryllium, or glucina. A white powder very like alumina.

Beryl'lium. (F. beryllium.) Name by the Germans, because of its existence in beryl, for Glucium, or Glucium. Atomic weight 9. Symb. Be. Occurs as a silicate in beryl, emerald, and other stones. Beryllium is a white metal of sp. gr. 21. It is rare. Its salts are sweet and colourless, and are distinguished from those of aluminium by not yielding a blue colour when heated with cobalt nitrate under the blow-

Beryt'ion. (Βερύτιον; from its inventor, Berytius.) A collyrium in ancient use, described hy Galen, de C. M. sec. Loc. iv. 7; also a pastile, which was of great efficacy against dysentery.

Berze'lius. A Swedish chemist, born at Westerlösa in 1779, died iu 1848. His researches in electro-chemistry were of chief value.

Bes. (L. bis, twice; because it is twice the triens, or third part of the as, or pound of twelve ounces.) An eight ounce weight or measure of former times, mentioned by Celsus; Rhodius, de Pond. et Mens. p. 40.

Besa char. Arabic for fungus. (Dornaus, Ruland, and Johnson.)

Besan'na. Fungus muscarum, by which is supposed to be meant sponge.

Besa'sa. The Ruta graveolens.
Besen'na. The bark of the Albizzia anthelmentica. Used as a remedy for tapeworm, in doses of two ounces. Also called Mussenna.

Besenyöfal'va. Hungary; County Liptau. A mineral water containing earthy and ivon carbonates, with free carbonic acid. Used in abdominal congestions, spleen and hver enlargements, and other results of ague.

Bes'sanen. Redness of the external parts, like that preceding leprosy, occupying the face and extremities; supposed to be what are now called chilblains.

Bes'se. France; Departement Puy de Dôme. Cold weak chalybeate waters. Used in

anamic conditions.

Bes'sis. Same as Bes.

Besteria. A Genus of the Nat. Order Gesneruceæ.

B. viola'cea, Plum. (L. violaceus, violetcoloured.) A species of tropical America, the berry of which is used as food.

Bes'tiæ. (L. bestia, a beast.) One of the eight Divisions of Mammalia, according to Linmeus; it included the ox and such like.

Bestial'ity. (L. bestia, a heast.) natural sexual intercourse with an animal.

Bes'to. The Saxifraga granulata. Bes'tucheff's tinc'ture. The Tinctura ferri chlorati atherea.

**Be'ta.** (L. beta. Gr. τεύτλον; F. bette; I. bietola; S. acelga; G. Mangold.) A Genus of the Nat. Order Chenopodiacea.

**B. al'ba.** (L. albus, white.) White beet, a variety of the B. rubra. The leaves are eaten like spinach, and the root yields sugar; the juice and powdered root are said to form a good errhine.

B. altis'sima. (L. altissimus, superl. of altus, high.) The B. hybrida.

B. campes'tris. (L. campester, belonging to a field.) Maugold wurzel, the B. hybrida.

B. cy'cla. (Κόκλος, a globe. F. carde poirrée; l. bieta; S. acelga; G. Mangold, Römischer Spinat.) White garden beet. The leaf-stalks and mid-ribs are boiled and used as food. The leaves are used as an emollient poul-tice. The juice and the dried root were used as an errhine.

B. hy'brida. (L. hybrida, a mongrel.)
The plant affording the root of scarcity, Mangel wurzel of the Germans. The root is very large, and cultivated for cattle; it contains much of the saccharine principle, is very nutritious, and in times of searcity forms a valuable substitute for bread. It is used externally as a poultice to cleanse foul ulcers.

**B. maritima**, Linn. (L. maritimus, belonging to the sea.) A species which is supposed to have been the origin of the *B. vulgaris* and B. hybrida. The leaves are boiled and used as spinach.

B. ra'pa. (L. rapa, a turnip.) The betterave. A species grown in France for its sugar.

B. rubra. (L. ruber, red.) Red beet, the

root of which is used indifferently with that of the B. vulgaris; also used to improve the colou. of their claret, by the French.

B. vulga'ris, Linn. (L. vulgaris, common. F. bette ordinaire; G. Runkelrube.) Common beet, the root of which forms a well-known article of diet. The root and leaves were formerly used as emollicate applications, and are still employed as a dressing for blisters in France. It affords a considerable portion of sugar, and when dried like malt, after great part of the juice is expressed, is

used for the making of beer. **Betaille**. France; Departement de la Conèze. A mild sulphur water, with some iron.

Be'taine. C5ll11NO2. An alkaloid obtained from beet-root juice. It is contained originally in the plant, and is said to be identical with lycin from Lycium barbarum. It crystallises from alcohol in shining deliquescent crystals, having a neutral reaction and a sweetish taste.

Betayne. The Betonica officinalis.
Betel. (Tam. vettilee. G. Betelpfeffer.)
A preparation of an Eastern masticatory, made of the leaves of the Piper betle, areca nuts, and lime. It is excitant to the digestive canal, and is supposed to increase the power of endurance, to act as a tonic and as au aphrodisiac, and to be a remedy against climatic evils. It reddens the saliva. See Piper betle. **B. leaf pep'per.** The Piper betle.

B. nut. The Areca nut. B. nut palm. The Arcea catechu.
B. pep'per. The Piper betle.

B. vine. Same as B. pepper.

Beth'elsdorp al'oes. See Aloes, Be-

Bethroot. The Trillium creetum.

B., broad'leaf. The Trillium latifolium.

Beton'ica. (As if Vetonica, from Vetones, a people in Spain, by whom it was discovered.) A Genus of the Nat. Order Labiatæ. Calyx tenribbed; corolla exserted; stamens two, anterior longest; anthers opening longitudinally.

B. aquatica. (L. aquaticus, living in water.) The water betony, the Scrophularia

aquatica, or greater water-figwort.

B. corona'ria. (L. coronarius, pertaining to a wreath.) A name for the Dianthus caryo-

B. officina'lis, Linn. (L. officina, a shop. F. betoine; I. bettonica; S. betonica; G. Gliedkraut, Wiesen Betonie.) Wood betony, also kraut, Wiesen Betonie.) Wood betony, also called Stachys betonica. The leaves and tops have an agreeable smell, a slightly warm taste, with some degree of astringency and bitterness; the leaves are smoked like tobacco, and when dried their powder is used as a sternutatory; the roots are bitter and nauseous, strongly emetic and cathartie; a decoction of the flowers and leaves was anciently an esteemed remedy in gout, seiatica, headache.

B. Paul'i. See Betony, Paul's.

B. purpu'rea. (L. purpureus, purple.) The B. officinalis.

B. sylves'tris. (L. sylvestris, living in the woods.) The B. officinalis.

B. vulga'ris. (L. vulgaris, common.) The B. officinalis.

Bet'ony. The Betonica officinalis.

B., Paul's. A synonym of Lycopus virginianus, L. sinuatus, and of Veronica officinalis.

B., wa'ter. The Scrophularia aquatica.

B., wood. The Betonica officinalis.

Bet'terave. The Beta rapa.

**Bet'ula.** (Said to be from L. batula, from batue, to beat; because of it were made the fasees of the Romans.) A Genus of the Nat. Order Betulaceæ. Male flowers with no perianth; 8-12 stamens; female flowers, scale of catkin 3-lobed, 2-3-flowered; fruit with a membranaceous

margin. B.al'ba, Linn. (L. albus, white. F. bouleau blane; I. betulla; S. abudul; G. Weissbirke.) Silver birch. Leaves ovate-deltoid, acute, doubly serrate; fruit broadly obovate, with a broad margin. The leaves have been used as an antiseptic and detergent in ulcers. The inner bark is bitterish and astringent, and has been used in intermittent fevers. The young shoots and leaves are applied as an antiseptic and detergent in ulcers; and as decoction in gout, rheumatism, dropsy, and eutaneous diseases. The tree yields very freely a saccharine juice, which is used in urinary diseases, and when fermented is drunk as a stimulant. An oil distilled from the bark gives the odour to Russia leather, and is used in skin diseases. The bark contains betulin.

B. al'nus, Linn. (L. alnus, the alder tree.) The Alnus glutinosa.

B. emargina'ta. (L. emargino, to deprive of its edge.) The Alnus glutinosa.

B. glutino'sa. (L. glutinosus, gluey.) The

Alnus glutinosa.

B. len'ta, Linn. (L. lentus, tenacious, sticky.) Sweet birch. Bark and leaves have an aromatic flavour, and are stimulant and diaphoretic. An oil is obtained from the bark like oil of gaultheria; it is a product of decomposition, like oil of bitter almonds, and does not exist naturally in it. The analogue of amygdalin in this ease is Gaultherin.

B. ni'gra. (L. niger, black.) Hab. North rica. Used in decoction in putrid sore America.

threat.

Betula'ceæ. A Nat. Order of mono-chlamydeous Exogens. Trees or shrubs. Leaves simple, alternate, with deciduous stipules; flowers unisexual, amentaeeous, with sealy bracts; male flowers with 2 or 3 stamens; female flowers with a 2-celled ovary, and one pendulous ovule in each cell; fruit dry, indehiscent, 1-celled, 1-seeded, without a capsule; seed pendulous, exalbuminous; radicle superior.

Bet'ulin. C<sub>36</sub>H<sub>60</sub>O<sub>3</sub>. (G. Birkenkampher.) A substance discovered in the bark of the Betula alba, of a white colour, in very light, long, needle-like crystals, insoluble in water, or alkaline solutions, but soluble in concentrated sulphurie acid, ether, alcohol, and the fixed and volatile

Betulin'eae. The same as Betulaceae. Betulin'eous. Having an arrangement of parts as in the genus Betula.

**Betul'la.** Same as Betula.

Betulore'tic ac'id. C<sub>36</sub>H<sub>66</sub>O<sub>5</sub>. white resin which covers the young shoots and upper surface of the young leaves of Betula alba.

Beulah. England; near London. A saline water, never much used, containing magnesium

and sodium sulphate.

**Zeur'en.** Germany; in Hohenzellern Sigmaringen, 1850 feet above sea level on the Danube. A health resort, in a very mild and

stable climate, for lung and laryngeal diseases. **Bevilac'qua.** The Hudrocotyle asiatica. Bex. Switzerland; in the Rhone Valley; 1259 feet high. Pleasant climate, but hot in summer; sheltered; beautiful neighbourhood; large salt mines. Waters contain large quantities of sodium chloride, and are cold. Used in sero-fula and skin diseases. The grape cure is much employed here.

Bex. (Βήξ, a cough.) A cough; sonorous and violent expulsion of air from the lungs.

B. convulsiva. (L. convulsio, a convulsion.) A synonym of Whooping-cough.

B. hu'mida. (L. humidus, moist.) synonym of Expectoration.

According to Mason Good, common cough, accompanied with an expectoration of a mucous or serous fluid.

B. sic'ca. (L. siecus, dry.) Cough unaccompanied with expectoration.

B. therio'des. (θηριώδης, beast-like.) Α synonym of Whooping-cough.

Bexaguil'lo. White ipecacuan of Peru.

Bex'1s. (Same etymon as Bex.) A cough. Bexu'go. A purgative root, formerly imported from Pern, supposed to have been a species of Hippocratea. (Qminey.)

Bey'a. (Arab.) Alchemical name for Acetum

philosophicum, or Mercurius philosophorum, Also

for Aqua mercurialis. See Gabricus.

Bc'yar y Montemay'or. See Montemayor y Beyar.

Be'za. An Abyssinian name for favus. Bezet'ta eæru'lea. (L. eæruleus, dark

blue.) The Croton tinctorium, or litmus plant. Bez'oar. (Pers. Pa-zahar, from pa, against; zahar, a poison. F. bezoard; I. belzuar; S. bezoard; G. Bezoarstein.) A concretion found in the intestines of certain land animals, and formerly used as a medicine against poisons and infectious diseases; bezoars were also worn as amulets. A false bezoar was made with cray-fishes' eyes, crabs' claws, bruised and mixed with musk, ambergris, ox-gall, and such like; there are eight species.

**B. bovi'num.** (L. bovinus, belonging to cattle.) The bezoar of the ox, found in the

abomasum and gall bladder.

**B. equi'num.** (L. equinus, belonging to horses.) The bezoar of the horse.

B. fos'sile. (L. fossilis, dug up.) A small hollow body from Italy, found in sand and claypits, of a purple colour, with a rough surface, the size of a walnut, and light. The shell contains a fine greenish white earth, which was used as an alexipharmic.

B. german'icum. (L'gagropilus; F. egagropile; I. and S. egagropilo; G. Gemsenku-gel.) The German bezoar; the bezoar of the chamois; composed of felted hair which has been licked off and vegetable and calcareous matters.

B. hom'inis. (L. homo, a man.) The human bezoar, of doubtful existence. See Bezoardicum humanum.

B. hys'tricis. ("Υστριξ, a porcupine.) The bezoar of the porcupine, said to be found in its gall-bladder, particularly in the province of Malacca. It is intensely bitter, and on being steeped for a time in water, it impregnates it with its bitterness, and with aperiont, stomachic, and supposed alexipharmic virtues.

B. microcos micum. (Mespos, little; κόσμος, the world; man was called μικρός κόσmos.) The calculus found in the human bladder.

B., min'eral. The Antimonium diaphoreticum.

B. nut. The Guilandina bonducella.

B. occidentale. (L. occidentalis, west) The occidental bezoar, found in the ern.) abomasum of the chamois, or wild goat of Peru. It is larger than the oriental bezoar, and sometimes as big as a hen's egg, is of a rough surface, and green, greyish, or brown.

B. of cay man. Formerly much esteemed. now unknown.

B. of cham'ois. The B. germanicum.

B. of deer. An odorons waxy substance secreted by a sebaccons gland, the lachrymal sinus, situated below the orbit. Used as an antispasmodic.

B. of In dian por cupine. The B. hystricis.

B. of mon'key. See Bezoar simia.
B. orientale. (L. orientalis, eastern.)
The oriental bezoar, found in the abomasum of the Capra agagras, which inhabits the mountains of Persia. It is about the size of a kidney bean, roundish or oblong, smooth, and of a shining olive or dark greenish colour; also called Lapis bezoar oruntalis.

B. porci'num. (L. porcinus, of a hog.) The B. hystricis.

B. slm ize. (L. simia, an ape.) The bezoar of the monkey; also called Lapis simia.

B., veg'etable. The Calappite.
B., west'ern. The B. occidentale.

Bez'oard. Same as Bezoar. Bezoar'dic. (F. bezoardique.) Of, or belonging to, or having the properties of, the bezoar.

B. ac'id. Same as Ellagic acid. Bezoar'dica ra'dix. (L. radix, a root.) The Dorstenia contrayerva.

Bezoar'dicum huma'num. humanus, belonging to man.) An old term for human nrinary calculi; they were highly esteemed as alexipharmics.

B. jovia'le. (L. jovialis, belonging to Jupiter, an old name of tin.) An old preparation made by fusing regulns of antimouy with tin in a crucible, reducing to powder when cold, mixing intimately with corrosive sublimate, distilling the mixture after some days, and mixing the distilled liquor with a large quantity of water, by which a white powder is precipitated. washing the precipitate repeatedly, drying it and detonating with nitre, again carefully washing and drying; it is powerfully diaphoretic in doses of 10 grs. to 1 scruple.

B. luna're. (L. lunaris, belonging to Luna, the moon, an old name of silver.) A medicine made by distilling butter of antimony with a solution of nitrate of silver; deemed of great efficacy in epilepsy and various affections of the head. Dose 6 to 12 grs.; also applied as a name for the Pulvis Viennensis albus virgineus.

**B.** martiale. (L. martialis, belonging to Mars, an old name of iron.) An old preparation made in the same way as the *B. joviale*, only substituting iron for tin. Formerly used as tonic and diaphoretic. Dose 15 to 25 grs.

B. mercuria'le. (L. mercurialis, belong-

ing to Mercury, the name by which quicksilver is now commonly known.) An antisyphilitic made with chloride of mercury, butter of antimony, and nitrie acid.

B. minera'le. (Eng. mine, from Welsh maen, a stone.) An old preparation of antimony made by detonating powder of algareth with nitre, and washing the product, which is a dentoxide of antimony.

B. satur'ni. (L. Saturnus, Sam., an old name of lead.) An old preparation made by distilling protoxide of lead and butter of anti-mony with nitric acid. Formerly given, in doses of 6 grs., in diseases of the spleen.

B. sola're. (L. solaris, belonging to Sol, the sun, an old name of gold.) A diaphoretic made with gold filings, butter of antimony, and nitric acid.

B. ven'eris. (L. Venus, the goddess of love, an old name of copper.) Copper filings, butter of antimony, and nitric acid. Used in lepra and brain diseases.

Bezoar'dicus la'pis. stone.) The Bezoar. (L. lapis, a

Bezoar'ic ac'id. A synonym of Ellagic

Bhadigan kutai. Hindustani namo

of the star anise, Illicium anisatum.

Bhadlee. The seed of Panicum pilosum. Used in India as food.

**Bha-khoom'ba.** (Hind.) The dried flowers of Tricosanthes cordata. Used as a stimulant. (Waring.)

The Hindustani name of the

Bhang. The Hindusta Indian hemp, Cannabis sativa.

Bhastmon. A preparation used in Southern India as a remedy in leprosy, and composed of copper, egg-shells, sal ammoniae, corrosive sublimate, borax, orpiment, mercury, and lime.

Bhee Dana. (Hind.) The common quince seed, Cydonia vulgaris. Used as a demulcent in diarrhea and dysentery. (Waring.)

Bhij-bund. (Hind.) Small, shining, angular seeds, probably of Coldenia procumbens.

Used as an aphrodisiac.

Bhils. A widely-distributed mixed race of men, with coarse features, flat noses, and high cheek-bones, belonging to the Munda division of the Dravidian stock of Indians living in Rajputana, and in the high grounds near the rivers Tapti, Narbadda, and Mahi. They extend eastward to Varada and southward to the Western Ghauts as far as Poonah and Daman, but occur also in the mountains of Gujerat. They are supposed to be the aboriginals of India.

Bhoji-dan. (Hind.) The white root of Colchicum byzantinum, imported into upper India from Cabul. Used as a stimulant and

aphrodisiac.

The Indian name of the bean of Bhoot. the Soja hispida.

Bhu'midsch. A race of men, belonging to the Dravidian stock, inhabiting Lower Bengal from the Ganges to the river Baitarni.

Bi. (L. bis, twice.) A prefix signifying twice or double, as biceps, two-headed; bicuspis, twopointed; bicarbonate, a carbonate, with two equivalents of carbonic acid to one of base.

Bi'a. (Bía, strength. G. Gewalt.) Brnte

Biac'ca. (It.) Lead carbonate.

Biacu'minate. (L. bis, twice; acuminatus, pointed.) Doubly pointed, with the points diverging.

Biad'schu. A Malayan race of men inhabiting the southern coast of Borneo.

Bi'afads. A race of African Negroes inhabiting both banks of the river Geba, and the right bank of the Rio Grande.

Biafars. The same as Biafads.
Bialate. (L. bis, double; ala, a wing. F. biailė; G. zweiflügelig.) Having two wings or appendages.

Biantherif'erous. (L. bis; anthera,

anther; fero, to bear.) Bearing two anthers.

Biapic ulate. (L. bis; apiculum, dim. of apex, a point. G. biapiculirt, zweigipfelig, zweispitzig.) Having two apices.

Biappendic'ulate. (L. bis; appendix, an appendage. G. doppeltbeanhängselt.) Having two appendages.

Biarghetun'sim. (Arab.) Alchemical

name for Cerussa. (Ruland)

Biaris'tate. (L. bis; arista, an awn. G. zweigrannig.) Having two awns or beards.

Biarritz. France; on the shores of the Mediterranean. A pleasant snmmer sea-bathing Has been recommended as a winter resort for consumptives, for which it does not appear to be well fitted from its uncertain climate

and the frequent rainy days at that season.

Biartic'ulate. (L. bis, twice; articulatus, jointed. G. doppelgelenkig.) Two-jointed.

**Biatom'ic.** (L. bis; atom.) Term applied in Chemistry to a body which, having the same composition as another, contains in the same volume double the number of atoms.

Biat'orine. (From the Genus Biatora.) A condition of the apothecium of lichens when the margin is of a different colour to the epithecium, or is absent, or is pale internally.

Biauric'ulate. (L. bis; auricula, the external ear.) Two-lobed, as of the base of leaves.

Also, applied to the heart of those mammals which have two aurieles.

Biauri'tus. (L. bis; auris, ear. G. zweiöhrig.) Provided with two ears.

Biax'ial. (L. bis; axis, an axle-trec.)

Having two axes. B. crys'tal. A crystal possessing two optic

axes; a ray of light passing through the crystal in any other direction than one coinciding with one of the optic axes bifurcates.

Biba'sic. (L. bis, twice; basis, a base. F. bibasique.) Having two bases, or two equivalents of the same base.

Bi'bech. Congh. Bib'eron. (S. biberon, from L. bibo, to drink. F. biberon; I. zampilletto; G. Saugflaschen.) A feeding-hottle for infants.

Bibilen. The name in Thibet of Piper

longum, which, mixed with brandy, is used as a stomachic and vermifuge.

Bibinel'la. Same as Pimpinella.

Bibi'rin. Same as Bebeerin. Bibi'ru. Same as Bebeeru.

Bibitorius. (L. bibitor, a driuker.) Of, or belonging to, a drinker. A synonym of the Rectus internus oculi, because when exerted it draws the eye towards the nose, like that of a drinker looking into his cup.

Bib'lus. (Βίβλος, bark.) The bulrush of the Nile, Papyrus antiquorum. A plant of Egypt, upon the leaves of which the Egyptians

Bibo'ras. Same as Biborate.

B. na'tricus. (Natrium.) Borax, sodium biborate.

Bibo'rate. A salt of borie acid, having two equivalents of acid to one of base.

Bibract'eate. (L. bractea, a thin plate of metal, a bract.) Having two bracts.

Bibract'eolate. (L. his; bracteola, dim. of bractea, a bract.) Provided with two bracteoles.

Bibro'mide. A salt having two equivalents of bromine to one of base.

Bi'bron. A French naturalist, born 1806,

died 1848. He wrote on reptiles.

B.'s an'tidote. Potassium iodide 4 grs., mercury bichloride, hromine 5 drs.; mix. Ten drops in a tablespoonful of wine or brandy, to be repeated if necessary. Used in snake bites, and said to have been efficacious.

Bib'ulous. (L. bibo, to drink. F. spon-gieux; G. einsaugend.) Attracting moisture;

absorbent. B. pa'per. (G. Fliesspapier, Löschpapier.)

Blotting paper, filtering paper. Bib ulus la'pis. (L. bibo, to drink; lapis, a stone.) The pumice-stone, from its absorbent

Bi'ca. The name of a Terebinthaceous plant growing in the region of the Argentine Confederation, which, when incised, yields a gum resin, of sweet taste, reddish colour, transparent, and

resembling gum arabic.

Bicahy ba fat. An oily substance obtained from Myristica bicahyba, and resembling nutmeg balsani.

Bicallose. (L. bis, twice; callosus, thickskinned. G. zweischwielig.) Having two eallo-Sittes

**Bicap'itate.** (L. bis; capitatus, having a head. F. bicipite; G. zweikiepig.) An organ or body terminating in two heads.

Bicap'sular. (L. bis, twice; capsula, a capsule. F. bicapsulaire; G. zweifacherig.) Having two capsules; applied to pericarps.

Bicarbo nas. Same as Bicarbonate.

B. ka'Heus. (Kalium.) Kalie or potassie

bicarbonate.

B. lixiv'iae. (L. lixivium, lye.) Potassium bicarbonate.

B. na'tricus. (Natrium.) Natrie or sodic bicarbonate.

B. potas sicus. Potassie bicarbonate.

B. so'dicus. Sodium bicarbonate. Bicarbonete. (Same etymon. F. bicarbone; G. doppeltkohlensaures.) A salt in which there are two equivalents of carbonic acid

to one of base. Bicarinate. (L. bis; carina, a keel. G. beuterseits gekielt.) Two-keeled.

Bicarpellary. (L. bis; carpel.) Having two earpels.

Bicauda'lis. (L. bis, double; cauda, a tail. F. bicaudé, G. zweischwänzig.) Having two tails; applied sometimes to the posterior auris, or retrahens auris muscle, which consists of two small bundles or fasciculi of fibres.

Bicau'date. (L. bicaudatus, from bis; cauda, a tail.) Having two tails.

(L. bis; carus, hollow.) Bicavitary. Containing two cavities.

Bic'co. The same as Biccho.

**Bicepha'lium.** (L. bis, double; κεφαλή, the head. G. Doppelkopf.) A large sarcoma on the head, as if another head were grown upon it. Also, a two-headed monster.

**Biceph'alous.** (Same etymon. G. zwei-kopfig.) Having two heads.

Biceph'alum. (L. bis; κεφαλή, the head.) Term in Botany for an overy composed of two carpels, separate from each other in their upper part

Biceph'alus. (L. bis, twice; κεφαλή, the head.) A mouster with two heads.

Biceps. (L. bis, twice; caput, the head. F. biceps; I. bicipite; G. zweikopfig.) Having two heads. Applied to certain museles that divide into two portions.

B. aneone'us. ('Αγκών, the clhow.) Tho anconcus muscle; so called from its two-headed

insertion.

B. bra'chii. (L. brachium, the arm.) The Biceps flexor cubiti muscle.

B. cru'ris. (L. crus, the leg.) The Liceps flexor cruris musele.

B. eu'biti. (L. cubitus, the forearm.) Tho Biceps flexor cubiti muscle.

B. exten'sor. (L. extendo, to extend.) A synonym of the triceps extensor; one head arising from the scapula, the other (now usually described as two) from the humerus.

B. externus. (L. externus, outward.) The two portions of the Triceps extensor cubiti, otherwise called Anconeus major, and A. ex-

ternus.

B. fem'oris. (L. femur, the thigh.) The

B. flexor cruris.

B. flex'or cru'ris. (L. flecto, to hend; crus, the leg. F. biceps femoral, ischio-femora-peronien, Chaussier; G. zweikopfiger Schenkelmuskel.) A muscle on the outer and back of the thigh, arising by a long head from the tuberosity of the ischium and by a short head from the lower part of the outer branch of the linea aspera of the femur; its tendon forms the outer hamstring, and is inserted into the outer side of the head of the fibula. It flexes and slightly rotates outwards the leg. It is supplied by the great sciatic nerve.

B. flex'or cu'biti. (L. flecto; cubitus, the forearm. F. biceps brachial, scapulo-radial, Chaussier; G. zweiköpfiger Armmuskel.) It arises by a short head from the apex of the eoracold process of the scapula, and by a long head from the upper edge of the glonoid cavity of the scapula, and forming the chief mass of the muscular structure of the upper arm is inserted by a broad and thin tendon into the posterior part of the tuberosity of the radius; from the inner side of the tendon and the lower end of the muscle an aponeurotic band, the semilunar fascia, runs to join the deep fascia of the forearm. It flexes and supinates the forearm. It is supplied by the musculo-cutaneous nerve.

B. hu'meri. (L. humerus, the arm.) The

B. flexor cubiti.

B. inter'nus. (L. internus, inner.) The Biceps flexor cubiti muscle.

**B. ma'nus.** (L. manus, the hand.) The Biceps flexor cubiti muscle.

Bich. The Aconitum ferox.

Bi'chat. A French anatomist, born 1771, died 1802.

B., canal of. (F. canal de Bichat.) A small canal leading forwards beneath the venæ Galeni and velum interpositum, and above the pineal gland, and opening into the third ventricle of the brain, first described by Eichat. The existence of this canal is not now admitted. Also termed the arachnoid canal.

B., fis'sure of. (F. grande fente cerebrale de Bichat.) The transverse or great horizontal fissure of the eerebrum. See Fissure of verebrum, transverse.

B., tu'nic of. The unner coat of bloodvessels.

**Bichich'iæ.** (Perhaps from βηχικόs, relating to a cough.) Pectoral troches made of juice of houorice, sugar, starch, tragacanth, almonds, and mucilage of quince seeds, according to Rhazes, ix, 55.

Bichios. A Portuguese name for the Dracunculus medinensis

Bichlore'tum hydrarg'yri. Hydrargyri perchloridum.

Bichloride. (L. bis, twice; chloride.) A salt in which there are two equivalents of chloring to one of base.

B. of meth ylene. See Methylene bichloride.

Bichloroace'tic ac'id. Seo Chloracetic acid

Bi'cho. Cough; supposed to be a corruption of Ribech.

Also, the Dracunculus medinensis.

Bi'cho di cu'lo. (Span., worm in the anus.) A very fatal disease endemic in Brazil, causing gangrene of the rectum; said to arise from bad food and the use of pimento.

According to some authorities, it is not a special disease reculiar to the negro race in hot countries, but a condition of ulceration and gangrene of the rectum, to which piles, chronic dysentery, the abuse of purgatives, injections, and hot hip-baths, and unnatural crimes conduce.

Bi'chos. The same as Bichios.

Bichro mas potas sæ. The Potassium dichromate.

Bichro'mate. A salt in which there are two equivalents of chromic acid to one of base.

Bichro'micus. (L. bis; chromic acid.) Bichromate.

B. potas'sicus. Potassinm dichromate **Bicion.** (Dim. of  $\beta i \kappa o s$ , a wine-jar.) The vetch, *Vicia faha*, from the shape of its pod.

Bicip'ital. (L. bis, twice; caput, a head. F. bicipital; G. zweikopfig.) Of, or belonging to, the Biceps.

B. em'inence. Same as B. tuberosity.

B. groove. (F. gouttiere, or conlisse bicipitale; I. scanalatura, or grouda bicipitale.) A longitudinal groove between the tuberosities of the humerus, and occupying the upper third of the bone. It contains the long tendon of the biceps, and receives the insertion of the latissimns dorsi.

B. tuberos'ity. (F. tuberosité bicipitale.) The elevation below the neck of the radius on its inner and anterior surface for the insertion of the

biceps tendon.

**Bicolligate.** (L. bis; colligo, to gather together.) United to each other, as in certain birds, in which the anterior toes are united by a basal web.

Bic'olor. (L. bis; color, colour. G. zweifarbig.) Presenting two colours; particoloured.

**Bicol'orin.** (L. bis; color, colour.) A name given by Raab to a supposed substance which produced the blue colour in a solution of sulphate of quinine and other bodies when viewed by reflected light; now known to be dependent on the optical condition called Fluorescence,

Also, a synonym of Æsculin.

Bico'mis. (L. bis; coma, hair. G. beiderseits behaart.) Hairy on both sides.

Bicon'cave. (L. bis; concavus, completely hollow, concave. G. beiderseits concav.) Doubly concave; applied to a disc or lens of which both surfaces are concave.

Bicon'gium. (L. bis, twice; congius, a measure about equal to a gallon.) A measure

containing two congii, or twelve sextarii. **Bicon'gregate.** (L. bis; congrego, to collect together.) Applied to leaflets when arranged in two pairs.

Bicon'jugate. (L. biconjugatus, from bis; conjugo, to join together. F. biconjuge; G. doppeltgepaart.) Doubly paired, as two secondary petioles, each bearing a pair of leaflets.

Biconjugatopin nate. Same as Bidigitipinnate.

Bicontor'ted. (L. bis; contortus, from contorqueo, to twist.) Twice twisted.

Bicon'vex. (L. bis; convexus, vaulted, convex. G. beiderseits convex.) Doubly convex; applied to a disc or lens, the two surfaces of which are each convex.

Bicor'nate. (L. bicornis; bis, twice; cornu, a horn. F. bicorne; G. zweihörnig.) Twohorned; having the likeness of two horns.

Bicor'nis. (Same etymon.) Two-horned; having two terminations. A term sometimes applied to the hyoid bone.

Also, for the same reason, to the flexor carpi radualis, and the extensor carpi radialis.

Bicornous. (Same etymon.) Having two horus.

Bicor'nute. (L. bicornis, from his; cornu, a horn. G. Zweihörnig.) Two-horned.
Bicor'onate. (L. bis; corona, a crown. F. bicouronne.) Name applied by Cassini to capitula of flowers supporting three different kinds of flowers, external, internal, and intermediate.

Bicor'porate. (L. bis; corpus, a body.) Having two bodies.

Bicos'tate. (L. bis; costa, a rib.) Having

two ribs. Generally applied to fruits.

Bicre'nate. (L. bis; erena, a notch. G. doppeltgekerht.) Doubly crenate. Applied to the margin of a crenate leaf when the teeth are themselves crenate.

Bicris'tate. (L. bis; crista, a crest.) Having two crests.

Eicrural. (L. bis; crus, the leg. G. zweischenklig.) Having two legs or supports.

Bicuculla'tus. (L. bis, twice; cucullus,

a hood.) Having a double hood or cowl.

Bicur vate. (L. bis; currus, crooked. G. doppett gekrummt.) Doubly curved.

Bicus pid. Same as Bicuspidate.
B. tooth. See Tooth, bicuspid.
B. valve. The mitral valve of the heart. Bicus pidate. (L. bicuspidatus; bis, twice; cuspis, a point of a spear. F. bicuspidė; G. zweispuzių.) Having two points.

Bicus pides. (Same etymon.) bicuspid teeth.

Bicy'anide. A haloid salt in which there are two equivalents of cyanogen to one of base.

Bicyanure'tum hydrarg'yri. Cyanide of mercury.

Bid'der. A German anatomist.

B.'s gan'glion. A ganglionic mass in the frog's heart lying embedded in the auriculo-ventricular septum.

Bi'dens. (L. bis, double; dens, tooth. G. Zuerzahn.) A Genus of the Suborder Tubuli-flora, Nat. Order Composita. Pappus of 2-5 persistent awns; receptacle chaffy; involucre many scaled.

B. acmel'la. The Spilanthes acmella. B. bipinna'ta, Linn. (L. bis, twice; pinnate.) Spanish needles. Hab. United States and West Indies. Root and seeds emmenagogue and expectorant. Used in retention of urine and dysentery. Applied in corneal opacities.

B. ccr'nua, Liun. (L. eernuus, bending down.) Bur marigold. Hab. Europe. A siala-

gogue.

B. chrysanthemoi'des, Michx. (Chrysanthemum; sidos, form.) Found in the rice grounds and swamps of Carolina. Acrid and sialagogue.

B. fer'vida, Lamb. (L. fervidus, glowing.) The Spilanthes oleracea.

B. frutes'cens. (L. frutex, a shrub.) The Elephantopus seaber.

B. grave olens. (L. graveolens, strong smelling.) Hab. Brazil. Contains a resinous principle; is mucilaginous and antiscorbutic. Used locally to ulcers and tumours of the breast. (Waring.)

B. hirsu'ta. (L. hirsutus, hairy.) Ilab. Jamaica. Used as a vulnerary. (Waring.)

B. leucan'tha. (Λευκός, white; ἄνθος, a flower.) Hab. Brazil. Used as B. graveolens.

B. panicula'ta. (L. panicula, a tuft, a panicle.) A native of Otaheite, where it is infused in cocoa-nut milk and used as a cathartic. (Waring.)

B. pilo'sa. (L. pilosus, shaggy.) Hab. Brazil. Used as B. graveolens.

B. triparti'ta, Linn. (L. tris, thrice; partitus, divided. F. chauvre aquatique; G. Wasserhanf.) Hemp-agrimony. Formerly used as a diuretic, sudoritic, and vnlnerary.

Biden'tal. The same as Bidentate.

Biden'tate. (L. bidentatus, from bis, twice; dens, a tooth. F. bidente; G. zweizahnig.) Having two teeth.

Bidentid'eæ. (Bidens.) A Tribe of the

Nat. Order Compositæ.

Bi'det. (Fr.) A vessel on a low, narrow stand, which can be bestridden. Useful for bathing the perinaum and the adjacent parts.

Bidlg'itate. (L. bidigitatus; bis. donble; digitus, a finger. F. bidigité.) Having two tingers. Applied to a leaf having two leaflets at the extremity of the common petiole, as in the Zygophyllum fabago.

Bidigitipin nate. (L. bidigitipinnatus; bis, twice; digitus, a finger; pinnatus, pinnate. F. bidigitipenné.) Applied to a pinnate leaf having two leadets at the extremity of the common petiole, as in the Mimosa purpurea.

Bidjage. A name given by the Foulhas to a Euphorbia, the juice of which they employ

to poison their arrows.

Bid'loo, God'frey. A Dutch anatomist, born at Amsterdam in 1649. He was physician to William III of England. His great work on anatomy contains numerous very accurate

Bid'loo, Lam'bert. Physician and botanist, born in Amsterdam 1633, died in same city. 1724.

Bidua'nus. (L. biduum, the space of two days. G. zweettagig.) Lasting two days.

Biduc'tulose. (L. bis, double; ductulus, dim. ductus, a lending. F. biductuleux.) Applied to a leaf on which are two nervures, as in the Pelotrichum biductulosum.

Bidu'um. (Lat.) A period of two days. Bidu'us. (L. bis; dies, a day. G. zweitagig.) Continuing two days only.

A synonym of Ru-Bieberstein eæ. tacea

Bie'cho. Same as Bische. Bie'co. Same as Bische di culo.

Bien'nial. (L. biennis ; bis, twice ; annus, a year. F. biennal; G. zweijahrig.) Of two years' duration. Plants which live two years, producing flowers in the second year only.

Bier'emate. (L. bis, double; cremus. F. biereme.) Applied by Mirbel to a fruit composed of two eremi (carpi), as the cenobium of the

Cerinthe major.

**Bifaribranch'iate.** (L. bifarius, double; βράγχια, the branchiæ. F. bifaribranche.) Applied by Latreille to a Family of the Gasteropola, having the branchiæ situated on the two lower sides of the latre. the two lower sides of the body.

**Bifarious.** (L. bifarius; from bis; for, to speak. F. bifaric; G. zweireihig.) In two

row

Bifemorocalca'neus. (L.bis, double; femur, the thigh; calcaneum, the heel. F. bifemorocalcanien; G. äusserer zweikopfiger Wadenmuskel.) Chaussier's name for the gastroenemius musele.

**Bi'ferous.** (L. bifer, bearing twice or two-fold; from bis, twice; fero, to bear. F. bifere.) Plants that bear fruit and flowers twice in the

Bif'fin. An apple dried and flattened. Bi'fid. (L. bifidus; bis, twice; findo, to eave. F. bifide; G. zweispaltiy.) Forked; divided into two; eleft.

Bifis'tulous. (L. bis; fistula, a pipe. G. zweirohrig.) Having two channels.

Biflex'ed. (L. bis, twice; flexus, bent.) Doubly bent.

B. canal'. See Canalis biflexus.

Biflorate. The same as Biflorous.
Biflorous. (L. biflorus, from bis, twice;
flos, a flower. F. biflore; G. zweiblithig, zweiblümig.) Two-flowered. Having two flowers

mpon one stalk or peduncle.

Bifo'liate. (L. bis; folium, a leaf. G. zweiblatterig.) Ilaving two leaflets springing from a

common point.

Bifo'liolate. (L. bis; foliolum, dim. of folium, a leaf.) Having two leadets.

Bifo'lium. (L. bis, twice; folium, a leaf.)
The Ophrys orata, double-leaf, or tway-blade. Bifollic'ular. (L. bis; folliculus, a small bag.) Having two follicles.

Bifo'ra. The same as Biphora.

Biforate. (L. biforus, from bis, donble; forus, a door. F. bifore; G. zweilocherig.) Having two apertures. Applied to anthers having two pores, Anthera bifora, like those of the Heaths and Myrtles.

Also (G. zweiklappig), applied to a pericarp

with two valves.

**Bif'orine.** (L. bis; foris, a door.) A raphidiferous cell, which, when placed in water, bursts and discharges its raphides by an opening at each end.

Biforipal'la. (L. biforus, having two openings; pallium, a mantle. F. biforipalle.) Applied by Latreille to an Order of the Conchifera, the mantle of which has two openings, one for the passage of the feet, the other for dejec-

Bifor'mis. (L. F. double; forma, shape. G. zweigestaltig.) Having two shapes or forms. Bifo'rous. Same as Biforate.
Bifrons. (L. bis; frons, the forehead. G. doppelsturing.) Having two faces or aspects.
Bifur'cate. (L. bis; furca, a fork. F. bifurque; G. zweizackig, gabelig.) Two-forked; dividing into two, like a fork. Having, or separative into two harmshes: forked; dividenterous

Bifurca'tion. (L. bis, two; furea, a fork. F. bifurcaion; G. zweispitzige Endtheilung, Gabeitheilung.) A dividing into two, as the body of a feel interior in the control of the feel in the interior of the feel in the interior of the feel in of a fork into its prongs. Applied to a division of the trunk of vessels, or of the stem of a plant. Also, to that splitting into two of a ray of light

when it enters a doubly refracting crystal.

**Bifu'siform.** (L. bis; fusus, a spindle; fusus, a spindle; fusus, a spindle; fusus, shape.) Term applied to spermatic filaments attenuated in their centre, as though consisting of two fusiform filaments united.

The bitter orange, Citrus Big'arade. vulgaris, var. bigaradia.

Bigara'dia myrtifo'lia. See Citrus bigaradia myrtifolia.

(L. his, twice; γαστήρ, the Bigas ter.

Big bloom. The Magnolia macrophylla.

Big bone. See Kenlucky, mineral waters

Bigelo'via vena'ta, Gray. (L. vena, a vein.) The Haplopappus discoideus. Big'elow, Y-lig'ament of.

ilie-femoral ligament.

Bigem'inæ eminen'tia. (L. bis, twice; gemino, to double; eminentia, a prominence.) A synonym of the Corpora quadrigemina.

Bigem'inal bod'ies. (L. bis, twice; gemino, to double.) The Corpora quadrige-

Bigem'inate. (L. bis; geminatus, donbled. F. bigeminé; G. doppeltyezweit.)
Donble-paired. Twice paired. Applied to a forked footstalk which has two little leaves on the apex of each division.

Bigem'mate. (L. bis, double; gemma, a

bud.) Having two buds or branches.

**Bige'ner.** (L. bis; genus, race. G. dop-pelgeschlechtig, bastard.) A plant hybrid, which has been produced from two allied genera.

Bigen'eris. (L. bis, double; genus, a race. F. bigenere.) Applied by Linnæus to hybrids born of individuals belonging to two different

races, as the mnle.

Bige'nus. (L. bis, double; geno, to beget. F. bigene.) Applied by Nees von Esenbeck to trees that at the end of summer produce a second but feeble shoot of leaves, as the Pyrus.

Bigg. The winter barley, Hordeum hexas-

Bigib bose. (L. bis; gibbosus, humpbacked.) Having two protuberances.

Bigib bous. Same etymon and meaning as Bigibbose.

Bigleaf. The Magnolia macrophylla.

Bigno'nia. (After the Abbé Bignon, a celebrated author, and librarian to Louis XIV.) The trumpet-flower. A Genns of the Nat. Order Bignoniaccæ.

**B.** æquinoctia'lis, Linn. (L. tialis, belonging to the equinox.) Hab. West Indies. Applied to tumours of the feet and to wens. An infusion of the flowers is given in angina, in affections of liver and spleen, and in hæmorrhages.

**B. allia'cea.** (L. allium, garlic.) This plant, ealled the "garlic shrub" from its power-

ful odour, is used as a febrifuge.

B. antisyphilit'ica, Mart. against; syphilis.) A Brazilian tree used in

syphilitic disorders.

B. capreola'ta, Linn. (L. capreolus, a tendril.) Hab. Southern United States. Detergent, alterative, aperient, dinretic, and sudorifie. Used instead of sarsaparilla. Used in syphilis, chronic rheumatism, and cachexiae. **B. catal'pa.** The Catalpa bignonioides.

B. cheloni'des. (Χελώνειον, the cyclamen; or χελώνη, a tortoise; είδος, likeness.) The flowers are used in Malabar as a perfume. An infusion is used as a cooling drink in fevers,

and the juice is given in mania.

B. chi'ca, Humb. et Bonpl. (An Indian word, chica, a pretty girl; or chico, small.) South American species, the leaves of which yield a fine red colouring matter.

**B. chrysan'tha.** (Χρύσεος, golden yellow; ἄνθος, a flower.) Grows in the Caraceas.

The bark is purgative. (Waring.) **B. copa'ia**, Aubl. Caroba. Hab. Guiana. The fruit is used as an antisyphilitic and in diarrhea, and externally in yaws; the bark is emetic and purgative.

B. crucig'era. (L. crux, a cross; gero, to

bear.) The B. capreolatu.

B. echina'ta, Willd. (L. echinatus. prickly.) A climbing shrub of Guiana. Said to be an adulterant of sarsaparilla.

B. guy'ra. Hab. South America. Root is purgative.

B. in'dica. (L. indicus, Indian.) The Calosanthe indica.

**B. leucox'ylon,** Willd. (Λευκός, white; ξύλον, wood. F. bois d'ébène vert.) White-wood tree. The juice is said to be an antidote to tho Manchineel poison.

B. longis'sima. The Catalpa longissima.

B. ohli'qua. (L. obliquus, slanting.) A Sonth American climbing shrub. Used in dysentery. (Waring.)

B. ophthal'mica. ('Οφθαλμικός, relating to the eyes.) A name given, with doubtful propriety, to a plant used in the West Indies in eye

B. rad'icans, Willd. (L. radico, to strike

root.) The Tecoma radicans.

B. sempervi'rens, Linn. (L. semper, always; vireo, to be green.) The Gelsemium sempervirens.

B. triphyl'la, Willd. (Τρεῖς, three; φύλλον, a leaf.) The B. chica.

B. tulipifo'lia. (Tulip tree; L. folium, a leaf.) Hab. Guinea. Used in dysentery.

B. un'guis ca'ti, Linn. (L. unguis, a nail; catus, a eat.) Cat's-claw trumpet flower. Hab. West Indies. Believed to be an alexipharmic, and used in snake bites.

**B. xylocar'pa.** (Ξύλον, wood; καρπός, fruit.) Hab. India. An oily substance distilled

from the wood is used in skin diseases.

Bignonia'ceæ. A Nat. Order of epipetalous corollidoral Exogens. Trees or shrubs often twining. Leaves exstipulate; inflorescence terminal; calyx entire or divided; corolla 4-5-lobed; stamens 2 or 4; anthers 2celled; ovary 2-4-celled; placentas axile; style one; fruit 2-valved, eapsular, 2-4-celled; seeds sessile, winged; albumen none; embryo with large leafy cotyledons.

Bignonia'ceous. Having an arrangement of parts as in the Genus Bignonia.

Bigno'niæ. Same as Rignoniuccæ. Bigno'nial alli'ance. Same as Bignoniales.

Bignonia les. In Lindley's system perigynous Exogens, with dichlamydeous, monopetalous, unsymmetrical flowers, capsular or berried fruit, having its carpels quite consolidated, parietal, free, central or axile placentæ, and an embryo with little or no albumen.

Bigor're. See Baguères de Bigorre. Bih. The same as Bikk. Bihai. The edible fruit of a species of Heliconia.

Biher'nious. (L. bis, double: hernia, a rupture.) Having a hernia or rupture on each side of the scrotum.

Biho'rius. (L. bis, deuble; hora, an hour.) Lasting two honrs. Employed in prescriptions to express a stated period or interval of two honrs, and usually put in the nenter to agree with intervallum (understood), a space or interval.

Bijoda'tum hydrarg'yri. The Hydrargyri iodidum rubrum.

Bijodure'tum hydrarg'yri. Hydrargyri iodidum rubrum.

Bijou. A name for the turpentine of the

Pinus sylvestris.

Bijugate. (L. bijugatus, from bis, double; juguni, a yoke. F. bijugue; G. zweijochig, zwei-paarig.) Double-yoked, doubly-paired; arranged in two pairs. Applied to a winged leaf bearing two pairs of leadets, with a pair of secondary petioles, each bearing a pair of leaflets.

Biju'gous. Same etymon and meaning

as Bijugate.

Bikh. The Assamese name of the root of the Aconitum forex, and other species of Aconitum. Used for poisoning arrows when mixed with the fresh juice of the fruit of *Dillenia speciosa*. It is conical, 2"—4" long, 1" broad, wrinkled longitudinally, brownish black externally, internally whitish, and of acrid taste. Acute pain, local inflammation, and dysentery, is produced by the introduction into a wound. Saltpetre is used in the treatment and the cupping glasses.

Biks'zad. Hungary; County Szathmar, in a mountainous district. Three mineral springs, e intaining sodium chloride 15.2 grains, sodium e irbonate 24.5, calcium carbonate 3.14, and iron e irbonate '14, in 16 ounces. Used in abdominal congestions, serofulous diseases, and menstrnal

obstructions.

**Bilabe.** (L. bis, double;  $\lambda \dot{\alpha} \beta \omega$ , to lay hold on.) An instrument for extracting foreign bodies of sufficiently moderate size from the bladder, through the urethra, having two branches capa-ble of being expanded in the bladder after introduction, and then closed on the object to be withdrawn.

Bila biate. (L. bilabiatus, from bis, double; labium, a lip. F. bilabia; G. zweilippig.)

Having two lips.

Bilacin'iate. (L. bilaciniatus, from bis, double; lavimatus, fringed. G. doppeltgeschlitzt.) Double-fringed. Applied to leaves which have their margins cut into segments.

Biladen. Chalybs, or steel. (Castellus, Quincy.)

Bilamel'lar. Same as Bilamellate.

Bilamel'late. (L. bilamellatus, from bis, twice; lumellatus, having little plates. F. bila-melle; G. zweiplattig.) Having two layers of little plates. Applied to parts of plants.

Bilate. A salt of the supposed Bilic acid. B. of so'da. A term formerly applied to a supposed salt found in the bile, now known to be a mixture of sodium glycocholate and taurocholate

Bilat'eral. (L. bis, donble; latus, the side. P. bilateral; G. zweiseitig.) Having two symmetrical sides. Applied to leaves or other parts which proceed from different points as well as different sides, and so somewhat distinct from opposite.

B. lithot'omy. See Lithotomy, bilateral. B. opera'tion. See Lithotomy, bilateral. See Symmetry, bilateral.

Bil'azais. France; Departement de Deux-Sèvres. A sulphurons water of 18° C. (64.4° F.) Used in chlorosis and skin diseases.

Bil'berry. (Dan, billebær, dark berry, or ball berry.) The fruit of the Vaccinium myrtillus.

B., bear's. The Arctostaphylos ava ursi.
B., com'mon. The Vaccinium myrtillus. B., great. The Vaccinium uliginosum.

B. red. The Vaccinium vitis-idea.

Bilbil'la. The same as Belbelta. Bilbil'ta. The same as Belbelta.

Bile. (L. bilis. Gr. χολή; F. bile; I. bile; S. bilis; G. Galle.) The secretion of the liver. A mucilaginous fluid, golden brown in man, golden red in carnivora, brownish green in her-bivora, bright green in birds, of bitter taste, and peculiar odour, of sp. gr. 1026—1032 in the gall-bladder, 1010—1011 as collected from a hiliary fistula in man, of feebly alkaline or sometimes neutral reaction, without morphological elements, and uncoagulable by heat. After death, in man, it has been found of various shades of colour, from pale yellow to almost black, and of various densities; erystals of cholesterin and of calcium and ammonio-magnesium phosphate have been observed. The following constituents have been found in the bile of animals :- Water, tauroebolic acid, glycoeholic acid, hyotauroeholic acid, hyoglycocholic acid, taurochenocholic acid (theso acids partly in combination with sodium, partly with potassium), choline, bilirubin, hilirerdin, bilifuscin, biliprasin, urobilin, cholesterin, palmitic, stearie, and oleic glycerides, palmitates and oleates of sodium and potassium, lecithin, urea in the bile of eattle and pigs, mneus from the bile channels, sodium and potassium chlorides, sodium carbonate, sodinm, calcium, and magnesium phosphates, traces of iron, manganese and siliea, and carbonic acid gas. Glucose has been found in hnmau bile, as well as traces of leuein, and in the fætus albumen; and copper has been noticed. From change of the normal constituents choloidie acid, cholic acid, dyslysin, taurin, and ammonia appear; and as products of decomposition triniethylamin, sulphur acids, fatty acids, as acetic and valeric acids, ammonium and sodium sulphate, ammoniaco-magnesian phosphate, and calcium phosphate.

The bile of oxen consists essentially of sodium glycocholate and taurocholate, and contains, besides ebolesterin, cholin, urea, fats, acetic and propionic acids reglycerides and as salts, colouring matters, mucus, and inorganic salts.

Human bile contains sodium taurocholate and glycocholate, cholesterin, fats, nineus, colouring matters, especially bilirubin and biliverdin, leeithin, inorganic salts, and traces of copper.

Pigs' bile contains sodium hyotaurocholate and hyoglycocholate, and the same constituents as human bile, cholin, a glyceride of phosphoric acid, originating probably in lecithin, a phosphorised fat and urea.

Dogs' bile contains sodium taurocholate as the

only bile salt.

Sheep's bile contains both sodium tanrocholate and glycocholate.

Goose's bile contains sodium chenotanrocholate.

Fishes' bile consists almost entirely of tauroeholates; in sea-water fishes the potassium salt is by far the most plentiful, little of the sodium salt being found, whilst in fresh-water fishes the sodium salt exists in equal or even greater quantity.

Serpents' bile is said to contain only the sodinm

taurocholate.

In pathological conditions lactic acid has been found; leucin and tyrosin in typhns fever; blood and albumen; sugar in diabetes mellitus, and the following after administration: -Antimony, nrsenic, copper, potassium iodide, potassium ferrocyanide, and zinc.

Alcohol and acetic acid throw down from bile the mucus more or less coloured; sulphuric acid canses the formation of crystals of stearie and, in ox bile, palmitic acids; fresh gastric jnice produces a precipitate, but only when free from peptones. The albuminoid, and probably the starchy matters, of the food are not affected by bile, but some have said that fresh human hile converts starch into sugar; blood-corpuscles are dissolved by it; bile, when shaken with neutral fats and warmed, has an emulsive action, and causes a separation into minute masses, when the fatty acids decomposing the soda salt of the bile form an envelope of soap, in which are set free the bile acids; admixture with pancreatic juice largely aids this emulsifying action. Oil passes easily through membranes moistened with bile, especially if it is alkaline. The daily amount of bile secreted in man is said to be two or three pounds; the evidence is insufficient. The proportions of the bile constituents vary; the bile of the gall-bladder contains more mucus and less water than that of the hepatic duets. The following analysis by Frerichs may be taken as a probable mean:—Water 859.2, mucus and colouring matter 29.9, cholesterin 2.6, fat 9.2, salts of bile acids 91.4, inorganic salts 7.7, in 1000 parts. Recent analyses have shown a striking variation in the proportion of the two bile acids, probably depending upon variations of diet. In cholera and febrile diseases the water of the bile is much reduced; in hydrothorax and in Bright's disease eholesterin erystals have been found; in a case of empyema and tuberculosis fatty masses have been seen, and also in typhus.

The hile salts and the colouring matter are the essential elements of the bile, and are formed in their completeness by the liver, but from what constituents is not yet proved, neither is the action of the bile on the food by any means

accurately known.

B.ac'ids. Term applied to the glycocholic, taurocholic, and other similar acids, found in combination with sodium and potassium in the bile; when present in the nrine they may be detected by Pettenkofer's test. See B., tests for.

B., bear's. Formerly used against epilepsy.
B., bluck. Same as Atrabilis.
B., blue. Cases have been rarely recorded

in which blue material has been vomited which gave the reactions of hile. The blue material under the spectroscope seems related to the oxidation products of bilirubin and biliverdin, and to a black pigment found naturally in human

A term applied by B., crys'tallized. Plättner and Verdeil to the crystals of tauro-cholate and glycocholate of soda, which they obtained by treating the alcoholic extract of bile with chloroform.

B., cys'tic. Bile obtained, in a somewhat concentrated condition, from the gall-bladder.

B.-duct, common. (F. conduit cholédoue; I. conduito epatico; G. der gemeinschaftliche Gallengang.) The duct which proceeds from the union of the hepatic and cystic ducts to open into the duodenim. It is 3" long, and 2"—3" wide; it passes downwards and backwards in the substance of the gastra-hepatic opportune. the gastro-hepatic omentum, having the vena portæ behind and the hepatic artery on its left, and the first part of the duodenum in front; after running along the inner and posterior face of the descending portion of the dnodenum in the head of the pancreas, it perforates the muscular wall of the intestine, rnns in it for '75", and opens generally, by a common orifice, with the pancreatic duct on the inner surface of the duo-denum, 3"-4" below the pylorus. Sometimes the panereatic orifice is a distinct one.

Formerly used to facilitate B., eel's. labour.

B., inspis's ated. Ox bile warmed, strained, and evaporated. See B., purified.

B., ox's. Formerly used in earache, amenorrhea, and in aid of labour. Locally as a detergent; later as a stomachie and anthelmintic, and in indolence of liver and constipation. See B., purified.

B., pig's. Used and prepared as B., ox's. **B.** pig'ment. (L. pigmentum, a paint.) The colouring matter of bile, consisting of bilirnbin, bilifuscine, biliverdin, biliprasin, and bilihumin. When present in the urine, bile pigment may be detected by the yellow colour it gives to white filtering paper when dipped in the urine and dried, and by the placing of a drop or two of nitric acid and of urine side by side on a white porcelain plate, when, on causing them to touch, a play of colours at the point of contact from violet through green to red is seen; the colours soon disappear.

B., pu'rified. Fel hovinum purificatum. Fresh bile of the ox, Bos taurus, mixed with double its quantity of spirit, the clear solution decanted after twelve hours, and evaporated. Used when the liver secretion is deficient and in constipation. Dose, 10—60 grains. See B.,

ox's.

B. res'in. The bile acids.

B., tests for. Pettenkofer's test:—A grain of sugar added to a solution containing bile which has been mixed with about half its bulk of strong sulphuric acid gives a purplish crimson colour.

Heller's test:—When albumen is shaken with

a solution containing bile and nitric acid added, the coagulum thrown down is of a dull greeu or bluish colour.

Gmelin's test:-When a few drops of a solution containing bile is poured upon a white plate and strong nitric acid dropped into it, the liquid acted on becomes successively pale green, violet, reddish, and a dirty yellow.

Bilen. Hungary; County Marmoros. Three springs of mineral water, containing sodium and calcium carbonate, with a little iron and much free earhonic acid. Used in disorders of digestion, enlargements of the liver and spleen, and in gouty conditions.

Bilharz'ia. (Bilharz, the name of the naturalist who discovered it in 1851.) A Genus of the Order Trematoda, Class Scolveida.

B. hæmato'bia. (Λίμα, blood; βίος, life.) Bisexual. Male: Body soft, whitish, filiform, 3-4 lines long. The anterior part or trunk, an eighth of the whole length, is flattened and lanceolate, having at its extremity an oval sucker, triangular; the remainder, the tail, is circular, contains a longitudinal canal, the gynacophoric canal; at the junction of the tail with the trunk is the ventral sucker, circular; genital pore situated between the ventral sucker and the origin of the gynæcophoric canal.

Female: Longer and much thinner than the male; body soft, transparent, pointed in front, without any longitudinal canal; suckers like the male; genital pore united with the posterior margin of the ventral sucker; ova oval, often with a more or less pointed extremity, which represents a rudimentary anchor. The female is received into the gynæcophoric canal of the male during impregnation. The embryo whilst in the ovum is covered with eilia; when free it is at first hourglass-shaped, but it subsequently becomes cone-like. This parasite is common in Egypt and at the Cape of Good Hope; the embryos have been found in drinking water, and Professor Cobbold states that its development is more rapid in proportion to the purity of the surrounding medium. It is found in the portal and mesenteric veins, and in the kidney and urioary passages of man, aue, ox, and sheep. It produces hamaturia and anamia, retention of urine from blood clots and pyclitis; dysentery is not infre-The intermediate host is not known; the quent. higher larval forms are probably ingested with stagnant water.

Bilia'ris. (L. bilis, bile.) Serving to convey or retain the bile.

**Bil'iary.** (L. bilis, Gr. χολώδης; F. biliare; I. biliare; S. biliar; G. zur Galle gehorig.) Of, or belonging to, bile.

B. ac'ids. These acids were discovered by Strecker, and are the glycocholic, the taurocholic, the cholic or cholalic, the byoglycocholic, the hyotaurocholic, and the chenotaurocholic. are all soluble in water and in alcohol, but are nearly insoluble in ether.

B. appara'tus. The liver, and its blood-

vessels and excretory duets.

B. ar'tery. An old name for that division of the cystic branch of the hepatic artery which ramifies between the gall-bladder and the liver, and supplies the latter.

B. aspar'agin. A synonym of Taurin.

B. calculi. (L. calculus, a small stone.) Same as Gall-stones.

B. cells. See Liver, cells of.

B. concretions. A synonym of Gall-

B. ducts. (L. pori or ducti biliarii; F. veies biliaries; I. condotti biliari; G. Gallengange.) The canals which arise from the secreting structure of the liver, gradually converging towards its under surface, till they at last form a single trunk, the ductus hepaticus. See Liver.

B. fis'tula. (F. fistule biliaire; I. fistola biliaire; G. Gallenfistel.) See Fistula, biliary.
Bilia'tion. (L. bilis, bile.) The produc-

tion or secretion of bile.

Bi'lic ac'id. (L. bilis.) Described by Liebig. It is a mixture of cholic and choleic acids.

Bilicholin'ic ac'id. (L. bilis; χολή, bile.) This name has been given to a combination of cholinic acid with undecomposed bilin, forming an acid compound, which is now known to be a mixed body.

(L. bilis; eyaneus, dark Bilicy'anin. blue.) An imperfectly known blue pigment obtained by the action of oxidising agents on bilirubin, and said also to have been found in gall-

stones and in ictoric urine.

Bilifellin'ic a'cid. (L. bilis; fel, bile.) A name given to a combination of fellinic acid with undecomposed bilin, forming an acid comjound, which is now believed to be a mixed

Biliful'vic ac'id. The same as Biliful-

Biliful'vin. (L. bilis; fulvus, tawny, G. Gallengelb.) A mixture of some of the colouring matters of the bile.

Also, a synonym of Bilirubin,

Bilifus'cin. (L. bilis, bile; fuscus, brown.) C161120N2O4. A dark green, almost black substance contained in very small quantities in biliary calculi; insoluble in water, chloroform, and ether, soluble in alcohol and alkulies. Reaction with nitric acid as bilirubin.

Bilihu'min. (L. bilis, bile; humus, earth.) The insoluble, blackish-brown residue left after bile has been exhausted by ether, water, chloro-

form, alcohol, and diluted acids.

Bilim bi. (Ind.) A tree, Averrhoa bilimbi, which yields a juice used by the natives of India, for curing itch and other skin diseases, by wearing linen dipped in it and applied to the part.

Bilim'bing te'res. The Averrhoa bi-

Bilin'. Austria; Bohemia An interesting neighbourhood. Austria; Bohemia, near Töplitz. An alkaline water, containing a large amount of sodium earbonate, 23 grs. in a pint, with a little lithium and calcium carbonate, and some sodium sulphate; not much used in the place, but exported largely. Used in urinary disorders, Bright's disease, jaundice, gout, and rheumatism.

Bilin. (L. bilis, the bile.) A gummy, pale ellow mass, which, when quickly dried and yellow mass, pulverised, yields a white powder, inodorous and of a sweetish bitter taste, formerly considered to be the principal and most important constituent of the bile; now known to be a mixture of sodium

glycocholate and taurocholate.

Bilineu'rine. (L. bilis , νεύρον, a nerve.) A synonym of Choline. It obtained this name from being found both in the bile and the brain. Bilingi billing-bing. Indian name

for the Malus indica, or Indian apple tree. **B**\*\*-cous. (L. biliosus; Gr. χολώδης; F. bilicus; 1. and S. bilioso; G. gallicht, gallsüchtig.) Having much, full of, or relating to the, bile. Applied generally to disorders arising from

too great a secretion of bile, as bilious diarrheea.

B. col'ic. See Colic, bilious. B. diarrhœ'a. See Diarrhæa, bilious.

B. fe'ver. A term which has been very loosely used. In a large number of instances bilious fever meant enteric fever, but it has been used to describe certain malarious fevers in tropical countries with hepatic disturbance.

B. tem'perament. See Temperament,

bilious.

B. vom'iting. See Vomiting, bilious. Biliphæ'in. (L. bilis; paiós, tawny.) Formerly believed to be the colouring principle of the bile, now known to be of a mixed character; also termed cholepyrrhin.

Also, a former name of Bilirubin. Biliphe'in. Same as Biliphain.

Bilipra'sin. (L. bilis, bile; πράσον, a  $C_{16}H_{22}N_2O_6$ . leek.) A brittle, shining, dark green substance obtained from bile; insoluble in ether and chloroform, soluble in alcohol and alkalies. The alcoholic solution becomes brown on the addition of ammonia. Reaction with nitrie acid as bilirubin, with the exception of the blue colour. It has been found in small quantity in human biliary calculi.

Bilipyrr'hine. (L. bilis; πυρρός, yellowish red.) A mixture of some of the colouring

matters of bile.

Biliru'bin. (L. bilis, bile; ruber, red.) C<sub>16</sub>H<sub>18</sub>N<sub>2</sub>O<sub>3</sub>. The principal colouring matter of bile. Consists of dark red prisms, insoluble in water, soluble in alcohol and ether, very soluble in chloroform. Nitric acid of commerce containing nitrous acid produces a change of colours through green, blue, violet, red, to a dull yellow. Obtained as an amorphous powder by precipitation from the chloroform solution by means of alcohol.

Bilis. (As if bis lis, double strife; because choler (from  $\chi o \lambda \dot{\eta}$ , bile) or anger was conceived to be greatly heightened by the excitement of

the hile. Nævius.) See Bile.

B. bu'bula. (L. bubulus, helonging to oxen.) A synonym of Fel bovinum, ox-gall.

B. fluxio. (L. fluxio, a flowing.) A

synonym of Cholera.

Bilit'icus. (L. bilis.) Causing a flow of

Biliver'din. (L. bilis, bile; viridis, green. G. Gallengrun.) C16 II18N2O4, according to Maly; C16H oNoO5, according to Städeler; and C8H9NO2, according to Thudichum. Formed when air is passed through an alkaline solution of bilirubin. A green amorphous body, insoluble in water, ether, and chloroform; soluble in alcohol. Reaction with nitric acid as bilirubin. It has been found in the placenta of the bitch, and in the hile of several animals; it is doubtful if it has been found in man, although some have professed to have discovered it in the urine of jaundiee.

(Sax. bile, a bird's bill.) Same as Bill.

Beak.

B. trout. See Trout, bill.

Billardie'ra. A Genus of the Nat. Order Pittosporace x.

B. mutab'ilis. (L. mutabilis, changeable.) A species the fruit of which has a pleasant subacid taste, and is eatable.

B. scan'dens, Smith. (L. scando, to elimb.) Hab. New Holland. Flesh of the berry (L. seando, to esculent.

Bil'na. The same as Pülna.

**Bilo'bate.** (L. bis; λοβόs, the tip of the ear. G. zweilappig.) Having two lobes. **Bilo'bed.** (L. bis, twice; λοβόs, the tip of the ear. F. bilobe; G. zweilappig.) Two-lobed. Having two divisions separated by a cleft. A synonym of Dicotyledonous.

Bilob'ular. (L. bis ; lobulus.) Having two lobules.

Bilocel'late. (L. bis; locellus, a little place.) Having two locelli.

Biloc'ular. (L. bilocularis; bis, twice; loculus, partition. F. biloculaire; G. zweifucherig.) Two-celled; divided into two cavities.

Bil'ton. Yorksbire; near Harrogate. mild sulphur water.

Bilum'bi bi'ting-bing. The Malus

Bil'va. The Ægle marmelos.
Bima'na. (L. bis, two; manus, hand. F. bimanes; I. and S. bimano; G. Zweihander.) An Order of the Division Mammalia, according to some, or, according to other classifications, a Family of the Order *Primates*. It includes man only. Distinguished by the erect posture, bipedal walk, opposable thumb, prehensible hands, fingers with nails, foot broad, plantigrade; unopposable hallux; toes with nails; thirty-two teeth close to each other; mamma pectoral; placenta discoidal, deciduate; hair only local; brain large and convoluted. Psychical conditions absolutely different to those of all other animals.

Bima'nous. (L. bimanus; bis, double; manus, hand. F. bimane; I. and S. bimano; G. zweihandig.) Having two hands.

Biman'ual. (Same etymon.) handed.

B. palpa'tion. (L. palpo, to touch softly.) A mode of examination of the pelvic organs by means of one or more fingers of one hand in the vagina and the other hand on the abdomen.

B. turn'ing. See Turning, bimanual. B. version. The same as Bimanual turn-

Bimec'onate. A salt of meconic acid with two equivalents of acid to one of base.

Bimeridæ. A Family of the Suborder Gymnoblastea, Order Hudroidea, Class Hydromedusæ, Subkingdom Cælenterata. Ramified colonies, invested with a perisarc, with sessile sexual buds; polypes crowned with simple tentaeles.

Bimes'tris. (L. bis, double; mensis, a month. G. zweimonatlich.) Of two months' duration; two months old.

Bimethylac'eton. A synonym of acetone, on the supposition that its constitution is CH<sub>2</sub>.CH<sub>2</sub>.CO.

Bi'mus. (Lat. bimus. G. zweijährig.) Continuing two years.

(L. bini, two.) A prefix signifying Bin-. twice or double; used before a vowel. See Bi-.

**Bina.** (Βόνη, malt.) Probably a misspelling for *Byne*, malt.

Bi'nary. (L. binarius; binus, by comples, F. binare; I. and S. binario; G. binar, gezweit.) Compounded of two; twofold. Branches of vessels and of plants that separate into two, and each of these again into two, or, as it is expressed, in binary order.

B. com'pound. Compounds which consist of two elements or radicals.

B. the ory. A theory of the composition of salts, which were all regarded as double compounds, whether they were made up of two simple elements, as Na and Cl, or whether a compound radical, as SO<sub>4</sub>, occupied the place of Cl; this compound radical was regarded as a unit. When salts are decomposed by the electric current they split up in accordance with this theory; CuSO<sub>4</sub> splits up into Cu and SO4.

Binate. (L. binatus; binus, by couples. F. bine; G. gepaart.) In pairs. Leaves divided almost from hase to apex, as the Drosera binata. Compound leaves having two leaflets on one stalk, as in Hardwickia binata.

Binau'ral. (L. bis; auris, the ear.)
Having two ears; or relating to both ears.

B. audit'ion. (L. auditio, the hearing.) The hearing with both ears.

Binaxial. (L. bini, two; axis, the whirl

of a spindle.) Having two axes.

Bin'daal. (Hind.) The fruit of the Luffa bindaal. Used in India with black pepper in hydrophobia and epilepsy.

Bind'er. (Sax. bindan, to fasten.) A folded tower, or piece of ealico, or a special apparatus, put round the abdomen of women during, or immediately after, labour, to support the contents.

Bind weed. The species of Convolvulus. B., blue. The Solanum dulcamara.

B., fid'dle-leav'ed. The Convolvulus panduratus.

B., great. The Convolvulus sepium. B., hedge. The Convolvulus sepium.

B., larg'er. The Convolvulus sepium. B., lav'ender-leav'ed. The Convolvulus cantabrica.

B., rough. The Smilax aspera.

B., sea. The Convolvulus soldanella.

B., small. The Convolvulus arrensis.
B., Virgin'ian. The Convolvulus pandu-

Bind weeds. The plants of the Nat. Order

Bind withe. (Eng. withe, a willow twig.) The Clematis vitalba.

Bind'wood. The Hedera helix.

Binelli, wa'ter of. Water containing a little empyreumatic oil. A secret remedy of Dr. Binelli, which about the year 1830 was in great repute as a styptic.

Binervate (L. binervatus; binervius, trom bis, double; nervatus, nerved. F. binerve; G. zweinerriy.) Having two nerves. Applied to leaves which have two longitudinal nerves or ribs

Biner'vious. Same as Binervate.

Bing'en. Germany; at the junction of the Nahe with the Rhine. The grape cure is carried on here.

(L. bini, two.) Twin. Ei'ni.

Biniflo'rous. The same as Biflorus. Bini'odide. (L. bini, two; iodine.) haloid salt in which there are two equivalents of iodine to one of base.

Biniodi'dum. (Same etymon.) Binio-

B. hydrarg'yri. See Hydrargyri iodidum rubrum.

Binkohum'ba. The Phyllanthus uri-

Binoc'ular. (L. bini, double; oculus, the eye.) Relating to both eyes.

B. mi'croscope. See Microscope, bin-

B. ophthal'moscope. See Ophthalmo-

scope, binocular.

See Vision, binocular. B. vis'ion. Binoc'ulus. (L. bini, donble; oculus, the eye. F. binocle.) Term for an X-shaped bandage for maintaining dressings on both eyes; also called Diophthalmos.

Bino'dal. (L. bis; nodus, a knot.) Having two nodes.

Bino mial. (L. bis; nomen, a name.) Having two names.

B. nomencla'ture. (L. nomenelatura, a calling of name, from nomen, a name; calo, to call.) The mode of description of an animal or plant by two names, one denoting the genus, the other the species.

B. sys'tem. Same as B. nomenclature. **Binous.** (L. binus, double.) Double; in pairs. Applied to leaves when there are only two on a plant, as Galanthus nivalis, snowdrop.

Binox'alate. (L. bini, donble; oxalas, an oxalate.) A combination of oxalic acid with a base, in which only half the hydrogen is replaced by a metal, oxalic acid being a bibasic acid.

Binoxystrych'nia. A name given by Schutzenberger to an alkaloid resulting from the exydation of stryclinia when ammonia is added to a boiled aqueous solution of snlphate of strychnia and potassium nitrate.

Bin'sica. A Rabbinical term for mental disease, and, in particular, atrophy of the organ of fancy. (Helmontius.)

B. mors. (L. mors, death.) Death following disorders of the mind, such as are produced by the bite of a mad dog. (Parr.)

Binu'cleate. (L. bis, twice; nucleus, a kernel.) Having two nuclei.

Binucle'olate. (L. bis; nucleolus, dim.

of nucleus.) Having two nucleoli. Bi'o. France; Departement du Lot. A cold mineral water, containing calcium sulphate, only used in the locality.

Biochemicus. (Bios, life; χημεία, chemistry. F. biochimique.) Applied by Harless to the action which odorous bodies exercise upon animal organic matter, and upon the nervous power, in order to produce the sensation of odours.

**Biochym'ia.** (Blos, life; χυμεία, chemtry.) The chemistry of living or once living istry.) things.

Biochymus. (Bios, life; χῦμος, juice. F. biochyme; G. Lebenssaft.) The sap of plants. Biocratics. (Bios, life; κρατίω, to rule.) Therapentic agents which influence the economy by modifying the rhythm, or the mode of being, of the functions of the body by stimulating,

depressing, or regulating them.

Bi'od. (Bios, life.) Reichenbach's term for vital force; the force special and peculiar to liv-

ing beings.

Biodes'mus. (Bíos, life; ἐεσμόs, a tie. F. biodesme; G. Lebenshand.) The general and special tie or fundamental condition of life.

Biodynamics. (Bios, life; δύναμις, power. F. biodynamique; G. Biodynamik.) The doctrine of living action. See Biosophia.

Biogam'ia. (Bios, life; γάμος, marriage.)

A term given to the series of phenomena other-

wise called Animal magnetism.

Bi'ogen. (Bios, hfe; γεννάω, to generate.) The same as Bioplasm.

Biogen'esis. (Bios, life; γένεσις, an origin.) The doctrine of the generation of living things from living parents only, as contra-distinguished from Abiogenesis.

Biogenetic. (Same etymon.) Belonging to the development of life.

Also, belonging or relating to biogenesis. n. fundament'al law. (G biogenetische Grundgesetz.) A statement or position laid down by Häckel that germ history, ontology, is a short

repetition of race history, phylogeny. **Biogno'sis.** (Bios, life; γνῶσις, knowledge, F. biognose.)

The investigation or know-

ledge of life.

Biolog'ical. (Blos, life; λόγος.) That which has reference to living beings.

**Biol'ogy.** (Bios, life; λόγος, a discourse. L. biologia; F. biologie; l. and S. biologia; G. Bio..., Lebenslehre.) The science which deals with living things, their organisation, and their manifestations. Sometimes improperly used as synonymous with physiology. Mental operations are not included in this term generally, but form a science apart, Psychology; and the habits of man as a social being also form a separate science, now named Sociology. Biology is divisible into Morphology, Distribution, Physiology, and Letiology.

The term has also been used as synonymous

with Animal magnetism.

Biolych'nium. (Bios, life; λύχνος, n lamp.) Used by Charlton and others for vital heat.

Also, for a mysterious secret preparation from human blood, alluded to by several ancient writers, according to Beguinus, Tyrocin. iii, 1. **Biol'ysis.** (Bios, life; λύω, to loosen.) The

destruction of life by internal agents, natural or artificial.

Biolytic. (Same etymon.) Having relation to, or producing, Biolysis

Biomag'netism. (Blos, life; magnetis-

mus.) Same as Animal magnetism.

Bioman'tia. (Bios, life; μαντεία, divination. G. Lebensprophezeneng.) The divination of that which relates to life.

Bioman'tic. (Same etymon.) Relating to

biomantia.

B. symbol'ic mon'ochord. A representation of the pulse heats according to the rules of

musical harmony.

Biom'etry. (Bios, life; μετρέω, to measure. F. biometrie; G. Lebensmesskunst.) The art of computing and reckoning the duration

**Bion'omy.** (Bίος; νόμος, enstom, law.) The knowledge of the laws of life; physiology.

(Bios, life; οντα, the things Bion'ta. Living, or once living, indiwhich exist.) viduals.

Bion'tic. (Same etymon.) Relating to

living things.

Term employed by B. devel'opment. Häckel to indicate the entire series of morphological changes which are undergone in the whole course of life by each individual or hion, or by the cycle of generation of several bionta.

Biophænomenol'ogy. (Blos, life; phænomenologia.) A treatise on the phenomena

of life.

Bioph'agous. (Blos; φαγείν, to eat.)
Feeding on living things. A term applied to certain plants which are able, by their leaves, to kill, dissolve, and absorb the bodies of small animals.

Biophil'ia. (Bios, life; φιλία, love.) The

instinct of self-preservation.

Bi oplasm. (Blos; πλάσμα, anything formed, from πλάσσω, to form.) Living or germinal matter possessing formative power. Upon it all germination, growth, and multiplication depend; it is the elementary part of every living tissne, as distinguished from the formed part or material. (Beale.)

Bi'oplast. (Same etymon.) An individual mass of bioplasm forming a living unit.

B., contagious. According to Dr. Beale, a living particle, consisting of bioplasm, seldom more than a 100,000th of an inch in diameter, colourless and structureless, insoluble in water, tenacious of life, capable of being propagated in certain fluids, as milk, out of the body, and very rapidly in the blood and some other fluids of the animal body to which it has gained access, derived from direct descent from the bioplasm of the body, and each kind capable of manifesting only its own specific action; that is, originating its own special disease, as smallpox or measles.

Bioplas'tic. (Same etymon.) Of, or be-

longing to, Bioplasm.

**Bioscope.** (Bios, life;  $\sigma\kappa o\pi \ell w$ , to look at, to examine.) A kind of hygrometer intended to prove the existence of life by demonstrating the persistence of the secretion of sweat.

Bios'copy. (Bíos, life: σκοπέω, to hehold. F. bioscopie; G. Bioskopie.) Term for an ex-

ploration or examination of life.

B., le'gal. A term for Forensic medicine. Bio'sis. (Βίωσις, life. F. biose.) The proress or formation of life; also the processes of gress or rotation living.
life; the act of living.

Bios, life; \(\sigma\text{op}\) a, skill.)

**Bi'osphære.** (Bios, life; σφαῖρα, a sphere. F. hiosphère; G. Lebenskugelehen.) The granules of the protoplasm of plants.

Biostatics. (Bios; στατική, statics, from ίστημι, to make to stand. F. biostatique; G. Biostatik.) The doctrine of the physical phenomena of organised bodies.

Biostatis'tics. (Bios; L. status, a condition.) A term for vital statistics.

Biotau'ra. (Biotos, life; aura, air. G. Lebenshauch.) Vital air, oxygen.

Bi'otaxy. (Blos, life; τάξις, an arranging. F. biotaxie; I. biotaxia; G. Biotaxie.) A syno-

nym of Taxonomy. B., patholog'ical. A synonym of Tera-

Biothal'mius. (Βιοθάλμιος, hale, from  $\beta$ ios, life,  $\theta$ a $\lambda\lambda$ a, to be luxuriant.) One who is long lived, or who is in robust health.

**Biothanatol'ogy.** (Bios, life; θάνατος, death; λόγος, a word.) The doctrine of life and

**Biothan'atos.** (Βία, violence; θάνατος, death.) Term used by Forestus, in Schol. ii, l. i. Obs. 1, for one who dies a violent death, whether

by his own hand or otherwise.

Biot'ic. (Bioros, life.) Pertaining to life.

B. prin'ciple. The supposed vital prin-

ciple.

Biot'ics. (Same etymon.) Physiology. **Biot'omy.** (Bios, life, τομή, a cutting, from τέμνω, to cut.) A term given to the dissection of or cutting into hving animals; vivisection.

Biov'ulate. (L. bis, twice; ovum, an egg.) Having two ovules, as of an ovary of a plant, or

one of its cells, as in the Acanthus.

Bipa'leolate. (L. bis; palea, chaff.) With two pales:

Bipal'mate. (L. bis; palma, the palm.) Doubly paintately compound.

**Eiparasitic.** (L. bis; parasiticus. F. biparasite.) A plant that lives parasitically on another parasite plant, as the *Tremella parasitica* on the stipes of the Agarieus parasitious.

Bipari'etal. (L. bis, twice; parietalis os, the parietal bone.) Having relation to both pa-

rietal bones.

B. diam'eter. A measurement of the feetal head, being an imaginary line drawn through the eranium from one parietal protuberance to the other, of which the average length is three inches and a half.

B. obliq'uity. A position of the fætal head during its passage through the pelvis in natural labour, in which it is somewhat bent on one side. so that the horizontal plane of the cranium is not at right angles to the axis of direction. At one time this was very generally believed to be the natural position in ordinary labour, but latterly the statement is rejected by many authorities.

B. su'ture. A synonym of the Sagittal suture.

Bipa'rous. (L. bis; pario, to bring forth.) Bringing forth two at a birth.

Also, in Botany, applied to a cyme in which the axis gives rise to two bracts, from each of which a second axis is developed.

Bipar'tite. (L. bipartitus; bis, twice; partio, to divide. F. biparti; G. zweitheilig, zweifach getheilt.) Divided deeply into two. The depth of division distinguishes bipartite from the less deeply eleft bifid.

Bipec'tinate. (L. bis; pecten, a comb.) Having two comb-like or toothed margins.

Biped. (L. bipes, from bis, double; pes, foot. F. bipede; 1. and S. bipede; G. zweifüssler.) An animal provided with two feet only.

Bipc'dal. (L. bipcdalis, from bis, two; pedalis, from pes, a foot. G. zweifussig.) Having, or walking on, two feet.

Bipel'tate. (L. bipeltatus, from bis, double; pelta, a buckler. F. bipelté, bicuirassé.) Having two shields.

Bipemulla. The Pimpinella, and also the Plantago minor. A doubtful spelling.
Bipenella. Same as Pimpinella.

Bipen'nate. (L. bis, twice; penna, a wing.) Having two wings.

Also, a synonym of Bipinnate.

Bi'pes. (L. bis; per, a foot.) Having two legs or supports.

**Bipetalous.** (L. bis, double; petalum, a leaf of metal, a petal.) Having two petals or divisions of the corolla.

Bipho'ra. An Order of the Class Tunicata, according to one classification. Outer and inner integuments united throughout; branchiæ ribbonshaped; an opening at each extremity; freeswimming. Sexes distinct.

Biphos'phate. A salt with two equivalents of phosporic acid and one of base.

Bipinella. The Pimpinella, and also the Plantago minor.

Bipin'na. Probably a various spelling of Pipinna.

Bipin'nate. (L. bipinnatus; bis, double; pinna, a leaflet. F. bipinné; G. doppeltgefiedert.) Having double leaflets. A pinnate leaf in which the leaflets are themselves pinnate.

Bipinnatepartite. (L. bis; pinnatus, winged; partitus, divided. G. doppeltfieder-theilig.) Term in Botany applied to a pinnatifid, that is to say, a simple leaf, but divided into very deep lobes, which are themselves cut like the principal lobe.

Bipinnatifid. (L. bipinnatifidus, from bis, double; puna, a leaflet; findo, to divide. F. bipinnatifide; G. doppeltgefiederspaltig.) Doubly pinnatifid. Pinnatifid leaves, the segments of which are themselves pinnatifid.

Bipinnat isect. (L. bis; pinnatus, winged; sectus, cut. G. doppeltfiederschnittig. Term applied to a pinnatiseet leaf (that is to say, simple, but divided into pinnate lobes, which reach the median nervure of the leaf), the lobes

Bipli'cate. (L. bis; plica, a fold. G. doppeltacfultet.) Having two folds.

of which are themselves pinnatisect.

Bipolar. (L. bis; polus, the end of an axis. F. bipolaire; G. zweipolar, zweistahlig.) Having two poles or axes.

B. nerve cells. Those which possess only two prolongations of the substance of the cell; found principally in the sympathetic ganglia, and in the grey substance of the cerebellum.

B. ver'sion. See Turning, bipolar. Bipolarity. (L. bis, double; polus, pole.)
The state of an electric or magnetic body, in which two poles of opposite properties are found.

Bipo'rose. (L. bis; porus, a hole.) Opening by two holes or pores.

Biposito'res. (L. bis; positus, part. of pono, to place.) A synonym of the Order Columba, the pigeons, in consequence of the eggs of the species being usually two.

Bipul'vinate. (L. bis; pulvinatus,

cushion-shaped. G. zweikissig.) Having two cushions or pads.

Bir. A term for the chest. Bira. A term for yeast.

Birac'emate. A salt, consisting of two atoms of raceruic acid and one of base.

Bira'mous. (L. bis; ramus, a branch.)
Two-branched, as in the limbs of Cirripedes.
Bira'o. The true Amomum. (Quincy.)
Birch. (Sax. birce. F. bouleau; 1. betula; S. abudul; G. Birke; Dan. birk; le. and Sw. biörk; Russ. bereza.) The Betula alba.
B., black. The Betula lenta.
B. abuduh. Serve as Betulis.

B. cam'phor. Same as Betulin, B., cher'ry. The Betula lenta. B., com'mon. The Betula alba.

B., Europæ'an. The Betula alba, B. stearop'ten. The same as Betulin, B., sweet. The Betula lentu.

B. tree, Jamai'ca. The Bursera gummifera.

Birch'worts. The plants of the Nat. Order Betulacea.

Bird. (Sax. brid, a bird; probably from bredan, to breed.)  $\Lambda$  feathered animal.

B. cher'ry tree. The Prunus avium, and P. padus.

B. cher'ry tree, wild. The Prunus padus.

B. cher'ry, Virgin'ian. The Prunus virginiana.

B. foot'ed. See Pedate.

B.lime. (L. viscum, aucuparium viscum; Gr. 1865; F. glu; 1. vischio; G. Voqelleim.) A vegetable substance of great viscidity, used to entangle birds. Prepared from the middle bark of the holly, but may also be obtained from the mistletoe, the Viburnum lantana, young shoots of elder, and other vegetable substances. Said to be discutient. Used in Japan for the treatment of wounds. Also ealled Tiscin.

B. manu're. A synonym of Guano.
B. pep'per. The Capsicum minimum.
Bird's bread. The Sedum acre.
B.'s eye. The Genus Adonis; also the Veronica chamadrys, and the Primula farinosa.

B.'s eye, red. The Geranium Robertia-

num. B.'s foot, small. The Ornithopus perpusillus.

B.'s foot tre'foil. The Lotus corniculatus. B.'s head pro'cesses. Same as Avicularia.

B.'s nest. The Hypopitys lanuginosa Also, the wild carrot. Also, the Monotropu.

B.'s nest bod'ies. A name given to a condition of arrangement of the scaly cells of epithelial cancer, in which they are placed in nest fashion around a circular central space, which contains amorphous colloid matter or degenerated cells.

B.'s nest, edible. The nests of several species of swallow, especially the Collocalia esculenta, used in China as an article of food. It consists in a large part of mucus, mixed with seaweed, Gelidium and other species, altered in the upper part of the alimentary canal, and discharged from the beak. It is carefully cleaned, and used chiefly for making soup.

B.'s tongue. The seeds of the Fraxinus excelsior, or ash, from their likeness; also the Polygonum aviculare, from the shape of its

Bedscha.

Birds. (Same etymon as Bird.) See Aves. Birefrin'gent. (L. bis, twice; refringo, to break back.) Doubly refracting. Applied to crystals.

Bire'thus. (Bippos. L. birrus, a priest's hood.) A cap lined with odoriferous drugs and applied to the head. Also called Cucupha.

Bir'hur. A nomad race of men inhabiting the southern highlands of Tschota Nagpur, and

belonging to the Dravidian stock.

Bir'mansdorf. Switzerland; in Canton of Aargau. A mineral water, springing from the Jura formation, and containing, in 16 oz., magnesium sulphate 169, sodium sulphate 54, potassium sulphate 79, calcium sulphate 9.64, magnesium chloride 3.53, calcium carbonate 1, magnesium carbonate 24, and iron oxide 08 grains. It is a purgative.

Biros'trate. (L. hirostratus; bis, double; rostrum, a beak.) Having two beaks; double-

Biros'tris. Same as Birostrate.

Bir'rum-ja-sif. (Hind.) The dried leaves and flowers of Artemisia vulgaris. Used in India as a stomachic, deobstruent, and autispasmodic.

Birsen. (From Heb. birzin. pl. of baraz, an aperture.) A deep ulcer or imposthume in the

breast.

Birth. (Sax. byrd, bearth, from beran, to bear. L. nativitas; Gr. τόκος; F. naissance I. nascita; S. nacimiento; G. Geburt.) Ti bringing forth of offspring.

B., concealment of. See Concealment of birth.

B., cross. A synonym of Transverse presentation.

B., enti're. The complete extrusion of a child from its mother; a condition which is required by the English law in order that the child

may inherit and transmit property.

B., mon'strous. The birth of a child with great deformity of body. No precise definition of a monster is given by the law of

England.

B., par'tial. The incomplete extrusion of a child from its mother; a condition which, even if the child be living, does not confer the right to inherit and transmit property.

B., plu'ral. The birth of twins or more.

B., pos'thumous. (L. postumus, the last, superl. of posterus, coming after.) A child born after the death of its father.

B., pre'mature. See Labour, premature. B., protrac'ted. Same as Gestation, protracted.

B., still. The birth of a dead child. See Stillborn.

Birth'root. The Trillium erectum.

Birth'wort. The species of Aristolo-

B., climb'ing. The Aristolochia clema-B., long-root'ed. The Aristolochia longa.

B., round. The Aristolochia rotunda. B., snake-killing. The Aristolochia

anguicida. B., snake-root. The Aristolochia serpen-

taria. B., three-lo'bed. The Aristolochia tri-

B., up'right. The Aristolochia clematitis. Birth'worts. The plants of the Nat. Order Aristolochiacea.

Bis. Twice, or double. The Latin root of the prefix Bi-, or Bin-.

Bisac'catc. (L. bis; succus, a hag. 6. Zweisackig.) Having two saes.

A salt, in which Bi'salt. (L. bis; salt.) one of the two equivalents of hydrogen only is replaced by a base.

Bi'sam. A synonym of Moschus.

Bisay'as. A Malayan race of men inha-

biting the Philippine Islands.

Also, a race of Dyaks in Northern Borneo A section of the Bedscha Bis charis. nation, about 200,000 in number, occupying the northern part of Abyssinia and the east of Nubia, between 15° and 23° lat. Their language is widely spoken. They are sometimes named

Bische. The same as Bicho di culo. Also, a local name for a severe form of dysen-

tery prevalent in Trinidad.

Bis'choff, Th. Ludwig Wilhelm. A distinguished professor at Giessen of the present century. His embryological researches have a high authority.

Biscoc'tus. (L. bis; coctus, cooked, from coque, to cook.) A name given to biscuit.

Bis'cuit. (F., from bis, twice; cuire, to bake. I. biscotto; S. bizcocho; G. Zwiebaek.) Unleavened dough of flour and water, to which butter, eggs, or sugar, are added to form the varieties, rolled thin and baked. Biscuits are made medicinal by the addition of mercuric chloride, jalap, charcoal, and other matters.

B. root. The bulb of Camassia esculenta. Bise. A term of doubtful etymology. Applied in France to a north or north-east wind, which in winter is cold and biting, in summer hot and dry, and in both cases prejudicial to health.

Bisec'tion. (L. bis; seco, to cut.) entting in two, as of the child when impacted in the pelvis; the operation may be performed at the neck, decapitation, or through the trunk, spondylotomy.

Bisectus. (L. bis; seco, to cut.) Divided into two parts or segments. Applied chiefly to spores separated from each other by two transverse septa.

Bisema'tum. The lightest, palest, and basest lead. (Quincy.)

Bisen'na. The same as Musenna. Bisep'tate. (L. bis; septum, a partition.) Having two partitions.

By some botanists this term is used (G. zweikammerig) to denote the division of a cavity into two by a septnm.

Biserial. (L. bis; serics, an order. G. zweireihig.) Arranged in double order; in two rows.

Bise'riate. (L. bis; series.) In two series or rows

Biser'mas. The Salvia sclarea.

**Biser'rate.** (L. bis; serratus, jagged.) A serrate leaf in which the teeth are themselves

Bise'tose. (L. bis; seta, a bristle. G. zweiborstia.) Having two setse or bristles.

Bise'tous. Same etymon and meaning as

Bisex'ual. (L. bis, double; sexus, sex.) Being of both sexes; hermaphrodite.

B. flow'ers. Flowers possessed of both male and female organs of generation.

Bisfay'ar. (Hind.) The root of the Poly-

podium rulgare. Used in India as a stimulant in flatulent indigestion. Dose, 5-20 grains. (Waring.)

Bisfer'ious. (L. bis; ferio, to strike.) A term synonymous with Dicrotic.

Bish. A native name of the Aconitum

Bishnukranth'a. (Ilind.) Probably the Evolvulus alsonoides. Used in India as a (Hind.) Probably vermifuge, and in boils, erruptious, and mucous disorders. (Waring.)

Bish'op's leaves. The Scrophularia

B.'s weed. The Ammi majus.
Bisilicate. (F. bisilicate.) A salt of silicie acid containing two equivalents to one of

Bisk. A native name of the Aconitum ferox

Bis'kra. Algeria. Indifferent hot waters, containing a very small amount of iron.

B. but'ton. (F. bouton de Biskra.) African date-mark. A disease observed in Algeria, probably the same as Aleppo evil and Dethi sore. It begins as an itching papule, which soon becomes pustular, then covered with crusts, under which ulceration progresses, sometimes in a scrpiginous form; it is inoculable, lasts about six months, and leaves deep, dark cicatrices; it may recur. By some it is supposed to depend on a fungous growth, which is described by Dr. Carter as consisting of a mycelium arranged in open and angular meshes, with conidia on its free ends; at a subsequent stage bright, orange-tinted particles, arranged in spherical or ovoid groups, are alone seen, and are supposed to be a further stage of development. Biskra buttou is seen in animals, especially on the noses of dogs.

Bislin'gua. (L. bis, double; lingua, a tongue.) Double-tongued. A name for the Ruseus hypogtossum, because it has a smaller leaf on each

ordinary one.

Bislumb'hi. The Cucumis trigonus.
Bismal'va. The Althan, or marshmallow.
Bis'muth. (F. bismuth; I. bismutte; S. bismuto; G. Wismuth). Bi=210. Hard, crystalline, reddish-white metal, of sp. gr. 9.9. Melts at 270° C. (518° F.) Most diamagnetic of all bodies. Does not oxidise in air; burns with a bluish flame. Comes from Saxony, Bismuth is bi-, tri-, and quinquevalent.

B. and ammo'nium ci'trate.
Liquor bismuthi et ammoniæ citratis.

B. carbonate. See Bismuthi carbonas.
B. ci trate. BiC<sub>6</sub>H<sub>5</sub>O<sub>7</sub>. A salt formed in the preparation of Liquor bismuthi et ammoniæ citratis.

B., flow'ers of. An efflorescence of bismuth oxide on minerals containing metallic bismuth.

B. lac'tate. A salt, which has been used, in powder or pill, in howel affections. Dose, '05 to '2 gramme.

B. loz'enges. See Trochisci bismuthi. B., mag'istery of. The B. subnitrate.

B. ni trate. See Bismuthi subnitras. B. ni'trate, ba'sic. Bi(OH)<sub>2</sub>NO<sub>3</sub>. Same as Bismuthi subnitrus.

B., ox'ide. See Bismuthi oxidum. Also, a name of B. subnitrate.

B., oxide of, white. Same as B. subnitrate.

**B. oxychlo'ride.** (B<sub>6</sub>Cl<sub>3</sub>,Bi<sub>2</sub>O<sub>3</sub>)<sub>2</sub>,1l<sub>2</sub>O. Pearl white. Prepared by slowly pouring a solution of bismuth in nitric acid into a solution

of sodium chloride. A white powder, used as a cosmetic.

B. oxyhy'drate. A term applied to the oxide of bismuth when thrown down from a solution of a bismuth salt by eaustic alkali. Used as carbonate of bismuth.

B., pu'rified. Bismuth fused with potassium nitrate to remove impurities. See Bismuthum purificatum.

B., reg'ulus of. The metal bismuth.

B. subcarbonate. Same as Bismuthi carbonas.

B. subni'trate. See Bismuthi subnitras.

B. tan'nate. See Bismuthi tannas. B. terox'ide. See B. trioxide.

B. trini'trate. Bi(NO<sub>3</sub>)<sub>3</sub>+3H<sub>2</sub>O. Obtained in large, transparent, triclinie prisms when a solution of bismuth in nitric acid is evaporated. The erystals are very deliquescent; they are soluble in glycerin, and when thus dissolved are

miscible in water without precipitation. **B. trioxide.** Bi<sub>2</sub>O<sub>3</sub>. Found native as bismuth oebre. Prepared by heating the hydroxide, carbonate, or uitrate of bismuth. It is a yellow powder, of sp. gr. 8.2 when thus formed; and it occurs in microscopic needles when obtained by the precipitation of a boiling solution of a bismuth salt with potash. Used as the subnitrate. Dose, 5-15 grains.

B. trisni'trate. A former name of Bis-

muthi subnitrus.

B. vale'rianate. See Bismuthi valerianas.

B., white. Same as B. subnitrate.

Bismu'thi carbo'nas. 2(Bi<sub>2</sub>CO<sub>5</sub>)H<sub>2</sub>O Two ounces of bismuth, in successive portions, are added to four ounces of uitric acid mixed with three ounces of distilled water; when effervescence has ceased heat is applied for ten minutes; after decauting, the solution is evaporated to two ounces, and a solution of six ounces of carbonate of ammonia in two pints of distilled water is added, the precipitate is collected on a filter, washed, and dried at a temperature not exceeding 65.5° C. (150° F.) A white powder, insoluble in water, soluble with effervescence in nitric acid. Used in gastrodynia and vomiting of standing, where there is much acidity. Dose, 5-20 grains or more. This is a subcarbonate.

B. et ammo'niæ ci'tras. Prepared by dissolving bismuth citrate in ammonia water and concentrating, when it is obtained in white, transparent, shining scales; freely soluble in water, slightly in alcohol, and insoluble in ether. See Liquor bismuthi et ammoniæ citrutis.

B. ni'tras. Same as B. subnitras. B. oxi'dum, B. Ph. (F. oxyde de bismuth; G. Wismuthoxyd.) Bi<sub>2</sub>O<sub>3</sub>. Molecular weight 468. Subuitrate of bismuth one pound, solution of soda four pints, mix and boil for five minutes; on cooling the oxide is deposited, when the supernatant liquid is decanted, and the precipitate washed and dried. It is a dull yellow, somewhat erystalline, powder, which dissolves in acids without effervescence. Properly Bismuth tri-Used as the subnitrate. Dose, 5-15 oxide. graius.

B. subcarbo'nas, U.S. Ph. Same as B. carbonas.

B. subni'tras, B. Ph. (F. sous-azotate de bismuth; G. basisches salpetersaures Wismuth-oxyd.)  $BiNO_4, H_2O$ . Magistery of bismuth. Two ounces of purified bismuth are added, in successive portions, to four ounces of nitrie acid mixed with three ounces of distilled water; when effervescence has ceased it is heated for ten minutes, decanted, and evaporated to two ounces; this being poured into a gallon of distilled water, a precipitate is formed, which is washed, collected, and dried at a temperature of 65.5° C. (150° F.) A white, heavy powder, in minute crystalline scales. It is blackened by hydrogen sulphide, and insoluble in water. Used in gastrodynia. Dose, 5-20 grains or more.

B. tan'nas. (F. tunnate de bismuth; G. Gerbsaneswismuth.) Tannate of bismuth. Forty-four parts of subnitrate of bismuth are dissolved in equal parts of nitric acid and water, and poured into a solution of soda; the precipitate is washed, triturated with twenty parts of taunic acid mixed with water, strained, and

dried with a moderate heat. It is a light vellow, tasteless powder, insoluble in water and alcohol Used internally as an astringent in diarrhoea, and externally in gonorrhea, leucorrhea, and ophthalmia.

**B.** trisni'tras. Same as B. subnitras. **B.** valeria'nas.  $C_5H_9O_2BiO$ . A solution of exide of bismuth in nitric acid mixed with

sodium valerianate; a precipitate forms, which is washed and dried. Used in gastrodynia and neuralgia. Dose, ½—2 grains, three times a

Bismu'thic ac'id. HBiO3. powder, obtained by passing a current of chlorine through a boiling solution of caustic potash, holding bismuth trioxide in suspension.

Bismu'thides. (F. bismuthides.) Name by C. Pauquy for a Family of ponderable bodies; by Beudant for a Family of minerals, having bismuth for their type.

Bismu'thous ni'trate. A synonym of Bismuth trinitrate.

B. ox'lde. A synonym of Bismuth tri-

Bismu'thum. The metal Bismuth.

B. al'bum. The Bismuthi subnitras.
B. carbon'icum. The Bismuthi carbonas.

- B. cit'ricum ammoniaca'le. The Liquor bismuthi et ammoniæ citratis.
- B. depurga'tum, Belg. Ph. (L. depurgo, to cleanse.) The same as B. purificatum.

  B. hydriconi'tricum. A synonym of
- Bismuthi subnitras.
- B. hydroni'tricum. The Bismuthi subnitras.
- B. hydro-oxyda'tum. See Bismuth oxyhydrate.
  - B. iac'ticum. See Bismuth lactate,
    B. ni tricum. The Bismuthi subnitras,
- B. ni'tricum ba'sicum. The Bismuthi subnitras.
- B. oxida'tum. Same as Bismuthi oxidum.
- B. oxydula'tum al'bum. (L. albus, white.) The Bismuthi subnitras.
- **B. purifica'tum,** B. Ph. (L. purificatus, from purifico, to make eleau.) Bismuth, ten ounces, is fused with an ounce of potassium nitrate for fifteen minutes; the slag from the surface is removed and another ounce of potassium nitrate added to the metal, and again fused. Used in making carbonate and subnitrate of bismuth.
- B. repurga'tum, Fr. Codex. (L. repurgo, to cleanse again.) Same as B. purificatum.
- B. subcarbon'icum. See Bismuthi subcarbonas.

B. subnitricum. The Bismuthi sub-

B. tan'nicum. See Bismuthi tannas. B. valerian icum. The Bismuthi valeri-

Sismu'tum. The same as Bismuthum. **Bi son.** (Βίσων.) The Ros bison; its flesh is said to be better than ox-beef; the hump is

highly esteemed. Bispenti. (L. bis, twice; penis, F. bispenen.) Applied by Blainville to an Order of the Reptilia, the males of which have the penis

double. Bispinose. (L. bis; spina, a spine.) Having two spines.

Bispi'rous. (L. bis; spire, to breathe.) Having two outlets, as of a wound.

Bissa-bol. A gum, resembling myrrh, imported from Arabia. It is of African origin, but its source is unknown.

Bissec'tus. (L. bis, twice: seco, to cut. F. biséqué.) Applied to an insect, the head and trunk of which are not separated by a suture. so that the body seems formed of two pieces only, as the Aranea.

Bis'sum. The Hydrangea arborescens. Bis'tort. (L. bis, twice, or double; torqueo, to twist, from the appearance of its roots. F. bistorte; I. and S. bistorta; G. Natterwarz, Schlangenwarz.) The root of the Polygonum bistorta. Used as an astringent. See Bistorta.

B., offic'inal. The Polygonum bistorta. B., Virgin'ian. The Polygonum virginianum.

Bistor'ta. (F. bistorte, couleuvrine; I. serpentina; G. Wiesenknöterich, Natterwurz.) Bistort, snake-weed; the rhizome of Polygonum bistorta. It is flattened on one side, rounded on the other, bent twice on itself, partly annulated with leaf-scars, and marked with rootlet-sears; blackish brown on the outside, brownish red within, with a large central pith. It coutains tannin and some gallic acid. Used in powder, decoction, or extract, as an astringent in diarrhœa, leucorrhœa, hæmorrhage, and relaxations of mucous membrane.

Bis'touri ca'ché. (F. bistouri; cacher, to hide.) A name for an old French bistoury, the blade of which is contained in a sheath, and starts out on pressing a spring. It was used in the operations for stone in the bladder and hernia.

Bis'toury. (F. bistouri, an incision-knife; from Pistorium, now Pistoja, a town once celebrated for the manufacture of such instruments. I. bistori; S. bisturi; G. Bisturi, Einschnittmesser, Ritzmesser.) A small knife, or scalpel, for surgical purposes; there are three forms in which it is made, the straight, the curved, and probe-pointed, which is also curved.

B., cur'ved. (F. bistouri à tranchant concave; I. bistori falcato; G. concavschneidiges, or krummes Bistouri.) A sharp or blunt-pointed bistoury, with a concave cutting edge.

B., probe-poin ted. (F. bistouri bou-tonné; I. bistori bottonato, smusso, or ottuso; G. kopfiges er geknöpftes Bistouri.) A straight or curved narrow knife, the extremity of which ends in a kuot or button. It has the advantage that it can be made to travel along a groove or

sinus, without injuring the tissues.

B., straight. (F. bistouri droit; I. bistori retto; G. Spüz, or Einstichmessen.)

A long, straight, narrow, and sharp-pointed knife.

Bistra'ta. (L. bis, twice; stratum, a

layer.) Term applied by Jager to those mature animals and to those stages of development which present only two layers of blastides.

B. solida. (L. solidus, solid.) Those forms which present a layer of limiting cells (exoderm), and a solid mass of cells of a different

kind within.

B. ca va. (L. carus, hollow.) Those forms which have a cavity in their interior surrounded by two layers of blastides, the outer one forming an exoderm, and the inner one an entoderm, as the gastrula of Häckel.

**Bistritz.** Austria; near Olmütz. A whey cure place in a fair climate.

Bisul'cate. (L. bis, twice; sulcus, eleft. G. zwerspaltig, gespalten.) Cloven-footed, as the ox.

Also, in Botany especially, two-grooved. **Bisul'phate.** (L. bis, double; sulphas, a sulphate.) A salt of sulphuric acid, in which one atom only of hydrogen is replaced by a base.

Bisul'phide. A compound having two equivalents of sulphur to one of base.

B. of carbon. Same as Carbon disul-

**Bisul'phite.** (L. his, double; sulphis, a sulphite.) A salt of sulphurous acid, in which one atom only of hydrogen is replaced by a base.

**Bisul'phuret.** A compound having two equivalents of sulphur to one of base.

Bisz'tra. Hungary; County Marmaros. An alkaline chalybeate water.

Bitar'tras. Bitartrate.

B. ka'licus. Potassium bitartrate.

B. potas sieus. Potassium bitartrate. Bitar trate. (L. bis; tartras, a tartrate.) A salt of tartarie acid, in which there are two atoms of acid to one of base; in other words, in which only one hydrogen radicle is replaced by a metal.

Biter nate. (L. biternatus, from bis, twice; term, three each. F. biterne; G. doppeltgedreit, doppeltdreizahlig, doppeltdreitheilig.) Twice ternate, or doubly threefold, compound leaves, the common petiole of which bears three secondary petioles, ou each of which are three leaflets.

Biterna'tisect. (L. bis; term; seco, to cut. G. doppeltdreeschnittig.) Doubly terrate;

each half divided into three.

Bithnymal'ca. (Heb. beten, bitni, stomach; malkah, queen.) Old term, according to Dolaeus, in Encyclopæd. Med. l. iii, c. i. 3 and 4. for a supposed peculiar active principle in the stomach, and presiding over chylification; also called Gasteranax.

**Bithyn'ians.** The inhabitants of Bithynia, in the north of Asia Minor. They are

descended from the Thracians.

Bith ynos. (Betwees) Old name for a plaster, described by Galen, de C. M. sec. Loc. ix, 3, and recommended as efficacious against dropsy; also, for a certain pastil or troch, de C. M. per Gen. v, 12, Gorræus.

Biting persica'ria. The Polygonum hydropiper.

B. stone crop. The Sedum acre.

Bitios de kis. An African synonym of

Bit-loban. A preparation made by the Hindoos, being a white saline substance, called in the country Padanoon, Southerloon, and popularly Khala mimue, or black salt. It is impure sodium chloride mixed with a little iron sulphide, and is made by melting three parts of the salt of

Lake Samur, with one part of myrobalan. It has been long used in India, and applied to many purposes, to improve digestion, and as specific in obstructions of the liver and spleen, the results of malarious poisoning, in paralysis, cutaneous diseases, worms, rheumatism; in short, in all

chronic affections of man and beast.

Bit-noben. The Bit-loban.
Bit'ten. (Eng. part. of bite, from Sax. bitan. G. geschnitten.) Having irregularlyshaped serrations, as in certain leaves.

Bitter. (Sax. biter, from bitan, to bite. L. amarus; Gr. πικρός; F. amer; L. amaro; S. amargo; G. bitter.) A well-known taste.

B. almond. The Amygdala communis,

var. amara. See Amygdala amara.

B. ap'ple. The plant and the fruit of the Citrullus colocynthis.

B. ash. The Picrana excelsa.

B. bark. The Pinckneya pubens. B. blain. The Vandellia diffusa.

B. bloom. The Chironia angularis.
B. bush. The Eupatorium nervosum.
B. can'dytust. The Iberis amara.
B. cassa'va. The Manihot utilissima.

B. cress. The Cardamine amara.

B. cu'cumber. Same as B. apple

B. cup. A cup made of quassia wood. Used for the administration of the drug by putting water into it, and drinking it in a short time when it has dissolved some of the bitter principle.

B. earth. A synonym of Magnesia.

B. gourd. Same as B. apple.
B. grass. The Aletris furinosa.
B., ho'ly. The Pulvis aloes cum canella.
B. king. The Soulamea amara.

B. kino'va. A synonym of Kinoric acid.
B. or'ange. The Citrus vulgaris.
B. parei'ra. The Abuta amara.
B. polyg'ala. The Polygala rubella.

B. prin'ciple. A neutral substance of indefinite chemical constitution, varying in com-position in different plants, on the presence of which the bitter quality of certain vegetables is said to depend.

B. purg'ing salt. A synonym of Magnesiæ sulphas.

B. pur'ple wil'low. The Salix purpurea. B. quino'a. A term applied to the seeds

with the husks of the Chenopodium quinoa.

B. red'berry. The Cornus florida. B. root. The Apocynum androsæmifolium, the Gentiana catesbai, and the Menyanthes

B. simaru'ba. The bark of the root of Simuruba officinalis.

B. sorin'jan. See Sorinjan tulk.

B. sweet. The Solanum dulcamara.
B. sweet, false. The Celastrus scandens. B. sweet night'shade. The Solanum dulcamara.

B. sweet vine. The Solanum dulcamara.
B. tinc'ture. "The Tinctura amara. B. vetch. The Errum ervilia; also, the

Orobus tuberosus.

B. vetch, black. The Orobus niger. B. vetch, wood. The Orobus sylvestris.

B. wa'ters. A term applied to those mineral waters which contain considerable amounts of sodium or magnesinm sulphate.

B., Welter's. (F. amer de Welter.) Pierie acid. B. wine of i'ron. See Iron, hitter wine of.

B. win'ter cress. The Barbarca vulgaris. Bitte'ra febrifu'ga. (L. febris, fever; fugio, to put to flight.) The Pierana excelsa.

Bitterin. A synonym of Quassia. Bittern. The water remaining after the crystallisation of common salt from sea-water, or from the water of salt springs, and containing some sodium chloride and large quantities of potassium, calcium, and magnesium chloride and sulphate, along with some iodine and bromine. Called also, mother water and mother lye.

Bit'terness. (Same etymon as Bitter. L. amaritudo; F. amertume; I. amarezza; G. Bitierkeit.) A bitter quality of a thing as re-

cognised by the taste.

Bit'ters. Term applied to several medicinal substances, expressing their quality as particularly perceptible to the taste, and which are further distinguished into the aromatic, pure, and styptie bitters.

B., colum'bo. Tinctura calumba.
B., spir'it. Tinctura gentiana.
B., wine. Viaum gentiana compositum.

Bittersweet. The Solanum dulcumura; also, a variety of the Pyrus malus.

Bitterweed. The Ambrosia trifida.

Bit'terwood tree. The Pierana ex-

Bit'terwort. (G. Bitterwurz.) The gen-

Bit'tos. A disease in which the chief sym-

ptom is acute pain in the anus. (Dunghson.) **Bitu'men.** (L. bitumen. Gr. ασφαλτος; F. bitume; I. bitume; S. betun; G. Erdpech, Erdharz, Bergtheer.) A generic name for certain mineral inflammable substances which have different names. Bitumens are solid, semisolid, or liquid; very combustible, have when heated a peculiar smell, and are bitter to the taste and stimulating. Bitumens are of several kinds:—Naphtha, fiquid and transparent; Petroleum, more oily; Maltha, or Mineral tar, blackish and of the consistence of honey; Pissasphalte, black and soft; Asphalte, black and solid. Amber is classed among bitumens by some.

B. barbaden'se. Barbadoes tar.

B. fa'gi. (L. fagus, a beech tree.) See Pix fagi liquida.

B., glu'tinous. See Pissasphalte.

B. juda'icum. (L. judaicus, Jewish.) Same as Asphalt.

B. liq'uidum. Liquid bitumen; petroleum.

B. of Barba'does. See Barbadoes tar.

B. of Judæ'a. Same as Asphalte. B. of Mal'ta. Same as Pissusphalte.

B., salt of. Same as Bit-loban. B., sol'id. Same as Asphalte.

Bitumina'ted. (L. bitumen.) Charged with bitamen.

**Bituminif'erous.** (L. bitumen; fero, to bear. F. bituminifere; G. erdpechtragend.) Impregnated with bitumen.

Bituminisa'tion. (L. bitumen.) Term for the transformation of organic matter into bitumen, as wood into coal, and the remains of vegetable substances into peat.

**Bitu'minised.** (Same etymon.) That which is changed into bitumen.

Bitu'minous. (L. bituminosus. F. bitumineux; I. and S. bituminesus; G. crd-pechartig.) Belonging to, or of the nature of, bitumen.

Biu'ret. ColloNo. A substance formed

by heating urea to 150° C.—160° C. (302° F.— 320° F.) It forms long, white, needle-shaped crystals. An aqueous solution of biuret in water, when a few drops of a soletion of cupric sulphate, and then an excess of caustic soda, are added, becomes of a red colour, changing to violet, according to the quantity of copper.

Biva'lence. (L. bis; valco, to have power.) The property possessed by some elements of replacing two atoms of hydrogen in a compound.

Bivalent. (Same etymon.) Possessing the property of Bivalence.

Bivalve. (L. bivalvis, from bis, double, valve, the leaves of a door. F. bivalve; 1. bivalve, conchiglie; G. Zweiklappig, Zweischalig.) Having two valves.

Bival'via. (Same etymon.) A synonym of the Lamellibranchiata, from being euclosed in

a bivalve shell.

Bival'vulate. (L. bis; valvula, dim. of valvæ, the leaves of a door. F. bivalvulé; G. zweischalig, zweiklappig.) Having two valvules.

B. an'thers. Those having two pores

closed by valves.

Bive nate. (L. bis; vena, a vein. G. zweraderig.) Having two veins or nervures.

Biven'ter. (L. bis, double; renter, the belly.) Double belly; the digastrieus nuscle.

B. cervi'cis. (L. cervix, the neck.) So

called from its fleshy ends and tendinous middle. The part of the complexus muscle which arises by three or four slips from the transverse processes of as many upper dorsal vertebræ, and is inserted into the superior curved line of the occipital bone. It is supplied by the posterior branches of the cervical university from the first to the eighth.

B. mandib'ulæ. (L. mandibula, the lower jaw.) A synonym of the digastric musele.

B. max'illæ. (L. maxilla, the jaw.) The

digastrie muscle.

B. maxillæ inferio'ris. (L. maxilla, the jaw; inferior, lower.) A synonym of the digastric muscle.

Biven'tral. (Same etymon.) Having two

B. lobe of cerebel'lum. See Digastric lobe of cerebellum.

Bivit'tate. (L. bis; vitta, a fillet, a band.)

Having two vitte, or furrows. **Biv'ium.** (L. bivium, a place with two ways, or where two roads meet.) The two hinder ambulacra of Echinoderms.

Bivu'to di Ter'mini. Italy; near Palermo. A cold water, containing calcium and magnesium carbonate, calcium and sodium sulphate, and magnesium and sodium chloride.

Bix'a. A Genus of the Nat. Order Bixaceæ.

B. america'na. The Bixa orellana.
B. orella'na. (Mod. L. orellana, for orleana, helonging to Orleans. G. orleanobaum; Beng. and Hind. Lutkun; Hind. Gawpurgee; By. Kisree; Can. Kuppa manhala; Mal. Korungoomunga; Tam. Kooragoomungid; Tel. Jufra; Ceyl. Kaha-gaha.) The heart-leaved constitutes that Hindeston and South America. annotto tree. Hab. Hindostan and South America. The reddish pulp surrounding the seeds furnishes Annotto. The seeds are cordial, astringent, and

Bixa'ceae. Small trees or shrubs. Leaves alternate, exstipulate; sepals 4-7; petals hypogynous, distinct, equal in number to the sepals, sometimes absent; stamens hypogynous, equal to, or some multiple of, stamens; ovary one or more celled; placentas two or more, parietal; finit one celled, with a thin pulp; seeds many; albumen fleshy-oily; embryo straight, axial; radicle turned to the hilum. Also called Flacourtiacea.

Bix'ads. The plants of the Nat. Order

Bix'ese. A Tribe of the Nat. Order Bixacca,

having the style simple and the fruit splitting. **Bix'in.**  $C_{15}\Pi_{16}O_4$ , Stein; or  $C_{28}\Pi_{24}O_5$ , Eng. A bright red colouring matter found in annotes, the product of Bixa orellana. It is easily soluble in alkalies, sparingly in cold alcohol and ether; sulphuric acid turns it blue, nitric acid produces a yellow substance of musky smell.

Bixin'ca. Same as Bixacea.

Blabero pus. (Βλαβερός, hurtful; ὑπός, juice.) A Genus of the Nat. Order Apocynaeca, separated by A. de Candolle from the Genus Alstonia; it is not recognised by all botanists. The plants have a milky irritant juice, which is nsed to poison arrows with, and is fatal to man.

Blac'cia. A term by Rhazes for measles. Blach mal. Alchemical term for a substance formed by pouring a mixture of several fused metals upon sulphur. (Johnson.)

Blacia. (Βλακεία, laziness.) A term for

debility.

Black. (Sax. blac. L. niger; F. noir; I. and S. negro; G. schwarz.) The appearance of an object from which no light is reflected, or through which no light is transmitted.

B. al'der. The Alnus serrulata, the Rhamnus frangula, and also the Prinos verticil-

latus.

B. an'timony. Sulphuret of antimony, or Antimonious sulphide.

B. ash. A synonym of British barilla.
B. assize. (Old F. assis, an assembly of judges; from L. assideo, to sit at, or near.) The assizes at Oxford in July, 1577, at which jail or typhus fever was so fatal to those who were present.

B. bal'sam. A synonym of Balsam of Peru.

B. basil'icon. The Unguentum basilieum nigrum.

B. bear'berry. The Arctostaphylos almina.

B. bile. Same as Atrabilis.

B. birch. The Betula lenta.

B. bird-weed. The Polygonum convol-

B. bit'ter vetch. The Orobus niger.
B. blood. Venous blood.

B. bot'tle. The Infusum sennæ composi-

The red resin of New E.-boy gum. Holland. An exudation from the Xanthorrhaa

hastilis or X. arborea.

B. boy resin. Same as B.-boy gum.
E. bry'ony. The Tamus communis.
B. bully. The wood of the Achias sa-

nota.

B. caca'o. The Colocasia esculenta.
B. can'eer. A synonym of Melanosis.
B. can'tharis. The Cantharis atrata.
B. car'away seed. The fruit of Carum nigrum. Used in India as a condiment.

B. cat'cchu. See Catechu nigrum. B. champig'non. The Boletus acrius. E. cincho'na. The Cinchona conduminea

candollii. B. cock. The Tetrao tetrix, or black

grouse. Used as food.

B. co'hosh. The Actas or Cimicifuga racemosa.

The Corallium nigrum, or B. cor'al.

Gorgonia antipathes.

B. cum'min. The seeds of the Nigella sativa, the small fennel flower, or the allied species. It is the μελάνθιον of Hippocrates and Diescorides.

B. cur'rant. The Ribes nigrum.

B. dam'mar of Mal'abar. (Hind. Dhoop Googul.) An aromatic and, when fresh, yellow resin, obtained from Canarium strictum.

B. damp. A synonym of Methane. B. death. The Pestis nigra, or black plague.

B. disea'se. A synonym of Melana. B. dog. A synonym of Hapochondria-

sis. B. dog'wood. The wood of Rhamnus franqula.

B. dose. The Mistura sennæ composita.

B. draught. A solution of sulphate of magnesia, or Epsom salts, in an infusion of senna, or Mistura sennæ composita.

B. drink. A decoction of the toasted leaves of Ilex vomitoria. Used by Indian tribes at the opening of their councils; it acts as an emetic.

B. drop. (F. quuttes noires anglaises; I. goccia nera; G. schwarze Tropfen.) Opinm ½ lb., verjuice 3 pints, nutmegs 1½ ounce, saffron onnce, boil, then add sngar 1 lb., yeast 2 drachms; keep warm for six weeks, and decant. **B. Egyp'tlan bean.** The Lablab vul-

garis.

B. elm. The Ulmus effusa.
B. eye. Ecchymosis of the eyelids and surrounding structures from a blow.

B. flux. See Flux, black.
B. gen'tian. The Seseli libanotis.
B. gin'ger. The root of Zingiber officinale

B. ginger. The root of Zingiber officinale when scalded without being scraped.

B. gram. (Sansk. Midga-parni; Beng. Krishna-moog, Kala moog; Tam. Karuppa-payara; Tel. Nella pessara; Arab. Moesh; Pers. Benoomash.) The seed of Phuscolus Max.

The hairy-podded kidney bean.

B. grouse. The Tetrao tetrix.

B. haw. The Fiburnum prunæfolium. B. hel'lebore. The Helleborus niger. B. hore hound. The Ballota nigra.
B. induration. See Induration of lungs.

black.

В. ipecacuan'ha. The Psychotria emetica.

B., I'vory. Animal charcoal from charred ivery.

B. Jack. Blende.

B. jaun'dice. (F. m'elasietère; G. schwarze Gelbsucht.) A name for Ictorus, when, the disease being severe or of long duration, the colour becomes dark.

3. jet. Sulphuret of ziuc, found in the mines. See Blende

B., lamp. Charcoal obtained by the burning of resinous or oily substances.

B. lead. Same as Plumbago.

B. leg. A synonym of Purpura, when of a severe character, and accompanied by discolouration. It is said to be caused by cating salt meat, having an excess of saltpetre.

**B.** lep'rosy. A variety of L:pra, the L. nigricans, in which the colour of the patches is

dark and livid.

B. lion. A term given by the British

troops to a phagedænic chancre from which they suffered when in Portugal.

B. magne'sia. A synonym of Manganese dioxide.

B. maid'enhair. The Asplenium adiantum-marum.

B. mas'terwort. The Astrantia major.

B. meas'les. See Rubeola nigra.
B. med'ick. The Medicago lupulina.

B. mercurial lotion. Black wash, Lotio hydrargyri nigra, B. Ph.

B. mul'berry. The Morus nigra.
B. mullein. The Verbaseum nigrum.
B. mus'tard. The Sinapis nigra.

B. myrob alars. The fruit of Terminalia chebula gathered before it is ripe. B. night'shade. The Solanum nigrum.

B. non'such. The Medicago lupulina. B. oak. The Quercus tinctoria.

E. oak bark. The bark of Quercus tinetoria.

B. ox'ide of cop'per. The Copper monoxide.

B. ox'ide of i'ron. Ferroso-ferric oxide. See Iron, magnetic oxide of.

B. ox'ide of man'ganese. The Manganese dioxide.

B. oxide of mer'cury. The Mercurous oxide.

B. pep'per. The Piper nigrum.

B. pep'per vine. The Piper nigrum. B. pest'ilence. The Pestis nigra.

B. phthi'sis. A synonym of Miners' asthma.

B. pitch. See Pix nigra.

B. plague. The Pestis nigra.
B. pock. The Hæmorrhagic smallpox.

B. pop'lar. The Populus nigra.
B. pop'py. A variety of Papaver somni-

forum.

B. ram'thorn. The Rhamnus lyccoides. B. root. The Aletris farinosa, the Pterocaulon pycnostachyum, and also the Leptandria purpurea.

B. saits. The black mass obtained during the manufacture of potash when the lixiviated

salts have been evaporated.

B. seed'ed dol'ichos. (Bomb. Simbi, Nispava, Bullar, Saim-ke-puttee, Walpapree; Tam. Mutcheh; Pers. Lobiya; Egypt. Liblah.) The seed of the Lablab vulgaris. A kind of lentil, widely cultivated in India. **B. snake-root.** The Actæa racemosa, or

rich-weed.

B. snake'weed. The Asarum virgini-

B. spit. The expectoration of mucus or other material, tinged with grey or black from the inhalation of air charged with minute carbonaceous particles, in the form of smoke or coal dust in a mine.

B. spleen wort. The Asplenium adiantum-nigrum.

B. spruce. The Abies nigra.

B. stalk'ed spleen wort. The Asplenium adiantum-nigrum.

B. sug'ar. The extract of liquorice. B. sul'phur. Same as Sulphur vivum. B. sul'phuret of mer'cury. The Mer-

curous sulphide. B. tam'arinds. Tamarinds with the skin

removed and salt added to preserve the pulp. B. tang. The Fucus vesiculosus. B. thorn. The Prunus spinosa.

B. thrush. Aphtha accompanied by great debility and black sordes.

B. turnip. The Leontice leontopetalum. B. turpeth. A synonym of Mercurous

oxide.

B. u'rine. Urine assuming a black appearance from blood, or a large quantity of bile, or, according to Dr. Marcet, from melanic acid.

B. var'nish of Syl'het. A resinous juice, obtained from the Simicarpus anacardium.

B. vom'it. The dark coloured matter, like coffee grounds, vomited in the last stage of yellow

fever; also, applied to the fever itself. B. wal'nut. The Juglans nigra.

B. wash. Calomel 30 grains, lime water 10 ounces; mix. Also called grey lotion.

B. wa'ter. The Pyrosis, or wat r-brash.

B. wax. An uncertain product, imported from India and the Pacific Islands.

B. whortleber'ry. The fruit of Vaccin-

ium myrtillus.

B. wood. The wood of the Dalbergia latifolia and D. sissoides.

B. worts. The Vaccinium myrtillus. Black, Joseph. A celebrated English chemist, born at Bordeaux in 1728, died in Edinburgh 1799. He discovered the presence of fixed air or carbonic acid in the carbonated alkalies.

His theory of latent heat, and his other researches, changed the whole aspect of chemical enquiry.

Black'berry. The Rubus fruticosus.

B., American. The Rubus villosus.

B., ereep'ing. The Rubus canadensis.

B., low. The Rubus canadensis.

Black'cock. The Tetrao tetrix.

Black'cock and the Algardians.

fusse.) A north-western tribe of the Algonkins, iuhabiting the district between 46° and 52° N. lat. on the Saskatschawan, extending to the Missouri

and the Yellow Stone River. Black-Jack. The Derbyshire miner's term for blende, or zinc sulphide.

Blackstonia. The yellow centaury. Blactara. Cerussa, or plumbic carbonate. (Ruland.)

Blac'tiæ. Rubeola or measles.
Blad'da. A term for buttermilk.
Blad'der. (Sax. blædr, from blasan, to blow.) A membranous bag. The urinary bladder.

B., air. See Air bladder.

B., cal'culus of. (G. Blasenstein.) See Calculus, urinary.

B. cam'pion. The Silene inflata. The young shoots have a combined flavour of asparagus and peas.

B., catarrh' of. (G. Blasenkatarrh.)

Same as B., fasciculated.

B., control

A vesicular organ of the Rotifera lying close to the cloaca, which contracts and dilates rhythmically. It gives off the two respiratory tubes which run along the sides of the body. The functions of the organ are not surely known, but Mr. Gosse believes that the respiratory tubes represent the kidneys, and that the contractile sac is a true urinary bladder. **B. dock.** The Rumex vesicarius, which

in India is eaten as a garnish.

B., existrophy of. (Ex, out;  $\sigma \tau \rho i \phi \omega$ , to turn.) Same as B., extroversion of. B., extroversion of. (L. extra, on the outside; verto, to turn. G. Blasenspalte.) An arrest of development of the lower part of the abdominal wall, with deficiency of the anterior wall of the bladder, so that its posterior wall protrudes as a red, papillated tumour. The nmbilicus is usually wanting. It is most common in males in whom there is generally also epis-

B., fascic'ulated. (I. fasciculus, a small bundle.) A condition of rugosity of the inner surface of the urmary bladder depending on hypertrophy of bundles of muscular fibre, between

which calculi occasionally become impacted. **B.-fern, brit'tle.** The Cystopteris fragilis.

B.-fern, tooth'ed. The Cystopteris fragilis, var. dentata.

B. fu'cus. The Fucus resiculosus.

B., gall. (G. Gallenblase.)

See Gallbludder.

B. herb. The Physalis alkekengi.

B., hia'tus of, congen'ital. (L. hiatus, an opening; congenitus, born at the same time.) Same as B., extroversion of.

B., inflamma'tion of. (G. Blusenentzündung.) See Cystitis.

B. in the throat. Old American term for cynanche.

B., ir'ritable. A condition in which there is a frequent desire to pass urine, generally with more or less pain.

B. nut. The Staphylca pinnata.

B. nut tree. The Staphylea trifolia.
B.-nuts. The Nat. Order Staphyleaceæ.

B.-pod'ded lobe'lia. The Lobelia in-

flata. B., sac'culated. (L. sacculus, a little A condition in which the walls of the bladder protrude in the form of pouches between the hypertrophied bundles of museular fibres, so that the walls there consist usually of the mucous and peritoneal coats only. The sacculi are most frequent on the posterior wall and, retaining urine till it decomposes, originate cystitis, and sometimes ulceration of the mucous membrane, and peritoneal inflammation and adhesion on the other side; they may also enclose a calculus. The pouches are produced by over-distension of the walls of the bladder, in consequence of obstruction to the escape of the urine.

B. sen'na. The Colutea arborescens.
B., swim. (G. Schwimmblasc.) A syno-

nym of Air-bladder. B., u'rinary. (F. ressie urinaire; I. rescica orinale; S. regiga; G. Harnblase.) The bladder is a bag composed of unstriated muscular tissue, the upper part of which only is covered with peritoneum. It is situated in the fore part of the pelvis, immediately behind the ossa pubis and in front of the rectum, in the male, and of the vagina and uterus in the female. It is of round or oval form, holds from two to three pints (500-600 cubic centim.), and when distended rises into the abdominal cavity. The upper part is named the vertex, and presents the remains of the allantois, which is termed the nrachus. The middle part is the body, and the lower part is the fundus, which is slightly prolonged in front to form the neck, and is in relation with the prostate gland. The bladder has three openings into it. Two are those of the ureters, which, after a course of a third of an inch through the walls, open by a valve-hke aperture, 2 mm. in length, 14 mm. distant from each other, and 18 mm. behind the third opening,

which is that of the urethra. The triangular space bounded by the three openings is named the trigonum vesicale, and the mucous membrane is here smooth. The muscular layers of the bladder are an external longitudinal layer, a middle layer composed partly of circular and partly of oblique fibres, and a thin internal longitudinal layer. The outer layer constitutes the detrusor uring. It is continuous anteriorly and below with the musculus pubo-vesicalis or levator prostatæ, and behind with the musculus recto-vesicalis. middle eircular layer becomes thicker below, and forms the sphincter vesicæ. The mincous membrane is pinkish-white, thick, and in the contracted condition presents numerous rugæ, which disappear when it is distended. It has small crypts and some acinous glands. The bladder is supplied by three sets of arteries-the superior vesical, arising from the obliterated umbilical; the posterior, f. om the middle hæmorrhoidal, the uterine. and vaginal; and the anterior, from the internal pudie, and sometimes from the obturator. The nerves come from the hypogastric plexus, and primar,ly from the lumbar region of the spinal cord.

B. worm. (G. Blasenwarm.) The Cysticereus.

B. wrack. The Fueus resiculosus.

Blad'dered. (Same etymon.) Having bladders or vesicles.

B. fu'cus. The Fucus resiculosus.

Blad'dery. (Same etymon.) Full of bladders or vesieles. Applied in Botany to structures which are thin and inflated.

B. fe'ver. A synonym of Pemphigus. Blade. (Sax. blæd, a leaf.) The expanded portion or lamina of a leaf, or of a petal.

Blade'bone. The scapula.
Bla'doch. A term for buttermilk.

United States. Bla'don springs. Mineral springs in Alabama, about 85 miles from Mobile, which are said to be similar in composition to those of Seltzer, Spa, and Aix-la-Chapelle. (Dunglison.)

Bla'dum. A low Latin term for corn, especially wheat.

Blæberry. The Vaccinium myrtillus. Blaes, Gerald. A Dutch physician, usually known as Blasius, who died in 1682. Hewas a great pathologist and comparative anatomist. He described very accurately the structure of the lungs, demonstrated the existence of valves in the lacteals, and wrote many works.

**Blæ'sitas.** (Βλαισός, one with distorted legs; crooked. F. blésité; G. Lispeln.) Term for the defect of speech named stattering or stammering, according to some anthors; but more properly it signifies that defect of speech which consists in substituting a soft for a harder consonant. See Psellismus.

Blæsop odes. (βλαισός, handy-legged; πούς, a foot.) A synonym of Talipes varus.

Blæ'sopus. (Same etymon.) Having outward-bending feet. A synonym of Talipes

Blæ'sotes. (Blaisotys. F. bluisote)

Crookedness of the legs.

Blæ'sus. (Blæaco's, having distorted limbs.) Having a distortion of the limbs, especially an outward bend of the legs; also, an angular curvature of the spine; also, a paralytic person, and one who stammers in his speech.

Also, a synonym of Good's genus *Ecphlysis*.

Bla'fards. The name given to the Albino Indians of the Isthmus of Panami.

Blain. (Sax. blegen.) A blister, pustule, or boil.

Blain'ville, Menri Marie Du-crotat de. A French naturalist, born at Dieppe 1777, died 1850.

B.'s classifica'tion of an'imals. Subkingdom I. Artiomorpha. Type 1. Osteozoaria, containing all vertebrates. Type 2. Entomozoaria, containing Arthropods and some Molluscs. Type 3. Malacozoaria, containing some Molluses. Subkingdom II. Actinomorpha, with the Type 4, containing Actinozoa, Polyps, and Zoophytes. Subkingdom III. Heteromorpha, with Type 5, Amorphozoaria, including the sponges.

Bla'kea parasit'ica. (L. parasiticus, parasitical.) Nat. Order Melastomacca. A plant

indigenous in Guiana, yielding a red dye.

Blan'ca. (F. blane, white.) Cerussa, or plumbie earbonate. (Ruland.)

Also, a medicine described by Nicolaus, in Antidotaria, which was supposed to purge the hody of the phlegmatic humours; it was formerly of three kinds, the great, the less, and the middle; consisting of turpentine, fetid gums, euphorbium, colocynth, antimony, and many aromatics.

B. mulie'rum. (L. mulier, a woman.) Leucorrhea, or the whites.

Blan'card's pills. The Pilulæ ferri

Blanch. (F. blanchir, to white, nomblanc, white; Teuton. blank, white, shining. I. bianchire, far impallidire; G. weiss machen, bleichen.) To make white.

Blanch'ed. (Same etymon.) Made white. B. al'monds. Almonds deprived of their outer skin, by soaking for a short time in hot water, and then peeling it off.

Blanch'ing. (Same etymon. F. blanchiment; G. Bleichen.) Whitening; making white.

Applied (G. Weisssieden) to the purifying or whitening of metal.

Also, see Etiolation.

B. of the hair. See Canities. Blanch'inin. An alkaloid discovered by N. Mill in the China bianca (Cinchona macrocarpa).

Blanc'non oriba'sii. The Aspidium filix-mas.

Blanc-rai'sin. The same as Blanc

Blanc-rha'zis. (F. blanc, white; Rhazes, an Arabian physician.) An ointment composed of white lead, white wax, and olive oil.

Bland. (L. blandus, agreeable. F. doux; I. dolce, blando; G. mild.) Mild, soft, unirritating. Applied to soothing medicines and applications, and to unstimulating food.

Blank'enburg. Germany; not far from Weimar. A pine-leaf bath used in skin diseases, nervous diseases, chronic brouchial catarrh, bronchiectasis, and the later stages of hoopingcongh.

(F. blanchet, dim. of blanc, Blank'et. white.) A woollen covering, originally white.

B. bath. The packing of a person in a hot and dry blanket for the purpose of inducing perspiration. Blanks. A popular name for epileptic

vertigo.

Blaps. A Genus of the Family Pimcliida, Group Heteromera, Order Colcoptera.

**B. mortisa**'ga. (L. mors, death; sagas, predicting) A species the larva of which has several times been found as a human parasite.

B. sulca'ta. (L. sulcatus, furrowed.) A species eaten by Egyptian women in order that they may grow fat and bear children; it is also applied in earache and bites of scorpions.

Blas. An unmeaning term first applied to the local and alterative movements of the stars; then, in imitation, it was used in reference to the same in men and brutes. Those who are curious to pursue the absurdity may consult Van Helmont's 'Blas Humanum' and 'Blas Meteoron.'

B. alterati'vum. (L. alter, another.)

Plastic force.

Bla'sius. See Blaes.

**B.'s oint'ment.** Oxide of manganese one part, lard four parts. Used in scabies.

Plast. (Sax. blæst.) A puff of wind. sudden attack of a disease, popularly believed to be produced by some poison or miasm in the air.

Blastæ'a. A synonym of Blastoderm.
Blas'te. (Βλάστη, increase. G. Keim, Spross.) A bud, a germ.

**Blaste'ma.** (Βλάστημα, increase; from βλαστάνω, to bud.) Term used by Hippocrates, de Uleer. l. x, v, 3, for any foul or morbid humour given out by the blood-vessels on the surface of

the body, or of a particular organ, causing pustules, crusts, or other diseases to arise.

Also (F. blastème; I. blastema; G. Blastem, Keimstoff, Www.elkeim.) The embryo of plants, including the radicle, the plumule, and the part of the axis to which the cotyledons are at-

The elementary basis of any vegetable structure, organ, or part of an organ, is also included

under this term.

In Physiology, the word had a special signifieation, but it is now little used. It signified the pabulum of the structures; that special nutrient element brought to each organ by the bloodvessels which is fitted for assimilation into its structure, and which, in the lowest forms of life, makes up the whole substance of the body. A further statement is to be found under the word Protoplasm. See also, Sarcode, Cytoplasm, and Bioplasm.

**B. den tis.** (L. dens, a tooth. G. Zahn-keim, Zahnkern.) The pulp of the tooth.

B. pi'll. (L. pilas, a hair.) The papilla of the hair-follicle.

B., subperios'teal. (F. blastème sous-périostal, couche ostéogène.) A supposed protoplasmic layer, under the periosteum of a developing bone, in which ossification takes place, so as to increase the thickness of the bone.

Blaste'mal. (Same etymon.) Of, or belonging to, Blastema.

Blastemat'ic. (Same etymon.) Relating to, or proceeding from, blastema.

B. mass. A name given by some embryo-

logists to organs still in a state of imperfect development.

Blaste'sis. (Βλάστησις, a budding, growth.) A term used in the same sense as Blastema.

Also (F. blastèse), a name by Wallroth for the development of lichens.

Blas'tide. (Βλαστός, a sprout.) The clear space in each segment of a dividing impregnated ovum which precedes the appearance of a nucleus.

Blasting. (Sax. blast, blowing.) The blowing up of rocks.

B. oil. A synonym of Nitro-glycerin.
Blas'tios. (Β\αστός, a sprout; tός, poison.
G. Keimgift.) A term for contagion by means of germs.

Blastocar'dia. (Βλαστός, a spront, a shoot; καρδία, the heart. F. blastocardie; G. Keimkern, Keimfleck.) A term for the Germinul spot.

Blastocar'pous. (Βλαστός, a spreut: καρπός, fruit. F. blastocarpe; G. sprossfruchtig.) A seed which germinates and begins to be developed before escaping from the pericarp.

Blas'tocele. (Bλαστός, a sprout; κηλίς, a spot. F. blastocie; G. Keimfleck.) Term for

the germinal spot.

Blas'tocheme. (Βλαστός; ὅχημα, that which bears.) A term applied to those Medus:o in which a generative body is developed in the radiating canals.

Blas tochyle. (Βλαστός, a sprout; χῦ-λος, juice. F. blastochyle; G. Keimfeuchtigkeit, Keinsaft.) The mucilaginous, colourless, homogeneous, nutritive fluid, which occupies the em-bryonal sac of the ovule of plants.

Also, the fluid contained in the vesicular blas-

toderm of maunuals.

Blas'toecele. (Βλαστός; κοΐλος, hollow.) The central cavity which gradually forms in the mornla, or the ovum, after segmentation.

**Blastocol'1a.** (Ελαστός, a bnd; κόλλα, ue.) The gummy substance which coats the glue.) huds of certain plants, as those of the horsechestunt.

Blas'tocyst. (Βλαστός; κύστις, the bladder, a bag.) A term for the Germinal ve-

Also, a synonym of Sporocyst.

**Blastoeystinx.** (Βλαστός; κύστιγξ, a little bladder, dim. of κύστις.) A term for the Germinal vesicle.

**Blas'toderm.** (Βλαστός, a sprout; δέρμα, the skin. F. blastoderm; G. Keimhaut.) A membrane contained in the impregnated living ovum, produced by segmentation, and forming the rudiment of a new animal. In birds it is a discoidal double layer of cells produced by the segmentation of the cicatricula or germinal disc of the impregnated egg during its passage through the oviduet previously to incubation. The blastoderm of birds, or germinal area, is thin in the centre, the transparent area; thicker in the periphery, the opaque area. In mammals it is a stratum of cells, appearing after impregnation, surrounding the yolk, and hence called the vesicular blastoderm; this soon consists of two layers. The difference between transparent and opaque area does not exist, but there arises a thickened opaque dise, the embryonal spot. Soon a third layer makes its appearance, how is not quite certain, and the layers are now known as the ectoderm, or epiblast, on the outside; the mesoderm, or mesoblast, in the middle; and endoderm, or hypoblast, on the inside. From the epiblast proceed the epidermis and its appendages, the nervous centres, the principal parts of the eye, ear, and nose, one layer of the amuion and volk-sac, and, in mammals, probably the outer layer of the permanent chorion. From the hypoblast proceed the epithelium of the alimentary canal, with the exception of the mouth, and of the ducts of its glands, the epithelium of the respiratory tract, and the deep layer of the yolk-sac and allantols. From the mesodiast are formed, by an axial part, the rudiments of the protocourtebal area. of the protovertebral segments of the body; and by an upper lateral part, the walls of the body, bones, museles, true skin, and peripheral nerves, the somato-pleural elements; and by a lower lateral part, the splanchno-pleural olements, as the walls of the alimentary caual, the heart and blood, the parenchyma of many glands, and the genito-urinary system; the space formed by the separation of these two sets of parts is the visceral or pleuro-peritoneal cavity. From the mesoblast proceed also the outer layer of the amnion, the vascular layers of the yolksac, the allantois and the chorion, and the fortal part of the placenta.

B., vesic'ular. (L. vesicula, bladder.) The mammalian blastoderm. (L. vesicula, a little

Blastoder'mic. (Same etymon.) Belonging or relating, to the blastoderm.

B. cells. The cells which, by a process of segmentation after impregnation, form an invest-ment of the yolk, and become part, at least, of the vesicular blastoderm.

B. mem'brane. The blastoderm. B. ve'siele. The vesicular blastoderm of mammals.

**Blas'todisc.** (Βλαστός; δίσκος, a disc.) The germinal disc of the ovnm of birds.

Blastogen'esis. (B\ao\taus, a sprout; iveous, generation. F. blastogenesie.) Term by Dupetit-Thonars for the multiplication of plants by means of buds.

**Blastog raphy.** (Βλαστός, a sprout; γραφω, to write. F. and G. blastographic.) Term by Dupetit-Thouars for the consideration of the bud of plants, its appearance, essence, and

development.

Blastor'dea. (Βλαστός, a hud; είδος, likeness.) An extinct Order of the Class Crinoidea. Subkingdom Echinodermata. Body rounded, enclosed in solid calcarcous polygonal plates, and having a jointed stem. The calyx is composed of three basal, five deeply grooved radial or ambnlacral, and five interradial or interambulacral, plates, or areas. They are found in the Upper Silurian, the Devonian, and the Carboniferous formations. The members of this order are known as Pentremites.

Blas'tomere. (Βλαστός; μέρος, a part.) A term applied to each of the segments into which the impregnated ovum, or cytode, first divides when it has become a morula.

Blas'tophor. (Βλαστός; φέρω, to bear.) A central or eccentrically placed portion of the spermatospore, which is not used up in the process of division to ferm spermatoblasts. It may or may not be uncleated; it remains passive, and serves to carry the spermatoblasts. **B. sperm.** The same as Blastophor.

Blastoph'oral cell. The same as

Blustophor.

**Blas'tophore.** (Βλαστός, a sprout; φέρω, to bear. F. blastophore; G. Keimtrager, Sprosstrager.) Name by L. C. Richard for the part of the embryo with a large radiele which bears the bud. (L. C. Richard.)

**Blas topore.** (Βλαστός; πόρος, a pas-ge.) The orifice produced by the invagination of a point on the surface of a blastula, or blasto-

sphere, to form the enteron.

(Βλαστός; σφαίρα, α **Blas'tosphere.** (βλαστός; σφαΐρα, a globe.) The condition of the impregnated ovum when, after undergoing segmentation and attaining the morula condition, it acquires a central cavity, called the blastoccele, and a wall consisting of one layer of blastomere, constituting the

Also, a synonym of the Blastodermic resiele.

Blasto sporæ. (Βλαστός, a sprout; σπόρα, a seed. F. blastosporè; G. sprosskeimkornig.) Applied by Reicheubach to a Section of the Lichenes gymnosporeæ, comprehending the Pulveraries and Contocarpes.

**Blastostro** ma. (Βλαστός; στρώμα, anything spread or laid out for lying upon, a bed. F. blastostroma; G. Keimschicht.)

for the germinal area.

Blas tostyle. (Βλαστός, a bud; στῦλος, a pillow.) A stalk upon which generative buds or gonophores are developed in the Hydrozoa.

Blas'tous. (B\aστυς. F. blasteux.) Belonging to a bud or germ.

B. tis'sue. (F. tissu blasteux.) A tissue from which another tissue or an organ springs

Blas'tula. (Dim. from βλαστός.) The

same as Blastosphere.

Blas'tus. (Βλάστος, a sprout. F. blaste; G. Spross, Keim.) Applied by L. C. Richard to the part of an embryo with a large radicle susceptible of being developed by germination, as the external part of the embryo of the Zea.

Blat'ta. (L. blatta, a cockroach.) A Genus of the Family Blattida.

B. orientalis. (L. orientalis, eastern. F. blatte des cuisines, bête noir, panetière, cafand; I. piatto, blatta; G. Schabe, Brotschabe, Kellerassel.) The common cockroach. Used formerly in decoction, with oil, to drop into the ear for earache. It has latterly been recommended as a vesicant, and as a diuretic.

Blat'ta byzan'tia. (L. blatta, a elot of blood; byzantus, byzantine. Gr. ὄνυξ.) Used by Dioscorides, ii, 10, for a marine substance employed as a remedy for coilepsy, hysteria, &c.; of a reddish-brown colour, pleasant odour, and shaped like a finger-nail, whence it was also ealled Unguis odoratus.

Also, a term for the oblong operculum of certain

shell-fishes. Blatta'ria. (L. blatta, a moth. G. chabenkraut.) The moth mullein, Verbascum Schabenkraut.)

B. lu'tea. (L. luteus, yellow.) The Ver-

bascum thapsus, or yellow mullein.

Blat'tidæ. (L. blatta, a cockroach.) A Family of the Group Cursoria, Suborder Ortho-ptera propria, Order Orthoptera. Body flat, long; prothorax scutiform; antennæ long, manyjointed; feet strong; head protected by a thoracie plate, generally without ocelli; external lobe of the maxilla prolonged into a rostrum; posterior wings mostly wanting in the females; abdomen with two anal appendages.

Blaud. A French physician, born 1774,

died 1858.

B.'s ferru'ginous pills, Fr. Codex. Powdered ferrous sulphate, potassium carbonate, of each 30 grammes, mixed with mueilage of gum arabie, and divided into 120 pills. Used in amenorrhœa aud leucorrhœa.

Bla'wort. The Centaurea cyanus.

Bla'zing star. A popular name for the Chammelirium luteum, the Lutris scariosa, the Liatris squarrosa, and also the Aletris fari-

**Elea'ber'ry.** The Vaccinium myrtillus. Bleach. (Sax. blacian, to grow pale. F. blanchir; I. bianchire; G. bleichen ) To make, or to grow, white or pale.

Bleaching. (Same etymon. F. blanchient; G. Bleichen.) The removal of colour; ment; G. Bleichen.) the act of making white.

B. liq'uid. The Eau de javelle.

B. pow'der. (F. poudre de blanchiment, poudre de Tennant, poudre de Knox.) A syuonym of Chlorinated lime.

Bleak. (Eng. bleak, pale; from Sax. blac, shining.) The Cyprinus alburnus, so named

from its pale colour.

It has been supposed that this fish may be the source of the Bothriocephalus latus iu mau.

Blear-ey'edness. (Dan. pliiroiet, blear-eyed. from plire, to blink.) Lippitudo. Chronic indammation of the tarsal margins of the eyelids.

Bleb. (Probably from the same root as Bladder.) A watery vesicle. See Bulla.

B., water. A synonym of Pompholyx.

Blech'non. The Aspidium filix-mas **Slech'num.** (Βλέχνον, a kind of fern.) Λ Genus of the Nat. Order Filiers, Suborder Tolypodiæ.

B. borea'le. (L. borealis, northern.) A synonym of the Lomaria spicant.

B. linguifo'lium. (L. lingua, the tongue; folium, a leaf.) The Scolopendrium vulyare, or common hart's tongue.

B. squamo'sum. (L. squamosus, scaly.) The Asplenium ceterach, or spleenwort.

**Blechropy** ra. (βληχρός, dull, sluggish;  $\pi \bar{\nu} \rho$ , hre, fever.) Λ slow fever. Λ term applied to the fever formerly called typhus mitior.

**Blechropy rus.** (Βληχρός, weak; πῦρ, a fever. F. blechropyre.) A low nervous fever.

Ble'chros. (Βληχρός, sluggish.) Weak, feeble. Au epithet applied to certain diseases, as fever, or to certain conditions, as the pulse.

**Blechrosphyg'mia.** (Βληχρός, weak; σφυγμός, the pulse. F. blechrosphygmie.) Term for a weak pulse.

Ble'doch. A term for buttermilk. Bleed'er. (Sax. bledan, to bleed.) A person the subject of the hæmorrhagie diathesis. See Hæmophilia.

Bleeding. (Same etymon.) Hæmorrhage, bloodletting.

The escape of sap (G. Saftflüsse) from a wound

of the bark of a plant.

B. boist. A term for a cupping glass.

B. from the nose. See Epistaxis.

B. heart. The Cypripedium luteum. Also, the Cheiranthus cheiri.

Ble fed. A sickness or plague, producing yellowness of the skin, which prevailed in Ireland

during the sixth century. (Dunglison.) **Bleich ebad.** Switzerland, Canton St.
Gall, in the Rhine Valley, 1450 feet above sea level. A mineral water, containing iron, calcium chloride and carbonate, and sulphuretted hydrogen. Used in chronic rheumatism and gout, neuralgia, and skin diseases.

Blende. (G. blenden, to dazzle.) Applied to minerals having a peculiar instre, as hornblende, zinc-blende, &c., but particularly to a metallie ore of zine, the sulphuret, or "black-jack" of the Euglish miner.

Blemmetrorrhoe'a. Piorry's term for Metroblennorrhaa.

Blon'na. (Bhéwa, muens. G. Schleim, Rotz.) Used by Hippocrates for Mucus, also called phlegm, by Galen, de Fac. Nat. ii, 9.

B. na'rium. (L. naris, the nose.) Nasal mucus.

Blennadeni'tis. (Βλίννα; ἀδήν, a gland. F. blennadenite; I. blennadenite; G. Schleimdrisenentzündung.) Inflammation of the mucous glands.

Blennaze'mia. (Βλίννα; ζημία, loss.) Excessive secretion of mucus.

Blennely'tria. (Βλέννα; ἔλυτρον, a

sheath, and so the vagina.) Lencorrhea. **Blennem'esis.** (Βλέννα; ἔμεσις, νο miting. F. blennémèse; G. Schleimerbrechen.) A vomiting of mucus,

**Blennen'tery.** (Βλέννα; ἔντερον, an intestine. F. blennentérie; I. blennenteria; G Darmschleimfluss.) A mucous flow from the intestines. Alibert's term for dysentery.

Blennenteri'tis. (Same etymon. F.

blennentérite.) Mucous enteritis.

Blenni'de. (Blewos, muens, and so, the blenny.) A Family of the Group Acanthoptera, Suborder Acanthopterygii, Order Teleostei, Class Pisces. Body long, cylindrical; skin soft and mucous; dorsal fin occupying the greater part of the back; anal fin long; abdominal fins very small or absent; pectoral fins large and powerful; pseudobranchiæ generally present; swim bladder absent; males with a sort of penis. Mostly

**Blennisth mia.** (Βλέννα, muens; lσθ-μός, a narrow passage. F. blennisthmie.) Excessive catarrhal secretion from the mneous membrane of the throat.

**Blennoche**'sia. (Βλέννος, mucus; χέζω, to case one's self. Γ. blennoche'sie.) A mncous evacuation from the howels.

Blennoche'zia. Same as Rhennochesia. Blennocys'tis. (Βλίννος, mneus; κόστις, a bladder.) A Bursa mucosa.

Blennocysti'tis. (Same etymon. F. blennocystite.) Mucons cystitis.

Blenno'des. (Βλεννῶδης, slimy.) Mu-

Blenneom'esis. Same as Blennemesis. **Blennogen'ic.** (Βλέννος, mucus; γένεσις, an origin. F. blennogene; G. schleimerzengend.) Generating or producing mucus; muciparons.

Blennog enous. (Βλέννος; γεννάω, to

produce.) Mucus producing.

B. appara'tus. Name given by Breschet to a supposed organ of secretion in the corinm, with exerctory ducts, which convey the mucus, from which the epidermis is formed, to the base of the papillæ.

Blennohymeni'tis. Same as Blennymentis.

Blen'noïd. (Blévvos, mucus; eldos, like-

ness. G. Schleimartig.) Resembling mucus.

Blenno'des. (Same etymon.) Mucoid.

Blenno'ma. (Bλίννος, mucus. F. blennome; G. Schleimgewächs.) A mncous tumour, such as a polypus.

Blennometri'tis. (B\(\text{Evvos}\); metritis. F. blennometrite.) Metritis, with much mucons secretion.

Blennometrorrhæ'a. (B\(\text{ivros}\), mucus; μήτρα, womb; ρέω, to flow.) Uterine lencorrhora.

Blennophlogo'sis. (Βλέννος; φλόγωσις, burning, inflammation.) Inflammation of a mucous membrane.

**Blennophthal'mia.** (Βλέννος; ὀφθαλμία, inflammation of the eyes. F. blennophthalmu; 1. blennoftalmia; G. Augentripper.)

Inflammation of the mucous membrane of the cye, the conjunctiva.

Blennop'tysis. (Βλίννος; πτύσις, a spitting. F. blennoptysie; G. Schleimspeien.) Mucous expectoration.

Blennopy ria. (Βλέννος; πῦρ, a fever. F. blennopyrie; 1. blennopiria; G. Schleimfieber.) Fevers, according to Alibert, with mucous complications, probably generally cases of enteric

**Blennorrha** gia. (Βλέυνος, mueus; ρήγνομ, to burst asunder. G. Schleimfluss.) Α discharge of mucus. Also, synonymous with Gonorrhea.

B. ana'lis. (L. anus, the fundament.) Mucons inflammation of the rectum and anus, from worms, piles, eczema, generrhœa, or se-

B. bal'ani. (Bd\avos, an acorn, the glans penis.) A synonym of Balanitis, with much discharge.

B. bucca'lis. (L. bucca, the cheek.) Mncous inflammation of the mouth.

B. genita'lium. (L. genitale, the genital member.) A synonym of Leucorrhiva.

B. nasa'lls. (L. nasus, the nose.) synonym of Coryza.

B. no'tha. (Nόθος, spurious.) A synonym of Balanitis.

B. ocula'ris. (L. ocularis, belonging to the eye.) Gonorrheal ophthalmia.

B. of the glans. A synonym of Balanitis.

B. pulmona'ria. (L. pulmo, the lnng.) Λ synonym of Bronchorrhau.

B. spu'ria. (L. spurius, false.) A synonym of Balanitis.

B. syphilitica. Gonorrhea produced by nrethral chancre.

Blennorrhag'ic. (Same etymon.) Of, or belonging to, Blennorrhagia.

B. arthritis. (Αρθρον, a joint.) Gonorrheal rheumatism.

B. epididymi'tis. (Επιδιδυμίς.) Same as Orchitis, gonorrhwal.

B. ophthal'mia. ('Οφθαλμία, inflammation of the eyes.) Generrheeal ophthalmia.

Blennorrhin'ia. (Βλίννος; ρίν, the nose.) Alibert's form of Rhinoblennorrhæa, nasal catarrh.

**Blennorrhœ'a.** (Βλέννος, mucns; ρόια, from ρέω, to flow. G. Schleimfluss.) Excessive secretion from mncons glands in any situation, but most generally applied to Gonorrhwa.

B. chron'ica. (Χρόνος, time.) Same as Gleet.

B. cilia'ris. (L. cilium, an cyclid, an eyelash.) See Tinca ciliaris.

B. genita'lium. (L. genitale, the genital member.) See Leucorrhwa.

B. luo'des. (Lues; ώδης, a suffix signifying fulness, or for eloos, likeness.) Same as Gonorrhaa.

B. nasa'lis. (L. nasus, a nose.) Nasal catarrh.

B. oc'uli. (L. oculus, the eye.) Same as Ophthalmia, purulent.

B. oc'uli gonorrho'ica. (L. oculus; gonorrhwa.) See Gonorrhwal ophthalmia.

B. oc'uli neonato'rum. (Néos, new; L. natus, part. of nascor, to be born.) Same as Ophthalmia, purulent.

B. oc'uli purulen'ta. (L. purulentus, full of pus.) Same as Ophthalmia, purulent.

B. of lach'rymal sac. Inflammation of

the lachrymal sac.

B. sim'plex. (L. simplex, simple.) Simple blennorthea is a term for a simple increased secretion of mucus from the urethra, proceeding generally from local irritation alone, uncounceted with contagion or virulence of any kind, and existing in persons in whom the affected organ is in a state of debility; cansed by excess of venery, or of indulgence in spirituous liquors, by cold, violent exercise. gout, rheumatism; the discharge is mild, like pure mucus, ropy, produces no excoriation, pain in micturition, or other disquiet, and does not communicate infection. (Mayne.)

Also, a synonym of Gleet.

B. urethralis. (Οὐρήθρα, the urethra.) Same as Gonorrhaa.

B. vene'rea. (L. venereus, venereal.) Same as Gonorrhiga.

B. vesi'cæ. (L. vesica, the bladder.) Same as Cystitis, chronic.

**Blennorrhoic.** (Βλέννος; ρέω, to flow.) Relating to mucous discharges.

Blenno'ses. (Blevvos.) The class of

diseases of mucous membrane. **Blenno'sis.** (Βλέννος. F. blennose; G. Schleimkrankheit.) Mucous disease, or that of mucous membranes, as catarrhal affections.

(Βλέννος; στάσις, α Blennos'tasis. standing. F. blennostase.) Suppression of the secretion and exerction of mucus.

**Blennotho** rax. (Βλέννος; θώραξ, the chest. F. blennothorax; G. Schleimbrust.) An accumulation of mucus in the thorax; chronic bronchitis.

B. chron'icus. (Βλέυνος ; χρόνος, time.) A term for those cases of bronehial asthma formerly called Asthma humidum.

Blennotorrhæ'a. (B\ivvos; otorrhæa.)

Alibert's term for Otorrhwa. Blennoze'mia. (Βλέννος; ζημία, loss.)

A synonym of Blennorrhæa.

Blennure thria. (Βλέννα, mucus; οὐρή-Opa, the urethra. F. blennurethrie.) A mucous discharge from the urethra, applied to gonorrhea of the male.

Blennu'ria. (Βλέννα; οὔρον, the urine. F. blennurie; G. Schleimharnen.) A discharge of mucus with the nrine.

Blenny'men. (Βλέννα; ὑμήν, a membrane. F. blennymen; G. Schleimhaut.) Λ mucous membrane.

(Blenny -Blennymenerysip'elas. men ; erysipelas. F. blennymenerysipèle.) Erysipelas of a mucous membrane.

(Blennymen. Blennymeni'tis. blennymenite.) Inflammation of a mucous membrane.

Blennym'enoïd. (Βλέυνα; ὑμήν, α membrane; ¿lôos, likeness. G. schleimhautahnlich.) Resembling a mucous membrane.

Blepharadenes. (Βλέφαρον, an eyelid ; aone, a gland. G. Augenliederdrusen.) The Meibomian glands.

Blepharadeni'tis. (Βλέφαρον, the eyelid; aon, a gland. G. Ingentiederdrüsenent-zundung.) Inflammation of the Meibomian zundung.)

Bleph'aral. (Βλέφαρον.) Pertaining to the eyelids.

**Blepharanthraco'sis.** (Βλίφαρον, the eyelid; anthracosis. F. blepharanthracosis;

G. Angenliederbrand.) Carbunele of the eyelid.

Blephareccop'eus. (Βλέφαρου; ἐκσπεύε, a knife for cutting out.) A knife use l for cutting out a piece of the cyclids for the curof trichiasis.

Blepharclo'sis. (Βλέφαρον, the eyelid; είλω, to roll up.) A rolling up of the eyelids. A synonym of both Entropion and Extrapion.

**Blepharemphyse'ma.** (Βλέφαρον; εμφύσημα, from εμφυσάω, to inflate, G. Augentiederwindgeschwulst.) Emphysema of the eye-

Blepharhelo'sis. A false spelling of Blenhardosis.

**Blephar**'ic. (Βλέφαρου, Palpebral. Relating to the eyelids. (Βλέφαρον, the eyelid.)

Blepharides. (Plural of Blepagie, an The eyelashes; also, the tarsal edges eyelash.) of the eyelids.

Blepharidoplas'tica. (Βλέφαρου, the eyelid;  $\pi\lambda\dot{a}\sigma\sigma\omega$ , to form.) operation for an eyelid. The plastic

**Bleph**'aris. (Βλεφαρίε, an eyelash.) Α Genus of the Nat. Order Acanthaveæ.

B. Boerhaaviæfo'lia. (Boerhaavia, the plant of that name; folium, a leaf.) Hab. India. Used in dysmenorrhæa. (Waring.)

**Elepharis mus.** (Βλέφαρου, the eyelid.) Winking; nietitation; spasm of the eyelids

Elephari'tis. (Β\έφαρον, the eyelid. G. Augenhederentzundung.) Inflammation of the eyelids.

B. angula'ris. (L. angularis, from angulus, a corner.) A synonym of B. maryinalis.

B. cilla'rls. (L. cilium, an eyelash. I. ottalmia secca.) The seat of this form of blepharitis is in the hair-follicles of the cilia. The roots of the cilia first become affected, the bulbs becoming pigmented and swollen.

B.gangræno'sa. (Γάγγραινα, gangrene.)

Same as Blepharanthracosis.

B. glandula ris. (L. glandulæ, glands. I. blepharite ghiandolare.)  $\Lambda$  synonym of B. ciliaris.

**B.** hypersecreto'ria. ('Y $\pi \acute{\epsilon} \rho$ , over; L. secretus, from secerno, to secrete.) The seat of this form of blepharitis is in the follieles, and especially in the glands opening into the hair-follicles. The secretion accumulates at the base of the cilia, in the form of greenish erusts.

B. lymphat'ica. (Lymphatic. I. blefarite linfatica.) A synonym of B. ciliaris.

**B. margina'lis.** (L. margo, an edge.) This form affects the integument of the intermarginal part of the border of the lids, which here forms a very thin lamina, connecting the skin with the mucous membrane. Excoriations and fissure are produced as a consequence of some persistent irritation, and the inferior puncta lacrymalia become everted.

(Φλεγμουή, inflam-B. phlegmono'sa. mation beneath the skin. G. Lid-absciss.) Abscess of the eyelids.

B. scrofulo'sa. (L. scrofulæ, a swelling of the cervical glands. I. blepharite scrofolosa.) A synonym of B. ciliaris.

B. sim plex. (L. simplex, simple.) The seat of this, which is the commonest form of blepharitis, is in the skin of the margin of the lids, especially near the roots of the cilia. The skin is red, and covered with epithelial scales. The cilia are imperfectly developed, and easily tall out. It often occurs in scrofulous persons.

B. ulcerosa. (L. ulcerosus, full of sores.)
A form of blepharitis chiefly affecting the ciliary region of the lid. The inflammation proceeds to ulceration, which extends to the follicles. It usually occurs as a sequela of eatarrhal conjunctivitis, or blennorrheea of the lacrymal sac, and is, therefore, often unilateral.

Blepharoadeni'tis. Same as Blepha-

Blepharoblennorrhæ'a. (Βλέφαpor, the cyclid; blennorrhoa, a flow of muchs. G. Augenliederschleimfluss.) The first stage of G. Augenhederschleimfluss.) puro-mucous inflammation of the conjunctiva.

B. gonorrho'ica. Gonorrheal ophthalmia.

B. malig'na. (L. malignus, of an evil nature.) Gonorrhoal ophthalmia.

B. neonato'rum. (Néos, new; L. natus, part. of nascor, to be born.) The ophthalmia of newborn children.

Blepharocarcino ma. (Βλέφαρον; каркивша, a cancer. G. Augenliederkrebs.) Cancer of the eyelids.

**Blepharocat'ochus.** (Βλέφαρον, the eyelid; κάτοχος, holding fast. F. blipharocatoche; G. Augenliedhalter.) An instrument for fixing the eyelid.

**Blepharocici'sis.** (Βλέφαρον, the eyelid; κλείσις, a shutting up. F. blepharocleisis.) Occlusion, or growing together, of the cyclids.

(Βλέφαρου; Blepharocolobo ma. κολόβωμα, the part taken away in mutilation.) Coloboma of the eyelids.

**Blepharoconjunctivitis.** (Βλίφα-ρον, the cyclid; conjunctivitis. G. Augenliederbindchautentzundung.) Inflammation of the mucous membrane of the evelids, the conjunc-

Blepharodyschro'a. (Βλέφαρον; δυς, an inseparable prefix meaning bad; χρόα, colour.) Navus of the cyclid.

**Blepharœde'ma.** (Βλέφαρον; οἰδημα, a swelling.) Œdema of eyelids.

Blepharoemphyse'ma. phuremphysema.

Blepharom eter. (Βλέφαρον; μέτρου, a measure. F. blepharometre, blepharopsalis; G. Auginited messer.) An instrument of Brzzi for the cure of trichiasis, by cutting out a piece of the eyelid.

Bleph'aron. (Βλίφαρου.) The eyelid. B. atonia ton. ('Ατουία, slackness.) Α synonym of Ptosis.

Blepharonco'sis. (Βλέφαρον; ογκωσιs, the act of increasing in bulk.) The formation of a tumour of the eyelid.

Blepharon cus. (Βλέφαρον, the eyelid; буков, a swelling. G. Augenliedergeschwulst.) Term for a tumour on the evelid.

Blepharophimo sis. (Βλέφαρον; φίμωσις, a stopping up an orifice, from φιμόω, to shut up, as with a muzzle.) Congenital smallness of the palpebral fissnre.

Blepharophthal'mia. (Βλέφαρον, the eyelid: οφθαλμία, inflammation of the eye.) Inflammation of the conjunctiva and of the eye and the cyclids co-existing.

B. neonato'rum. (Néos, new; L. natus, part. of nascor, to be born.) Purulent ophthalmia of children.

B. purulen'ta. (L. purulentus, full of pus.) Purulent ophthalmia.

B. ulcero'sa. (L. ulcerosus, ulcerous.) Same as Tinca ciliaris.

**Blepharophthal'mic.** (Same etymon.) Of, or belonging to, *Blepharophthalmia*. Blepharophthalmi'tis. (Βλέφαρον; οφθαλμός, the eye.) Inflammation of the eyelids, and of the globe of the eye.

B. glandulo'sa. (L. glandulosus, full of glands.) Purulent ophthalmia of children.

Blepharophthal'mo - blennor rhœ'a. (Βλεφαρον: οφθαλμός; βλέννος, mueus; ρέω, to flow.) Puro-mucous inflammation of the conjunctiva in its fully formed state.

Blepharophtheiri asis. (Βλέφαρον; φθειρίασις, the lousy disease. G. Augenliederlüusesucht.) The presence of pediculi among the eyelashes.

Blepharophy'ma. (Β\έφαρον; φῦμα, a swelling. G. Augenliedergeschwulst.) Tumour

of the erelid.

Blepharophyse'ma. (Βλέφαρου: φύσημα, that which is blown up. G. Augenliederwindgeschwulst.) Emphysema of the eye-

Blepharoplas'tic. Of, or belonging to, the operation of blepharoplasty.

Blepharoplastice. Same as Blephu-

roplasty. Bleph'aroplasty. (Β\ίφαρου, the eyelid; πλάσσω, to form. G. Augenliederbeldung.) The operation of supplying any deficiency caused by lesion, or wound of the cyclids, by taking a flap from the sound parts contiguous, or by

transplantation. In Dieffenbach's operation for restoring the lower lid, a V-shaped incision is made from the angles of the lid downwards to an extent sufficient to include the whole scar, and the part included between the arms of the V is cut away or refreshed; a horizontal cut is now made from the outer canthus towards the temple, to the extent of an inch or more, and from the outer extremity of this a vertical cut is made parallel to the outer cut of the V. The quadrilateral flap thus formed is separated from its attachments except below, and shifted inwards, so as to cover the raw surface included between the arms of the V. The exposed surface left by its transposition may be left to granulate, or slightly drawn with sntures towards the flap.

In Szymanowski's modification of this operation the incision from the outer canthus, instead of being horizontal, is carried npwards, so as to form an acute augle externally.

**Blepharople'gia.** (Βλίφαρον, the eyelid; πληγή, a stroke. I. blefaroplegia; G. Augenliederlahmung.) The falling down of the upper eyelid from paralysis of the levator muscle.

Blepharop salis. (Βλέφαρον; ψαλίς, a pair of scissors.) Same as Blepharoneter. Blepharopto'sis. (Βλέφωρον, the eyelid; πτοσις, a fall. G. Augenliedervorfall.)
Falling of the upper eyelid. See Ptosis.

The phrase also included any distortion of the eyelids.

B. ectro'pium. Same as Ectropium.

B. entropium. Same as Entropium. Blepharopyorrhæ'a. (Βλέφαρου; ποον, pus; ρέω, to flow. I. blefaropiarria; G. A secretion of pns from the cyclids. Purulent ophthalmia.

B. neonato'rum. (Neos, new; L. natus, born.) Purulent ophthalmia of infants.

Blepharorrhœ'a. (Βλέφαρον; ρέω, to

flow. G. Augenliederfluss.) Discharge of mucus

or pus from the eyelids.

Blepharosaro'thrum. (Βλέφαρου; σάρωτρου, a sweeping broom.) Λ name of the instrument also called Blepharoxystis.

Eleph'arospasm. (Βλέφαρον, the eyelid; σπασμός, a spasm. G. Augenliederkrampf.)

Spasm of the orbicularis palpebrarum. **Bleph'arostat.** (Βλέφαρον; στάτικος, from lστημι, to cause to stand.) An instrument for fixing the eyelids in operations on the eye.

Elepharosteno'sis. (Βλέφαρον; στένωσις, narrowing.) Diminution of space between the evelids.

Blepharosyndesmi'tis. (Βλέφα-ρον; σύνδεσμος, a ligament.) Inflammation of conjunctiva of eyelids.

Blepharosynechia. (Βλέφαρον; συνέχεια, continuity.) Adhesion of the eyelids. Blepharo'tis. Same as Blepharitis.

B. glandula'ris contagio'sa. (L. glandulæ, glands; contagiosus, contagious.) synonym of Egyptian ophthalmia.

Blepharoti'tis. (Βλέφαρου.) Same as Tinea ciliaris.

Blepharoto'sis. (Βλέφαρου.) Same

as Ectropium.

Blepharoxys'tis. (Βλέφαρον; ξύω, to scrape. G. Augenliedkratzer.) An instrument for removing granulations from the surface of the palpebral conjunctiva.

Blepharoxys'tum. Same as Blepha-

**Blepharyd'atis.** (Βλέφαρον; ὐδατίς, an hydatid.) Hydatid of the eyelids.

Blephil'ia. A Genus of the Nat. Order Labiatæ.

B. hirsu'ta. (L. hirsutus, hairy.) Hab. United States. A plant having the aromatic properties of miut.

Blessed. (Part. of E. bless, from Sax. bletsian, to bless.) Made happy.

B. herb. The Geum urbanum. B. this'tle. The Centaurea benedicta.

(Βληστρίζω, to throw Elestris'mus. with force.) Used by Hippocrates for a constant and vehement tossing of the body; jactitation.

Ble'ta al'ba. Used by Paracelsus for

milky urine proceeding from diseased kidneys.

Ble'tia. A Genus of the Nat. Order Orchidacræ.

B. campanula'ta. (Low Lat. campanula, a little hell.) A Mexican species, used in dysentery.

B. verecun'da. (L. rerecundus, modest.) Hab. West Iudies. Root fleshy, transparent, of hitterish taste. Used as a stomachic.

Blets. The spots on over-ripe fruit. Blet'ting. The process of oxidation which succulent fruits undergo after they are ripe; it is a state intermediate between maturity and decay.

**Σle'tus.** ( $B\lambda\eta\tau\delta s$ , stricken; from βάλλω, to throw.) Used to describe one suddenly seized

with difficulty of breathing.

Also, applied to a livid spot on the chest, as if from a hlow, supposed formerly to accompany pleurisy.

Ble ville. France; departement Seine Inferieure. A village near Havre possessing a mild ehalyheate water.

Bley. The bleak, Cyprinus alburnus. B.sap'ida, Koenig. (L. sapidus, savoury.) Hab. Guinea. In Ashantee a decoction of the hark is used as an antisyphilitie. Its succulent aril, boiled, is used for food.

Bligh'ia. A Genus of the Nat. Order Sapindiene.

Blight. (Probably from Sax. blican, to shine.) A blast; mildew.

A vernacular term in America for a form of lichen urticatus.

Also, a term for facial palsy arising from cold. B. in the eye. Extravasation of blood

under the conjunctiva. Blight'ed. (Same etymon.) Blasted, mildewed.

B. o'vum. See Ovum, blighted.

Blim'bing-bu'la. The Averrhoa carambola.

Bline'ta. Old term for red earth. (Ruland.

Blind, (Sax. blind.) Deprived of sight.

B. fis'tula. See Fistula, blind.

B. net'tle. The Lamium album.

B. piles. Piles which do not bleed.

B. spot. An area in the field of vision

corresponding to that part of the retina where the optic nerve enters, and where rays of light give rise to no sensations.

B. worm. The Anguis fragilis.

Blindness. (Sax. blind. L. cacitas; Gr. τυφλότης; F. cecité; I. cecita; S. cequedad; G. Blindheit.) A deprivation or want of sight, depending on some pathological condition of the nervous or optical apparatus of the eye.

B., col'our. See Achromatopsia. B., day. See Nyetalopia.

B., moon. Same as Hemeralopia. B., ner'vous. See Amaurosis.

B., night. See Hemeralopia.

B., noctur'nal. Same as B., night. B., snow. See Snow blindness.

Blis'ter. (Sax. blaesan, to blow. Blister. (Sax. blaesan, to blow. L. pustula; F. vesicatoire; I. vessicatorio; S. vesigatorio; G. Blase, Blatter.) A vesicle caused by a deposition of serous fluid beneath the cuticle, the consequence of a hurn, the application of a vesicatory, disease, or friction.

Also, the medium, as cantharides, by which

the hlister is produced.

B.-beetle. The Cantharis vesicatoria.
B., fe'ver. A term applied to feverish condition accompanied by herpes labialis. B.-fly. Same as B.-beetle.

B., fly'ing. A hlister applied for a short time only, so as not to produce vesicution.

B. magistral. (L. magistral. F. vésicatoire magistral.) Equal parts of powdered cantharides and of wheat flour, mixed with a sufficient quantity of vinegar to form a soft paste.

B., perpet'ual. A blister which, after the removal of the cuticle, is dressed with savine ointment or other irritant to keep up a continual discharge.

B. plas'ter.

The Emplastrum cantharidis. Blis'tered. (Same etymon.)

blisters or vesicles.

B. umbilica'ria. The Umbilicaria pus-

Blis'tering ce'rate. The Emplastrum cantharidis.

B. amman'nia. The Ammannia vesica-

B. collo'dion. The Collodium cum cantharide.

B. flu'id. The Liquor epispasticus. B. fly. The Cantharis vesicatoria.

B. liq'uid. The Liquor epispasticus. B. pa per. The Charta epispastica.

B. plaster. The Emplustrum canthar-

B. tis'sue. The Charta epispastica.
Blis'ters. See Epispastics.
Blis'terweed. The Rananculus acris. Blite. The Chenopodium bonus-Henricus,

and also the Amaranthus blitum.

B., great white. The Amaranthus viri-

B., red. A variety of Amaranthus viridis. **B.**, **up'right.** The Amaranthus blitum. **Bli'tum.** (Βλίτον, an insipid potherb; thought to be a kind of spinach or beet.) Blit or blite. See Amaranthus blitum.

A Genus of Nat. Order Chenopodiacea.

B. al'bum. (L. albus, white.) A variety of Amaranthus viridis.

B. america'num. The Phytolacca decandra.

B. capita'tum. (L. capitatus, having a head.) Mulberry-blite, strawberry spinach. Emollient and laxative.

B. foe'tidum. The Chenopodium factidum,

or C. vulraria.

B. mi'nus. (L. minor, less.) The Amaranthus blitum.

B. ru'brum. (L. ruber, red.) A variety of Amaranthus viridis.

Block'wood. A synonym of Logwood. Blom'fontein. South Africa. A district much recommended as a residence for consumptive people, in consequence of the dryness and purity of the air.

Blood. (Sax. blod; from blowan, to bloom, to flourish. L. sanguis; Gr. alma; F. sang; 1. sangue; S. sangre; G. Blut.) The red fluid which circulates through the heart, arteries, capillaries, and veins, which supplies nutritive material to all parts of the body, and which conveys the waste matters of the different tissnes to the special organ by which they are removed. Human blood is bright red in the arteries, dark in the veins, of an average sp gr. of 1055, of a saltish taste, a faintish odour, an alkaline reaction, and of a temperature of 37.8°C. (100° F.) in the interior of the body, lower in the extremities and on the surface. It consists of a eolourless transparent liquid, the liquor sanguinis or plasma, which carries a multitude of reddishyellow discs, the red corpuscles, and a much smaller number of colourless, granular, irregular spheres, the white corpuseles. When withdrawn from the body it coagulates, separating into a solid red substance, crassamentum or clot, and a strawcoloured fluid, serum; as it cools it gives off a watery vapour, halitus. When evaporated, blood yields on an average 790 parts of water and 210 of solid residue, which has nearly the same ulti-mate composition as dried flesh. The chemical constituents of blood vary in proportion, but on an average there are in 1000 parts, by weight, water 795, fibrin 2, albumin 70, hæmoglobin 120, fatty matters 2, extractives 3, inorganic residue 8. In addition, it contains, in 100 parts, by volume, 30-35 of carbonic acid in arterial, 40-50 in venous, blood; 16-20 of oxygen in arterial, 12 in venous, blood; 1-2 of nitrogen in both, and traces of ammonia and, perhaps, hydrogen. The ash contains, on an average, sodium chloride 59, soda 4.4, potash 12, magnesia 1.2, sulphuric acid 1.7, phos-

phorie acid 8.7, calcium phosphate 3.4, ferric oxide 8.4, carbonic acid 1.2 per cent. Silica, lead, copper, and manganese have also been described. The mode in which these elements are grouped is not known, but it would appear that the iron, potash, and most of the phosphates, are contained in the corpuscles, and the sodium salts in the lignor sanguinis. The fatty matters consist of saponifiable fats 1.5, phosphorised fats 4, cholesterin 0.8, and serolin 0.2, in 1000 parts of blood. The fats vary much, and are much greater after a much. The extractives consist of sugar, nrea, creatin, creatinin, uric acid, lactic acid, hippuric acid, leucin, tyrosin, hypoxanthin, and xanthin, colouring and oderiferous matters.

The liquor sanguinis or plasma consists of water holding in solution the substances which form fibrin, albumin, serum-casein, and salts, of which the chief is sodium chloride; in coagulation it gives up the fibrin to the clot. Its sp. gr. is

The red corpuscles (F. globule rouge, hématies; G. rothen Blutzellen) are yellowish, biconcave, circular, flat discs, homogeneous, flexible, clastic, probably without a cell-wall, from 1-3500th to 1-3200th of an inch in diameter, 1-12,400th inch thick, and of sp. gr. 1088. The red corpuscles of camels are elliptical, thus varying from all other mammals. In birds, reptiles, and most fishes, they are oval, with a central elevation on both sides. The size varies; they are larger in birds than mammals, largest of all in the naked Amphibia. They consist of a colourless stroma, infiltrated with the semifinid coloured matter. The stroma consists of paraglobulin, cholesterin, lecithin, and neurin. The colouring matter is hæmoglobin, an albuminous compound containing iron. They also contain, in yet unknown quantities, potash and lime salts, chiefly of earbonic and phosphoric acids. Their average number in man is about five millions in a cubic millemeter; in other mammals it varies from three to eighteen millions.

The white corpuscles (F. globules blancs, leucocytes; G. Lymphkörperchen) are rounded, slightly flattened, bi- or tri-nneleated cells, with thin walls, and generally granular contents, possessing great contractile power, so as to be capable of altering their shape and their position, and of throwing out of arms; of various sizes, the average being 1-2500th inch. They are much fewer in number than the red corpuseles, being in the proportion of 2.5 to 1000. They circulate more slowly than the red corpuscles, keeping to the outside of the stream and clinging, as it were, to the walls of the blood-They are more numerous in venous vessels. than arterial blood, most numerous in the splenic and hepatic veins. Clear round spaces, vacuoles, are seen in them; they are of two kinds, one

finely granular, the other containing coarse granules; they can take up small solid particles from the blood; they probably contain albuminoid matters of several kinds, lecithin, glycogen, potassium salts, and phosphates. Other bodies have recently been described. See B. corpuscles, trans-

Serum. - A straw-coloured liquid, oceasionally turbid from fatty particles; sp. gr. 1 027, alkaline; contains much albumin, which differs from that of egg in not being precipitated by ether; paraglobulin, fatty matters, extractives, soda, and potash, combined with lactic, carbonic, phosphorie, sulphurie, and fatty acids; ammonia combined with lactic acid and lime and magnesia with phosphoric, carbonic, and sulphuric acids In coagulation the fibrin of the scrum solidifies.

Crassamentum.—The crassamentum or clot is formed by the entanglement of the blood-corpuscles in the solidifying fibrin, which, gradually shrinking, squeezes out the serum, and separates itself. The upper surface of the clot is generally

cupped. See Coagulation.

Development .- In Batrachians the blood-corpuscles appear to be modifications of the early embryonic cells, and to be produced by segmentation. They are rounded, unwalled cells, having granular contents and a pellucid globular nucleus, containing one or two clear specks, which gradually contract and become oval, flattened, less granular, and red; they are the red corpuscles.

In the bird the blood-corpuscles are first formed, at the same time as the blood-vessels, from the middle layer of blastoderm, and subsequently in

the different structures of the body.

In mammalia the subject is not so well known, but the first blood-corpuscles are nucleated spheroids, probably embryonic cells, which have undergone some change. Then, when the liver comes into existence, colonrless nucleated bodies are produced by it, and subsequently by the spleen, lymphatic glands. These undergo fissiparous increase and become coloured, but still nucleated; whether they are converted into, or replaced by non-nucleated red blood-discs is uncertain. Red blood-discs are also produced in the different developing structures of the body.

The-blood corpuscles are continually during life being used up and developed, precisely how is not known. It is usually thought that the white corpuscles of the blood are developed from the corpuscles of the lymph and chyle, and themselves become converted into the red corpnseles. The same process is believed to go on in the spleen and, according to late observations, in the medulla

of bones.

The red corpuscles are, according to one view. shrnnken white corpuscles, with colour change in their contents; according to another, they are represented by the nucleus only of the white corpascles, which undergoes changed development.

B., arte'rial. (G. Schlagaderblut.) The blood contained in the systemic arteries, the pulmonary veins, and the left heart. It is bright scarlet, contains 5 per 1000 parts more water, has a lower specific gravity, has more fibrin, and so coagulates more quickly, less albumin and fat, more extractive and salts, more oxygen and less earbonic acid, than venous blood. Its temperature is higher.

Blood is frequently used as food; when fresh and warm from a recently killed animal it bas been lately extolled as a cure of anamia and of phthisis and other wasting disorders; and the serum has been recommended as an anthel-

miutic.

B., black. A synonym of venous blood. B., buf fy coat of. See Buffy coat. B. cal'culus. A synonym of Phlebolith.

B. ca'sein. The colourless substance which remains after the removal of the hamoglobin from the blood. A mixed substance.

Also, a synonym of Globulin.

B. casts. See Casts, urinary.
B. cells. The red corpuseles and white corpuscles of the blood.

B. char'coal. See Charcoal, blood.

B, circulation. See Circulation of blood.

B. clot. See under Blood, and Congulation. B., colouring matter of. See Hamoglobin.

B. cor'puscle-holding cells. A term applied to certain large, more or less spherical, bodies seen in the blood of mammals, in many cases being agglomerated blood-corpuscles; in some probably a group of blood-corpuscles surrounded by fibrin or enclosed in leucocytes, and in that condition undergoing degeneration.

B. cor'puscles. (L. corpusculum, a little y.) The red and white corpuscles of the blood. See Blood.

B. cor'puscles, transpa'rent. Certain corpuseles, of the size of the red corpuseles, believed by Professor Norris to exist in blood, but which under ordinary circumstances are invisible in consequence of their refracting index and colour being the same as those of the plasma.

B. crys'tals. A term for crystalline

Hæmatoidin.

B. cysts. Same as Harmatoma.

B. cysts, sarco'matous. A sarcoma containing effused blood which has broken down its structure.

The red corpuscles of the B .- discs. blood.

B. disea'ses. A generic term, of loose application and uncertain pathology, serving to denote a class of disorders which are supposed to depend upon alterations of the constitution of the blood or poisonous matters absorbed into it. such as pyæmia, anæmia, metallic poisouing, and such like

B., drag'on's. See Dragon's blood.

B., dried. Dried goat's blood was used as a sudorific, dried human blood in epilepsy, and dried bullock's blood in anamia.

B., exces'sive discharge' of. Same as Hæmorrhage.

B., flow of. A synonym of Hamorrhage. B.-flow er. See Hamanthus.

B., gases of. Arterial blood contains, at 0°C., 47°3 per cent. of gases, in the following proportions:—Oxygen 16°9 per cent., carbonic acid 29.2 per cent, and nitrogen 1.4 per cent., the two former partly in solution, partly in loose combination, a small quantity of ammonia, and perhaps hydrogen. The quantity of gases in venous blood, at 0° C. and 1 m. pressure, varies to some extent. The quantity of oxygen may be as low as 6 per cent., and of carbonic acid 35 per cent., in the blood returning from muscle at rest.

B.-glands. A generic name for the spleen, thyroid, thymus, and supra-renal bodies.

B.-glob'ules, defic'iency of. See Aglobulia and Anamia.

B.-heat. In the interior of the body 100° F., though commonly marked on the thermometers at 98.6° F.

B., hepat'ic. The blood of the hepatic veins contains a greater proportion of corpuseles, and more of the white than the red. It contains sugar.

B., impu'rity of. See Acatharsia. B., inflamma'tion of. See Hamitis. B., inflam'matory. Blood was formerly described as inflammatory when it exhibited a firm clot and a buffy coat.

B., loss of. See Hamorrhage.

B., men'strual. See Menstrual blood. B.mur'murs. Anamic and other vascular murmurs.

B. pic'tures. The network formed by the adhesion of the red corpuscles to each other on a slide under the microscope, and supposed to be of a different pattern in human blood to that formed in the blood of other animals.

B. plas'ma. (Πλάσμα, anything formed.)

The liquor sanguinis.

B. poisoning. A term in popular use to denote diseases arising from the introduction into the blood of decomposing organic matter.

B., por'tal. The blood of the portal vein

E., por tal. The blood of the portal vein contains more water in proportion to the solid matter, less fibrin and allumin, more fat, extractives, and salts, and more white corpuseles.

B. pres'sure. The pressure exerted by the blood against the walls of the vessels. It is primarily derived from the muscular force exerted by the heart. In the larger arteries of the larger mammals and in man it amounts to 140-160 mm. of a column of mercury. It diminishes gradually as the arteries are smaller, and in the capillaries it amounts in the dog to 38 mm., in the crural vein to 11.4, facial vein 3 mm., and in the larger venous trunks it may become a negative quantity, diminishing to 0.1 mm. in the innominate, which is still further lessened during respiration. The pressure in the pulmonary artery amounts in the dog to 29.6, in the cat to 17.6, and in the rabbit to 12 mm. of mercury. Blood pressure rises with increase in the total quantity of blood in the system, with increased force of the beats of the heart, with contraction of the whole arterial system, and with increased peripheral resistance. It falls with loss of blood, dilatation of the vessels, and diminished force of the beart's beat.

**B.-prop'er fluid.** A term applied to that fluid in Invertebrata which is contained within distinct-walled vessels, and has a definite circulation, in contradistinction to the *Chylaqueous* 

fluid.

B., quan'tity of. The amount of blood in the human body is estimated at one thirteenth of the weight of the body; about one fourth is supposed to be in the heart, lungs, large arteries, and veins, one fourth in the liver, one fourth in the skeletal organs, and the remainder in the rest of the body.

B., red. A synonym of arterial blood.
B., re'nal. The blood of the renal veins has been stated to be unable to coagulate, but this is doubtful.

B. root. The Tormentilla officinalis.

B. sounds. Anæmic murmurs.

B., spit'ting of. (G. Blutauswurf.) See Hamoptysis.

E., splen'tc. The blood of the splenic veins contains a great abundance of white eorpuseles, from positive increase in number, and also from destruction of the red corpuscles in the spleen.

B. stains. For their recognition, see Blood, tests for.

B., tests for. Blood when dried is insoluble in strong alcohol, ether, chloroform, or oil. It is

soluble in water.

Chemical tests.—A solution of blood is not made green or crimson by ammonia; heat destroys the red colour, and produces a brown amorphous coagulum, which subsides; strong nitric acid coagulates it, and the coagulum, treated further with nitric acid and heated, dissolves and becomes yellow; tincture of galls produces a red and not a blue precipitate. A solution of dried

blood in solution of potash is precipitated white by hydrochloric acid, and the liquid is turned blue by solution of petassium ferrocyanide. Fresh tineture of guniaeum and peroxide of hydrogen produce a blue colour.

Microscopic test.—The characteristic red blooddises are seen, but often very misshapen, crenate, globular if water has been used, or broken up.

Spectroscopic test.—The hemoglobin undergoes several chemical changes by time and exposure to air and water, and the spectroscopic appearances vary accordingly. The chief changes in the spectrum are in all cases a darkening of the blue end, in some, absorption bands in the green, in others, in the red also.

B., transfu'sion of. See Transfusion.
B. tubes. A term for the arteries and veins.

B. tu'mours, cavern'ous. Same as

Angeioma, cavernous.

B., veloc'ity of. The velocity with which the blood travels along the arteries progressively diminishes from the aorta towards the capillaries, and it gradually increases again from the capillaries towards the large veius. In the larger arteries, as the carotid, the velocity is estimated at 300 mm. per sec., in the medium-sized, as the maxillary, at 165 mm., and in the smaller, as the metatarsal, at 56 mm. In the capillaries it is from 0.5 to 0.8, and in the larger veius from one half to two thirds of the rate it moves in the larger arteries.

B., ve'nous. (G. Blutaderblut.) Venous blood is of a purple colour, becoming scarlet on exposure to the air; it is dichroic, being green by

transmitted light in thin layers.

B., vom iting of. See Hamatemesis. B., white. A synonym of lymph. B. wort. The Rumex sanguineus.

Bloodless operations. In this method of treatment, after any wounds or ulcers that may be present have been covered with cotton wool and some waterproof tissue, the limb is firmly bandaged with a roller, made of india rubber or other elastic material, from the extremity upwards. By this means the blood is almost entirely expelled from the limb. Where the bandage ends an elastic ligature is wound with moderately strong traction several times round the limb, so that no more blood can pass through the arteries; the ends of the ligature are fastened together by a knot, or by a clasp, or by a hook and chain. The clastic roller may then be removed in part or entirely, and the amputation or other operation performed. The merit of the plan is due to Esmarch.

Blood lessness. See Anamia.

Blood letting. (L. venæsectio; Gr. φλιβοτομια; F. saignie; I. salasso; S. sangria; G. Aderlass.) An artificial abstraction of blood for the cure or prevention of disease. Blood-letting may be general or local. The mode of effecting the former will be found under Arteriotomy and Phelodtemy; of the latter, under Searification, Capping, and Leeching.

General bloodletting acts by diminishing the force of the heart's action and the quantity of the blood in the body. It is useful in those eases of pneumonia where, from the amount of lung inflamed, there is great impediment to the blood-flow, and the veins of the head and neck become turgid from over-distension of the right cavities of the heart, in apoplexy with distended veins or a full hard pulse, and in uramic engargement of

lungs, where, again, there is over-distension of

right side of heart.

Local bloodletting is seldom wrong in inflammation of external parts, or of the pleura, or peritoneum, or of the organs of sense, in a previously healthy person, and it may often be resorted to advantageously in the less strong.

In both cases the importance and the extent of the organ affected, and the physical coudition of the patient, are main factors in the determina-

B., cap'illary. See Scarification, Cupping, and Leeching.

B., deple'tive. When the object is to diminish the amount of blood in the body.

B. derivative. When blood is taken from a vessel near to the inflamed part.

B., evac'uative. When it is intended to

reduce the quantity of blood. B., gen'eral. A term for Arteriotomy, or

Phlebotomy.

B., lat'eral. A term used to express the views of those who recommend that blood should be let on the same side of the body as the disease.

B., lo'cal. A term for Cupping, Leeching, and Scarification.

B., revul'sive. When the blood is taken from a vessel far from the indamed part.

B., spo'liative. When the blood is let to diminish the number of red corpuscles.

Bloodliq'uor. The Liquor sanguinis.

Blood root. The Sanguinaria canadensis, and the Patential townwall. and the Potentilla tormentilla.

Blood'shot. Ecchymosed; hyperæmic. Blood'stone. See Hamatites and Helio-

tronum. Also, a term used by the Australian miners for the basaltie lava which often overlies auriferous

Blood'stroke. A synonym of Apoplexy. According to some, sudden congestion of

the whole brain with rupture of bloodvessel.

Bloodve'sicles. The corpuseles of the blood.

Bloodves'sel. (G. Blutbehalter.) general term for artery, vein, or capillary.

B., breaking of. Hæmorrhage. Usually applied to hæmorrhage from the lungs or stomach.

Blood weed. The Asclepias curassavica. Blood wort. The Hieracium venosum, the Rumex sanguineus, and the Sanguinaria canadensis.

Blood'y. (Same etymon as Blood.) Containing, or tinged with, or the colour of, blood.

B. crane's-bill. The Geranium sangui-

B. dock. The Rumex sanguineus.
B. flux. A term for Dysentery.
B. man's fin'ger. The Arum macula-

B. small'pox. Same as Smallpox, hamorrhagic.

B. sweat. Same as Ephidrosis cruenta. Also see Hamathidrosis.

B. u'rine. Same as Hamaturin.

B .- war'rior. The Cheiranthus cheiri. **Bloom.** (leel. blom, a blossom.) A flower, blossom. The whitish or bluish cloudy or a blossom. powdery appearance on fruits and leaves; it is of a waxy character.

B., bon'ey. The Apocynum andræsi. folium.

Eloom'ing. (Part. of E. bloom, from Icel. blim, a blossom.) Producing or bearing flowers.

B. spurge. The Euphorbia corollata,
Bloss burgh mineral springs.
Tioga County, Pennsylvania. The water In Tioga County, Pennsylvania. contains free sulphuric acid, with iron, aluminum, and magnesium sulphates. They are astringent and tonie. (Dunglison.)

Blos'som. (Sax. blostma.) The corolla of a dower.

Blot. A French obstetrician now living. B.'s per'forator. (F. perce crâne de Blot.) An instrument used in eraniotomy. It consists of two blades which, when closed, overlap each other in such a manuer that the blunt back of each protects the cutting part of the other.

Blo'ta al'ba. See Bleta ulbu. Blotch. (Formed from E. black.) A mark

on the skin. Blow. (Arian root bhlagh, to strike.) A stroke; the result of a blow is a contusion.

Blowball. The Taraxacum officinale.
Blowfly. The Musca vomitoria.
Blowing. (E. blow, to puff, from Sax.
blawan, to puff up.) The act, or the sound produced by the act, of more or less forcibly emitting air; the noise of wind.

An altered condition of B. respira'tion. the respiratory murmur, in which it becomes rougher, harder, more intense, more or less metallie, and of a higher pitch, and seems as if drawn from the point of the elest where the ear or the stethoscope is applied; both inspiration and expiration are affected, and the latter is also prolonged. Its varieties are described as diffused and tubular.

B. sound. See Murmur.

Blow-pipe. (F. chalumeau; I. cannello; G. Lothrohr.) A tapering tube of metal used for the purpose of indation in anatomical investigations.

Also, an instrument through which a stream of air from the lungs, or bellows, may be directed into a flame, which thus assumes a conical form, at the point of which the heat is very intense.

Blub'ber. (Eng. blow, to puff up; from blawan, to swell.) The subcutaueous fat of the whale, seal, and such like.

Blue. (leel. blar, livid. F. blcu; I. tur-chino, azzurro; G. Blau.) One of the primary colours. Originally it meaut livid.

B., an'ilin. See Anilin dyes. B. bell. The Scilla nutans, the Gentiana

catesbai, and the Campanula rotundifolia. B., Ber'lin. A synonym of Prussian blue. B. ber'ry. The Caulophyllum thalictroides,

an American species of Lantana.

B. ber'ry, low. The Vaccinium pennsylvanicum.

B.-blaw. The Centaurea cyanus.

B. bon'nets. The Centaurea cyanus.

B. bot'tle, corn. The Centaurea cyanus. B .- bot'tle, great. The Centaurea mon-

B. caps. The Scabiosa succisa, and the Knautia arvensis.

B. car'dinal flow'er. The Lobelia syphilitica.

B. co'hosh. The Caulophyllum thalictroides.

B. cop'peras. Cupric sulphate.

B. disea'se. A synonym of Cyanosis.

B. dove's-foot. The Geranium sylvaticum.

n. flag. The Iris versicolor.

- B. flea'bane. The Erigeron arris.
  B. gen'tian. The Gentiana catesbai.
  B. gum. (G. schiefergrauer Zahnfleischrand.) A blue condition of the free edges of the gums, seen in lead poisoning. It is believed to depend on the deposit of plumbic sulphide in the tissues from the action of sulphuretted bydrogen developed in the decomposing substances about

the edges of the gums and the tartar on the teeth. B. gum suc'cory. The Catanunche ca-

rulea.

B. gum tree. The Eucalyptus globulus. B. John. Blue fluor, or Derbyshire spar. B. line. See B. gum.

- B. lit'mus pa'per. See Litmus paper. B. mass. A term for Pilula hydrargyri.
- B. mel'ilot. The Melilotus carulea. B. mould. The Aspergillus glaucus.
- B., moun'tain. Cupric carbonate. B. oint'ment. The Unguentum hydrar-

B., Par'is. Same as Prussian blue.

B. pill. The Pilula hydrargyri.

B., Prus'sian. (F. bleu de Prusse; I. azzurro de Berlino; G. Berlinerblau.) Fe<sub>7</sub>Cy<sub>18</sub>. Ferrie ferrocyanide.

B. pus. See Pus, bluc.
B. rock'et. The Aconitum napellus.
B. skin. Same as Exangia cyania of Mason

B. stone. Cupric sulphate.

- B. suppuration. See Pus, blue.
- B. sweat. See Cyanhidrosis.
- B. vit'riol. Same as B. stone. B. weed. The Echium vulgare.

B. wolfs'bane, ear'ly. The Aconitum

Blue'licks. United States; Kentucky, on the Licking River. Sulphurous saline waters. (Dunglison.)

Blu'mea. A Genus of the Nat. Order Compositæ. Small plants, chiefly intertropical; several species of which have a camphoraceous

B. balsamif'era, De Cand. (L. balsamum, a fragrant gnm; fero, to bear.) Ilab. Moluceas, Java, Ceylon, India. Has an agreeable balsamic flavonr, and a camphoric smell. Used as a sudorific and expectorant, tonic, antispasmodic, and emmenagogue; also, in paralysis and leucorrhœa. It yields on distillation Ngai camphor.

B. gran'dis, De Cand. (L. grandis, great.) Common in the Tenasserim provinces, and yields

a good camphor. (Waring.)

B. lac'era. (L. lacer, bitten, torn.) Hab.
Java, China, Bengal. Very aromatic and terebinthinate. Used in dyspepsia.

Blumenbach, Johann Friedrich. A German naturalist and physiologist, born at Gotha 1752, died 1840. His anthropological researches are of great value.

n.'s nor'ma vertica'lis. (L. norma, a pattern; vertex, the highest point.) A method of estimating the size and form of a skull by placing it with the malar bones in such a position as it would occupy if the lower jaw were attached and looking at it from above. By this plan a general idea can be obtained of its length, breadth, general form, and facial projection.

Blu'menstein. Switzerland; Canton Bern, near Thun. An alkaline saline chalybeate water, of temp. 17° C. (62.6° F.), containing iron carbonate 15 grains, calcium carbonate 3.6, in 16 ounces.

Blu'mistein. Same as Blumenstein. Blunt. (leel. blunda, to doze; the original meaning being dull.) Having no sharp edge or

B. hook. See Hook, blunt.

B .- leav'ed dock. The Rumex obtusifolius.

B.-leav'ed ziz'yphus. The Zizyphus jujuba. The fruit of this plant is eaten in India fresh, and also in pickle and conserve.

B. shield-fern. The Nephrodium filix-

Blush. (D. bloozen, from blos, redness. L. ruber; Gr. ερόθημα; F. rougeur; I. rossore; S. rubor; G. Rothe.) The red colour which is ono of the constant phenomena of the inflammatory process, and which is caused by dilatation of the capillaries.

B., cuta'neous. (L. entis, the skin.) A

more or less extensive redness of the skin.

B., inflam'matory. The redness of skin or mucous membrane produced by inflammation.

Blush'ing. (Same ctymon.) The redness of the cheeks caused by shame or confusion, caused by dilatation of the capillaries of the skin from temporary suspension of the action of tho vaso-motor nerves of the part.

**Boa.** (As if bova, which signifies a large wine vessel, of a great length and big-bellied; also, the measles.) A papular or vesicular erup-

tion.

A Genus of the Family Boidæ. These are among the largest of serpents, and from their excrement uric acid is obtained. The flesh is eaten, the fat is used in bruises, and the freshly flayed skin is applied to the helly in abdominal affections.

B. krait. A synonym of the Bungarus cæruleus.

B. linea'ta. (L. linea, a line.) A synonym of Bungarus væruleus.

B. u pas. The upas tree.

Boa-tam-payang. The Chinese name of the fruit of the Sapindus rubiginosus. It is of the size of a prune, with a blackish wrinkled epicarp. When soaked in water it forms a gummy transparent jelly. It was used in dysentery, but does not appear to be specially useful.

Bo'æ. An old term for syphilis. Bo'ak. (Ar. boak.) A species of the white

variety of Lepra vulgaris.

Boa'la. A term used in Central Europe to denote generally severe cruptions or ulcers; originally, in all probability, it was confined to syphilitic diseases.

Boanth'emon. (Βοάνθεμον; from βούς, an ox; ἄνθεμον, the name of a flower, probably the chamomile.) The ox-eye, Chrysanthemum leucanthemum.

Boar. (Sax. Bar.) The male of the swine, Sus scrofa.

Boat. (Sax. bat.) A small open ship. B .- sha'ped. In Botany, having the form of a boat.

Bo'batsch. Roumania. A mineral spring containing sodium chloride and hydrogen sul-

Bobor'ri. The Curcuma longa.

Bocchegia'no. Italy; near Siena. Five mineral water springs, arising from the clay slate, and containing iron, with small quantities of salts. Used in anæmia, chlorosis, and scrofula.

Boc'choe. The buchu, Barosma betulina. Boc'co. The Buchu.

Bocco'ne. An Italian naturalist, born at Palermo 1633, died 1704.

Bocco'nia. (After Boecone.) Nat. Order Papaveraceæ. Ilab. Mexico. Herbs with a milky juice.

в. frutes'cens, Linn. (L. frutex, a shrub.) Used as a drastic purgative and a vermifuge. Locally, in ringworm and corneal opacities.

Boche'tum. A secondary decoction of certain woods, as Lignum vitæ. (Blasius.)

Boch'ium. A synonym of Bronchoeele.

Bo'cho. The Barosma betulina.

Bo'cia. A glass subliming vessel, having a round belly and long neck.

Bo'cium. A synonym of Bronchocele. Bock let. Bayaria. Height 620 feet. A pleasant village, near to Kissingen. Climate mild. Cold chalybeate waters, with much car-Climate honic acid. A stimulating saline chalybeate, used in amemic conditions, especially in feeble diges-tion. Said to cure sterility, and to check the

tendency to abortion. **Bo'co.** The Robina panacoco.

Bo'dach. Hungary; near Weissenburg. A mineral water containing calcium bicarbonate and free carbonic acid. Used in gout, rheumatism,

glandular disorders, and chronic bronchitis. **Bo'dendorf.** Germany; near Heidelberg. A climatic cure place for chest and nervous dis-

eases. The grape cure is used. **Bo'do**, Ehr. A Genus of the Family Monadina, Order Flagellata, Class Infusoria. Some species inhabit the intestinal canal of the frog and salamander, and others are found in the body of some of the Radiata.

B. urina'rius, Hassall. (L. urina, urine.) A species said to be found in the urine.

Bodroo Pam. The native name of the Trimeresurus gramineus and T. erythrurus.

Bod'y. (Sax. bodiy. L. eorpus; Gr. σωμα;

corps; 1. corpo; S. cuerpo; G. Korper.) That which is cognisable by the senses. The word is used as a basis of classification in the sciences; as in physics, solid and fluid bodies; in Chemistry, simple and compound bodies.

In human Biology, it is used to distinguish the material from the mental part of man, body and

mind.

In Anatomy, it serves to distinguish the basal part of a structure from its appendages, as body of the sphenoid bone. It is also often the base of nomenclature, as pituitary body, pacchionian body. It is used in this scuse in Biology generally.

In Surgery, it is used with the epithet foreign to signify a substance introduced from without into the tissues or the cavities of the human body, or unnaturally growing there, as bullets, loose car-

tilages in joints.

B .- cavity. (L. cavitas, a cavity.) The space in which lie the alimentary canal and its appendages.

B., extre'me parts of the. See Acrea. B., fric'tion of the. See Anatripsis.

B .- louse. The Pediculus vestimenti. B. of Rosenmul'ler. The Parovarium. B., perinæ'al. See Perinæum, body of.

B., res'tiform. See Restiform body.

B., suprare'nal. The Adrenals. B., thy'rold. See Thyroid body.

B., Wolff'ian. See Wolffian body. Boe. The principle of intelligence on Zoroaster's system. See Akho.

Bo'e, François de la. A German physiologist, better known as Sylvius, born at Hanau, near Frankfort, 1614; died 1672.

Boehme'ria. (Böhmer.) A Genus of the Nat. Order Urticacea. Several species yield valuable fibres for textile fabrics; Chinese grass, Rhea, and Pooah fibre.

B. aliena'ta. (L. alieno, to alter the nature of.) Hab. China. Used both externally and internally. It is refrigerant, diuretic, and

cmollient.

B. cauda'ta, Endl. (L. cauda, a tail. F. bochmerie a queue.) A native of Brazil, where the leaves are used as a sudorific and autiha-morrhoidal, a decoction of the leaves being added to a bath.

Boel'li. A term for the intestines. (Dunglison.)

Boerhaa'via. A Genus of plants of Nat. Order Nyctaginacea. Chiefly tropical, and pos-

sessing emetic and purgative properties.

B. decumbens, Vahl. (L. decumbo, to lie down.) Hogmeat. Hab. West Indies and South America. In Guiana its root is called ipecacuanha, and is an emetic and purgative. Used also in dysentery.

B. dian'dra, Aubl. (Diandrous.) The B.

deeumbens.

B. diffu'sa. (L. diffusus, part. of diffundo, to spread out.) Spreading hogweed, also called hogmeat. Hab. Jamaica. An expectorant; a decoction of the root has also been used in asthma, in gonorrhea, and in dysentery.

**B. hirsu'ta.** (L. hirsu'tus, hairy.) Hab. Jamaica, Brazil. Used in jaundice.

**B. insula'ris.** (L. insularis, belonging to an island.) The same as B. diffusa.

B. laxa, Pers. (L. laxus, loose.) The B. decumbens.

B. peruvia'na, Hnmb. A species used in venereal diseases.

B. procum'bens. (L. procumbo, to prestrate one's self.) Hab. India. The root is somewhat nauseous and bitter, and is laxative. It is given in dysentery, and is applied locally in skin diseases.

B. prostra'ta. (L. prostratus, part. of prosterno, to spread out.) Hab. India. Used in snake-bites.

B. scan'dens. (L. seando, to climb.) Hab. West Indies. Used in governmea.

B. tubero'sa, Lamb. (L. tuberosus, full swellings.) Hab. Peru, where it is called Yerba de la purgacion. Purgative and emetic. Eaten as food.

Boers. A term given to the persons of Dutch extract living in South Africa.

**Boethema.** (Βοηθέω, to aid.) a remedy. (Castellus.)

Boethemat'ica sig'na. (Вопвицаτικός, remedial; L. signum, a sign.) Signs of a favourable progress of a disease.

Boëtum. See Bocium.
Bof. Quicklime. (Ruland.)
Bofarei'ra. Name, in the language of the Cape de Verd Islands, for the white species of the Ricinus communis, castor-oil plant. See Ricinus communis.

Bog. (Irish bogach.) A morass.

B. bean. The Menyanthes trifoliata, or huck-bean.

B. bean, fring'ed. The Villarsia nymphavides.

B. berry. The cranberry, Oxycoccus palustris.

B. bil'berry. The Vaccinium uliginosum. B. moss. A term applied to several species of Sphagnum.

B. myrtle. The Myrica gale.
B. on'ion. The Osmunda regalis.
B. vr'olet. The Pinguicula vulgaris.
B. wort. The eranberry, Oxycoccus pa-

Bo'gia gum'mi. Gamboge.

Bogo'ta. South America; a city of the Granadiau Confederation.

B. bark. A term applied, from the source of the supply, to one of the kinds of fibrous Carthagena bark.

Bohe'a. (F. the boui.) A name of black

Bohe'ic ac'id. An acid said by Rochleder to be found in black tea.

Bohe'mians. A name of the Gipsies.

Bo'hmer, Georg Rudolph. German botanist, born 1723, died 1803.

Bo'hun u'pas. The poisonous juice of Antiaris toxicaria. See Upas. Boi'a. See Boa.

Boiciningua. A name for the rattle-snake, Crotalus horridus.

Bo'idæ. A Family of the Suborder Aglyphodontia, Order Ophidia, Class Reptilia, comprising the Boas and Pythous. They are the largest of all living snakes; they have strong recurved teeth, but their bite is not venomous; they kill their prey by folding themselves round The Pythons have rudimentary hind limbs, terminating in horny anal spurs.

Boil. (Sax. byl. L. furunuculus; Gr. δοθών; F. furonele, clou; I. furoncolo; S. divieso; G. Beule, Furunkel, Blutgeschwür.) Α circumscribed inflammation of the skin, or of subcutaneous connective tissue, or of a sebaceous gland. Usually some of the affected part sloughs, the core or setfast, and is discharged along with pus through an opening in the skiu. Errors in diet, producing an enfeebled condition of system. overtraining for athletics, severe hydropathic treatment, inhalation, and handling of putrefied flesh, and the existence of diabetes, are among the causes of boils. They are sometimes epidemic.

B., blind. A boil where there is little sloughing, no distinct margin or core, and little

B., Bula'ma. See Bulama boil.

B., Delhi. See Delhi boil.

B., gum. See Gum boil.

B., malig'nant. See Carbuncle.

B., wasp's nest. A boil with several loculi, or a small carbuncle.

Boiling. (L. chullitio; Gr. avageous; F. challation; I. challizione; S. challicion; G. Aufsieden.) The violent movement of a liquid under the influence of such an amount of heat as will serve to convert it into vapour; the movement is caused by the rapid formation of bubbles of vapour of the liquid, which rise and burst on the surface. When a liquid boils the temperature ceases to rise, the additional heat becoming latent in the vapour.

B. point. (G. Sicdepunkt.) The temperature at which bubbles of vapour are given off from a liquid. This varies for different liquids and for the same liquid under different physical conditions, especially differences of atmospheric pressure; the greater the pressure the higher the boiling point; but the conditions being constant the boiling point is constant.

Boi'na. (L. bos, an ox.) A synonym of

Vaccina.

Bois-plan. France; south of Chamberry, in Savoy. A mild chalybeate water.

Boisse. France; near Fontenay-le-Compte. Purgative mineral waters, containing calcium sulphate and carbonate and calcium chloride.

Boivin, Mada'me. A French femalo obstetrician, born at Moutreuil, near Versailles, in 1775; died 1841. Her obstetrical and gynæ-

cological writings were much esteemed. **Bojanus, or gan of.** A series of tubes, with numerous blood-chanuels, found in Molluses and Cephalopods, and opening on the oue side on the exterior of the body, and on the other communicating with some part of the blood-vascular system. It is probably a urinary apparatus.

B., trache'al sacs of. attached to the muscular layer of the deriuis of nematode worms.

Bola. Myrrh.

Bo'lar earth. Same as Armenian bole. Bolax. A Genus of the Nat. Order Umbelliferæ.

B. gleba'ria. (L. glebarius, belonging to elods.) Hab. Southern Chili, Falkland Isles. A beehive-shaped plant, yielding a white gummy resin, amber-coloured when dry. Used as an application to wounds.

**B.** gum'mifer. (L. gummi, gum; fero, to bear.) The Hydrocotyle gummifera.

**Bol'bitum.** (Βόλβιτον. G. Kuhmist.) Dung of the ox or cow. Anciently recommended by Hippocrates, de Nat. Mul. ii, 17, as a poultice or fomentation in uteriue diseases.

Bolbocas'tanon. Same as Bulboeastanum

**Bolbo'des.** (Βολβός, a bulb; εἶδος, likeness. G. zwwbelformig.) Bulbous, ball-shaped.

Bolbomelano ma. (Βολβός, a hulb; melanoma. F. bolbomelanome; G. Schwarzschwamm des Auges.) Melanoma of the eye.

Bolbomelano'sis. (F. bolbomelanose.)
The progress or formation of Bolbomelanoma. Bolchon. Used for Bdellium, according to Dioscorides, i, 80.

Bolde'a. Same as Boldoa.

Bol'dine. A bitter alkaloid, discovered by Bourgoin in Boldo leaves; it is soluble in alcohol, ether, and caustic alkalies; it is coloured red by nitrie and sulphuric acids.

Bol'do. The leaves of Boldoa fragrans. Boldo'a. A Genus of the Nat. Order Monimiacea. Aromatic fragrant plants.

B. fra grans, Gay. (L. fragrans, sweet smelling.) Boldo. An Alpine evergreen shrub, growing in Chili. The leaves contain an aromatic oil and an alkaloid, Boldine. They are ovaloblong, entire, reddish brown when dry, leathery, glossy above, pale and hairy beneath, with many small glands. They have a fragrant smell and a pungent, aromatic taste.

Used as a tonic where there is torpidity of the liver, and, especially the oil, in catarrh of the genite-urinary organs.

Bol'dus. The leaves of Boldoa fragrans.

**Bole.** (Βῶλος, a clod of earth. F. bol; G. Bolarerde.) Name of an argillaceous mineral having a conchoidal fracture, a glimmering internal lustre, and a shining streak; its colour varies from white, through different shades of yellow and brown, to black, and it is translucent or opaque, soft, and easily cut, and capable of being polished; it adheres to the tongue, has a greasy feel, and if immersed in water after it is dried, it falls asunder with a crackling noise; it consists of clay coloured with iron oxide, and often containing chalk and magnesia. Many species were formerly used in medicine; and as they used to be made into little cakes, or flat masses, stamped with certain impressions, they were termed Terræ sigillatæ, or sealed earths. Bole was used as an internal astringent, and an absorbent in menorrhagia, hæmoptysis, chronic bronchitis, and diarrhoea. Externally it was nsed in leucorrhæa, piles, aphthæ, burns, and nleers. Dose, 5-10 grains.

B., Arme'nian. See Bolus armeniæ. B., French. (F. bol du pays.) A compact, heavy, soft-feeling earth, found near Blois and Saumur. Used in France as a substitute for B., Armenian.

B., red. See Bolus ruhra,

B., white. See Bolus alba.
B., yellow. A bole differing from Bolus rubra only in depth of colour.

Sol'echon. Poland. A strong saline or sool mineral water bath.

Bole'sis. An old term for Coral.

Bol'eson. Balsam.

Bole'tic ac'id. Same as Fumaric acid. Boletus. (Bölos, a miss. F. bolet; G. Kugelschwamm, Locherschwamm.) A Genus of the Family Hymenomycetes, Nat. Order Fungi. Hymenium distinct from the smooth hymenophore; trama none; tubes easily separable from hymenophore. Fleshy, terrestrial fungi, of which some are poisonous, many eatable.

B. æn'eus, Bull. (L. æneus, made of bronze.) Esculent. Flesh white, changing to yellow in the air; pileus broad, olive, or black brown; stem yellowish, brownish at the base; tubes sulphur yellow. In woods iu summer and

autumn.

B. æstiva'lis, Fr. (L. æstivalis, belonging to summer.) Esculent. Pileus silky, soft, pale tan; stem stout, even, white; tubes clougated, small. In woodland pastures.

B. agar'icus. ('Αγαρικόν, a tree-fnngus.)

The Polyporus officinalis.

B. al'bus. (L. albus, white.) The Polyporus officinalis.

nor as opermans.

B. annula'tus, Pers. (L. annulatus, furnished with a ring.) The B. luteus.

B. ba'dius, Fr. (L. badius, chestnut-coloured. G. Maronenpilz.) Esculent. Fileus pulvinate, soft, viscid, chestnut brown; stem solid, even, brownish yellow; tubes pale yellow, broad, angular. In pine woods.

B. bovínus, Linn. (L. bovinus, belonging to cattle. G. Kuhpilz.) Escalent. Pileus reddish grey; stem equal, even; tubes angular, greyish yellow, afterwards rusty brown; spore elliptic yellowish; taste and smell fragrant. Heathy firwoods.

**B. calo'pus,** Fr. ( $Ka\lambda \acute{o}s$ , heautiful;  $\pi o \acute{v}s$ , a foot) Suspicious. Scarlet-stemmed boletus. Pileus broad, convex, olive brown, somewbat tomentose; stem reticulated, scarlet; tubes adnate, angular, yellow. In woods.

B. casta/neus, Bull. (Κάστανα, chestnuts.) Esculent, but not very good. Pileus convex, velvety, cinnamon coloured; flesh white, unchanging; stem cinnamon; tubes short, white, afterwards yellowish. Woods.

B. cer'vi. (L. cervus, a stag.) The Elu-

phomyces granulatus.

B. cervi'nus. (L. cervinus, pertaining to a deer.) The Elaphomyces granulatus.

B. chirurgo'rum. (L. chirurgus, a sur-

geon.) The Polyporus fomentarius.

B. chrysen teron, Fr. (Χρύσεος, golden; ἐντός, inside. F. bolet de euivre, bolet à tache jaunes.) Poisonous. Pilens soft, reddish brown; stem rigid, scarlet or yellow; tubes rather large, angular, greenish yellow; fiesh yellowish white, changing to bluish when cut. In meadows and woods.

B. constric'tus. (L. constrictus, com-

pressed.) The B. cyanescens.

B. cras'sipes. (L. crassus, thick; pes, a foot.) The B. calulis.

B. cu'preus. (L. cupreus, of copper ) The

B. chrysenteron.

B\_cyanes'cens, Bull (Kvaveos, dark blue. F. botet indegotier.) Doubtfully esculent. Pilcus tomentose, tan coloured; flesh compact, white, becoming dark blue when cut; stem ventricose, white; tubes free, minute, round, white, afterwards yellow. In woods.

**B. discoï deus.** (Δίσκος, a round plate; εἶδος, likeness.) The Trametes suaveolens.

B. ed'ulis, Bull. (L. edulis, eatable. bolet comestible; G. Steinpilz, Herrenpilz, Edel-pilz.) Esculent. Pileus smooth, umber brown; flesh white; stem whitish brown, reticulated, especially towards summit, ringless; tubes white, afterwards yellowish green. In woods. **B.** el'egans, Fr. (L. elegans, elegant.)

Doubtfully esculent. Pilens viscid, golden yellow; flesh pale yellow; stem yellow, afterwards rufous; tubes small, simple golden yellow.

Woods.

B. crythro'pus, Krombh. (Ερυθρόπους,

red-footed.) The B. Inpinus.

**B.** esculentus. (L. esculentus, fit for eating.) The B. edulis; also, the Morchella esculenta.

B. fel'leus, Bull. (L. fellens, like gall. F. bolet chicotin.) Poisonous. Pileus smooth, brownish or reddish grey; flesh flesh-coloured, stem reticulated; tubes adnate, convex, angular, white, afterwards flesh-coloured; spores pink; taste bitter. Woods.

E. fla'vus, Krombh. (L. flavus, golden

yellow.) The B. elegans.

B. fomenta'rius. The Polyporus fomenturins.

B. fra'grans, Vitt. (L. fragrans, sweet smelling.) Pileus pulvinate, with an inflexed margin, subtomentose, nuber brown; stem variegated with red and yellow; tubes semi-free, small, rounded, yellow, becoming green. In woods. Esculent.

B. ful'vus. (L. fulvus, tawny.) The

Polyporus igniarius.

B. granula'tus, Linn. (L. granulum, a little grain. G. Schmeerling.) Esculent. Pileus convex, yellowish, with a brownish evanescent gluten; stem ringless, yellowish, with yellowish or brownish granules in the upper part; tubes aduate, simple, yellow. In fir-woods.

**E.** hippocre'pis. ("Ιππος, a horse; κρηπis, a shoe.) The Polyporus igniarius.

B. ignia'rius. The Polyporus igniarius. B. impoli'tus, Fr. (L. impolitus, rough.)

Esculent. Pileus tlocculose, pallid, afterwards eracked; stem short, stout, even, pallid; tubes nearly free, very long, large, yellowish. On woodsides

B. lar'icis. (L. larix, a larch tree.) The Polyporus officinalis.

B. lupi'nus, Fr. (L. lupinus, wolfish. G. Rothfuss, Feuerpilz.) Dotted-stem boletus. Pileus convex, tomentose, dry, at first bluish green, then yellowish; stem blood red; flesh yellowish, becoming blue on fracture. sonous,

B. lu'ridus, Schäff. (L. luridus, sallow. F. bolet perniceux; G. Hexenpilz, Schusterpilz, Judenpilz.) Poisonous. Pileus tomentose, olive umber, getting viscid; flesh when broken changes to blue; stem stout, vermilion red, reticulate or punctate; tubes free, rounded, yellow, then greenish. In the neighbourhood of trees.

B. lu'teus, Linn. (L. lutcus, yellowish. G. Butterpilz, Ringpilz, Schmalzling.) Esculent. Pileus gibbous, thin, cushion-shaped, with a brown evanescent gluten; stem whitish, above the white, and afterwards brownish ring, rough, and darkly punctate; tubes adnate, small, simple, yellow. In fir-woods.

B. obtu'sus. (L. ohtusus, blunt.) The

Polyporus igniarius.

B. officina'lis. (L. officina, a workshop.)

The Polyporus officinalis.

B. pach ypus, Fr. (Παχύς, thick; πούς, a foot. F. bouse de vache, cèpe-cordon rouge; G. Dickfuss.) Poisonous. Pileus subtomentose, brownish; stem thick, reticulated, yellow and red; tubes rounded, yellow. Woods.

B. pernicio'sus. (L. perniciosus, perni-

cious.) The B. luridus.

B. pipera'tus, Bull. (L. piperatus, peppered. G. Pfefferpilz.) Poisonous. Pileus smooth, slightly viscid, yellow, inclining to reddish grey; stem slender, even, yellow within and at the base; tubes large, angular, ferruginous. In woods.

B. pur'gans. (L. purgo, to purge.) The

Polyporus officinalis.

- B. re'gius, Krombh. (L. regius, regal. G. Konigspilz.) Esculent. Pileus bare, blood red or purple; flesh pale yellow; stem very thick, yellow-veined, on a purple or red ground; tubes golden yellow. In woods. Escuthick. lent.
  - B. ri'bis. See Polyparus ribis.

B. rubeola'rius. (L. rubeo, to redden.) The B. luridus.

B. ru'tus, Schäff. (L. rufus, red. Espenpilz. Esculent. Pileus dry, scaly at first, then smooth, red or orange brown; flesh white, when broken becoming blue or violet.

B. salicis. (L. salix, the willow.) The

Trametes suarcolens.

**B. sat'anas**, Lenz. (Σατανᾶs, the devil. G. Satanspilz.) Poisonous. Pileus smooth, rather viseid, tan. afterwards white; flesh white, turning reddish, when broken changes to blue; stem firm, reticulated above, blood red; tubes free, minute, yellow. Woods.

B. sca'ber, Fr. (L. scaber, rough. F. bolet orange, var. rude; G. Burkenpilz, Kapuzinerpilz.) Esculent. Pileus smooth, viscid when moist, rugulose; margin veiled; stem solid, scaly; tubes free, small, convex, white, becoming

dingy. Woods.

B. suaveo'lens. (L. suaveolens, sweet smelling.) The Trametes suaveolens.

B. subtomento'sus, L. (L sub, under; tomentum, a stuffing for cushions. G. Ziegenlippe.) Esculent. Pilcus pulvinate, villosotomentose, olive coloured or reddish brown; stem stout, unequal, roughly punctate, ribbed, yellow, later reddish; tubes adnate, broad, angular, yellow. In woods.

B. sulphu'reus. The Polyporus sulphu-

B., touch'wood. The Polyporus igniarius.

B. ungula'tus. (L. unqulatus, provided with claws.) The Polyporus fomentorius.
B. versipei'lis, Fr. (L. versus, part. of verto, to turn, to change; pellis, the skin.) The B. rufus.

**Bolis'mus.** (Bῶλος, a mass.) Used by Avicenna, iii, fen. 13, tr. 2, c. 15, 16, for Bu-

Boli'tes. (Βῶλος, a elod.) The mush-

Bolivarie'æ. The same as Jasminaceæ. Boll, Germany; Wurtemburg. A mineral spring, 1300 feet above sea-level, containing a little sodium carbonate and sulphate, with some hydrogen sulphide. Used in skin diseases, serofula, leucorrhica, and chronic cystitis.

Bollet erie. The indigenous name of the species of gutta percha produced by the Achrus

mulleri.

Bologn'ian phos'phorus. Sulphate of baryta, mixed with a fifth part of charcoal, ignited, and whilst hot put into a closely-scaled glass tube, is called by this name because, after exposure to the sun's rays, or the magnesium light, it acquires the property of shining in the dark with a bright orange light; also called Bononiensis lapis.

B. stone. Same as Bolognian phosphorus. Bolorhe'tin. A resinous substance, found in the fresh or fallen leaves of pine trees, and in the fossil firwoods of Danish bogs. Its composition is variable, but it appears to consist of the

elements of oil of turpentine with water. It melts at 75° C. (167° F.) **Bo'lus.** (Billos, a mass. F. bol.) Any roundly formed medicine, larger than an ordinary sized pill, yet small enough to be swallowed.

A kind of argillaceous earth. See Bole.

B. ad quarta nam. (L. quartana, the quartan ague.) A febrifuge consisting of quinine,

tartar emetic, and potassium earbonate. **B. al'ba.** (L. albus, white. G. weisser Thon.) A species of a white colour, and containing some magnesia and traces of iron. For properties, see Eole.

B., aliment'ary. (F. bol alimentaire.)
The soft mass formed by the food, after mastication and insalivation have been performed, so as to fit it for its transmission into the pharynx, œsophagus, and stomaeh.

B. Arme'niæ. A variety from Armenia, and other parts; it has a reddish-brown colour, from the presence of iron oxide. Used as a tooth powder. For uses, see Bole.

B. orienta'lis. (L. orientalis, eastern.) The same earth as Armenian hole, but brought from Constantinople

B. ru'bra. (1. ruber, red. G. rother Thon.) Armenian hole.

Boma'rea. A Genus of the Nat. Order Amaryl'idacea.

B. salsil'la. A plant used in Chili as a

sudorific and in skin diseases.

Bomba'ceæ. (Bombax, the silk-cotton tree.) A Tribe of the Nat. Order  $Sterculiace\alpha$ , with palmate or digitate leaves and perfect flowers.

Bomba'ceous. (Same etymon.) Having an arrangement of parts as in the Genus Bombax. Bomba'cium. (G. Baumwolle.) Cotton

Bom'bax. A Genus of plants of the Trihe Bombacea, of the Nat. Order Sterculiacea. Large trees, the seeds of many of which are enveloped in a silky cotton.

Also, a term for cotton.

B. cei ba. Hab. South America. Used in dropsy, tetanus, and chest affections. Locally as a vulnerary.

B. gossyp'ium. The Cochliospermum

gossypium.

- **B.** heptaphyl'ium, Cav. ('E $\pi \tau \acute{a}$ , seven; φύλλου, a leaf.) A tree which affords the substance called moc-main. It consists of the long silky hairs which cover the seeds. The gum resiu is said to be astringent, and the root tonic and aphrodisiae. The bark is said to be emetic.
- B. malabar'icum. See B. heptaphyllum. **B. pentand'rum,** Linn. (Πέντε, five; ἀνήρ, a man.) Silk-cotton tree. Bark emetic. A gum which exudes from it is given, with

spices, in diarrhea and dysentery. **Bom bay nuts.** The Bonduc seeds. **Bom** bic. ( $B\delta\mu\beta\nu\xi$ , a silkworm.) Belonging to a silkworm.

B. ac'id. (F. acide bombique; G. Sciden-würmersaure.) An acid found in a cavity near the anus of the silkworm, the larva of Bombyr mori, now believed to be nearly pure acetic acid.

Bomboku'lon. A name which Dioseorides is said to have given to mandragora.

**Bom'bus.** (Bo $\mu\beta\delta$ s, the buzzing of bees F. bourdonnement; G. Ohrenbrausen.) A ringing noise in the ears, otherwise termed Tinnitus aurium.

Also, a sonorous movement of flatus in the intestines, otherwise termed Borborygmus.

Also, a variety of the Paracusis illusoria, of Mason Good; being a dull, heavy, intermitting sound.

Bomby c'idæ. (Βόμβυξ, a silkworm.) A Family of the Group Bombyeinæ, Order Lepidoptera. Antennæ of both sexes serrate; palpi hairy; anterior wings with twelve veins and no accessory cell; dorsal vein not bifurcate; posterior wings with two inner marginal veins; larvæ hairy.

**Bombyc'inæ.** (Βόμβυξ, a silkworm.) A Group of the Order *Lepidoptera*, Class *Insecta*. Moths having a heavy, hairy body, and peetinate antennæ; ocelli absent; wings of females sometimes wanting. Many of the genera produce silk for the envelopment of the cocoons.

Bombylius. (Βομβυλιός.) The silk-

worm moth, or the pupa, or the larva. **Bom'byx.** ( $B\dot{o}\mu\beta\nu\xi$ .) A Genus of the Family  $Bombycid\varpi$ , Order Lepidoptera, Class

B. mo'ri. (L. morus, the mulberry tree. F. bombyx du murier, ver à soie ; G. Seidenwurm.) The silkworm moth.

**B.** pityocam'pa. ( $\Pi(\tau v)$ , the pine tree;  $\kappa \acute{a}\mu \pi \eta$ , a caterpillar. F. processionaire du pin.) Larvæ, irritating, as B. processionea.

**B. processio'nea.** (L. processio, a marching onward, from procedo, to go forth; so called from the habits of the larve, which are often seen as if in procession. F. la processionaire.) The hairs of the larvæ of these moths are very irritating to the skin; they perforate the cuticle, and are supposed to contain formic acid. Great redness, heat, and itching or smarting is produced, with eczema or urticaria; the conjunctiva may also be affected, with cedema of the lids, and faucial irritation may be set up. Serious constitutional disturbance is said to have been

**Bon.** The Egyptian name of the coffee tree; also spelled *Ban*.

Bo'na. The Phaseolus vulgaris. Bo'na fe'ver. A malignant malarial fever, which severely attacked the French troops at Bona, in Algeria, in 1832-5.

Bonan'nia officina'lis. Sinapis alba. Bo'nar. Spain; in the Province of Galicia. A mineral water, temp. 23° C. (73.4° F.), containing iron.

Bona're al'oes. A variety very similar

to Barbadoes aloes. **Bona**'sia. The *Leonurus cardiaca*.

Bon'church. Isle of Wight. A pleasantly situated place, 150 feet above sea-level. A winter residence.

Bond. (Sax. bend, or band; Sans. bandha, a fetter.) A tie.

B., atom'ic. See Atomic bonds. Bon'donneau. France; Drôme. alkaline sulphurous water containing iodine. It is employed for drinking, in baths, injections, and douches. Used in scrofula, syphilitic affections, skin diseases, chronic bronchitis, nterine and joint diseases.

**Bon'dou gum.** A variety of the Senegal gum arabie; it has a bitter taste.

Bon'duc. The Guilandina bonducella. B. seeds, Ind. Ph. (G. Nickersamen.) The seeds of Guilandina bonducella. They are about ·75" in diameter, irregularly ovoid, smooth, hard, lead-coloured, and bitter. They contain a fixed oil, and a bitter substance, which can be isolated as an amorphous powder, having no basic properties, but which is, or contains, the active principle. They are tonic and antiperiodic, and have been successfully used in intermittents, and locally in hydrocele and gonorrhea. Dose, 10-15 grains.

B. tree, smooth. The Guilandina moringa.

Bonducel'læ sem'ina. (L. semen, a seed.) See Bonduc seeds.

Bon'duch indo'rum. The fruit of the Guilandina bonducella.

Bon'due. The Gymnocladus canadensis. Bone. (Sax. ban. L. os; Gr. ὀστεόν; F. os; I. osso; S. hueso; G. Bein, Knocken.) The framework of the animal body, supporting the softer structures, forming the joints, and protecting the important viscera. The assemblage of bones of an animal is usually called the skeleton, but this term has a wider and more scientific signification.

Chemical composition.—Bone has a sp. gr. of I.898-I.964. It is hard, tough, and somewhat elastic; light pink on the outside, while living, dark red within. It consists of a basis of gelatin impregnated with earthy material; on an average there is in 100 parts—Water and organic matter 33.3, ealcinm phosphate 51.04, calcium fluoride 2, calcium carbonate 11.3, magnesium phosphate 1.16, sodium chloride 1.2. In rickets, mollities ossium, and caries, the earthy matters are much less. The proportions of the two constituents vary at different ages. The percentage of animal matter is, on the average, in a child 47.2, in an adult 20.18, and in an old person 12.2; of earthy matter, in a ebild 48.48, in an adult 74.84, and in an old person 84.1. The proportions vary also in different bones; those of the arms contain more earthy matter than those of the legs, and these more than the vertebræ. The petrous bone contains a large amount. The organic matter of bone. bone cartilage, or ossein, when boiled, is converted into gelatin containing, in 100 parts, carbon 50, hydrogen 6:6, nitrogen 18:3, oxygen 25:1.

Structure of bone.—To the naked eye bone is com-

posed of two kinds of structure, an outer or compact layer, dense and firm, and an inner part, the cancellons structure, spongy, the network of which is made up of bony arches, advantageously arranged for mechanical support. Under a low magnifying power a transverse section is seen to be composed of a number of somewhat circular zones, the Haversian system, each having a central opening, the Haversian canal, a series of concentrically arranged, isolated, oblong dark spots, the lacunæ or bone-cells, and from them run a number of tortuous, branching, fine lines, the canaliculi, inosculating with their fellows of the lacuna and with the canaliculi of adjacent lacunæ. The interspaces between the Haversian systems are occupied by lacunæ with their candiculi, remnants of earlier Haversian systems. If the section be a longitudinal one, the circular systems are not seen, but large branching canals, the Haversian canals, cut along their length with the interspace occupied by lacunæ and canaliculi. The Haversian canals are the channels for the blood-vessels, which run more or less regularly in the length of the bone, and so the appearances described are produced. They are from 1-1500th to 1-100th of an inch in diameter. The lacunæ are 1-1800th by 1-6000th of an inch in man, larger in reptiles and fish; each is occupied with corpuscles of nucleated germinal matter, with some fibrils, and serves for the nutrition of the surrounding bone. The canaliculi are too small to give passage to blood-corpuscles, but transmit the nutrient fluid materials of the blood; these canals are probably occupied by branches of the lacunar cells. The animal matrix is a fine reticular substance, arranged in lamellar fashion round the Haversian canals, each lamella being often united to its neighbour by perforating fibres; it is brittle and friable. The lacunæ are dilated portions of the space between two lamellæ.

Classification of bones.—Bones are divided into

long, short, flat, and irregular.

Long bones are found in the limbs, and chiefly serve to support the body or to act as levers. They consist of shaft and extremities. The shaft, diaphysis, is long, cylindrical, dense in structure, and hollow; the cavity is the medullary canal. The extremity, epiphysis, is dilated, chiefly composed of cancellous tissue, and forms, with that of its neighbour, a joint.

The short bones, as those of the carpus, have no division into parts; they are cancellous, with

a thin outside of compact bone.

The flat bones form the walls of splanchnic cavities; they are made up of two surfaces of dense tissue, enclosing cancellons structure. In the cranial bones the outer surface is called the outer table; the inner, the inner or vitreous table, and the intervening substance the diploë.

The irregular bones are those which cannot be

classed under the other heads.

Covering of bones .- Bones are covered on the outside by a dense fibrous membrane, the periosteum, and the medullary cavity is lined in the same way by the endosteum, or medullary mem-

Marrow.—The central cavity of long bones is filled with a fatty matter, the *medulla* or marrow. It contains 96 per cent. of fat.

Bones are freely supplied with blood-vessels from the periosteum, the nutritious artery, and the endosteum; a few nerves and lymphatics can

be traced.

Development and growth of bonc .- Most of the bones are developed from cartilage, but several of the cranial bones from connective tissue; the process is similar in essence in both cases. Earthy matter is deposited around the blood-vessels, except in the nuclei, which become the lacunæ. The detail of the development of bone from cartilage is still wanting in preciseness. The eartilage cells are said to arrange themselves in rows by repeated division, blood-vessels penetrate new ground, intercellular substance develops between the columns of cells, and in it calcareous salts are deposited, which again undergo absorption, and bony spiculæ are found, which enclose groups of cartilage-cells, and constitute the primary medullary spaces. The cells do not all proceed alike; one set, osteoblasts, undergo calcification and partake in the formation of bone tissue; the other set develop into medullary tissne. Growth in length takes place at the car-tilaginous innetion of the shaft and joint end; growth in girth takes place from the periosteum. There seems little, if any, interstitial growth. Separate centres of ossification are found in all

B., ab'scess of. A condition which is nsually of slow formation, and occurring in the cancellous structure.

B. ague. Same as Osteocopus.

B., an'eurysm of. See Osteo-aneurysm. B. ash, B. Ph. (Os ustum.) The residue of bones which have been burnt to a white ash in contact with air. Consists principally of calcium phosphate, mixed with about 10 per cent. of calcium carbonate and a little calcium fluoride, and magnesium phosphate. Used to prepare calcium phosphate and sodium phosphate.

B., at rophy of. ('A, neg.; τροφή, nourishment.) Wasting of bone tissue, so that the bone becomes lighter, but not necessarily smaller.

B., atrophy of, concentric. (L. con, for cum, together with; centrum, the middle point of a circle.) That form in which the whole bone becomes small by absorption of both the compact and cancellons structures, and the shrinking of the medullary canal. It occurs in paralysis and old anchylosis.

B., at'rophy of, excen'tric. (L. ex, out of; centrum.) That form in which the bone becomes lighter by the gradual transformation of compact into cancellous structure, but does not become smaller. It is a condition of old age and of insanity, is often accompanied by fatty change,

and renders fractures very easy.

B., back. (Back.) The spine, from its

**B.**, bar. (E. bar, a bolt, a stiff rod; from old F. barre.) The os pubis, from its position in

the pelvie arch.

B., bend'ing of. A condition of bone resulting from injury, occurring in the young, or in diseased hones of adults, in which the bone hecomes bent, either without any fracture or with only partial fracture.

B.-bind'er. The Osteocolla, or glne-stone. B. black. Animal charcoal. See Carbo

animalis.

B. black, artific'ial. Wood charcoal mixed with 7.5 per cent, of calcium phosphate, digested in a solution of calcium phosphate in hydrochloric acid, evaporated to dryness, and ignited in a covered vessel.

B., blade. (Blade.) The scapula.

B., boat-like. The scaphoid bone, from its shape.

B., breast. The sternum.

See Fragilitas B., brit'tleness of.

B. canal's. The Haversian canals; also, the veins of the diploë.

B., ca'ries of. See Caries.

B., erup per. (F. croupe, the rump; from G. Kropf, a protuberance.) The coccyx.

B. earth. A synonym of B. ash.

B. earth cal'culus. A phosphate of lime calculus.

B., enchondro'ma of. See Enchondroma.

B., erec'tile growth in. A vascular growth in a bone of the character of nievus, consisting of an interlacement of minute blood-

B. fe'ver. Phlegmonous inflammation of the hand and arm, often seen in workers in bone.

B., frac'ture of. See Fracture.

B., haunch. (Haunch.) The ilium.

B., heart. A term wrongly applied to a piece of the fibro-cartilage between the auriculoventricular apertures of the heart when it has undergone calcification.

**B., hyper trophy of.** (Y $\pi i \rho$ , above:  $\tau \rho o \phi i j$ , nutrition.) A condition of doubtful existence, except in the form of scleresis, as a result of inflammation. Occasionally a bone grows in length at a greater rate than its fellow. B., inflamma'tion of. See Ostitis.

B., interpari'etal. See Interparietal bone.

B., i'vory tu'mour of. See Exostosis, wory.

B. mar'row. See Bone and Medulla.

B., necro'sis of. See Necrosis.

B. nip'pers. Cutting forceps. Used in the removal of bone.

B. oil. A fetid, blackish-brown, thick oil, obtained during the dry distillation of bone; from it is prepared the Oleum animale atherenm.

B., os'seous tu'mour of. Same as Exos-

The Calcis phosphas, B. phos'phate. B. Ph., or Calcii phosphas præcipitata, U.S. Ph. The normal calcium ortho-phosphate, Cag (PO4)2.

B., plough'share. The vomer, from its

shape.

B., rump. (Rump.) The sacrum.
B., salt of. A synonym of ammonia. B., sclero'sis of. (Σκληρός, hard.) A condition of low inflammation of bone, in which there is increase of hony tissue around the Haversian canals and in the cancelli, so that the bone becomes heavier and denser.

B. screw. (F. tirefond.) A small screw, which is introduced into the central bore hole made by a trephine, to enable the round portion of bone isolated by the trephine to be ex-

tracted.

B., share. The pubis, from its supposed likeness to a ploughshare. **B.**, **shin.** (Shin.) The tibia.

B., soft'ening of. See Mollitics ossium. B. spir'it. An ammoniacal aqueous liquid obtained during the dry distillation of bone.

B., splin'ter. (Splinter.) The fibula. B., tail. (Tail.) The coccyx.

B., ulcera'tion of. A term applied to those cases of caries occurring in persons the subject of constitutional syphilis, affecting the surface and not proceeding rapidly or deeply.

Bone ache. Same as Ostrocopus.
Bones, cartilag'inous. Bones arising from cartilage. They are the basi-occipital, exoccipital, and part of the squamosal, the sphenoid except the cornua, the periotic portion of the temporal, the mes-ethmoid, and ethmo-turbinal, the pterygo-palatine, the mallens with Meckel's eartilage, the incus and stapes with the stylohyoid, the tbyro-hyoid, the vertehræ, the ribs and sternum, the scapula and coracoid, part of the elavicle, and the bones of the upper limb except the sesamoid, the ilium, ischium, pubis, and all the bones of the lower limb except the sesamoid. (Allen Thompson.)

B., mem'branous. Those arising from fibrous membrane. They are, part of the squamosal hone, the frontal, the parietal, the squamozygomatic and tympanic of the temporal, the nasal and lachrymal, the maxillary and premaxillary, the vomer and cornua sphenoidalia, the inferior turbinal, the malar, the inferior maxillary, the clayicle in front, the marsupial bone, and the smaller sesamoid bones of tendons.

(Allen Thompson.)

Bone'set. The Enpatorium perfoliatum.
B., rough. The Enpatorium tenerifolium. B., up'land. The Eupatorium sessilifolium.

Bongard'ia. A Genus of the Nat. Order Berberidacea.

**B. chrysog'onum.** (Χρυσός, gold; γόνος, offspring.) Hab. Asia. The leaves are eaten as an antipsorie.

B. Ranwelfii. Tubers esculent.

Bonifa'cia. (L. bonns, good; facio, to do; from its value.)
Bon'ington. Near Edinburgh. A strong

chalybeate water.

Bonn. Switzerland, near Freiburg. mineral water containing small quantities of snlphates and carbonates of calcium and magnesium, with some hydrogen sulphide. Used in skin dis-

Bonnes. See Eaux-Bonnes.
Bonnet. (F. bonnet, a cap; from Low
Lat. bonneta, a kind of stuff or cloth.) A cap. Also, the second stomach of ruminating animals; the Reticulum.

B. pep'per. The Capsicum tetragonum. Bon'net, Amedes. A French surgeon, born at Amberienx in 1802, died at Lyons in 1858.

B.'s cap'sule. The posterior part of the

tunica vaginalis oculi, behind the point of perforation of the tendons of the muscles of the eyeball.

Bon'net, Saint. France; Departement des Hautes-Alpes. A mineral water, temp. 33° C. (91.4° F.), containing a small quantity of calcium sulphide and some earbonate. Used in skin dis-

Bononien'sis la'pis. (L. Bononia, Bologna; lapis, a stone.) See Bolognian phos-

Bon'pland. A French naturalist, born at Rochelle in 1773, died in Brazil in 1858.

the Nat. Order Rutacca. The Galipaa cusparia. Eonpland'ia. (Bonpland.) A Genus of

B. angustura. The Galipæa cusparia.
B. trifolia'ta. (L. ter, three; folium, a leaf.) The Galipæa cusparia.

Ecn'tia ger'minans. (Bontius.) The Avicennia tomentosu.

Bontius. A Dutch physician; died 1599.
B.'s pills. Socotrine aloes, gamboge, gum ammoniaeum, of each a drachm, white wine vinegar six drachms; dissolve by means of heat, evaporate to a proper consistence, and divide into four-grain pills. Purgative in dropsy.

Bo'nus ge'nius. (L. bonus, good; genius, a tutelar deity.) The Poucedarum offi-

B. Kenri'cus. (F. ansérine.) English mercury. See Chenopodium bonus Henricus. Bo'ny. (F. osseux; 1. osseo; S. huesoso; G.

being, knochern.) Of the nature, or quality of, bone.

B. fishes. The *Teleostei*. Boo'cho. The different species of *Barosma*. Booie'tace. The name in the Deccan of a species of Sellignea, an infusion of the leaves of which are given in rheumatism. (Waring.)

Boo'ko. See Buchu. Book um wood. The astringent wood

of Casalpinia sappan. Boom'ah nut. The fruit of Pycnocoma

macrophylla. Boo'mee hoomu'ra. The Trichosan-

thes cordata. Bo'on upas. The Upas poison. Boo'na. The Phaseolus vulgaris.

Boon'dee. A Hindustani remedy containing lead and zinc. Used in nleers. (Waring.)
Boopid'eæ. The same as Calyceraccae.

Boot'ia vulga'ris. The Saponaria officinalis.

Boot'tia. A Genus of the Nat. Order Hydrocharidaecæ, some of the species of which

are used in India as potherbs.

**Bopyr'idæ.** A Family of the Tribe Enisopoda, Suborder Isopoda, Order Arthrostraca, Class Crustacea. Parasites in the branchial eavity, or on the surface, of certain of the decapod Crustacca. Body of the female discoid, eyeless. Males very small, lengthened, possessing eyes; antennæ sbort, no palpi; seven pairs of legs, short, and ending in hooks; in the female possessing large lamellae, which form an incubatory eavity; abdominal legs respiratory.

Bora. A synonym of Boron.

So'ra. (lt., from L. boreas.) The north wind, when cold and dry, is so called in Italy.

Borache'vo. The Datura stramonum.
Borac'ic. Of, or belonging to, the substance borax. The same as Boric.
B. ac'id. Same as Boric acid.

B. anhy'dride. See Boric anhydride.

B. lint. (G. Borsäurelint.) Lint soaked in a solution of boric acid and dried. Used as an antiseptic application to wounds.

B. lint, Lister's. Lint spread with Cora-

tum acidi boracici. **Bo'racite.** 2Mg<sub>3</sub>B<sub>8</sub>O<sub>15</sub>+MgCl<sub>2</sub>. A native borate of magnesia usually associated with gyp-

Bora'cium. A synonym of Boron. Borades. Limatura, or file dust. (Rnland.)

Bor'age. The Borago officinalis.

B., com'mon. The Borago officinalis. B., small wild. The Asperugo procum-

Bor'ageworts. The plants of the Nat. Order Boraginacea.

Boragina'ceæ. (Borago. F. borraginacico; G. Boretschgewächse.) Herbs or shrubs with alternate leaves, generally rough; scorpioid inflorescence; symmetrical flowers; persistent, 4-5-partite calyx; regular, 4-5-partite corolla; stamens equal in number to the lobes of corolla, and alternate with them; ovary with four ovules in a separate lobe; style basilar; stigma simple or bind; fruit 2-4; achania at the bottom of the persistent calyx.

Boragin'ea. Same as Boraginoidea.

Boraginoi'dem. (Borago; elõos, likeness.) A Subfamily of the Family Asperifolia or Boraginacea, in which the style is basal, and the earpels more or less distinct.

Bora'go, Tournef. A Genus of plants of the Nat. Order Boraginacea.

B. in'dica, Linn. The Trichodesma indieum.

B. officina'lis, Linn. (L. officina, a kshop. F. bourrache; I. borragine; G. retsch.) Borage. The root is mucilaginous workshop. Borretsch.) and emollient, and the leaves are reputed cooling in drinks from the possession of potassium nitrate. It was used in intermittent fevers, rheumatism, and exanthemata.

B. zeylan'ica, Linn. A diuretie. Used

against snake-bites.

Bo'ras. A borate.

B. na'tricus. (Natron.) Borax.
B. so'dæ. A term of sodium biborate, borax.

**B. so'dicus.** Borax, sodium biborate. **B. superso'dicus.** Sodium biborate or

borax.

Bo'ras. Sweden. A carbonated spring.
Boras'seæ. A Tribe of the Nat. Order
Palmaceæ, having fan-shaped leaves.

**Boras'sus,** Linn. (Βόρασσος, the palm fruit.) A Genus of the Nat. Order *Palmaeeæ*. **B. æthio'pum,** Mart. (L. æthiops, Ethiopian.) Fruit esculent, both ripe and unripe;

the liquid albumen is said to be aphrodisiac.

B. flabellifor mis, Linn. (L. flabellum, a small fan; forma, shape. G. Fucherpalme.) l'almyra palm. Hab. India. The fresh juice is aperient; sugar, called Jaggery, is extracted from it; the fruit is used in chest disorders, and the seed in liver disturbances.

n. gomu'tus, Liun. Sugar is extracted

from the sap.

B. sechellen'sis. The Lodoicca malda-

Bo'rate. A salt of boric acid. The borates are easily decomposed by acids, and if ignited, after mixture with sulphurie acid gas, exhibit the green flame of borie acid.

B. of ammo'nia. See Ammonium biborate.

B. of mer'cury. A salt which has been recommended in syphilis.

B. of so'dium. A synonym of sodium

biborate, Borax.

Bo'rated. Containing borax.

Bor'athron. The Juniperus sabina.

Bo'rax. (Arab. buraq, borax. F. borate de soude; l. borace minerale; S. borraj, atincar; G. borsaures Natron.) Na2B4O7+10H2O. Sodium biborate, or sodium pyroborate. Found native, as tincal, in Persia, Thibet, and other places, as a saline incrustation on the shores of lakes; as a crystalline deposit in a lake in California. Prepared by treating crude boric acid with sodium carbonate. It forms large, transparent, hexahedral, flattined, slightly efflorescent, colourless crystals, insoluble in rectified spirit, soluble in water and in glycerin. Borax is used as a local application in aphthæ, foul ulcers, chilblains, freckles, pruritus, and leucorrhœa; and generally as a preventive of putrefaction. It is used as an oxytocic, an astringent in uteriue hæmorrhage, as an emmenagogue, and as a solvent of uric acid in the menagogue, and as a strain urine. Dose, 5—40 grains. **B., anhy'drous.** ('Αν, neg.; εδωρ, water.)

The same as B., glass of.

B., artific'lal. Borax prepared by heating native boracic acid with sodium carbonate.

B. depura'ta. (L. de, from; puro, to purify.) The borax of the Pharmacopoias.

B., glass of. Borax deprived of water by exposure to a red heat, when it melts, and on cooling becomes a transparent, anhydrous, solid substance. It is used as a flux in blowpipe investigations.

B., glycerin of. See Glycerinum boracis.

B., hon'ey of. See Mel boracis.
B., mel'lite of. The Mel boracis.

B. tartarisa'tus. A synonym of Tartras

potassæ boraxatus, Ph. Belg. B. vene'ta. (L. venetus, Venetian.) The

horax of the Pharmacopæias. Borax trion. Sodium biborate or borax. Borbo'nia, Linn. A Genus of the Nat. Order Leguminosæ, named after Gaston de Bour-

bon, son of Henry IV of France.

B. corda'ta, Linn. (L. cordatus, heartshaped; from cor, the heart.) Cape tea. The leaves and flowering tops are used in infusion as a digestive, stomachic, and stimulant.

**B. cordifo'lia**, Lamk. (L. cor; folium, a leaf.) The B. cordata.

B. parviflo'ra. (L. parvus, small; flos, a flower.) Hab. Cape of Good Hope. Used in asthma and hydrothorax, and generally as a diuretic.

B. ruscifo'lia. (L. ruscum, butcher's broom; folium, a leaf.) Hab. Southern Africa. Used as a diuretie in hydrothorax and in

Bor'bori. A native name in the Moluceas for an oil prepared from the flowers of the Uvaria odorata and other fragrant flowers with oil of coco and turmeric. It is rubbed into the body as a preventive of fevers.

Borborus. (Βόρβορος.) Fæces. **Borboryg mus.** (Βορβορύζω, to produce a rumbling in the bowels. F. borborygme; I. gorgogliamento; G. Knurren, Kollern.) The gurgling noise produced by the movements of flatus in the intestines.

Bor'cette. Same as Burlscheid.

Bor'deaux. France; on the Garonne.

B. tur'pentine. Common turpentine, obtained from the Pinus maritima, growing in the South-west of France.

**B. wine.** Wine from the district surrounding Bordeaux. The red wine is known as claret; the white as Sauterne, Barsac, and others

Border. (Old Low G. hord, a fringe or edge of a thing. F. bord; G. Rand.) An edge. Applied to the upper spreading part of the petals of a corolla.

(F. borde; G. gerandet.) Bor'dered.

Having a margin or border.

B. pits. (G. behoften Tüpfeln.) A term applied to the dilated terminations or bases of pore canals in the structure of plants.

Bordighe'ra. Italy; in the Riviera. Pleasantly situated on the shores of the Mediterranean, with much the same climate as Mentone. Hotel accommodation good.

Bore. A synonym of Boron.

Bo'real. (L. borealis, from boreas, the north wind. G. nordlich.) Belonging to the

north or to the north wind.

B. pole. A term applied by French writers to the end of the magnetic needle which points south, on the hypothesis that there is a terrestrial magnet, the boreal pole of which points north, and of which, as unlike magnetisms attract each other, the pole of a compass pointing south is the analogue.

Bore'cole. (Dutch boerekool, peasant cabbage.) The curled variety of the Brassica oleracea. Also called curled kale, or green curled

broccoli.

Borel'li. An Italiau physician, born at Naples in 1608, died 1679. He was the first to apply the laws of mechanics to explain the movements of the body.

The elder tree, Sambucus Bore tree.

Bor'go-ma'ro. Italy; Piedmont. A cold sulphur spring used in skin diseases and scrofula. Borhaave. A Dutch physician; born

1668, died 1738.

B.'s antiasthmat'ic elix'ir. A preparation made of alcohol, aniseed, the roots of orris, asarabacca, liquorice, sweet flag, and elecam-

B.'s red pill. A preparation chiefly composed of cinnabar.

Bori-bori. See Borbori

Bo'ric. (Boron.) Relating to boron.

B. ac'id. (F. acid borique; G. Borsäure.) H<sub>3</sub>BO<sub>3</sub>, or B(OH)<sub>3</sub>. Found in solution in the water of the hot volcanic lagoons of Tuscany, from whence much is obtained; also, native in the volcanic formations in the Lipari Islands, and at Sasso in Italy, whence its name Sassolite. Made by adding sulphuric acid to a hot solution of sodium biborate, when transparent, scaly crystals belonging to the triclinic system are formed. It is formed by the union of boron trioxide and water. It is inodorous and has little taste. Heated it loses water and fuses into a transparent glass of boric oxide. It burns with a green flame. It dissolves in 25 parts of cold water, 3 parts of boiling water; very soluble in alcohol. Formerly used as an anodyne and antispasmodie, and was called the sedative salt of Homberg. It is a powerful antiseptic, and a destroyer of bacteria and the lower vegetable growths. As such it has been used in the treatment of wounds, in parasitic disease of the skin, and in eczema.

Bo'ride. A compound of beron and a simple

Bori'tis. A name for the philosopher's stone. (Ruland.)

Bo'rium. A synonym of Boron.

Borkhause'nia ca'va. (After Borkhausen, a German botauist; L. cavus, hollow.) The Fumaria bulbosa.

Hungary; County Sáros. A Borkut.

sulphur water.

Bor'la. Italy. A saline chalybeate water, containing sodium choride 21 grains, iron carbonate one grain, in 16 ounces. Used in diseases

of the lymphatic glands.

Bormio. Italy; in the Valtelline, at the foot of the Stelvio Pass. A climatic cure place for lung and nervous disorders, 4300 feet above sea level, somewhat changeable in climate, with a mineral water of a temperature of 25° C. (82.4° F.), but varying much. The solid constituents are small, chiefly sulphate of lime and magnesia. Used in rheumatism, nervous disorders, and anamia.

Born. (Part. of E. bear, to carry, to bring forth; from Sax. beran, to carry.) Brought

forth from the womb.

B. ali've. (Contraction of Sax. on, in; lif, dative life, life.) The condition of the whole body of a live child having been entirely delivered

from the body of its mother.

Borneene. C10H16. A liquid product, along with water, of the action of phosphoric anhydride on Borneo camphor. Analogous to the essence or terpene of ordinary camphor oil and of valerian oil. It boils at 176° C. (348.8° F.) to

180° C. (356° F.)

Sorneo. An island of the East Indian Archipelago between 7° N. and 4° 20′ S. lat., and between 109° and 118° E. longitude. It is partly independent, and partly belonging to the Dutch.

B. ar row-poison. See Dajasksch.

B. cam'phor. Same as Borneol. Bor'neol. C<sub>10</sub>H<sub>18</sub>O. Boruco camphor; the product of Dryabalanops camphora. Formed artificially by treating camphor with sodium. It resembles ordinary camphor, but is harder, and less volatile, sp. gr. 1009, of a mingled camphorous and peppery smell; melts at 198° C. (388·4° F.), and boils at 212° C. (413·6° F.) Borneol is an alcohol which furnishes ethers by losing water when heated with organic acids at 200° C. (392° F.)

Bor'nesite. A volatile, neutral, saccharine matter found in Borneo caoutchoue.

Borocal'cite. (Boron; calcium.) CaB<sub>4</sub>O<sub>7</sub> +4 ll<sub>2</sub>O. A mineral found in the nitre beds of Peru and Chili, from which boric acid is made.

Boron. (F. bore; I. and S. boro; G. Boron, Bor.) At. weight 11. Symb. B. Isolated by Gay Lussac, and by Thènard, and by Sir Humphrey Davy, almost simultaneously in 1809. The basis of boric acid. It is prepared by heating potassium and borofluoride of potassium in an iron vessel and washing out the soluble salts. It is allotropic; one form, the amorphous, being a greenish-grey or brown tasteless powder, and inodorous; the other, the crystalline, obtained by melting the amorphous form with aluminium. Its compounds with simple bodies are called borides, or borurets. It is the only non-metallic element which does not combine with hydrogen.

B., adaman'tine. ('Λδάμας, not to be broken.) A syuonym of crystalline Boron.

**B., amor'phous.** ('Λ, neg.; μορφή, form.) See Boron.

**B.** atrocalcite. (L. ater, black; calx, lime.) A mineral found in the State of Nevada, U.S., containing calcium and sodium biborate, from which boric acid is obtained.

B., crys'talline. See Boron. Boros-le'no. Hungary; County Arad. A little-known spring, said to contain calcium, magnesium, and copper.

Borotar'trate of magne'sia. Prepared by adding two parts of boracic acid to five parts of magnesium tartrate, and adding by degrees four parts of hot water. Then evaporate to dryness over a saud bath.

B. of pot ash. The Tartras borico-potas-Sicus.

B. of pot'ash and magne'sia. Prepared by heating tartras borico-potassicus with carbonate of magnesia. Used as a laxative.

Boro'va-ho'ra. Hungary; County Sohl.

A sulphur spring.

Bor'ozail. (Ethiop.) A disease, endemic on the shores of the river Senegal, which affects the genital organs of both sexes, called Asab in males, and Assabatus in females; it is different from syphilis, though arising from venereal exeess, and is supposed to be identical with Fram-

bæsia, or the yaws; also termed Zail. Bor'ra. Italy; in the Arno Valley. mineral water containing sodium and iron car-

bonates.

Borra'go. See Borago. Borre'ra. A Genus of the Nat. Order Lichenes.

**B. furfuracea.** (L. furfuraceus, brampy.) Hab. Europe. Bitter. Has been used as a febrifuge instead of quiniue. Now called Evernia furfuracea.

Borre'ria. A Genus of the Nat. Order Rubiaceæ.

**B. emet'ica**, Mart. ('Εμετικός, provoking sickness.) Hab. Brazil. Root emetic. Used instead of ipecacuanha.

B. ferrugin'ea, De Cand. (L. ferrugineus, of the colour of iron rust.) Hab. Brazil. Used as B. emetica.

B. poay'a, De Cand. Hab. Brazil. Root used as B emetica. A decoction of the leaves is used in colic.

B. verticilla'ta, Mey. (L. verticillus, a whirl.) Hab. Brazil. Same as B. cmetica.

Bor'ri. (Ind.) An ointment made from the root of the Curcuma longa, or turmeric plant, and also the plant itself.

Borriber'ri. The Curcuma longa.

Bor'ro di Capren'nc. Italy. A mineral spring containing calcium, sodium, magnesium, and iron carbonates.

Borro'ne. Italy; Tuscany. A chalybeate water.

Bor'rozail. See Borozail.

Bor'sa. Hungary; County Marmaros. Three alkaline chalybeate springs. Used in chronic skin diseases, gout, and rickets.

Bor'schom. Russia; in the Caucasus.

Two springs of mineral water, one of a temperature 35° C. (95° F.), the other 23° C. (73.4° F.) They contain sodium carbonate 30 parts, iron carbonate 06, and sodium iodide 003, in 10,000 parts.

Bors'zek. Hungary. Mineral waters from ten or twelve springs, of a temperature of 91° C. (195.8° F.) They contain 11 grains of calcium carbonate in a pint, and 5 grains of magnesium carbonate. They are used in chronic affections of the mucous passages.

Bo'rum. A synonym of Boron.

**Bor'uret.** (F. borure.) A combination of boron with a simple body.

Bos. (Bovs, from βόω, or βόσκω, to feed, because it fed or supported man by its labours. F. bauf; I. bue; S. buey; G. Ochs.) The ox or cow. A Genus of the Family Bovida, of the Suborder Ruminantia, of the Order Ungulata.

B. bu balus. (Βούβαλος.) The buffalo. B. tau'rus, Linn. (Tavoos, a bull.) The

common ox.

Bo'sa. (Egypt.) A name for an inebriating mass made of the meal of darnel, hempseed, and water; also, at the present time, for an acidulated drink often made by fermenting an infusion of millet seed.

Bosch'esjesmansthee. Bushman's a. The Methystophyllum glaucum.

Bos'combe. Hampshire; near Bourne-

mouth. A chalybeate water.

Bosing. Hungary; County Pressburg. A mineral water containing magnesium, calcium, and iron carbonates. Used in chlorosis, lencorrhea, and convalescence from acute diseases.

Bos'jesman. (G. Buschmanner.) Woodmen. One of the two great divisions of the Hottentot race. Inhabiting, and probably the aborigines of, the South of Africa. They call theruselves San. They are of small stature, less than five feet (males 144 d centim., females 144.8 centim.) The index of breadth of the skull is 73.82, of height 70.23. The women are inclined to steatopygy, and the labia majora and prapntium chitoridis are elongated. The men are thin-limbed, pot-bellied, with dry, black skin; beard scauty; hair woolly, short. Their weapon is the bow and poisoned arrow. They are intelligent and musical. They bury their dead, and raise a small cairn over them.

**Bos'moros.** (Boῦs, an ox; μόροs, a portion; because freed from the chaff by the treading of oxen.) A name for a species of corn.

Boss. (F. bosse, a hump; from old High G. bozo, a bunch; or Celt. bos, a swelling.) A knob, a protuberance.

**Bos** sed. (Same etymon.) Having a boss or central elevation; same as *Umbonate*.

Boston iris. The Iris virginica.
Bos'trychoid. (Βόστρυχος, a lock of hair; είδος, likeness. G. lockenformig.) Like a lock of hair.

B. cyme. See Cyme, bostrychoid.

B. dichot'omy. See Dichotomy, bostry-

Bostrychoid'al. (Βόστρυχος.) Having the appearance of a ringlet or Bostryx.

Bostrychop'oda. (Βόστρυχος, a lock of hair; ποῦς, a foot. F. bostrychopode.) Α synonym of the Cirripedes.

Bos'tryx. (Βόστρυχος.) A term applied to a eyme when the lateral axes, as they successively develop, fall always on the same side of the relatively main axis; the uniparons helicoid cyme of Bravais; examples: Hemerocallis and Phormium.

Boswellia. (After Dr. Boswell, of Edinburgh. G. Weihrauchbaum.) A Genns of the Nat. Order Amyridaceae. Several species, growing in Africa and Asia, supply the different kinds of olibanum, or true frankincense.

B. bhau-dagia'na, Birdwood. A Sonmali country species, supplying olibanum.

B. Car'teri, Birdwood. A native of the Soumali country in Africa, the chief source of the African olibanum.

B. floribun'da. (L. flos, a flower; abundo, to be very plentiful.) The B. papyrifera.
B. Frerea'na, Birdwood. A species of the

Soumali country. Used as a masticatory.

B. gla'bra, Roxb. (L. glaber, smooth.)

Hab. Coromandel. Yields a resinous substance,

Koondrieum. Used in gonorrhea, and as a plaster in skin diseases, nlcers, and indolent wounds. Probably the same as B. thurifera. It is the same as the Pimelea glabra of Blume.

B. mauritia'na. The Colophonia mauri-

**3.** papyrif'era, Richard. (L. papyrus, paper; fero, to bear.) A native of Abyssinia and Sennaar. It is identical with the Plosslea floribunda of Endlicher. Yields Olibanum.

B. serra'ta, Roxb. (L. serratus, saw-

shaped.) The B. thurifera.

B. thurifera, Colebr. (L. thus, frankineense; fero, to hear. Arab. Luban, Cundur, Bistuj; San-k. Sallaci, Anduri, Sarahhi, Suvana; Hind. Salai, Gundabarosa, Esus; Tam. Paranghi-sambranı.) Leaves pinnate; leaflets ovate, acuminate, serrate, downy; racemes axillary, simple. An Indian species; the chief source of olibanum of the ancients.

**Bot.** (Gael. botus, a belly-worm.) A name given to the larva of the Genus Estrus found in

man as well as other animals.

Also (F. bout, an end; from their likeness to the clipped ends of thread), applied to the threadworm, Oxyurus vermicularis.

Botal'li, Leon'ard. An Italian anatomist, who lived in France from A.D. 1561 to 1585.

B., fora'men of. (F. trou de Botal.) The foramen ovale of the fætal heart. Erroneously supposed to have been discovered by Botalli. It was first noticed by Galen.

The Plumbum lotum, or Bot'amum.

washed lead. (Ruland.)

Botan'icon. (Βοτάνη, a herb.) plaster made of herbs, described by Paulus Ægineta, vii, 17.

**Bot'anist.** (Βοτάνη, a herb. F. botaniste; I. botanico; G. Botaniker.) One who cultivates the science of botany.

**Botanol'ogy.** (Βοτάνη, a herb; λόγος, a discourse. G. Pflanzenlehre.) A treatise on

plants or Botany.

**Botanometry.** (Βοτάνη, a herb; μίτρον, a measure.) A synonym of *Phyllotaxy*, or the laws of the arrangement and order of development of leaves.

Botanoph agous. (Birávn, a herb.

φαγείν, to eat.) Living on vegetables. **Bot'any.** (Βοτάνη, a herb. F. botanique;
I. and S. botaniea; G. Botanik, Pflanzenkunde.)

The branch of Biology which relates to the vege-table kingdom extinct and existing. B., descrip'tive. The section of the subject which relates to the description and nomen-

elature of plants. B., fos'sil. (L. fossilis, that which is dug

up.) Same as B. palæontological.

B., geograph'ical. The section of the subject which relates to the present distribution of plants over the world.

B., med'ical. The account of those plants which are used in medicine.

B., morpholog'ical. (Μορφή, form; λώγος, an account.) That section of the subject relating to the forms of plants and their

organs.

2., palæontolog'ical. (Haλαιός, old; ουτα, things which exist; λόγος, an account.) The section of the subject relating to plants found in the different strata of the earth's

B., physiolog'ical. The section of the subject relating to the functions or actions of plants and their several organs and structures.

B., struc'tural. The section of the sub-

ject which relates to the physical structure of

the several tissues of plants.

B., systematic. The section of the subject relating to different kinds of plants in their relationship to each other.

Bot'any Bay. An inlet on the Eastern Coast of Australia, south of Sydney.

B.-bay gum. A yellow gum produced by the Xanthorrhwa arborea, or grass tree of New South Wales.

B.-bay ki'no. The concrete juice of the

Eucalyptus resinifera.

Botargo. A salted preparation made in Italy and the South of France from the roe and blood, after they are somewhat putrescent, of the grey mullet; used as seasoning to other food.

Bo'thor. (Arab. bodsar.) A term for an exanthema; also, for an abscess of the nostrils, according to Waltheros, Sylv. Med. p. 183. It had three significations among the Arabians: first, all tumours; more strictly, a tumour with solution of continuity; and more strictly still, small tumonrs or pustules, according to Fallopius, de Tum. vol. i, c. 2, p. 619.

Bothren chyma. (Βόθρος, a pit; ἐγχέω, to pour in.) A synonym of the variety of the vascular tissue of plants called Pitted tissuc.

Bothridia. (Βοθροειδής, hollowed. F. bothridie.) A name given by Blainville to an entozoon of the Python. An ally of Bothrioce-

Also, a term for the fossæ of Bothriocephalus. Also, a term for the Bothriocephalus in the scolex state.

Bothrid'ium. (Bolpiov, a little pit.) A sexually mature form of cestoid worm.

B., arcua'tum. (L. arcuatus, bent.) A species found in the intestine of Morelia spilutes.

**Bothrioceph'alus.** (Βοθρίον, a little pit; κεφαλή, a head. F. bothriocephale; I. botriocefalo; G. Grubenkopfwurm.) A Genus of the Order Cestoidea. Body very long, flat, soft, with a large number of segments; head ohlong, furnished with two lateral fossæ, but without hooks. The genus comprises a large number of species which chiefly inhabit the alimentary canal of fishes; a few are found in mammals, and three in man. The embryo is cystic.

The following species of Bothriocephalus have been observed in the animal kingdom:

B. angusta'tus. (L. angustus, narrow.)
A species found in the intestine of Scorparia

B. angus'ticeps. (L. angustus, narrow; caput, head.) A species found in the intestine of Sebastes norwegicus.

B. antarc'ticus. (L. antarcticus, southern.) A species found in the stomach and intestines of various species of Phoca.

B. anthoceph alus. ("Avtos, flower; κεφαλή, head.) A species found in the rectum of Phoca barbata.

B. arde'æ cæru'leæ. (L. ardea, a stork; carulcus, blue.) A species found beneath tho skin and under the muscles of the Ardea carulea.

B. belo'nes. A species found in the intestine of Belone acus.

**B. calla riæ.** (Καλλαριάς, a kind of cod fish.) A species found in the intestine of Gadas morrhuæ.

B. carpio'nis. A species found in the intestine of Salmo carpio.

B. centrol'ophi pompil'ii. In intestine of Centrolophus pompilius.

B. ce'polæ. In intestine of Cepola rube-

B. cla'viceps. (L. clavis, a key; caput, head.) In intestine of Anguilla vulgaris.
B. corda'tus, Leuckart. (L. cordatus,

heart-shaped.) A foot long; head short, heartshaped; anterior part lanceolate; without any marked neck. Met with in Greenland in man and in the dog.

B. cor'diceps. (L. cor, the heart; caput,

head.) In Trutta salar.

B. cras'siceps. (L. crassus, thick; caput,

head.) In Merlangus carbonarius.

Davaine. (L. cristatus, tufted.) Differs from B. latus in that the head is provided with longitudinal projecting lips like crests; the neck is ringed; the strobila are markedly prominent on their posterior border. It is nine or ten feet long. Observed in

B. decip'iens. (L. decipio, to catch.) In Felis concolor.

**B. dendrit'icus.** ( $\Delta \epsilon \nu \delta \rho i \tau \eta s$ , a tree.) In Larus canus.

B. ditre'mus. (Δίε, twice; τρῆμος, a hole.) In intestine of Larus argentatus.

B. du'bius. (L. dubius, doubtful.) A doubtful species, described by Krabbe, in Icelanlia deposits. landic dogs.

B. el'egans. (L. elegans, choice.) In small intestine of Phoca cristata.

B. eri'ocis. In intestine of Salmo criox.

B. falco'nis. In the kidneys of Falco.

B. fascia'tus. (L. fascio, to swathe.) In intestine of Phoca annellata.

B. fe'lis. In intestine of Felis domestica. B. fis'siceps. (L. findo, to eleave; caput, head.) In intestine of Sterna hirundo.

B. fo'lium. (L. folium, a leaf.) In intestine of Herpistes lencurus.

B. frag'ile. (L. fragilis, fragile.) In intestine of Cyclopterus lumpus.

**B. fus'cus.** (L. *fuscus*, dusky.) A species described by Krabbe in Icelandic dogs.

B. ga'di barba'ti. (L. barbatus, bearded.)
In intestine of Gadus morrhuæ.

B. ga'di mor'rhuæ. In intestine of Gadus morrhuæ.

B. ga'di redia'ni. In intestine of Gadus minutus.

B. grac'ilis. (L. gracilis, slender.) In intestine of Loligo vulgaris.

B. granula'ris. (L. diminutive form of granum, a seed.) In intestine of Cyprinus spec?

B. hi'ans. (L. part. of hio, to stand open.)
In stomach and small intestine of Leptonyx

**B. imbrica'tus.** (L. *imbrex*, a gutter-tile.) In intestine of *Halichelys atra*.

B. infundibulifor mis. (L. infundibu-lum, a funnel; formis, shape.) In intestine and pyloric appendage of Salmo salvelinus.

B. labra'cis. In intestine of Labrax

B. lanceola'tus. (L. lanceolatus, lanceshaped.) In small intestine of Phoca carbata.

B. la'nii pomera'ni. In the abdomen of

B. la'tus. (L. latus broad.) Length 25 feet or more; hair-hke in frout, widening gradually to half an inch, colour brownish grey, sometimes white; head 1-10th iuch long, 1-20th inch broad, oblong, with two lateral long suckers; neck short; the earlier segments indicated by wrinkles; the segments gradually increase in size, are usually wider than long, and the latter ones have a central thickening, on the anterior part of which is placed a short, smooth, retractile penis, and immediately below the genital pore the orifice of the uterus. Eggs I-370th inch to 1-570th inch, oval, brown, and provided with an operculum. The embryo is at first ciliated, then six-hooked; it is supposed to inhabit some fish. This worm is chiefly met with in Russia and Switzerland. It is expelled in longish portions, and not by single segments.

B. longicol'lis. (L. longus, long; collum, the neek.) In the intestine of Gallus gallinaceus.

B. lo'phii. (Lophius, the fish of that name.) In the intestine of Lophius piscato-

**B.** macula'tus. (L. maculo, to speekle.) In the intestine of Felis pardus.

B. microceph'alus. (Μικρός, small; κεφαλή, head.) In the stomach, intestines, and branchiæ of Orthagoriscus mola.

B. plica'tus. (L. plico, to fold.) In rectum

of Xiphias gladius.

B. podicip'idis. In intestine of Podiceps minor.

**B. proboscid'eus.** ( $\Pi \rho o \beta o \sigma \kappa i s$ , an elephant's trunk.) Two feet long; found in the pyloric appendages of salmon, Salmo salar and S. hucho.

B. puncta'tus. (L. pungo, to priek.) In intestine of Gadus minutus.

B. rectang'ulus. (L. rectus, upright; angulus, angle.) In intestine of Barbus fluviatilis.

B. reticula'tus. (L. reticulatus, net-like.) A doubtful species of Krabbe in dogs.

B. rugo'sus. (L. rugosus, wrinkled.) In

intestine of Labrus maculatus. B. salmo'nis um'blæ. In intestine of

Salmo salvellinus. B. serra'tus. (L. serro, to saw.) In

small intestine of Canis azara. B. sim'ilis. (L. similis, like.) In intes-

tine of Canis lagopus. B. specio'sus. (L. speciosus, brilliant.)

In intestine of Bolevsoma olmstedi. B. squa'li glau'ci. (L. squalis, shark;

glaucus, ohve green.) In intestine of Prionodon glaucus.

**B. stemmaceph'alus.** ( $\Sigma \tau \ell \mu \mu a$ , a garland; κεφαλή, head.) In small intestine of Phocana communis.

B. stri'gis accipitri'næ. (L. strir, an oil; accipiter, a hawk.) Under the skin of Strix accipitrina.

B. sulca'tus. (L. sulco, to furrow.) In small intestine of Felis pardus.

**B. trop'icus.** (L. tropicus, tropicul.) A name given to a tropical variety of Tuenta mediocannellutu.

B. variab'ilis. (L. variabilis, changeable ) In intestine of Phoca cristata.

Both'rion. (Βόθριου, a little pit.) Used by Galen, de Ossib. v, fin., for the alveolus, or socket of a tooth; also, in Introductio, c. 15, and by Paulus Ægineta, Adams's Transl. iii, 22, p. 416, vol. i, for a deep ulcer of the cornea.

Both'rium. See Bothrion.

Bothroceph alus. See Bothriocepha-

Both rops. (Βόθρος, a hole; ωψ, the eye.) A Genus of the Family Crotalida, Order Ophidia. A small spur at the caudal end; scales carinated; head without large plates, except above the eyes and on the ridge, which runs from the nose to the eyebrows.

B. jarara'ca. A Brazilian species, very

poisonous.

B. lanceola'tus. (L. lanceolatus, lance-shaped. F. fer de lance.) Inhabits Martinique. Length six to seven feet; colour brown or yellow. Death generally occurs some hours, and, oceasionally, some days, after the bite.

Both rus. (Βόθρος, a hole.) A depression;

a pit.

Both'ryum. Same as Botryon.

Same as Bocia.

Botia. Same as Bocia. Botin. Old name for Terebinthina, or turpentine; also, for balsam of turpentine. (Ruland.)

Bo'tion. Turpentine.
Bo'tium. See Bucium.
Bo'tor. Otherwise Bothor.
Botothi'num. An obscure term used by

Paracelsus to denote the most striking sympton.s of a disease.

Bo'tou. The Pareira brava.

Bot'ria. (Bότρυς, a cluster of grapes.) See l'itis botria.

Botrioceph'alus. Otherwise Bothriocephalus.

Bot rophis actæoï des. ('Ακτέα, the elder tree; cicos, form.) The Actaa racemosa. B. serpenta'ria. (Βότρυς, a cluster of grapes: ὄφις, a snake; L. serpentaria, snake weed.) The Actœa racemosa.

**Botrych'ium.** (Βότρυχος, a grape stalk. G. *Traubenfarn.*) A Genus of the Suborder *Ophioglosseæ*, Nat. Order *Filices*.

B. cicuta'rium. (L. cicuta, hemlock.) A species used in Hayti as an alexipharmic.

B. luna'ria, Sw. (L. luna, the moon. F. lunaire; G. Mondraute.) Moonwort. A Europæan species formerly used as an astringent.

Botrycy'mose. (Βότρυς, a cluster of grapes; cyme.) Applied to a raceme or any botryose cluster when cymosely arranged.

Botryllidæ. (Βοτρυς, a cluster of grapes.) A Family of the Order Synascidiæ, Class Ascidioida, Subkingdom Tunicata. Body simple; viscera situated at the side of the respiratory chamber. Animals compound, fixed, their tests fused, forming a common mass, in which they are imbedded in one or more groups. Individuals not connected by any internal union; oviparous and gemmiparous.

Botryllus. (Borpus.) A cluster of small

berry-shaped bodies.

Bot'ryoid. (Βότρυς, a cluster of grapes; είδος, likeness. G. traubenformig.) Resembling, shaped, or formed like, a cluster of grapes.

Botryoid'al. Same as Bo'ryoid and

B. tis'suc. (Βότρυς, a bunch of grapes.) Term applied by Ray Lankester to a special form of vaso-fibrous tissue, formerly called hepatic tissue, surrounding the alimentary canal in the leech. The walls of these vessels are composed of a single row of hemispherical cells, with the flat surface internal.

**Botryon.** (Βότρυς, a cluster of grapes. G. Traubenauge.) Α syuonym of Staphyloma. Botryop'sis. (Βότρυς.) A Genus of

the Nat. Order Menispermacea.

B. platyphyl'la, Miers. (Πλατύς, broad; φύλλον, a leaf.) The Chondrodendron tomentosum.

Botryose. (Borous. G. hotrytischen.) A term for the indeterminate or racemose form of inflorescence, when the lateral axes are terminated by a flower, but not the main

**Bot'rys.** (Βότρυς, a cluster of grapes, from the likeness of its seeds to this object.) A plant mentioned by ancient writers, which they also called Ambrosia, supposed to be the Chenopodium botrus.

Also, a synonym of Raceme.

B. ambrosioï des. The Chenopodium ambrosioides.

B. america'na. The Chenopodium am-

B. anthelmin'tica. The Chenopodium anthelminticum.

B. mexica'na. The Chenopodium ambrosioides, or Mexican tea-plant.

B. vulga'ris. (L. vulgaris, common.) The Chenopodium botrys, or Jerusalem oak.

Botryta'ceae. (Botrytis.) A synonym of Hyphomycetes.

(Βότρυς.) The cauliflower, Bot rytes. from its supposed formation similar to a cluster of grapes.

Bot'rytis. (Βότρυς.) A term for the impure oxide of zine found in the chimucys of furnaces used for zinc smelting.

Also (G. Traubenschimmel), a Genus of Hy-

phenomycctous fungi.

B. bassia'na, Montagne. (Bassi.) The cause of muscardine, a disease of silkworns; now included under the Genus Strachylidium.

B. infes'tans, Montagne. The Phytoph. thora infestans.

Botrytos'teophyte. (Βότρυς, a cluster of grapes; όστέον, a bone; φυτόν, a plaut. G. blumenkohlformige Knockgewächs.) Au exostosis of bone of a spongy character.

Botta'cio. Italy; near Castelnuovo. A

chalybeate water.

Bott'ger's test. A test for sugar in the urine. A solution of sodium carbonate, 1 to 3, is added in equal quantity to the urine and then some basic nitrate of bismuth; the mixture is boiled, when, if sugar be present, a black precipitate is formed.

Bottle. (F. bouteille, from Low Lat. buticula, from Gr. βούτις, a flask.) A bollow vessel

with a narrow neek.

B. brush. The Equisctum arvense.

B., feed'ing. A vessel with an artificial nipple attached to it either directly or by means

of an elastic tube, for the feeding of infants. **n. gourd.** The Lagenaria vulgaris. **B.-nosc.** A familiar term for Acne rosuciu.

B.-sha'ped. Shaped like a Florence flask. See Lageniform.

B., specif'ic grav'ity. See Specific gravity bottle.

B. stoop. A block of wood with a groove on the upper surface, having a slope so that a bottle may be placed on it in a convenient position for the removal of its contents by a knife.

B., white. The Silene inflata.

Bot'uliform. (L. botulus, a sausage;

forma, likeness.) Having the form of a sausage. **Botulin'ic ac'id.** (L. botulus, a sausage.) An acid which has been supposed to exist in decomposing sausages, and to be a cause of their noxiousness.

Botulis'mus. (L. botulus, a sausage. G. Wurstvergiftung.) Sausage poisoning. Same as Allantiasis.

Bot'ulus. (L. botulus. F. saucisse; I. salciccia; G. Fleischwurst, Blutwurst, Wurst.) A sausage.

Bo'tus. A vessel otherwise called Cucurbita; also, a vessel above, and communicating with, another vessel named a Descensorium. (Castellus.)

Bot zen. Austrian Tyrol. A pleasantly situated spot, 1120 feet above sea level. Used as a climatic health resort and for the grape cure.

Bou'ba. A local name among the negroes of Rio Janeiro for Frambæsia.

Boucen'na. Same as Mussena. Bou'ceras. (Βοῦς, an οχ; κέρας, a horn.) The Trigonella, from the shape of its pods.

Boucne mia. (Bou, particle of increase κνήμη, the leg.) Elephautiasis arabum.

**Boucranion.** (Boῦs, an οχ; κρανίον, the skull.) A name given by Dioscorides to the Antirrhinum majus from the form of its corolla.

Bou'da. A disease said to be prevalent among dissolute Abyssinian women, characterised by severe paroxysms of a cataleptic character.

Boudes. France; Departement du Puy de Dôme. Mineral waters containing sedium bicarbonate and a little iron. Used in urinary deposits, and dyspepsia with amemia.

Bou'din's solu'tion. One gramme of arsenious acid boiled with 1000 grms. of water for a quarter of an hour. Fifty grammes contain five centigrammes of arsenious acid.

Bou'gie. (F. bougie, a wax candle. I. tenta incerata; S. candelilla; G. wachserne Sonde.) A slender instrument, made of catgut, of elastic gum or wax, with silk, or other such material, or of metal, for introduction into the urethra, rectum, vagina, and osophagus. It is used for purposes of exploration, dilatation, and medica-

B. à boule. (F. à, with; boule, a ball.) Same as B., bulbous.

B., arm'ed. The common hougie with a piece of the nitrate of silver, or other caustic, fixed within its extremity. Used for the destruction of very close strictures of the urethra.

B., bulb'ous. (F. bougie à boule.) An elastic bougie, tapering towards the extremity, which is dilated in the form of a sphere.

B., cal'omel. Made of calomel one part,

and white wax 23 parts.

B., cam'phorated. Mutton suct 500 parts, wax 10, powdered camphor 150. Melted and made into suppositories for the vagina or rectum. Used in piles and uterine diseases.

B., caus'tic. Same as B., armed.

B., caus'tic pot'ash. Caustic potash .2 parts, extract of opium 4, water 60, gum a sufficiency. In chronic gleet.

B. cou'dée. (F. coude, the elbow; from L. cubitus, the elbow.) Same as B., elbowed.

B., el'bowed. (F. bougie coudée.) An elastic bougie with a sharp curve, as a beut elbow, about three quarters of an juch from its elbow, about three quarters of an inch from its extremity. Used when there is an enlarged prostate.

B., fil'Iform. (L. filum, a thread; forma, shape.) A bougie with a fine, elastic, tapering

B., iod'urated. Gelatine 2 parts, gum 2, sugar 1, and rose water 4, dissolved in a water-bath with one part of potassium iodide. Formed into hougies to be used in chronic gleet.

B., lead. Yellow wax 25 parts, Goulard's extract of lead I. A medium strength is made with 6 parts, and a strong form with 3 parts, of

wax.

B., medicated. A bougie charged with a sedative or astringent or other drug, for application to the urethra or neck of the bladder.

B., mercu'rial, of Falk. Turpentine 4 parts, resin 2, mercurial plaster 60, calomel 8, red precipitate 2.5.

B., mercu'rial, of Plenck. Yellow wax 180 parts, extract of lead 15, calomel 3.

B., mercu'rial, sol'uble. Corrosive sub-limate '25 parts, extract of opium 4, water 60,

gum a sufficiency. Used in chronic gleet.

B., nitrate of mer'cury. Yellow wax
180 parts, olive oil 30, nitrate of mercury 8.

B., plas'ter. (F. bougie emplastique.) A bougie in which the stiffening material is composed of 6 parts of yellow wax and one of olive

B., u'terine. Same as Sound, uterine. Bou'hou. A name given in the Sandwich Islands to a fever closely resembling, if not identical with, dengue.

Bouillaud. A French physician of the nineteenth century.

B's. disea'se. A name proposed by Trousseau for endocarditis.

Bou'ka. The Malabar name of Epidendron sterile. Used, in decoction, in haths and lotions for the eure of catarrh. The fruit, externally applied, is regarded as a diuretic.

Bou'lay's bat'tery. A galvanic battery in which the copper plate is immersed in a solution of equal parts of potassium nitrate and copper sulphate, and the zinc plate in a solution of sodium chloride, with an equal quantity of flowers of sulphur.

Boule grais'seuse de Bi'chat. (F. boule, a ball; graisseux, fatty.) The mass of fat which occupies the hollow between the bucciuator and the masseter muscles.

Boule'sis. (Βούλησις, a willing.) The will, or the exercise of the will. **Bouli'mia.** Same as Bulimia.

Boulog'ne-sur-mer. France; Departement Pas de Calais. A sea-bathing place, very much frequented. Good sauds. Town lively, but badly drained. It possesses a chalybeate spring of no great importance.

Boulou, Le. France; Departement Pyrénées-Orientales. A gaseous water, containing sodium bicarbonate and a little iron.

Boumelia. (Βουμελία; from βου, a particle of increase;  $\mu \in \lambda ia$ , the ash.) The Fraxinus excelsior.

Bou-nafa res'in. An amber-vellow resin prepared in Algeria from the Thapsia garganica, which has a powerfully irritant action on the skin and intestinal mucous membrane. It is highly esteemed by the Arabs as a purgative and revulsive in rheumatic and other pains.

Boun'cing bet. The Saponaria officinalis.

Boun'dou, Same as Akazga.
Bou'quet. (F. from bosquet, a little wood; from low L. bosqum, a wood.) A nosegay.

The special characteristic smell and flavour of wines. Supposed to depend on the presence of small quantities of various ethers, and especially ænanthic ether, formed during the slow chemical change which is constantly going on in wine while in eask or bottle.

Also, used by French authors to denote a cluster.

B. fe'ver. A synonym of Dengue fever.

B. of Ri'olan. The cluster of muscles and ligaments attached to the styloid process of the temporal boue.

Bou rane. The juice of the Erythrophlaum guineense. An arrow poison of Senegambia. It produces suffocation and retention of urine.

Bourbon. An island off the east coast of Africa; now called Reunion.

B. tea. The leaves of Angræcum fra-

**Bour bon-Lan'cy.** France: Departement Saone et Loire. A bath in the time of the Romans. Water of 40° C. (104° F.) to 60° C. (140° F.), containing sodium chloride. Used in rheumatism and chronic paralysis.

Bour bon l'Ar'chambaut. France; Departement Allier. Water of 52°C. (125.6°F.), eontaining sodium chloride; one spring is ferruginous. Used in scrofula, paralysis, gout, and

rheumatism.

Bour bonne-les-Bains. France; Deartement Haute Marne. Height 900 feet. Pleasant little town on the slopes of the Vosges. Saline waters, with nitrogen and much carbonic acid, varying from 46° C. (114.8° F.) to 64° C. (147.2° F.) Used in much the same cases as Wiesbaden, to stimulate the gastro-intestinal mucous membrane, and to increase the elimination of used-up material by the kidneys in gout, rheumatism, torpid liver, and the results of malarious fevers and in gunshot injuries.

Bourboule. France; in the Auvergne, near Mount Dore. Height 2600 feet. Alkaline saline waters, containing arsenic, of 44° C. (111.2° F.) to 52° C. (125.6° F.) Used in rheumatism and gouty thickenings of joints; in chronic bronchitis. In virtue of the arsenic, which is said to be present in the form of one tenth of a grain of sodium arsenate to a pint, they are used in the sequelæ of intermittent fevers, rheumatism, skin diseases, phthisis, and scrofula.

Bourdon'nement. (F. bourdonner, to

buzz.) A French term for huzzing in the ears.

Also for the continuous buzzing murmur which is heard on applying the stethoscope to any part of the body; and which appears to depend on contraction of the muscular fibrils.

B., amphor'ic. (G. amphorisches Sausen.) Same as Amphoric resonance.

Bourg d'oisans. France: Departement de l'Isère. Fechle sulphurous waters.

Bourguig'non's oint'ment. An

ountment for scabies, consisting of oils of lavender, mint, cloves, and cinnamon, of each 20 minims,

tragacanth 1 dr., carbonate of potassium 1 oz., flowers of sulphur 3 oz., and glycerine 6 oz.

Bour'nand. France; Departement de la

Vienne. Feeble sulphurous waters.

Bourne'mouth. England; Hampshire. A winter sea-side residence, pleasantly situated among pinewoods, on a sandy soil, with a moderately moist and mild climate. East winds are somewhat broken by surrounding hills.

Bour'rasol. France; Departement Haute-Cold carbonated chalybeate water. Garonne. Used in chlorosis and enlargements of lymphatic

glands.

France; Departement de la Bous'san. Haute Garonne. A mineral water containing calcium and sodium bicarbonate in small quantities. Used in disorders of the alimentary canal and rheumatism.

Bou'ton. (F. bouton, from bout, an end.)

A pimple.

B. d'Alep. The Aleppo evil. B. de Bis'kra. See Biskra button.

Bouton'nière operation. (F. boutonnerre, a button-hole.) An operation for impervious urethral stricture. A curved catheter, after being passed down to the stricture, is turned with its convexity the opposite way, so that the point projects into the perinamm; this is

cut down upon and the urethra opened, the sides of the aperture are held apart by a hook so as to expose the stricture, in order that a fine probe may be passed along it, upon which the stricture is divided; the eatheter is then passed on into

the bladder and fixed there.

B. operation, palatine. An operation, proposed by Maisonneuve, for the removal of a posterior nasal polypus by making a button-holelike incision into the soft palate, drawing the polypus into the mouth through it, and tying or removing with the écraseur.

Bou'za. Name of a beer brewed by the

Tartars, probably from a species of Eleusine.

Boyache'vo. The Datura sanguinea.
Bo'vidæ. (b. bos, an ox.) A Section of the Family Caricornia, of the Group Raminantia, of the Order Ungalata. Having simple, rounded non-spiral horns, and no lachrymal sinuses.

Bovil'læ. (L. bos, bovis, an ox; because cattle were supposed liable to it.) Rubcola or measles. Rayni, Vinarius, de Peste, l. iii.

Bovi'na fa'mes. (L. bovinus, pertaining cattle; fames, hunger.) Same as Bulimia. to eattle; fames, hunger.) Same as Bulimia.

Bovis'ta. The puff-ball, Lycoperdon bo-

vista, Bovista nigrescens, and other species. Also, a Genns of the Order Trichogastres, Or a Genus of the Family Gasteromycetes.

Family Lycoperdacci, Suborder Gasteromycetes, Order Basidiomycetes.

B. gigante'a. (L. gigantens, belonging to the giants.) The Lycoperdon bovista.

B. nigres'cens, Pers. (L. nigresco, to become black.) Puff-balls. Egg-shaped, white, later yellowish grey, then blackish. Spore dust has been used as a styptic. Its smoke is probably narcotic.

Bow. (Sax. bigan, to bend.) To bend. B. leg. (F. genou arque; 1. gambe storte; G. Sabelbein.) Bending outwards of the lower

Bowdich'ia. A Genus of trees of the Suhorder Papilionacea, Nat. Order Legumi-

B. ma'jor. (L. major, greater.) Hab. Brazil. The bark is bitter and aerid, containing

much tannin, and is the Brazilian Alcornoquo bark of commerce. It is diaphoretic and tonic, and used in rhenmatism, gonty swellings, syphilis, dropsy, and impetigo.

B. pa'via. The bark is said to stimulate the lymphatics. The reasted seeds are used instead of coffee. (Waring.)
B. virgilior des. Also yields the Alcornoque bark. Was once used in phthisis, and as a substitute for ipecacuanha.

Bow'ed. (Sax. bugan, to bend.) Curved or arched. See Arcunte.

Bow'els. (L. botellus, a small sansage. F. boyan.) The intestines. Bow'man. An English anatomist and

ophthalmic surgeon, new living. B's. cap'sule. The capsule of the Mal-

pighian corpuscle of the kidney.

B's. discs. The discs formed by the

transverse eleavage of the muscular fibres

B's. glands. Glands of the olfactory mucons membrane, chiefly situated on the septum nasi, and more distinct in the lower animals, to which this name is usually restricted. They are sometimes tubular, sometimes flask-shaped, sometimes bifurcated; they are crowded with epithelinm, spherical at the base, polyhedral towards the opening of the gland.

B.'s lamel'lae. (L. lamella, a small plate.) The sixty or more lamella which he supposed to make up the substance of the human cornea.

B.'s probe. A fine silver probe of several sizes, used for introduction into the nasal duct.

B.'s sar'cous el'ements. Sec Sarcous elements.

Bow'man's root. The Euphorbia corollata, U.S.A. Ph. Also, the Gillenia trifoliata, and Leptandra purpurea.

Box. (L. buxus, the box tree.) The box

tree, Buxus sempervirens.

B. ber'ry. The Gaultheria procu B. hol'ly. The Ruscus aculeatus. The Gaultheria procumbens.

B., moun'tain. The Arbutus uræ ursi.
B. splint. This is composed of a hollow

piece of wood or metal, on which the leg rests, and to which a thigh piece is often jointed, the angle of the leg and thigh pieces being capable of variation. The limb is further enclosed by two side pieces on hinges, to allow of the application of dressings to wounds or nleers. At the extremity is a foot piece; the inclination can also be varied. The whole is softly padded.

B.-tree. The Buxus sempervirens.

The Polygala chamæ-B.-tree, dwarf. hurns.

Box'wood. The Cornus florida.
Boy's love. The southern wood, Artemisia abrotanum.

Boy'er, Alex'is. A Fren born at Uzerches in 1757, died 1833. A French surgeon,

B.'s splint. A straight splint for fracture of the neck of the femur, with a foot-board and

an extending serew. **Boyle, Reb ert.** A celebrated physicist, born at Lismore Castle, in Ireland, January 25th, 1627, died in London, December 30th, 1691.

B.'s law. The statement that the volumo of a given quantity of any gas varies inversely as the pressure, the temperature being the same.

Boyle's fu'ming liq'uor. Introduced by Beguin in 1650. Boyle's formula was sulphur and sal ammoniac, of each 5 oz., quieklime 6 ez.; mix and distil. It is ammonium persulphide of uncertain composition. It is an orange, oily, fetid liquid, useful for wounds or ulcers, according to Beguin. See Beguin's fuming liquor.

Bo'zeman's appara'tus. See Apparatus, Bozeman's.

Brabe'jum. A Genus of the Nat. Order Proteaceæ.

B. stella'tum. (L. stellatus, set with stars.) The seeds are roasted and eaten; the shells are used instead of coffee.

Brab ylon. (Βράβυλου.)

damson plum, Prunum damascenum.
Also (G. Schlehen), the fruit of the sloe, Prunus spinosa.

Brac'cate. (L. bracca, tronsers.) Having the legs covered with feathers, as in certain hirds.

Brachel'ytra. (Βραχύς, short; έλυτρον, the wing-case of insects.) A Subsection of the Section Pentamera, Order Coleoptera. Elytra not covering the abdomen; antennæ short; two anal appendages.

Brachel'ytrous. (Boaxús, short; ¿\uτρον, the wing-case of insects.) Having short civtra.

Bracheri'olum. A truss.
Bracherium. (L. brachium, an arm; because it embraces the part on which it is applied like an arm; or from bracea, trousers, because it was worn under them. F. brayer; G. Bruchband.) Used by the older writers to signify a truss.

Bra'chia. (L. plural of brachium, an arm.) A term sometimes used in Anatomy to denote connecting cords with the outstretched appearance of arms.

B.anterio'ra. See Brachium conjunctivum anterius.

B. conjuncti'va. (L. conjungo, to join together.) Two rounded fasciculi given off laterally and externally from the corpora quadrigemina. See Brachium conjunctivum anterius and B. conjunctivum posterius.

B. conjuncto'ria. (L. conjungo, to unite together.) A synonym of Processus e cerebello ad testes.

B. copulati'va. (L. copulo, to couple.) The Processus à cerebello ad testes.

**B.** cor'porum quadrigem'inum. (L. corpus, a hody; quadrigeminus, fourfold.) Two flat bands of white fibres, of which one connects the nates with the corpus geniculatum internum of the optic thalamus, and the other, the corpus geniculatum externum with the testis. See Brachium conjunctivum anterius and B. conjunctivum posterius.

B. of op'tic lobes. See Brachium conjunctivum anterius, and B. conjunctivum posterius.

B. pon'tis. (L. pons, a bridge.) The middle peduncles of the cerebellum; the Processus e cerebello ad pontem.

**B. posterio'ra.** (L. posterior, behind.) See Brachium conjunctivum posterius.

Brachiæ'us. (L. brachium, the arm.) Of, or belonging to, the arm. Formerly used in the same way as Brachialis.

B. exter'nus. Same as Brachialis exter-

B. internus. (L. internus, internal) Same as Brachialis anticus.

B. mus culus. (L. musculus, a mnscle.) Same as B. internus.

Bra'chial. (L. brachialis, belonging to the arm. F. bruchial; S. braquial.) Of, or belonging to, the arm.

B. aponeuro'sis. (F. anonètrose brachiale.) The layer of fibrous membrane under the skin, which covers the muscles on the front and back of the arm, and sends processes between them. It varies in thickness, is denser on each side of the muscle, and is especially strengthened at the hend of the elbow, where it covers the brachial artery by a slip from the hiceps tendon. It is attached to a ridge at each side, which occupies the lower third of the humerus from the condyles, and forms the intermuscular septa. It extends into the forearm and into the axilla, and is strengthened by fibres from the latissimus dorsi, the pectoralis major, and the teres muscles. It is very thick at the back of the arm, and is attached above to the spine of the scapula, and below to the oleranon and neighbouring parts.

B. ar'tery. (F. artere humérale; G. Armschlagader.) The continuation of the axillary artery; it runs along the inner side of the arm from the lower border of the teres major tendon to a short distance below the bend of the elbow, where it divides into the radial and ulnar arteries. It lies along the inner border of the coraco-brachialis above and the biceps below, having behind it at the upper part the long head of the triceps and the musculo-spiral nerve, then the inner head of the triceps, and below this the insertion of the coraco-brachialis and brachialis anticus muscles. It is accompanied by two venæ comites; the basilic vein is above it in its lower half; the median nerve crosses over it from the outer to the inner side lying in front of it for some distance, and on its inner side for the upper part of its course it has the internal cutaneous and ulnar nerves. At the elbow it is separated by the bicipital fascia from the median basilic vein. Its branches are the superior profunda, nutrient artery of humerus, inferior profunda, and anastomotica magna.

In the sloths and lemurs the brachial artery breaks up into several parallel branches.

B. bones. A term for the four or five bones which support the rays of the pectoral fin of fishes. Same as B. rays.

**B.** diple gia. (Δίς, twice; πληγή, a stroke.) A term applied to those cases of paralysis in which, from local and limited disease of the cervical portion of the spinal cord, the arms only are affected.

B. glands. The lymphatic glands of the arm; they consist of a series on the inner side of the brachial artery, a few accompanying the radial and ulnar vessels, two or three in front of the elbow, and one or two above the inner condyle of the humerus.

B. mus'cle, ante'rior. The Brachialis anticus.

B. mus'cle, posterior. The Triceps extensor cubiti.

B. plex'us. (F. plexus brachial; G. Armgeflecht.) This plexus is formed by the anterior branches of the fifth, sixth, seventh, and eighth cervical nerves and the first dorsal nerves, with a small twig from the fourth cervical nerve. Walsh has given the best description of it. The fifth eervical, after receiving a small filament from the fourth, near its exit from the intervertebral foramen, unites with the sixth at the outer border of the scalenus anticus. The fifth, just as it comes into contact with the sixth, gives off from its inner side a small fasciculus, which runs downwards and aeross the latter nerve to receive a supply from its inner aspect, thus forming a cord of quite considerable size; the remaining fibres of the two nerves unite somewhat higher up, making another cord, larger than the preceding one, which is at first placed externally and postcrierly, but, finally, anteriorly to it. The eighth cervical and first dorsal unite beneath the scale nus anticus into a common trunk, which, a little lower down, gives off from its upper side n small branch to the nusculo-spiral nerve. The seventh cervical runs separately, splitting, about an inch and a half above the clavicle, into two portions. The superior, larger fasciculus unites with the anterior branch of the fifth to form the outer cord; the inferior, with the posterior of the same to form a trunk common to the circumtlex and the larger root of the musculo-spiral. The outer cord is formed opposite the lower horder of the claviele. Midway between this hone and the coracoid process it gives off from its internal aspect a small branch, which, running obliquely across the axilla in front of the axillary artery, joins the inner cord just at the point, when it divides into the internal head of the median and the ulnar. Here it divides one fasciculus joining the internal head of the median, whilst the other pierces the latter and joins the ulnar. The division of the outer cord into musculo-eutaneous and external head of median takes place at a short distance below the level of the coracoid process. The inner cord is formed opposite the lower border of the clavicle. It is a little longer than the onter. dividing somewhat lower down. At about its middle it gives off the lesser internal cutaneous, and an inch below, the greater. There is no true posterior cord dividing into the musculo-spiral and circumflex nerves. These two nerves arise high up and proceed through the axilla as separate cords, though bound together in a common sheath. The circumflex springs from the outer side of the trunk, formed by the posterior division of the fifth and sixth, and the lower one of the seventh, the remaining portion of the latter, with the small branch of the eighth cervical and first dorsal, forming the muscule-spiral. The suprascapular nerve is derived from the posterior division of the fifth with, in some instances, a few filaments from the sixth. The posterior thoracic has three roots. The subscapulars may The posterior he three, four, or five in number. Other branches given off from the plexus are a branch to the phrenic nerve, and one to the rhomboid muscle from the fifth. One or two small external anterior thoracic nerves are given off from the common trunk of the eighth cervical and first dorsal nerve.

B. rays. The generalised and often greatly arrested segments of the pectoral limb. In the skate they are very numerous, fewer in the sharks, and still fewer in the Dipuoi. In the Ganoids there are generally two rows, and two rows appear in some Teleostei, as the herring. As a rule there is only one row, and in nearly all Teleostens only four bones in the row.

Teleosteans only four bones in the row.

B. veins. These veins are two in number, and accompany the brachial artery throughout its course. They are the continuation of the two deep radial and two deep ulnar veins, and terminate with the basile as the axillary vein. They receive branches, accompanying the branches of the brachial artery, and communicate with each other by many cross branches.

Brachiale. (L. brachiale, a bracelet.) Old term for the carpus or wrist.

**Brachial'gia.** ( $B\rho\alpha\chi(\omega\nu)$ , the arm;  $\tilde{a}\lambda\gamma\sigma$ , pain.) Neuralgia of the arm.

Brachialis. (L. brachialis, from brachium.) Belonging to the arm.

B. anti'cus. (L. antieus, in front. F. brachiul anterieur, humero cubital, Ch.; G. der innere Armmuskel.) Lies along the lower front of the humerus and the elbow-joint. It arises by two fleshy digitations which embrace the insertion of the deltoid, and from the front of the humerus ucarly down to the elbow; it is inserted into the base of the coronoid process of the ulna. It is supplied by the external cutaneous nerve. It flexes the forearm.

Also, called Brachiæus, B. internus, and B.

musculus.

B. exter'nus. (L. cxternus, outward.) A name for the third head of the Triceps extensor cubiti.

B. inter'nus. (L. internus, internal.) Same as B. anticus.

Brachia'ria. Same as Brachiata.

Brachia ta. (L. brachiatus, with branches like arms.) An Order of the Class Crinoidea, Subkingdom Echinodermata. Body cnp-shaped, furnished with five or more branching arms; no dorsal pores; generally stalked.

Bra'chiate. (L. brachiatus. F. brachië; G. armformig.) Branching in pairs, which are at right angles with those above and below, as the leaves of the lilac. Having spreading arms. The same as Decussate.

Brachi'da. (Βραχίων, the arm; εlĉos, resemblance. F. brachide.) The external pair of tentacula of the true Nercides.

Brachie rium. (L. brachium.) A truss. Brachif erous. (L. brachium, an arm;

fero, to bear.) Arm bearing. **B. disc.** The floor of the subumbrellar eavity in the Rhizostomidæ, from which are given off the brachia or arms.

Brachile. (L. brachile, a girdle.) A

Brachilu'vium. (L. brachium, an arm; luo, to wash.) An arm bath.

Brachinus, Web. A Genus of the Family Carabidae, Group Pentamera, Order Coleoptera. Bombardier heetles, so called because of their emitting from the anus, with a more or less lond report, an aerid fluid, very acid, and, in some species, producing vesicles or pustules on the skin. The B. crepitans is an English

Bra'chio. (L. brachium, the arm.) This word, used as a prefix in compound names of vessels, ligaments, denotes a connection with the arm.

**Brachiocephal'ic.** (Βραχίων, the arm; κεφαλή, the head.) Relating to both arm and head.

B. ar'tery. The innominate artery.
B. vein. The innominate vein.

Brachiocu bital. (L. brachium, the arm; cubitus, the forearm.) Belonging to the upper and forearm.

B. lig'ament. The internal lateral ligament of the elbow-joint.

**Brachiocyllo'sis.** (Βραχίων, the arm; κύλλωσις, a crooking. F. brachweyllose.) A crooking of the arms inwards.

Also, the loss of power resulting therefrom. **Brachiola ria.** (Bραχίων, an arm.) A larval stage of asteroid Echinoderms. The larva presents three warted arms anteriorly.

Brachi'olum. (L. brachiolum, dim. of brachium, the arm.) A small arm.

Brachiom eter. (Βραχίων, the arm; μέτρον, a measure. G. Armmesser.) An instrument for measuring the thickness of the arms for obstetric purposes.

Bra'chion. (Βραχίων.) The arm. Brachion'cus. (Βραχίων; όγκος, α swelling. G. Armgeschwulst.) A tumour of the arm.

Brachionop'oda. A synonym of Bra-

chiopoda.

Brachiop'oda. (Βοαχίων, an arm; πούε, a foot. F. brachiopodes; G. Brachiopoden.) A Class of the Subkingdom Mollusca. Marine animals with a bivalve shell, fined with expansions of the integument, called lobes of the mantle; living forms, all fixed by a peduncle; shell inequivalve and equilateral; valves situated above and below the body; no head; mouth with two long cirriferous arms, often supported on an internal calcareous framework, the carriage-spring apparatus; no branchiæ, cirri of arms probably acting as respiratory apparatus; nervous system is a thick ganglionic band on the ventral system of the mouth, the ends of which are united by a commissural eard surrounding the gullet, and bearing two small ganglia. Sexes sometimes distinet. The Brachiopoda are divided into two groups:

Articulata-Valves with a hinge line; mantle lobes not quite free; intestine ending locally.

Inarticulata .- Valves not united on a hingeline; mantle lobes free; a distinct anus. Brachiop'odous. (Same etymon.)

Having the characters of the Brachiopoda. Brachiora'dial. (L. brachium, arm; radius, the bone of that name.) Relating to the humerus and the radius.

B. lig'ament. The external lateral liga-

ment of the elbow-joint.

B. mus'cle. The Supinator radii lon-

Brachioradia'lis. (L. brachium; radius.) Sommering's term for the supinator longus musele.

Gruber's term for a third head, occasionally found in the biceps flexor cubiti muscle, which arises from the outer surface, or from the bicipital groove, or from the great tuberosity of the humerns.

Brachiorrheu'ma. (Βραχίων, the arm; ρευμα, for rheumatism.) Rheumatism of the arm.

Brachiostropho'sis. (Βραχίων; στρέφω, to twist.) Twisting, or distortion, of the arm.

Brachiot'omy. (Βραχίων; τέμνω, to cut.) Amputation of the arm.

Brachi'rolum. A truss.

Bra'chium. (βραχίων, an arm.) The arm, especially the upper arm of vertebrate animals.

Also, applied to many arm-like structures in the lower animals, as the prolonged margins of the foot in Cephalopoda.

In Botany, a branch.

B. conjuncti'vum ante'rius. (L. anterior, in front.) A white band extending from the onter part of each of the nates to the thalamus opticus, inner corpus geniculatum, and the optic

B. conjuncti'vum poste'rlus. (L. posterior, hinder.) A white band extending from each of the testes to the inner corpus geniculatum and the crus cerebri.

B. mo'vens quar'tus. (L. movco, to move; quartus, fourth.) The latissimus dorsi. Brachu'na. A species of Salyriasis, or Furor uterinus.

**Brachyacanth'ous.** (Βραχύς, short; ἄκανθα, a thorn.) Having short spines or thorns.

**Brachyau'chen.** (Βραχύς, short; αὐχήν, the neek. G. Kurzhals.) A short-necked per-

Brachyauche'nia. (Βραχύς; αὐχήν.) Short-neckedness.

**Brachyceph'alæ.** (Βραχύς; κεφαλή, the head. G. Breitschudeln.) A name given by Retzius to those races of men in which the head is egg-shaped, with the more rounded end behind. The relation of the transverse to the longitudinal diameter of the skull is called the cephalic index; tho longitudinal diameter being taken as 100, brachycephalic races have the cephalic index, or proportionate length of the transverse diameter. above 80 according to Thurnam, 83.34 and upwards according to Broca, and S1 and upwards according to Welcker.

**Σ. orthogna'thous.** ('Oρθόs, upright; γνάθος, the jaw.) Short-headed races, with slightly projecting jaws. They are Lapponians, Sclavs, Russians, Poles, Awarees, Hungarians, Turks, and Fiuns, in Europe; Samoyedes, Takoutes, Tchoudes, Awarees, Turks, Afghans, and Persians, in Asia; Tagalernes and Manillans, in the Pacific; Azteks and Mexicans, in South America; Chinchas and Peruviaus, in Equatorial

America; absent in Africa.

**B.**, progna'thous. (Πρό, forward; γνάθος, jaw.) Short-headed races, with prominent jaws. They are absent in Europe and Africa; Tartars, Mongols, Calmucks, and Malays, in Asia; Otaheitans, Papuans, and Malays, in the Southern Ocean; Natchez, Czekz, Seminoles, Eurrhees and Iowas, in South America; Charrenas, Puelches, Araucarians, New Peruvians, and Incas, in Equatorial America.

Brachycephal'ic. (Βραχύς; κεφαλή.) Having the characters described under Brachycephalæ.

Brachyceph'alism. (Same etymon.) The condition of the skull of Brachycephalw. Brachyceph'alous. (Same etymen.)

Same as Brachycephalic. **Brachyc'era.** (Βραχύς; κέρας, a horn.) A Suborder of the Order Diptera. Antennae three-jointed only; palpi one- or two-jointed; wings always present; oviparous; live on the juices of plants or animals.

Brachychronius. (Βραχύς, short; χρόνος, time.) Term applied by Galen, in Def. Med., to a disease which continues only for a

short time.

Brachydac'tylous. (Βραχύς; δάκτυλος, a finger. G. kurzfingerig.) Shortfingered.

Brach'ydont. (Boaxús; ôcoús, a tooth.) Having a short-crowned tooth. Applied to certain ruminants.

Brachyglot'tis. (Βραχύς; γλωττίς, the mouth of the windpipe.) A Genus of the

Nat. Order Compositæ.

B. repan'da. (L. repandus, bent backwards.) Hab. New Zealand. Exudes a resinous gnm, which the natives chew; but they believe it is fatal if swallowed.

(Βραχύς; γυάθος, Brachygna'thus. jaw.) A malformation in which the maxilla is too short.

Brachymetro pla. (Βραχώς; μέτρον, a measure; ωψ, the eye.) A synonym of myo-

 $\mathbf{p}^{\mathrm{ia}}$ Brachyno'sis. (Βραχύνω, to shorten.) Unnatural shortness of an organ.

Brachyn'sis. (Βραχύνω, to shorten. G. Verkurzung.) Shortening.

Brachyo'tous. (Beaxis; ovs, the ear. G. Kurzohrig.) Short-eared.

Brachypet'alous. (Βραχύς; πέταλον, a leaf.) Short-petaled, as of a flower.

Brachypneu'ma. (Βραχύς; πνευμο Brachypneu'ma. (Βραχύς; πνευμο Short-windedness. (Βραχύς; πνευμα, wind. G. kurzer Athem.)

Brachypneumatic. (Same etymon. G. Kurzathmig.) Short-winded.

**Brachypnœ'a.** (Βραχύπνοια; βραχύς, short; πνέω to breathe. F. brachypnic; S. braquipnea; G. Kurzathmigkeit, Engbrüstigkeit.) Term used by Galen, de Diff. Respir. iii, 8, for that state of breathing in which the inspirations are short, with long intervals between.

Brachyp'odous. (Βραχύς; ποῦς, a foot.

G. Kurzfussig.) Short-footed. Brachypotus. (Βραχύς; πότης, a drinker.) An epithet used by Galen to one who in a high fever drinks little.

Brachyp'tera. (Βραχύς; πτερόν, a ing. G. Kurzfügler.) Birds with short

Brachyp'terous. (Βραχύς, short; πτερόν, a wing. F. brachyptère; G. kurzflüglig.) Having small or short wings.

Brach'yris. A Genus of the Nat. Order

Compositæ. B. eutham'iæ. (Εδ, abundantly; θαμά, in crowds.) Hab. America. An aromatic, pleasant smelling plant, having diuretic properties.

Brachyrrhi'na. (Βραχύς; ρίν, the nose.) Shortness of the nose, snout, or trunk.

Brachyrrhynch'us. (Βραχύς; ρύγ-Xos, a shout.) A malformation in which the nose is too short.

Brachys'cii. (Βραχύς, short; σκιά, a shade. F. brachyscien; G. Kurzschattige.) Applied to the inhabitants of regions where the sun never reaches the zenith, because their bodies cause a very short shadow.

Brachys mus. (Βραχύς.) Shortening. Εγακιστος, superlative of βραχύς, short, κεφαλή, the head.) A term of Huxley, having the same signification as Brachycephala, but including those skulls only which have a cephalic index of 86 or

Brachystom'ata. (Braxés, short;  $\sigma \tau \dot{\nu}_{\mu a}$ , the mouth.) A Subsection of the Section Obtecte, Suborder Ovipara, Order Diptera, having the probescis short.

Brachyu'ra. (Βραχύς, small; οὐρά, a tail.) A Tribe of the Podophthalmia Division of the Subclass Malacostraca, of the Class Crustacea. Crabs. Abdomen short, withdrawn into cephalothorax; no abdominal appendage; limbs fitted for walking.

Also, a Family of the Suborder of insectivorous

Brachyu'rous. (Same etymon.) Having

a short tail. Bra'cium. A term for copper. (Ruland.) (Sax. bracce, a fern.) The Brack'en. Pteris aquilina.

B., rock. The Polypodium vulgare, and also the P. incamum.

The root of Polypodium vulgare. B. root. Brack'ish. (Dutch brak, briny.) Saltish. B. wa'ter. Water in the neighbourhood of the sea or salt springs, containing a considerable quantity of sodium chloride, and some magnesium chloride; when drunk it often produces diarrhœa.

Bra'con. A Genus of the Family Braconida, Subgroup Entomophaga, Group Terebrantia, Order Hymenoptera. A near ally of the Ichneumon fly, which deposits its eggs in colcopterous larvæ, and has been known as a parasite of the skin of man, producing intolerable itching and a vesicular rash resembling seables.

tea; G. Nebenblatt, Deckblatt.) A floral leaf, from the axils of which the flower-stalk rises, generally of a different shape and colour from the other leaves of the plant.

The term is applied to every modification of a leaf which lies between the true leaves and the ealyx. A bract may approach in structure to a leaf on the one hand, or to the petal of a flower

on the other. A term applied to the overlapping protective leaf-like appendage to the pedunclo of the polypite in certain Hydrozoa; it is also called Hydrophyllium.

B .- re'gion. A synonym of the Inflorescence of a plant.

Bract'ea. (Same etymon.) A bract. Bract'eate. (L. bractea. F. bracteifere.) Having bracts.

Bract'eated. Same etymon and meaning as Bracteate.

Bracteif'erous. (L. bractea; fero, to bear. F. bracteifere ; G. nebenblattertragend.) Bearing bracts.

Bracteiform. (L. bractea, a floral leaf; forma, resemblance. F. bracteiforme; G. deckblattformig.) Resembling a bract.

(L. bractcola, dim. of Bract'eolate. Furnished with bractebractea, a thin leaf.)

Bract'eole. (L. dim. of bractea. F. bracteole; G. Deckblattehen.) A little floral leaf. Applied to leaflets that are between the bractea and calyx, or on pedicels.

Bract'eose. (L. bractea.) Having many or conspicuous bracts.

Bracteous. (L. bractea, a thin leaf. G. deekblattreich.) Having many or conspicuous bracts.

Bract'let. (Dim. of bract.) Same as Bracteole.

Bradæsthe'sia. (Βραδύς, slow; αἴςθησις, perception.) Slowness of perception and response.

Bradyar'thria. (Βραδύς, slow; ἀρθρόω, to utter distinctly.) The same as Bradylalia.

Bradybolis mus. (Βραδύς, slow; βάλλω, to throw. F. bradybolisme.) Slow ejaculation

of the semen. Bradycau'ma. (Βραδύς, slow; καῦμα, burning heat. F. bradycaume; G. Moxabrandwunde.) A wound caused by slow burning, as by the Mora.

Bradycau'sis. The act of slow burning. Bradycaute rium. (Boadus, slow; καυτήριον, a brand.) The Moxa.

(Βραδύς; κροτέω, to Brad ycrote.

strike.) A drug that diminishes the frequency of the heart's contractions. (Dunghson.)

Bradyecoi'a. (Βραδύς; ἄκοή, hearing. G. Schwerhoren.) Dulness of hearing.

Bradyfi'brin. (Beacus; fibrin.) A name given to a supposed variety of fibrin which caused the buffy coat of coagulated blood.

Bradyglos'sia. (Βραδύς; γλώσσα, the tongue.) Short-tonguedness; slowness of speech.

**Bradylalia.** (Βοαδύς, slow; λαλιά, babbling.) Disorder of speech accompanying insular sclerosis of the brain and cord, and usually indicating glosso-pharyngeal paralysis. The power of modulation is lost, the voice is pitched in a monotone, and is occasionally nasal. Utterance is not indistinct, it is merely slow, not withstanding an unusual expenditure of effort. Letters and syllables, though correctly formed, are separated from each other by pauses. The slowness of speech depending on a hindrance to the articulation. See Brudyphrasia.

Bradylog'ia. (Βραδύς; λύγος, speech.)

Difficulty or slowness of speaking.

(Βραδύς: Bradymase'sis. from μασάομαι, to chew. G. das beschwerliche Kauen.) Difficulty of mastication.

Bradymasse'sis. Better spelt Bradymasesis

Bradymaste'sis. A synonym of Bra-

dymasesis. Bradynos'us. (Βραδύς, slow; νόσος, a

disease. F. Bradynose.) Slow or chronic dis-

Bradypep'sia. (Βραδύς, slow; πέπτω, to concoct. F. bradypepsie; G. Schwerverdaulichkeit.) Weak or slow digestion. (Quincy.) Bradypha'sia. (Βραδύς; φάσις, a

saying, from φημί.) Slowness of speech generally. Special forms are denoted by Bradylulia and Bradyphrasia.

**Bradyphra** sia. (Βραδύς, slow; φράσις, speech.) Morbid slowness of speech, the result of over-fatigue or inertia of the nervous system. The slowness of speech depending on slowness

of mental operation. See Bradylalia.

B. interrup'ta. (L. interruptus, part. of interrumpo, to break asunder.) Slow speech,

with longer or shorter distinct pauses. Bradypnœa. (Βραδύς, slow; πνέω, to breathe. F. bradypnée.) Slow and difficult

breathing.

Bradypod'idæ. (Βραἐψς, slow; ποψς, a foot.) The sloths. A Family of the Order Bruta, Class Mammalia. Head round; face short; auriele hidden; eyes anterior; fore limbs the longest; feet having long curved claws for suspension; mammæ pectoral; stomaeh compound; cervical vertebræ numerous.

**Bradysper matism.** (Βραδύς, slow; σπέρμα, seed. F. bradispermatisme; I. and S. bradispermatismo.) Too slow emission of the

semen.

Bradysu'ria. (Βραδύς, slow; οὖρον, the urine. F. bradysurie.) A slow and difficult excretion and evacuation of urine.

Bradytoc'ia. (Βραδύς; τόκος, birth.) Lingering labour.

Brae'mar. Scotland; Aberdeenshire, near the Dee, amongst magnificent scenery. A famed air-eure place.

Bragant'ia. A Genus of the Nat. Order ristolochiaceæ. Tropical shrubs of bitter taste. Aristolochiaceæ. B. tomento'sa, Blume. (L. tomentum, a stuffing for cushions.) Hab. Java. Used as an emmenagogue.

B. Wallich'ii, R. Brown. Hab. Malabar. The fruit, boiled in oil, is used as an application in scables and chronic ulcers. The juice of the leaves is regarded as an antidote to snake bites.

Brag'gat. A ptisan of honey and water. (Quiney.

Bra'hoes. One of the races inhabiting Beloochistan. They have short, thick bones, with round, flat faces.

Braid, James. An English surgeon, born 1795, died 1860. See Brandism.

Braid'ism. A synonym of Hypnotism, to commemorate the name of Mr. Braid, of Manchester, who devoted great attention to the subject, especially in its medical aspects.

Brain. (Sax. brægen. Gr. εγκέφαλος; L. cerebrun; F. cerveau; I. cervello, cerebro; S. cerebro; G. Gehirn, Hirn.) A generic term for the central nervous mass contained within the eranium. The word is also used synonymously with cerebrum. *Encephalon, Crebrum, Cere*bellum, Medulla oblongata, Nervous system, are some of the headings under which further detail may be found.

The term Brain has more than one signification. In its widest acceptation it represents that nervecell, or collection of cells, in which the will of the animal resides, and by which its movements are guided and its functions regulated. It may hence be applied to the single or double ganghon cell of the lower Vermes, the cephalic ganglia of the Mollusca and Insecta, and to the entire contents of the skull in the higher Vertebrata. But there is a more limited signification, in which the term is applied to the encephalon of Vertebrata alone, and which includes the cerebrum and cerebellum, the ganglia at the base of the brain, the pons Varolii, and the medulla oblongata. Lastly, there is a still narrower meaning, in which it is restricted to the cerebrum proper, or cerebral hemispheres, and the immediately subjacent ganglia, excluding the cerebellum and medulla oblongata. Taking the term Brain in its widest signification, it is represented in the lowest classes of the animal kingdom only by one or two nerve-cells, with centripetal and centrifugal nerve-fibres connected with them, which minister to the sensations of contact and of light, and to movements executed in response to those stimuli. In the Asteriadæ, a multiplication of such cells, forming groups or ganglia, at the base of the arms and connected with each other, so as to form a ring round the mouth, is observed surrounding the anterior part of the intestinal canal. The presence of this ring is noticeable throughout the Mollusca and Insecta, the part above the esophagus becoming gradually more and more complex, and giving off branches, which supply the organs of sense, as the eyes, tentacles, and antennæ, whilst the subosophageal ganglion supplies the parts about the mouth. The first rudiment of a cranium, protecting or supporting the brain, is found in the Cephalopoda.

In Fishes, whilst considerable differences exist, the general type is that there are two symmetrical cerebral hemispheres, which pass in front into the olfactory lobes, and which constitute the prosencephalon, or forebrain; immediately behind these is the thalamencephalon, which is often almost entirely concealed by the optic lobes or mesencephalon. Behind these is the cerebellum. or metencephalon, and the medulla oblongata.

The brain of Amphibia presents a prosencephalon divided into two hemispheres, and having two lateral ventricles, which are prolonged into the olfactory lobes. Behind this is the mesencephalon, with the pineal gland, which is again succeeded by the optic lobes, a small filletlike cerebellum bridging over the fourth ventricle,

and the medulla oblongata.

In Reptiles, the same parts remain, but the prosencephalon is larger, covering the thalamencephalon. The lateral ventricles are also bigger, and communicate posteriorly with the third ventricle, which is placed between the two halves of the thalamencephalon, and has a large infundibulum. The meseneephalon is divided by a groove into two halves, which sometimes project far forwards. The metencephalon is small and fillet-like in Ophidia and Sauria, but broader and larger in Chelonia and Crocodilia.

The brain of Birds resembles that of Reptiles, but is distinguished by the greater proportional size of the prosence phalon, the hemispheres of which are often of considerable width. They are connected by a small anterior commissure. The thalamencephalon is small, has a divided roof, and is entirely concealed by the prosencephalon. The mesencephalon is divided, and the halves are pushed down to the sides of the brain. The large median portion of the cerebellum is transversely laminated, and covers the whole of the myclen-

cephalon.

In regard to the brain of Mammals, the olfactory lobes are covered by the prosencephalon, which gradually increases backwards in the different classes, from the Marsupials, and Rodents, and Insectivora, in which it scarcely reaches to the corpora quadrigemina, to man, in whom it entirely covers the metencephalon. It c msists of two halves, separated by a deep fissure, and connected in the mature state by a system of commissures, named the corpus callosum, the fornix, and the anterior commissure. The hemispheres of the prosencephalon are smooth in many mammals, presenting in this respect em-hryonic characters; in the higher classes gyri are developed, which attain their highest degree of complexity in man. They present two cavities, named the lateral ventricles, which commnnicate with each other through the primitive cerebral cleft. Into the interior of these ventri-cles project the corpa striata. The thalamencephalon is divided into two masses, which lie immediately behind the corpora striata, and are named the optic thalami. The space between these, constituting the third ventricle, is continued downwards into the infundibulum, and backwards through the aqueduct of Sylvius into the fourth ventricle, which is the dilated and exposed central cavity of the spinal cord. The third ventricle is traversed by the soft commissure. The mesencephalon has its primitive lumen reduced to a narrow tube, the aqueduct of Sylvius; and the upper surface presents an antero-posterior and a transverse sulcus, which mark the limits of the corpora quadrigemina. The metencephalon presents median and lateral portions, and is nearly or altogether free.

B., abdom'inal, of Wris'berg. The

solar plexus.

B., ab'seess of. See Cerebral absecss.

B., anæmia of. See Cercbral anæmia. B., an'eurysm in. The cercbral arteries of the base of the brain are those most frequently affected, but the disease is rare.

B., at'rophy of. (G. Gehirnatrophie.) The condition in which the whole or part of the brain is less than normal; it may be congenital, and in this case is most commonly on the left side; or acquired, the result of pressure of tumour, apoplexy, obstructed circulation, and such like.

B., base of. (G. Gehirngrund, Hirnbasis.) A term applied to the whole under surface of the

encephalon.

B., can'cer of. The several forms of cancer are each found in the brain, encephaloid being most frequent; it may be secondary or primary, single or multiple.

B. case. The calvarium, or skull.

B., cholesteato'ma of. A small, white, glistening mass like a pearl, or a collection of them, consisting of layers of epithelial cells. enclosed in a delicate membrane, and composed

chiefly of cholesterin.

E., circula'tion in. The brain receives a remarkably large snpply of blood through the two internal carotids and the two vertebrals. The primary brauches of these vessels freely anast mose at the base of the brain, and in some animals form a rete mirabile before penetrating the cerebral substance. The capillaries are long, delicate, and numerous; the veins are thinwalled, and discharge their contents into the sinuses of the dura mater. The circulation presents some peculiarities, for the brain being enclosed in an unyielding bony case, and being itself incompressible, no additional quantity of blood can be introduced, nor any abstracted, without either the withdrawal of a portion of the contents in the former case, or the introduction of some material from without in the latter case. The means by which the variations in the quantity of blood contained in the brain are compensated for is probably the cerebro-spinal fluid.

B., composition of. See Nervous tissue. B., compression of. See Compression of brain.

B., concus'sion of. See Concussion of brain.

B., conges'tion of. Same as Cerebral hyperæmia.

B., cysticercus in. The Cysticercus cellulosæ, the scolex of the Tania solium, has been not infrequently found in the grey matter of the human brain.

B., cysts in. (Κύστις, a hladder.) Cavities with a definite wall, and containing serous fluid, usually resulting from apoplectic effusions, but occasionally dermoid in character, and containing hair. Other cysts are the so-called hydatid cysts

and the cysticercus.

B., development of. The brain is developed from the epiblast. This layer of the blastoderm, about the twentieth hour of ineubation in the chick, is raised into two folds, the laminæ dorsales, the groove between which is the medullary groove. The folds arch over the groove, and meeting convert it into a tube, named the medullary eanal. Beneath the groove is the notochord, formed of mesohlastic cells. Very soon the front end of the tube dilates into a small bulb, which is the first cerebral vesicle, or forebrain, and behind this the second (midbrain) and third (hindbrain) cerebral vesicles are successively formed. About the middle of the second day the first cerebral vesicle enlarges laterally, the lateral portions forming the optic vesicles, which become separated from the forebrain by

constriction. By the end of the second day the vesicles of the cerebral hemispheres begin to appear as projections of the front part of the forebrain. In the course of the third day the forebrain and cerebral hemispheres bend downwards. The eerebral hemispheres are hollow, and their cavities constitute the lateral ventricles, each of which is continuous with the cavity of the forebrain. The cavity of the forebrain subsequently corresponds to the third ventricle, or the tween brain, and is prolonged downwards into the infundibulum, as far as the pitnitary body. Above the 'tween brain is the rudiment of pineal gland. The midbrain now increases in size, its roof develops into the corpora bigemina in birds, or corpora quadrigemina in mammals; the floor forms the crura cerebri, and its cavity becomes reduced to the narrow iter a tertio ad quartum ventriculum. The hindbrain becomes marked off during the third day from the rest by a slight constriction. This separates the hindbrain into the cerebellum in front, and the medulla oblongata behind. The walls of the cerebellar portion of the hindbrain become much thickened, but the roof of the medulla oblongata portion thins out into a membrane, which covers the fourth ventricle. In the subsequent development the parts already mentioned increase in size, and become more and more distinctly differentiated and specialised.

The eye is, in regard to the retina and optic nerve, an outgrowth from the anterior cerebral

vesicle.

The ear makes its appearance on either side of the hindbrain as an involution of the epiblast, which becomes converted into a closed sac, the otic vesiele, surrounded by mesoblast.

**B.**, ecto'pia of. ('Éκ, out; τόπος, a place.) Protrusion or displacement of the brain, or a part of it, from malformation, or defect of the

cranial bones and integuments.

**B., em'bolism in.** (Έμβόλισμα, that which is put in.) The plugging of one or more blood-vessels by a piece of detached clot or other matter, carried to its seat by the current of blood; softening follows more or less speedily in proportion to the greater or less obstruction of the blood-vessels, and the amount of the consequent thrombosis.

B., extravasa'tion of. (L. extra, out of; vas, a vessel.) The effusion of blood into, or on, the surface of the brain from rupture of a blood-

vessel, the result of injury or disease.

B. fag. (From E. flag, to be weary; from Dutch flaggeren, to hang loose.) A term which has been used to denote the collection of symptoms which depend on over-work with overworry of nervous system.

B., fatty degenera'tion of. (L. degenero, to be unlike its kind.) The morbid condition occurring in softening of the brain, and consisting of degradation of the cerebral tissues, grey and white, the neuroglia cells, and the blood-vessels, by their conversion into fat granules, and the granular bodies called exudatiou corpuseles.

B. fe'ver. A term for meningitis, and also for other fevers, as typhus, with brain complica-

tions.

B., fibro'ma of. A tumour, consisting of fibrous tissue, originating in the connective tissue.

**B.**, fi'brous tu'monr of. A term which probably includes the hard forms of glioma of the brain, as well as true fibromata.

B., fis'sures of. See Fissures of brain.
B., fun'gus of. (L. fungus, a mushroom.)
A term applied to the

G. Hirnschwamm.) A term applied to the fungoid growth which projects from the interior of the skull when a meningeal cancer has perforated the bones and integuments.

Also, the protrusion of a dark reddish-looking mass of broken-up and intiltrated brain substance

skull, accompanied by laceration of the cerebral membranes; called also heroia of the brain. **B.**, glio'ma of.  $(\Gamma \lambda i \iota, \text{glue.})$  A new growth arising in the neuroglia, occurring in the brain substance, and having no definite outline. It is soft to the feel, yellowish or greyish red, and consists of a finely reticulated substance with

which is occasionally seen in fractures of the

**B.**, grey degeneraltion of. Same as B., schrosis of.

B., hæm'orrhage of. See Cerebral hæmorrhage.

B., hem'ispheres of. See Cerebral hemispheres.

**B.**, her nia of. (G. Gehirnbruch.) The projection of a portion of brain from the skull cavity, the result of injury or disease.

B., hydatids in. Hydatid cysts usually occur on the surface of the brain, and seldom contain the hooklets of Echinococcus hominis, the larval form of the Tania echinococcus. They are the abortive cysts known as Acephalocysts.

B., hyperæ'mia of. See Cerebral hyper-

**B.**, hyper'trophy of. ( $(1\pi i\rho, \text{in excess}; \tau\rho_0\phi)$ , nutration.) Increase of size of the brain, probably caused by increase of the neuroglia, or an infiltration of the white matter. The so-called partial hypertrophies are probably morbid deposits.

B., indura'tion of. (L. induro, to harden.)
Too great firmness of brain structure, dependent
usually on altered conditions of the neuroglia.

B., inflamma'tion of. See Cerebritis

and Meningitis.

**B., larda'ceous tu'mour of.** (L. lardum, the fat of bacon.) A term which has been applied to a schaceous cyst growing from the dura mater.

B.-like can'cer. A term for encephaloid eancer.

**5., lipo'ma of.** ( $\Lambda l\pi os$ , fat.) A fatty tumour arising from the dura mater.

B., lit'tle. The cerebellum.

B., lobes of. See Cerebrum, lobes of.

B., mar garoid tu mour of. (Μαργαρίτης, a pearl.) Same as B., cholesteatoma of.

**B., melano'ma of.** (Μέλας, black.) A term applied to a cancerous tumour containing much pigment; or to a melanotic sarcoma.

B., myxo'ma of. (Møga, mucus.) A tumour consisting of branching cells, with a soft mucoid intercellular substance, arising from the connective tissue of the brain.

**B.**, neuro'ma of. ( $N\epsilon\tilde{\nu}\rho\rho\nu$ , a nerve.) A small tumour, consisting of ordinary white nerve fibre and connective tissue, found on the surface of the convolutions, in the ventricles, and in the white matter of the brain.

**2.**, œde'ma of. (Οἴδημα, a swelling. F. ædēme de cerreau.) An accumulation of fluid in the ventricles and the subarachnoid cavity of the brain, with an emia and softening of the fornix, caused by pressure on the veins of Galen.

Also, generally, the presence of an excess of

fluid in the brain structure, as frequently occurs in typhus, anasarea, mania, and other diseases.

B. pan. (Sax. panna, a pan; from L. patina, a shallow bowl.) The cranium.

B., paral'ysis of. See Paralysis of

brain.

B., pet'rified. (L. petra, a rock; fio, to make.) Exostoses in animals.

B., protru'sion of. (L. protrudo, to thrust forth.) Same as B., hernia of, and B., ectopia of.

B., psammo'ma of. (Ψάμμος, sand. G. Gehirnsundgeschwulst.) A small, smooth, white tumour arising from the membranes of the brain, or from the choroid plexus, and consisting of corpora amy lacea containing calcareous granules, and cubedded in a cellular and fibrillated growth.

B., ramollis'ement. (F. ramollir, to soften.) Same as B., softening of.

B. sand. The sabulous matter found in

and about the pineal gland.

B., sarco'ma of.  $(\Sigma \acute{a} \rho \xi, \text{ flesh.})$ roundish tumour, of varying density, often contained in a sort of vascular capsule, whitish or reddish on section, and consisting mainly of spindle-shaped cells.

**B.**, sciero'sis of.  $(\Sigma \kappa \lambda \eta \rho \delta s, \text{hard.})$  Atrophy and degeneration of the grey and white matter of the brain, with thickening of the neuroglia; generally in hardened patches. Selerosis.

B., si'nuses of. See Sinuses of brain.
B., soft'ening of. (F. ramollisement du cerveau; G. Gehunerweichung.) A morbid diminution of the consistence of the brain structure from a slight degree to complete diffluence, resulting usually from thrombosis or embolism. Softening of the brain is commonly arbitrarily divided into three varieties—red, white, and yellow; the red variety is occasionally inflammatery.

B., soft'ening of, red. The form which is sometimes inflammatory, sometimes supervenes ou white softening from giving way of minute vessels, but most frequently is eaused by embolism or thrombosis. In addition to the microscopic characters of white softening, altered bloodcorpuscles and plugged capillaries are seen, with, in older cases, crystals of hamatoidin.

B., softening of, white. The form in which there is little change of colour, in consequence, apparently, of its arising from slowly progressing disease of the small blood-vessels without any accompanying congestion or thrombosis. It is occasionally somewhat rapidly produced by embolism of a large artery.

B., soft'ening of, yel'low. A form in which the colour is rendered yellowish by the colouring matter of effused blood, or by a gelatinous adematous condition of brain structure.

B., specific gravity of. According to Dr. Bastian, the sp. gr. of the grey matter is 1 030, and that of the white matter is 1 040.

B., suppura tion in. (G. Gehirneiterung.) See Cerebral abscess.

B., syphilo'ma of. A cerebral tumour, of syphilitic origin, of greyish semi-translucent matter, and often found undergoing caseous degeneration.

B., tap'ping of. A synonym of Paracentesis capitis

B., thrombo'sis of. (Θρόμβωσις, a becoming curdled.) The coagulation of blood in the blood-vessels of a more or less limited part of the brain, generally depending on degeneration of the arterial coats. It is a frequent cause of softening of the brain.

B., tubercle of. (Dim. of L. tuber, a swelling.) A roundish, pale yellow or greenish, firm mass, from the size of a hempseed to a hazel nut, or larger, usually occurring, especially in scrofulous children, at the base of the cerebrum or cerebellum, and having the usual characteristies of tuberele.

B., tyro'ma of. See Tyroma.

B., ven'tricles of. See Ventricles of

B., weight of. The average brain weight of male Europeans, from twenty to sixty years of age, is 49 oz. (Welcker); of English, 47.8 oz. (Boyd), 49 oz. (Peacock); of French, 47.9 oz. (Parchapfe); of Germans, 48.3 oz. (Wagner); of Scotch, 50 oz. (Peacock); of Negroes, 413 oz. The difference between the average weight of the male and female brain is 4.94 oz. (Welcker), 5.3 oz. (Peacock). The relative weight of the different elements of the human encephalon, estimating the whole at 204, is—cerebrum 170, eerebellum 21, and peduncles, corpora striata, optic thalami, pons Varolii, and medulla oblongata, collectively, 13.

B. worm. Same as Hungarian fever. Brain'less. (G. gehirnlos.) Having no

Brake, com'mon. (Sax. bracca, a fern.) The Pteris aquilina.

B., rock. The Polypodium incanum and P. vulgare.

Brake'root. The Polypodium vulgare.
Bram'ble. (Sax. bremel. F. ronce; G.
Brombeerstrauch.) The Rubus fruticosus.
B., Amer'ican hair'y. The Rubus vil-

losus.

B. ber'ry. The fruit of Rubus fruticosus. B., small. The Rubus casius.

B., stone. The Rubus saxatilis. Bra'mia. A Genus of the Nat. Order Scrophulariaceæ.

B. serra'ta. (L. serratus, saw-shaped.)
Used in rheumatism, infused in the water of a hath.

Bran. (Old F. bren, from Bret. brenn; Welsh bran. L. furfur; Gr. πίτυρου; F. son; I. erusca; S. salvado; G. Kleie.) The epidermic covering of the seeds of cereals, notably of wheat, sifted out, when ground, to make white flour. Bran constitutes about 20 per cent. of the grain; it contains a large amount of nitrogenous matter, notably cerealine, a diastase-like substance, which is able to effect the conversion of starch into dextrin; it also contains a large proportion of the salts of the grain. It is unwise in most cases to have it entirely removed, for reasons of nutriment, and also because it serves by the mechanical influence of its undigested part, the woody matter, to pro-mote intestinal action. The analyses of bran vary. The following is from Poggiale:-Albumen and gluten 13, starch 21·7, sugar 1·9, gum 7·9, fat 2·9, water 12·7, woody matter 31·6, mineral matters, consisting chiefly of siliea, magnesium phosphate, potassium chloride, and sulphate and calcium carbonate, 5.5 per cent.

B. bath. See Bath, bran.

B. his cuits. Same as B. cakes.
B. bread. Used as an article of diet in constipation. Same as B. cakes.

B. cakes. Finely ground bran made into cakes with eggs and butter, and baked in a quick oven. Used in diabetes.

B. loaf. Same as B. bread.

B. tea. A decoction of bran, sweetened or not, used as a demulcent in coughs.

Bran'ca. (I. branea, a paw.) A term applied to certain herbs, some part of which was supposed to resemble the paw of a particular animal, as Branca leonis, the foot of the lion.

B. german'ica. (L. germanicus, German.)

The Heracleum spondylium.

B. ursi'na. (L. ursinus, belonging to a bear.) The Acanthus mollis.

B. ve'ra. (L. verus, true.) The Acanthus

mollis.

Eran'card. (F. braneard, a handbarrow, from branche, a bough.) A means devised for carrying sick or injured persons readily and painlessly. Great divergence of opinion and practice exists as to the best method of fulfilling these objects, and the contrivances for this purpose are very various in material and plan of construction.

(Bret. branc, an arm; Welsh Branch. braich, a branch. L. ramus; Gr. κλάδος; F. branche; I. and S. ramo; G. Ast, Zweig.) A name given to the divisions of blood-vessels,

lymphatics, or nerves.

In Botany, the divisions of the stem or axis.

**B.** sys'tem, monopo'dial. (Móvos, alone;  $\pi o \dot{\nu} s$ , a foot.) That form of branching in which the apex continues to grow vertically, producing lateral branches in aeropetalous succession.

B. spine. (G. Zweigdorn.) In Botany, a spine or thorn attached to a stem, in contradis-

tinction to a leaf spine.

B. sys'tem. An axis of a plant with its branches; or a branch with its branches.

B. sys'tem, dichot'omous.  $(\Delta i \chi \alpha,$ doubly;  $\tau i \mu \nu \omega$ , to divide.) That form of branching in which the axis ceases to grow apically, but gives rise to two new divergent growing points.

**Branch**'æ. (Bράγχοs, hoarseness, which is an effect produced.) Swelling of the tonsils. Rolandus, M. M. ii, 16.

Branch'ed. (Branch. L. ramosus; F. rameux; I. and S. ramoso; G. astig.) Having

branches or boughs; ramified.

B. mus'cular fi'bre. A variety of striped muscular fibre seen in the heart, the tongue, and in the facial muscles of some mammals, in which the fibre divides into two or more branches, which either join with others, as in the heart, or gradually become smaller, and are ultimately attached to the under surface of the corium of the skin or nuncous membrane, as in the face and tongue.

Branch'i. Same as Branchæ.

Branchiæ. (Βράγχια, the gills of a fish. F. branchie; 1. branchie; S. branginas; G. Kiemen.) Gills. The organs of respiration in water-breathing animals, consisting of filamentous or lamellar processes of integument, per-meated by blood-vessels, so as to expose the blood to the air dissolved in the water for the purposes of oxygenation. In Annelida they are filamentous, ciliated, and often branched, and traversed by pseud-hamal vessels. In Crustacea they are abundantly supplied with bloodvessels, but not ciliated; they are attached to a limb, or to a maxilla. In the land Crabs they are also used for air breathing, and are kept moist in a large chamber. In some Molluses the branchize are contained in the mantle. In all these animals the branchiæ obtain their blood as it flows back to the heart. In adult Urodela, and in the larval condition of Amphibia, the branchiæ are attached to some of the visceral arches, and project externally. In Fishes the branching are covered by an operculum, and arc internal; they are supplied with blood by branches of the cardiac aorta.

Branch'ial. (Same etymon.) Having,

or relating to the, branchiæ, or gills.

B. an'imals. A term for the Crustacca. B. arch'es. (G. Kiemenbogen.) The visceral arches after the hyoidean arch; persistent in fishes. In osseous fishes the arches are made up of a median ventral bone, the basibranchial, the first of which is attached above to the glossohyal, and below to its successor, the remainder to their fellows above and below; on each side rise the hypobranchials; to these succeed the ceratobranchials, then the epibranchials; and the arch is completed by the palatobranchials, which are attached to the pharyngeal bones; on their outer convex side are attached the gills. The branchial-arch bones are often incomplete. In the human fætus they are also called Subcranial plates.

This term (G. Kiemengefässbogen) is sometimes used as synonymous with Aortic arches, to describe vascular structures, but this use is con-

fusing.

B. ar'teries. (G. Kiemenarterien.) The arteries which, arising from the aortic bulb in the embryo of Vertebrata, and in adult fishes and  $oldsymbol{\Lambda}$ mphibia, supply the branchiæ.

B. cham'ber. The chamber or space in

which the gills of fishes lie.

B. cleft. A parallel series of four to six depressions or fissures occurring in the transverse diameter of the neek of the embryo of vertebrates about the third or fourth day, and ultimately penetrating to the throat. The upper edge becomes thickened and forms the branchial fold. See also Visceral cleft.

B. fis'sure. (G. Kiemenspalte.) The space between the lower subcranial plates of the human fætus; sometimes persistent as a malformation.

Same as B. cleft.

B. fis'tula. (G. Kiemenfistel.) A persistent opening in the side of the neck, and having a communication with the throat below the tonsil. It is a feetal relic, the remains of a branchial fissure.

B. fold. The thickened upper or cephalic

horder of a B. eleft.

B. gang'lia. A term for the parietosplanchnic ganglia of Mollusca.

B. heart. A contractile cavity at the base of each branchia in cuttle fishes, which sends the venous blood, returned from the body, through the branchiæ.

B. oper'culum. The Operculum.
B. rays. (G. Kiemenstrahlen.) A series of rods projecting from each branchial arch in the

dogfish and other Elasmobranchs.

B. sac. The respiratory sac of Tunicata, called also the pharynx. It has an external aperture, sometimes called the mouth, and an internal inferior one, the true mouth, opening into the pharynx. It is the homologue of the branchize of other Molluses, and has vessels in its walls, which cross each other at right angles and are furnished externally with cilie.

A dilated chamber, into which the mouth opens in Amphioxus, called also the pharyngeal sac.

It contains cartilaginous rods in its walls, between which are ciliated elefts.

B. slit. A term in the adult for the bran-

chial eleft of the embryo.

B. veins. The vessels which collect the blood from the branchize of fishes and Amphibia and return it to the dorsal aorta.

**Branchia'ta.** (Βράγχια.) A synonym of *Branchifera*. It also forms an Order of the Subclass Gasteropoda, which includes those animals which live in water and have a veliferous Lirva.

Also, a Section of the Annelida, including the tube-worms and sand-worms, which have external branchiae.

Also, a Section of the Subkingdom Vertebrata, including Amphibia and fishes, which at some period of their life possess branchiæ.

Branch'iate. (Same ctymon.) Having

branchiæ or gills.

**Branchif'era.** (Βράγχια, gills; φέρω, to bear.) A Subclass of the Class Gasteropoda, of the Division Mollusca. Respiration aquatic by means of the walls of the mantle cavity, or by external branchiæ, or by pectinated branchiæ, contained in a branchial chamber. First flexure of the intestine towards the heart side of the body hamal.

**Branchiobdel'lidæ.** (Βράγχια, gills; βδέλλα, a leech.) A Family of the Subclass Hirudinea, Class Annelida. Body nearly cylindrical when extended, composed of unequally ringed segments; cephalic lobe double; no eyes; a sucking disc at the posterior extremity; pharynx without a trunk, with two flattened masticatory apparatus, one above the other.

Branchiocar'diac. (Βμάγχια; καρdia, the heart.) Belonging to the gills and the

B. canal's. The branchial veins of Crustacea conveying the blood from the gills to the heart.

**Branchiode'lous.** (Βράγχια; δῆλος, manifest. F. branchiodele.) Having branchiæ visible externally.

Branchiogasterop'oda. (Βράγχια, the gills; γαστήρ, the stomach; πούς, foot.) Another term for Branchifera.

Also, a synonym of Gasteropoda.

Branch ioid. (Βράγχια; είδος, likeness. G. kiemenahulich, kiemenartig.) Resembling gills.

Branchiopno'a. (Βράγ breath.) A synonym of Crustacea. (Βράγχια; πυοή,

Branchiop'oda. (Βράγχια, the gills; πουs, a foot. F. branchiopode.) Gill-footed. A Division of the Subclass Entomostraca, of the Class Crustacea. Legs numerous, adapted for swimming, either flattened out, so as to become branchiae, or have branchiae attached to them; body having a carapace or naked; many segmented; mouth with masticatory organs; antenna small, one or two pairs; eyes two or three.

Branchiop odous. (Same etymon.) Gill-footed; having the same characters as the

Branchiopoda.

**Branchios'tegal.** (Βράγχια, the gills; στεγω, to cover.) Covering the gills.

B. mem brane. A membrane which assists to close in the branchial chamber; it is attached to the hyoid bone, and is supported and spread out by the branchiostegal rays.

B. rays. Parallel rod-like ossifications supporting the opercular or branchiostegal membrane in fishes with ossified skeletons. They vary from one or two to upwards of twenty, their normal number in Teleostei being seven. They are only attached to the lower and inner part of the hyoid arch, the outer margins of the ceratohyal and epihyal bones, as the upper and outer part of this arch carries the mandibular arch and the broad opercular bones. These latter belong to the same category, for in bony fishes the operculum is wrought into two large folds, the upper and outer carrying the broad operculars, and the lower and inner the branchiostegal rays.

Branchios'tegite. (Same etymon.) A term applied to the free, even-edged, hair-margined covering of the gills of Macrura. It is a lateral prolongation of the omostegite.

Branchios'tegous. Same etymon and

meaning as Branchiostegal.

Branchios teous. (Βράγχια, the gills; όστεόν, a bone.) Having bony gills. Formerly applied to certain fishes which have gills with bony rays.

**Branchios'toma.** (Βράγχια; στόμα, a mouth) One term for the Amphioxus, and for the class of which it is the sole representative, in consequence of its dilated pharynx having a series of transverse clefts lined with a ciliated mucous membrane, which are believed to act as branchiæ.

**Branch'iotroch.** (Βράγχια, the gills of fishes; τροχός, a wheel.) Term applied by Ray Lankester to that division of the Architroch, or primitive ciliated band of invertebrate embryos, from which ciliated branchial filaments are most constantly developed.

**Branch'iule.** (Βράγχια.) Term applied by v. Beneden to the hollow, oval, ciliated tentacles

of the Bryozoa.

Branchiu'ra. (Βράγχια; οὐρά, a tail.) A Suborder of the Order Copepada, Class Crustacca. Cephalothorax buckler-shaped; abdomen two-lobed; a long protractile style in front of the mouth; four pairs of biramous swimming feet.

Branch let. (Dim. of Branch.) A little or secondary branch. The ultimate divisions of

**Branch**'us. (Βράγχος, hoarscness. G. erserkeit.) Term used by Galen, de San. Tu. Herserkeit.) v, 8, and de Symptom. Caus. iii, for a species of catarrh; also, hoarseness.

Bran'ci. Quinsy.

Bran'cia. Glass.
Brand. (Sax. brand, from brennan, to urn. F. charbon, nielle; I. carbone, golpo; S. burn. neguilla ; G. Brand.) A term for parasitic fungi of the Order Puccinia, which, growing on living leaves, give to them an appearance of burnt patches.

Brand'is, extemp'orised caut'ery of. A portion of telegraph wire, one end of which is rolled up in a spiral form, whilst the other is filed to a point and inserted into a piece of wood to serve as a handle.

Brand'ish's solu'tion. Sec Liquor potassæ Brandishii.

Brand'y. (Dut. brandewijn; from brandt, burnt; wijn, wine; branden, means to distil as well as to burn. F. eau de vie, cognac; I. acqua vita d'Inghilterra; G. Branntwein.) An alcoholic liquor obtained by distillation from the wine of grapes. It is colourless when distilled, and is kept in oak casks to obtain the pale colour; brown brandy is coloured with burnt sugar or catechn. It consists of 44 to 55 per cent. of absolute alcohol, with small quantities of a volatile oil, acetic ether, cenanthic ether, tannin, and the colouring matter and water.

B. mix'ture. The Mistura spiritus vini

Brank. A name for buckwheat, Fagopyrum esculentum

Branks. (Lowland Scot. brank, to bridle.) The Cynanche parotidea, or mumps, from its interference with the motion of the jaw.

Brankur'sine. The Acanthus mollis. Bran'ny. (Bran.) Having the appearance of bran.

B. borre'ra. The Borrera furfuracea.

B. tet'ter. A synonym of Pityriasis. Bra'que. Spain. A saline spring, contain-

ing a little hydrogen sulphide.

Braricia. Vitrum, or glass. (Ruland.) Bras. The Malay name for rice deprived of the husk.

Bra'sa. Roumania. Two mineral springs, containing hydrogen and iron sulphide, with sodium and magnesium sulphate.

Bras'dor, Pierre. A French surgeon, born 1721, died 1797.

B., cor'set de. A bandage employed by Brasdor in fractures and dislocations of the

B.'s opera'tion. Ligature of the artery in angurism on the distal side.

Brase'ma hydropel'tis. The Hy-

dropeltis purpurea.

B. pelta'ta. The Hydropeltis peltata.

Brash. (Perhaps from the same root as brackish, or from Dutch braken, to vemit.) common term indicating some disorder of the alimentary canal.

B., wa'ter. A synonym of Pyrosis. B., wean'ing. Diarrhea produced by

change of food in weaning a child.

Brasilet'to. Logwood.
Brasil'ia. Old name for the wood of the Genus Cæsalpinia, or Brazil-wood.

Brasilien'sis ra'dix. (L. radix, a

**Bras'ilin.** C<sub>22</sub>H<sub>20</sub>O<sub>7</sub>, or C<sub>22</sub>H<sub>18</sub>O<sub>7</sub>. The crystallisable colouring matter of Brazil wood. It is colourless or of a sulphur-yellow colour, rapidly changing to red in the sunlight.

Brasium. Old name for Malt. Brasima. Immature black pepper.

Bras mos. (Βράζω, to ferment.) Used by the ancient Greek author Pharnuthus for fer-Used mentation, or zymosis.

Brass. (Sax. bræs. L. æs; Gr. χαλκός; F. airain; I. rame; S. alambre; G. Messing, Erz.) An alloy of copper, with 28 to 34 per ecnt. of ziue.

Brassadella. The Ophioglossum spicatum, or adder's tongue.

Brassatel'la. Same as Brassadella.

Brass'founders' a'gue. See Ague, brassfounders'.

Bras'sic acid. (F. acide brassicique.) C22H42O2. An acid existing as a glyceride in colza oil, probably identical with Erucic acid.

Bras'sica. (L. brassica. As if prasica, from præseco, to cut in pieces, because it is cut off by the stem; or from πρασία, a garden plot.) The cabbage or colewort. A Genus of plants of the Nat. Order Cruciferæ.

B. acidula'ta. (L. acidulus, sourish.) The acidulated cabbage; a name for the culinary preparation called Sour crout.

B. al'ba. (L. albus, white.) The white eabbage plant.

Also, the Sinapis alba.

B. apia'na. (L. apianus, belonging to bees.) The jagged or crimpled colewort.

B. asparagoï des. ('Ασπάραγος, asparagus; είδος, form.) The broccoli.

B. asperifo'lia. Lam. (L. asper, rough; folium, a leaf. F. chou rude.) The wild turnip.

B. asperifo'lia esculen'ta. (L. esculentus, estable. F. raviole, grosse rave.) The turnip.

B. asperifo'lia oleif'era, De Cand. (L. oleum, oil; fero, to bear. F. navette.) The navew.

B. bot'rytis. (Βότρυς, a bunch of grapes. F. chou-fleur.) The cauliflower.

B. bot'rytis cymo'sa. (Βότρυς; L. cyma, a young sprout of cabbage, a cyme.) Broccoli.

**B.** campes'tris, Linn. (L. campester, belonging to a level field. F. chou-colza.) Coleseed. Cultivated for the seeds, which yield colza

B. cani'na. (L. caninus, belonging to a dog.) The Mercurialis perennis, or dog's mer-

B. capita'ta. (L. capitatus, having a head. F. chou pommé.) Headed colewort; the systematic name of the cabbage.

B. cauliflo'ra. (L. caulis, a stem; flos, a flower. F. chou-fleur.) The cauliflower.
B. caulora'pa. (L. caulis, a stem; rapa,

a turnip.) The Kohl-rabi.

B. cuma'na. (L. cumanus, of Cumæ.) The systematic name of the red cabbage.

B. eru'ca. (L. eruca, a kind of colewort. F. roquette sausage.) The garden rocket, which affords the Semen erucæ; these with the seeds of the wild rocket (Eruca sylvestris) have an acrid taste, and are eaten by the Italians in their pickles; they are said to be aperient and antiscorbutic, but are chiefly esteemed for their supposed aphrodisiac qualities; also called Roman rocket, and rocket gentle. The Romans ranked

the rocket as aphrodisiae. **B. erucas'trum.** Same as *B. cruca*.

B. florida. (L. floridus, flowery.) The systematic name of the cauliflower.

B. his'pida. (L. hispidus, rough.) The B. eruca.

B. ital'ica. (L. italicus, Italian.) The B. florida.

B. jun'cea, Hook. (L. junceus, like a rush.) Hab. Southern Russia, India, and Africa, where it is extensively cultivated. Seeds used as those of the Sinapis nigra.

The systematic name of B. lactur'ria. the Savoy plant; also called B. sabauda and B. oleracea bullata.

B. marina. (L. marinus, belonging to the sea.) The Convolvulus soldanella, or sea convolvulus.

B. medullif'era. (L. medulla, marrow; fero, to bear. F. chou-fleur; G. Elumenkohl.) The cauliflower.

B. napobras'sica. (L. napus, a kind of turnip; brassica, a cabbage.) The Swedish turnip.

B. na'pus. (L. napus, a kind of turnip. F. chou navet; G. Rubsanen.) Rape. The seeds yield, on expression, a large quantity of oil, called rape oil, sometimes used in stimulating liniments. The seeds were thought to be alexipharmic. The

expressed juice is said to be expectorant. The leaves of the wild species when used for long appear to produce gangrene of the extremities.

B. na'pus esculen'ta. (1. esculentus, eatable. F. navet; G. Raps.) The navew, or French turnip. A variety with a fleshy fusiform

B. na'pus oleif'era. (L. oleum, oil; fero, to bear. F. colza.) A variety cultivated for slicep food, and for its oil-yielding seeds.

B. nigra. (L. niger, black.) The Sinapis

B. oblon'ga. (L. oblongus, oblong.) The

B. rapa.

B. olera'cea, Linn. (L. oleraceus, herblike. F. chou potager; I. cavolo; S. col; G. Kohl, Gaelic gabaisde; Port. couve, repolho; Arab. Krumb Kirnub; Pers. Kullam; Beng. and Hind. Kopee.) The systematic name of the wild cabhage; indigenous on our coast and the parent of all our garden cabbages, however varied in their appearance, as common cubbage, red cabbage, broccoli, cauliflower. Pickled cabbage is considered wholesome and antiscorbutie.

B. olera'cea aceph'ala. ('A neg.; κεφαλή, the head. F. chou vert; G. Grünckohl.)
The variety called Scotch kale or borecole.

B. olera'cea bot'rytis. (Βότρυς, a cluster of grapes. F. chou-flour; G. Blümenkohl.) The cauliflower and the broccoli.

B. olera'cea bulla'ta. (L. bullatus, having bubbles. F. chou bouillone.) The Savoy cabbage.

B. olera cea capita ta. (L. capitatus, having a head. F. chon pommé, chou cabus; G. Weisskraut.) The cabbage.

B. olera'cea caulora'pa. (L. canlis, a stem; rapa, a turnip. F. chou-rave.) The kohlrabi.

B. olera'cea cymo'sa. (L. cymosus, full of shoots. F. chou brocoli.) The broccoli.

B. olera'cea gemmif'era. (L. gemma, a bud; fero, to bear. F. chou bouillone.) Brussels

B. olera'cea gongyloi'des. (Γογγυλοειδής, roundish. F. chou-rave.) eabbage.

B. olera'cea napobras'sica. The turnip cabbage.

B. pompela'na. (L. pompeianus, Pompeian.) The B. florida. Borecole, or Scotch kale.

B. ra'pa, Linn. (L. rapa, a turnip. F. rabiole; G. Steckrube.) The turnip. Demuleent, detergent, somewhat laxative and diuretic; the

seeds are sometimes used as diuretic. B. ru'bra. (L. ruber, red.) The red cabbage. A variety of B. oleracea capitata. An infusion of its leaves, of a very rich blue colour, affords an excellent test both of alkalis and acids, becoming green with the former, and red with

the latter. B. sabau'da. (Mod. L. sabaudia, Savoy.) Another name for the B. lacturria, or Savoy cabbage.

B. sabau'da gemmi'iera. (L. gemma, a

bnd; fero, to bear.) Brussels sprouts.

B. sabel'lica. (L. sabellicus, sabine.) The borccole.

B. sati'va. (L. sativus, that which is sown.) The systematic name of the common garden cabbage.

B. sinapioi des. (Σίναπι, mustard; είδος, likeness.) The Sinapis nigra.

B. sinapis'trum, Bois (Σίναπι, mustard.) The charlock. Seeds used as those of black mustard; they are less pungent.

B. sylves'tris. (L. sylvestris, belonging to a forest.) Sea colewort or cabbage.

Brassica'ceæ. (Brassica.) A synonym of Cruciferæ.

Brassic'ese. (L. brassica.) A Subfamily of the Family, or a Tribe of the Nat. Order, Crucifera, having the cotyledons incumbent and folded.

Brassicid'eæ. (Brassica.) A Tribe of

the Nat. Order Crucifera.

Brassidel'la. The Ophioglossum.

Brassidel'lica ars. A Paracelsian term for curing wounds by applying the herb Brassidella, or Brassadella, to them.

Brass-wire borre'ra. The Borrera flavicans.

Bra'thu. The Juniperus sabina.

Braun's system of plants. Julifloræ, including Piperineæ, Urticineæ, and Amentiteræ; Monochlamydeæ, including Serpentariæ, Rhizantheæ; Aphanocyelæ, including Hydropeltidineæ, Polycarpeæ, and Crucifloreæ; Tetraeyelæ—(a) Gamopetalæ, including Aniso-carpæ, and Isocarpæ, and (b) Eleutheropetalæ, including Encyclæ, Centrospermæ, and Discophoræ; and lastly, Perigynæ, including Calyciphoræ; and many; floræ and Corollifloræ. Germany; in the Rhine

Province. Pine-leaf baths. Used in rheumatism and gout, skin diseases, and mucous discharges.

Braw'lins. The Arbutus uvæ ursi, and also, the Vaccinium vitis idea.

Brawn. (Old F. braon, a slice of flesh.) Flesh, especially the flesh of the pig, and of this, again, especially the soft parts of the head and

Brawn'y. (Same etymon.) Muscular, firm. B. induration. A term applied to the firm and resistant thickening and hardening which occurs in certain inflammations and degeneratious, such as connective-tissue inflammation.

Brax'y. A synonym of Splenic apoplexy in sheep. The evidence is conflicting as to the results of eating the flesh of a braxy sheep, some observers stating that pigs and dogs die in a few hours after eating; others, that they eat it with impunity. Scotch shepherds, it is said, eat it when pickled for some time. Probably, much depends upon the general infection of the carcase, and the presence of infective bacteria, or of septic poison.

Braye'ra. (After Brayer, a German phy-A Genus of the Suborder Rosea, of the ieian.)

Nat. Order Rosaleæ.

B. anthelmin'tica, Kunth. ('Λντί, against; ἕλμινς, a worm.) A tree with round, tomentose branches; crowded imparipinnate leaves; oblong, serrate leaflets; flowers in a paniele, diœcious; fruit an obovate, one-seeded nut. Found in Abyssinia. Flowers and tops form kousso. See Cusso.

Bray'erin. (Brayera.) A bitter, aerid resin, forming 6-25 per cent. of kousso.

Brazil' co'coa. The seeds of Paullinia sorbilis.

A resinous exudation from B. co'pal. various species of Hymenwa, and from Trachylobium martianum.

B. el'emi. The produce of Icica icicariba. B. nuts. The seeds of the Bertholletia The produce of Icica icicariba. exectsa.

B. tea. The leaves of Stachytarpha jamaicensis. .

B. wood. The Casalpinia echinata, braziliensis, crista, and other species.

Brazil'ian ar rowroot.

root, Brazilian.

Brazilien'se lig'num. (L. lignum, wood.) Brazil wood. The wood of species of Cæsalpinia.

B. ra'dix. (L. radix, a root.) The Brazilian root. A name given to the ipecacuau root.

Brazilin, See Brasilin.
Bread. (Sax. bread, from bredan, to nourish. Gr. αστος; L. panis; F. panis; I. pane; S. pan; G. Brod.) A dough is made with flour, water, and salt, is rendered porous by carbonic acid, and baked. The porosity is possible by means of the gluten, which is tenacious. The earbonic acid is generated by the admixture of brewer's yeast, German yeast, or baker's yeast, or by the addition of tartaric acid and bicarbonate of soda; or it is introduced by mixing the dough, under pressure, with water in which carbonic acid has been dissolved. Bread is very nutritive and digestible; it contains on an average, according to Dr. Letheby, nitrogenous matter 81, carbohydrates 51, fatty matter 16, mineral substances 2.3, and water 37° per cent. Good bread is uniformly porous and of agreeable smell; not sodden, heavy, or acid.

B., aera'ted. Made by Dr. Dauglish's process. Flour and salt are mixed by machinery in an air-tight vessel with water in which carbonic acid has been dissolved. It keeps sweet longer than ordinary bread, but is by some thought not so pleasant to the taste.

B., al'mond. See Almond bread.
B., bar'ley. Barley contains little gluten, and so cannot be made into a spongy bread with-out the addition of wheat flour. It is not very easily digestible, and is laxative.

B., bee. See Propolis.

B., black. Bread made from rye flour.
B., bran. Is used sometimes as a laxative.

See Bran cakes.

B., brown. Bread made with flour not entirely freed from bran; occasionally rye is ground with the wheat for brown bread. It is somewhat laxative, but now and then, if the particles of bran are too coarse, it produces dyspeptic symptoms and intestinal irritation.

B., cassa va. See Cassava bread. B. crumb. Same as Mica panis.

B., cuck'oo. The Oxalis acetosella.

B., di'ka. Bread made of the nut of Mangi-fera gabonensis. Eaten in the Gaboon country.

B., ferment'ed. Ordinary bread made with one of the kinds of yeast.

B. fruit tree. The Artocarpus incisa.
E., fung'us of. The Aspergillus glaucus, Penicillium roseum, and Oldium aurantiacum.

B., glu'ten. See Gluten bread.

B., hon'ey. (F. pain d'épice; L. panis mellitus.) A bread made with rye flour and honey, to serve as an excipient of drugs.

B., In'dian. The Scienotium giganteum.
B. jel'ly. Bread boiled in water and **B. jel'ly.** Bread boiled in water and strained, so that it sets into a smooth jelly when cool. It may be flavoured according to circumstances.

B., leav'ened. Bread of which the fermentation has been induced by the addition of dough, in which the starch has undergone the change into dextrine and sugar, and this latter into alcohol and carbonic acid. See Leaven.

B., meal. An earth, consisting largely of

the shells of minute infusoria, eaten in the north of Europe.

B., mon'key's. The Adansonia digitata. E. nuts. The seeds of the Brosimum ali-

B., oat. Thin unfermented cakes made of oatmeal. See Outmeal.

B. poultice. See Cataplasma panis.

B. root. The root of the Psoralea esculenta.
B., rye. Rye flour is now seldom used alone in England, but mixed with wheat flour to make brown bread. Rye bread is dark in colour, and sour in taste, and is laxative.

B., sow. The species of Cyclamen.

B., St. John's. The Ceratonia siliqua. B. tree. The Azadirachta indica.

B., unferment'ed. Bread made with saline matters capable of disengaging carbonic acid instead of yeast, the so-called baking powders, which consist of sodium carbonate and tartaric acid, coloured with turmeric; sodium carbonate and hydrochloric acid are also used for this Ammonium carbonate is employed purpose. sometimes, as from its volatility, it produces the needed vesiculation.

B., wa'fer. (F. pain azyme, pain a chanter.)
A thin, flexible, baked compound of flour, water, and sugar. Used for wrapping up nauseous me-

dicines for administration.

B., way. The Plantago major.

Bread made with wheaten B., white. flour, from which the bran has been carefully removed.

B., whole meal. Bread made of flour to which its natural amount of bran, after being finely ground, has been added.

Bread'root. The Camassia esculenta, and also the Psoralea esculenta.

Break-bone fe'ver. The Dengue fever. Break'stone. The Pempinella saxifraga, the Alchemilla arvensis and the several species of Saxifraga are so called from their supposed lithontriptic properties.

Bream. (Old F. bresme. F. brème; I. reina; G. Borassen.) The Cyprinus brama.
Breast. (Sax. breést. F. mamelle; G.

Brust.) The mamma of females; the mammilla of males. See Mammary gland.

Also, popularly used as a term for the thorax, or chest.

B., ab'scess of. See Abscess, mammary. B., ab'sence of. The gland has been found altogether wanting in some females, accompanied by absence or defect of the ovaries.

**B.**, ad'enocele of. ('Aôήν, a gland; κήλη, a tumour.) Same as B., adenoma of.

B., ad'enoid tu'mour of. ('Aôn'v; ēlôos,

form.) See B., adenoma of. **B.**, adeno'ma of. (Αδήν.) A non-malignant glandular tumour attached to the mammary gland, generally of slow growth, more or less nodulated, and semi-elastic; occasionally, after long quiescence, it grows very rapidly; it usually occurs in women under thirty years of age. See Adenoma.

B., amputa'tion of. The removal of the breast by the knife for disease; it is accomplished through two curved incisions, enclosing the nipple, meeting at their extremities and forming an ellipse, the long axis of which usually has the direction of the fibres of the pectoralis major muscle.

B., at rophy of. ('Λ, neg.; τροφή, nourishment.) Shrinking of the mammary gland, the result of old age or disease. The glandular tissue is absorbed or replaced by fat, but the ducts remain and often contain a mucous fluid.

B. bone. The Sternum.

B., bouy tu'mour of. See B., osseous

tumour of.

B., can'cer of. The scirrhous form is by far the most frequent, but all the forms of cancer occur in the mammary gland. It is most com-mon in women of forty-five to fifty years of age; local injury is supposed to be a predisposing

B., cartilag'inous tu'mour of. Same

as B., enchondroma of.

(Κόλλα, glue; εἶδος, B., colloid of. form.) Colloid of the breast is rare; it is seldom alone, but generally accompanies scirrhus or en-cerhaloid; it semetimes attains a great size.

B., com'plex cys'tic tu'mour of. Same

as B., cystic sarcoma of.

B., cys'tic sarco'ma of. (Κύστις, a bladder; σάρξ, flesh.) This form varies in appearance according to the propertionate presence of cysts and intermediate solid substance. It occurs often as the result of mammary inflammation in women of thirty to forty years of age, and is said to be not infrequently the seat of cancerous deposit.

B., enceph'aloid. (Εγκέφαλος, the brain; zidos, likeness.) This form of cancer is net infrequent; it grows rapidly, and may attain a

great size.

B., enchondro ma of. ('E $\nu$ , in;  $\chi \delta \nu \delta \rho \sigma s$ , cartilage.) A tumour containing cartilaginous

tissue, very rarely seen.

B., fibroplas'tic tu'mour of. (L. fibra, a filament; πλάσσω, te form.) A term applied to certain tumours which are new usually included under the term spindle-celled sarcoma.

B. glass. A dattened glass vessel, with an epening large enough to receive the nipple, placed on the breast to catch any milk which may run

away from a nursing woman.

B., hydat'id tu'mour of. watery tumour.) A cystic tumour caused by the Cysticerous cellulosæ or the Echinococcus hominis.

B., hyperæsthe'sia of. ('Y $\pi i \rho$ , in excess; αίσθησις, sensation.) Exalted sensibility of the mammary gland and of its cutaneous co-

**B.**, hyper'trophy of. (' $\Gamma \pi i \rho$ , in excess; τροφή, nutrition.) An increase of size of the mammary gland, caused by growth of normal structure without any new deposit. It may attain a very large size.

B., hysterical. A condition of the mammary gland in hysterical girls, in which it becomes painful, tender on pressure, and somewhat

swellen.

B., inflamma'tion of. Inflammation of the breast occurs most frequently in the first month or two of nursing or during weaning; it is also seen in new-born children of both sexes. It may have its seat in the gland itself, or in the connective tissue beneath or above it, and the resulting abscess is then called mammary, submanimary, and supramammary abscess, respectively.

B., lac'teal tu'mour of. (L. lac, milk.) A dilatation of an obstructed lactiferous duct containing milk; it may last long, growing slowly, and attain a large size. In process of time the milk becomes inspissated and oily.

B., lipo'ma of. (Λίπος, fat.) Å fatty

tumour of the breast, which occasionally reaches a large size.

B., male. The mammary gland exists in the male, but in a very rudimentary condition. In man it has been known to secrete milk.

B., medul'lary can'cer of.

B., encephaloid.

B., neural'gla of. Same as Mastodynia. B., neuro'ma of. (Νεῦρον, a nerve.) Small tumeurs on the cutaneous and ether nerve filaments of the breast. See Neuroma.

B., os'seous tu'mour of. (L. os, a bone.) A tumour centaining bony tissue; a condition of

very rare occurrence.

B.-pang. A synenym of Angina pectoris. The Sternalgia of Mason Good.

B., pig'eon. See Pigeon breast.

B.-pump. (Antlia mammaria.) An instrument for removing milk from the breast when the infant is unable to suck sufficiently. It consists of an expanded glass tip, to surround, without bruising, the nipple; a reservoir to contain the milk withdrawn; and a means for exhausting the apparatus, either a tube to be sucked, er an india-rubber ball to be compressed, or an exhausting syringe. The action should be intermittent to imitate the effort of the child.

B., recur'rent fi'broid tu'mour of. term applied to hard varieties of sarcoma of the breast.

B., sanguin'eous cyst of. (L. sanguis, bleod.) A cyst in the mammary gland containing

thin, red, altered blood.

**B.**, sarco'ma of.  $(\Sigma \acute{a} \rho \xi, \text{flesh.})$  Sarcoma of the breast varies in consistence and in rapidity of grewth; it occurs in females of thirty years and upwards, and not infrequently returns after operation. See Sarcoma,

B., sero-cyst'ic tu'mour of. A cystic tumeur er cystic sarcoma, the cysts of which

contain serous fluid.

B., sero-mu'cons cyst of. A evstic tumour or cystic sarcoma, the cysts of which contain a glairy fluid.

B., supernu merary. (G. Brustdrüsenüberzahl, Brustdrusenvermehrang.) The occurrenee of a third mammary gland; a fourth and a

fifth have been recorded.

B.-weed. The Saururus cernuus. Breath. (Sax. bræth, from æthna, with a prefix, vapour. L. halitus; Gr. πνεῦμα; F. haliene; I. lena, alito; S. aliento, halito; G. Athem.) The air as altered by respiration. This alteration consists in the removal of exygen, the addition of carbonic acid, ammonia, and watery vapour helding organic matters in solution, and the elevation of temperature. According to Vierordt, the amount of oxygen removed is 4.782 per cent. The average amount of carbonic acid added is 4.35 per cent.; this is liable to great variation from many causes, both external, as temperature, season, moisture; and internal, such as food, sleep, disorder. The nitrogen of the air is probably absorbed, but if so, an equivalent amount is exhaled. The amount of water in vapour given off in the breath is somewhat over 4 per cent., chiefly derived from the blood, but some probably from the combustion of hydrogen in the body. Ammonia is almost always found in the breath, but in very small quantity. Traces of hydrogen have been discovered. Several salts, as sodium chloride, sodium and amiuonium urate, have been detected, as also uric acid and urea. The organic matter exhaled has undergone no accurate examination,

either in health or in disease. Neither have the infections matters, which are doubtless in some contagions diseases given off from the lungs, as yet been recognised. The odorons principles of articles of food, such as alcohol and onions, and of drngs, as ether and phosphorns, are found in the breath. The temperature of the breath is about 35° C. (95° F.)

B., pulse. A term applied to a pulsatile movement of the expired air in cases of phthisis, where there is a large cavity either close to the heart and the aorta, or separated only from them

by indurated structures.

B., short'ness of. See Dyspnaa.

B. sounds. The respiratory sounds heard in auscultation.

Brea'thing. (Same etymon.) The act

of respiration.

B., abdom'inal. The form of respiration in which the thorax is more or less quiescent, the abdomen being protruded and depressed by the descent and ascent of the diaphragm. It is natural to the human male, and is produced by pleurisy or other painful affection of the thorax. and by paralysis of intercostal and other respiratory muscles.

B., bronch'ial. See Bronchial breathing. B. pores. The Stomata.

B., pu'erile. See Purile breathing.

B., thorac'ic. That form of respiration in which the abdomen is almost quiescent, and the chief movement of expansion is accomplished by the thorax. It is specially a feminine method of breathing, and is met with in painful abdominal and diaphragmatic diseases.

B., vesic'ular. See Vesicular breathing. Breathlessness. The condition of being short of breath, or of oppressed breathing.

Same as Dyspnæa.

Breb. Hungary; County Marmoros. A saline water, containing sodium carbonate and sulphate, a little iodine and bromine, with free carbonic acid and hydrogen sulphide.

Brec'cia. (I. breccia, a gap. F. brèche.)
A generic name for all rocks with a fragmentary F. brèche.) structure when the agglomerated grains which constitute them are angulous fragments with

sharp edges. Brech'ma. Otherwise Bregma.

Brech'mus. Otherwise Bregma.
Bredes. The young shoots of the Solanum nigrum, eaten as spinach.

Breech. (Sax. bric, breeches.) The but-

tocks; the nates.

B. presenta'tion. The position of the child in labour when the breech occupies the os uteri. It occurs about once in forty-five or fifty births at full period. It is recognised by the tuberosities of the ischia, between which lie the amus and genital organs. The breech may present with the back of the child in front or behind, and in either oblique diameter of the pelvis. The child is not infrequently born dead from delay in the passage of the head and compression of the umbilical cord.

Breese-fly. (Sax. brimsa, a gadfly.) The

gadtly, Tabanus bovinus.

Bregma. (Βρέγμα, the upper part of the head, from  $\beta \rho i \chi \omega$ , to moisten; from its softness in infants. F. bregma; I. and S. bregma; G. Scheitel.) The point of junction of the sagittal and coronal sutures, which in infants is not occupied by bony structure, but by membrane, and is called the anterior fontanelle.

The bregma was described by Aristotle as the anterior part of the bead, which in man is developed after birth, and as the last of the bones of the body to become consolidated. In Galen, the word βρέγμα is used as a synonym of κορυφή. the vertex, whence Vesalius' expression ossa verticis for ossa bregmatica. By the older physicians the term came to be applied to the anterior fontanelle.

B. bones. (L. ossa bregmatica.) The parietal bones.

Bregmatic. (Same etymon.) Of, or pertaining to, the Bregma.

Breg mato-anterior. (Βρέγμα; L. anterior, in front.) A term applied to that stage of presentation of the fœtal head in which the bregma is towards the one or other foramen ovale of the mother.

**B.-cot'yloid.** (Βρέγμα; κοτύλη, a small cup; ¿¿cos, likeness.) A term applied to that stage of presentation of the feetal head in which the bregma is towards the cotyloid cavity or acetabulum of the mother.

**B.-poste'rior.** (Bpé $\gamma\mu\alpha$ ; posterior, hinder.) A term applied to that stage of the presentation of the fætal head in which the bregma is towards one or other sacro-iliac synchondrosis of the mother.

**Bregmatodym'ia.** (Βρέγμα; δύω, to go into.) A synonym of Cephalodymia.

Breg'uet's thermom'eter. licate metallic thermometer, consisting of three strips of platinum, gold, and silver in this order: rolled into a thin ribbon, and twisted into a spiral, the silver constituting its inner surface, as it is the most expansible; one end is fixed, the other carries a light needle, which marks the movement of the spiral as it expands on the application of heat.

Bre'idin. A crystalline resin, obtained by treating arbol-a-brea resin or gum elemi with

alcohol.

Bre'in, A crystalline resin, obtained by treating arbol-a-brea or elemi resin with alcohol.

Brel'isis. A synonym of Gum caranna. (Quincy.)

Bren'ning. (Sax. bærnan, or byrnan, to be on fire.) A name for gonorrhea, synonymous with burning.

Brent'wood. A town in Essex, possessing a saline spring, containing magnesium sulphate

in small amount.

**Brephocacocol'pia.** ( $B\rho i\phi os$ , a fetns; L. cacocolpia, putridity of the vulva. F. bréphocacocolpie.) Term for infantile colpocace or cacocolpia.

**Brephoc'tonon.** (Βρεφοκτόνος, child murdering; from βρέφος, an unborn child; κτείνω, to kill.) The Conyza squamosa, which was used as an emmenagogue, and probably as an abortifacient.

Brephomeningu'ria. fœtus; L. meninguria. F. bréphomeningurie.) Infantile meninguria, or passing of small shreds of membrane with the urine.

Brephopityri'asis. (Βρέφος, a fœtus; L. pityriasis. F. bréphopityriase.) Infantile

pityriasis.

Brephopolysar cia. (Βρέφος, a fœtus; L. polysarcia. F. bréphopolysarcie.) Term for infantile polysarcia, or obesity.

Brephotrophi'um. (Βρεφοτροφείον. F. brephotrophion; G. Findelhaus.) A foundling

Brephul'cus. (Βρέφος, a fœtus; ἔλκω, to draw. F. brephalous; G. Geburtszange.) Mid-

wifery forceps.

Brephydroceph'alus. (Βρίφος, a fœtus; L. hydrocephalus. F. bréphydrocephale; G. Wasserkopf der Kinder.) Infantile hydroce-

Bresch'et, Gil'bert. A French anato-

mist, born 1784, died 1845.

B.'s bone-canals. Canals in the diploë of the cranial bones, in which Breschet's veins

B.'s veins. The four larger veius on each side of the cranium in the diploë; one frontal, two temporal, and one occipital.

Bres'ilin. Same as Brazilin.
Bres'lau fe'ver. The contagious epidemic which devastated the Prussian army before Breslau in the middle of the eighteenth century; it was called by Sauvages Tritwophya vratisla-

B. test. The floating of the stomach and intestines in water immediately they are removed from the body of a child, which was supposed to be a proof that the child had been born alive.

Bretan'ica. Same as Britannica. Brevi-. (L. brevis, short.) An affix em-

ployed to denote shortness.

Bre'via va'sa. (L. brevis; vas, a vessel.) Branches of the splenic artery and vein supplying the cardiac extremity of the stomach.

Breviartic'ulate. (L. brevis; articutus, a joint. G. kurzyliederig.) Having short joints or internodes.

tail.) Itaving a short tail.

Brevicantian

Brevicaul'ine. (L. brevis; eaulis, a stem. G. kurzstengelig.) Short stemmed.

Brevic'ulus. (Dim. of L. brevis. G. etwas kurz.) Shortish, rather short.

Breviling'uia. (L. brevis, short; lingua, tongue.) A Group of the Order Lacertilia, Class Reptilia. Tongue thick, fleshy, only capable of protrusion when the mouth is open.

Bre'viped. (L. brivis; pes, a foot.) Having

short feet.

Brevipenna'tæ. (L. brevis, short; penna, a wing. F. brevipennes.) A Family of birds of the Order Natatores. Wings always short; tail very short; legs placed far back; hallux often absent. Same as Pygopoda.

Brevipen'nes. A synonym of Struthio-

Bre'vis. (L. brevis, short.) A synonym of the Teres minor muscle.

B. cu'biti. (L. cubitus, the forearm.) The anconeus muscle.

B. palma'ris. See Palmaris brevis.

B. radii. (L. radius, the bone of that name.) A synonym of the Supinator brevis.

Breviss'imus oc'uli. (L. brevissimus, superl. of bravis; oculus, the eye.) The inferior oblique muscle of the eye, being the shortest of the ocular muscles.

Brewe'ria. A Genus of the Nat. Order Convolvularere.

B. scopa'ria. (L. scoparius, a sweeper.) Hab. Canary Islands. Has a bitter balsamic taste, and yields an essential oil, which is emplayed to adulterate oil of roses. The wood is called rosewood.

Brexia'ceae. An Order of the lamiflored Exogens. Trees with coriaceous, alternate, simple leaves, a many-leaved calyx, soperior fivecelled ovary, with a consolidated style, and no albumen.

Brex'iads. The plants of the Nat. Order Brixincea.

Brey'nia. Old name for an undetermined species of Capparis.

Brian con tur pentine. A species of turpentine afforded by the Pinus cembra. See Terebinthina briantica.

B. man'na. A saccbarine substance yielded

hy the Pinus larix. Bri'ar. (Sax. brér.) A prickly shrub. B. rose. The Rosa canina.

B., sweet. The Rosa rubiginosa.
B., wild. The Rosa canna, dog-rose, or hip tree.

Briarea'ceae. An Order of the Subclass Alcyonaria, or a Suborder of the Order Alcuanaria. Axis hollow, or filled with spongy tissue containing siliceous or calcarcous spicules.

Brick. (F. brique; from old Dut. brick, a fragment. F. brique; I. quadrello; G. Backstein, Mauerstein, Ziegelstein.) Clay moulded into a particular form and burned. Bricks and brickearth were formerly employed in medicine; tho powder of bricks made into an ointment with lard, or mixed with vinegar, was applied to herpetic and other cutameous diseases. A hot brick applied to a bubo is supposed to have a very beneficial action.

B., oil of. (Oleum lateritium.) Hot bricks steeped in olive oil, are broken in pieces, and then distilled. Used formerly in cutaneous disorders.

B.-tea. This is essentially Lie tea damped with bullock's blood and pressed into a mould. An infusion of it is beef-tea and tea at ouce.

Brick'layer's itch. A disease of the skin of the hands of bricklayers and persons following similar occupations, which is sometimes a form of lichen and sometimes eczema.

Bricumum. An old name for an undetermined species of Artemisia.

Bride lia. A Genus of the Nat. Order Euphorbiaecae

B. colli'na, Hook and Arn. The outer erust of the capsules is said to be poisonous.

B. spino sa, Willd. (L. spinosus, full of thorns.) Hab. Assam. The bark is astringent and the leaves vermifuge.

Brides les Bains. France; Departement de la Savoie. Mineral waters, temp. 36° C. (96.8° F.), containing calcium sulphate 2, and sodium sulphate 2.5, in 1000 parts, with free carbonic acid and a little hydrogen sulphide. Used in abdominal congestions, chronic gout, skin diseases, and constitutional syphilis.

Bride wort. The Spirae ulmaria. Bridge. (Sax. bryeg.) A roadway across a river. A term applied to structures of this character.

B. of nose. The free edge of the nose between its tip and the forehead.

B., Wheat'stone's. See Wheatstone's

Bridge of Al'lan. Scotland; near Stir-

ling. See Airthrey.

Bri'dle. (Sax. bridel. F. bride; I. briglia; S. brida; G. Eiterhaken, Esterpflock.) A narrow slip of hving structure interposed between two orinces or the opposing walls of an absecss.

A filament of adhesion, which has become organised, between two surfaces of a scrous membrane.

A band stretching across a cicatrix.

**B., cicatric'ial.** (L. cicatrix, a sear of a wound.) A tough, elevated band stretching across a cicatrix.

B. stric'ture. A urethral stricture consisting of one or more bands.

Brid'lington. A town on the Yorkshire coast, possessing a mild chalybeate spring.

Briede'lia. Same as Bridelia.

Brieg'erbad. Switzerland; on the Simplon route at the foot of the Nesthorn. Sulphur springs, temp. 46°C. (114°8°F.) Used in abdominal congestions. lymphatic enlargements, skin diseases, gout, and rheumatism.

Bri'er. Same as Briar.

Bright, Rich'ard. An English physician, born 1789, died 1858. First associated albumen in the urine and dropsy with a disease of the kidney, which has been named after him.

B.'s disea'se. (F. maladie de Bright, albuminurie; 1. malattia di Bright, albuminurie; G. Brightsche Krankheit, Albuminurie; G. Brightsche Krankheit, Albuminurie, Euceissharn.) A generic term including several forms of acute and chronic disease of the kidney, usually associated with albumen in the urine, and frequently with dropsy, and with various secondary diseases, resulting from deterioration of the blood. Nomencl. of Dis. Roy. Coll. Phy. Lond.

The co-existence of degeneration of the kid-

The co-existence of degeneration of the kidneys, with the conditions of which abuminuria and dropsy are the chief, was first established by Dr. Richard Bright. Later investigations have demonstrated the existence of several distinct kidney lesions causing albuminuria. Further details will be found under \*Nephritis, \*Granular kidney, \*Larduceous kidney, and \*Albuminuria.\*

B.'s disea'se, \*acu'te. (\*Albuminuria.\*)

(Albuminuria acuta, nephritis desquamans acuta, anasarea renalis acuta; F. maladic de Bright aiguë, albuminurie aiguë, nephrite desquamative, anasarque aigue d'origine rénale; I. nefritide desquamativa acuta : G. acute parenchymatose nephritis.) A term applied to those cases in which there is a more or less sadden accession of symptoms with fever. Kidney large, soft, capsule easily peels; medulla deeply congested; cortex congested in patches, if tubes are much affected opaque and pallid. Epithelium of ducts swollen, cloudy, thrown off from the tubes in casts, both hyaline, granular, and containing blood; in addition to these casts the urine often contains casts of modified epithelium and matter exuded in the bare tubes. The disease varies in severity from a somewhat trivial to a fatal disease, and in duration from a few days to many months. Pulse quick and hard; skin dry; temp. elevated; often nausea, headache; aching across loins. Anasarca is not always present, but generally, and is at first of face and scrotum, then affecting the whole cellular tissue and the serous cavities. Urine scanty, high coloured, sometimes turbid; of high sp. gr.; contains albumen, often blood and casts. Urea diminished. Produced by exposure to cold, by the poison of searlet fever. Frequently recovery takes place. Death may occur from ædema of important viscera or effusion into serous cavities, from secondary inflammation of lungs or pericardium, from brain complications, and from exhaustion.

**E.'s disease, chron'ic.** A term applied to those cases which are of slow growth, with evidence of constitutional disturbance, and in which the kidneys are found degenerated in one of four chief ways, known as the smooth white kidney, the contracted granular kidney, the fatty

or lardaceous kidney, and the cystic kidney. Further details will be found under the heading Kidney.

Bright'on. A town on the south coast of Sussex. The air is dry and bracing; the land rises behind the town and protects the place from the north winds, but it is exposed to the east. It stands upon the chalk. The best time is from September to January, after that the east winds are very trying. It is hot and glaring in summer. There is an iron spring in the neighbourhood. The shore is shingle, but in other respects the bathing is good.

Brigno la. Old name for a variety of the Prunus domestica.

Brill. The Rhombus vulgaris, a sea fish, much used as food.

Brillantai'sia. A Genus of the Nat. Order Acanthacea.

**B. owarien'sis.** Hab. Western Africa. A decoction of the leaves is used in abdominal pains.

**Brim.** (Sax. brim, the surf of the sea, and so the border.) A margin, rim, or edge.

B. of pelvis. The upper orifice or inlet of the pelvis formed by the upper border of the symphysis pubis, the ileo-pectineal lines of the ilium, and the promontory of the sacrum. It is oval in form, the longer diameter being transverse and about 5 25", the antero-posterior or conjugate being about 4 3", and the oblique being 5".

**Brimstone.** (Sax. bryne, a burning; stan, a stone; as if burning stone.) A synonym of Sulphur.

B. wort. The Pencedanum officinale.

Brindonia in dica. The Garcinia indica.

**B.** tal'low. A fatty substance, obtained from the seeds of *Garcinia indica*. It is almost white, fines at 44° C. (111° F.), and contains olein and stearin.

**Brine.** (Sax. bryne, salt liquor.) A strong solution of sodium chloride with some potassium nitrate.

Salt water. The strong saline residuum after the making of salt.

B. baths. See B. springs.

B. springs. Natural waters containing sodium chloride in large quantity.

Brin'jal. The egg apple, the fruit of Solanum melongena.

Brin'ton root. The Leptandra purpurea.
Brinvil'liers. The Spigelia anthelminities.

Bri'on. The Corallina officinalis.

**Bri'quebec.** France; near Cherbourg. Chalybeate waters of little note.

Bri'sa. (L. brisa. G. Weintrester.) The refuse of grapes after pressing; grape skins.

Brise-coque. (F. briser, to break; coque, shell.) An instrument having two lumbs and a sheath, devised by Heurtelonp, for breaking up the shell of a vesical calculus after it had been drilled by his mandrin à virgule.

B.-pierre. (F. briser; pierre, a stone.) An instrument formerly used in lithotomy to break the stone into smaller pieces, so that it

might easily pass through the wound.

Also, the name given by Civide and Amusat to their original instruments for crushing a vesical calculus, when the force used was obtained by means of a hammer.

Brisement. (F. briser, to break.) A breaking or tearing asunder.

B. for'cē. (F. forced.) The forcible rup-ture of fibrons or bony anchyloses of joints. Brisin'gidæ. A Family of the Order Astrondea, Class Stellerida, Subkingdom Echinodermata. Arms distinct from the disc, channelled by a straight canal; tentacular tubes in two rows.

Brisingoï'dea. An Order of the Class tellerida. The same as Brisingidæ.

Bris'tle. (Sax. byrst, with diminutive suffix el. L. seta; F. soie; G. Borste.) The strong coarse hair of swine.

In Botany, stiff pointed hairs. See Seta.

B. cells. Peculiar cells found in the area of distribution of the acoustic nerve in the sacculi, ntricle, and ampulle. They are triangular in form, and have an oval nucleus. The base of cell is connected with the cuticular membrane, and from this base passes upwards a single cilium or bristle, having parallel and not tapering borders.

B. fern. The Trichomanes radicans.

B .- point'ed. Applied in Botany to organs which terminate in a stiff hair or bristle.

Bris'tleworts. The plants of the Nat. Order Desvauxiaceæ.

Bris'tly. (Same etymon.) Having many bristles or stiff hairs.

Bris'tol hot well. See Clifton.

Britan'nica her ba. A plant esteemed by the Romans as antiscorbutic. The adjective Britannica does not mean British, but is derived, it is supposed, from the Frisian language, and signifies "fixing loose teeth," in reference to its beneficial effects on the gums of scorbutic patients, which was experienced by the Romans in the country of the Frisii. It has been variously ascribed to Statice armeria, S. plantaginea, Cochlearia anglica, Potentilla nemoralis, Polygonum persicaria, Inula britannica, and Rumex aquatiens.

Brith'os.  $(B\rho i\theta \omega, to labour under a$ load.) A weight or abnormal pressure upon any

Brit'ish gum. See Dextrin.

B. oil. A variety of Petroleum.
B. vin'egar. The Acctum of the Br. Pharm.

Brit'ta. The Allium schenoprasum, or

chives. Brit'tle. (Sax. brcotan, to break.) Easily

broken. B. blad'der fern. The Cystopteris frag-

B. cup fern. The Cystopteris fragilis.

B. gum. See Gum, brittle. Brit'tleness. (Same etymon.) The condition of being easily broken.

B. of bones. A condition of atrophy or degeneration of osseons structure occurring in certain cases of insanity, and in other diseases, which allows of easy fracture.

Brit'tlestars. The animals of the Order Ophiuroidea.

Brit'tleworts. The minute plants of the Nat. Order Diatomacea.

**Briza.** ( $B\rho i\zeta a$ ; from  $\beta\rho i\zeta \omega$ , to make to sleep.) Speltwheat. A kind of corn or bread causing drowsiness.

Also (G. Zittergras), a Genus of the Nat. Order

Craminee. Quake, or quaking grass.

Brizoc'eras. (Briza, a grain like rye; Lipas, a horn. F. brizocire; G. Mutterkorn.) The ergot of rye, Secale cornutum.

Broad. (Sax. brád. L. latus; Gr. söpős; F. large, grand; I. largo; G. breit.) Wide. n.-leav'ed laur'el. The Kalmia lati-

folia.

B.-leav'ed moor wort. The Andromeda mariana.

B. lig'ament. (F. ligament large; G. tes Mutterband.) The wide expansion of breites Mutterband.) peritoneum on each side of the uterus. See Uterus, broad ligament of.

Bro'ca, Paul. A French surgeon and anthropologist, born at Sainte Fay, Department of the Gironde, in 1824, died in Paris 1880.

B.'s convolution. The third left frontal convolution of the brain; because of his observations on the convection between injury or disease of this part and the loss of articulate speech. See Gyrus frontalis tertius.

**B**.'s goniom'eter. ( $\Gamma \omega \nu i a$ , an angle; μέτρον, a measure.) An apparatus for measuring

the facial angle.

B.'s occip'ital crotch'et. A form of hook for determining the point on the face where the prolonged occipital plane impinges.

B.'s re'gion. Same as B.'s convolution. Broc'coli. (I. broccoli, pl. of broccolo, a sprout.) A name for a species of the Genus Brassica. See Brassica oleracea botrytis.

Broch'itas. (L. brochitas, from brochus, The projection of the teeth in projecting.) animals.

**Broch'os.** (B $\rho \delta \chi \sigma s$ , a nosse.) A particular form of handage, like a nosse.

Also (L. brochus, projecting; G. hervorstehend), applied to one in whom the teeth project, or who has a promiuent upper lip, or lower lip and chin.

Broch'thos. (Βρόχθος.) Τ Also, a small kind of drinking vessel. The throat.

Broch'us. Same as Broches. Bro'die, Sir Ben'jamin Col'lins. An English snrgeon, born at Winterslow, in Wiltshire, in 1783, died at Broome Park, Surrey, in 1863.

B.'s diseas'e. A term applied to a pulpy degeneration of the synovial membrane of joints, especially of the knee, described by Brodie.

Bro'dium. (G. Brühe.) Broth, or the liquor in which anything is boiled; also, any liquid vehicle of a medicine. The same as Jusculum.

B. sa'lis. (L. sal, salt.) A decoction of salt.

Broke'leak. The Rumex hydrolapathum. Bro'ma. (Βρῶμα, food. G. Speise.) Food of any kind that is masticated and not drunk. Also, a synonym of Bromine.

B. the on. (Θεός, God.) The food of the gods, i.c. mushrooms.

Bro'mal. CBr3.CHO. A thin, oily, colourless liquid, produced by acting on alcohol with bromine; it boils at 172° C. (341.6° F.), and is decomposed by alkalies into formic acid and bromoform. It has a penetrating odonr and a pungent taste. Also called Tribromaldchyde. **B. hy'drate.** CBr<sub>3</sub>.CH0+H<sub>2</sub>O. Formed

on the addition of a small quantity of water to bromal. It melts at 53° C. (127.4° F.) Produces profuse secretion from mouth, nose, and eyes, diarrheea, paralysis and convulsions, and death; the serous sacs always contain fluid. Externally it is an irritant. It has been used as a hypnotic, and in epilepsy. Dose, three grains.

Broma'lum hydra'tum. See Bromal hydrate.

Bro'mate. (F. bromate; S. bromato; G. bromsaures Salz.) A salt of bromic acid. The bromates, when heated, lose oxygen, and become bromides.

Bro'mated. Containing bromine.

B. cam'phor. See Camphora monobromata.

**Broma'tion.** (Βρωμάτιον, dim. of βρῶμα, food.) A light meal.

Bromatoec'crisis. (Βρώμα, food; εκκρισις, secretion.) A synonym of Lientery.

Bromatog raphy. (Βρωμα; γράφω,

to write.) A description of foods.

Bromatol'ogy. (Βρῶμα, food; λόγος, a discourse. F. bromatologie; I. and S. bromatologia; G. Nahrungsmittellehre.) The doctrine or consideration of food, its nature, quality, and uses.

Eromatom'etry. (Βρωμα; μέτρον, α measure.) The measure of the quantity of food necessary for each day.

Erome. Same as Bromine.

B. grass. The Bromus purgans.

B. grass, soft. The Bromus mollis.

B. grass, sterile. The Bromus sterilis. Bro'mel, O'laf. A Swedish botanist, born at Orebro in 1639, died at Götheborg in 1705.

Bromelia. (In honour of Olaf Bromel.) A Genus of plants of the Nat. Order Bromeli-

B. ana'nas. The pine-apple, Ananassa

B. pin'guin. The pinguin. The fruit is very acid; a wine is made from it; the seeds are said to be anthelmintic.

The plant is also used as a detersive in the West

Indies.

Bromelia'ceæ. (Bromelia. G. Ananasseuwachse.) A Nat. Order of epigynous petaloid Monocotyledons; or a Family of the Order Liliiyforæ, Series Corolliyforæ, Class Monocotyledones. Monocotyledonous plants often epiphytes. Leaves persistent, rigid, crowded, sheathing at base; perianth arranged in two whorls, the outer leafy, the inner petaloid; sta-mens 6; anthers introrse; ovary 3-celled; style 1; fruit a berry or a capsule, often the fleshy berries are united in the form of a cone; seeds numerous; embryo at hase of mealy alhumen.

Bromelia ceous. Having an arrangement of parts as in the Genus Bromelia.

Bromeliæ. Same as Bromeliaceæ. Bro'melworts. The plants of the Nat. Order Bromeliacea.

Brome'tum. A synonym of Bromide. B. ferro'sum. The Ferri bromidum.

B. hydrarg'yri. The Hydrargyri bromidum. B. ka'licum. The Potassii bromidum.

B. potas'sicum. The Potassii bromidum.

Bromhy'drate. Same as Hydrobro-

Bromhy'dric. Same as Hydrobromic. B. e'ther. A synonym of Ethyl bromide. Bro'mic. Of, or belonging to, bromine.

B. ac'id. (F. acide bromique; G. Bromsäure.) H.BrO<sub>3</sub>. Liquid, uncrystallizable; decomposed by heat into bromine and oxygen. Obtained from harium bromate by the action of sulphuric acid.

Bro'mica. (Broming.) Medicines containing bromine.

Bro'midated. (G. bromhaltig.) Containing bromine.

Bro'mide. A combination of bromine with a hase. Bromides are known by the giving off of bromine as a red vapour when heated with potassium chromate and sulphuric acid. In solution chlorine gives an orange solution which, on mixing with ether, becomes colourless, the ether dissolving the bromine, and rising to the surface as a red layer.

B. of ammo'nium. See Ammonii bromidum.

B. of cad'mium. See Cadmium bromide. B. of cal'cium. See Calcii bromidum.

B. of cam'phor. See Camphora mono-

B. of car'bon. See Carbon bromide.

B. of ce'rium. See Cerium bromide.

B. of e'thyl. See Ethyl bromide. B. of I'ron. See Ferri bromidum.

B. of lith'ium. See Lithii bromidum.

B. of mer'cury. See Hydrargyri bromidum.

B. of morphia. See Morphia hydrobromas.

B. of potas'sium. See Potassii bromi-

B. of so'dium. See Sodii bromidum.

B. of strych'nia. See Strychniæ hydrobromas.

B. of zinc. See Zinc bromide.

Bromidrosis. (Βρώμος, a stench; ὶἐρώς, sweat. F. bromidrose, sucur fetide; G. stinkender Schweiss.) A fetid smell of the stinkender Schweiss.) cutaneous exhalation.

B., gen'eral. This occurs occasionally

when the person is otherwise well, and when

there is no excess of secretion.

B., lo'cal. Occurs in the axilla, the feet, and the perinæum. Rigid cleanliness and disinfectants are indicated.

B. pe'dum. (L. pes, a foot.) The form accompanying excessive sweating of the feet. The odour has been supposed to depend on decomposition of the sweat in the stockings and shoes, and later it has been said to be caused by a bacterium, to which the specific name fætidum has been given.

Bro'minated. (Bromine.) Containing or charged with bromine.

B. cam'phor. The Camphora monobro-

Bro'mine. (L. bromum, from βρώμος, a stench. F. brome; I. and S. bromo; G. Brom.) Symb. Br. At. weight 79·75. Sp. gr. at 0<sup>5</sup> C. (32° F.) 3·1872. Discovered by Balard in 1826. A dark red liquid, at ordinary temm 1820. A dark red liquid, at ordinary temperatures volatile, odour suffocating; freezes at -22° C. (-7.6° F.) to a red crystalline metallic mass; holls at 63° C. (145.4° F.); slightly soluble in water, more so in alcohol, freely in other. Obtained by passing a stream of chlorine through the mother-liquor of a saline spring, and then adding ether; the magnesium bromide is decomposed, and the ether dissolves the free bromine. Caustic potash is then added; the solution evaporated, ignited, and heated in a retort; bromine is given off as a deep red vapour, which is con-densed by cold. Inhalation of its vapour produces great irritation, with profuse secretion from the eyes, nose, and fauces, with cough, hoarseness, and difficulty of breathing. Internally it acts as

an irritant, producing congestion and softening of the stomach and duodenum, with vomiting, epigastric pain, difficulty of breathing, anxiety, and collapse. Used as a caustic in cancer and in h spital gangrene and diphtheria. Internally in

bronchocele, syphilis, scrofula, and some skin diseases. Dose, two drops, largely diluted. **B. chloride.** (F. chlorure de brôme; G. Chlorbrom.) BrCl. Prepared by passing chlorine gas through bromine. It is a reddish-vellow, mobile liquid, very volatile, giving off dark yellow, strong smelling, tear-exciting vapours; a powerful bleaching agent. Used by Landolfi in cancer, both internally and externally. See Landolfi's caustic.

B., tests for. Its colour and odonr; gives a vellowish precipitate with silver nitrate, which light turns violet; turns starch orange.

Bromin'ii chlori'dum. See Bromine chlorule.

Bromin'ium, U.S. Ph. Bromine. Brom'ion. (Βρόμιον.) A kind of plaster or cataplasm. These applications were also called Acopa, from  $\tilde{a}_{\kappa o \pi o s}$ , not liable to corruption, and believed to restore from a state of fatigue and weariness to ease; it is described by Paulus Ægineta. Adams's Transl. vii, 19, p. 583, vol. iii, and Aëtius, l. xv. (Gorræus.) See Acopa.

Bro'mism. The condition produced by an

overdose or too long continuance of bromine or a bromide, consisting in dry throat, watery eyes, acne, boils, hunger, great weakness, somnolence, and loss of sexual power; the latter is by no

means always present.

Bromis'mus. Same as Bromism. Bromium. A synonym of Bromine. Brom'ley. Kent. There is a chalyheate spring here called St. Blaise's Well.

Bro'mo-chlora'tum. A disinfectant used in America, containing alum and calcium chloride 73 parts, magnesium bromide 11 parts. sodium chloride 5 parts, and lime sulphate 1

Bromochlo'roform. CCl<sub>3</sub>Br. Obtained by heating chloroform with bromine to 160° C.— 170° C. (320° F.—338° F.) It is a colourless liquid, boiling at 104 °C. (219.2° F.), and decomposing slowly in the light.

Bromo'des. (Βρῶμα, food; ώδης, a suffix signifying fulness.) Having the property of, or

being full of, nutriment.

Also (Βρώμος, a stink; ώδης.) Stinking, full of a foul smell.

Also (Bemudonar, to bray), bellowing, crying with a loud wail.

Bromoform. (F. bromoforme, brome-theride, bromoformyl; S. bromoforme; G. Bro-moform.) CHBr<sub>3</sub>. Sp. gr. 2.9. A volatile liquid, oleginous and inflammable; decomposed by caustic potash into potassium chloride and potassium formate. Prepared by the action of bromine and an alkali on alcohol. It has been used as an anæsthetic, but is irritating.

**Bromog'raphy.** (Βρῶμα, food; γράφω, to describe.) A description of food.

Bromohy'drate. Same as Hydrobro-

Bromohy'dric. Same as Hydrohronic.

B. ac'id. Same as Hydrobromic acid.
Bromont. France; Departement du Puy de Dôme. Cold, weak, bicarbonated waters, with a trace of iron.

Bro mous. (Βρῶμος, a stink.) Stinking,

Bro'mum. A synonym of Bromine.

B. chlori'dum. Bromine chloride. Bro'murated. Containing bromine.

Bro'muret. Same as Bromide. Bromuretted. Containing bromine.

Bromure tum. (Bromine.) A bromide. B. fer'rl, Belg. Ph. The Ferri bromidum. B. ka'licum. (Kali.) Potassium bromide.

B. potas'sicum. Potassium bromide. B. so'dieum. Sodium bromide.

**Bro'mus.** (Βρόμος; from βιβρώσκω, to eat.) A Genus of the Nat. Order Graminaceæ. Spikelets panieled, awned, with three or more perfect flowers; stamens 2; styles 2. Also, old name for the oat.

B. arven'sis, Lunn. (L. arvum, an arable field.) A decoction of the roots is said to be vermicide.

**B.** catharticus. (Καθαρτικός, purgative.) Inhabits Chili. Roots purgative.

B. cilia tus. (L. cilium, an eyelash.) The B. purgans.

B. gla'ber. (L. glaber, smooth.) The Triticum repens.

B. mol'lis. (L. mollis, soft.) Inhabits England. Seeds said to produce giddiness in man, death in poultry.

B. pur'gans. (L. purgans, purging.)
Found in North America. Root said to be actively purgative and emetic.

B. secali'nus. (L. secale, rye.) Said to

be a narcotic poison, but probably incorrectly.

B. sterilis. (L. sterilis, barren.) Seeds are said to be vermifuge.

B. temulent'us. (L. temulentus, intoxieated.) The Lolium temulentum.

Bronchade'nes. (Βρόγχια, the bronchial tubes; ἄδην, a gland.) The bronchial glands.

Bronchadeni'tis. (Bronchadenes. F. bronchadenite; G. Bronchialdrüsenentzündung.) Inflammation of the bronchial glauds.

Bronchadenoscir'rhus. (Bronchadenes; scirrhus. F. bronchio-scirrhe or -squirrhe.) Seirrhus of the bronchial glands.

Broncharc'tia. (L. bronchia, the bronchial tubes; arcto, to close.) Contraction or narrowness of a bronchus or of a bronchial tube.

Bronchec'tasis. Otherwise Bronchiectasis.

Bronch'i. (L. plural of bronchus, the windpipe.) Sometimes used for the two primary divisions of the trachea, each of which is called a bronchus; sometimes used to denote the bronchial tubes.

B., dilata'tion of. (F. dilatation des bronches; G. Erweiterung der Bronchien.) Same as Bronchiectasis.

B., lob'ular. (G. lobulare Bronchien.) Same as Bronchiole.

B., plug'ging of. The complete filling up of the smaller bronchial tubes with viscid corpusculated secretion, with consequent degeneration of the bronchial wak.

B., ulcera'tion of. Ulceration of bronehial mucous membrane may arise from inflammation of mucous glands, from variolous pustules, from syphilis, from tubercular disease, from acute bronehial inflammation occurring in enteric or puerperal fever, it may be the result of pneumonic abscesses, of purulent infection or of gangrene of the lungs, and may be produced by the pressure of an ancurysm, a tumour, or a plcuritic effusion.

Bronch'ia. (Βρόγχια, the bronchial tubes. G. Luftröhrenäste.) The bronehial

The branches or divisions of the trachea are never termed bronchi by Celsus and Aurelianus, but always bronchia.

Bronch'tal. (L. bronchialis, bronchicus, F. bronchique; l. bronchiale; S. bronquial; G. bronchial, Luftrohrig.) Relating to the bronchi or bronchial tubes.

B. ar'teries. (G. Luftröhrenschlagadern.) Usually one on the right side and two on the left, arising separately or conjointly from the thoracic aorta; they pass to the back of their respective brouchus, and accompany it by their branches in its repeated subdivisions. They are the nutritious arteries of the lung, supplying also the bronchial glands and in part the esophagus.

B. asth ma. Asthma with bronchitis, or

excessive bronchial discharge.

Also, a synonym of ordinary spasmodic asthma. B. breathing. (F. souffle bronchique; G. Bronchialathmen.) The respiratory sound heard in health over the bronchi on each side of the seventh cervical, and the two or three upper dorsal vertebræ in most people, and often at the sternal end of the clavicle. The sounds of inspiration and expiration are separated by a distinct interval. It differs only in intensity from the sound heard over the trachea, but in the quality of hollowness from vesicular breathing.

Bronchial breathing may be heard in any part of the chest, where it is not naturally present as a consequence of consolidation of the lung over a bronchial tube or a small cavity by pneumonic or other deposit, or by fluid in the pleura when not too great in quantity. Some have supposed that the cause of bronchial breathing is the movement to and fro of air in the bronchial tubes, where it is heard; others that the sound is laryngeal in origin, made intense by consonance in the brouchial tubes; still others, and these the majority, that the noise is made by the air passing through the narrow chink of the glottis, and conducted down the air-tubes. The consolidation of structure adds directly to the conductibility of the lung tissue, and indirectly aids in the recognition of sounds in the bronchial tubes by the destruction of the vesicular murmur.

B. casts. (G. Abdrücke der Bronchialröhren.) The exudation product of Bronchitis, plastic.

B. catarrh'. A very mild form of bronchitis affecting only the bronchi and the larger bronchial tubes. See Bronchitis, acute. B. cells. The air-cells of the lung.

B. col'lapse. A synonym of Pulmonary collapse; and also of Atelectasis.

B. concre'tion. (L. concresco, to grow together. G. Luftrohrenstein.) Same as Broncholith.

B. cough. The reverberant character of the sound of the cough heard over a patch of consolidated lung.

B. expectora'tion. A term specially given to the expectoration of asthma, asphyxia, and such like grave interferences with breathing when, from a sort of churning process in the bronchial tubes, the secretion is much mixed with air in bubbles.

B. flux. (L. fluxus, a flow.) Same as Bronchorrhæa.

B. glands. (G. Bronchialdrüsen, Luft-röhrendrusen.) Ten or twelve lymphatic glands lying in the interspace of the brouchia and on the larger bronchial tubes. In early life they are pale red, afterwards they become grey, and subsequently often black.

B. hæm'orrhage. Bleeding from the surface of the bronchial mucous membrane, as in

catarrb.

The term has also been specially applied to hæmoptysis from congestion of the bronchial capillaries, produced by incompetency of the tricuspid valve.

B. mus'cles. The circularly arranged fasciculi of unstriped muscular fibres which line in a more or less continuous fashion the bronchial tubes; in the bronchi muscular fibre is chiefly distributed in the space between the free

ends of the cartilages,

B. nerves. The nerves of the bronchi arise from the recurrent branches of the pucumogastric; sympathetic filaments are also found.

The uerves of the bronchial tubes are derived

from the posterior pulmonary plexus.

B. phthisis. (G. Luftrohrenschwind-sucht.) Tuberculosis of the bronchial glands, in children chiefly, generally following a severe or several milder attacks of broughitis. The cough becomes more frequent and paroxysmal; the breathing gets more oppressed; the superficial veins of the thorax are dilated; after several intermissions emaciation progresses rapidly, signs of tuberculous disease of lungs or other viscera become prominent, and the child dies from these, or occasionally recovery takes place slowly; caseous matter may occasionally be seen in the expectoration. Hamorrhage has been known to occur. The bronchial glands are found in a state of caseous or tuberculous degeneration; some of them are softened and excavated. Ulceration of neighbouring structures may have taken place, and in the lnngs or other organs tuberculous disease is advanced.

B. plex'us. The Pulmonary plexus.

B. pol'ypi. Fibrinous casts of a greater or

less extent of bronchial tubes, consisting of a network of fibrin enclosing leucocytes. See Plastic bronchitis.

B. respira'tion. See B. breathing. B. sep'tum. See Bronchus, septum of. B. sound. Normal B. breathing. B. spasm. The condition of spasmodic

- contraction of the muscular coat of the bronchial tubes, which is the essence of the paroxysm of asthma.
- **B. steno'sis.** (Στενόω, to contract.) See Bronchiostenosis.
- B. tu'bercle. Small miliary tubercular deposits in the mucous membrane or the walls of the bronchial tubes, occurring in cases of general tuberculosis, phthisis, and laryngeal phthisis.
- B. tubes. (G. Luftröhrenäste.) divisions and subdivisions of the primary bronehi; the division is usually dichotomous, and is continued until a pulmonary lobule is reached, each of which is supplied by a small bronchial tube, which undergoes further division into lobular passages, which have opening out from them the air-cells. The larger brouchial tubes have the same structure as the bronchus of each side, but on entering the lung the cartilages consist of plates and imperfect rings in all parts of the tube, and they cease in bronchial tubes of less than half a line in diameter. The fibrous coat becomes thinner as the tubes become smaller. The muscular coat completely surrounds the

tubes, and continues to the smallest subdivisions. The clastic longitudinal fibrous bundles are found in all the sizes. The epithelium of the mucous membrane is columnar and ciliated, with here and there goblet cells. Mucous glands of various sizes are found in all the bronchial tubes. The bronchial tubes are developed in the interior of the primitive lung cavity in the form of excal tubes.

B. ulcera'tion. Ulceration of the mncons membrane of the bronchial tubes, due either to catarrhal inflammation or to tubercle; syphilitie ulceration is by some believed to occur. See

Brouchi, ulceration of.

B. veins. (G. Bronchialblutadern.) They arise in the smallest subdivisions of the bronchial tubes, and follow their course to the bronchi; the right vein opens into the azygos vein, the left into the superior intercostal vein.

B. voice. Same as Bronchophony. Bronchia'lis glan'dula. (L. dim. of glaus, an acorn.) A synonym of the Thyroid gland.

Bronchiarc'tia. (L. bronchia, the bronchial tubes; arcto, to narrow.) Contraction of the bronchial tubes. See Bronchiostenosis.

Bronchic. (L. bronchia.) Belonging to

the bronchial tubes.

Bronchiec tasis. (Βρόγχια; ἔκτασις, dilatation. F. bronchectasie; G. Erweiterung der Bronchen.) Dilatation of the bronchial tubes. Saccular, cylindrical, and fusiform dilatations have been described. The commonest cause is chronic bronchitis, which produces relaxation of the walls and increased pressure from within, by reason of the cough; atelectasis and lobular pneumonia are believed to be causative agents. The diagnosis is often difficult; the symptoms are those of phthisis, with copious muco-purulent expectoration, often bloody, and not unusually fetid.

Bronchii'tis. Same as Bronchitis. **Bronchiocri'sis.** (Βρόγχια, the bronchial tubes; κρίσις, the turning-point of a disease.) Paroxysmalattacks resembling hooping-

cough occurring in tabes. (Roth.)

Bronch'iole. (L. dim. of bronchia.) A small bronchial tube, less than 1-5 millimeters in diameter, which is destitute of cartilage, but possesses clastic fibre and muscular tissuc.

**Bronchiopneumonia.** (Βρόγχια, the bronchial tubes; πυεύμων, the lung.) Inflammation of the lungs, beginning in the bronchial membrane, and afterwards involving the parenchyma of the lung.

Bronchiorrhæ'a. See Bronchorrhæa. Bronchiosteno'sis. (Βρόγχια; στένωσις, a being straightened, from στένω, to make narrow. G. Verengerung der Bronchen.) Narrowing of the bronchi or of the bronchial tubes from pressure or from thickening of mucous membrane.

Bronchis'mus. (F. bronchisme.) A term used by Marshall Hall to indicate spasm of the bronchial tubes.

Bronchit'ic. (Βρόγχια.) Of, or belonging to, bronchitis.

B. asth'ma. Same as Bronchial asthma. B. dyspnœ'a. Dyspnæa or difficulty of breathing arising from bronchitis, with copious secretion.

Bronchi'tis. (Βρόγχια. F. bronchite, catarrhe pulmonaire; I. bronchite; S. bronquitis; G. Lungeneuturrh, Bronchialentzundung,

Luftröhrenentzündung.) Inflammation of the bronchial mucous membrane, with cough, more or less fever, alteration of voice, soreness of chest, and, subsequently, expectoration of cell-containing mucus, and then of a muco-purulent, or sometimes of a plastic, secretion.

B., acu'te. (G. acute bronchialcatarrh.)
The disease ranges from a very trivial malady, which may be called bronchial catarrh, to a very severe disorder, largely dependent on the minuteness and the extent of the tubes involved. In severe cases the initiatory fever is often intense, the cough accompanied with considerable pain and dyspnœa; soon secretion occurs, at first seanty, thin, frothy, and saltish, sometimes bloodstreaked, then yellowish, and, lastly, opaque, and often muco-purulent, and slow recovery occurs. Death may take place early, from the general tumefaction of the mucous membrane producing asphysia, or, in the same manner, later on, from excessive secretion and inability to get rid of it, or a typhoid condition may occur, with a feeblo irregular pulse, a cold clammy surface, and delirium. The natural respiratory murmur is obscured by sibilant, sonorous, and crepitant rhonchi. The pathological changes are: redness, swelling, and injection of the mucous membrane, sometimes ulceration, often infiltration of peribronchial connective tissue.

B., acu'te catar'rhal. Same as B., acute.

B., asthen'ic. ('Ασθενικός, weakly.) Α form of chronic bronchitis with pneumonic conditions, and often cardiac complications.

Also, called peri-pneumonia notha.

B., cap'illary. (F. bronchite capillaire.)
The form of bronchitis in which the ultimate divisions of the bronchial tubes in the whole or the greater part of the lungs are inflamed. It is much more common in children than adults, and is very often fatal. There is considerable fever, with flushed face, hacking cough, and dyspnea, at the beginning; then the face becomes livid, the cough less frequent, but often paroxysmal, expectoration scanty, being mucus tinged with blood, and occasionally fibrinous shreds, more oppression of the breathing, and with the increase of asphyxial symptoms, somnolence, and death often in from five to eight days. The physical signs are those of bronchitis, with much subcrepitant rhonchus, and increased, or, at least, not decreased, resonance. The swelling of mucous membrane, which in a large bronchial tube is of small consequence, becomes in these minute channels of grave moment, and after death they are often found closed from engorgement of the lining membrane and accumulation of secretion; this is generally purulent, and sometimes fibrinous.

B., carbona'ceous. (L. carbo, coal.) A term for Miners' phthisis.

B., catarrh'al. Same as Bronchitis. B., chron'ic. (F. bronchorrhèe chronique; G.chronische Bronehialcatarrh.) Neglected acute attacks or recurrence of the disease produces such a liability that a bronchial attack comes on every winter, each one more troublesome than the last. Emphysema, dilatation of the bronchial tubes, dilated right heart, serous effusion in connective tissne, and subsequent disorder of liver and kidney, is not infrequently the future history. The expectoration is generally muco-purnlent, sometimes fetid, occasionally absent. The percussion note is duller than natural, vesicular

breathing is weak, sibilant and sonorous rhonchi are heard.

B., convul'sive. A synonym of Hoopingcough

B., croup'ous. Same as B., plastic. B., diphtheritic. The extension of diphtheria to the bronchi with the consequent lung

B., dry. A term given to those eases of chronic broughitis in which the secretion from the

mucous membrane is almost entirely wanting. B., epidem'ic. (Επιδήμιος, prevalent

amongst a people.) A synonym of Influenza. B., exu'dative. (L. exsudo, to sweat out.)

Same as B., plastic.

B., fe'tid. Those cases of chronic bronchitis in which the expectoration is copious, often bloody, and very offensive; supposed to be produced by remaining in a dilated tube. The odour has been known to depend on butyric acid.

**B.**, fi'brinous. (Fibrin.) Same as B.,

B., gout'y. A term applied to cases of bronchitis which appear to be caused by a gouty condition of body, and which thus have a constitutional origin.

B., mechan'ical. Bronchitis caused by the inhalation of dust, metallic particles, fine sand from a grindstone, cotton dust, and such

B., mem'branous. Same as B., plastic.

B., plastic. (Ilkartikos, fit for moulding. F. pneumonie fibrincuse, bronchite fibrineuse.) The expectoration of more or less extensive, solid, or hollow casts of the bronchial tubes in cases not of diphtheria or croup. The casts are composed of a fine network of fibrin, enclosing lencocytes and red corpuscles. The preliminary symptoms are those of local pneumonia; hæmoptysis is not unusual, cough generally suffocative. Attacks often return repeatedly, and, after some time, they may cease, or phthisis or pueumonia of a low form may supervene. The disorder is more common on the continent of Europe, and apparently much more that then it is related. fatal than in England.

B., pot'ters'. Called, locally, Potters' asthma. A form of chronic bronchitis common among the workers in the potteries, produced by unhygienic conditions, such as the cold, bleak climate, the dampness of the material in which many of them work, the dust which others are constantly breathing, the close, ill-ventilated workrooms of others. There is first oppression at the chest, then dyspnæa, afterwards cough, at first often dry, occasionally hæmoptysis.

B., pseudomem branous. (Ψευδής, false; L. membrana, a skin.) The same as B., plastic.

B., pu'trid. Same as B., fetid. B., rheumat'ic. An attack of bronchitis, which is supposed to depend on a rheumatic disposition, or on an attack of acute rheumatism.

B., se'nile. (L. senilis, belonging to old people. G. Bronchiulenzündung der alter Leute.) A term applied to subacute or chronic forms of bronchitis occurring in aged persons.

B., suffocative. A severe form of capillary bronchitis occurring in new-born children, and producing much dyspnæa and blueness of aurface.

E., sum'mer. A term for Hay asthma. B., vesic'ular. Same as Vesicular pneumonia.

Bronch'ius. (Βρόγχια.) The sternethyroid muscle.

B. mus'culus. The Sterno-thyroideus muscle.

**Bronchlemmi'tis.** (Βρόγχος, the windpipe; λέμμα, a sheath or membrane.) The name given to croup in Good's system.

Bronchoægoph ony. (Βρόγχος; ἄιξ, a goat; φωνή, a voice.) Tremulous broncho-

phony.

Bronchoc'ace. (Βρόγχια, the bronchial tubes: κακός, bad.) Chrome bronchitis.

B. infant'ilis. (L. infantilis, belonging to infants.) Capillary bronchitis.

Bronchocatar'rhus. (Βρήγχια; κα-

τάρροος, a running down.) Bronchial catarrh. **Bronch ocele.** (Βρόγχος, the windpipe; kilan, a tumour. F. bronchocele; I. and S. broncocele; G. Kropf.) Same as Goitre.

B., acu'te. Same as Goitre, acute.

B., ancurysmatic. Same as Goitre, pulsating.

B., cys'tic. Same as Goitre, cystic.

**B.**, endem ic. (Έν, among; δημος, a people.) A synonym of Goitre.

B., exophthal'mic. Same as Goitre, exophthalmic.

B., lymphat'ic. A synonym of ordinary Goitre.

B., pul'sating. Same as Goitre, pulsating.

B., scir'rhous. A term given to cancer of the thyreid gland.

B., sim'ple. Same as Goitre, simple.

B., vas'cular. Same as Goitre, pulsating. Bronchocephalitis. (Βρόγχια; κεφαλή, the head.) A synonym of Hooping-

Bronchohæmorrha'gia. ( $B\rho \delta \gamma \chi \rho s$ , the windpipe; αἰμορραγία, hæmorrhage.) An exudation of blood from the surface of the bronchial membrane.

Broncholemmi'tis. Same as Bronchlemmitis.

Bronch'olith. (Βρόγχια; λίθος, a stone.) A calcareous deposit in, or degeneration of, a bronchial gland.

**Bronchomyco'sis.** (Βρόγχια; μύκης, fungus. G. Lungenpilzkrankheit.) The production of parasitic fungi in the bronchial tubes. Bacillus subtilis, Oidium albicans, and Aspergillus glaueus, have been found in the bronchial tubes in many birds and mammals. There is no evidence to prove that these growths are diseaseproducing in man.

Bronchoparal'ysis. (Βρόγχια; παράλυσις, paralysis.) A synonym of Asthma.

Bronchoph'onism. Same as Broncophony.

**Bronchoph'ony.** (Βρόγχος, the windpipe; φωνή, the voice. L. bronchophonia; F. and G. bronchophonie; I. bronchofonia; S. broncofonia.) The clear resonance of the voice in the bronchi heard by means of the stethoscope. Heard in health over upper part of sternum and in interscapular region, and in greatly lessening degree in the further parts of the ehest. Dr. Bristowe points out that bronchophony is the offspring of laryngeal intenation; pectoriloquy of oral articulate sounds. Bronchophony is produced in any part of the chest where it is not natural when the lung tissue over the brenchus is consolidated from any cause, and over cavities; it is due to increased conducting or reflecting capacity of the

structure of the lung. This is called by Lacnnec structure of the mag, bronchophonie accidentelle.

Bronchophony as an arms to the arms and the arms and the arms and the arms arms are arms and the arms are arms.

unnatural condition. See under Bronchophony.

II., pectoriloquous. (L. pectus, the breast; loquor, to speak.) A term for pectoriloquy.

B., sniffing. A form which is characterised by a snitting accompaniment.

B., strong. A synonym of Pectoriloguy.

B., whis'pered. Bronchophony heard when the patient whispers; it is often clearer than vocal bronchophony.

**Bronch'oplâsty.** (Βρόγχια; πλάσσω, to form.) The operation for closing a tracheal fistula, which may be done either by paring the edges, and then inserting sutures or transplanting

a sip of skin to fill up the gap. **Bronchopleur'isy.** (Βρόγχια; πλευρῖτις, pleurisy.) A disease characterised by the simultaneous occurrence of bronchitis and pleu-

Bronchopneumo'nia. See Bronchio-

pneumonia Bronchorrhæ'mia. (Βρόγχια; ἡέω, to flow; alua, blood.) Hæmorrhage from the

bronchi or bronchial tubes. Bronchorrha gia. (Βρόγχια; ἡήγ-νυμι, to burst forth.) Hamorrhage from the

bronchi or bronchial tubes. **Bronchorrhœa.** (Βρόγχια, the bronchial tubes; ρέω, to flow. F. bronchorrhee, pituite, flux muqueux; I. and S. broncorrea; G. Schleimfluss.) A form of chronic bronchitis where the expectoration is very profuse, albuminous, and free of air, and either thin and watery, or thick and glutinons; the cough is paroxysmal, and often accompanied by great dyspnæa. It is frequent in old persons who have had repeated attacks of bronchitis, especially when there is some cardiao trouble.

B., acute'. Subacute bronchitis. B., fe'tid. Fetid bronchitis.

**Bron'chos.** (Βρόγχος, the windpipe.) Suppression of the voice from a entarth. Former name for a catarrh chiefly affecting the

Bronchos tasis. (Βρόγχια; στάσις, a standing.) Bronchitis

Bronchosten'ia. (Βρόγχια; στενός, Narrowness of the bronchi or the narrow.) bronchial tubes.

Bronchosteno'sis. Same as Bronchrostenosis

**Bronch'otome.** (Βρόγχος, the windpipe; τομώ, a ent, a knife. F. bronchotome; I. and S. broncotomo; G. Bronchotom.) of flat trocar, consisting of a blade, double-edged near to the point, enclosed in a silver cannula. Used for opening the larynx or trachea.

Bronchotomy. (Βρόγχος, the wind-pipe; τέμμω, to cut. F. bronchotomie; I. and S. broncotomia; G. Luftröhrenschnitt.) The operation of opening the air-passages for the removal of a foreign body, or for the admission of air. It is called thyrotomy when the opening is made by dividing the thyroid cartilage; laryngotomy when the opening is made through the cricothyroid membrane; laryngotracheotomy when made through the cricoid cartilage and the upper rings of trachea; and tracheotomy when the trachea is opened below the isthmus of the thyroid gland.

Bronchoty'phus. (Βρόγχια; typhus.)

A term applied to those cases of typhus fever in which there is concomitant bronchial affection.

Bronchovesic'ular. Relating to the bronchial tubes and air vesicles.

B. respiration. The respiratory sounds heard in the chest.

**Bronch'us.** ( $B\rho\delta\gamma\chi\sigma$ s, the windpipe. F. bronche; I. bronchi; S. bronquios; G. Luft-rohrenast.) This name is given to each of the two divisions of the trachea. The bronchi are composed of an elastic framework of cartilaginous bands, surrounding the tube in front and at the sides, but wanting behind, united to each other, and the tube completed behind by an extensible fibrous membrane, which encloses at that part a layer of unstriped muscular fibre and longitudinal bundles of elastic tissue. They are lined by a smooth, pale, rosy, mucous membrane, having a distinct basement membrane and layers of epithelial cells, of which the outermost are columnar and ciliated, and send processes down to the basement membrane, which join with processes of the connective-tissue corpuscles of the submucous tissue; between these processes spindle-shaped cells are found; other irregular cells are found in the deeper layer, and goblet eells are frequently seen. They are formed by end-bulgings of the tube, which is separated from the primitive alimentary canal to form the trachea.

D., left. (G. linke Luftrohrenast.) Narrower and longer and more oblique than the right; has nine to twelve cartilages, and is one and three quarter inches long; passes below the arch of the aorta, to enter the root of the left lung opposite the fifth dorsal vertebra; it crosses the descending aerta and the esophagus, and has the left pulmonary artery at first above and then in front of it.

B., right. (G. rechte Luftröhrenast.) Wider and shorter and more horizontal in course than the left; has six to eight cartilages, and is one inch long; enters the right lung opposite the fourth dorsal vertebra, has the azygos vein enrying round it, and the right pulmonary artery at first

below and then in front of it.

B., sep'tum of. The point of junction of the inner walls of the bronehi looking from the inside of the trachea. As the left is the smaller bronchus the septum is more on that side, and the right bronchus is thus more in the line of the trachea, and more likely to receive a foreign hody.

Bron'do. Raw beef seasoned with a mixture of spices, aouazè. Much eaten in Abyssinia.

Bron'gniart's sys'tem of plants. Brongniart divided plants into Cryptogamæ, including Amphigenæ (Thallogens) and Acrogenæ; Phawrogame, including Monocotyledones, which are subdivided into Albuminose and Exalbuminose; Dicotyledones divided into Angiospermæ and Gymnospermæ. Under the Angiospermæ are included Gamopetalæ subdivided into Perigynæ and Hypogynæ; and Dialypetalæ, subdivided also into Perigynæ and Hypogynæ.

Broni'a. Italy; in the Apennines. A mineral water containing small quantities of sodium and calcium carbonate.

Bron'tes. (Βρουτή, thunder.) Another name for the Belemnite, or arrow-stone.

Bron'tolith. (Βρουτή, thunder; λίθος, a stone; from the explosion which accompanies or precedes its fall.) An aërolite or meterooBrontol'ogy. (Βροντή; λόγος, a dis-

course.) A treatise on thunder.

Bronze. (I. bronzo. L. as; Gr. xakkos; F. bronze; S. bronce; G. Erz.) An alloy of copper and tin, the latter usually in the proportion of 10 per cent. or thereabouts. Sometimes zine and a little lead are added.

B. age. (G. Bronzezeit.) That period which by some archeologists is believed to intervene between the stone age and the age of

iron

Bronz'ed. (Same etymon.) Having the

appearance or colour of bronze.

B. skin. A term for Addison's disease, from the discolouration of skin which generally accompanies it.

Brood. (Sax. brod.) That which is bred

or hatched, offspring.

- B. cells. A term given to those animal cells which develop other cells in their in-
- B. or'gan of Bar'kow. A vasenlar plexus, which develops during incubation, in the abdominal walls of birds.

Brook. (Sax. broc, a marsh.) A small stream.

B. weed. The Samolus valerandi. Brook'lime. The Veronica beccabunga.

Broom. (Sax. brom, from bremen, to prick. F. genet; I. ginestra; S. ginesta; G. Ginster.)
The Cytisus scoparius.

B., Af'rican. The Aspalathus.

- B. ash'es. The ashes from burnt broomstalks. Formerly used as a diuretic.
  - B., but cher's. The Ruscus aculcatus.
  - B., clo'ver. The Baptisia tinctoria. B., com'mon. The Cytisus scoparius.

  - B., decoction of The Decoctan scoparii.
    B., dy'ers'. The Genista tinctoria.
    B., in'digo. The Baptisia tinetoria.
    B. juice. The Succus scoparii.
- B. juice. The Succus scoparii.
  B. pine. The Pinus palustris.
  B.-rape. The Genus Orobanche.
  B.-rape, Virgin'ian. The Epiphegus vir-
- B., salt of. Obtained by dissolving broom ashes and evaporating the clear solution; it consists chiefly of potassium carbonate. Dinretic and antacid.
  - B., Span'lsh. The Sarothamnus junceus. B. tops. The same as Scoparii cacumina. B., yellow. The Baptisia tinctoria. Broom'rapes. The plants of the Nat.

Broom rapes.

Order Orobanchaceæ. **Bro**'simum. (Βρώσιμος, eatable.)

Genus of the Nat. Order Artocarpaeva.

B. alicas'trum. (L. alicastrum, a kind of spelt.) The tree which yields the bread-nut, which, when roasted, is used instead of bread. The milky juice is poisonons.

**B.** galactoden dron. (Γάλα, milk; δίν-δρον, a tree. G. Kuhbaum.) The Palo de vaça, or cow-tree, of South America. Grows on the dry slopes of the Cordilleras. Its juice is milky and nutritious.

**B. spu'rium.** (L. spurius, false.) Milkwood. Hab. Jamaica. The milky juice is poisonous, and is made into birdlime.

B. u'tile. (L. utilis, nseful.) The B. galactodendron.

Brossma. A Genus of the Nat. Order Ericaceæ.

B. coccin'ea. (L. coccineus, scarlet.) Berries succulent, esculent.

Brossard'iere. France. Chalybeate and aperient waters.

Brotera corymbo'sa. The Cardopatium corymbosum.

Broth. (Sax. broth, from breowan, to hrew.) A weaker sonp, usually with vegetables added.

Mutton broth contains 33 per cent., beef broth 27 per cent., and pork broth 19 per cent. of the weight of raw meat and bone. The loss on knuckle of mutton is 30 per cent. on the meat, and 14 per cent, on the bone.

Brother. (Sax. brother. L. frater; Gr. αδέλφος; F. frère; I. frate; G. Bruder.) A son of the same father and mother.

B., u'terine. (L. uterus, the womb.) A son of the same mother by another father.

Brotterode. Germany; in Thuringia. A small town at the foot of the Inselsberg, 1780 feet above sea level. Recommended as a cure place for phthisis.

Brou. (F. brou. I. mallo; G. Nussschale.) The green envelope of the walnut. Au extract is used as a stomachic and vermifuge.

Brough. Same as Brow in Scotland.

Brough'ton. Yorkshire. A sulphur spring Erough ton. containing sodium chloride. The Hydnum ouri-

scalvium.

Brous'sa. Turkey. Mineral waters from several springs, containing sodium, magnesium, and calcium chloride, sodium and calcium sulphate, free carbonic acid, nitrogen, and a little oxvgen.

Broussais, François Joseph Victor. A French physician, born at St. Malo in 1772, died in 1838.

**Brous'saïsm.** (Broussais.) A general term given to the doctrines taught by Bronssais. They were marked by an appeal to physiology in the explanation of morbid processes, and consisted mainly in the contention that irritation or excitation was the essential cause of disease, and especially an irritation of the gastro-intestinal mucous membrane.

Brous'saist. A believer in the doctrines

of Broussais or Broussaism.

Broussone'tia. A Genus of the Nat Order Morace or Artocarpacea.

**B. papyrif'era.** (L. papyrus, paper; fero to hear.) The paper-mulberry tree. The inner bark is used for making paper in China and the South Sea Islands.

B. tincto'ria. (L. tinctorius, belonging to a dyer.) Hab. South America, West Indies. The fruit is cooling and astringent, and forms an excellent gargle in nlceration of the mouth and throat. A salt is prepared from the ashes, which is said to afford immediate relief in gout and rheumatism.

Brow. Scotland; near Ruthwell, in Dum-friesshire. A mild chalybeate water.

**Brow.** (Sax. bru.) Used indefinitely, sometimes meaning the forehead, sometimes the eyebrow, sometimes this and the superciliary ridge.

B.-a'gue. Strictly supra-orbital neuralgia of malarious origin. Now used as synonymous with Hemicrania or Megrim.

B. pang. A synonym of Hemicrania.

B. presenta tion. The position of the child in labour when the forehead occupies the front of the axis of motion.

Browal'lia. A Genns of the Nat. Order Scrophulariacia.

**B. demis'sa.** (L. demissus, low lying.) Hab. Caraceas. A decoction is used in ringworm and other skin diseases.

Brown. (Sax. brún. F. brun; I. bruno; G. braun.) The name of a colour.

B. at rophy of heart. See Heart, brown atrophy of.

The inemicated inice of the Events of the Events

**B.** gum. The inspissated juice of the Eucalyptus resinifera.

B. gum-tree. The Eucalyptus resinifera.
B. indura'tion of lung. See Lung, brown induration of.

B. mix'ture. The Mistura glycyrrhizæ composita, U.S. Ph.

B. mush'room. The common name for the Cortinarius cinnamomeus.

B. races. The brown races of Europe are characterised by dark eyes, absolutely black hair, and fair skin, which readily becomes a warm bronze tint by exposure to the sun. They include the Circassian, the Pelasgian or Albanian, the Ligurian, and the Basque races, with the Gipsics. In Africa the brown races are represented by the Berber and Semitic and many others; in India by the Rajpouts and Brahmans; in Persia by the Iranians.

B.-red. A synonym of Colcothar. B. stud'y. Mason Good's Aphelxia otiosa.

**B. study.** Mason Good's Aphelvia otiosa. **Brown, John.** The founder of the Brunoman system. Born at Lintlaws or Preston, Betwickshire, in 1735, died in London in 1788.

Brown, Robert. A botanist, born at Montrose in 1773, died in London in 1858. After him the movement ealled Brownian is named.

Brown'ea. A Genus of the Nat. Order Leguminosa.

**B. latifo'lia.** (L. lutus, broad; folium, a leaf.) Hab. West Indies. Used as a styptic.

Brown'ian move'ment. A molecular motion, first described by Robert Brown, and named after him, although noticed by many previous observers. Granules when in a liquid of some viscosity are inmobile, but when suspended in the limpid or watery fluid they are subjected to some influence as yet unknown, it may be currents in the fluid, or mutual attraction, or electrical conditions, which produce irregular movements of approximation and divergence. Organic and inorganic particles are equally affected. It has been suggested that there is an intimate connection between this movement and osmosis; in this instance movable solids move in a liquid, in the other a fixed solid causes currents in the liquid.

Brown'ism. See Brunonian system. Brown'ist. Same as Brunonian.

Browns'town. Ireland; near Kilkenny. A disused chalybeate water.

Brown'wort. The Scrophularia aquatica and S. nodosa.

Bru'ca. Italy; near Catania. A mineral water, containing calcium and sodium carbonate, alumina, and hydrogen sulphide.

Bru'cca. (From Bruce, the traveller in Abyssinia, who brought the seeds from that country.) A Genns of the Nat. Order Simarubuceæ.

B. antidysenter ica. ('Avri, against:

B. antidysenterica. ('Aυτί, against; ενσευτερία, dysentery.) An Africau tree, called in Abyssinia Wooginoos, having a bitter and astringent bark, esteemed as a remedy in dysentery and diarrhea. It was at one time supposed that this tree yielded false angustura bark, but it is now known that the real source is Strychnos nux remnica.

B. ferrugin'ea. (L. ferrugineus, of the colour of iron rust.) Samo as B. antidysenterica.

B. quassiol'des, Ham. (Quassia; slõos, likeness.) A Himalayan species. Bark and root used as a bitter.

B. sumatra'na. Hab. Sumatra, China. Used in dysentery.

Bruch, ag'gregate glands of. See B., clusters of.

B., clus'ters of. Lymph follicles found first in the lower animals, but said to exist in man in the conjunctiva of the lower eyelid, near the inner canthus, and beneath the membrana nictitans. They are closed sacs, surrounded by a capillary plexus, and in their neighbourhood are found lymphoid canals with lymph cells. They are the trachoma glands of Henle.

R., mem'brane of. A vitreous lamina, stated by Bruch and Faber to cover the posterior surface of the iris, like that on the inner side of the choroid. Alt deuies its existence in man.

Bru'cin. (Mod. L. brucia. F. brucine, vomicine; 1. and S. brucina; G. Brucin.) C<sub>22</sub>H<sub>26</sub>N<sub>2</sub>O<sub>4</sub>. Colourless, efflorescent, rhombic prisms or lamellæ, containing four equivalents of water; easily soluble in alcohol, slightly in water, insoluble in ether. Strong sulphurie acid turns its solutions red, then yellow and greenish. Nitric acid forms a deep red, changing to violet on the addition of stannous chloride. The salts are very bitter, and have the same poisonous action as those of strychnin, but are not so active. Brucin is contained, along with strychnin, in the bark of Brucea antidysenterica, and the bark and seeds of Strychnos ignatii. It is separated in the preparation of strychnine by cold alcohol.

B. sul'phate. Used in intermittent fevers.

B. solu'tion. A solution of one gramme of brucin in 1000 c.c. of distilled water. Used in testing for nitrie acid in water.

Bruci'num. Same as Brucin.
Bruck'e's test for sug'ar. A test for traces of sugar in the urine. The urine is precipited with a proportion of the delivery

for traces of sugar in the urine. The urine is precipitated with normal acetate of lead, filtered, then basic acetate of lead added as long as any precipitate is formed, again filtered, and then precipitate with ammonia. The precipitate is washed with water, dried between bibulous paper, rubbed in a mortar with oxalic acid until a filtered specimen shows no turbidity; the filtrate is saturated with finely divided carbonate of line, the mixture again filtered, the filtrate acidulated with acetic acid, evaporated to dryness, and then dissolved in a small quantity of water. It contains any sugar existing in the urine which may be detected by the ordinary tests.

Brück'enau. Bavaria; in the wooded valley of the Sinn, on the western declivity of the Rhôn Mountain, fifteen miles from Kissingen. Altitude 915 feet. A pleasant, quiet place, in a mild climate, with a pure weak chalybeate water, containing a considerable amount of carbonic acid. Peat baths are employed. Used in anæmia; the Sinnbergerquelle is used in chronic bronchitis, scrofula, and calculous disorders.

bronchitis, scrofula, and calculous disorders.

Bru'court. France; near Caen. Waters containing calcium and sodium sulphate, sodium chloride, and carhonic acid.

Brug'heas. France; Departement de l'Allier. Cold bicarbonated waters, containing a little sodium earbonate.

Bruguie'ra gymnorrhi'za. The

Rhizophora gymnorrhiza.

Eruise. (Old F. bruiser, to break) A contusion with ecchymosis. The accompanying discoloration is produced by oxidation and other changes in the effused blood; it may not appear for some hours or a day or two after the injury, and may last for several days or two or three weeks.

B. root. The Stylophorum diphyllum.
B. wort. The Saponaria officinalis, and

the Bellis perennis.

**Bruis'ing.** (Same etymon.) A term applied to reduction of vegetable or other drugs to a coarse powder.

Bruis'sement. (F. bruissement, rustling. G. Schnurren.) Corvisart's term for the sound called purring tremor, or the frémissement

cataire of Laennee.

**Bruit.** (F. bruit, a noise, or report. L. strepitus; 1. strepito; S. ruido; G. Geräusch.) The term used in France to denote the sounds heard in the chest by mediate or immediate auscultation. The word is so commonly used here that it seems well to describe the different varieties.

B. anèvrys'mal. The loud, rough sound heard over an aneurysm. It is most distinct in a tubular aneurysm, and is sometimes double.
B. arté'riel. (F. artériel, arterial.) Arte-

**B. arté'riel.** (F. artèriel, arterial.) Arterial bruit. The conducted heart's sounds heard in the larger arteries.

**B.** cos'to-hep'atique. (L. costa, a rib;  $i\pi\pi a \rho$ , the liver.) A sound supposed to depend on the collision of the ribs with the liver.

**B.** d'air'ain. (F. air'ain, brass.) Bruit of brass. A variety of metallic tinkling. See *Bell sound*.

B. de chiquenaude. (F. chiquenaude, a fillip. G. Nasenstübergeräusch.) A noise as of a fillip on the nose, being the sound in a tortuous or contracted artery during cardiac systole.

**B. de choc.** (F. choc, a shock.) A single or double noise, accompanied by an impulse, heard when, on auscultating the gravid uterus, the head of the fetus or some other part is brought into sharp contact with the uterine wall under the stethoscope.

Also, used in the same sense as B. de chique-

naude.

B. de clapo'tement. (L. clapoter, to splash, G. Glucksengeraüsch.) Splashing bruit. Produced by percussion or succussion in a large vomica, a dilated stomach, or a serous or other cavity, when it contains both fluid and air.

B. de cla'quement. (F. elaquement, clapping.) Clapping bruit. The noise produced

by the sharp shock of contact.

B. de collis'ion. (L. collido, to clash. G. klimperndes Geräusch.) A sound of hard bodies striking each other when they are made to move in the cavities in which they are.

B. de cra'quement. (F. craquement, crackling. G. Krachengeräusch.) Crackling sound, as in roughnesses of the pleural or pericardial surface, or as in the inspiratory sound in emphysema.

**n.** de cuir neuf. (F. cuir, leather; neuf, new. G. Neuledergeräusch.) New leather sound. A creaking sound heard in pericarditis or pleusium.

B. de dia'ble. (F. diable, a humming-top. G. Kreiselgeräusch, Nonnengeräusch.) A term for

a humming sound or murmur produced by the circulation in the veins, being usually confined to the internal jugulars, and more especially to the right one; believed to be caused by diminution of the mass of the blood; so named after a French toy, which produced a somewhat similar sound.

B. de drap'eau. (F. drapeau, a flag. G. Fahnengeräusch.) A sound like the rustling of a flag waved in the air: heard in nasal polypus when the person breathes strongly. It is heard also in croup when false membranes are detached and are moved in respiration.

B. d'etrille. (F. etrille, a currycomb. G. Striegelgeräusch.) A harsh cardiac valvular

murmur.

**B. de flot.** (F. *flot*, a wave.) A gurgling murmur coinciding with the movements of the heart, said to depend on the presence of air and fluid in the pericardium.

B. de forge. (F. forge, a smithy. G. Schmiedegeräusch.) A blowing murmur, synchronous with the arterial diastole, heard in

varicose ancurvsm.

E. de frois'sement. (F. froissement, rumpling.) A crumpling noise supposed to be caused by the rubbing of thick false membranes on the pleura, or by the compression in expiration of indurated pulmonary parenchyma of differing density or containing small cavities.

B. de frô lement. (F. frôlement, rustling. G. streifendes Gerausch.) Rustling sound, heard when the pericardium or pleura is somewhat

roughened.

- B. de frott'ement. (F. frottement, rubbing. G. Reibungsgeräusch.) Rubbing murmur heard in pericarditis and pleurisy, and sometimes in peritonitis, and in the subscapular region from muscular action. A similar sound is heard in the gravid uterus, and is caused by fætal movements.
- B. de frou-frou. (F. frou-frou, the rustling of silk. G. Lockpfeifengeraisch.) A respiratory rale suggesting the noise of its name.
- B. de gal'op. (F. galop, a gallop.) A cantering action of the heart, in which the first sound is preceded by a feeble præsystolic murmur, heard chiefly at the apex. It is supposed by its describer, Potain, to be connected with granular kidneys.

B. de gre'lot. (F. grelot, a small bell. G. Schellengerausch.) A rale originating in the toand-fro movement of a foreign body in the respiratory channels.

B. de lime. (F. lime, a file. G. Feilen-geräusch.) Filing sound. Valvular murmurs of

the heart of a roughish character.

B. de mou'lin. (F. moulin, a mill. G. Wassermühlengeräusch.) A splashing murmur heard in connection with the heart's action, said by Morel-Lavallée to be pathognomomic of traumatic hydropneumopericarditis.

B. de parch'emin. (F. parchemin, parchment.) The sound as if of two pieces of parchment rubbed against each other. A cardiac valvular murnur.

B. de piaul'ement. (F. piauler, to whine or mew. G. Miauengeräusch.) A cardiac mur-

mur like the mewing of a cat.

B. de pot fêlê. (F. pot, a jug; feler, to crack. G. Geräusch des gesprungenen Topfes.)
Cracked-pot sound, produced at times by a sharp percussion over cavities during expiration, and also in healthy lungs in yielding chests.

B. de ra'clement. (F. racler, to scrape.) Scraping sound. An intensified friction sound.

B. de rape. (F. rape, a rasp. G. Raspelgeräusch.) Rasping sound. A harsh cardiac

valvular murmur.

B. de rap'pel. (F. rappel, a call. G. gespaltener Herzton.) An apparent reduplication of the second sound of the heart occurring in mitral constriction, described by Bouillaud. According to later observers, it is a divided diastolic murmur.

B. de roue hydraul'ique. (F. roue, a wheel; hydraulique, belonging to hydraulies.)
Water-wheel noise. Same as B. de moulin.

B. de rou'et. (F. rouet, a spinning-wheel.)

A modification of the cephalic souffle heard in the neighbourhood of the unclosed anterior foutanelle; it is a continuous soft hum, with or without periodical increases.

B. de scie. (F. scie, a saw. G. Sügegeräusch.) The sound of the saw, similar to the B. de rape, but more rough, both being most generally indicative of a diseased state of the valves, causing contraction of the orifice of the heart.

B. de sif flement. (F. sifflement, hissing. G. I'feifengeräusch.) A cardiae valvular murmur,

as of hissing.

B. de souf'fle. (F. souffle, breath. Blasegerausch.) A sound as when a large shell is held to the ear. It may be cardiac, vascular,

B. de souf'fle à dou'ble eou'rant. (F. à, with; double, twofold; courant, current.)

Same as B. de diable.

B. de souffle con'tinu. (F. continu. continuous.) A bruit de souffle heard in the veins.

B. de souf'fle or'dinaire. (F. ordinaire, ordinary.) The intermittent bruit de souffle as heard in the arteries. Called by Lacance chant des arteres when it possessed a musical note.

- B. de souf'fiet. (F. soufflet, bellows.)
  The sound of the bellows, heard in cases of enlargement of the heart, or of contraction of its orifices, and passing by insensible gradations into the B. de rape and B. de scie, all three originating from the same causes.
- B. de souf'flet ceph'alique. See Souffle, cephalic.
- B. de sou'pape. (F. soupape, a valve. G. Klappengerausch.) Valve sound. A bronchial inspiratory whistle, followed by a dry erackling rattle; originated at the orifice of a eavity.

B. de susur'rus. (L. susurrus, a low gentle noise.) A soft murmur heard in crectile tumours, arterio-venous aneurysms, and such like.

- B. de taffetas. (F. taffetus, a kind of light silk.) A respiratory râle, like the tearing of silk, heard in bronchial asthma at the commencement of pneumonic consolidation.
- B. de tiraillement. (F. tiraillement. G. zerrendes Gerausch.) A respiratory rûle, simulating the noise of a sharp pull on anything. B. de tremblo'tement. (F. trembloter,

to tremble.) Barth's term for B. de drapeau. B. de va et vient. (F. va, from aller, to go; rient, from venir, to come.) A systolic and diastolic murmur heard in stenosis, with insuffi-

ciency of the aortic valves. B. dias'tolique. Same as Murmur, dias-

B. du cœur. (F. cœur, the heart.) The sounds of the heart.

B. du cœur fe'tal. (L. fetus, effspring.) The sounds of the heart of the fœtus in

B. bu'morique. (L. humor, fluid.) The dull sound on the percussion of a liquid.

B. hy'datique. (F. hydatique, belonging to an hydatid.) A mixed noise and vibratory sensation perceived by the hand and obtained occasionally on percussing an hydatid cyst.

B. hydroaerique. Same as B. hydro-

pneumatique.

B. hydropneu matique. ("Υδωρ, water; πνευμα, wind.) The sounds produced by auscultation or percussion of cavities, which contain both air and liquid.

B. inférieur. (F. inférieur, lower.) The

first sound of the heart.

B. met'allique. Metallic tinkling.

B. mus'culaire. (F. musculaire, belonging to muscle.) The first sound of the heart, from its supposed cause. Also see Murmur, muscular.

Musical cardiae or lung B. mu'sical.

B. pericar'dique. Friction sound in pericarditis.

B. peridias'tolique. Same as Murmur, peridiastolic.

B. perisys'tolique. Same as Murmur,

perisystolic.

- B. pla'centaire. The sound heard in the abdomen of a pregnant woman over a certain part of the uterus, varying from a soft whiff to a harder note. At one time it was supposed to be originated in the placenta, hence its name. It is now believed to have its seat in the walls of the uterus, and is called Uterine souffle.
- B. prédias'tolique. Same as Murmur, prædiastolic.
- B. présys'tolique. Same as Murmur, præsystolie.

B.res'piratoire. (F. respirer, to breathe.) The breath sounds as heard in health.

B. ro'tatoire. (F. rotatoire, rotatory.) The sound which accompanies the contraction of the cardiac ventricles.

Also, a term applied to a sound heard on applying the ear to the naked chest, which is not the respiratory murmur; it resembles the

rolling of the wheels of a heavy carriage, and depends on contraction of the muscular fibrille.

B. Sko'dique. (G. Skoda'sche Schall.)

The percussion note which Skoda called tympanitic. In Goa believed the terminal of the contraction of the contraction of the contraction. panitic. Dr. Gee believes the term to be synouymous with clearness of note.

B. supérieur. (F. supérieur, upper.) The second sound of the heart.

B. sys'tolique. Same as Murmur, systolic.

B. tricuspid'ien. (G. Halsvenengeräusch.) The murmur heard in the veins of the neck; so called because it is alleged to be caused by the tricuspid valves.

**B. tym'panique.** (L. tympanum, a drum.) Drum sound. A sonorous and clear percussion

B. vein'eux. A venous murmur.

B. vesic'ulaire. Vesicular breathing. Bru'mal. (L. bruma, mid-winter; for brevma, from brevio, to shorten. F. hyémal; G. winterlich.) Pertaining to the midst of winter. Applied to certain plants (Brumales plantæ) which flower in the season corresponding te our winter.

Brumasar. Arabic for Argentu, or Luna. See Soloma.

Brumati. A glass vessel. (Ruland.) Brumelli. The Fraxinus excelsior, or ash.

Bru'mous. Same etymon and meaning

Brunella. Same as Primella.

Brunes'cent. (Mod. Lat. brunesco, to become brown. G. braunlich.) Brownish.

Brunfel'sia. A Genus of the Nat. Order

B. america'na. (F. bois plié bâtard.) Trumpet flower, rain flower. Hab. West Indies. Fruit of the size of a large nut, soft, smooth, of an orange colour, and of agreeable taste. syrup of the fruit is used in obstinate diarrhoa.

B. unifio'ra. (L. unus, one; flos, a flower.) Hab. Brazil. The root is used as an antisyphilitic and emmenagogue. It produces abortion.

Brunia ceæ. Heath-like shrubs, with small, imbricated, rigid, entire, exstipulate leaves. Calyx imbricated; petals and stamens 5, inserted on the calyx; anthers 2-celled, extrose, bursting longitudinally; ovary 1-3-celled, with 1-2 anatropous ova in each cell; style snuple or hifid; fruit 1- or 2-celled; seeds with a minute embryo in fleshy albumen. They are epigynous calveifloral exogens. **Bru'niads.** The plants of the Nat. Order

Bruniaceæ.

Brunn's glands. Brunner's glands. Brun'neous. (Sax. brun, brown.) Of a dark brown colour.

Brun'ner, Jean Con'rad. A Swiss anatomist, born at Diessenhofen, near Schaffhausen, in 1653, died at Mannheim in 1727.

B.'s glands. Duodenal glands. racemose glands of the upper part of small intes-tine in mammals, and in sharks and rays. In man, found chiefly near the pylorus, sparingly distributed at the lower end of duodenum and beginning of jejunum. They are embedded in the submucous tissue, and have a few museular fasciculi between the acini; they open on the surface of the mucous membrane by minute pores. The epithelium of acini and duct is cylindrical and flattened. They secrete a viscid fluid containing mucus, which has no action on fats, but whose purpose is not known.

Brunn'thal. A cold water bathing esta-

blishment near Munich.

Brunonia'ceæ. Herbs. Leaves entire, radical; flowers in heads, surrounded by an involucre; calyx inferior, 5-pointed; corolla 5-pointed, withering; stamens hypogynous; anthers slightly united; ovary superior, 1-celled; ovule solitary, erect; style single; stigma with an indusium; fruit enclosed in the hardened calyx. Hypostaminous corollifloral exogens.

Bruno'niads. The plants of the Nat.

Order Brunomacea.

Bruno'nian. (F. brownien.) Belonging

to the ideas of Brown, John.

B. sys'tem. Applied to a system of the practice of physic, formed by Dr. John Brown, a Scotch physician, and contemporary of Cullen, consisting in the assumption that the hody possesses a peculiar property of excitability; that every agent capable of acting on it during life does so as a stimulant; that these stimulants (or the excitement caused by them) when they are duly in exercise, produce the healthy performance of the natural functions; that when excessive they produce exhaustion, or direct debility; when deficient, the effect is an accumulation of excitability, or indirect debility; from one or other of which states of debility all diseases were supposed to arise

Bruno'nianism. Same as Brunonian system.

Brunsvig'ia. A Genus of the Nat. Order Amaryllidavea

B. toxica'ria. Ker. (L. toxicum, poison.) Hab. Cape of Good Hope. The juice of the bulb is an acrid poison, producing violent vomiting. It is added by the natives to their arrow poison.

Bruns'wick black. A solution of asphalte in drying oil or turpentine, with or without the addition of a solution of india rubber, in mineral naphtha. Used in the mounting of microscopic objects.

B. green. Crude copper chloride; also called Friesland green.

Bru'nus. Erysipelas. (Ruland.)
Bruscan'dula. The Humulus lupulus, or hop-plant; also, the Genus Lupinus, or the

Brus'cus. Same as Ruscus. Brush. (F. brosse, a brush, from Low Lat. brustia.) An implement for cleaning things.

B.-burn. A wound produced by rapid and severe friction of the surface of the body, as when it comes in contact with a strap in rapid motion, or with the ground or hard snow in a slip on a mountain side. The skin is ground away, and the subjacent structures killed.

B., eroup. A b ush, on a long curved wire, made of a squirrel's tail, with the hairs directed to the handle. Used for removing false membranes from the larynx and trachea, and for

applying local remedics.

B. discharge'. A term applied to that form of luminous electric discharge in which the light appears to diverge in fine radii from the conductor; its presence depends on the physical conditions of the conductor and of surrounding

B., larynge'al. A brush, pointed or square, made of camels' or squirrels' hair, fixed on a handle bent an inch from the brush at a right angle. Used to apply remedies to the interior of the larynx.

B., metal'IIc. A bundle of fine wires fixed in an insulating handle. Used for faradisation of less sensitive parts in anæsthetic conditions.

B.-sha'ped. Having the form of a brush; same as Aspergilliform.

B., stom'ach. Same as Excutia ventri-

Bru'ta. (L. brutus, stupid.) A term synonymous with Edentata.

Also, a term applied to animals not endowed with reason.

Also, a tree known only in the East, and resembling the cypress; also said to be a kind of Sabina. or savin.

Also, an old term for a certain force or power of celestial influence by which instinct is manifested in brute animals.

Bru'tia pix. Used by Pliny, H. N. xv, 7, for a thick, resinous kind of pitch used by the ancients; from the Brutii, a people of Italy, in whose country it abounded.

Bruti'no. Turpentine. (Quincy.)
Brutobon. An ointment used by the Greeks, but not now known, according to J. H. Velschius.

Bru'tole. (Fr.) See Brytole.

Bru'tua. The Cissampelos pareira, or Pa-

Bruxanelli. (Ind.) A tall tree of Malabar, the bark of which is diuretic, the root antiarthritic; its juice, mixed with butter, is applied

Bruy'ercs. France. A carbonated chalybeate water.

Bry'a. (Bρύου, a moss.) A Genus of the Nat. Order Leguminosæ.

B. eb'enus. (Εβενος, ebony.) Hab. West Indies. An oil distilled from the wood is used for toothache.

Brya'eeæ. (Bρύου, a moss.) Mosses. A Suborder of the Order Stegocarpæ, Nat. Order Musci. Sporangium dehiseing transversely by the separation of the operculum, or irregularly. Also, a synonym of Stegucarpæ.

Bryaspar'agi. (Βρύον, the blossom of the hop; ἀσπάραγος, asparagus shoots. G. Hop-

fenspressen.) The early shoots of the hop.

Bryce's test. A test of the genuineness of the vaccine virus, consisting in the re-vaccination of a child from the cruption already resulting from the first vaccination, when, if the virus be genuine, the second vaccination is said to overtake the first.

Bry'cetus. Otherwise Brychetus. Brycheth mus. (Βρυχηθμός,  $\beta \rho \dot{v} \chi \omega$ , to roar.) Rumbling of the intestines.

Bry'chetus. (Βουχετός, the ague, from βρύχω, to grind the teeth.) A name of a pernicious malarial fever.

Bry'chius. (Βρύχιος, the depths of the sea.) Term applied by Hippocrates to deep-seated veins.

Bry'eæ. (Βρύον, a moss.) Brunceæ.

Bryg'ma. Otherwise Brygmus.

**Bryg mus.** (Βουγμός, from βούχω, to grind the teeth. G. Zahneknirschen.) Stridor dentium, grinding of the teeth, or the peculiar noise made by gnashing or grating of the teeth, in epilepsy and other convulsive diseases, arising from spasm of the museles of the lower jaw.

**Bryin'eæ.** (Βρύον, a moss.) One of the Subclass of the Class *Musci*, according to some, consisting of the true mosses, the other being Sphagnacea.

Bry ogens. (Βρύον, a moss; γεννάω, to produce.) A section of Cryptogamia, including mosses and liverworts.

Bryoi'dea. See Bryacea.
Bryoidin. A crystalline bitter and fusible resin, obtained by treating elemi with alcohol.

Bryol'ogy. (Βρύον, moss; λόγος, a discourse. G. Laubmooskunde.) The science or botany of mosses.

Bryonia. Same as Bryonia.

Bryonia. (Βρύω, to burst forth, from its rapid growth. F. bryone; G. Zaunrübe.) Bryony. A Genus of plants of the Nat. Order Cucurbi-

B. abyssin'ica. The root, when fresh, is said to be poisonous, but esculent when cooked.

B. africa'na, Thunb. Hab. Cape of Good Hope. Used by the Hottentots as an emetic, cathartic, and diuretic, in skin diseases, dropsy and syphilis.

B. al'ba, Linn. (L. albus, white.) Inhabits the South of Europe. Monoccous; root yellowish. A tincture has been recommended in diphtheria

B. america'na. The Convolvulus mechoacanna.

B. callo'sa, Rottl. (L. callosus, thickskinued.) Stem filiform, rough; leaves on long petioles, cordate, 3-5-lobed, toothed, scabrous; berries globose; flowers yellow. Coromandel. Seeds, mixed with oil, are used as a vermifuge.

B. cordifo'lia. (L. cor, the heart; folcum, a leaf.) Hab. Ceylon. Used as a cooling medicine

and au expectorant. (Waring.)

**B.** diol'ca, Jacq. ( $\Delta ls$ , twice; olkos, a house; meaning stamens and pistils in separate flowers. F. bryone, navet du diable, navet galant, vigne blanche, couleuvrée; I. brionia; G. Zaunrübe.) Stem long, branched, weak, with tendrils; leaves alternate, palmate, rough on both sides; flowers in short axillary raceures, greenish white; fruit a globular red berry. root is large, fusiform, fleshy, succulent, whitish, marked with circular striæ, of an acrid taste, and disagreeable odour. It is irritant, and a drastic purgative and an emetic. Used externally to bruises, museular rheumatism, and glandular swellings; internally in dropsy, bronchitis with serous effusion, hooping-cough, and epilepsy. Sold by herbalists as white bryony and mandrake. Both root and berries have produced death; the former was fatal in four hours, the latter in thirty. Symptoms were giddiness, intoxication, vomiting, diarrboa, and coma. Decoction of galls is said to be an antidote.

B. epigœ'a, Rottl. (Eπίγαιος, upon the earth.) Stem glabrous; leaves fleshy, on longish petioles, cordate, 3-lobed, very hairy; male flowers shortly racemose at the end of a loug pedunele; female flowers short, peduneled, solitary; berry ovate, rostrate, glabrous; seeds white. Coromandel. Root bitter; once supposed to be Calumba root. Used externally in castor oil, with cummin seed and onions, for rheumatism. Internally for dysentery and syphilis. A popular internal and external remedy for snake-

bites in India.

B. ficifo'lia. The Trianosperma ficifolia. **B. filifor'mis.** (L. filum, a thread; forma, shape.) Hab. Nepaul. Seeds given to feverish conditions in children.

B. glabra, Roxh. (L. glaber, smooth.) The

B. epigæa.

B. heterophy'la. ("Ετερος, the other, different; φύλλον, a leaf.) Hab. China. Used in phthisis and dysentery. (Waring.)
B. lacinio'sa. (L. laciniosus, full of projecting points.) Hab. India. The juice of the leaves is used in liver disorders, and in cough and flatulence. The whole plant is esteemed a tonie.

B. mechoacan'na al'ba. (L. albus, white.) The Convolvulus mechoacanna.

B. mechoacan'na ni'gra. (L. niger, black.) The Exogonium purga.

B. mechoacan'na ni gricans. (L. ni-

gricans, blackish.) The Exogonium purga. **B. ni'gra.** (L. niger, black.) The Tumus communis. Also, the B. alba.

B. palma'ta. (L. palma, the palm.) Hab. Cevlon. An oil is extracted from it, which is used in wounds and hruises. (Waring.) **B. peruvia'na.** The Exogonium purga.

B. pilo'sa, Roxb. (L. pilosus, hairy.) The B. rostrata.

B. rostra'ta, Rottl. (L. rostratus, beaked.) Stem slender, hairy; leaves on longish petioles, rounded, cordate, toothed, pubescent; male flowers usually two together on a long slender peduncle; female flowers solitary; berries ovate, hairy;

seeds black. Root small, and of light grey colour. Is used in piles, and as a demulcent in humoral asthma.

B. rudera'lls. (L. rudus, rubbish.) The

Bryonia divica.

B. sca'bra. (L. seaber, rough.) Hab. India, Cape of Good Hope. Gently aperient. Used in coughs. (Waring.)

E. scabrella. (Mod. L. scabrellus, dim. of scuber, rough.) Hab. India. Given in flatu-

lence. (Waring.)

B. scrobicula'ta. (L. scrobiculus, a little ditch.) Hab. Abyssinia. Used for tapeworm.

Said to be sedative.

 $m{Bry'onin.}$   $C_{48}H_{80}O_{19}$ . A glucoside obtained from Bryonia alba and B. diotea by percolation with alcohol, and treated with plumble subacetate. It is a white or slightly coloured granular substance, bitter, soluble in water and alcohol, insoluble in other. An active purgative.

Bryon'itin. A crystallisable substance

found in bryony root.

Bry'ony, black. The Tamus communis.
B., black-ber'ried. The Bryonia alba.
B., red-ber'ried. The Bryonia dioica.

B. wa'ter, com'pound. The Alcoolatum bryoniæ compositum.

B., white. The Bryonia alba, and also, the B. dioica.

B., wild. The Sycios angulatus.

**Bryoph ilous.** ( $B\rho \dot{\nu} \sigma \nu$ , moss;  $\phi \iota \lambda \dot{\epsilon} \omega$ , to ve. F. bryophile.) Growing on or amidst love. F. bryophile.)

Bryophyl'lum. (Βρύου; φύλλου, a leaf.) A Genus of the Nat. Order Crassulacea.

B. calyci'num. (Κάλυξ, a enp ) Hab. Moluccas, India. Used for abdominal pains, and as a poultice in hernia.

Bryophy'ta. (Βρύον; φυτόν, a plant.)

A synonym of Muscinea.

**Bryoplastic.** (Bpéon, moss;  $\pi\lambda \acute{a}\sigma\omega$ , to form. F. bryoplaste.) Diseases characterised by productions which approach more or less closely to vegetable forms, as warts, polypi, fungus.

Bryor'etin. A product, along with hydrobryoretin and glucose, of the action of sulphuric

acid on bryonin.

Bryozo'a. (Βρύον, moss; ζώον, an animal. F. bryozoaires.) A term synonymous with Poluzoa.

Bryozoa'ria. (Βρύον; ζωάριον, dim. of ζωου, an animal.) A synonym of Polyzoa. **Bryth'rion.** A malagma, or cataplasm,

in former use, described by Paulus Ægineta. (Hooper.)

**Brytia.** (Βρύτια, the refuse of olives or grapes after pressing.) The lees of grapes. **Brytolatu'ra.** (Βρότον, beer. F. brytolature; I. britolatura; G. Bierauszuge, Arzneibiere.) Béral's term for beers medicated with roots and herbs.

Bry'tole. (Βρύτον, beer or ale.) A French term for a preparation made by macerating some medicinal substance in beer; also called Brutole.

Bryto'lea. (Βρύτον, beer. F. brytolé; I. britolea; G. Arzneibier.) Same as Brytolatura.

Brytol'ica. (Βρύτου. G. Bierverbindungen.) Applied by Beral to combinations of beer for medical use, as in Brytolea, Brytolatura. Brytoloti va. (Βρύτου.) Solutions in

beer for medical use in lotions and clysters. Bry'ton. (Βρύτον, from βρύω, to germinate; because the grain germinates in the process of malting.) Old term for a kind of potion made from barley; said to be what is now called ale or

Bry'um. (Βρύον, a tree moss.) A Genus of the Nat. Order Bryacea.

B. trique trum. (L. triquetrum, three-cornered.) Hab. France. Used as an astringent iu hæmorrhage.

Bu-. (Bov-, a form of βούς, an ox.) Used in composition to express size or excess.

Buat'rica. A false spelling of Buiatrica. Bu'ba. The same as Boubu.

Bu'balus. (Βούβαλος.) The buffalo, Bos bubalus.

**Bubasteeor'dium.** (L. Bubastis, the Egyptian deity, also called Bast, and supposed to occupy the same position as Artemis; cor, the The Artemisia vulgaris.

Bubas'ticum. An ulcer which arises chiefly on the superficial parts in children. Actius, iv, 21.

Bub'ble. (Sw. bubble. a bubble.) A skin or bladder of water filled with air or gas.

B. fe'ver. A synonym of Pemphigus or Pompholux.

**Bub bling.** (Same etymon.) Gurgling. Applied to a sound like the bursting of a bubble.

B. rhonch'us. See Rhonchus, bubbling.

Bu'bë. A pustule.

Bu'bendorf. Switzerland; not far from Basel, 1200 feet above sea level. Two springs, of a temperature of 13° C. (55-4° F.), containing ealcium carbonate 2.3 grains, and magnesium chloride 09 grain, in 16 ounces.

**Bu'bo.** (Βουβών, the groin. F. bubon; I. bubbone; S. bubon; G. Drüsengeschwulst, Leistenbeule, Schambeule.) An inflammatory enlargement of a lymphatic gland, produced by venereal or other inoculation, or by simple irritation; usually occurring in the groin, but not necessarily so.

B., abdom'inal. That which is placed

above the fold of the groin.

B., acu'te. A bubo arising rapidly, with much reduces and pain.

**B.**, amygďaloid, in'dolent.  $(\Lambda \mu \nu \gamma \delta \acute{a} \lambda \eta$ , an almond; ¿idos, form.) A painless, hard, almond-shaped venercal inguinal bubo.

A bubo not mani-B., consec'utive. A bube not manifesting itself until after the occurrence of a

chancre or gonorrhæa.

B., constitu'tional. A venereal bubo manifesting itself some time after the occurrence of primary symptoms, when constitutional affeetions have been developed.

B., creep'ing. A bubo which, having burst, spreads to a greater or less extent along the neighbouring skin by semicircular advances, healing on one margin whilst it extends on the other. The cicatrix is always thin and blue. other.

B., cru'ral. (L. cruralis, belonging to the leg.) A bubo which is situated well below the fold of the groin.

B., gonorrhœ'al. A bnbo resulting from the reflected irritation of a gonorrhea.

B., in'dolent. (G. schmerzlos Bubo.) bubo which remains hard, and does not tend to suppuration.

B., in'durated. A bubo caused by the absorption of syphilitic poison.

B., infecting. A syphilitic bubo. B., in'guinal. (L. inguen, the grain.) An enlargement of one or more lymphatic glands of the groin.

B., inoc'ulable. Same as B., syphilitic. B., mul'tiple, in'dolent. A syphilitic enlargement of the whole series of inguinal glands

B., parotid. A term for Mumps.

The term has also been used to describe inflammation of the parotid gland, following an acute infectious fever, most commonly typhus. It almost invariably ends in suppuration.

B., pestilential. A term for Plague.
B., pri'mary. (F. bubon d'emblee.) A
bubo which is believed to arise from absorption of syphilitic poison without the occurrence of a chanere.

**B., prim'itive.** Same as B., primary. B., pu'bic. A bubo very near the puhes.

B., scrof ulous. A scrofulous culargement of a lymphatic gland.

B., stru'mous. (Struma.) Same as B.,

serofulous. B., sup'purating. A bubo in which pus

has formed. B., sympathetic. A bubo resulting from

icritation without infection. B., syphilit'ic. A bubo resulting from

absorption of venereal poison.

**B.**, vene'real. Same as B., syphilitic. B., vir'ulent. Same as B., syphilitic.

Bu'bon. (Βουβών, the grain; because one of the species was used as a remedy for tumours in that region.) A Genus of the Nat. Order Umbellifera.

B. cop'ticum. (L. copticus, belonging to Coptes, new Coft, an Egyptian town.) Ptychotis ojowan.

B. gal'banum. An arboreseent South African species, at one time supposed to be the source of galbanum.

B. macedon'icum. (F. persil de Macedoine, P. de roches; S. ipposelino; I. salsa macedonica; G. Macedonische Petersilie.) Macedonian parsley. Hab, Turkey and North Africa. The seeds differ from common parsley in the pericarp being thin, membranous, and without marked rays. The seeds have been used in epilepsy.

Bubon d'em'blee. (F. emblée, at the first onset.) The same as Bubo, primary.

Bubona. The nipple. (Dunglison.)

Bubonadeni'tis. (Βουβών; adenitis. F. bubonadenite; G. Leistenentzundung.) Inflammation of the inguinal glands.

Bubonal gia. (Βουβών; άλγος, pain. F. bubonalgie; G. Leistenschmerz.) Pain in the

Bubon'cus. (Βουβών; ὄγκος, a tumour.)

Bubo; a swelling in the groin.

Bubo'nium. (Βουβώνιον, from βουβών, the groin; because esteemed efficacious in discases of that region.) A species of starwort, but which is uncertain. Called also Aster atticus, Asterion, and Asteriscus.

**Bubon'ocele.** (Βωβών, the groin; κήλη, a tumour. F. bubonocele; G. Leistenbruch.) A species of hermia in which the part protrudes at the abdominal ring; synonymous with inguinal hernia. By some anthors, hubonocele is synenymous with inguinal hernia of whatever variety, or in whatever part of the course; by others, it is restricted to inguinal hernia when in the ingoinal canal.

Bubonoid. (Bubo; elões, form. G. bubanahntah, budenartig.) Resembling a lmbo. Bubonon cus. (Βουβών, the groin; οηκος, a swelling.) Bubo.

Bubonop'anus. (Βουβών; L. panus, a swelling.) A bubo.

Bubonorix'is. Same as Bubonorrhexis. **Bubonorrhex'is.** (Boe $\beta \dot{\omega} \nu$ , the groin;  $\dot{\eta} \dot{\xi} \iota s$ , a rupture or fracture.) A term applied by Paulus Ægineta to a hubonocele when attended with rupture of the peritoneum, that is, without a hernial sac.

Bubon'ulus, (Dim. of bubo.) Inflammation of the lymphatic glands of the dorsum penis.

Bu bon-u'pas. The Upas antiar.

Bubro'nia guazu'ma. The Guazuma tomentosa.

Bu'buline. (L. bubulus, of the ox.) A substance obtained by Morin from the action of alcohol on cow-dung. Probably a mixture of nitrogeneus principles. Precipitated by metallic salts, alum, and tannin.

Bubun'culus. Same as Bubonnlus. Bu'caros. A name of Terra portugallica.

Buc'ca. (L. bucca, the cheek. F. joue; I. guancia; S. carrilo; G. Backe, Wange.) The hollow part of the cheek which stands out in the act of blowing; also, the cheek itself.

Also, the vulva. B. sacca'ta. (L. saccus, a bag.) The check pouch for the temporary reception of food in some Rodentia and Quadrumana.

Buc'ca dei Fio'ri. Italy; near to the Maremma. Mineral waters, 29° C. (84.2 F.), containing sodium chloride 21 6 grains, sodium carbonate 6.5, sodium sulphate 2.5, in a pint, with some nitrogen and carbonic acid. Used in the neighbourhood in malarious disorders.

Buccac'raton. (L. buccea, a morsel; κράω, to eat; or κεράννυμ, to mix.) A term used by Lindenus, Exerc. ix, 65, for a portion of bread soaked in wine, which anciently served for breakfast.

Buc'cal. (L. bucca, the cheek. F. buccal.) Of, or belonging to, the cheek or mouth.

B. artery. (F. sus-maxillaire, Ch.; G. kenarteric.) A branch of the internal Backenarteric.) maxillary, running obliquely forwards on the buccinator muscle with the buccal nerve, supply ing the buccal muscles and anastomosing with branches of the facial artery.

B. glands. (F. glandes buccales; G. Backendrusen.) Small, racemose, mucous glands lying between the mucous membrane of the cheek and the buccinator muscle. Whether they secrete anything else but mucus is not known.

B. lymphatic glands. The lymphatic glands on the surface of the buccinator muscle, through which the superficial lymphatics of the frontal region pass on their way to the submaxillary lymphatic glands.

n. mem'brane. The mucous membrane

which lines the interior of the mouth.

B. nerve of fa'cial. (G. Backenlippenzweigen.) Buceal branches are given off from the facial nerve to the buccinator and orbicularis oris museles; they give branches as they pass to the masseter, the zygomaticus major, the levator anguli oris, and the nasal muscles. They anastemese with the infra-orbital branches of the temporofacial division of the facial and with the buccal nerve of the inferior maxillary.

B. nerve of infe'rior max'illary. (F. buccolabial, Ch.; G. Backennere.) A branch of the inferior maxillary. It pierces the external pterygoid muscle, and supplies a branch to it, and afterwards two or three to the temporal muscle, close to the insertion of which it lies. It divides into two branches, which join the facial nerve, and supply the jutegument, the buccinator muscle, and the mucous membrane. It is chiefly sensory.

B. nerve, supe'rior. (L. superior, upper.)

The B. nerve of facial.

B. opera'tion. Furneaux Jordan's opera-tion for removal of the tongue, in which the cheek is divided first from the angle of the mouth

to the ramus of the jaw.

B. pouch. (L. sacculus buccalis; F. aba-joue; S. abazoues; G. Häugebacke, Buckentusche.) A pouch situated on each side of the mouth, between the cheek and the jaw, in some Cheiroptera, Rodents, and Quadrumana, which serves to contain food. It becomes filled when the masseter is relaxed, and is emptied by the contraction of that innsele.

B. sal'ivary papil'la. The prominent opening of the duct of the parotid gland in the cheek.

B. vein. Its branches accompany those of the artery, and it joins the facial vein below the angle of the mouth.

Bucca'les gland'ulæ. See Buccal

Buc'cea. (L. buccea, a mouthful. Bissen.) Term signifying as much as may be held within the cheeks, a mouthful. The same as Buccella. (Ruland and Johnson.)

Buccel'aton. (L. buccella, a small mouthful; dim. of buccea, a mouthful.) A purgative medicine, consisting of seammony, opium, and aromatics, made up in form of a loaf, or of a thick electuary. Aëtius, iii, 100; Paulus Ægineta, vii, 5.

Buccel'la. (L. buccella.) A little monthful.

Applied formerly to a polypus in the nose; hecause it was supposed to be a portion of flesh parting from the bneca, or cheek, and finding its way into the nose. (Ruland and Johnson.)

B. purgato'ria. (L. purgatorius, purga-

tive. G. Pargurbissen.) A purgative morsel. **Buccella tio.** (L. buccella, a small mouthful.) The application of a pledget of lint to arrest hæmorrhage. Fallopius, de Vuln. part. v, ii, c. 10.

Buc'cia. (It.) The hoiled and pressed pulp of the olive after expression of the oil. It still contains from 22 to 28 per cent. of oil, and is used as a fuel.

Bucci'na. (L. buccina, a shepherd's horn.) The spongy bones of the nasal cavities. Buccina'to-pharynge'al mem'-

brane. The pterygo-maxillary ligament. Buc'cinator. (L. buccino, to sound a trumpet. F. buccinateur alviolo-labial, Ch.; 1. buccinatorio; S. bucinador; G. Backenmuskel.) A thin flat muscle, which occupies the cheek. It arises from the pterygo-maxillary ligament, from the alveolar processes of the upper and lower pairs opposite the molar teeth, and is inserted into the orbicularis oris at the angle of the month where the middle fibres decussate. It squeezes food between the teeth, and is used in such actions as blowing a trumpet, from which it derives its name. It is supplied by a branch of the inferior maxillary nerve.

B.nerve. The buccal nerve of the inferior maxillary

Buccin'ida. (L. buccinum, a shell-fish

like a trumpet.) A Family of the Division Siphonostomata, Order Prosobranchiata, Section Branchifera, of the Class Gasteropoda, distinguished by a shell notched anteriorly, or with the canal abruptly reflected, producing a kind of varix on the front of the shell. (Woodward.)

Buc'cinum. (L. buccinum, a shell-fish, so called from its likeness to buccina, a trumpet; from βυκάνη, a trumpet.) A Genus of the Family Buccinida. Shell oval, with a large aperture; columella and peristome smooth and not den-

B. unda'tum. (L. undatus, made in the form of waves. F. buccin; G. Trompetenschnecke.) The whelk. Used as an article of food; the calcined shell was formerly used as an absorbent; aud, filled with salt and then burnt in an earthen pot, as a dentifrice.

(L. bucco, a babbler; from bucca, **Buc'co.** (L. bucco, a babbler; from bucca, the cheek.) One who is wide-mouthed, or who

has distended checks.

In composition, a prefix signifying relationship to the check.

Also, a synonym of Buchu.

B.-la bial nerve. (L. labium, the lip.) The buccal nerve of the internal maxillary.

Also, by some, restricted to the terminal brauch of the buccal nerve of the internal maxillary.

B.-la'bial, supe'rior. The baccal nerve of the facial.

**B.-pharynge'al.** ( $\Phi \acute{a}\rho v\gamma \xi$ , the throat.) Relating to the mouth and the pharynx.

B.-pharynge'al aponeurosis. ('A $\pi o$ νευρώσις, the end of a muscle.) A synonym of

the Pterygo-maxillary ligament.

Buccula. (Dim. bucca, the cheek.) The fleshy portion under the chin; used by Bartholin, iii, 11, p. 532.

Also, a small mouth.

Buc'cule. (L. buccula, a check. G. Un-pkinn.) The fatty tissue forming a double terkinn.)

Buce'a. The inner white epiderm of beans. (Schliekum.)

A white Portuguese wine, Bucellas. containing, according to Brande, 18:49 parts by volume of alcohol, of sp. gr. 825 at 60° F., in 100 parts of wine.

Buceph'alon, red-fruit'ed. Tronhis americana.

Bucephalop'sis haimea'nus. (Boūs, an ox; κεφαλή, the head; ωψ, the eye.) A larval form of a trematode worm found in the Cardium rusticum.

**Buceph'alous.** (Boῦs, an ox; κεφαλή, the head. F. bucéphale.) Like the head of an ox from its size or appearance.

polymor'phus. Buceph'alus (Βοῦς ; κεφαλή ; πολύς, many ; μορφή, torm.) A larval form of trematode worm found in various species of Unio and Anodonta.

Buceras. (Boυs, an ox; κέραs, a horn; from the likeness of its seed to a horn. G. Bockshorn.) Name used by Hippocrates, de Morb. Mal. xeiii, i, 24, for the Trigonella fænum græcum, or fenugreek.

B. foe'num græ'cum. The Trigonella fænum græcum.

Bu'ceros. Same as Buceras.

Buchin'ho. The fruit of Luffa purgans. Bu'chu. The name given by the natives at the Cape of Good Hope to, and the pharmacopæial name of the leaves of, the Barosma betulina, B. crenulata, and B. serratifolia. B. pulchella and

B. betuling are more especially used by the Hottentats. They are smooth, greyish green, toothed, marked with pellucid dots at the indentations and apex, having a powerful odour and a warm camphoraceous taste. Buchu leaves contain a volatile oil, smelling like peppermint, which throws down at a low temperature barosma camphor; a body similar to rutin has also been observed. Diuretie stimulant, and stomachic stimulant. Used in chronic inflammation of mucous membrane of urinary passages, and in atonic dyspepsia. At the Cape, buchu is administered in gout and rheumatism; and infused in brandy or vinegar it is used in sprains, bruises, and muscular rhenmatism.

B., false. The leaves of the Empleurum serrulatum have been imported for buchu. They are distinguished from those of Barosma serrulata by being narrower, with the teeth more deflected, and the point acute and wanting a

gland. B. fo'lia, B. Ph. (I. folium, a leaf. F. feuilles de bucco; G. Buccoblutter.) Buchu

leaves. See Buchu. B., large. The leaves of Barosma cre-

nata, B. crenulata, and B. betulina.

B. leaves. See Buchu.

B., leng. The leaves of Barosma serratifolia and Empleurum serratifolium.

B., short. The leaves of Barosma betulina. Bu'cida. A Genus of the Nat. Order Combretacea.

B. bu'ceras. (Βοῦς, an οχ; κέρας, a horn.) Olive bark tree. Hab. West Indies. The bark is astringent.

B. capita'ta. (L. capitatus, having a head.) Yellow sanders. Hab. Jamaica. A decoction is used in syphilis.

Buck. (Sax. bucca, a he-goat.) The male of the deer, goat, hare, and other animals.

B. bean. (By some said to be a corruption of bog bean, from its place of growth; by others held to be a derivation of Dutch bocksboonen, or G. Bocksbohne, from Scharbock, the scurvy, and bohne, a hear; a remedy against scurvy.) The Menyanthes trifoliata, or water-trefoil.

B .- bean, American. The Menyanthes

B.-ber'ry. The Vaccineum stamineum. B.'s hern plan'tain. The Plantago coro-

B. mast. (Eng. dialect, buck, beech; Sax. mæst.) The seeds of the heech tree, Fagus syl-

B. yam. The Dioscorea triphylla. Buck'et fe'ver. A term for Dengue fever.

Buck'eye. The Æsculus hippocastanum. B., red. The Æsculus paria.

Buck ho. A synonym of Buchu.

Buckland'ea. A Tribe of the Nat. Order Hamamelueca, having several ovules in

Buck'rams. The Allium ursinum. Buck'thorn. (A translation of L. spina, a

thorn; cervina, belonging to a deer, its old name; or a modification of G. buxdorn, a translation of πυξάκανθα, which was perhaps the same plant.) The Rhamnus catharticus, or purging buck-

B., dy'er's. The Rhamnus infectorius.

B., Pal'estine. The Rhammus paliarus.
B., purg'ing. The Rhammus catharticus.
B., sca. The Hippophae rhamnoides, the

berries of which are used in sauces, and are said to possess narcotic properties

Buck'u. A synonym of Buchu.

Euck wheat. (Eng. dialect buck, for beach; Sax. boc. beech; G. buche, beech. F. sarrasın ; 1. saygina, grano saraceno ; G. Buchweizen.) The Polygonum fagopyrum, called buckwheat, as if beechwheat, from the resentblance of its seeds to beech mast. The seeds are nutritive, and are used largely in Eastern countries, and in smaller quantities in Europe, to make bread or puddings, but they are deficient in nitrogenous principles and in fat. Buckwheat flour contains, in 100 parts, starch 79:891, nitrogenous principles 2:645, dextrin 2:85, sugar '914, fat '943, and water 12:754.

B., climbing. The Polygonum convolvulus.

B., east'ern. The Polygonum divarica-

Buck'wheats. The plants of the Nat. Order Polygonaecæ.

Bucne mia. (Bov, a particle of increase; σήμη, the leg.) A disease of the leg, distinκνήμη, the leg.) guished by tense, diffuse, inflammatory swelling.

**B.sparganetica.** (Σπαργανόω, to wrap in swaddling clothes.) The swelled leg of the

puerperal state, or phlegmasia dolens. **B. trep'ica.** ( $T\rho\sigma\pi\iota\kappa\delta$ , the tropics.) The disease otherwise called Barbadoes leg, and elephantiasis arabum.

(Bous, an ox; kpaviov, a Bucra'nion. head; from a supposed likeness of its flower to an ox's head.) A name for the Genus Antirrhinum,

on shap-dragon. (Quiney.)

Buc'ton. The hymen, according to Severinus Piricus, in Opuse. Phys. Anat. 1, 5, p. 47.

Bud. (Old F. boter, to push. F. bouton, bourgeon; I. bottone; S. boton; G. Knospe.) A

conical body at the termination of the stem or a branch of plants, and at the axils of the leaves, which contains the axis and its appendages in a rudimentary state.

B., acces'sory. A bud or buds in addition to, and by the side of, the one normal bud.

B., adventitious. (L. adventitius, foreign.) A bud which is produced in an ahnormal and irregular position, as on the root of a plant, on a leaf, or on the stem.

B., a pical. (L. apex, the extreme end of a thing.) A bud placed at the extremity of the axis of a plant.

B., em'hryo. An adventitious bud when enclosed in the bark, as in the cedar of Lebanon.

B., flesh'y. A bud the scales of which are thick and succulent, as in the tiger lily. Also called Bulbil.

B., flew'er. An unexpanded blossom.
B., la'tent. (L. lateo, to lie hid.) A bud in which there is no apparent external structure when not growing, such as is seen on the horsechestnut.

B. leaf. A bud which develops leaves, and serves for the growth of the stem.

B., mix'ed. A bud which develops both leaf and flower.

B., na'ked. A bud without scales or other protection.

B., nor'mal. A single bud at the termination of a stem or branch, or in the axil of a leaf.

B. ru'diment. Term applied by Pringsheim to a cell formed, by the growth of septa, from the distended part of the tube just below the 3-6-celled apex of the proembryo in Chara.

B. scales. The onter dry scales of a hud which are aborted leaves; they serve to protect the inner part of the bud from cold and mois-

B., sca'ly. A bud possessing external scales

in its period of rest.

B., subpeti olar. (L. sub, under; petio-lus, a little foot.) A bud which is enveloped by the base of the petiole of a leaf, as by a sheath, as in the plane tree.

B., ter'minal. (L. terminalis, belonging

to a boundary.) The same as B, apical.

B.-varia tion. The appearance of new characters in particular buds, which develop differently from the other shoots of the same stock. There are two forms. In one case the abnormal shoot of a stock, which itself belongs to a variety, resembles or reverts to the primitive form; in the other case new characters, not previously displayed, arise on particular shoots of a stock. **Bu'da.** See Ofen.

Bud'ding. (Same etymon as Bud. F. gemmation; G. Knospung.) The mode of propagation of a plant by introducing and keeping fixed a bud under the bark.

A process of the division of living cells. The nucleus first divides: one of the segments approaches the cell wall; a protrusion occurs there, includes the small nucleus, and forms a bud, which finally separates as a complete cell.

Buddle'ia. A Genus of the Nat. Order

Serophularine $\epsilon x$ .

B. america'na. Hab. South America. West Indies. Used in emollient baths and fo-mentations. (Waring.) mentations.

B. brazilien'sis. Hab. Brazil. Used for

mucilaginous poultices. (Waring)

B. globo'sa, Lam. (L. globosus, round like a ball.) Hab. Mexico. Used as a stimu-

B. madagascaren'sis. Hab. Madagascar. Used in asthma, cough, and catarrh. (Waring.)

**B. polys'tachys.** (Πολύς, many; στάχυς, an ear of corn.) Hab. Abyssinia. Given for tapeworm. (Waring.)

B. verticilla'ta. (L. verticillus, the whirl of a spindle.) Hab. Mexico. Used as an applica-

tion to wounds.

Bud'ram. (Welsh.) Oatmeal steeped in water for twenty-four to thirty-six honrs till it hegins to ferment, then skimmed and boiled to the consistence of gruel.

Bue. France; Hautes Pyrénées, near St. Sauveur. A weak chalyheate water.

Buec'phlysis. (Βοῦς, an οχ; ἐκφλύω,

to rush forth.) Cow-pox.

Bue'na. (Bueno.) A Genns of the Nat.

Order Rubiaceæ

**B. hexan'dra**, Pohl. (*Hexandra*, having six stamens; from εξ, six; ἀνήρ, a man.) Hab. Brazil. Bark bitter and febrifuge. B. obtusifo'lia, De Cand. (L. obtusus

blunt; folium, a leaf.) Bark used as a mild febrifuge.

Buff. (Contr. of F. bufle, a buffalo.) A pale yellowish colour like the tanned and dressed skin of a buffalo, called buff-leather.

B., inflam'matory. The buffy coat of coagulated blood.

Buf falo. (S. bufalo. F. buffle; 1. bufalo; G. Buffel, Buffelocks.) The Bos bubalus. Buffalo beef is dark in colour and strong in flavour.

Buf'feli. A riug made of the horn of a

buffalo, which is worn on the ring finger to cure the cramp. (Parr.)

Buf fon, George Louis le Clerc, Comte de. Born at Montbard, in Burgundy, 1707; died, from stone in the bladder, 1788. French naturalist. He wrote the 'Histoire naturelle."

Buffy coat. (L. corium phlogisticum, crusta pleuritica; F. couenne inflammatoire, couenne pleuritique; L. cotenna; S. costra inflammatoria; G. Speckhaut.) The upper layer of the clot in coagulated blood, which, under certain circumstances, contains no red corpuscles, and thus is colourless, or nearly so. It consists of fibrin and white corpuscles. It is always formed when the red corpuscles run together and so fall rapidly to the bottom of the vessel, and, except in the pregnant female, is not found to occur in the healthy human blood. The buffy coat is formed in inflammatory conditious, in chlorosis, and in all conditions of blood which make the liquor sanguinis lighter or the red corpuscles proportionably heavier. In conditions where the fibrin is actually in excess the surface of the buffy coat becomes concavely cupped. In some animals, as the horse, the blood naturally coagulates so strongly that a buffy coat is always formed when blood is let. It is also found in those cases in which the coagulation of blood is retarded by such artificial means as cold.

**Bu'fo.** (βοῦς, an οχ; φίνω, to slay; they were supposed to be deadly to oxen.) A Genus of the Order Anoura, Class Amphibia. Body squat; limbs short; gait heavy; back warty;

maxilla without teeth.

B. vulga'ris. (L. vulgaris, common. F. crapaud commun; I. rospo; S. sapo; G. Krote.) The common toad, formerly believed to be of great efficacy in medicine; the flesh dried and powdered was supposed to be powerfully diuretic and diaphoretic, and was given in dropsy; the living animal was applied to carbuncles and to cancer to draw out the virulent matter, and was alleged to swell visibly with the absorbed virus. The whole animal dried was worn about the neck as an amulet; it was believed to have a gem in its head (Bufonite), to which extraordinary virtues were attributed.

Bufo'nes exsicca'tæ. (L. bufo, a toad ; exsiccatus, dried. G. getrocknete Kroten.)

Dried toads. See Bufo vulgaris.

Bufon'idæ. (L. bufo, a toad.) A Family of the Gronp Oxydactyla, Order Batrachia. They are also described as a Section of the Order Anoura, of the Class Amphibia; as a Family of the Opisthoglossa platydactyla, and in other ways. Body squat; skin warty and glandular; toothless; tongue attached by its anterior extremity to the mandible; pupils transverse; hind limbs not much larger than the fore limbs; toes of hind

feet only slightly webbed. **Bu'fonite.** The toad-stone, believed formerly to be generated in the head of the toad, or to be vomited by the same animal; they were also called Chelonites, and other names, for equally good reasons. Toad-stones were in fact the teeth of several species of fessil fish, chiefly the anarrhieas and sparus; they had extraordinary properties attributed to them, were supposed to possess great alexipharmic virtues, and to cure the bite of poisoneus animals when applied to the part, according to Aldrovandus, de Insectis, iv, 3, m. 469.

Bug. (Welsh bug, a hobgoblin. F. punaise;

I. cimice; S. chinche; G. Wanze.) The Cimex lectularius. The bite of a bug produces a raised, circular, flattened papule, having a red point in

the centre produced by the puncture. **B.**, ag'arte. (F. ayarie fansse orange: G. Fliegenschwamm.) The Ayareus muscarius.

Used formerly to destroy bugs.

B. bane. The Cimicifuga racemosa. B., har'vest. The Acarus autumnalis, or Leptus autumnalis. Probably this insect is a larval form of a Tetranychus or a Trombidium.

Bugantia. A childrin.
Bugle. (L. bugilla, the Roman name of this plant.) The Ajnga reptans.

B., com'mon. The Ajuga reptans. B., moun'tain. The Ajuga pyramidalis. B., pyram'idal. The Ajuga pyramidalis.

B., wa'ter. The Lycopus virginicus.
B. weed. The Lycopus virginicus.

B., yel'low. The Ajuga chamapitys. **Bugloss.** (Bovs, an ox;  $\gamma\lambda\omega\sigma\sigma\alpha$ , the tongne; from the resemblance of its leaves. F. buglose; 1. buglosa; S. buglosa; G. Ochsenzunge.) The Anchusa officinalis, A. italica, and Lycopsis arrensis,

B., cow'slip. The Pulmonaria officinalis, from its likness in leaf and flower respectively to

the two plants.

B., creep'ing. The Lycopsis vesicularia.
B., dy'ers'. The Anchusa tinetoria.

B., gar'den. The Anchusa officinalis. E., small wild. The Lycopsis arvensis. B., stone. The Echium italicum.

B., up'right. The Ajuga pyramidalis, or Bugula.

B., vi'pers. The Echium vulyare.

Buglos'sa. See Bugloss.

Buglos'sum. The bugloss. Also, an old mame for the sole, Solea vulgaris.

B. angustifo'lium ma'jus. (L. angustns, narrow; folium, a leaf; major, greater.)
The Inchusa officinalis.

B. horten'sc. (L. hortensis, belonging to a garden.) The Anchusa officinalis.

B. latifo'lium. (L. latus, broad; folium,

a leaf.) The Borago officinalis. B. sati'vum. (L. satirus, that which is

sown.) The Anchusa officinalis.

B. sylves'tre. (L. sylrestris, belonging

to a wood.) The Anchusa officinalis.

B. tincto'rum. (L. tinetorius, belonging to a dyer.) The Anchusa tinetoria.

B. vulga're ma'jus. (L. vulgaris, common; major, greater.) The Anchusa officina-

Bu'gula. (Probably a dim. of Buglossa.) The Ajuga pyramidalis.

**B. chamæ'pitys.** (Χαμαί, on the ground; πίτυς, a pine tree.) The Ajuga chamæpitys.

B. pyramida'lis. (L. pyramidalis, like a pyramid.) The Ajuga pyramidalis.

B. rep'tans. (L. repto, to creep.) The Ajuga reptans.

Buiatrica. (Βοῦς, an οχ; Ιατρικός, belonging to medicine. G. Rindvichheilkunde.) The medical treatment of cattle diseases.

Buid'he Chon'nael. Same as Blefed. Builth. Wales; Brecknockshire. Picturesquely situated on the Wye. There are three springs, a chalybeate, a sulphur, and a strong salt spring, besides others in the neighbourhood. The salt spring contains 66 grains of sodium chloride and 11 grains of calcium obloride, in the pint. Used in dyspepsia and liver diseases.

Buis'ard. France. A mineral water, containing calcium chloride and carbonate.

Bu'lam fe'ver. Name given on the African coast to yellow fever.

Bula'ma boil. An inflamed and painful boil common on the west coast of Africa, caused by the larva of an undetermined insect.

Bula'ta. Same as Balata. **Bulb.** (Bολβός, a bulb. F. bulbe; I. and S. bulbo; G. Knolle, Zwiebel, Bolle.) In Botany, a subterrancan bad with fleshy scales, sending off roots from below and a stem above; or it may be looked upon as a very short stem, producing roots below, and leaves in the form of scales above. Confined to Monocotyledons.

Also, a generic term in Biology for several more

or less rounded structures.

B., aor'tic. (I. bulbo dell' aorta; G. Aortenzwiebel.) The anterior and upper of the three regimal divisions of the rudimentary tubular heart of the embryo; from it are developed the primitive aortic arches, which, as well as the bulb, are permanent in some animal:

Also, the enlargement at the commencement of

the aorta. See Aortæ radix.

B., arte'rial. Same as B., aortic. B., ar'tery of. (G. Zwiebelarterie.) short branch arising from the internal pudie artery between the layers of the subpubic fascia; it passes transversely inwards, pierces the bulb of the urethra and ramifies within it; it gives a branch to Cowper's gland. It varies in size, is sometimes double and sometimes absent.

B., au'ditory. The membranons labyrinth

and the cochlea are together so called.

B., cen'tral. The bulbons extremity of a nerve-fibril in a corpuscle of Krause.

B., coat'ed. (Low. L. cota, a garment.)

Same as B., tunicated.

B., den'tal. (F. bulbe dentaire; I. bulbo del dente.) The papilla which is developed at which, projecting into the descending enamel germ, becomes the teeth pnlp.

B. of cor'pus caverno'sum. A slight enlargement near the junction of each corpus

cavernosum with its fellow.

B. of cor'pus spongio'sum. The posterior bulbons portion of the corpns spongiosum penis, called B. of wrethru.

B. of eye. The globe of the eye.

B. of feath'er. The papilla at the bottom

of the feather follicle of the skin, on which the feather rests.

B. of fe'male. The B. of vestibule.
B. of for'nix. The Corpus albicans of each side.

B. of hair. (F. bulbe du poil; I. bulbo del pelho; G. Haarknopf, Haarzwichel.) The soft enlargement of the root end of the hair.

B. of o'vary. By Rouget, this term is applied to the plexns of veins and to the arteries of the ovary.

By Sappey, it is applied to the body of the ovary itself.

B. of Rou'get. Same as B. of ovary. B. of spi'nal mar'row. The medulla oblongata.

B. of throat. The tonsils. B. of tooth. See B., dental.

B. of ure'thra. (G. Harnröhrenzwiebel.) The posterior rounded end of the corpus spongiosum of the penis.

B. of vagina. The B. of vestibule.

B. of vestibule. (G. Schwellkorper des Vorhofes.) Au elongated oval mass, about an inch long, lying on each side of the vestibule of the vagina, and consisting of a venous plexus. Together they are the analogue of the bulb of the male urethra. The bulb of the vestibule is covered internally with nucous membrane, and externally by part of the constrictor vaginæ muscle.

B., olfac'tory. (L. olfacio, to smell. I. bulbo olfattorio; G. Riechkolben, Riechnervenkolben.) The anterior oval termination of the olfactory tract, consisting chiefly of grey substance, and giving origin to the branches of the olfactory nerve, which pass through the foramina in the cribriform plate of the ethmoid.

B., rachid'ian. ('Pάχις, the spine.) The

medulla oblongata.

B., sea'ly. A bulb with narrow, thickish, imbricated scales, as the lily.

B., specific gravity. See Specific gra-

vity bulb.

B., tu'nicated. (L. tunicatus, provided with a coating.) A bulb with broad, enfolding fleshy scales, as the onion.

Bulba ceous. (L. bulbus. F. bulbace; G. zwiebelartig, zwiebeltragend.) Applied to a bulb-bearing plant.

Bul'bar. (Same etymon.) Relating to a

Also, and especially in the term hulbar paralysis, relating to the bulbus rachidicus or medulla ohlongata.

B. disea'ses. A term under which some authors include epilepsy and bulbar paraly-

B. paral'ysis. See Paralysis, bulbar. Bulbi. (Plural of L. bulbus, a bulb.) A term applied to rounded eminences or parts of

B. forni'cis. (Fornix.) The Corpora albicantia.

B. prio'rum cru'rum forni'cis. prior, first; crus, a leg.) The Corpora albicantia.

B. vestib'uli. (L. vestibulum, an entrance.) See Bulb of vestibule.

Bul'biceps. (L. bulbus; caput, the head. zwiebelkopfig.) Bulbous-headed. G. zwiebelkopfig.)

Also, a stem with a bulbous base.

Bulbif erous. (L. bulbus, a bulb; fcro, to bear. F. bulbifére; G. Zwiebeltragend.) Having or bearing bulbs.

Bul'biform. (L. bulbus; forma, shape. zwiebelformig.) Having the shape of a G. zwiebelformig.)

Bul'bil. (L. dim. bulbus, a bulh. F. bulbille; G. Zwiebelknospe.) A small, solid, or scaly bud, growing in the axils of the leaves of a plant, which, being detached from it, becomes developed and produces a new individual.

The term is also applied in Chara to a mass of isolated underground nodes with greatly abbreviated whorls.

Bulbillif'erous. (L. bulbillus; fero, to bear. F. bulbillifere; G. bulbillentragend.)
Bearing bulbils.

**BulbiTus.** Same as Bulbit. **Bulbi'ne.** A Genus of the Nat. Order Liliacea.

B. planifo'Ha, R. and S. (L. planus, flat; folium, a leaf.) Hab. Europe. Said to be a purgative.

Bulbip'arous. (L. bulbus; pario, to bring forth.) Same as Gemmiparus.

Bulb'let. (Dim. of bulb.)

Bulbocastan'eum. Same as Bulbocas-

**Bulbocas tanum.** (Βολβός, a bulb; κάστανον, a chestuut.) The Bunium bulbocastanum, so called because its root is bulbous, and has the flavour of a chestnut.

Bulbocaverno'sus. (L. bulbus, a bulb; cavernosus, cavernous; in reference to the bulb of the urethra and the cavernous bodies of the penis.) The accelerator urinæ muscle.

Bulbocavernous glands. (Same etymon.) Cowper's glands.

Bulboco dium. (Βολβός, a bulh; κώδιον, skin.) The Narcissus pseudonarcissus. **Bulbo'dium.** (L. bulbus.) A synonym a skin.)

of Corm.

Bulbogem ma. (L. bulbus; gemma, a bud.) The same as Bulbil.

Bul'bonach. The Lunaria rediviva.

Bulbophyllum. (L. bulbus, a bulb; folium, a leaf.) A Genus of the Nat. Order Orchidacea.

B. nu'tans. (L. nuto, to ned.) Hab. Madagascar. Used as an emollient.

**Bulborrhex'is.** (Bo $\lambda\beta\delta$ s, a bulb;  $\beta\tilde{\eta}\xi\iota s$ , a breaking.) Rupture of the globe of the eye.

Bul bosin. A bitter, unerystallisable principle, soluble in water and in absolute alcohol, insoluble in ether; obtained from the Agaricus bulbosus, and to which, according to Boudier, its poisonous properties are due; it is said to differ from amanitin.

**Eulbo'sus.** Same as Bulbous.

Bulbotu'ber. (L. bulbus ; tuber, a bump. G. Knollzwiebel, Zwiebelknolle.) A tuberculated bulbous underground dilated stem, with very few scales; also called Corm.

Bulbourethra lis. (Βολβός, a bulb; οὐρήθρα, the urethra.) The accelerator urinæ muscle.

Bul'bous. (L. bulbosus. G. zwiebelartig, ausgeschwollen, knollig.) Of a rounded form. Bearing, or having the structure of, a bulb.

B. ag'aric. See Agaricus bulbosus.
B. ba'sed. Swollen at the base.
B. crow'foot. The Ranunculus bulbosus.

B. fing'ers. Enlargement of the ends of the fingers, with incurvation of the nails, seen in phthisical people and in cases of cyanosis.

B. por'tion of ure'thra, See Urethra.

bulbous portion of.

Bulbuli. Plural of Bulbulus. Bul bulus. (L. dim. of bulbus. G. Zwiebelchen.) A small bulb, such as develops in the

angles of the scales of a growing or propagating

Also, the same as Bulbil.

B. thra'cus. (L. bulbus, a bulb; thracus, belonging to Thrace.) The bulbous edible root of Cuperus esculentus.

Bul'bus. (Βολβός, a bulb.) A bulb; a bulb-shaped structure.

B. allii, U.S. Ph. (L. allium, garlie. F. ail; G. Knoblauch.) The bulb of Allium sati-2.26211.

B. aor'ticus. Same as Bulb, aortic, and Aorta radix.

B. arterio'sus. (Arteria.) The Bulb,

B. caro'tis commu'nis. (L. communis,

common.) An enlargement of the upper part of the carotid artery, which occurs in about 33 per cent. of adults. It is not perceptible during the first year or two of life. A similar enlargement is sometimes found at the commencement of the external or internal carotid artery.

B. ce'pæ. (L. cepa, an onion.) The onion; the bulb of the Allion cepa.

B. cine reus. (L. cinercus, ashen-grey colour.) A synonym of Bulb, olfactory.

B. col'chici. Colchicum root. See Colchici cormus.

B. eseulen'tus. (L. esculentus, estable.) Probably the Allium ascalonicum.

B. forni'cis. (L. fornix, an arch.) A synonym of each of the Corpora albicantia.

B. glandulo'sus. (L. glandulosus, full of

glands.) The Proventriculus.

B. medul'læ spina'lis. -(L, medulla,morrow; spinalis, belonging to the spine.) The medulla oblongata.

B. oc'uli. (L. oculus, the eye. F. bulbe de l'œu!; G. Augupfel.) The eyeball.
B. olfactorius. See Bulb, olfactory.

B. ova'rii. (L. ovarium, the ovary.) See Bulb of ovary.

D. pi'li. (L. pilus, hair.) See Bulb of hair.

**B. rachidicus.** ('Páχιs, the spine.) Λ synonym of the Medulla oblongata.

B. seil læ. The bulb of Scilla maritima.

B. ure'thræ. (Οὐρήθρα, from οὐρέω, to pass urine.) See Bulb of wrethra.

B. vagi'næ. (L. vagina, a sheath, the vagina) The Bulb of the vestibule.

B. ve'næ jugula'ris. (L. vena, a vein; jugulum, the throat. G. Drosseladerzwiebel.) The enlargement of the jugular vein at its commencement; it occupies a depression in the temporal bone.

n. vestib'uli. (L. vestibulum, from vestio, to eover.) See Bulb of vestibule.

B. victoria'lis lon'gæ. (L. victorialis, belonging to the mountain St. Victoire; longus, long. G. langer allermannsharnisch.) The bulb of the Allium victoriale.

B. vomito'rius. (L. vomitorius, emetic.)
The Hyacinthus muscari.

**Bule**'sis. (Βούλησις, a willing. G. Streben, Wille.) The will.

Bul'ga. (L. bulga, a bag.) The vulva; also the womb.

Bulging. (Old Sw. bulgja, to swell ont.) Protrusion, a circumscribed swelling out. Applied to such occurrences as the prominence seen in the early stage of a hernia, or the projection of a part of the chest walls in thoracic ancurysm.

**Buli'mia.** (Bov, a partiele of angment; λιμός, hunger. F. boulimie, faim canine, addiphagie; I. bulimo; G. Heisshunger, Gefrässig-keit.) A morbid bunger, chiefly occurring in idiots and maniaes, in which the patients cat so inordinately that regurgitation or vomiting occurs, and then they eat again; the so-called canine hunger. The older writers paid great attention to this condition. Cullen distinguished three species.

**Β**. **eynorex'ia.** (Κύων, a dog; δρεξες, appetite.) Same as B. emetica.

B. emet'ica. ('Emetinos, provoking sickness.) In which there is desire of food in great quantity, which is immediately vomited up

B. heliuo'num. (L. helluo, a glutton.) In which the eraving for food is the only disorder.

B. syncopa'lis. (Συγκοπή, a swoon.) In which the sense of hunger is preceded and eaused by fainting.

Bulimi'asis. Same as Bulimia.

Buli'mic. (Same etymon.) Relating to

Buli'mus. Same as Bulimia. Bu'limy. Same etymon and meaning as Bulimia.

Bulith'os. (Bous, an ox; \lambda itos, a stone.) A bezoar, or intestinal concretion, found in the kidneys, gall-bladder, or urinary bladder of the ox. (Castellus.)

Bull. (From Sax. bellan, to bellow. F. taureau; I. toro; S. toro; G. Stier.) The male of the Bos taurus.

B.'s eye condens'er. See Condenser, bull's-eye.

B.'s foot. The Tussilago farfara, from the shape of its leaf.

B.'s hoof. The Murucuja ocellata.

B.'s liv'er. The Fistulina hepatica.
B. segg. Pool sedge. The Typha lati-

B. stongue. The Fistulina hepatica. B. weed. (O. E. boll, a globular body.) The Centaurea nigra.

B. wort. Pool wort. The Scrophularia. Also, Ammi majus.

Bulla. (L. bulla, a bubble of water. F. bulle; 1. bolla; G. Bluze, Wasserblase.) A bleb. A more or less circular elevation of the epidermis, caused by effusion of a serous or sero-purulent fluid; produced by disease or vesicants. A bulla differs from a vesicle only in its size, and may be from half an inch in diameter to the size of a Tangerine orange.

Also, a term applied to the tympanic element of the temporal bone, when, as in the dog, it forms a large bubble-like appearance.

Bullace. (Gael. bulaisteur.) The Prunus communis, var. insititia.

**Bullæ.** (L. plural of bulla, a water-bubble. F. bulles; G. Blasen.) An Order in the elassification of skin diseases by Willan, including pemphigus and pompholyx

Also, large vesieles or blebs, or appearances

resembling them.

B. rotun'dæ cervi'cis u'teri. (L. bulla, a bubble; rotundus, ronnd; cervir, the neek; uterus, the womb.) The glands of Naboth. **Bullate.** (L. bullatus, inflated, having a bubble. G. blasig.) Blistered; having blebs or

blisters; inflated.

Applied to leaves where the surface rises above the veins, convex on one side, concave on the other, as the Savoy eabbage.

Bull'dog for ceps. Forceps with a spring catch, a fenestrated wide blade, tapering rapidly, and the extremity of one blade pointed, of the other notebed, for the reception of the point. They are used for taking hold of the ent ends of bleeding vessels.

Bulles'cence. (L. bulla, a bubble.) A term applied to the condition occurring in leaves when the intervenous structure arises above the

veins, as in the Savoy cabbage.

Bulles'cent. Same as Bullate. Bullet. (F. boulet, a bullet; from L. bulla, a stud.) A ball-shaped missile for a gun.

B. detec'tor. An instrument to enable

the presence of a leaden bullet to be detected at the bottom of a deep wound, or when embedded in bone. Much ingenuity was directed to this object in connection with the well-known case of Garibaldi, where Nélaton discovered the bullet by a probe made of porcelain, which was coloured by the metal. Lacomte Lüers employs a small canula forceps, by which a piece of metal can be pinched off, whilst Liebreich employs two wires —the poles of a battery—connected with a galvanometer, the needle of which moves when contact with a metal is effected.

B. extrac'tor. (G. Kugelschraube.) A kind of gimlet which, guarded by a canula, is inserted into the wound and screwed into the

B. for'ceps. Forceps with long handles and short-toothed blades, that is, having the hinges near the extremity. Used for extracting

Bull'fist. (Perhaps a corruption of Bovista.) A name of several species of Lycoperdon.

Bullica'me. See Viterbo. Bullif'erous. (L. bulla; fero, to bear. F. bullifere ; G. blusentragend.) Bearing blisters or vesicles.

Bullock. (Sax. bullnea, a little bull. F. buuf; I. bue; G. Ochs.) The castrated male of

the domesticated Bos taurus.

B.'s blood. Has been used as a remedy in anæmia, phthisis, and general debility. It may be drunk warm, or may be concentrated and taken in the form of pill.

B.'s heart. The Anona reticulata.
B.'s lung'wort. The Verhaseum thapsus, so called because it was used in chest diseases of

Bullose. (L. bulla, a water bubble.) Same as Bullate.

Bullous. (Same etymon.) Having blebs or blisters.

B. disea'ses. In Tilbury Fox's classification, herpes and pemphigus.

Bulls and cows. The Arum macu-

Bull'segg. (Segg for sedge.) The Typha lutifolia.

Bul'Iula. (Dim. of bulla, a bubble. G. Blaschen.) A small bleb or blister.

Bullule. (Dim. of Bulla.) A small bleh or blister.

Bull'wort. (More probably poolwort, from the habitat.) The Scrophularia aquatica, and also, the Ammi majus.

Bul'ly tree. The Achras sapota. Also, the Bumelia nigra.

(Polerush or poolrush. Bul'rush. jone d'eau; I. giuneo; G. glatte Binse.) The Typha latifolia.

And also, the Scirpus lacustris.

Bulrushworts. The plants of the Nat. Order Typhacea.

Bulung. The Javanese name of the Fucus

vesiculosus.

Bumam'mus. **Bumam'mus.** (Bov, a particle of increase; μάμμη, the mother's breast. G. Grossbeerig.) Having large berries like a nipple.

Bumas'thon. (Bov, a particle of increase; μασθός, for μαστός, the breast.) Excessive size of the female breast.

B. pen'dulum. (L. pendulus, hanging.) A large female breast hanging down.

Bumas'tus. (Same etymon.) Same as Bumasthon.

Also (G. grossbeerig), bearing large berries like a large nipple.

Bumble-bee. (Old Dutch bommelen, to buzz.) A name given to the species of the Family Bombidæ; also called Humble-bee.

Bum blekite. The Rubus fruticosus.

Bumelia. (Βουμελία, a kind of ash.) The

Frazinus excelsior.

Bumel'ia. (Same etymon.) A Genus of the Nat. Order Sapotaevæ. Tropical trees or shrubs, with a bitter astringent bark; some of the species supply Balata.

B. lyciol'des, Gaertn. (Λυκοειδής, wolf-

like.) Hab. Carolina. Fruit used in diarrhea. **B. monta** na. (L. montanus, belonging to a mountain.) Red bully tree. Hab. Jamaica. Bark used as a substitute for cinchona.

B. ni'gra. (L. niger, black.) Bully tree. Hab. West Indies. Used instead of cinchona. and as an application to foul ulcers; supplies bastard balata.

B. salicifo'lia. (L. salix, a willow; folium, a leaf.) Willow-leaved sapota. Hab. West Indies. Used as a substitute for einchona.

Also called Achras salicifolia.

Bump'ing. (Welsh pumpio, to thumb.) The sudden jump or jar occurring when certain liquids are boiled in glass vessels. 'It may be prevented by putting into the vessel small angular fragments of glass, by giving the lower part of its interior a metallic coating, or by passing a slow current of air or carbonic acid through a fine-pointed glass tube to the bottom of the fluid. **Bu'na.** The Coffice arabica.

Buncho'sia. "A Genus of the Nat. Order

Malpighiacea.

B. armeni'aca. (L. armeniucus, Armeniau.) Hab. Peru. Seeds poisonous.

Buncombe. United States. A county of North Carolina, in which there are mineral springs. (Dunglison.)

Bun'dle. (Sax. byndel, dim. of bund, a thing bound up.) A thing or things tied or gathered up into one package.

B. sheath. (G. Gefassbündelscheide, Strangscheide.) A term applied by Sachs to partially or entirely closed envelopes or sheaths, composed of fundamental tissue, which accompany the fibro-vascular bundles of plants.

Bun'du. Otherwise Bonduc.

Bun'duhr. The Corylus avellana. Bune'wand. The Heraclium spondy-Bune wand. lium.

Bung'arum pa'mah. The native Indian name of the Bungarus fasciatus.

Bung'arus. A Genus of venomous snakes of the Family Elapidæ, Suborder Proteroglypha, Order Ophidia. Hab. India, Ceylou, and China. The characters of the Genus are—Body rather elongated; tail comparatively short; head more or less dilated, depressed, with broad rounded muzzle, searcely distinct from neck, which is not dilatable; eye small, with round pupil; rostral shield broader than high, reaching to upper surface of snout; anterior frontals half the size of posterior, vertical 5-sided; occipitals tapering behind; nostrils rather wide between two nasals; soreal none; one præ-, two post-oculars; seven upper labials, the third and fourth entering the orbit; scales smooth, moderately imbricated, disposed in oblique rows, forming fifteen longitudinal series round the body, those of the vertebral series are very broad, hexagonal; ventrals between 200 and 250; anal and sub-

caudal entire; scales without apical groove; maxillary bone with a fang in front, a second small simple tooth at some distance behind the fang. The Bungari are diurnal terrestrial snakes, living in holes in the ground; fang shorter, and therefore bite less dangerous, than that of the Cobra, since it can be more easily excised.

B. annula'tus. (L. annulatus, furnished with a ring.) A synonym of B. fasciatus.

n. arcua'tus. (L. arcuatus, part. of arcuo, to bend like a bow.) A variety of B. caruleus. The upper parts of the animal present narrow white streaks, arranged in pairs

B. can'didus. (L. candidus, glistening.)

A synonym of the B. carulous.

B. cæru'leus. (L. cæruleus, dark blue.) The krait. The first temporal shield is considerably longer than high; ventrals 201 to 221, subcandals 38 to 56; lower parts uniform white; upper parts bluish or brownish black, uniform, or with more or less numerous very narrow white cross streaks, not quite so broad as a seale, and generally radiating from a white vertebral spot; no collar; ventral surface sometimes livid or yellow. This snake is common all over India. It may attain a length of four or five feet. Next to the Cobra it is the snake most destructive to human life in India.

B. fascia'tus. (L. fascia, a band.) A species found in Burmah, Rangoon, and India. Body trigonal, with sharp dorsal ridge and declining sides; body with alternate broad, black, and yellowish rings extending across the belly; there are about twenty-five to thirty-three black rings; head black anteriorly, and on the sides separated from the triangular surface by a yellow V-like mark; lower parts and throat uniform yellow. Length sometimes over six feet. Bite

very dangerous.

**B. liv'idus.** (L. lividus, of a leaden colour.) A variety of B. cærulcus. The upper parts of the animal are uniform blackish brown.

Bun-hal'di. The Hindustani name of the

root of the Curcuma aromatica. Bu'nias. (Bouviás. G. Zackenschote.) A Genus of the Nat. Order Crucifera.

Also, the Brassica napus, or wild navew. B. caki'le. The Cakile maritima.

B. eruca'go, Linn. (L. eruca, a kind of colewort.) Hab. Europe. Aerid and dinretie; also used as a sternutatory.

Bu'nioid. (Boverás, a kind of turnip; zidos, like.) Turnip-like; applied to a form of

scirrhous cancer from its shape

Bun'ion. (Bovvés, a little hill. L. tubera verrucosa; F. oignon; I. bunione; G. Schwiele.) An enlarged bursa on the foot; generally on the metatarso-phalangeal articulation of the great or little toe, occasionally over the seaphoid. Produced by crowding of the toes in a too tight boot, or by injury. In time the joint ends of the bones become thickened, the bursa becomes inflamed, and may suppurate, and a troublesome ulcer be left. The boots or shows should be broad soled, with a short waist. The bunion should have pressure taken off it by a pad, and the absorption of its contents may be attempted by iodine or mercuric iodide.

Buni'tes vi'num. (L. vinum, wine.) Name for wine made of hunium 2 drs., and must

4 pints. **Bu'nium.** (Bovrós, a little hill; from its place of growth, or from its tuberous root.) A Genus of plants of the Nat. Order Umbellifera. Fruit oblong, crowned with styles; carpels with 5 slender ribs, and 2 or 3 elongated vitta between them; petals obcordate, with an inflected point. This word was anciently applied as a name of the turnip; also a name for the Petroselinum sativum, wild parsley, and the Seseli montanum. Also, the same as Bunion.

**B.** bulbocas'tanum. (Βολβώς, a bulb; κάστανον, a chestnut. F. noix de terre.) The root is named earth-nut, hawk-nut, kipper-nut, and pig-nut; it is as large as a nutmeg, hard, tuberous, whitish, nutritious, and has a sweetish taste; it has been supposed useful against stran-

gury and bloody urine.

Also, ealled Carum bulbocastanum.

B. car'vi. The Carum carui.

B. cop ticum. The Ptychotis coptica.

B. ferula'ceum. (Ferula.) The tubers are eaten in Greece under the name of Topana.

B. flexuo'sum, With. (L. flexuosus, full arns.) The Conopolium denudatum. of turns.)

B. mi'nus. (L. minor, less.) The B. or Carum bulbocastanum.

Bun'nian. Otherwise Bunion. Bun'sen. A German physicist, who died in 1871.

B.'s absorptiom'eter. (L. absorptio, a sucking down; metrum, a measure.) An apparatus contrived for the determination of the amount of a gas capable of being absorbed by water.

B.'s bat'tery. Zine-carbon battery. It consists of a vessel of curthenware containing dilute sulphuric acid, into which is placed a cylinder of zinc, open at both ends; within this is placed a porous earthenware vessel, containing nitric acid and a solid cylinder of carbon. The earbon forms the positive, and the zine the negative, pole.

B.'s burn'er. A tube of metal placed over a small gas burner, having opposite to the jet at its lower end holes for the admission of air, which, mixing with the gas, secures its perfect combustion, and a smokeless, very hot flame,

when lighted at the top of the tube.

**B.**'s photom'eter. ( $\Phi \tilde{w} s$ , light;  $\mu \acute{\epsilon} \tau \rho o \nu$ , a measure.) A circular spot is made on a bibulous paper screen, by means of a solution of spermaceti in naphtha; the spot appears translacent, and when illuminated from the front it appears darker, from behind lighter, than the surrounding paper. A light of a definite intensity, say a wax candle of known size, is placed behind the screen. The light to be tested is placed at such a distance in front of the screen that the spot is of the same brightness as the rest of the paper, and thus the relative illuminatory power of lights is obtained.

Bunt. The Tilletia caries.

Bun'weed. The Senecio jacobæa. Bun'yon. Otherwise Bunion.

Buophthalmia. A synonym of Buphthalmos.

**Buoy ancy.** (Eng. buoy, from Dut. boci, from Low. L. boia, a elog.) The quality of floating; lightness.

B. of lig'uids. The vertical upward pressure of the lower layers of a liquid on those above, the result of the pressure of liquids being exerted in all directious.

Bupei'na. (Boυ, a particle of augment πείνα, hunger.) Bulimia, or voracious hunger. (Bov, a particle of augment;

Bu'phane texica'ria. The Amaryllis disticha.

Buphthal'mi her'ba. (Bous, an ox; öρθαλμός, the eye; L. herba, springing vegetation.) The Anthemis tinctoria.

Suphthal'mia. A synonym of Buphthalmos.

**Buphthal'mos.** (Bov, a particle of augment; or βούν, an ox; όφθαλμός, the eye. F. buphthalmie, wil de bænf; S. buftolmia; G. Ochsenauge.) A synonym of Keratoglobus.

Buphthal'mum. (Βοῦς, an ex; δφθαλμόs, an eye; from the funcied resemblance of its flower. G. Rindsauge.) A Genus of the Nat.

Order Compositæ.

Also, the plant ox-eye, Anacyclus radiatus, B. cre'ticum. (L. creticus, Cretan.) The

Anthemis pyrethrum, or pellitory of Spain. B. german'icum. (L. germanieus, German.) The Chrysanthemum leucanthemum, or great ox-eye daisy.

B. ma'jus. (L. major, greater.) Same as

B. germanicum.

B. olera'ceum. (L oleraceus, resembling herbs.) A plant said to be used as a potherb in Cochin China.

B. salleifo'lium. (L. salix, a willow; folium, a leaf.) Willow-leaved ox-eye. A plant said to he slightly narcotic, and the leaves of which are tonic and stimulant, and are used in Persia as tea.

**B. spino'sum.** (L. spinosus, prickly.) The plant supposed to be the *Hyophthalmus*, or hog's-eye; either the Eryngium maritimum, or

the Pullenis spinosa.

E. stearopten. Obtained by distilling the flowers of B. salieifolium. It forms yellow, silky, acieular crystals, melting at about 35° C. (95° F.) to a yellowish oil of pleasant odour, faintly acid reaction.

Buphthal'mus. (Same etymon.) The Sempervivum tectorum.

Also, the same as Buphthalmos.

**Bupi'na.** (Bov, a particle of augment; πεῖνα, hunger.) A synonym of Bulimia.

Bupleurin eous. An old Division of the Umbellsferæ, having the characters of Bupleurum.

Bupleuroï des. (Bupleurum, the herb hare's-ear.) A name for the Bupleurum rotundifolium.

Bupleu'ron. The Bupleurum rotundifolium.

**Bupleu'rum.** (Bov, intensive; πλευρόν, a rib; its leaves having large ribs. F. l'oreille de lievre; G. Hasenohrlein.) A Genus of plants of the Nat. Order Umbellifera. Hare's ear. Fruit ovate, oblong, crowned with the styles; carpels with 5 prominent ribs; petals roundish, entire, with an involute retuse point.

B. falca'tum. (L. falcatus, siekle-shaped.) Falcate-leaved hare's-ear. Hab. Europe. Root

is aperient. Used in snake-bites.

B. frutico'sum, Linn. (L. fruticosus, shrubby.) Hab. South Europe. Fruit carminative and diuretic.

B. perfolia'tum. (L. per, through; folium, a leaf.) The B. rotundifolium.

B. rotundifo'lium, Linn. (L. rotundus, round; folium, a leaf.) The round-leaved hare's-ear. Hab. Europe. Stem branched above; universal involuere wanting, partial involueres mucronate; leaves perfoliate, roundish oval.

Formerly celebrated for curing ruptures, and as an astringent and diuretic.

**Bupres tidæ.** (Βούπρηστις, a poisonous cettle.) A Family of the Group Pentamera, Order Cokeptera. Body long, brightly coloured; prothorax with a flattened appendage; head small; antennæ eleven-jointed, dentate; abdo-men with five ventral plates; larvæ live in

**Bupres'tis.** (Bows, an ex;  $\pi \rho \eta \theta \omega$ , to blow out; because if eaten among the grass by cattle it kills them.) Au insect (Gr.  $\beta n\sigma\pi\rho\eta\sigma\tau$ rs) used by Galen, de Simpl. Med. Temp. ac Fac. xi, 1, § 45, vol. xii, p. 365, cd. Kühn, resembling the Cantharis, supposed to be the Mylabris cichorii.

Also, a Genus of pentamerous Colcoptera. Also, a name of a pot-herb used by the

Greeks.

Bur. Old term, used by Helmontius, tr. Elementa, n. 13, for a supposed mineral juice, or seminal liquor, originating in putrefield water, and causing the generation of plants; it was called the first issue, stock, or generation of mi-

The common name for the rough head of the Arctium lappo, and similar rough involuera.

B., les'ser. The Xanthium strumarium. B. marigold. The Bidens cernua, from its burr-like seed-vessels.

B. pars'ley. The Caucalis daucoides, from

its burr-like seed-vessels.

B., prai'rie. The Silphium terebintha-

B. reed. The Sparganium ramosum, from its burr-like seed-vessels.

B. reed, great. The Sparganium ramo-

B. this'tle. The Arctium minus.
B. weed. The Arctium minus.
B. wort. The Hanmeulus acris.
Bu'rac. Old term for borax, and for all

kinds of plants. (Ruland.) **Burbot.** The Gadus lota; a source of supply of some kinds of Oleum morrhuæ.

Bur'dach, Karl Fried'rich. A German anatomist, born at Leipzic iu 1776, died at Breslau in 1847.

B. col'umns of. The posterior median columns of the spinal cord.

B., slen'der fascic'ulus of. Same as B., columns of.

Bur'dock. (F. bourre, a flock; G. Docke, a flock.) The plants Arctium lappa and Lappa minor.

B., broad-leav'ed. The Xanthium strumarium.

B., great. The Lappa major.
B., small. The Xanthium strumarium. Burd'wan fe'ver. An endemic malarious fever observed in Burdwan; intensified by overcrowding, insufficient food, and poverty.

Burette. (F. burette, dim. of Old F. buret, a vase.) A glass tube of various shapes, closed at one end, moulded into a lip at the other, and graduated so that a definite amount of its contents may be withdrawn or measured. Used in volumetric analysis.

Burg-furing mushk. (Hind.) The dried leaves of Dorema ammoniacum, used as a stimulaut. Dose, 20-30 grains.

Bur'goo. Same as Burgout.

Burgout. A form of oatmeal gruel boiled to a moderate consistence and eaten with butter. Also (Arab.), the grain of wheat boiled with leaven and afterwards dried in the sun. It will k-cp good for years, and is eaten with bullu or oil.

Bur'gundy. (F. Bourgogne.) A district of Central France.

B. pitch. (F. poix blanche, poix jaune; G. Weisspech.) Pix burgundica. A resinous exudation from incisions through the bark of G. Weisspech.) the Abics excelsa, melted in hot water and strained through a cloth. Hard and brittle, yet gradually taking the form of the vessel in which it is kept; opaque, varying in colour, generally dull reddish brown; of a peculiar somewhat empyreumatic perfumed odour, and aromatic taste without bifterness; gives off no water when heated; nearly soluble in rectified spirit. A compound of resin and palm oil is often substituted. Used as a plaster basis.

B. wine. The wine grown in the Burgundy districts, both red and white. It is stronger and fuller bodied than elaret, and, for that reason, is believed to be of service in anamic conditions of body. It contains an average of seven to four-

teen per cent. of alcohol.

Buri'na. Pix or pitch. (Ruland.)
Bu'ris. Name used by Avicenna, iii, fen.
2, tr. 1, e. 3, for what was called a scirrhous hernia, which probably meant a scirrhous enlargement or induration of the testicle.

Burmannia'ceae. Herbaceous plants without true leaves, or with radical tufted ones. Flowers hermaphrodite, regular; perianth tubular, regular, superior; stamens distinct, inserted into tube of ealyx, either 3 with introrse authers, or 6 with extrerse anthers; evary inferior, 1celled, with 3 parietal placenta, or 3-celled with axile placente; style 1; stigmas 3; capsule 1-3 celled; seeds numerous, very small; embryo

A Nat. Order of epigynous petaloid Monocotyledons, or a Family of the Order Gynandra, Class Monocotyledones.

Burman'niads. The plants of the Nat.

Order Burmanniacea.

Bur meister, Her mann. A distinguished entomologist of the early part of the present century.

B.'s classifica'tion of an'imals. Irregular, Infusoria; Regular, Radiata; Symmetrical, Mollusca, Arthrozoa, Osteozoa

Bur'mie. (llind.) The Taxus baccata. Used in Iudia as a scent and an aphrodisiae.

Burn. (Sax. bernan, to seorch with heat. F. brulure; Gr. kavots; L. ustio; 1. abbrucciamento; S. quemadura; G. Brandwunde.) A lesion of some part of the body produced by the nction of heat. Dupuytren divided burns into six classes:

1. The result of a momentary application, or of no great temperature, in which there is only redness and pain.

2. When there is vesication and loss of euticular substance, followed or not by suppuration.

3. When the cuticle is destroyed, but a portion only of the corium.

4. When there is complete destruction of the whole depth of skin. The eleatrix after healing often produces deformity by contraction.

5. When the superficial muscles are destroyed. 6. When the whole thickness of the limb is

destroyed.

There is more constitutional disturbance when the trunk is injured than when the limbs are burnt. At first, in a severe burn there is great depression, with congestion of internal organs, which may cause death. Reaction may set in after two or three days; there is much fever, and inflammation of lungs and brain, or ulceration of the duodenum, may prove fatal. When eschars are separating, or after extensive vesication, When eschars there is often much suppuration, which may prove fatal by exhaustion or intercurrent pneumonia or bronchitis.

Burn'ea. A name of common pitch. Bur'net. (I. brunezza, swarthy; in reference to its brown flowers.) The Poterium officinale.

B. blood'wort. (From its power of stanch-

ing blood.) The Sanguisorba officinalis.

B., Can'ada. The Sanguisorba canadensis.

B., sal'ad. The Poterium sanguisorba.
B., small. The Poterium sanguisorba.
E. sax'ifrage. The Pimpinella saxifraga.

Bur'nett, Sir W. An English naval medical officer.

B.'s disinfecting fluid. A solution of zine chloride.

Bur'nia. A name of common pitch. Burning. (Sax. barnan, to scorch with heat.) The act of heing burnt; very hot.

Also, an old English name, it is thought, for gonorrhea; also called Brenning. See Combustion.

B. bush. The Euonymus atropurpureus.

B. glass. A convex lens, so called because, if powerful enough, by its means the calorifie rays of direct sunshine may be sufficiently concentrated to set fire to a combustible material on which they are focussed. Heat obtained in this manner has been used as a caustic.

B. of the feet. A term applied by some authors to a febrile disorder attacking the Sepoys during the Burmese wars of 1824-6, of which the most distressing symptom was intense burning heat of the soles of the feet. Later writers have doubted the existence of a special disease of this kind, but believe it to be a form of beriberi.

Burn'isher. (Old F. burnir, to make brown, to pelish.) An instrument of varied shape and of highly-polished hard steel, used for polishing the surface of the gold stopping of a tooth.

Burns. A Scottish auatomist of the

eighteenth century.

B., lig'ament of. The inner extremity of the superior cornu of the saphenous opening of the fascia lata, which is attached to Gimbernat's ligament at the spine of the pubes.

Burnt brass. See Es ustum. B. al'um. See Alumen ustum. B. ear. The Ustilago carbo.

B. harts'horn. (F. corne de cerf calcinée.) Cornu ustum, Cornu cervi calcinatum. Pieces of stag's horn burnt to whiteness; it is chiefly ealcium phosphate. It was used in rickets, and in relaxations of the bowels.

B. holes. The Pemphigus gangrenosus.
B. horn. See Cornu ustum.

B. rhu'barb. See Rheum ustum.

B. sponge. (F. éponge calemée; G. gebraunter Schwamm.) Spongia usta. Sponge burnt carefully in a close vessel and powdered. It is composed chiefly of calcium phosphate and carbonate, sodium iodide and carbon. It was used in goitre and serofula, the iodide being the active remedy.

Bu'row's operation. A mode of removal of tumours of the face, whereby a de-

formity from a scar is prevented. It consists in the removal of the tumour by including it in a triangular incision enclosing a surface which is to be quite denuded of skin; the base line is then extended in healthy structures to three times its original length, and a triangular piece of skin of the same size as the other, but on the opposite side of the base line, is to be removed; the angles of skin left are to be dissected up, attached to the adjacent angle of the skin-denuded triangles. This operation is adapted also to the removal of SCATS.

Burquism. A term for Metallotherapy, from its introducer, M. Burq.

Burr. A rough pronunciation of the letter r, ealled also Rotacism.

Also, the lobe of the external ear.

Also, the circular projecting ring at the base of a deer's horn. B. seed, branch'ed. The Sparganium

ramosum.

Bur'rage. The Borago officinalis

Bur'rhi spir'itus matrica'lis. (L. matricalis, belonging to the womb.) Burrhus's spirit for disorders of the womb; composed of myrrh, olibanum, amber, mastich, and spirit of wine.

Burro'ne. Italy; near Castelnuovo. A mild enalybeate, with free carbonic acid.

Bur'sa. (Βύρσα, a hide.) A bag or purse. The scrotum.

B. abducto'ris dig'iti min'imi pe'dis. A bursa found between the abductor minimi digiti of the foot and the tuberosity of the fifth metatarsal bone in 14 per cent. of subjects.

B. acromia lis. A bursa situated between the inner surface of the deltoid and the greater

tuberosity of the humerus.

B. anconce'i. A bursa found beneath the anconæus muscle in from 12 to 28 per cent. of subjects.

B. an'guli inferio'ris scap'uiæ. bursa found in 7 per cent. of subjects at the

inferior angle of the scapula.

B. an'guli superio'ris scap'ulæ. bursa found in 8 per cent. of subjects at the insertion of the levator scapulæ, or in the uppermost part of the m. serratus anticus major.

B. anseri'na. A bursa situated beneath the insertion of the sartorius and gracilis muscles. It may communicate with the B. semimembranosa, and thus indirectly with the knee-joint.

B. aorticotrachea'lis. A bursa found between the lower part of the trachea and the aorta.

B. bicipita'lis radia'lis. A small bursa situated between the insertion of the biceps eubiti

and the tubercle of the radius.

B. bicip'itis. (L. biceps, having two heads. G. Zwischenhöckerschleimbeutel.) The process of the synovial membrane of the shoulder-joint which invests the tendon of the biceps, and thus preserves the integrity of the membrane.

B. bicip'itis cru'ris. A bursa situated between the tendon of the biceps femoris and the

ligamentum collaterale laterale longum. B. bicipitofibula'ris. The same as B.

bicipitis cruris.

B. bicipitogastrocnemia'lis. A bursa rarely found between a sesamoid bone in the outer head of the gastrocnemius and the tendon of the biceps.

B. brachia'lis infraspina'ti. A bursa found in 28 per cent. of subjects beneath the humeral attachment of the infraspinatus muscle and the bone.

B. brachia'lis infraspina'ti. The same as B. infraspinata.

B. calca'nea. A bursa situated between the tendo Achillis and the posterior surface of the tuberosity of the os calcis.

B. carpi'na vola'ris. A bursa frequently found between the tendon of insertion of the flexor earpi ulnaris and the os pisiforme.

B. cho'iera. (Χολή, gall.) The gall-blad-

B. cinculta'ris. A bursa found in 25 per cent, of subjects at the spine of the scapula between the hone and the trapezius muscle.

B. coccyge'a. A bursa found between the tendinous band which constitutes the posterior insertion of the sphineter ani externus and the apex of the os coccygis.

B. copula'trix. (L. copulatrix, she who couples. G. Samentasche.) A sac or pouch present in many Condylopoda, in which the seminal

fluid is preserved after copulation.

B. coracobrachia Iis. A bursa situated between the tendon of origin common to the hiceps and the coracohrachialis muscles and the apex of the coracoid process of the scapula.

B. coracoclavicula'ris latera'lis pos-A bursa occurring in about 15 per te'rior. cent. of subjects behind and beneath the coracoclavicular ligament.

B. coracoclavicula'ris media'iis. bursa found between the upper surface of the coracoid process and the inferior rough surface of the acromial extremity of the claviele.

A bursa formed by a B. coracoï dea. separated portion of the subscapular bursa, which occurs in about 87 per cent. of subjects, and is situated beneath the root of the corncoid process.

B. cor'dis. (L. cor, the heart.) The perieardium.

B. costoclavicula'ris. A bursa occasionally found in the ligamentum costoclaviculare.

B. cricothy'reo-thyreof'dea. A bursa found occasionally between the thyroid body and the cricothyroid muscle.

B. cubita'lis extenso'ris car'pi radia lis bre'vis. A bursa found in from 10-57 per cent. of subjects between the origin of the extensor carpi radialis brevis and the supinator muscle.

B. cubita'lis interos'sea. A bursa oceurring in about 20 per cent. of cases between the tendon of the biceps brachii and the tuberosity of the radius, the adjoining surface of the upper end of the ulna and the supinator brevis muscle.

B. cubitoradia'lis. The same as B. cubitulis interossea.

B. deitoi'dea. (L. mucus, slime; and Δ, the Greek letter D.) A bursa subjacent to the deltoid separating it from the joint, and not communicating with it.

B. entia'na. (Ent, the original describer.) The duodenal segment of the intestine in Elas-

mobranch fi-hes.

**B.** epiplo'ica. (' $E\pi i\pi \lambda oo\nu$ , the omentum.) A synonym of B. omentalis.

B. extenso'ris car'pi radia'lis bre'vis. A bursa situated between the extensor carpi radialis brevis muscle and the third metacarpal bone. It exists in from 70 to 90 per cent. of subjects.

B. extenso'ris car'pi radia'lis ion'gi.

A bursa which is present in 20 per cent. of subjects between the extensor carpi radialis longus and the second metacarpal bone.

B. extenso'ris car'pi ulna'ris. A bursa found in 30 per cent, of eases between the flexor

earpi ulnaris and the os pisiforme.

B. extenso ris digito rum pe'dis bre'vis. A bursa beneath the short extensor of the toes; it is found in 6 per cent. of subjects

B. extenso'ris hal'lucis bre'vis. A bursa found in connection with the short extensor of the great toe in 12 per ceut. of sub-

- B. Fabric'ii. (Fabricius.) A exeal process opening into the posterior extremity of the clonea in birds. During the first period of feetal hife the duct of the corpora Wolffiana opens into it. Its mucous membrane contains a large number of Peyer's glands.
- B. fibula'ris. The same as B. bicipitis

B. flexo'ris car'pi ulna'ris. A bursa found between the tendon of the flexor carpi ulnaris musele and the pisiform bone in 30 per cent. of subjects.

B. fos'sæ infraclavicula'ris. A bursa found frequently in front of the coracoid process

and the coraco-clavicular fascia.

B. gastrocne'mil latera'lis. A bursa lying beneath the outer head of the gastrocnemins muscle, and found in frem 14 to 17 per cent. of subjects.

B. gastrocne'mii media'lis. A bursa lying beneath the inner head of the gastroenemius musele. It is entirely independent of the bursa semimembrauosa in 50 per cent. of subjects.

B. gemel'li superio'ris. A bursa existing between the tendon of the gemellus superior and the pyriformis. It is present in 25

per cent. of cases **B.** genua'lis ante'rior. The same as B.

anserina. B. genua'lis latera'lis exter'na. bursa found in 16 per ceut. of subjects between the external intermuscular septum of the fascia lata, ligamentum iliotibiale, and the external condyle of the femur.

B. gcnua'lls latera'lls exter'na infe'-rior. The same as B. bicipitis cruris.

B. genua'lis latera'lis inter'na infe'rior. The same as B. anscrina.

B. genua'lis latera'lis inter'na me'dla. A bursa found in 52 per cent. of subjects beneath the ligamentum collaterale mediale of

B. genua'lis latera'lis inter'na supe'rior. A bursa found in 13 per cent. of subjects at the lower extremity of the adductor magnus musele.

B. genua'lls poste'rior. The same as the B. semimembranosa.

B. glute'i max'imi. A bursa existing between the glutaeus maximus and the femur. That of one side fails in 42 per cent. of subjects, and both in 17 per cent.

B. glute'i me'dii. A bursa existing between the glutæus medius and the trochanter major of the femur. It is absent in 20 per cent. of subjects.

B. glute'i min'imi. A bursa existing beneath the pyriformis, or between the tendon of this muscle and that of the gemellus superior in 25 per cent, of subjects.

B. glutcofascia'lis. The same as B. gluteofemorales.

B. gluteofemora'lis. A bursa between the glutarus maximus and the femur. It is absent on one side in 42 per cent., and on both sides in 17 per cent.

B. gluteotrochanter'iea. A large bursa situated between the glutæus maximus and the

surface of the great trochanter.

B. humera'lis flexo'ris digito'rum sublimis. A bursa found occasionally beneath the upper part of the flexor sublimis digitorum.

B. humerotricipita'lls. A bursa found on the posterior surface of the humerus in 8 per

cent. of subjects.

B. hyoi'dea. The same as B. subhyoidea. B. ili'aca. The same as B. subtendinea.

B. iliocostocervica'lis. A bursa found over the tubercle of the first rib in 80 per cent. of

B. Iliocostocervica'lls. A bursa situated between the iliocostalis dorsi muscle and the transverse process of the seventh cervical vertebra.

B. illopectine'a. A bursa situated between the psoas and iliac muscles in front, and the iliopectineal eminence and the hip-joint, with which last it often communicates, behind.

B. iliopso'as. A bursa existing between the iliopsoas muscle and the trochanter minor. It is present in 17 per cent. of subjects.

B. infragenua'lis. The same as B. infrapatellaris.

B. infrapatella'ris. A hursa situated between the tendo patellæ and the tuberosity of the tibia.

B. infrapatella'ris profun'da. A bursa found in front of the ligamentum patella in 40 per cent. of subjects.

B. infrapatella'ris superficia'lis infe'rior. A bursa found in front of the tuberosity of the tibia iu 20 per cent. of subjects; it is either subcutaneous or is covered by the fascia.

B. Infrapatella'ris superficia'lis supe'rior. A bursa found beneath the skin in front of the ligamentum patellæ in 40 per cent. of subjects.

B. infraspina'ta. A bursa situated beneath the tendon of insertion of the infraspinatus muscle into the middle facet of the great tuberosity of the humerus.

B. infraspina'ti. A bursa situated beneath the infraspinatus muscle. It is frequently

B. intermetacarpophalange'a. Bursæ intermetacarpophalangeæ.

B. intermetatarsophalange'a. Bursæ intermetatarsophalangeæ.

B. intertubercula'ris. (L. inter, between; tuberculum, dim. of tuber, a knot.) A synonym of B. bicipitis.

B. intramuscula'ris pectora'lis majo'ris. A bursa found in 8 per cent. of cases within the substance of the pectoralis major

muscle. B. intraserra'ta. A bursa found between the insertious of the upper division of the serratus anticus major muscle in 9 per cent. of subjects.

B. intratendino'sa olec'rani. A bursa found in 58 per cent. of subjects within the tendinous tissue superjacent to the anconcus,

B. ischiad'ica. A bursa situated by tween

the tendon of the obturator internus muscle and the groove of the ischium, in which it glides.

B. ischiad'ica glute'i max'imi. A bursa found between the glutæus maximus and the tuber ischii in 42 per cent. of subjects.

- B. latis'simi dor'si. A bursa situated between the latissimus dorsi and the lower border of the teres major muscle when these muscles are in contact.
- B. masseter'ica. A bursa occasionally found between the anterior and posterior portions of the masseter muscle.
- B. metacarpophalange'a. See Bursa metacurpophulangeæ.
- B. mucilagino'sa. (L. mucilago.) Same as B. mucosa.
- B. muco'sa. (F. bourse muqueuse; I. borsa; S. bolsa; G. Schleimbeutel.) A synovial sac of discoidal form interposed between muscles, tendons, or skin, and bony prominences, for the purpose of lessening friction. Bursæ mucosæ are often lined with true synovial membrane, but not always; and sometimes they have direct

communication with the joint which they protect. About 27-30 of the bursæ mucosæ are constant, and about 170 occur occasionally, so that the total number in the two halves of the body is about 400. The occasional bursæ are generally developed as the result of nausual friction of muscles against each other or adjoining parts. Some, as those which form on the shoulder when heavy weights are frequently horne, are pathological. There is are frequently horne, are pathological. There is a gradual passage from loese connective tissue, the meshes of which are filled with fluid, to the perfect bursa lined with endothelium.

B. obturato'ria inter'na. A bursa existing in 38 per cent. of subjects, and found nearer to the trochanter major than the usual bursa ischiadica.

B.obturato'ris exter'ni. A bursa found in connection with the obturator muscle. It exists in 11 per cent. of cases.

B. obturato'ris inter'ni circumflex'a. The same as B. ischiadica.

B. obturato'ris inter'ni ova'lis. The same as B. obturatoria interna.

B. olec'rani. A bursa situated between the skin and the electanon; it is rounded or elliptical, and 4 cm. long (11 inch).

B. omenta'lis. (L. omentum.) The eavity of the lesser omentum, exhibited by blowing through the foramen of Winslow.

B. omen'ti majo'ris. A synonym of the great omentum.

B. omen'ti mino'ris. A synonym of the lesser omentum.

B. ovarica. (G. Eierstocktasche.) bursa situated between the superior part of the broad ligament of the uterus and the tubal surface of the ovary. It extends towards the middle line in a horizontal groove between the inner part of the tube and the ligamentum ovarii.

B. pas'toris. (L. pastor, a shepherd.) Shepherd's purse. The Capsella bursa pastoris, from the form of its seed-vessels.

B. pas'toris mi'nor. (L. minor, lesser.) The Tresdalia iberis.

B. patel'læ. (F. patella, a plate, the knee-pan.) The synovial bursa between the patella and the skin.

B. patel'ize amplifica'tze. (L. patella, the knee-pan; amplifico, to enlarge.) Housemaid's knee.

M. patella'ris. The same as B. prapatelluris subcutanea.

B. patella'ris latera'lis. One or occasionally two bursa found in 8 per cent. of subjects on the outer side of the patella.

B. patella'ris latera'lis exter'na. The same as B, putellaris lateralis.

E. patella'ris præligamento'sa. The same as the B. infrapatellaris superficialis su-

B. patella'ris præspino'sa. as B. infrapatellaris superficialis inferior.

B. patella'ris prætubero'sa. The same as B. infrapatellaris superficialis inferior.

B. patella'ris profun'da. The same as præpatellaris subtendinosa.

B. patella'ris subcuta'nea. The same as B. præpatellaris subcutanea.

B. pectine'a. A bursa found at the insertion of the pectinens muscle in 57 per cent. of

B. pectora'lis mino'ris. A bursa frequently found at the insertion of the pectoralis minor into the humerus.

B. peronæa'rum commu'nis. A bursa situated between the tendon of the peronæus brevis and the external malleolus. It communicates with the bursa of the peronæus longus above.

B. pharynge'a. (G. Schlundtasche.) A median pouch or enlargement of the pharynx, about three fifths of an inch long (15 mm.) and a quarter of an inch (6 mm.) wide, eccasionally found between the upper part of the pharynx and the spinal column. It opens usually by a narrow aperture at the lower border of the tonsil. It projects upwards towards the body of the occipital hone, and ends hlindly in front of the pharyngeal tubercle. It is a remnant of that projection of the pharyngeal mucous membrane from which the anterior lobule of the hypophysis cerebri is developed.

phrenicohepat'ica B. ante'rior. When the free border or the posterior surface of the plica ligamentosa triangularis sinistri is (pathologically) adherent to the peritoneal investment of the diaphragm a sac is formed, which is closed everywhere except to the right. It is found in from 10 to 48 per cent. of cases.

в. phrenicohepat'ica poste'rior. When the free border or the anterior surface of the plica ligamentosa triengularis sinistri is (pathologically) adherent to the peritoneal investment of the diaphragm a sac is formed, which is closed everywhere except to the right. It is found in 3 per cent. of cases.

B. poplite'a. A bursa found behind the knee-joint between the fibrous capsule and the oblique origiu of the poplitens muscle. It communicates with the part of the joint above the external semilunar cartilage by means of a fissure, which is limited anteriorly by the border of this cartilage, and behind by the tendinous origin of the popliteus.

B. postcalca'nea profun'da. The same as B. calcanea.

B. postcalca'nea subcuta nea. bursa situated between the skin and the tendo Achillis opposite the os calcis.

B. postcalca nea superficia lis. same as B. postcalcanea subcutunea.

B. postgenua'lis exter'na. The same as B. gastrocnemii lateralis. B. præmenta'lis. A bursa situated between the skin and the anterior and lower part

of the inferior maxilla.

B. præpatella'ris latera lis inter'na subligamento'sa. The same as B. prapatellaris medialis profunda.

B. præpateila'ris me'dia. The same as

B. præpatellaris subjuscialis.

- B. præpatellaris media'lis profun'da. A bursa found in 10 per cent. of subjects beneath the fascia covering the inner part of the patella.
- B. præpatella'ris media'lis superficialis. A bursa found on the inner side of the patella superficial to the fascia in 8 per cent. of cases

B. præpatella'ris profun'da. The same as B. præpatellaris subtendinosa.

B. præpatella'ris secun'da. The same as B. præpatellaris subfascialis.

B. præpatella'ris subaponeurot'ica. The same as B, prapatellaris subtendinosa.

- B. præpatella'ris subcuta'nea. bursa found beneath the skin in front of the patella.
- B. præpatella'ris subfascia'lis. bursa found between the fascia lata and the tendon of the quadriceps extensor femoris in 29-45 per cent. of subjects.

B. præpatella'ris subtendin'ea. The same as B. prapatellaris subtendinosa.

- B. præpatella'ris subtendino'sa. bursa found in 10 per cent. of cases between the patella and a thin layer of the tenden of the quadriceps extensor muscle.
- B. præpatella'ris superficia'lis. The same as B. præpatellaris subcutanea.

B. præpatella'ris ter'tia. The same as B. præpatellaris subtendinosa.

B. pyrifor mis. A bursa found either beneath the tendon of the pyriformis muscle or between its tendon and that of the gemellus superior muscle, in 25 per cent. of subjects.

B. quadra'ti fem'oris. A bursa found between the quadratus femoris and the trochanter

- B. retrocondyloï'dea exter'na me'dia. A bursa found between a sesamoid bone of the external head of the gastroenemius and the tendon of the biceps. It is of rare occur-
- B. retrecondyloï'dea exter'na subcuta'nea. A bursa occasionally, but rarely, found between the skin and the outer head of the gastroenemius musele.
- E. retroepicondyloï'dea latera'lis profun'da. The same as B. gastrocnemii lateralis.
- B. retroepicondyloi'dea latera'lis pro'pria. The same as B. gastrocnemii
- B. retroepitrochlea'ris media'lis hu'merl. A bursa rarely found to the inner side and behind the inner condyle of the humerus.
- B. sacra'lis. A bursa situated between the skin and lumbo-dorsal fascia covering the sacrococcygeal articulation.
- B. sarto'rii pro'pria. A bursa between the sartorius muscle and the lower end of the adductor magnus. It is found in 13 per cent. of subjects.
- B. semimembrano'sa. A hursa situated between the semimembranesus muscle and the int rnal condyle of the femur. It often com-

municates with the cavity of the knee-joint, the opening being most patent in flexion. It also covers the tendinous origin of the inner head of the gastrocuemius to the extent of one inch and a half.

B. semimembrano'sa pro'pria. bursa between the tibia and the tendon of the semimembranosus muscle. It may either be independent or a process of the bursa semimembranosa.

B. semimembrano'si. A bursa occasionally found between the semimembranesus muscle and the internal cendyle of the femur. It generally communicates with the synovial sac of the knee-joint.

B. semimembrane'si supe'rier. bursa found between the semimembranesus and the tuber ischii. It exists in 17 per cent. of

subjects.

B. semimembrane'so-gastroenemi-a'lis. The same as B. semimembranosa.

- B. si'nus tar'si. A bursa, found in 42-49-53 per cent. of subjects, situated in the sinus tarsi and extending beyond to the lateral surface of the neck of the astragalus, beneath the tendon of the extensor digitorum longus and the tendineus band of the ligamentum cruciatum tarsi (Wurzel), which connects the fibrous sheath of the latter with the ligamentum interesseum in the sinus tarsi. This bursa is bounded posteriorly by the first joint of the feet, and in front extends as far as the astragalo-scaphoid articulation, with which it communicates in 5 per cent. of sub-
- B. sternohyo''dea. A bursa occasionally found between the sternehyoid muscle and the thyrohyoid membrane.
- B. subachilie'a. The same as B. cal-
- B. subacromia'lis. A bursa which appears to be a process of the B. subdeltoidea above the tendon of the supraspinatus muscle.
- B. subcalca'nea. The same as B. subcutanea calcanei.
- B. subcap'ite latera'li mus'culi rec'ti fem'oris. A bursa found in 28-44 per cent. of subjects beneath the external head of the rectus femeris.
- D. subcla'via. A bursa occasionally found between the clavicle, the tendon of the subclaviu smuscle, and the ligamentum costoclavicu-
- B. subcrura'lis. The same as B. suprapatellaris.
- B. subcuta'nea acremia'lis. A bursa found between the acromion process of the scapula and the skin in 15 per cent. of subjects.
- B. subcuta'nea calca'nei. A bursa situated between the posterior part of the fascia plantaris and the tuberesity of the es calcis.
- B. subcuta'nea capit'uli ul næ. bursa found in 27 per cent. of subjects between the skin and the head of the ulna.
- B. subcuta'nea con'dyli radia'lis hu'meri. A bursa feund in from 2-7 per cent. of subjects over the outer condyle of the humerus.
- B. subcuta'nea con'dyli ulna'ris hu'meri. A bursa found in 17 per cent. of subjects between the skin and the inner condyle of the humerus.
- B. subcuta'nea fibula'ris. A bursa found occasionally between the skin and the head of the fibula.

**B. subcuta'nea go'nu.** (L. subcutanea; sub, beneath; cutis, the skin; genu, the knee.) A bursa placed between the tendo patella and the skin.

B. subcuta'nea latis'simi dor'si. A bursa found between the skin and the latissimus

dorsi musele.

**B.** subcuta'nea malle'oli latera'lis. Λ bursa found between the skin and the outer malleolus in 54 per cent. of cases.

B. subcuta'nea malle'oli media'lis. A bursa found between the skin and the inner mal-

leolus in 38 per cent. of subjects.

B. subcuta nea olec rani. A bursa found beneath the skin over the olecranon in 60 per cent. of subjects. It is present on the right side alone in 5 per cent., on the left side alone in 3 per cent.

B. subcuta'nea os'sis navicula'ris. A bursa found both on the dorsal and on the plantar

surface of the scaphoid bone.

B. subcuta'nea planta'ris capit'uli hal'lucis. A bursa between the skin and the plantar surface of the head of the first metatarsal bone. It is found in 80 per cent. of subjects.

B. subcuta'nea planta'ris capit'uli os'sis metatar'si quin'ti. A bursa between the skin and the plantar surface of the head of the fifth metatarsal bone. It occurs in 50 per cent. of subjects.

B. subcuta'nea proces'sus stylol'del ra'dil. A bursa found occasionally only between the skin and the styloid process of the

radius.

**B.** subcuta'nea supra'protuberan'tiam occipita'lem exter'nam. A bursa situated between the skin and the external occipital protuberance.

**B.** subcuta'nea trochan'teris majo'ris. A bursa found between the skin and the trochanter major in 31 per cent. of subjects.

B. subcuta nea tuberis is chii. A bursa occasionally, though rarely, found between the skin and the tuber ischii.

**B.** subcuta'nea ulna'ris os'sis metacar'pi quin'ti. A bursa situated between the skin and the ulnar surface of the fifth metacarpal bone.

B. subdelto'i'dea. A bursa found beneath the deltoid muscle.

B. subgemel'laris. A bursa found beneath the gemelli in 6 per cent, of subjects.

B. subhyo''dea. A bursa situated between the skin and the pomum Adami.

B. subili'aca. The same as B. subtendinea.
B. subligamento'sa. The same as B. infravatellaris.

B. sublingualis. A bursa believed by some anatomists to exist on the outer surface of the genioglossus muscle, and to afford an explanation of ranula.

**B.** subpatella'ris. (L. sub, beneath; patella, the knee-pan.) A bursa placed between the tendo patellæ and the tibia. The same as

B. infrapatellaris.

B. subscapularis. (L. sub, under; scapula, the shoulder-blade.) A bursa beneath the tendon of the subscapularis muscle, communicating with the synovial membrane of the shoulder-joint by an opening on the inner side of the capsular ligament.

This bursa is found in 11 per cent. of sub-

icets.

B. subscrra'ta. A bursa occasionally

found between the serratus magnus and the upper angle of the scapula.

**B. subtendin'ea.** A small bursa situated between the tendon of the iliac muscle and the trochanter minor muscle.

B. subtendino's a mus'culi brachia'lis inter'ni. A bursa, rarely found, beneath the tendon of the coracobrachialis muscle.

B. subtendino'sa mus'culi pectora'lis majo'ris. A bursa found in 33 per cent. of subjects beneath the tendon of the pectoralis major.

B. subtendino'sa mus'culi peronæ'i ter'tii. A bursa, rarely found, beneath and near

the insertion of the peronaus tertius.

B. subtendino's a mus'culi subscapula'ris. A bursa found in 11 per cent. of subjects beneath the teudon of the subscapularis muscle.

B. subtendino'sa mus'culi supruspina'ti. A bursa, rarely found, beneath the tendon

of the supraspinatus muscle.

B. subtendino's a mus'culi tere'tis mino'ris. A bursa, rarely found, beneath the tendon of the teres minor.

**B. subtendino'sa mus'culi tricip'itis** bra'chii. The same as B. subtendinosa olecrani.

**B.** subtendino's olec'rani. A bursa situated beneath the fascia covering the olecranon in from 3 to 37 per cent.

B. supracetabula'ris. A bursa found above the acetabulum in 31 per eent. of subjects.

B. supraanconæ'a intratendino'sa. The same as B. intratendinosa olecrani.

B. supracondyloi'dea inter'na. A bursa frequently communicating with the knee-joint, situated beneath the inner head of the gastroenemius musele.

B. supracondylor dea media lis. A bursa covered by the inner head of the gastroenemius, and often a mere process of the synovial membrane of the knee-joint. It exists as an independent cavity in 33 per cent. of subjects.

B. supracoracoï dea latera'lis. The same as B. coracoclavicularis lateralis poste-

rius.

B. supracoracoï dea latera'lis ants'rior. The same as B. pectoralis minoris.

**B.** supracoracci'dca media'lis ante'rior. The same as *B. fussa infraelavicularis*.

**B.** supragenualis. The same as B, suprapatellaris.

B. suprapatella'ris. A bursa situated beneath the muscles above the knce-joint in about 11 per cent. of subjects; it does not communicate with the eavity of the knee-joint.

B. suprapatella'ris intramuscula'ris. A bursa found in 13 per cent. of subjects between the cruralis and rectus femoris muscle, two or three centimetres above the patella.

B. supraxiphoï'dea. A bursa or lacuna in the connective tissue, situated at the lower extremity of the ensiform process of the sternum, behind the linea alba.

B. synovia'lis. (L. synovia.) Same as B. mucosa.

**B.** synovia'lis iliocostocervica'lis. The same as B. iliocostocervivalis.

**B.** tenso'ris fas'ciæ la'tæ. The same as B, genualis lateralis externa.

B. tenso'ris ve'll palati'ni. A bursa situated between the tendon of the tensor palati

and the hamular process of the internal ptery-

goid plate.

B. ter'etis majo'ris. A bursa found between the tendon of the teres major and the lesser tuberosity of the humerus in 57 per cent. of subjects.

B. tes'tium. (L. testis, a testiele.) The bag of the testieles; a term for the scrotum.

**B.** thyreohyol'dea. The same as B. subhyoidea.

B. thyreohyol'dea latera'lis. A bursa frequently found between the greater cornu of the hyoid bone and the thyrohyoid musele.

B. thyreotrachea'lis. A bursa found between the isthmus of the thyroid gland and

the traches.

- B. tibia'lis anti'ci. A bursa found on the inner side of the first tarsal bone in 42 per cent. of cases.
- B. trochanterica. The B. gluteofemo-
- B. trochanterica mus'culi glute'i me'dii ante'rior. A bursa situated between the tendon of the glutæus medius and the outer part of the trochanter major of the femur. It is often double.

B. trochanter'ica mus'culi glute'i me'dil poste'rtor. A bursa found in 67 per cent. of subjects between the tenden of the gluteus medius and that of the pyriform muscle.

B. trochanterica mus'cult glute'i min'imi. A bursa situated between the tendon of insertion of the glutæns minimus and the trochanter major.

B. trochanter'ica profun'da. The same

as B. trochanterica.

B. tuberosoischiad'ica. situated between the tendon of the obtarator muscle and the groove of the ischium in which it

B. ulnoradia'lis. A bursa existing between the ulna and the radius, sometimes termed B. cubitalis interessea. It is found in from 20 to 50 per cent.

B. viri'lis. (L. virilis, belonging to a man.) The scrotum.

Bursæ. (L. bursa, a sac.) A term usually used alone to signify B. mucosæ.

Also, see Bursa.

B. dorsa'les articula'res metacarpophalange'æ profun'dæ. Bursæ, not always present, situated beneath the extensor tendons on the metacarpal phalanges of the fingers When present they communicate with the joint of the phalanx in 25 per cent. in the case of the thumb, and in 50 per cent. of the remaining fingers.

B. dorsales pe'dis subcuta'neæ. Bursæ found rarely between the skin and the extensor tendons over the first joints of the toes.

B., drop'sy of. (G. Wassersuch de Schleimbeutel.) Effusion into a bursa mucosa. (G. Wassersuch der

B., for eign bodies in. Small flattened bodies found in the fluid of an enlarged bursa, consisting probably of consolidated lymph; a friction sound is often noticed, produced by their movement.

B. gluteofemora'les. Two or three small bursæ situated between the tendon of the glutæus maximus below the great trochanter, the bones, and the adjoining muscles.

B., inflamma'tion of. Inflammation may occur from injury or other cause in any bursa; it is most common in the most exposed, as that over the patella. It may result in effusion of sernm or in the production of pus, or in the thickening of the walls of the sac by fibrinous deposit and infiltration.

B. intermetacarpophalange'æ. Burfound in the second interesseous interstice in 25 per cent. of subjects, in the third in 58 per cent., and in the fourth in 17 per cent. of

B. intermetatarsophalange'æ. Bursæ found between the heads of the metatarsal hones. That between the first and second exist in 95 per cent. of subjects, that between the second and third in 98 per cent., that between the third and fourth in 95 per cent., and that between the fourth and fifth in 20 per cent. of

B. lumbrica'les ma'nus. The same as

B. intermetacarpophalangeæ.

B. lumbrica'les pe'dis. A synonym of

B. intermetatarsophalangea.

B. metacarpophalange'æ. placed either on the volar or dorsal surface of the metaearpal phalangeal articulation. They may be subeutaneous and superficial, or subtendinous and deep. The subcutaneous dorsal of the first finger occurs in 40 per cent., of the second in 53 per cent., of the third in 66 per cent., of the fourth in 66 per cent., and in the fifth in 27 per cent. of subjects. A subtendinous or deep me-tacarpophalangeal bursa is only occasionally present. When present it communicates with the joint in the case of the thumb in 25 per cent, and in the other fingers in 50 per eent. of subjects. The subentaneous volar bursa occurs in the case of the thumb in 6 per cent, of the forefinger in 20 per cent., in the middle finger in 27 per cent., and occasionally only in the ring and little fingers.

B. muco'sæ. Sec Bursa mucosa.

B. musculo'rum interosseo'rum ma'nus. Bursæ found beneath the interessei muscles of the hand. That which is most frequently present is beneath the second dorsal interesseous muscle.

B. musculo'rum interessee'rum pe'dis. Bursæ found beneath the interesseous muscles of the foot. That beneath the second dorsal is found in 3 per cent. of cases; that be-neath the third dorsal in 7 per cent.; that in connection with the first plantar in 47 per cent., with the second plantar in 57 per cent., and with the third plantar in 13 per cent. of cases.

B. musculo'rum lumbrica'lium pe'dis accesso'riæ. Barsæ found in connection with the lumbricales muscles. That in connection with the first exists in 17 per eent, with the second in 25 per eent, and that with the third

in 17 per cent. of cases.

B. musculo'rum lumbrica'lium subtendino'sæ. Bursæ found between each of the extensor tendons and the first joints of the

B. planta'res. Burse found in connection with the interessel museles; that connected with the first plantar occurs in 47 per cent. of subjects, with the second in 57 per cent., and with the third in 13 per cent. of subjects.

B. subcuta'neæ dorsa'les articulatio'num metacarpophalange'æ. Bursæ found between the skin and the metacarpophalangeal articulations. That of the thumb occurs in 40 per cent. of subjects; that of the forefinger

in 53 per cent.; that of the middle finger in 66 per cent.; that of the ring finger in 66 per cent.; and that of the little finger in 27 per cent. of subjects.

B. subcuta'neæ dorsa'les phalan'gium secundo'rum digito'rum ma'nus. Bursa found between the skin and the second joint of the fingers. Such a bursa exists in the thumb in 80 per cent. of subjects, in the ring finger in 87 per cent. of subjects, and is constant in the index, middle, and ring fingers.

B. subcuta'neæ dorsa'les phalan'gium tertio'rum digito'rum ma'nus. Bursæ found between the last articulations of the fingers and the skin. These exist in 7 per cent. of subjects in the case of the second and fourth

fingers.

B. subcuta'neæ planta'res articulatio'num metatarsophalan'gium. Bursæ occasionally found between the skin and the

metatarsophalangeal articulations.

B. subcuta'neæ proces'sus spino'si vertebra'rum cervica'llum. Bursæ found beneath the skin over the spinous processes of the lower cervical vertebræ, especially of the seventh or Vertebra prominens.

B. subcuta'neæ vola'res articulatio'num metacarpophalan'gium. Bursæ found between the skin and the volar surface of the metacarpophalangeal articulations. That of the thumb is present in 6 per cent. of subjects; that of the foreinger in 20 per cent.; that of the middle finger 27 per cent.; and those of the ring and little fingers occasionally only.

B. subcuta'neæ vola'res phalan'gium primo'rum digito'rum. Bursæ situated between the skin and the volar surface of the first phalanges of the fingers. They are found in

9 per cent. of subjects.

B. subtendino'sæ pe'dis. Bursæ found occasionally beneath the tendons covering the first joints of the toes.

B. subtendino'sæ dorsa'lis articula tio'num metacarpophalan'gium. same as B. dorsales articulares metacarpophalangeæ profundæ.

B. synoviales accessoriæ. (L. synovia; accessorius, accessory.) Term applied to the synovial bursæ found in and between various muscles of the head, trunk, and extremities.

B. synoviales subcutainea. Bursa situated in various parts of the body between the skin and bony or cartilaginous projections, as the oleeranon, angle of the jaw, thyroid car-

B. tu'mor. (L. tumor, a swelling.) A thickening of the walls of a bursa mucosa. Same as Bursal tumour.

Bur'sal. (Same etymon.) Of, or belonging to, a bursa.

B. ab'scess. Suppuration, the result of inflammation of a bursa.

B. syno'vial mem'brane. See Synovial membrane, bursal.

B. tu mour. A hard swelling, usually over the patella, consisting of thickening of the bursal sac over the patella, or of a deposit of fibrous material in its cavity, or of a gradual consolidation of the contents of the bursa, or from deposit of wrate of soda in gout.

Bursa'lis. (Same etymon.) Belonging to a bursa; shaped like a bag or purse.

B. mus'cle. A muscle found in the orbit of birds and lizards, the tendon of which is attached to the membrana nictitaus; it draws the lid over the eye.

Also, the same as B. musculus.

B. mus'culus. (L. musculus, a muscle.) The Obturator internus muscle.

Bursal'ogy. (Βύρσα, a bag; λόγος, a discourse.) The doctrine or consideration of the bursæ mucosæ.

Bursarius. Same as Bursalis. Bur'ser, Jo'achim. A botanist born at Camentz in 1593, and was professor of physic and medicine in the Academy of Soroe in Denmark.

**Burse'ra.** (Burser.) A Genus of the Nat. Order Amyrulaecæ, or Terebinthaecæ.

B. acumina ta, Willd. (L. acumino, to make pointed.) A tree growing in the Antilles, which furnishes Caragna resin.

B. balsamif'era, Pers. (L. balsamum, balsam; fero, to bear.) A tree growing in the Antilles which furnishes the balsamiferous resin of Gommart.

B. gummif'era, Jacq. (L. gummi, gum; fero, to bear.) A tropical South American tree which furnishes Gommart or Cachibon resin.

B. panicula'ta, Lam. (L. panicula, a.) The Canarium commune, or Colophonia tuft.) mauritiana; latterly it has been called Boswellia mauritiana.

Bursera'ceæ. A Subtribe of the Nat. Order Terebinthaceæ. Ovary containing 2 ovules; ovules with a superior micropyle and a ventral

Also, a synonym of Amyridacea.

Burser'idæ. A Tribe of the Nat. Order Amyridaceae, in which the ovary is more than one-celled.

Bur'serine. A white pulverulent resinous substance obtained from Cachihou resin, the balsam of the Bursera gummifera.

Bursicula. Same as Bursicule.

Bursic'ulate. (Βύρσα, a bag.) Like a purse. Furnished with a Bursicule.

Bursicule. (Dim. bursa, a pouch. G. Beutelehen.) A small pouch; a small sac excavated in the rostellum to receive the retinacula of the pollinia of orchids.

Bursifo'liate. (L. bursa, leaf.) Having pouch-shaped leaves. (L. bursa; folium, a

Bursiform. (L. bursa, a purse; forma, shape. G. taschenformiy.) Purse-shaped. A flattened sphere.

Bursi tis. (Bursa. G. Schleimbeutelcutzundung.) Inflammation of a bursa mu-

Burst wort. (From its supposed efficacy in ruptures.) The Herniaria glabra.

Bursula. (Dim. of L. bursa, a bag.) The scrotum.

Burt'scheid. (Boreette.) Germany; a suburb of Aix-la-Chapelle. Height 500 feet. A rather close town, with fair accommodation; not so pleasant as Aix-la-Chapelle, but much cheaper. There are sulphurous and weak alkaline saline springs of 59° C. (138.2° F.) to 71° C. (159.8° F.) They contain less sulphur than those of Aix-la-Chapelle. The sulphur springs are used in skin diseases, in dyspepsia, liver disorders, and gravel. The saline in scrofula, gout, and rheumatism.

Bur'unhem. A name of Monesia. **Buscatina.** (Boῦs, an ox; σκατός, for σκάτους, gen. of σκώρ, duug.) The odoriferons principle of cow-dung which imparts to cowhonses their peculiar odour.

Buscori'na. (Βοῦς; σκῶρ, dung.) Same as Buscutina.

Busell'num. (Βου, intensitive; σέλινον, parsley.) The Daucus carota, or carrot.

Bush. (Dan. bush, a shrub. F. buisson; 1. espuglio; G. Busch, Strauch.) A small shrubby tree, a thicket. In Botany, a shrub which is low and branched at the base is called n bush.

B.-bas'll. The Ocimum caryophyllatum, or O. minimum.

B. honevsuck'le. The Diervilla tri-

B., Jew. The Prdilanthus lithymaloides.
B. tea. The leaves of Cyclopia genistoides and U. latifolia.

Busignarg'ues. France; Departement de l'Herault. A mild chalybeate water.

Busk. Ru-sian Poland; in the neighbourhood of Cracow. Mineral waters, temp. 13° C. (554° F.), containing magnesium iodide 1·3, magnesium chloride 8·7, magnesium sulphate 29, sodium chloride 154, in 22,400 parts, with some hydrogen sulphide and nitrogen.

Bu'sot. Spain; near Alicante. A pleasant place, but hot in summer, with earthy waters of a temperature of 41° C. (105°8° F.) Used in chronic rheumatism and dyspepsia.

Bus'sang. France; Vosges. A cold car-

bonated chalybeate water, containing a little arsenic. Used in gastralgia, dyspepsia, chlorosis, and anarmia.

Bus'siares. France; Departement do l'Aisne. Cold weak bicarbonated waters

Bus'sii spiritus bezoardicus. The bezoardie spirit of Bussius; made by distilling spirit of hartshorn, or of ivory, sal ammoniac, crude potash, amber, oil of cedar, and alcohol.

Bus'tard. (Through Old F. bistard, from L. avis, a bird; tarda, fem. of tardus, slow. F. outarde; 1. ottarda; G. Trappe.) tarda. The flesh is much esteemed. The Otis

**Butalanine**. C<sub>5</sub>H<sub>11</sub>NO<sub>2</sub>. A substance homologous with glycocol and with leucine, found in the spleen and panereas of oxen. It sublimes without decomposition, and forms large colourless prisms, which are very slightly soluble in alcohol and water.

Bu'tane, (G. Butylwasserstoff.) C.H. A paraffin, gascous under 1° C. (33°8° F.), occurring in petroleum and in the distillation of some

coals. It is anaesthetic.

Butch'er, Rich'ard G. A Dublin surgeon of the present century now living.

B.'s saw. A narrow-bladed saw on a frame, so arranged that it can be set at any angle. Used in resections of joints.

Butch'er. (Old F. bocher, one who kills he-goats; from Old F. boc, a he-goat.) One who kills animals for food.

B.'s broom. The Ruseus aculeatus, or knec-holly, because butchers made besoms of it.

B.'s prick'wood. The Rhamnus franquia, from its use for skewers.

Butc. Scotland. An island at the mouth of the Frith of Clyde. Mild, equable, and moist climate. Range of temperature not extreme. Snow seldom falls heavily in winter, and does not stay long; heat in summer less than on the mainland. Few fogs. Protected from east winds to a great extent.

Bute, John Stu'art, Earl of. Born 1713, died 1792. A celebrated botamst.

Bu'tea. (Bute.) A Genus of the Suborder Pupilionacea, of the Nat. Order Leguminosa.

B. frondo'sa, Roxb. (I. frondosus, leafy.) Bastard teak. Leaves pinnately trifoliate; leaflets large, roundish ovate: racemes simple, many-flowered; ealyx segments short, slightly acute; corolla pubescent; legume flat, with a solitary apical seed. Seeds used as a vermifuge, and locally in ringworm. Flowers used as a fomentation in dysuria. Yields a gum called fomentation in dysuria. Butea kino.

B. gum. Same as B. kino.

Gummi rubrum B. ki'no. Pulos kiuo. astringens formerly; now this name is applied to an Eucalyptus gum. It is brittle, ruby red, in-odorous, astringent, soluble in water, partly in alcohol. Used externally as an astringent. Given in chronic diarrhœa and pyrosis.

P. parviflora, Roxb. (L. parvus, small;

flos, a flower.) Supplies an astringent guin like that of the B. frondosa.

B. seeds. The seeds of the B. frondosa.

Used as an anthelmintic.

B. super'ba, Roxb. (L. superbus, proud.)
Twining shrub, with pinnate trifoliate leaves; leaflets roundish; raceines simple; legumes flat, with one apical seed; calyx segments short, acuminate. Also yields Buten kino.

Bu'teæ gum'mi. (L. gummi, gnm.)

The B. kino.

Bu'teo. A Genus of the Family Falconidæ, Order Acciptres, or Raptores. The buzzards.

B. vulga'ris, Linn. (L. vulgaris, common.

F. buse vulgaire; I. bozzago; G. Buszaar.) The common buzzard. The testicles, boiled with honey, were used against male impotence.

The same as Arachidic Bu'tic ac'id.

Bu'tiga. A swelling of the whole face; also called Gutta rosca or rubra. (Ruland.)

Bu'tin. One of the solid constituents of

butter, according to Heintz, probably Arachin.

Butoma'ceæ. (Butomus, G. Blumen-binsen.) A Nat. Order of hypogynous petaloid Monocolyledons. Aquatic plants, with parallelveined leaves, triseriate petaloideous flowers, and superior ovary with numerous ovules attached to a parietal network.

Bu'tomads. The plants of the Nat. Order Butomaccie.

Bu'tomon. (Βούτομον.) The Iris pseu-

Bu'tomus. (Βούτομος, from βούς, an ox; τέμνω, to cut. So called because it was said to cut the months of oven cating it.) A Genus of the Nat. Order Butomacew.

B. umbella'tus, Linn. (Umbel. F. jone fleuri; G. Wasserviole.) The flowering rush. Hab. Europe, Asia. Plant acrid; leaves aperient; root and seeds used in snake-bites. From the farma of the root a bread is made. A decoction of the leaves is said to be diarctic, and useful in

dropsy and in splenic disease. (Sax. butera; from L. buty-But'ter. rum; from βούτυρου, from βούς, cow; τυρός, cheese. F. beurre; l. butiro; S. manteca; G. Butter.) The oily portion of milk obtained by the churning of cream or new milk; this mechanical action breaks the walls of the fat-globules, and causes the contents to adhere to each other. It consists of the glycerides of stearie, palmitie, and oleic acids, with smaller quantities of those of butyrie, caprie, caproic, and caprylic acids. Fresh butter contains 4 to 15 per

cent. of water, .5 to 2.5 per cent. of salt, 3 to 5 per cent. of casein, and from 86 to 92 per cent. of fat. When fresh, butter is usually very easily digested. It speedily becomes rancid in hot weather, from decomposition set up by the casein which it contains. Butter is adulterated with water, starch, salt, and animal fats.

The term butter is given to several solid vegcable oils and to certain metallic chlorides.

B. and eggs. The Linaria vulgaris, from the colour of its flowers.

E., bambarra. A name of Shea butter. B., bam'bouc. A name of Shea butter. B. bur. The Petasites vulgaris.

B., caca'o. A concrete oil obtained from the decorticated seeds of the Theobroma caeao by pressure and heat. It is pale yellow, of a bland and agreeable taste; melts at 33° C. (91.4° F.) It is composed of stearin and palmitin, with a small quantity of olein, and perhaps arachic acid. It is used for making suppositories. See Oleum theobromæ.

B., chi. A name of Shea butter.

B., chigomier. A name of Chiquito butter.

B., chiqui'to. A product of the Combretum butyrosum, a native of South-Eastern Africa. It is rather hard, white, and of an aromatic odour. Used in food.

B., co'coa-nut. Cocoa-nut oil. See Oleum eocois.

B., cro'ton. Obtained by heat from the seeds of the Stillingia sebifera. A tallowy substance used for candles.

B., di'ka. Same as Dika bread.

B., ful'wa. A concrete oil expressed from the seeds of the Bussia butyracca, a native of India. It is used externally in rheumatism.

B., galam. A name of Shea butter. B., ghee. See Ghee. B., illipe. See Illipe oil.

B., ko'kum. The Mangosteen, oil of. B., mahdu'ca. A name of Shea butter.

B., man'wa. A name of Shea butter.
B., man'go. A concrete oil obtained from the seeds of the Mangifera indica.

B., moun'tain. A natural alum, but rarely found; it is yellowish and unctuous.

B. nut. The Juglans cinerca.
B., nutmeg. A name of Macc, oil of.
B.-nut tree. The Bassia butyracea.

B. of an'timony. Trichloride of anti-

B. of tin. A crystalline mass formed by the addition of one third of its weight of water to tetrachloride of tin or stannic ehloride.

B. of zinc. The chloride of zinc.
B., palm. A concrete oil, of orange-yellow colour, extracted from the fruits of the Elais guineensis and the E. melanococca. Used in the manufacture of soap and candles.

B., shea. A concrete oil, extracted by boiling, from the seeds of the Bassia Parkii. largely as food by different African races.

B. teeth. The incisor teeth.

B. tree, In'dian. The Bassia butyra-

B., veg'etable. The concrete oils obtained from various trees, such as the species of Bassia, Combretum, Elais, and others.

B., wax. A solid oil obtained by the distillation of wax, and employed as a resolvent.

But'terbur. The Petasites vulgaris. But'terby. Durham, on the river Wear.

A sulphur water containing sodium chloride; now almost disused.

Buttercup. A name for the Species of Ranunentus.

But'terflower. The Genus Ranunculus, or crowfoot.

But'terfly. (Sax. buttor-fleoge; perhaps from Old Dutch boter-schifte, yellow exercment.
F. papillon; I. farfalla; G. Schmetterling.)
The imago of the species of Diwrnal lepidoptera.
B. or chid. The Habenaria bifolia.

B. root. The root of Asclepias decumbens.

B. satyrion. The Hobenaria bifolia.
B.-weed. The Asclepias tuberosa.

3uttermilk. (F. babeurre, lait de Buttermilk. (F. babeurre, lait de beurre, I. sicro; G. Buttermileh.) The residue of milk after butter is obtained by churning. It consists of uitrogenous matter 4.1, fat 7, lactose 6.4, salts 8, water 88.0 per cent. Used in gastrodynia and neuralgic disorders, rickets, and diabetes.

But'ternut. The Juglans emerca, or white walnut.

But'ters. (Boutupov.) Fixed oils having a softish solid consistence at an ordinary temperature; also called Fats.

Butterweed. The Erigeron canadense. Butterwort. The Progresola vulgaris, or Yorkshire sanicle, from the property its leaves possess of coagulating milk, or from its greasy feel.

But'terworts. The plants of the Nat. Order Lentsbulariaceæ.

Büt'tner, Da'vid S. A. Bern 1724 at Chemnitz, died in 1768. He was professor of botany in the University of Göttingen.

Buttne'ria. Same as Byttneria.

Buttneria ceæ. See Byttneriacea. Buttock. (Eng. butt, an end; with dimin. suffix ock; from Old F. bot, an end. L. clunis; Gr. πῦγη; F. fesse; I. natica; S. nalga; G. Hintertheil, Hinterbacke, Steiss.) The protuberant termination of the trunk behind. breech or haunch.

But'ton. (Old F. boton, a bud, a button, from O. F. boter, to push out. F. bouton; I. bottone; G. Knopf.) A small round knob; an article for fastening parts of dress together. **B., bach elor s.** The Ranneulus aconi-

tifolius, and also the Lychnis vespertina. **B. bush.** The Cephalanthus occidentalis.

B. cau'tery. See Cautery, button.

B. of Alep'po. Same as Aleppo cvil.
B. of Bis'kra. Same as Aleppo evil.

B. of Crete. Same as Aleppo evil. B. of Na'ples. A term for a bubo.

B. scur'vy. An epidemic of cachectic disease, observed in the South of Ireland, accompanied by button-like excrescences on the

B., snake'root. The Eryngium yucca-folium; and also the Liatris spicata.

B., snake'weed. The Eryngium uquaticum.

B. su'ture. See Sature, button.

But'tonhole frac'ture. An incomplete fracture of bone, in which a missile has perforated or driven a piece out of the bone.

Buttonwood shrub. The Cephalanthus occidentalis.

Butu'a. The Cissampelos parcira, or Pareira brava.

Bu'tyl. (Βούτυρον, butter; δλη, matter.) C4H9. A hypothetical radicle supposed to exist

in the tetryl or tetracarbon series of alcohols and ethers

B. al'cohol. C<sub>4</sub>lI<sub>10</sub>O. Exists in four isomeric conditions. It is obtained by fractional distillation from the molasses of beet-root sugar. It is a colourless liquid, boiling at 110° C. (230 °F.), of sp. gr. 8032, smelling somewhat like amyl alcohol, and burning with a smoky flame.

B. car'binol. The normal primary pentyl

alcohol.

B. hy'dride. C4H10. A rectified hydrocarbon obtained from American petroleum. It is a colourless liquid, boiling at 0°C. (32°F.), sp. gr. 600. It has anæsthetic properties when inhaled, but is unsafe.

Butyl'amine. C<sub>4</sub>ll<sub>11</sub>N. Primary butylamine exists under three forms: normal butylamine Cll3. (Cll2)3. Nll2; isobutylamine CH (CII3)2. CII2. NII2; and katabutylamine (CH3)3

Ù . NII2.

Butylchlo'ral. A colourless oily liquid, of a peculiar odour, rather like chloral.

B. hy'drate. Same as Chloral butylicum. Buty'phus. (Bovs, an ox; typhus. G. Rinderpest.) A term for the eattle plague.

Butyra'ceous. (L. butyrum, butter. F. butyrace, butyrux; G. butterartig.) Of the

Bu'tyrate. (L. butyrum.) A combination of butyric acid with a base.

B. of ethyl'ic e'ther. Same as Buturie

B. of glyc'erin. The substance called

butyrine found in butter. B., so'dium. A salt of butyrie acid, found in the sweat of many animals, and occasionally

iu that of man. Bu'tyric. (L. butyrum, butter.) Of, or

belonging to, butter. **B. ac'id.** (G. Buttersaure.) C<sub>4</sub>H<sub>7</sub>O. OII. A viscid liquid with a rancid smell, solidifying at 12 C. (-10.4 F.) and boiling at 163 C. (325.4) F.) It is found in the pulp of the fruit of a few trees, such as the Ceratonia siliqua, Sapindus samuaria, and Tamarindus indica, in the seeds of Heracleum giganteum and Partinaea sativa, and is otherwise widely distributed throughout the vegetable kingdom. In animals it is found free or combined with bases in perspiration, the juice of flesh, urine, and in many decomposing matters, such as the contents of the large intestine. Combined with glycerin, it occurs in cows' and goats' milk, and in many fatty substances. It is obtained from the fermentation of sugar in contact with putrid cheese when kept alkaline by chalk. The sugar solution becomes thick, lactic acid is

then produced, and subsequently butyric acid.

B. c'ther. C<sub>4</sub>H<sub>5</sub>O.C<sub>2</sub>H<sub>7</sub>O<sub>3</sub>. Prepared by agitating a mixture of 100 parts of butyric acid, 100 of alcohol, and 50 of sulphuric acid. The ether is removed from the surface, washed with water, and treated with calcium chloride. boils at 110° C. (230° F.), is freely soluble in alcohol, slightly in water, and smells like the pineapple; it is used to communicate this flavour.

B. fermenta'tion. The process which occurs when butyric arid is formed from the fer-

mentation of sugar. See B. acid.

**Bu'tyrin.** (L. butyrum, butter.) Butyrate of glycerin. It is an oily fluid at ordinary temperatures, solid at 0° C. (32° F.) It smells of heated butter. It is soluble in alcohol.

Bu'tyroid. (Βούτυρον, butter; είδος, form.) Resembling butter.

**B. tu'mour.** A galactocele in which the fluid portions have been absorbed.

**Butyrom'eter.** ( $Bo\acute{\nu}\tau \nu\rho\rho\nu$ , butter;  $\mu\acute{\epsilon}\tau\rho\rho\nu$ , a measure.) A graduated tube, in which milk is shaken up with other until the fatty matter is dissolved by it; on the addition of alcohol, in a quantity equal to the ether, the butter is separated, and, floating on the surface, its relative proportion can be read off.

Another form depends for its action on the solution of the casein in strong acctic acid, and

thus the separation of the butter.

Bu'tyrose. (L. butyrum. F. butyreux; G. butterreich.) Having the characters of, or appertaining to, butter.

Bu'tyrum. (Βούτυρου, butter; from βούs,

a cow; τυρός, cheese.) Butter.

B. amygdala'rum dul'cium. (L. amygdala. an almond; daleis, sweet.) A synonym of Confectio amygdala.

(F. beurre d'antimoine; Chloride of antimony, or B. antimo'nii. G. Spieszglanzbutter.) antimonious ebloride.

B. antimo'nii liq'uidum. (L. liquidus, fluid.) Antimenious chloride.

B. caca'o. See Butter, cacao.

B. caca'o phosphora'tum. A mixture of one part of phosphorus in eighty of cacao butter. B. ce'ree. (F. beurre de cire; G. Wachs-

butter.) Same as Oleum ceræ.

B. insul'sum. (L. insulsus, unsalted.)
Unsalted butter. Used occasionally as a local application.

B. nucis'tæ. (L. nux, a nut.) Butter of nutmeg. The Oleum myristica expressum.

B. saturn'i. (L. Saturnus, Saturn, a name for lead.) Butter of lead. The Unguentum plumbi acetatis.

B. stan'ni. (L. stannum, tin. F. beurre

d'etain; G. Zimbutter.) Chloride of tin.

B. stib'ii. (L. stibium, a sulpburet of Butter of antimony; chloride of antimony.) antimony.

B. sulphu'ris. (G. Schwefelbutter.) Sulphur monochloride.

B. vaccinum. (L. vaccinus, from cows.) The butter of cow's milk.

B. zin'ci. Butter, or chloride, of zinc. Buxa'ceæ. (L. buxus, the box tree.)

order of which the box tree is the type, but which is usually included in the Nat. Order Euphorbiaeca.

Bux'eae. A Tribe of the Nat. Order Euphorbiaceae, having the ovules in pairs, and the stamens inserted beneath the rudimentary ovary.

Bux'eous. (L. buxus, the box tree. G. buchshaumartiy.) Yellowish, with the colour of boxwood.

Bux'in. An alkaloid obtained from the box tree, Buxus sempervirens. It has a bitter taste, and excites sneezing. Soluble in alcohol and boiling water. Also said to be identical with Bebeerin.

B. sul'phate. A yellow substance, soluble in water. Used as a tonic and stomachic, and as a substitute for quinine in ague.

Buxin'eæ. The same as Buxaeeæ. Buxi'num. Same as Buxin.

B. sultu'ricum. Same as Buxin sul-

Bux'ous. (L. buxus. G. buchsbaumähn-lich.) Having the characters of, or similar to, the box tree.

Eux'ton. England; Derbyshire. Climate

bracing, but somewhat wet and cold. Altitude 1000 feet; on the limestone. Indifferent thermal waters, of 28° C. (82.4° F.), containing little solid matter, but a large quantity of nitrogen, 63 cub. in. to the pint. The waters are drunk for dyspepsia and vesical disorders, but they are mainly used for baths in chronic gout and rheumatism.

**Bux'us.** (Πύξος; from πυκάζω, to grow thick, or hard.) The box tree. A Genns of the Nat. Order Euphorbiacea. Flowers monacious, axillary; male flowers one bract at base; stamens 4; female flowers 3 bracts at base; styles 3; capsule

3-celled, each 2-seeded.

always; virens, partic of vireo, to be green. F. buis; 1. bosso; S. box; G. Buchsbaum.) box tree. Leaves opposite, oval, entire, leathery, smooth, persistent; anthers ovate, sagittate. The leaves have a strong, nauseous, bitter taste, are aperieut, and have been used in decoction in dropsy, asthma, and worms; the wood has been supposed to be diaphoretic, diuretie, and alexipharmic. The bark has been used in rheumatism and syphilis. The leaves are said to have been used as an adulterant of uva ursi. **Bu'zias.** Hungary; between Temesvar

and Lugos. Several chalybeate mineral springs are here, varying considerably in the amount of

iron they contain.

Buz'zard. (F. busard, or buse; from Low L. busio, L. butio.) The Buteo rulgaris.
Buz'zing. (Eng. part. of buzz, formed by imitation of the actual sound which it expresses. F. bourdonnement; 1. bucinamento; S. zumbido; G. Summen.) A humming, as of bees; applied to a similar sound heard as if in the ears under certain circumstauces, as the taking an over-dose of quinine.

By'arus. A plexus of blood-vessels in the

brain, the rete mirabile of sheep.

By kow. Russia; circle of Isum. A water containing sodium sulphate, and free carbonic acid. By'ne. (Birm, malt for brewing.) An old term for macerated barley in a state of germination, as described by Aëtius, xxx, 29. See Malt.

Byre'thrum. Name for a kind of cap for the head, containing cephalic drugs, accord-

ing to Forestus, v, Obs. 132.

Byron acid springs. A town in Genesee County, New York. The water is a nearly pure dilute sulphuric acid. It is powerfully astringent and tonie. (Dunglison.) **Byr'sa.** (Βύρσα, a hide.) A piece of leather

to spread plasters on. (Quincy.)

Also, same as Bursa.

Byrsodep sicon. (Βυρσοδεψέω, to tan hides.) Cotton wool saturated with a tanning material. Applied by the ancients to the abdo-

Byrsodep'sicum princip'ium. (Βυρσοδεψικός, for tanning; L. principium, a principle. G. Gerbstoff.) Tannic acid.
Byrson'ima. A Genus of the Nat. Order

**B. chrysophyl'Ia.** (Χρυσός, gold; φήλλον, a leaf.) Hab. Brazil. Bark astringent. (Waring.)

B. continuifo'lia. (L. continuus, hanging together; folium, a leaf.) Hab. Mexico. The

bark is used in skin diseases.

B. crassifolia, De Cand. (L. crassus, thick; folium, a leaf.) Hab. French Guiana. Used as a febrifuge and against the bite of the rattlesnake; also, in abscess of the lungs. (Waring.)

B. spica'ta. (L. spicatus, part. of spico, to furnish with a point.) Berries acid and

astringent. Used in dysentery.

B. verbascifo'lia. (L. verbascum, the plant of that name; folium, a leaf.) Hab. French Guiana. Used as a local astringent to clean ulcers and heal wounds. (Waring.)

**Bysau'chen.** (Βύω, to stuff full; αὐχήν, the neck.) A stiff neck. A short-necked person.

Bys'ma. (Βύσμα, a plug.) A cork, a stopper.

Byssa'ceæ. (L. byssus, cotton.) An Order

of fungoid plants, according to Fries. **Byssa'ceous.** (L. byssa, cotton. F. byssac; G. schimmelartig, flaumfederig.) Resembling a byssus; consisting of fine entangled threads.

Byssif ereus. (L. byssus; fero, to bear. F. byssifere.) Having a byssus.

Bys'sine. (Biosos, cotton.) Made of, or resembling, silk.

Byssocau'sis. (Βύσσος, cotton; καῦσις, a burning. F. byssocausis.) Term for burning produced by the use of the byssus as a moxa.

**Bys'soid.** (Βύσσος; είδος, form. G. schimmelartig, flaumig.) Resembling a byssus.

Byssophthi'sis. (L. hyssus, cotton; phthisis. F. byss-phthisis; G. Baumwollen-schwindsucht.) Phthisis or consumption of the cotton-spinner.

Bys'sus. (Βύσσος, a kind of very fine linen. F. byssus.) Fine flax; cotton wool, charpie, silk.

A Genus of Fungi, now included in Penicillium and Mucor.

Also, the thread-like stipe of some fungi.

Also, a tuft of silky threads, of a chitinous character, secreted by a special gland in the foot of certain lamellibranchiate mollusca for the purpose of attachment to a rock or other surface.

Also, the Pudendum muliebre.

**B. gland.** (G. *Lyssusdrüse.*) An organ in the foot of certain lamellibranchiate moliuses which secretes the Byssus; it is a tougue-like process, grooved at its base.

Bys'tini antid'otus. ('Αντίδυτος, a remedy.) A corroborant and diuretic medicine

anciently in use.

**By'thus.** (Baθόs, depth.) An old term for the hypogastric region.

Bytte'ra febrifu'ga. Same as Bittera febrituga.

Byttne'ria. (Büttner.) A Genus of the Nat. Order Byttneriaceæ.

B. corda'ta, Lamb. (Mod. L. cordatus, heart-shaped.) Hab. Peru. The leaves are ap-

plied to the bites of spiders.

Byttneria'ceæ. Trees or shrubs. Leaves simple, alternate; calyx 4-5-lobed, valvate; stamens hypogynous; filaments more or less united; anthers 2-celled, introrse; ovary com-posed of 4-10 carpels, united, and a central column; style simple; stigmas equal in number to carpels; ovules 2 in each cell; fruit eapsular; cotyledous plaited or spiral. It is a Nat. Order of thalamifloral angiospermous Dicotyledous.

Byttne'riads. The plants of the Nat.

Order Byttneriacea.

C. Abbreviation of compositus, compound. Also, of Centigrade, or Celsius, a scale of thermometry

Also, signified nitre.

Also, used in prescriptions for calx, lime. Also, the chemical symbol of carbon.

C.C. Cornu cervi, hartshorn.

Also, an abbreviation of concisus, ent; and contusus, bruised.

C.C.U. Cornn cervi ustum, burnt hartsborn.

C.M. Abbreviation of Cras mane, to-morrow

morning.

Ca. The chemical symbol of calcium.

Caa. A Brazilian word signifying herb, and specially used to designate the Rex paraguai-

Caa-aguay-mi. A Paraguayan name of a species of *Styrax*, having aromatic balsamic properties. (Waring.)

Caa-apia. Brazilian name for the Dor-

stenia braziliensis.

Caa-ataja. A Brazilian plant, which is bitter and reputed a good purgative; supposed to be a species of Gratiola.

Caa-bera. A Paraguayan name of a plant of the Asparagineae, producing a resin like dragon's blood. (Waring.

Caa-bera-mi. A Paraguayan name for a labiate plant, of strong balsamic odour and aromatic taste, which is used in snake-bites and

as an antiseptic. (Waring.)

Ca'abo. The Brazilian name of the Mimosa sensutiva and M. pudica.

Caa-cambay. (S. lechetrenza.) A Para-

guayan name for one of the Euphorbiacea, with a caustic, milky juice, applied to foul ulcers; the leaves are used as a poultice to indolent tumonrs.

Caa-cica. The Euphorbia capitata.

Caa-curura. A Paraguayan name of a verbenaceous plant, the decoction of which is used in baldness, erysipelas, sore throat, and intermittents. (Waring.)

Caa-ghuju-yo. Brazil. A species of Gratiola. Bitter; used as a purgative. (Dunglison.)

Caa-hay. Paraguay. A species of Portulacea, the leaves and roots of which are used in decection in dysentery, malignant fevers, and inflammation of the kidneys and bladder. (Wa-

Caa-imbe. Paraguay. A species of Cheiranthus, the aromatic petals of which are used in

hooping-cough. (Waring.)

Caa-imbe-mi. (S. nardo celtico.) Paraguay. A species of valerian. Root and flowers aromatic, stimulant, tonic, and diuretic. (Wa-

Gaa-nambuy-guazu. (S. enula,) Paraguay. A species of Inula. Root large, fleshy, of pungent taste. Boiled in wine it is used as a poultice in lumbago. Used as stimulant and tonic in malignant fevers. (Waring.)

Caa-ngay. Paraguay. A kind of wild chicory, used instead of taraxacum. (Waring.)

Caa opia. Brazilian name for the Hypericum bacciferum.

Caa-peba. A name of the Cissampelos parcira, the C. glaberrima, the Pothomorpha peltata, and P. umbellata.

Caa-petay-hubay. (S. nastuerzo silvestro.) Paraguay. A species of nasturtium; also, the Parietaria officinalis. Used as a diuretic. (Waring.)

Caa-pita-guazu. (S. consulvdo.) Para-guay. A species of Symphytum, the root of which is astringent. (Waring.) Caa-ponga. Brazilian name for the Inula

crithmoides.

Caa-poni-mi-quiru. Paraguay. species of Glechoma. Aromatic, bitter, and slightly astringent. Used in chest affections. (Waring.)

Caa-quiri. Paragnay. A species of Fumarus. Used as an emmenagogue. (Waring.)

Caa-ro'ba. Same as Uaroba.

Caa-ruru. (S. fitolacca.) Paraguay. A Used as a purgative. species of Phytolacoa. (Waring.)

Caa-tay. (S. yerba sangunaria.) Para-guay. A species of *Polygonum*. Used as an astrin-gent. (Waring.)

Caa-ti-hubæ. (S. escabiosa negra.) Paraguay. A species of Scabiosa. Supposed to be a specifie in lepra and scabies. (Waring.)

Caa-yupe. (S. tanaceto.) Paraguay. A species of Tanacetum, having a strong balsamic odour, and used as a stimulant and vermifage.

Cab. (Arab.) An alchemical term for an-

Cabacal'li bark. A product of British Guiana. Said to be a good dressing for nleers. Source unknown. (Waring.)

Cabacin'ha. A name of the fruit of Luffa

Caba'da. Same as Cadaba. Cabal. A Portuguese beverage, made by infusing bruised raisins in white wine.

Cab'ala. See Kubbala.

Cabalatar. Same as Cabalator.

Cabalator. Old term for nitre
Cabalhan. A Mexican plant, species
unknown. Used for poisoning arrows, and as an antidote against white hellebore.

Cab'alist. See Kabbalist.

The Cynoglossum offi-Caballa'tion. einale.

Cab'alline. (L. eaballus, a horse.) Of, or belonging to, a horse.

C. al'oes. Sec Aloë eaballina.

Cab'anis. A Swiss physician, born 1757, died 1808.

C., pal'let of. A shovel-shaped instrument, composed of two plates of silver pierced by holes, jointed and movable on each other, used to seize the extremity of the probe introduced into the nasal canal in the operation for lachrymal fistula done according to the method of Méjean.

Cab'aret. (Reabaret, a wine shop.) The Asarum europæum, because it is said to be used

by drinkers to produce vomiting.

Cab bage. (Old F. cahus, great-headed; from L. caput, a head. F. chou; I. cavolo; S. col; G. Kohl.) The generic name of the Brassica oleracea and many of its cultivated varieties. The cabbage, when boiled, is largely used as an article of food, and is a valuable antiscorbutic. The leaves put into a vessel, with alternate layers of salt, pressed, allowed to remain until they are sour, form the Sauer-kraut of the Germans. The fresh leaves have been used as an application to foul nleers.

Also, a name of the fruit bud of the Cocos nucifera.

C., cow. The Nymphaa odorata.

C. Irish. The Drucontium fixtidum.
C. palm. The Areca oleraccu, and the Euterpe montana, and the Andira incrmis.

C., red. A garden variety of Brassica ole-

rucea, used chiefly as a pickle.

C. rose. The Rosa centifolia.

C., Savoy'. A variety with bullate leaves. C., sea. The Crambe maritima.

C., skunk. The Dracontium factidum. C., swamp. The Dracontium factidum.

C. tree. The Andira. or Groffree incrmis. Also, the Cavalia kleinia, or carnation tree,

a native of the Canary Islands.

C.-tree bark. The bark of Andira incrmis. Used as an anthelmintic. It is eathartic,

emetic, and narcotie.

C., tur'nip. A variety with a large fleshy enlargement of the stem, somewhat like a turnip and used as food in the same way. Also called Kohl-rabi. The Brassica oleracea caulorapa.

C., wa'ter. The Nymphaa odorata.
C., white. The ordinary garden variety of

Brassica oleracea.

Cabba'gium. (G. Wurmrinde.) The hark of the Andira inermis, and A. retusa.

Cabeb. (Arab.) Old term for seales of iron. (Kuland and Johnson.)

Cabebi. Same as Cabeb. Cabel. (Arab.) Fæces.

Ca'bob pep'per. Cubebs, fruit of Cubeba

Cabomba'ceæ. A Nat. Order of thalamifloral Exogens; or Subfamily of the Family Nymphæacæ, Order Polycurpieæ, having cyclic flowers, numerous monomerous ovaries, with two or three ovules baving sntural placentæ. A synonym of Hydropeltideæ.

Cab'otz. The Brayera anthelmintica. Cabra'lia. A Genns of the Nat. Order

Meliaceæ.

C. canjera'na. Hab. Brazil. The bark is employed in intermittent fevers and dropsy. Cabulator. (Arab.) Old term for sal nitrnm

Cabureib'a. The native name of the tree supplying balsam of Pern.

Cabureici ba. Balsam of Pern. Cac'abum. (Κά·αβος, a three-legged pot. G. Kessel.) A pot in which anything is boiled. Cac'abus. Same as Cacabum.

Cace mia. (Kakós, bad; alua, blood.) A diseased or unhealthy condition of the blood.

Cacaerom'eter. (Κακός, bad; ἀήρ, air; μέτρου, a measure. F. cacaeromètre; G. Luft-verderbnissmesser.) An instrument for measuring noxious gases.

Cacesthe'sis. (Κακός; αΙσθησις, sensation. F. cacesthese; G. Kakasthese). Term for bad or morbid sensation.

Cacafer'ri. Ferrous carbonate.

Cac'agogue. See Caccagogue.

Cacalexiteria. (Kunos; aligu, to ward off.) Applied to remedies which drive away noxions humours, or which counteract poisons.

**Caca'lia.** (Κακαλία, a plant mentioned hy Dioscorides and Pliny as being serviceable in coughs; and variously supposed to be a Buplenrum, a Mercurialis, and a Cacalia. G. Pestucurz.) A Genus of the Nat. Order Compositie.

C. alliarifo'lia. (Alliuria, the hedge-mustard; L. folium, a leaf.) The C. alpina. C. alp'na, Jacq. (L. alpinus, alpine.) The strange colt's foot; supposed to possess desiccative virtues, and to be the κακαλία of Dioscorides.

C. anteuphor'bium. ('Avri, against.) An African plant, supposed to be an antidote to the euphorbinm.

C. glabra. (L. gluber, smooth.) The C. alpina.

C. hasta'ta. (L. hastatus, armed with a spear.) A plant which grows in Siberia, is violently purgative, and said to be antisyphili-

C. klein'll, Linn. Hab. India. A decontion of the leaves is used as an alterative in syphilis, rheumatism, and lepra.

C. odo'ra. (L. odoras, sweet smelling.)
A species used in Arabia for fumigating the chambers of the sick in smallpox.

C. pen'dula. (L. pendulus, hanging.) species, the expressed juice of which is used in

Arabia against diseases of the ear.

C. sarracen'ica. The Sewcio cacaliaster.
C. sonchifo'lia, Wall. (L. sonchus, the sow thistle; folium, a leaf.) Used in India as a condiment. Its juice, mixed with arrack, is given to favour the eruption of smallpox, and alone it is employed externally as resolvent and supportative, and as an application to inflamed eyes

Ca'camum. Improperly used for Cancamum.

Cacan'che. Same as Cacocynanche.

**Cacan'thrax.** (Κακός, bad; ἄνθραξ, a carbancle.) Malignant postule.

Cac'anus. A plant, mentioned by Panlus

Ægineta and Galen, probably identical with Cacalia. Caca'o. Same as Cocoa.

C. antilla'num. Cocoa of the Antilles, the fruit of Theobroma cacao.

C., black. The Colocasia esculenta.
C. but'ter. Same as Oleum Theobromæ.

C. but'ter, med'ieated. Caeao butter 28 oz., yellow wax 4, balsam of Peru and benzoic acid, of each I dr. Melt and mix. Used for chapped hands.

C. earaccen'se. (F. cacao caraque.) Cocoa from Caraceas. Seeds largish, rounded, sometimes a little mouldy in flavour.

C., is'land. Same as C. antillanum.
C. lagar'to. The Theobroma pentagona. C. mi'nus, Gart. A synonym of Theobroma cacao.

C .- red. A substance found in the seeds of cocoa after the sweating process; it is soluble in

water and alcohol. C. se'men, Belg. Ph. (L. semen, seed.) The fruit of Theobroma cacuo.

C. tabula'ta. (L. tabula, a hoard.) Chocolate in cakes.

C. theobro'ma. The Theobroma cacao.

C. tree. The Theobroma cacao.
C., wild. The Carolinea princeps.

Cacaoste arin. (Στέαρ, snet.) Same

as cocoa butter. **Cacapho'nia.** (Κακός, bad; φωνή, the voice.) Hoarseness, roughness, or other unna-

tural condition of the voice.

Cacaphrodite. (Κακός; άφροδίτη,

Venns.) A name for syphilis.

Cacaph'thæ. (Κακός; ἄφθα, thrnsh.) A malignant form of aphtha or thrush.

Cacation. (L. caco, to go to stool.) The

act of detacation.

Cacatoria fe bris. (L. cacatorius, from caco.) A species of intermittent fever in which there is diarrhoa, sometimes accompanied by termina.

Cac'atory fe'ver. See Cacatoria febris.

Cacava'ta. A term for cocoa.

Caca'vi. A term for cocoa. Also, the Jatropha manihot.

**Cac'cagogue.** (Κάκκη, excrement; ἄγω, to lead along.) That which promotes intestinal action.

Applied to ointments which, when rubbed on

the anus, produced defacation.

Cac'cio cot to. Italy; in the district of Vollera. A mineral water containing sodium chloride and calcium sulphate, with free carbonic acid and nitrogen

Caccion'de. A pill, of which the basis is catechn, recommended by Baglivi in dysentery. Cacedo'nium tar'tarum. The pec-

cant matter in the human body secreted but not immediately expelled.

Caccnte'ria. (Κακός, bad; ἔντερου, an intestine. F. cacentirie; G. Darmfaule.) putrid state of the bowels, as in dysentery.

Cacephebote'sia. (Κακύς; ἐφηβότης, pnherty. F. cacéphibotesie; G. Kakephabotasia.)

Disease occurring at puberty.

Cach'alot. (Biscayau, from cachau, which in the Cantabrian dialect signifies a tooth. S. cachalote; G. Grosskopf; Dan. kaskelot; Swed. kaselot; Greenland kigitilik.) The spermaecti whale, Physeter macrocephalus. This animal is a monophyodont, and has about twenty-seven conical teeth in the lower jaw.

The flesh, dried and smoked, is eaten by the Esquimanx: the intestines are also eaten; the blubber supplies oil, and the tendons and aponeuroses furnish gelatine; spermaceti is obtained from the head, and ambergris is formed in the

intestines

Cachang-parang. A Sumatran bean given in pleurisy; probably the Mimosa scan-

**Cachecitic.** ( $Ka\chi\acute{e}\kappa\tau\eta s$ , in a bad habit of body. F. cachectique.) Of, or belonging to, the state called cachexia.

C. disea'ses. Diseases supposed to be dependent upon a morbid condition of blood.

Cacheleo'ma. (Κακός, bad; ἔλκος, a sere.) A foul or a malignant ulcer.

Cachelcoporphyroty'phus. (Cachetcoma; porphyrotyphus.) rotyphus accompanied by sloughing ulcers.

Cachen-laguen. The Chironia chi-Lensis.

Cachex'ia. (Kakós, bad; Egis, a habit. F. cachexu; I. cachessia; S. caquixia; G. Kachexie.) A deprayed condition of the body, in which nutrition is everywhere defective; used generically with an adjectival qualification, as syphilitic, cancerous, scorbntic, to denote the special cause. Formerly it was synonymous with

C. africana. (L. Africanus, African.)

The desire of dirt-eating among the negroes. Also, called *Fica* and *C. aquosa*.

C., al'kaline. The bad health caused by taking large quantities of alkalies for a long period, and evidenced by pallor, breathlessness, emaciation, and anæmia, accompanied sometimes by increase of latent diseases, such as phthisis.

(L. aquosus, watery. F. C. aquo'sa. cachexic aqueuse.) A term given to an anæmic condition leading to scrons effusions, and often accompanied by perversion of appetite, seen in hot climates, and specially among negroes. It has received many names, such as white tongue, stomach disease of negroes, dirt-eating, negro eachexy, intertropical anæmia, and many others. Donbtless many different disorders have been included under this name, such as the results of malaria or of intestinal worms.

The term is also given to the condition in eattle and sheep produced by Fasciola he-

patica.

**C.** calculo'sa. (L. calculosus, full of stones.) The conditions tending to the formation of urinary calculus.

C. canceratica. (L. canceraticus, like a cancer.) The conditions accompanying the formation of cancer, such as loss of strength and flesh, and yellowish or brownish colouration of the skin, at one time the impairment of nutrition, known by the term cancerous eachexia, was supposed to be present before the occurrence of the local disease.

C., can'cerous. Same as C. canceratica.
C. cardi'aca. (Καρδιακός, helonging to the heart.) The special conditions of disorder attaching to persons the subjects of heart disease,

such as venous obstructions, deficient arterialisation of the blood, dyspeptic conditions, and dropsical effusions.

C. chlorot'ica. A synonym of Chlorosis. C., drop'sical. A condition described as exhibiting pallor and dryness of skin, puffiness of cyclids, anasarca of lower limbs, and difficulty of breathing on any exertion.

C. dysthet'ica. ( $\Delta \delta \sigma \theta \epsilon \tau \sigma s$ , in bad condition.) A bad habit of body, from some disorder of the blood.

C. exophthal'mica. Same as Exophthalmic bronchovele.

C., gaol. The dyscrasia often produced by

close confinement in prison.

C. icter'ica. (Ίλτερος, jaundice.) Jaun-

C. lymphat'ica farcimino'sa. (Lymphatie; L. farciminum, farcy.) Farcy

C., marsh. The condition of body produced by exposure to marsh miasmata.

C. mercurialis. (L. mercurialis, belonging to mercury.) A term formerly applied to eases of tertiary syphilis where mercury had been administered in large quantities and great destruction of tissne, in soft palate, bone, and other parts, had ensued.

C. palus'tris. (L. paluster, marshy.)

Same as C., marsh.

C. rena'lis. (L. renalis, belonging to the kidney.) Albuminuria and its accompanying symptoms.

C. rhachitica. ('Paχῖτις, a spinal complaint.) The early signs of impaired nutrition preceding the full development of rickets. They are essentially emaciation, profuse perspiration of head and upper part of body during sleep, intolerance of bed coverings, and tenderness or great painfulness on being touched.

C. saturni'na. (L. Saturnus, Saturn, a name for lead.) Chronic lead-poisoning.

C. scorbu'tlea. (Scorbutus.) The condition of body leading to purpura.

C. scrofulo'sa. (L. scrofulæ, a swelling of

the glands of the neck.) Scrofula.

It is usually described as being denoted by a thin, pale skin, often marked with cicatrices or cruptions, especially about the nose, a thick upper lip, a narrow chest, large abdomen, flabby muscles, and large joints.

C. splen'ica. (Σπληνικός, belonging to the spleen.) The condition of body induced by miasmata. Leucocythamia.

C., stru'mous. (L. struma, a serofulous

tumour.) Same as C. serofulosa.

- C. syphilot'dea. (Syphilis; ¿lòos, likeness.) A term given to the condition also called C. mercurialis.
- C. uteri'na. (L. uterinus, belonging to the womb.) Leucorrhœa.

C. vene'rea. (L. Venus, the goddess of

love.) Syphilitie disease.

C. veno'sa. (L. venosus, venons.) A condition of body in which the venous circulation is supposed to be torpid.

C. vir'ginum. (L. virgo, a virgin.) Chlo-

rosis.

Cachex'iæ. Cachectic diseases; the name of a Class of Cullen's Nosology, being diseases in which there is a deprayed state of the whole, or greater part, of the body; without any febrile or nervons disease, as the primary one.

Cachex'y. Same as Cachexia.

Cach'ibou res'in. A white or brownish, aromatic, bitter resin, often in triangular masses, the product of the Bursera gummifera.

Cach'iman. The fruit of the Anona mu-

ricata.

Cachim'ia. See Cachymia.

Cachinlag'ua. The Chironia chilensis. loudly.) Immoderate laughter; a symptom in mania, and hysteria.

Cachi ri. A fermented liquor obtained

from the root of a species of manihot.

Cachlex.  $(K\acute{a}\chi\lambda\eta\xi.)$  A little stone or ealeulus, found in waters or on the sea-shore, which, when heated on the fire, and cooled in whey, gives an astringent quality to the liquid, which makes it useful in dysentery. (Galen.)

Cacho're. A synonym of Catechu.
Cachos. An Oriental fruit, apparently of a Solanum, which is reputed to be lithontriptic.

(Dunglison.)

Cachou'. A term for Catechu.

**Cach rys.** (Κάχρυς.) A Genus of the Nat. Order *Umbelliferæ*, having acid and sialagogue properties.

Also, a term for parched barley.

C. libano'tis, Linn. (Λιβανωτίς, rosemary.) Ilab. Africa and South Europe. Aromatic and astringent; seeds acrid.

C. maritima. (L. maritimus, maritime.)

The Crithmum maritimum.

C. odontal'gica, Pall. ('Oòoús, a tooth : aλγos, pain.) The root has been used against toothache.

Cachu'. A synonym of Catechu.
Cachun'de. A medicine in great repute among the Chinese and Indians, described by Ros. Lentilius, Miscell. Med. Pract. part iii, p. 113, and composed of aromatics, perfumes, medicinal earths, and precious stones, the whole made into a stiff paste and formed into figures that are dried for use. Of these the ehicf persons in China usually keep a small piece in their mouths as a cordial, and as a means of rendering

the breath fragrant. This substance is valued as a medicine in nervous complaints, and as aphrodisiac and a prolonger of life, the two grand objects of most Eastern medicines.

Cachu'tic ac'id. (Cuchou.) Same as

Cutechutannic acid.

Cachym'ia. Old term for an imperfect metallic body, or immature ore of metal, not saline, nor metalline, but almost metallic.

Ca'cia fer'rea. (L. ferreus, made of iron.) The same as Cochlea ferreum.

Caco'a. Another spelling of Cocoa.

Cacoæsthe'sis. See Cacæsthesis. Cacoalexete rian. (Κακός, evil; ἀλεξητήριος, driving back.) Having power to drive back, or protect against, mischief; applied to medicines and preparations.

Cacoalexete rium. (Kakós, evil: άλεξητήριου, a remedy.) A term in former use, according to Helmontius, de Peste, § Preservatio, synonymous with Alexiterium.

**Cacochol'ia.** ( $Ka\kappa \delta s$ , bad;  $\chi \delta \lambda \dot{\eta}$ , bile.) Old term for a vitiated condition of the bile.

Cac'ochri. See Cacochroi.

Cac ochroi. (Κακός; χρόα, colour.) Diseases in which the colour of the skin is

Cacochy lia. (Κακός, bad; χυλός, chyle.) Term for indigestion or depraved chylineation. **Cacochy lous.** (Κακός, bad; χυλός

chyle.) Producing bad chyle. Applied to food of difficult digestion, as cacochylous aliments, aliments that produce bad chyle.

Cacochy'mia. (Κακός, bad; χυμός, jnice or humour.) Old term for an unhealthy state of

the humonrs.

C. plum'bea. (L. plumbeus, helonging to lead.) Lead poisoning.

C. scorbu'tica. Purpura. C. scrofulo'sa. Scrofula.

C. vene'rea. Syphilis. Cacochy'mica fe'bris. (Cacochymia; februs, a fever.) A remittent or intermittent fever, supposed to arise from a deprayed state of the humours.

Cacochy micous. (Κακός, bad; χυμός, juice or humour.) Causing or producing a vitiation or deprayed condition of the humours.

Cacochy mous. Same as Cacochymicous. Cacocne'mius. (Κακός; κνήμη, the leg.) One who has diseased legs.

**Cacocol'pia.** (Κακός; κόλπος, the vagina. F. cacocolpie.) Term for a putrid condition of the vulva.

(Κακός, bad; κύρημα, a Cacocore'ma. purge.) Old term for a medicine which purges off depraved humours.

**Cacocynan'che.** (Κακός; κυνάγχη, sore throat.) Term for angina maligna.

Cacodæ'mon. (Κακός, bad; δαίμων, a god.) An old term for an evil spirit, supposed to influence and afflict with disorders the bodies of men. Formerly used as a name for nightmare.

Cacodæmonoma'nia. (Κακός; δαίμων; μανία, madness.) A term applied to that form of delusional insanity in which a person believes himself to be, or to be inhabited by, the devil or some evil spirit.

**Caco'des.** (Κακός; ὄζω, to smell. G. übelrieehend.) Having a bad smell. Offensive matter discharged by the bowels, the stomach, or by foul ulcers.

Caco'dia. (Κακωδία, a bad smell.) Having a bad smell.

Cacodonti'a. (Kanös; δδούs, a tooth.)

A bad condition of the teeth.

Cac'odyl. (Κακώδης, ill-smelling: ΰλη, matter.) As<sub>2</sub>(CH<sub>3</sub>)<sub>4</sub>. Arsendimethyl. Constitutes, with its oxidation products, alkarsin, or Cadet's fuming liquid. A colourless, transparent, oily liquid, boiling at 170 C. (338° F.), and crystallising at 6 C. (42.8° F.); it takes fire easily in the air, and is a very energetic poison. It is obtained by decomposing eacodyl chloride by zine, dissolving out the zine chloride with water, and removing the water from the cacodyl by ealcium chloride.

C. chlo'ride. As(CH<sub>3</sub>)<sub>2</sub>Cl. Obtained by distilling alkarsin with hydrochloric acid. A colourless, non-faming liquid, exhaling a very

poisonous vapour.

C. cy'anide. As(CH<sub>3</sub>)<sub>2</sub>Cn. Obtained by distilling alkarsin with hydrocyanic acid. colourless, ethercal liquid above 33°C. (91.4°F.); below that temperature it is a lustrous solid in 4 sided prisms. Boils at 140° C. (284° F.), slightly soluble in water. Intensely poisonous in varour.

Cacodyl'ic ac'id. (Same etymon.) (CH<sub>3</sub>)<sub>2</sub>AsO<sub>2</sub>H. The result of the oxidation of cacodyl in the presence of water. Brilliant, colourless, square prisms; permanent in dry, deliquescent in moist air. Not poisonous.

Cacoe thes. (Κακός, bad; ηθος, manner or disposition.) A bad habit of body, or a dis-order of a bad character.

Cacoe thic. (Same etymon.) Ill-conditioned. Used to ulcers or disorders which do not answer to remedies.

Cacoe thous. Same as Cacoethic.

Cacogalac'tia. (Κακός: γάλα, milk.) A condition in which the milk is bad.

Cacogalac'tica. (Same etymon.) One who has bad milk.

Cacogal'ia. Same as Cacogalactia.

Cacogen'esis. (Κακός, had; γένεσις, origin. F. cueogenesie.) Term for false, morbid formation, either a monstrosity, or a pathological product.

Cacoglos'sia. (Κακός, bad; γλώσσα, the tongue. F. encoglossie; G. Zungenfäule.)

Putrid state of the tongue.

Cacomelias mus. (Κακός; μέλος, α limb. F. cacomeliasme; G. eine uble Beschaffenheit der Glieder.) A bad condition of the limbs.

Cacome tra. Same as Metrocace. Cacome tria. Same as Metrocace.

Cacom'etrum. Same as Cacaërometer. Cacomor phia. (Κακός, bad; μορφή, form. G. missbildung.) Malformation or deformity.

Cacomorpho'ma. (Κακός; μόρφωμα, form.) Term for a morbid alteration.

Cacomorpho'sis. (Κακός; μόρφωσις, α shaping.) The progress of cacomorphoma.

Caconych'ia. (Kakos; oveg, the nail.) A morbid state of a mail.

Cacoparonych'ia. (Kakôs; parony-

chia.) Malignant paronychia.

Cacopathi'a. (Κακός, bad; πάθος, affliction.) Old term, used by Hippocrates, for a severe affection or malady of the mind; as melancholy

Cacopharyn'gia. (Kakós; φάρυγξ, the pharynx.) A putrid condition of the pharynx. **Cacophony.** (Κακός, bad; φωνή, the

voice.) Old term for a harsh, grating, or discordant state of the voice.

**Cacophthal'mia.** (Κακός; οφθαλμία.) Malignant inflammation of the eye.

Cacopla'sia. (Κακός; πλάσσω, to form.) The formation of diseased structures, as cancer, in consequence of a depraved condition of the system generally.

**Cacoplas'tic.** (Κακός, bad; πλάσσω, to form.) Morbid deposits that are of an imperfect

organisation or structure.

Cacopneumo'nia. (Kakós; pneumo-

nia.) Same as Pneumonosaprosis.

Cacopra gia. (Κακός, bad; πράσσω, to do.) Old term for a diseased or depraved condition of the viscera by which nutrition is carried on.

Cacoprax'is. The same as Cacopragia. Cacoproc'tia. (Κακός; πρωκτός, the

anus.) Same as Proctocace.

Cacore ma. Same as Cacocorema.

Cacorrhachi'tis. (Kakós; rhachitis.) Term for a disease of the vertebral column.

**Gacorrhin'ia.** (Κακός; ρίν, the nose.) A putrid condition of the nose.

**Cacorrhyth** mic. (Κακόν, bad; ρυθμόν, order.) Old term, applied to an irregular or disorderly pulse as to its rhythm.

Caco'sis. (Kakow, to corrupt; also, to afflict.) An old term (Gr. κάκωσις), used by Hippocrates, for a bad habit of body.

Cacosit'ia. (Kakos, bad; σιτίου, food.)

An aversion from food.

Cacos mia. (Κακός; ὀσμή, a smell.) Having a bad smell.

Cacoso mium. (Κακός; σῦμα, the body.) A lazaretto for leprous and other incurable diseases.

Cacosom'nia. (Kakós; L. somnus, sleep.) Sleeplessness.

Cacosperma'sia. (Κακός; σπέρμα, seed.) A deprayed condition of the semen.

Cacosperm'ia. Same as Cacospermasia. Cacosphyx'ia. (Κακός, bad; σφύξις, the pulse.) A bad or irregular state of the pulse.

Cacosplanch nia. (Κακός; σπλάγχνον, the bowel.) A deprayed condition of the digestive

Cacostom'achus. (Κακός, bad; στό-μαχος, the stomach.) That which hurts the stomach. Formerly applied to improper food.

Also, a disordered condition of stemach. στόμα, a mouth; ὄσφρησις, a smell.) A bad odour from the month odour from the month.

Cacostom'ia. (Kaκόs, bad; στόμα, a mouth.) Same as Stomacace.

Cacos tomus. (Κακός, bad; στόμα, the mouth.) An old term for one who has a bad or diseased mouth, or fætid breath.

Cacothana sia. (Κακός; θάνατος, death.) Term for a severe death, or that attended by the more violent symptoms of pain, convulsions, &c.; the opposite of euthanasia.

The term has also been used to denote death rendered more painful by the nimia diligentia medici; when active drugs are given to patients

with a hopeless malady. Cacoth'elin.  $C_{20}II_{22}N_4O_9+II$  O. An alkaloid produced by the action of nitric acid on

Cacoth'esis. (Kakós; θίσις, a placing.) A bad or faulty position of any part, or of the whole body.

Cacothy'mia. (Κακός, bad; θυμός, the mind.) A disordered or depraved state of mind. **Cacotrib'ulus.** (Κακός; τρίβολος, a three-pronged implement, a caltrop.) The Centaurea calcitrapa. (Hooper.)

Cacotrich'ia. (Κακός; θρίξ, hair.) Dis-

ease of the hair.

Cacotroph'ia. (Κακός, bad; τροφή, nourishment.) Imperfect or disordered nourishment of a part.

C. folliculo'rum. (L. folliculus, a small bag.) A cachectic disease of the hair follicles, dependent on mal-nutrition; occurring generally over the whole body, especially on the outer sides of the limbs, on the back, the sides of the face, and the forehead. It consists of solid, red, firm, raised papules, the size of a pin's head, over the site of the hair follieles; the hairs are generally absent, and the few that are present are dry, twisted, and shrivelled. The disease usually occurs in strumous or phthisical females, although it is not restricted to them; it often produces considerable irritation.

**Cacotrophy.** (Ka $\kappa$ ós, bad;  $\tau \rho i \phi \omega$ , to nonrish.) Disordered or imperfect nutrition.

Ca'cou. A term for a cretin. Also, a synonym of Catechu.

Cacou'cia. A Genus of the Nat. Order Combretacea.

C. coccin'ea. (L. coccineus.) Hab. South America. A perennial climbing shrub, having

emetic and cathartic properties. Cac'ozyme. (Κακός; ζύμη, leaven.) A term applied to a particle of matter, organised

or not, which is supposed to be the active agent in the production of infectious disease, either by its propagation or by acting as a ferment.

Cacta'cea. (Caetus. G. Kaktusgewächse.) A Nat. Order of epigynous, calycifloral Exogens; or a Family of the Order Opuntinæ. Succulent plants, usually spiny and leafless; stems globular, columnar, flattened, or angular; flowers sessile; sepals and petals usually many, alike, epigynous; stamens numerous, with long filaments and versatile anthers; ovary inferior, fleshy, one-celled, with parietal placentæ; style one; stigmas several; fruit succulent; seeds numerous, exalbuminous.

Cac'tal alli'ance. Same as Cactales. Cacta'les. In Lindley's system epigy-Cactales. nous Exogens, with dichlomydeons polypetalous flowers, parietal placentæ, and an embryo with little or no albumen. It includes the Nat. Orders Homalineea, Loasacea, and Cactacea.

Cac'tea. Same as Cuctacea.

Cac'tiform. (L. caetus; forma, likeness.) Resembling certain Cacti, as the Spongia cactiformis.

Cactoï deze. (Káktos; eldos, likeness.)

Same as Cactucca Cac'tos. The plant known to the ancients under this name was a thorny plant, the downy seeds of which, called pappus, were regarded as poisonens. It was probably the artichoke, Cynara scolymus, or the cardoon, C. carduncalus.

Gae'tus. (Kákros, a thorny plant. F. cactier; I. cacto; G. Fackeldistel.) A Genns of the Nat. Order Cactacea. Succulent plants. Some of the species have been used as antiscor-

buties.

C. coccinel'lifer. (L. coccinella, the co-chineal insect; fero, to bear.) The Opuntia cochinillifera.

C. fi'eus in'dica. (L. ficus, a fig; indicus, Indian.) The Opuntia fieus indica.

C. grandiflo'ra. (L. grandis, great ; flos,

a flower.) A tincture has been used with success in functional palpitation. Four ounces of the fresh stems and flowers are macerated for a month in a pint of alcohol. Dose, 1-5 drops, three times a day.

C. melocac'tus. The Melocactus commu-

C. opun'tia. The Opuntia vulgaris. Cacu'balum. The berry-hearing chickweed. (Quincy.)
Cacubay. A disease of Jamaica, probably

leprosy.

Gacu'men. (L. cacumen, the extreme end. G. Spitze, Gipfel.) A ridge; the top, summit, or highest point of anything.

Also, the highest point of the superior vermiform process of the cerebellum.

Cacumina. (Plural of Cacumen, the ex-

ne end.) The tops of a plant.

C. sabi'næ. See Sabinæ cacumina.

C. scopa'rii. See Scoparii cacumina. treme end.)

Cacu'minate. (L. cacumen. G. zuge-spitzt.) Having a point or fine end. Cacurg'ia. (Κακουργία, ill-doing.) Per-

versity of function.

Cada ba. A Genus of plants of the Nat. Order Capparidaceæ.

C. farino'sa. (L. farinosus, mealy.) The young shoots are said to be an antidote against

venomous bites. (Dunglison.)

C. in'dica, Linn. (L. indicus, Indian.)

The root is said to be aperient and anthel-

Gada'ver. (L. cado, to fall. F. cadarre; G. Leichnam.) A body deprived of life; a corpse, carease, or dead body.

Cadaver'ic. (L. cadaver, a dead body.) Of, or belonging to, a dead body.

C. hyperæ'mia. Hypostatic hyperæmia, or the red stains of the depending parts of a dead body.

C. rigid'ity. Rigor mortis.

Cadaveri'nus. Same as Cadaveric. Cadaverisa tion. (L. cadaver, a dead The condition of paleness, coldness, and insensibility of a finger or other small part of the body, popularly known as dying of the part.

Cadavero'sus. Same as Cudaverous. Cadaverous. (L. cadaverosus. Gr. νεκρώδης; F. cadaveroux; I. cadaveroso; S. cadaverico; G. leichenartig, todtenahnlich.) Belonging to, or resembling, the dead body.

Cad'dis. Soft lint. (Quiney.) Cade. The French name of the Juniperus oxycedrus, the oil of which is called Huile de

Cade. See Oleum juniperi empyreumaticum.

Cade'ac. France; Departement des Hautes Pyrenées. A cold spring, containing sodium and hydrogen sulphide and sodium chloride, with minute quantities of iodine and bromine.

Gadeji indi. The Folin malabathri of old pharmacologists; the leaves of Cinnamomum tamala and C. eucalyptoides.

Cadelari. The Achyranthes aspera and A. prostrata.

Cadel-avanacu. The Croton tiglium.
Ca'det - Gas'sicourt, Lou'is
Claude. A French chemist, born in l'aris in 1731, and died there in 1799.

C.'s fu'ming liq'uid. A synonym of Alkarsin.

Ca'dia. A Genns of plants of the Nat. Order Leguminosæ, growing in Egypt.

(L. purpureus, c. purpu'rea, Forsk. (L. purpureus, purple.) The leaves applied to the abdomen are used in colic.

C. va ria, Forsk. (L. varius, variegated.)

Used as C. purpurca.

Cadi'va insa nia. (L. cadivus, falling;

insania, senselessness.) Epilepsy.

Cad mia. (Καδμεία, οτ καδμία, calamine. F. coann; S. cadmia; G. Ofenbruch.) A soot which collects on the sides of melting-pots, according to Dioscorides.

Also, a name applied to several metallic sub-

stances, calamine, cobalt, tutty.

Also, a yellow pigment containing cadmium

sulphide. C. arsenica'lis. A white pulverulent oxide, which forms on the surface of the arsenions

acid of commerce. C. artificia'lis. (L. artificialis, artificial.)

Tutty.

C. factitia. (L. factitius, made by art.) Tutia, or tutty.

C. forna'cum. (L. fornax, a furnace.) Tutia, or tutty.

C. fos'silis. (L. fossilis, that which is dug up.) Calamina, or calamine.

C. lapido'sa. (L. lapidosus, stony.) Ca-

lamina, or calamine. C. metal'lica. (L. metallicus, metallie.)

Cobalt.

C. nati'va. (L. nativus, natural.) Cobalt.

Also, the Lapis calaminaris, or calamine. C. natura'lis. (L. naturalis, natural.)

Calamine.

C. of Gau'bius. Flowers of zinc.

Cadmif'erous. (Cadmium; fero, to bear.)

Containing cadmium.

Cad'mii iodi'dum, B. Ph. (F. iodure de cadmium; G. Jodcadmium.) Cdl2. At. weight 366. Iodine and cadmium filings are mixed in a moist condition in the proportion of 127 to 56. It consists of flat, white, pearly micaceous crystals, melting at 310° C. (590° F.) It is soluble in water and alcohol. Astringent; seldom used internally; locally as an ointment, instead of iodide of lead, in enlarged glands, nodes, and chronic joint affections.

C. sul phas, U.S. Ph. (F. sulfate de cadmium; G. schwefelsaures Cadmium.) CdSO<sub>4</sub>. 4H<sub>2</sub>O. Formed by dissolving cadmium oxide or carbonate in dilute sulphuric acid. Transparent colourless crystals, astringent, rough in taste, efflorescent. Astringent and emetic. Used locally in conjunctivitis, corneal opacities, and gonorrhoa, in solution of ½ grain to 4 grains to an ounce of water. Ointment, 2 grains to 80 grains

of lard.

Cad'mium. (Καδμία, calamine, in which it was first observed.) Symb. Cd. Atom. weight 111-6, vapour density 55-8. Found in zinc ores. Like tin, but harder; very malleable; sp. gr 8 667; melts at 315° C. (599° F.) It is dyadic, and forms but one series of compounds. used in the manufacture of some tooth-stoppings

C. bro'mide. CdBr<sub>2</sub>. A salt used in photography. It has been taken by mistake for ammonium bromide, and produced vomiting, burning in throat and stomach, diarrhoa, and

great exhaustion.

C. ioda'tum. See Cadmii iodidum.

C. i'odide. See Cadmii iodidum.

C. ni'trate. Cd(NO<sub>3</sub>)<sub>2</sub>+4Il<sub>2</sub>O<sub>4</sub>. Fibrous

crystals, deliquescing in the air, and soluble in alcohol.

C. pois'oning. Soluble salts are poisonous, producing giddiness, vomiting, purging, slowness of pulse and respiration, coma, and convulsions.

Fixed caustic alkalies give a C. salts. white precipitate, insoluble in excess; ammonia gives a white precipitate, soluble in excess; alkaline carbonates give a white precipitate of cadmium carbonate, insoluble in excess; hydrogen sulphide and ammonium sulphide throw down yellow cadmium sulphide.

C. sul'phate. See Cadmii sulphus. C. sulphu'ricum, G. Ph. (G. Schwefelsaures Kadmiumoxyd.) See Cadmii sulphas.

Cadoc. A synonym of Bonduc.

Cad'tchu. A synonym of Catechu. Cadu'ca membra'na Hunte'ri. (L. caducus, falling; membrana, a membrane.) The membrana decidna, and called after William Hunter.

Also, called simply caduca.

C. pas'sio. (L. passio, a suffering.) A synonym of Epilepsy, the falling sickness.

Caducase. Vertigo. (Quincy.)

**Caducibranchia ta.** (L. caducus, faling ; βράγχια, the gills.) A Suborder of the Order Urodela, Class Amphibia, having decidnous gills, opisthocælons vertebræ, and double vertebral transverse processes.

Caducibranch iate. (L. caducus: βράγχια, the branchiæ.) Applied to those Amphibia, in which the branchiæ disappear when the animal arrives at adult age.

Caduciflo rous. (L. caducus; flos, a flower.) Plants in which the corolla falls at an early period.

Caducity. (L. caducitas. F. caducité; I. caducità; S. caducidad; G. Hinfülligkeit.)
Weak old age; the period of human life which
extends from 70 to 80 years of age, and which precedes decrepitude.

Cadu'cous. (L. cado, to fall. F. caduc: G. abfallig, hinfallig.) Falling off; dead. In Botany, applied to a calyx which falls off

when the blossom expands, as in the poppy. Cadu'cus. (L. caducus, falling.) Falling off.

C. mor'bus. (L. morbus, a disease.) The

falling disease; epilepsy.

Cadurcum, a coverlet of Cadurcian (Cahors in France) linen, then a bed so ornamented, and a marriage bed.) A term for

Cad'us. (Kádos.) An ancient wine vessel, containing about eleven gallons and a quarter, equal to the Metreta attica.

Cæ'ca. (L. cæcus, blind.) A term applied generally to blind tubes, or tubes with one end closed.

C. foram'ina. (L. foramen, an opening.) See Foramen cacum anterius and F. cacum posterius.

C., intesti'nal. Two long blind tubes connected with the upper part of the large intestine in birds, the use of which in unknown.

C., pylor'ic. (Hu) woo's, the pylorus.) series of blind tubes, varying in number from one to fifty, found immediately behind the pyloric valve in the stomach of most fishes. They have been supposed to represent the panereas.

Cæ'cæ hæmorrho'ides. ' (In carcus, blind; hæmorrhoid.) Blind piles.

Cæ'cal. (L. cæcus.) Blind; closed at one end. Of, or belonging to, the cecum.

C. appen'dix. See Appendix eæci vermiformis.

C. ar'tery. A branch of the ilio-colic

artery, which supplies the excum.

C. her'nia. (G. Blinddarm' uch.) A protrusion of the cacum through the right abdominal ring. There is usually no sac, sometimes there is a partial sac at the upper part; the tumour is large, irregular, and generally, when seen, irreducible.

Cæca'trix. The same as Cicatrix. Cæ'citas. (L. cæcus, blind.) Blindness.

C. crepuscula'ris. (L. crepusculum, twilight.) A synonym of Hemeralopia.

C. diur'na. (L. diurnus, belonging to the

day.) A synonym of Nyctalopia. C. mi'nor. (L. minor, less.) A synonym

of Amaurosis. C. nocturna. (L. nocturnus, belonging

to the night.) A synonym of Hemeralopia.

C. verba'lis. (L. verbalis, belonging to words.) Word blindness. A condition in which, from unilateral destruction of the nervous centre of sight, a person, although able to speak and write words, is unable to understand anything that is written. This condition often occurs in conjunction with Surditas verbalis.

Cacitidis. (Cacum, the intestine of that name.) A synonym of Typhlitis.

Cæci'tis. (Cucum.) A synonym of Typhlitis.

Cæ'citude. (L. cæcitudo.) Blindness. Cæ'cum. (L. intestinum cæcum, from cæcus, blind. F. eacum; I. cieco; S. ciego; G. Blinddarm.) The beginning of the large intestine, so called because it is prolonged behind the opening of the ileum into a cul-de-sac. It is the widest part of the large intestine, being 21 inches wide. It lies in the right iliac fossa, covered by peritoneum, except behind, where it lies on the iliacus musele. On its left side the ileum opens, protected by the ileo-caeal valve, and below is the appendix vermiformis. It is supplied by a branch of the ilio-colic artery, and its nervous supply is derived from the plexuses of sympathetic nerves around the mesenteric arteries.

The cæcum is present in most mammals and birds, in many reptiles, but not in fishes.

Also, applied to any blind tube. See Caca.

C., phleg'mon of. (Φλεγμονή, an inflamed tumour.) Perityphlitis.
Cœ'cus. (L. eæcus, blind.) Blind. Applied to canals, &c., that are closed at one end, as the intestinum cœcum, or blind gut.

Cæ'la-do'lo. The Torenia asiatica. Cæ'li do'num. (L. cælum, heaven; do-num, the gift.) The Chelidonium majus, from

its excellent qualities.

C. ro'sa. (L. rosa, a rose.) The rose of heaven, Lychnis cali rosa.

Cæmenta'tion. (L. cæmentum, stone from the quarry.) See Cementation.

Also, any tenacious substance which, when placed between two bodies, causes them to ad-

C. cu'prum. (L. cuprum, copper.) Copper precipitated from its solution by iron.

**Cæmen'tum.** (L. cæmentum, stone as hewn out of the quarry.) The cement of the teeth.

Cænesthe'sis. (Καινός, new; αἴσθησις, perception.) A term given to that feeling in the body generally which induces, on the one hand, sensations of lightness and elasticity, and on the other, of lassitude and weariness, without the intervention of muscular labour or disease. It has been spoken of as a sixth sense.

Cæno'tus. The Erigeron canadense.

Cænozo'ic. Same as Cainozoic.

Cæ'pa. The onion, Allium cepa.

Cæru'lein. (L. cærulcus, dark blue.) Same as Azulene.

Cærules'cent. (L. cæruleus, dark blue.)

Cæru'leum. (L. cæruleus, dark blue. G. Himmelblau.) A sky, or deep blue, or Prussian

C. berolinen'se. (G. Berlinerhlau.) Berlin or Prussian blue. A synonym of Ferric ferrocyanide.

(Med. L. Borussia, C. borus'sicum. Prussia.) Prussian blue. À synonym of Ferric ferrocyanide.

Cæru'leus. (L. cæruleus.) Blue, sky blue. C. mor'bus. (L. morbus, disease.) The blue disease. Cyanosis.

Cæru'lic ac'id. (Same etymon.) acid of coffee, by some regarded as an oxidation

product of caffetannic acid.

Cæruli'na. Same as Cærulein.

Cærulo'sis. (L. cæruleus, dark blue.) A blueness.

C. neonato'rum. (Néos, new; L. natus, born.) The blue disease of new-born children; Cyanosis.

Cæsalpi'neæ. A Suborder or a Family of the Nat. Order Leguminosæ. Petals monosymmetrical, not papilionaceous, imbricated in estivation, the upper petal exterior; flowers in panieles or racemes.

Cæsalpi'nia. (In honour of Cæsalpinus.)
A Genus of plants of the Nat. Order Leguminosæ, Suborder Casalpineae, several species of which supply the Brazil wood used for dyeing. legumes of most are astringent.

C. bon'duc, Roxb. A species often confounded with Guilandina bonducella, and from which it is distinguished by its glabrous leaflets, very unequal at the base, by the absence of stipules, and by its yellow seeds.

C. bonducei'ia. The Guilandina bonducella.

C. brazilien'sis. Furnishes brazilettin, an inferior Brazil wood.

C. coria'ria, Willd. (L. coriarius, belonging to leather.) Hab. India. Divi-divi. The legumes contain a large quantity of tannin. powder they are used as an antiperiodic and as an astringent. A decoction is used as an injection in bleeding piles.

C. cris'ta. (L. crista, a crest.) The source

of braziletto, an inferior Brazil wood.

C. echina'ta. (L. echinatus, prickly.) The source of the true Brazil wood. Somewhat astringent, but only used as a colouring agent. According to some, it is from the wood of this tree that they collect Goa powder.

C. morin'ga. The root is used as a diu-

retic.

C. nu'ga. The root is used as a diurctic. C. oleosper'ma. (L. oleum, oil; sperma, seed.)

c. pap'ai. Pi-pi. Legumes are astrin-

C. sap'pan, Linn. (F. brésillet des Indes.) Hab. India. The wood is used in decoction or extract as an astringent. The latter in doses of 10-15 grains twice daily.

Casa'rea sec'tio. See Casarian sec-

Children brought into the Cæsa'res. world by the Cæsarean operation.

Casa rian section. (L. sectio casarea, from eado, to cut; or named after Julius Casar, who is said to have been removed from his mother by abdominal section. F. accouchement, or operation cesarience; I. parto or taglio cesareo; S operacion cesarea; G. Kaiserschnitt.) The operacion cesarea; G. Kaiserschnitt.) operation for the removal of the child from the uterns by means of an incision through the abdominal walls into that organ. It is adopted when the pelvic cavity is so small that there is no reasonable belief that the child can be extracted, or when the mother has died suddenly, and it is hoped that the child may still be living, The causes of pelvic contraction calling for the operation are mollities ossium, rickets, distortion from fracture of the pelvis, exostosis, spondylolisthesis, tumours, cancer of cervix uteri. amount of contraction of conjugate diameter of the polvis justifying the operation is generally stated by English obstetricians to be 1.5"; in Germany a diameter of 2.5" has been held to be too small for an attempt to extract the child. The best time for operation is believed to be a few days before the expected time for the be-ginning of labour. The os should be dilated some hours before the operation to secure a free passage for discharges; the bladder and rectum should be emptied. An incision is made through the abdominal parietes, from just below the umbilicus, to about 2.5" above the pubes, bleeding vessels are to be tied, and the abdominal walls kept closely applied to the nterns by the hands of an assistant to keep back the intestines; the uterus is to be cut through in the middle line, and in its middle third, so as to avoid the fundus and the cervical region, where a superabundance of circular fibres would cause the wound to gape. If the placenta be underneath, it must be separated as far as its edge, the membranes ruptured, and the child extracted by the feet; the placenta is then removed, a large bougie or the finger is passed through the os uteri into the vagina to secure a passage for the blood and fluids, and the uterus induced to contract by pressure and by ice. It is generally advised to bring the nterine walls together by an uninterrupted suture, with one end of the silk hanging out of the vagina, or with carbolised catgut; the abdominal walls are to be closed by suture and dressings applied. The maternal mortality is great—85 per cent. See also Porro's operation. Cesa'riate. (L. casaries, the hair. G.

behauert.) Having hair.

Casa'ries. (L. casaries, akin to Sans. keça, hair. G. Haupthaar.) The hair of the bead

Gresarot'omy. (Cosarian; τομή, section.) A synonym of Cosarian section.

Cw'sious. (L. casius, bluish-grey; G. blaulich, hechtblau.) A dull light bluish-grey, or greenish-grey, or lavender colour. Old term

Cæ'sium. (L. cæsius, bluish-grey.) Cs. At. weight 132.5. A monad alkaline metal, discovered by Bunsen and Kirchhoff, by the aid of the spectro-cope, in the residue of mineral waters. occurs very sparingly; its salts burn with a blue flame. It is the most electropositive of metals.

The metal has not yet been obtained in the pure state.

Caso'nes. A term applied to those born by means of the Casarian operation.

Cæspitellose. Diminutive of Cæspitose

Cæs'pitose. (L. cæspes, turf, a elump. G. rasenformig, rasenstandig.) Growing in tufts; tutted.

Cæspit'ulus. (L. dim. of cæspes.) small tuft.

Cæsul'læ. (Lat.) Having grey eyes. Cæt'chu. A synonym of Catechu.

Caf. Old name for Camphora, or camphor.

Caf'a. Same as Uaf. Caf'al. A term for agrinony. Caf'ar. Same as Caf.

Caf'ein. The same as Caffein.
Caf'fa. A term for comphor.
Caffe'a, U.S. Ph. The same as Coffee.
Caffean'ic ac'id. An acid of coifee. By some, regarded as an oxidation product of caffetannic acid.

Caffeel'ie ac'id. An acid of coffee. By some, regarded as an oxidation product of caffetannie acid.

Caffe'ia. The same as Caffein. Caffe'ic. (F. café, coffee.) Of, or belonging

to, coffee.

C. ac'id. C<sub>9</sub>H<sub>8</sub>O<sub>4</sub>. Formed by boiling caffetannic acid with potash. Brilliant yellowish prisms or plates, soluble in hot water and alcohol. The aqueous solution reduces a hot solution of silver nitrate; it is coloured green by ferric chloride, changing to red on the addition of sedium carbonate.

Caffe'idin. (F. cafeidine.) C<sub>7</sub>H<sub>12</sub>N<sub>4</sub>O. A strong unerystallisable base, obtained by treat-(F. cafeidine.) C<sub>7</sub>H<sub>12</sub>N<sub>4</sub>O. ing caffein with barium hydrate. It is soluble

in water and alcohol.

Caffeidi na. Sume as Caffeidin. Caffe in. (F. cafe, coffee; cafeine; I. caf-feina; S. cafeino; G. Kaffein.) C<sub>8</sub>H<sub>10</sub>N<sub>4</sub>O<sub>2</sub>. Methyl-theobromine. An alkaloid identical with that found in the leaves and seeds of Caffea arabica, the leaves of the species of Thea, the leaves of Ilex paragraensis, the fruit and leaves of Paullinia sorbilis, in Cola acuminata, Ilex cassine, and other plants. It consists of silky, needles containing one equivalent of water, soluble in 74 parts of cold water and 165 parts of alcohol, melting at 225° C. (437° F.) and subliming, without change, at a higher temperature. A poisonous dose in animals produces cerebral excitement, irregular movements, quick breathing, muscular weakness, then tetanic and clonic convulsions, slowness and irregularity of heart's action, and death from paralysis of respiration. In moderate dose, it produces in man increased mental activity and wakefulness, quickness of pulse, restlessness, and muscular tremors. It has been used in nervous headaches, priapism, and in opium poisoning, and as a diuretic. Dosc, two grains.

C. arse'niate. A salt which has been used as an antiperiodic.

C. cit'rate. Prepared by dissolving caffein in citric acid and evaporating. Has been used in migraine. Dose, one grain.

C. hydrobro'mate. A salt which has

been said to have directic properties.

C. vale'rianate. Used in hysterical vomiting, migrain, hooping-cough, and as a nervine tonic.

Caffe'ina. Same as Caffein.

Car feone. A brown, aromatic, volatile, oil, produced in the roasting of coffee berries; slightly soluble in water, easily in other.

Caffeotan'nic ac'id. Same as Caffe-

tannic acid.

Caffetan'nic ac'id. (F. acide cafétannique.) C35 ll 38 O24, doubtful. Found in coffee berries, in Paraguay tea, and in cahinea. A colourless, gummy, easily soluble mass, giving with ferric salts a green colour. Perhaps the same as Chlorogenic acid.

Caffre bread. The edible seeds of

various species of Encephalartos.

C. corn. The seeds of Panicum spicatum.

Caf'fres. See Kaffres.

Caf'ta. The Arabian name of the young shoots of Catha edulis, or of a preparation made from them.

Cafurs. A term for camphor.

Cafu'zo. A mixed breed between a white man and an Indian of Brazil, in which the hair is very curly and coarse enough to form a large

bristly mass sticking up like a mop.

Cagastrum. Used by Paracelsus to express the germ of, or the morbific, matter which generates diseases that are not congenital nor hereditary, but arise from corruption, viz. pleurisy, pestilence, and fever.

Cagosan'ga. The ipecacuanha plant,

Cephaelis ipecucuanha.

Cag'ot. A term given in some parts of

France to a Cretin. See also Cagots.

Cag'ots. (Probably can ur ca got, a provincial corruption of Canis gothus, a Gothic dog, from their supposed descent from the Visigoths.) A people found in the Basque provinces, Béarn and Gascony. They have high cheek bones, pro minent noses with large nostrils, straight lips; the lobule of the external ear is wanting. In the middle ages they were excluded from all political and social rights, and were compelled to wear a special dress.

Cagu'a. A term for vegetable ivory. Caguacu-apara. The American bezoar

deer. (Quincy.)

Cahin'ca. A name, adopted from the Brazilian Indians, of the root of several species of Chiococca. It consists of twisted, longitudinally wrinkled pieces, varying in size from that of a quill to that of the little finger; the cortical part is bitter, acrid, and astringent in taste; the inner ligneous part tasteless. It contains cabincic acid, a green, bad-smelling, fatty matter, a yellow colouring matter, a coloured viscid matter, and cuffetannic acid in the bark. It is tonic, diurctic, purgative, and emetic, sometimes producing nausea and griping. It has been used in snakebite and in rheumatism; in dropsy it had a great reputation, which time has not sustained.

Cahin'cæ ra'dix. (L. radix, a root.)
The root called Cahinca.

Cahin cetin. C22 H34O3. A compound which, along with a non-crystallisable sugar, is formed by the action of hydrochloric acid on cahincic acid.

Cahin cic acid. (F. acide caincique; G. Caincasaure.)  $C_{40}\Pi_{64}O_{18}$ . A colourless, prismatic substance, of a very bitter taste and without odour, slightly soluble in water, easily soluble in alcohol. Used as a diuretic in dropsy.

Cahincig'enin. C14H24O2. A compound formed, along with butyric acid, by the action of potassium hydrate on cabincetin.

Cahin'cin. Same as Cahincic acid. Cai'chu. A name of Catechu. (Quincy.) Cai'eput. A synonym of Cajuput.

Cail-ce'dra. The Swietenia senegalensis. Cail-ce'drin. The bitter febrifuge principle contained in the bark of the Swietenia senegalensis.

Caina'na root. A synonym of Cahinca. Caina'num. A synonym of Cahincio acid.

Cain'ça. A synonym of Cahinea.

Cain'cine. Cabincic acid.
Cain'to. The star apple; the edible fruit Caini'to. of the Chrysophyllum cainito.

Cainozo'ic. (Kawés, new; ζωϊκές, el animals.) Applied, in Geology, to the post-Tertiary and Tertiary strata of the earth as containing recent forms of life.

Caipa schora. A cucurbitaceous plant of Malabar, the unripe fruit of which is emetic, and the juice of the ripe fruit is drunk by the natives with a little nutneg, to remove hiccough.

Caira. The Mimosa japonica.

Cai'ro. Egypt. A winter residence for chest affections, having a dry and generally a mild winter climate, but with some vicissitudes and often much dust. In summer it is intolerantly hot. It is unfavorable for those liable to pulmonary congestion or hæmoptysis.

Cait'chu. A synonym of Untechu.
Cajan. A decoction of the Ihoaseolus cre-

Caja'nus. A Genus of the Suborder Papilionaceæ, Nat. Order Leguminosæ.
C. bic'olor, De Cand. (L. bicolor, two-coloured. F. pois d'Angole.) A species the seeds of which are used as food in the Antilles.

C. fla'vus, De Cand. (L. flavus, yellow. F. pois d'Angole.) A species the seeds of which

are used as food in the Antilles.

C. in'dicus, Spreng. (L. indicus, Indian.) Pigeon pea or dholl. The seeds are used as food; in excess they have produced diarrhoa, but in moderation they are said to be somewhat constipating.

Caj'eput. Same as Cajuput.

Caj'eputenc. C<sub>10</sub>H<sub>16</sub> A hydrocarbon obtained by repeatedly distilling cajeput oil with anhydrous phosphoric acid

Caj'eputol. Same as Cajuput oil. Caju nassi. The Strychnos colubrina or the S. ligustrina.

Caj uput. (Malay, caju-puto, white free.)

The pharmacoposial name of the Melateuca minor.

C. oil. See Cajuputi oleum.

Cajuputene.  $C_{10}II_{16}$ . The hydrocarbon of which oil of cajeput is the hydrate. It is pleasant to the smell, slightly soluble in alcohol, and boils between 160° C. (320° F.) and 165° C. (329° F.)

Cajupu'ti o'leum. (L. oleum, oil. F. essence de cajeput; S. caieput; G. Cajeputöl.) Distilled from the leaves of the Melahuca minor.  $C_{10}H_{16}.H_{2}O$ . Very mobile, transparcut; sp. gr. 919; boils at  $175^{\circ}$  C. (347° F.); of a fine green colour, a camphoric odour, and an aromatic taste. Externally, it is a rubefacient; internally, stimulaut, antispasmodic, and diaphoretic. Used in spasmodic affections of the intestinal canal and in rheumatism; also in chronic catarrh of mucous membranes generally.

Caju ular. The Strychnos colubrina er the S. liquistrina.

Cak. An Arabic name in Sennaar for a little-known disease, possibly of the nature of pellagra or ergotism.

Cake-meal. Linseed meal obtained by grinding the cake after the expression of the oil; the Line farina, B. Ph.

Cakile. A Genus of the Nat. Order Cru-

C. marit'ima, Linn. (L. maritimus, belonging to the sea. G. Mversenf.) Purple sea rocket. An antiscorbutie.

Cakilin'eæ. A Family of the Section Pl-urorrhizea, Nat. Order Crueefera, having the fruit short, deeply two-jointed, the upper joint dagger-shaped.

Cal. Alchemical name of orpiment, arsenious sulphide; also, of vinegar.

Cala'ba bal'sam. Same as C. resin.

C. resin. (F. baume de Marie.) Obtained from Calophyllum calaba. Green, of a strong but not disagreeable odour. Used in the Antilles as a vulnerary, and as a substitute for copaiba balsanı.

Cal'abar. A district, of ne definite boundary, on the west coast of Africa, in the Bight of Benin.

C. bean. The seed of the Physostigma venenosa. See Physostigmatis faba.

Cal'abarin. An alkaloid found in the Calabar bean. The liquid from which eserin has been separated is precipitated by subacctate of lead and ammonia, the filtrate is evaperated, the residue treated with alcohol, precipitated with phosphotungstic acid, and this decomposed with baryta. It is distinguished from eserin by its solubility in water. It produces tetanus in frogs. Also used for impure eserin.

Cal'abash. (Port. calabaco, a gourd.) The dried shell of a gourd. Used as a receptacle.

C. gourd. The Lagenaria vulgaris.

C. nut'meg. The Monodora myristica.
C., sweet. The Passiflora laurifolia.

C. tree. The Crescentia cujete.

C. tree, nar'row leav'ed. The Crescentia enjete.

Cala'brian man'na. See Manna. Caladie'æ. A Tribe of the Nat. Order Aracea. Stamens and pistils numerous, contiguous, or separated by the rudimentary bodies; anther cells with a thick connective.

Cala'dium. A Genus of the Nat. Order Aracce, possessing underground corms, which, when cooked, are escalent.

C. bie'olor. (L. bieolor, two-coloured.) The corms, when cooked, are enten as food.

C. esculen'tum. (L. esculentus, eatable.) The Colocasia esculenta.

**C. pœ'cile.** (Ποικίλος, many-coloured.) E-culent. Same as C. bicolor.

C. sagittæfo'lium, Willd. (L. sagitta, an arrow; falium, a leaf.) Hab. West Indies. Roots are eaten, when boiled, and also the leaves.

C. seguinum, Vent. A native of India.

The juice has been given in gout and rheumatism, and to women as an anaphrodisiae. A fineture is used in pruritus vulvæ.

C. viola'ecum. (L. violaceus, v. coloured.) Esculent. Same as C. bicolor. (L. violaceus, violet-

Cala'e. Name formerly in use for a species of Indian tin, which is reduced by exposure to the fire into a kind of cerussa, such as is made of lead and European tin.

Calaem. Same as Caluë.

Calaemum. Same as Calaë. Calaf. The Salix wyyptiaca.

Calage'ri. A name of the seeds of the Vernonia anthelmintica. See Calagirah.

Calagirah. A name of the seeds of the tigella indica. They have been confounded Nigella indica. They havith the seeds of Calageri.

Calagua'la. The Polypodium calaguala.
C. india'na. The Acrostichum huac-

Calagua'læ ra'dix. (L. radix, a root.) The root of Polypodium calaguala.

Calahua'la. The same as Caluquala. Calamagros'tis. (Κάλαμος, a reed; άγρωστις, a kind of grass.) A Genus of the Nat. Order Graminea.

C. lanceola'ta, Reth. (L. lanceolatus, lance-shaped. G. Riethgras.) Reed grass. Root

diuretie and emmenagogue.

Calamandri'na. The Teucrium chamædrys.

Calama'rian. (L. calamus, a reed.) Of, or belonging to, a reed.

Cal'amary. The Loligo vulgaris.
Calam'bae. Indian name for Aloëxylon

agallochum.

Calam'boue. Same as Calambac. Calame'don. (Καλαμηδόν, like a broken reed.) Old term for different kinds of fracture, longitudinal, but lunated at the extremity, eblique, and comminuted. (Gorræus.)

Cal'ament. The Melissa calamintha.

Calamiferous. (L. calamus; fero, to bear. F. calamifere; G. federtragend.) Formed of cylindrical tubes, like reeds or feathers, united in tufts, as the Spongia calamifera.

Calam'iform. (L. calamus; forma, likeness. F. calamiforme; G. federformig.) Formed like a reed or feather.

Calami'na. See Calamine.

C. præpara'ta. (L. præparatus, prepared.) See Calamine, prepared.

Calamina'ris. Belonging to ealamine. C. la'pis. (L. lapis, a stone.) A term for calamine.

Cal'amine. (As if calapida, from cadmia lapidosa, an ere of zinc; or from calamus, a reed, inasmuch as it forms reed-like filaments in the furnace when melted. L. calamina; F. calamine; S. calamina; G. Galmei.) A native impure zinc carbonate found in crystalline and transition rocks and in the earboniferous and oolitic formations. Mineralogists call zine silicate also by this name. Calamine is a compact, dull, earthy substance, varying in colour from greyish to reddish or brownish. Sp. gr. 3.4 to 4.4.

C., prepa'red. The native mineral is

heated to redness, powdered, and elutriated. It is salmon-coloured, and contains iron oxide. It is often adulterated largely with barium sulphate and chalk. Used as a mild astringent and exsiccant in execriations and superficial ulcerations, in eczema, and intertrigo.

(Καλάμινθος, from καλός, Cal'amint. The Calamintha beautiful; μίνθα, mint.) officinalis.

C., com'mon. The Calamintha officinalis. C., field. The Calamintha nepeta.

C., les'ser. The Calamintha nepeta. C., moun'tain. The Calamintha grandi-

flora. C., spot'ted. The Calamintha nepeta.
C., wa'ter. The Mentha arvensis.

Calamin'ta humil'ior. (L. humilis, lowly.) A synonym of Gleehoma hederacea.

Calamin'tha. (Καλός, heautiful; μίνθα, int. F. calament; S. calaminto.) A Genus of the Tribe Satureineæ, Nat. Order Labiatæ. Herbs or shrubs.

C. ac'inos. ('Aktros.) Basil thyme, wild basil. Stimulant, diaphoretic, and expectorant.

C. an'glica. (L. anglicus, English.) The Calamintha nepeta.

C. aquatica. (L. aquater.) The Mentha arvensis. (L. aquaticus, living in

- **C.** ciinopo'dium, Benth. (Κλινοπόδιον, from κλίνη, a bed; πούς, a foot; so called beeause its tufts are like the knobs on a bed-foot.) Hab. Europe, Asia, America. It is somewhat aromatic, and has been used as a cephalic and
- C. erec'ta virginia'na. (L. erectus, upright; virginianus, Virginian.) The Cunila mariana.
- C. grandiflo'ra, Möuck. (L. grandis, great; flos, a flower.) Mountain calamint. Hab. Italy. Used as a carminative.

C. hedera'cea. (L. hederaceus, of ivy.) The Glechoma hederacea.

C. humilior. (L. humilis, lowly.) The Glechoma hederacea.

C. magniflo'ra. (L. magnus, great; flos, a flower.) The C. grandiflora.
C. mag'no flo're. (L. magnus, great; flos, a flower.) The C. grandiflora.
C. monta'na. (L. montanus, belonging to a mountain.) The C. officinalis.

C. nep'eta, Link. (L. Nepeta, a city of Etruria.) Used as an aromatic and carminative

in popular medicine.

- C. officina iis, Mönch. (L. officina, a workshop. F. calament des montagnes; G. Kalaminthmelisse, Bergmünze.) Calamint. Perennial. Leaves ovate, dentate, pubescent; cymes secund, more or less unilateral. Hab. Europe, North Africa, West Asia. The plant has an agreeable odour, and is sometimes used as a stomachic and sudorific.
- C. officina'rum. (L. officina, a workshop.) The C. officinalis.
- C. paius'tris. (L. paluster, marshy.) The Mentha aquatica.
- C. parviflo'ra. (L. parvus, small; flos, a flower.) The C. nepeta.

C. pule'gio odo're. (L. pulegium, pennyroyal: odor, a seent.) The C. nepeta.

C. trichot'oma. (Τρίχα, in three parts; τέμνω, to cut.) The C. nepeta.

C. vulgaris. (L. vulgaris, common.) The

C. officinalis.

Calamis'trum. (L. calamistrum, a curling-iron.) A double row of short, closelyset, curved bristles on the upper surface of the metatarsus of each of the fourth pair of legs of the females of certain spiders. Its use is to eard the silk obtained from the fourth pair of spiuners.

Calamita. The Styrax calamita.
C. bianc'a. (I. bianco, white.) The white loadstone. A name for a very adhesive kind of white bole, which was formerly supposed alexipharmic and aphrodisiac.

Calamule. (Dim. calamus. F. calamule; G. Federchen.) A small reed or feather. Calamus, U.S. Ph. (Κάλαμος. a reed.) The rhizome of the Acorus calamus. Used as a stimulant tonic in flatulence and digestive torpor.

Also, the quill of a bird's feather.

Also, formerly applied to the stalk of any plant.

C. alexandri'nus. (L. alexandrinus, Alexandrian.) The stalk of a plant growing in ludia and Egypt, supposed to be the Andropogon nardus. An antihysteric and emmenagogue.

C. aromaticus. (L. aromaticus, fragrant.) The Acorus calamus; but the plant so designated by Dioscorides is believed to be a

species of Andropogon.

C. aromaticus ve'rus. (L. verus, true.)

The C. alexandrinus.

C. dra'co. (L. draco, a dragon.) The fruit of this species is the chief source of the resin called dragon's blood.

C. in'dicus. (L. indicus, Indian.) The Saccharum officinarum.

C. odora'tus. (L. odoratus, sweet smelling.) The Acorus calamus, Andropogon martini, and A. citratus.

C. oil. See Oleum calami.

C.ro'tang. A plant erroneously supposed to yield dragon's blood.

C. sacchari'nus. (L. saccharum, sugar.) The sugar-eane, Saccharum officinarum.

C. scriptorius. (L. scriptorius, belonging to a writer. F. plume à écrire; G. Schreibit der.) The hiuder termination of the median furrow of the floor of the fourth veutricle where bounded by the posterior pyramids.

C. vulgaris. (L. vulgaris, common.) The Phragmites communis, or common reed; and

also, Acorus calamus.

Calan'dra. A Genus of the Family Curculionidæ, Group Cryptopentamera, Order Colcoptera.

C. grana'ria. (L. granaria, a granary.)
The corn weevil. A beetle which does much damage to stored corn.

Cal'appite. (Malay, calappa, the cocoanut tree.) A stony concretion sometimes found in the inside of the eocoa-nut; also, called a vegetable bezoar. The Malays wear them as amulets of great virtue.

Calasay'a. The same as Calisaya. Calathia na viola. (Kalatis, a little

basket.) The Gentiana pneumonanthe.

Cal'athide. (Καλαθίς, a little basket. F. calathide; G. Bluthenkorb.) Used by Mirbel and Cassini for a kind of inflorescence composed of sessile flowers thickly placed upon a common involucre. Adopted by Link, but applied by him only, to compound flowers which, before floresceuce or during the night, are enveloped totally by the common calyx.

Calathid'iflore. (L. calathus, a little basket; flos, a flower.) An involucre when it surrounds a chuanthium charged with sessile dowers, or nearly so, somewhat resembling a small basket.

**Calathid'ium.** (Καλαθίς, a little basket. G. Bluthenkorbehen.) A term for the flower-head of Compositæ, or for the involuere alone.

Calath'iform. (L. calathus, a wieker basket; forma, shape. G. korbformig, napfformig.) Cup-shaped.

Cal'athine. basket.) Cup-like. (Kálados, a vase-shaped

Calath iphore. (Καλαθίς a little basket; φέρω, to bear. F. calathiphore; G. Bluthenkorbtrager.) The part which, in the Composita, bears the calathidia of the capitulum.

Cal'athis. Same as Calathidium.

Cala'zia. (Xa\a\u00e4a, a bail-stone.) A precious stone with white spots, like hail, in it. (Quincy.)

Calbala. A synonym of Kabbala.

Calbia num. A plaster, the composition of which is not known, mentioned by Myrepsus. (Hooper.)

Calcadinum. Term for zinc sulphate;

also, for red ink. (Randf.)

Cal cadis. Zine sulphate; also, according to some, the Sal alkali. The same as Calcadi-227(772.

Calca'real. (L. calcaneum, the heel.)
Of, or belonging to, the Calcaneum.

Calcancan. (L. calcaneum.) Belonging

to the heel

C. ar'teries, inter'nal. Several large branches of the posterior tibial artery before it divides, which supply the inner plantar muscles and the fat and integument of the heel; they anastomose with the peroneal and internal mallcolar arteries.

Calca'neo-astrag'alal articula'tion. The astragalo-ealcaneal articulation.

C .- astrag'alal lig'aments. The astra-

galo-calcaneal ligaments.

C.-cu'boid articula'tion. The synovial joint and ligaments which unite the anterior face of the calcaneum to the posterior of the cuboid bone.

C .- cu'boid lig'aments. These consist of a dorsal or superior ligament connecting the anterior and upper surface of the calcaneum with the cuboid, an inferior ligament divided into a superficial part, the long plantar ligament, and a deeper part, the short plantar ligament, and the internal or interesseous ligament closely connected with the external calcaneo-scaphoid ligament.

C. fib'ular lig'ament. (Fibula, the hone of that name.) The middle portion of the external lateral ligament of the ankle-joint.

C .- sca phoid lig aments. Two ligaments which connect the calcaneum and sca-phoid; the inferior or plantar, which passes from the front of the calcaneum to the interior surface of the scaphoid; and the external or dorsal, or interesseous, which is attached to the ridge of the calcaneum, which separates the articular surfaces for the astragalus and the cuboid, and is inserted into the outer side of the scaphoid.

C.-ta'lar. (L. calcancum, the bone of that name; talus, the ankle-bone, the astragalus.) Belonging to the os calcis and the astragalus.

C. ta'lar lig'aments. The Astragalo-

calcaneal ligaments.

Calca neum. (L. calcaneum, from calx, the heel. Gr. πτέρνα; F. calcaneum; I. and S. culcamo; G. Fersenbein, Fersenbnocken.) The bone of the heel. Articulates above with the astragalus, in front with the cuboid bone. It consists of a large pesterior part, tuber culcis, with a constricted part, neck, in front, and two tubercles inferiorly. The internal surface is concave, having in front a flattened process, the sustentaculum tabi. The upper surface has two articular facets for the astragalus; anterior surface concave vertically, convex transversely, articulates with the cuboid; inferior surface presents a rough anterior tuherele. It is very long in some monkeys and from

Calcanth'os. Same as Chalcanthos. Calcanth'um. Same as Chulcanthum.

Calcan'tum. A kind of red ink. (Quincy.)

Calcar. (L. calcar, a spur; from calx, the heel, on which the spur is fixed. F. éperon; G. Sporn.) The Calcaneum.

A spur-like process of the calcaneum of bats, which gives attachment to the wing membrane. Also, applied to the rudiments of the hind

limbs in certain snakes.

The horny projection found on the tarsi of some Gallinaceæ; also, called the spur. Also, a spur-like process in some Rotifera.

A posterior projection of the base of the corolla The nectariferous or calyx of some flowers, spur.

The ergot of rye, from its shape.

C. a'vis. (L. avis, a hird.) The Hippocampus minor.

Cal'carate. (Same etymon. F. éperonné; G. gespornt.) Spurred, or having spurs; applied to corollæ.

Calca'reo-ferru'ginous. (L. calx, lime; ferrum, iron.) Containing lime and ferric oxide.

C.-magne'sian. Containing lime and magnesia.

C .- sab'ulons. (L. sabula, coarse sand.) Containing lime and the debris of quartz.

C.-silic'ious. (L. silex, flint.) Containing lime and flint.

Calca'reous. (L. ealx, lime. F. calcaire; I. and S. calcareo; G. kalkartig.) Of, or belonging to, or of the nature of, lime.

C. degenera'tion. See Degeneration, calcareous.

C. earth. Lime. C. infarc'tion. (L. infarcio, to stuff with.) A term applied to that condition of the kidney in which deposits of phosphate, or, more rarely, carbonate of lime, are found in the connective tissue of the kidney.

C. metas'tasis. (Μετάστασις, a being put into a different place.) A condition of acuto calcareous deposit in organs, such as the lungs or intestinal mucous membrane; according to some, connected with kidney change, wherehy the ex-

cretion of calcareous salts is obstructed. C. spar. Crystalline calcium carbonate. Calcareus carbonas. Calcarcons carbonate; a synonym of Chalk.

Calcaria. (L. calx.) Lime.

C. bisulturo'sa. Calcium hisulphide. C. carbol'ica. Same as Calcis carbolas. C. carbon'ica. Chalk, carbonate of lime.

C. carbon'ica anima'iis. (L. animalis, living.) Carbonate of lime prepared from animal structures, such as shells, madrepores, crabs' eyes, cuttle-fish bones, or egg-shells.

C. carbonica cru'da, Russ. Ph. (L. crudus, raw.) Prepared chalk, Creta præparata. C. carbon'ica nati'va. (L. nativus, na-

tural. G. weisse Kreide.) Chalk.

C. carbon'ica præcipita'ta, G. Ph.
(G. präcipitirter hohlensauren Kalk.) The Culcis carbonas præcipituta.

C. carbon'ica solu'ta. (I. solutus, dissolved.) The Aqua calcuriæ carbonicæ.

C. caus'tica. (Kauotikos, capable of burning.) Quicklime.

C. chin'ica. Quinate of lime contained in cinchona bark.

C. chino'vica. Quinovate of limo. Used in diarrhœa.

C. chlora'ta, G. Ph. (G. Chlorkalk.) Chlorinated lime.

C. chlorin'ica. Chlorinated lime.

C. exstinc'ta. (L. extinctus, part. of exstinguo, to quench.) A synonym of Calcis hy-

C. glycerina'ta. Quicklime 3, glycerin 150 parts, digest with a gentle heat, and, on cooling, add chloric ether 3 parts. Used as an application to burns,

C. hy'drica. ("Y $\delta\omega\rho$ .) Slaked or hydrated lime, Calcis hydras.

C. hydrochlo'rica. (G. ehlorealeium.) Calcium ehloride.

C. hydroiod'ica. The Calcii iodidum. C. hydrosulfura'ta. Same as Calcium

sulphite. C. hypochloro'sa. Chlorinated lime. C. hypophosphorica. A synonym of

Calcis hypophosphis. C. hypophosphoro'sa. The Calcis hy-

pophosphis.

C. lac'tica. Same as Culcium lactate. C. muriatica. (L. muria, brine.) Calcii chloridum.

C. oxymuriatica. A synonym of Chlorinated lime.

C. phenyl'ica. (Phenyl.) A synonym of Calcis carbolas.

C. phosphor'ica, G. Ph. (G. phosphor. saure Kalkerde.) A synonym of Calvis phos-

C. phosphor'ica ac'ida. The acid phosphate of lime. See Calcium tetrahydrogen phosphute.

C. phosphor'ica ex os'sibus. (L. ex, out of; os, a bone.) Bone phosphate. See Calcis phosphas.

C. phosphor'ica mellit'ica. (L. mel, honey.) Phosphate of lime mixed with fermenting milk, and, after standing for eight days, evaporated to the consistence of honey. Given in rickets.

C. pu'ra. (L. purus, pure.) Lime. See Calcium monoxide.

C. pu'ra liq'uida. (L. liquidus, fluid.) Lime water.

C. sacchara'ta. (L. saccharum, sugar. F. saccharate de chuux; G. Zuckerkalk.) A concentrated solution of sugar is shaken with calcium hydrate, filtered, and precipitated with alcohol. It contains 86 parts of sugar and 14 of lime. Used instead of lime water; and given in poisoning by earbolic and oxalic acids.

C. solu'ta. (L. solutus, part. of solvo, to dissolve.) Lime water, Liquor calcis.

C. stibia'to-sulfura'ta. Three drachms of sulphuret of antimony, half an ounce of sulphur, and two ounces of lime, powdered, mixed, and exposed to heat for an hour in a well-luted erucible. A yellowish powder, now disused.

C. subphosphoro'sa. Same as Calcis hypophosphis.

C. sulfocarbolica. See Calcium sulphocarbolate.

C. sulfura'ta. Same as Calcium sulphide. C. sulfura'to-stibia'ta. Same as C. stibiato-sulfurata.

C. sulfu'rica. Calcium sulphate. Same as Culcium sul-C. sulfuro'sa. phite.

C. sulphu'rica us'ta, G. Ph. (L. ustus, part. of uro, to burn. G. gebrannter Gyps.) Burnt sulphate of lime, Plaster of Paris. C. us'ta, G. Ph. (L. ustus, burnt. G. gebranater Kalk.) Quicklime, Calx.

Calca'riæ a'quæ. (L. uqua, water.) Lime water.

C. chlo'rum. Chlorinated lime.
C. hypophos'phis. A synonym of Calcium hypophosphite.

Calcarif'erous. (L. calx, lime; fero, to bear.) Containing, or mingled with, lime. Also (L. calcar, a spur), bearing spurs.

Calcariform. (L. calx, line; forma, likeness.) Having a calcarcous, rhomboidal appearance.

Also (L. calcar, a spur), formed like a spur. Cal'carine. (L. calcar, a spur.) Spur-

C. sul'cus. See Sulcus, calcarine.

Cal'caris flos. (L. calcar, a spur; flos, a flower.) Delphinium, or larkspur.

Calca'rius la'pis. (L. lapis, a stone.) The limestone.

Cal'cas. The Arum colocasia.

Cal catar. Same as Calcadinum. Cal caton. A troche containing arsenie. Calcatrep'ola. Name, used by Para-eelsus, for the Delphinium, or larkspur.

Calcatrep pola. A synouym of Centaurea calcitrapa.

Calcatri pæ flo'res. (L. flos, a flower.) The bine, bitterish, inucilaginous flowers of the D. Iphinium consolida. Used as an expectorant and a vulnerary.

Calcatrip'pa. Same as Calcatrepola. Calce'don. See Chalecdon. Calcedon'icus. See Chalerdonic.

Calce'iform. (L. calceus, a shoe; forma, likeness. G. schuhformig.) Somewhat like a

Cal'cena. Concretions of the tartrate of lime, which form in the human body. Paracelsus, de Turtaro, ii, 1.

Cal'cenon. Same as Calcena.

Galceno'nia. A synonym of Calcena.
Calceno'nius. Term, applied by Paracelsus, de Tartayo, ii, 3, to the blood when supposed to abound in tartrate of lime; whence such was called calcined blood.

Calcenos. Same as Culcenonius. Calceolaria. (L. calceolus, a little slipper. F. culceolure; G. Puntoffelbume.) A Genus of the Nat. Order Scrophulariacae. The slipper-wort.

C. corymbo'sa. (L. corymbus, a cluster of flowers.) Used in Peru as a purgative and dinretie.

C. pinna'ta, Linn. (L. pinnatus, feathered, pinnate.) Used in Peru as laxative and emetic. C. rugo'sa, Ruiz and Pavon. (L. rugosus, wrinkled.) Used in Chili as a vuluerary.

C. scabiosæfolia, Sims. (L. scabiosus,

rough; folium, a leaf.) Used in Peru as an emetie.

C. trif'ida, Ruiz and Pavon. (L. tripdus, three eleft.) Used as febrifuge.

Cal'ceolate. (Same etymon. G. schuhformig.) Slipper-shaped.

Calceos toma. A Genus order Polystoma, Order Trematoda. A Genus of the Sub-

C. el'egans. Parasitie on the branchiæ of Sciuena aquila and S. umbra.

Cal'ces. (L. calx, lime.) A synonym of oxides, especially of the earthy metals, from their frequent similarity to lime.

Calce'tus. Same as Calcenos.

Cal'ceum equi'num. (L. culceus, a

shoe; equinus, belonging to a horse.) The Tussilago farfara, from the shape of its leaf.

Calchith'ius. Verdigris. (Quincy.)

Calcia. A synonym of Calcaneum. Calcic. (b. calx, lime.) That which belongs to, or resembles, calcium.

Also, the adjectival form of calcium, and used instead of it, as calcie hydrate for calcium hydrate, calcic sulphate for calcium sulphate.

Cal'cico. (L. calx.) A prefix in several compound terms, applied by Berzelius to double salts resulting from the combination of a calcie salt with another, indicated by the terminal por-

tion of the crithet, as Calcico-ammonicus.

Cal cides. A Family of simple bodies, having Calcium for their type.

Calcid'icum. A medicine into which arsenic was introduced as an ingredient. (R. and J.Y

Calciferous. (L. calx, lime; fcro, to carry. G. Kalkfuhrend, Kalkhaltig.) Containing, or bearing, lime or carthy salts.
C. bod'ies. The lacune of bone.
C. canal's. The canaliculi of bone.

Calcification. (L. calx, lime; fo, to become.) The deposit of earthy and other salts in a structure or tissue. See Degeneration, cal-

Also, the normal deposit of earthy matter in a

growing structure, as in a tooth or bone.

Cal'ciform. (L. cale, a small stone;
forma, sbape.) Pebble-shaped
Also (L. calx, the heel) having a projection

like a heel.

Calcifraga. (L. calx, lime, or stone; frango, to break; because believed to break or crumble down the stone in the bladder.) Scolopendrum, or spleenwort, according to Scribonius Lurgus, n. 150. The Calcifraga of Pliny is supposed to be the Globularia alypum of modern botanists, and by some it has been used synonymously with Saxifraga.

Calcifying. (L. calx, lime; fio, to become.) Producing, or becoming infiltrated with,

lime, or calcareous matter.

C. seg'ment. A thick, glandular sacculus, or dilatation of the lower part of the oviduet in birds, which secretes the substance forming the shell; it is sometimes called the nterus.

**Calcig'enous.** (L. calx, lime; γεννάω, to generate. G. Kalkzeigend.) Applied to the common metals which, with oxygen, form a calx, or earthy-looking substance.

Calcig'erous. (L. calx; gero, to earry.) Bearing, or holding, lime or earthy salts.

C. cells. The outermost cells of the dentine of the tooth.

Calcigra'dus. (L. calx, the heel; gradus, a st p.) One who walks on his heel.

Cal'cii bromi'dum. See Calcium bro-

C. carbo'nas precipita'ta. See Calcis carbonas macinitata.

c. chlori'dum, B. Ph. (F. chlorure de calcium; G. salzsaurer Kalk.) CaCl<sub>2</sub>. Hydrochloric acid is neutralised by calcium carbonate. with the addition of a solution of chlorinated lime and slaked lime; the solution is filtered, evaporated to solidity, and the salt dried at 201.45 C. (400° F.) It is very deliquement, soluble in twice its weight of water, and in alcohol. It is colourless, slightly translucent, hard, friable, and of a bitter, acrid taste. The hydrate crystallises from a saturated solution in 6-sided prisms.

With ice it forms a powerful freezing mixture, reducing temperature to  $-48^{\circ}$  C.  $(-54.4^{\circ}$  F.) When strongly heated it becomes anhydrons, and is used to dry gases. It occurs in the water of many springs, and in sea water. Used in scrofula and rickets, in uterine and ovarian tumours. Dose, 10 to 30 grains. In large doses it is a gastro-intestinal irritant.

C. chiorure tum. A synonym of C. chloridum.

C. hy'dras. See Calcis hydras.

C. hypochlo'ris. A name formerly given to ehlorinated lime, Calx chlorata.

C. hypophos'phis, U.S. Ph. Same as Calcis hypophosphis, B. Ph.

C. hyposul'phis. See Calcium hyposulphite.

C. i'odas. See Calcium iodate.

C- todl'dum. See Calcium iodide. C. oxychlorure'tum. A synonym of C. chloridum.

C. oxi'dum. See Calcium, monoxide.

C. phos'phas præcipita'ta, U.S. Ph. Same as Calcis phosphas, B. Ph.

C. protochlorure'tum. A synonym of C. chloridum.

C. sul'phas. See Calcium sulphate.

C. sul'phas us'ta. (L. ustus, burnt.) Plaster of Paris.

C. sulphi'dum. See Calcium sulphide. C. sul'phis. See Calcium sulphite.

C. sulphure'tum. Same as Calcium sulphide.

Calcina'tio. See Calcination.
C. philosoph'ica. (Φιλοσοφικός, philosophic.) Alchemical term applied to the process of rendering bony or horny matter brittle and pulverisable, by suspending it for some hours over boiling water.

C. si'ne ig'ne. (L. sine, without; ignis, fire.) Same as C. philosophica.

C. spagyrica. (Spagyric.) Same as C.

philosophica.

Calcina'tion. (L. calx, lime. F. calcination; 1. calcinazione; S. calcinacion; G. Kalcinerung.) The application of such an amount of heat to saline, metallic, or other substances, as to deprive them of moistnre and organic or volatilizable matter, but not sufficient to fuse them. It was formerly used to indicate the formation of an oxide of a metal by exposure to the air.

Calcina tum majus. (L. major, greater.) A term used by the alchemists for whatever was duleified by their art, and not so by

nature, as lead, mercury.

C. ma'jus pote'rii. (L. major; Poterius.) Precipitated mercury. Mercury dissolved in aquafortis, and precipitated by salt water; applied by Poterius to obstinate ulcers.

C. mi'nus. (L. minor, less.) Alchemical term applied to anything naturally sweet, as sugar, honey, manna.

Cal'cine. (F. caleiner, from Low L. calcino, to reduce to lime or a calx. G. verkalken.) To subject a body to great heat in order to drive off its water and more volatile parts.

Cal'cined. (Same etymon. F. calciné; G. calcinirt.) That which has been subjected to

calcination.

C. blood. Same as Calcenonius.

C. magne'sia. A synonym of Magnesia usta.

C. mer'cury. Same as Hydrargyrum oxydum rubrum.

Calcino'nia. Same as Calcenonia.

Calcino'nius. Same as Calcenonius. Calcip'arous. (L. calx, lime; pario, to produce.) Producing, or bearing, lime, or carthy salts.

**Calciphy'ta.** (L. calx; φυτόν, a plant.) Applied by Blainville to a Class of his *Pseudozoa*, containing organised phytoid bodies composed of an internal fibrous and an external cretaceous substance, as the *Coralline*.

Cal'cis cre'mor. (L. calx, lime; cremor, cream.) The cream of lime. Au old term for the pellicle formed on the surface of lime water by exposure to the air, which consists of calcium

irbonate.

C. bichlorure'tum. The Calcii chloridum.

C. carbo'las. Carbolate of lime. Calcium hydrate 4 parts, carbolic acid 10 parts; mix. Used in chronic diarrhea. Dose, two grains.

C. carbo'nas. Same as Culcium carbonate.
C. carbo'nas du'rus. (L. durus, hard.)
Marble.

C. carbo'nas friab'ilis. (L. friabilis,

easily broken.) Chalk.

C. carbo'nas præcipita'ta, B. Ph. (G. frischgefalter kohlensamer Katk.) Hot solutions of calcium chloride and sodium carbonate are mixed, and the precipitate washed and dried until no precipitate is given with silver nitrate. A white powder, free from grit. Antacid. Dose, 10 to 40 grains or more.

C. he'par. (' $H\pi\alpha\rho$ , the liver.) Calcium

sulphuret, from its colour.

- cteinte; G. geloschter Kulk.) Ca(Oll)<sub>2</sub>. Slaked line. A soft, white, bulky powder, soluble in cold water, freely soluble in syrup. Formed when water is added to quickline. Much heat is evolved, and watery vapour, carrying particles of line, is given off; it contains 24-32 per cent. of water. Used as a pharmaceutical agent in the preparation of certain alkaloids and other drugs; and, in solution, as lime water.
- C. hypochlor'is. A synenym of Calx chlorata.

Also, Calcium hypochlorite.

c. hypophos phis, B. Ph. (G. unterphosphorigsaurer Kulk.) Ca(PO<sub>2</sub>H<sub>2</sub>)<sub>2</sub>. Formed during the boiling of phosphorus with calcium hydrate and water. It is pearly white, and crystallises in flattened prisms. Bitter and nauscous to the taste. Has been used in plthlisis with doubtful advantage, in loss of nerve power, in scrofula, and bone diseases. Dose, 5—10 grains three times a day.

C. Hniment'um. Carron oil. Equal parts

C. Hniment'um. Carron oil. Equal parts of lime water and olive oil mixed tegether form calcium oleate and margarate. Used locally to

burns and sealds.

- C. Il quor. Aqua calcis, lime water. Two ounces of slaked lime added to a gallon of water, the clear liquor poured off after twelve hours. Antacid and astringent in dyspepsia with diarrhea and vomiting, and in pyrosis; locally in leucorrhea and gleet. Dose, 2—8 ounces.
- C. H'quor sacchara'tus. One eunce of slaked lime and two ounces of sugar are added to one pint of water. The clear solution is decanted after twelve hours. One part lime in 50. Used as liquor calcis. Dose, 1—3 drachms in water or milk.
  - C. mu'rias. Same as Calcii chloridum. C. oxymu'rias. The Calcii chloridum.

C. phos'phas, B. Ph. Ca<sub>3</sub>(PO<sub>4</sub>)<sub>2</sub>. (F. phosphate de chaux hydratée; G. phosphorsaure Kalkerde.) Calciom phosphate is prepared by dissolving bone ash in dilute hydrochloric acid, precipitating hy solution of ammonia, and washing and drying the precipitate under 100° C. (212° F.) It is a light, white, amorphous powder, insoluble in water, soluble in nitric, hydrochloric, and acetic acids. Deficiency of calcium phosphate in the food produces in animuls weakness and bad health, and sometimes bone disease. It has been given in rickets, caries of bone, phthisis, scrofnla, ununited fracture, tertiary syphilis, and menorrhagia. Dose, 10—20 grains thrice daily.

C. phos'phas præcipita'ta. See Culcii

phosphas precipitata.

C. sul'phas. See Calcium sulphate. C. sul'phis. See Calcium sulphite.

C. sulphure tum. The Calcium sulphide. C. vi'vi flo'res. (L. vivus, hving; flos, a flower.) See C. cremor.

Cal'cis os. (L. calx, the heel; os, a bene.) The bone of the heel. The Calcaneum.

Calcispong'iæ. (L. calx, line; spongia, a sponge.) An Order of the Class Spongia, having a calcareous skeleton.

Calcitari. Old term for alkaline salt.

Cal'cite. (L. calx, lime.) A term applied to minerals composed of the crystalline varieties of carbonate of lime.

Calcite'a. Ferrous sulphate. (Quincy.) Calciteo'sa. Lithargyrum, or hitharge. (Quincy.)

Calcitios. Verdigris. (Quincy.)
Calcitis. An old term. Vitriol burnt to redness.

Calcitra'pa. (1. calcatreppo, from L. calco, to tread down; Mod. L. trappa, a snare, or L. tribulus, a thistle. The name was probably first applied to the iren-pointed sphere thrown down before cavalry to injure the horses' feet, and thence transferred to the spiny heads of the plant.) The Centaurea calcitrapa; alse, Delphinium consolida.

**C. hippophæs'tum.** ( $\Pi \pi \pi \delta \phi \mu \iota \sigma \tau o \nu$ , an unknown plant.) The Centaurea calcitrapa.

C. lanugino'sa. (L. lanuginosus, downy.)
The Cnicus benedictus.

c. officina is. (L. officina, a workshop.) The Centaurea calcitrapa, St. Barnaby's thistle.
c. sic'ula. (L. siculus, Sicilian.) The

Centaurea solstitialis.

C. solstitialis. The Centaurea solsti-

tialis.

C. stella'ta. (L. stellatus, starry.) The Centaurea calcitrapa.

Calcitra'pic ac'id. A name given by Colignan to a very bitter substance obtained from the Centaurea calcitrapa. It is an impure product.

Calcitrapoï'des. Old name for the montpellier star thistle, which has lanceolate and entire leaves. A species of centanrea.
Calcium. (L. calx, lime.) Ca. At. weight

Cal'cium. (1. calx, lime.) Ca. At. weight 39.9; sp. gr. 1.5778. Very abundant in compounds, never free. Light yellow metal, hard, very ductile; quickly exidises, decomposes water, hurns with a bright flash. Prepared by fusing calcium, strontium, and ammonium chlorides in a porcelain crucible, in which there is an iron cylinder connected with the positive pole of a

battery, and a carbon point with the negative; calcium collects round the carbon point,

C. ac'etate. See Acetate of lime. The C. antimo'nlo-sulphura'tum. Calcaria stibiato-sulphurata.

C. benzo'ate. See Lime, benzoute of.
C. bisul'phide. Same as C. disulphide.

C. bisul'phite. A solution of hydrated calcium sulplate in aqueous sulphurous acid; it is made by passing sulphur dioxide into milk of lime. It is used as an agent in stopping fermentation and putrefaction.

C. broma'tum. Same as C. bromide. C. bro'mide. (F. bromure de caleium; G. Bromealcium.) CBr<sub>2</sub>. Formed by the direct union of caleiom and bromine, or by dissolving lime in hydrobromic acid. Deliquescent and soluble in alcohol.

Used, as the other bromides, in epilepsy, hysteria, and insonnia, than which it is said to act

more quickly.

C. bromi'dum. See C. bromide.

C. carbonate. (F. carbonate de chaux; I. carbonato di calce; G. kohlensaurer Kalk.) CaCO3. Exists, in a more or less pure state, in the form of chalk, marble, and limestone, of which the more ancient are without organic remains, while the more recent are composed of the ealcareous envelopes of Foraminifera. These rocks often contain cavities, in which huge crystals of the salt occur. It is found in plants, in the bones and shells of animals, and in a crystalline form in the sacculus vestibuli of the ear. It is almost insoluble in pure water, readily soluble in water which contains carbonic acid; on this depends the hardness of waters. It is dimorphous in its forms, cale spar and arragonite.

C.carbonate, precip'itated. See Culcis

carbonas pracipitata.

C. carbon'icum. Same as C. curbonate. C. carbon'icum nati'vum. (L. nativus, natural.) Chalk.

(L. purus,

C. carbon'icum pu'rum. (L. pure.) The Calcis carbonas præcipitata.

C. chlo'rate. Ca(ClO<sub>3</sub>)<sub>2</sub>. Formed when chlorine is transmitted through milk of lime or potassium chlorate is precipitated with calcium silicofluoride. It is very deliquescent,

C. chlora'tum. Same as Calcii chloridum. C. chlora'tum crystallisa'tum. Crystallised calcium chloride from a watery solution.

C. chlora'tum fu'sum. A term applied to calcium chloride after being exposed to heat.

C. chlora'tum sic'eum. (L. siceus, dry.) Same as Calcii chloridum.

C. chlo'ride. See Calcii chloridum.

C. chlori'dum. Same as Caleii chloridum. Also, a synonym of chlorinated lime, Calx chlorata.

C. chlo'ruret. Chlorinated lime,

C. chlorure tum. Chlorinated lime. C. diox'ide. CaO<sub>2</sub>. Is obtained by treating lime with hydrogen dioxide. It consists of microscopic quadratic tables or prisms, soluble with difficulty in water, insoluble in alcohol, and efflorescent in the air.

**C.** disul'phide. CaS<sub>2</sub>. Obtained when milk of lime is boiled with an excess of sulphur, filtered, and allowed to cool, when it throws down

yellow crystals, soluble in water.

C. fluora'tum. See C. fluoride. C. flu'oride. CaF<sub>2</sub>. (G. Fluorealcium.) Fluor spar. Occurs abundantly in nature in in talliferous veins. It is a constituent of bones and of the enamel of the teeth, and of the ashes of plants. Insoluble in water. Used in retarded dentition and rickets.

C. hy'drate. See Culcis hydras.
C. hydri'odate. The Calcium iodide.

C. hydrosulfura'tum. Same as C. sulphite.

C. hydrosul'phide. (G. Schwefelwasserstoffcalcium, Schwefelculcium.) Ca(SH)2. Same as C. sulphydrate.

C. hydrox'ide.  $Ca(OH)_2$ . Same as C. hydrate.

C. hypochlo'rite. Ca(OCl)<sub>2</sub>. A compound which occurs in the form of unstable feathery crystals, and which, according to one hypothesis, is a constituent, along with calcium chloride, of chloride of, or chlorinated, lime. See Chlorinated lime.

C. hypochloro'sum. Same as C. hypochlorite.

C. hypophos'phite. See Calcis hypo-

phosphis. C. hyposul'phite. Ca2HSO2. Calcium hydrate in water is boiled with sulphur and filtered; sulphurous oxide gas is passed through the solution, the clear liquid is decanted and evaporated to crystallisation. It occurs in 6-sided efflorescent crystals. Has the power of preventing fermentation and destroying the lower vegetable organisms. Used in sarcina ventriculi, and in

epīphytic diseases. C. l'odate. (F. iodate de chaux ; G. iodsaurer Kalk.) Ca(10,12.6H20. Obtained by adding an excess of a filtered aqueous solution of chlorinated lime to an alcoholic solution of iodine kept cool. It occurs in flat, colourless, shining needles, slightly soluble in water, almost

insoluble in alcohol.

C. ioda'tum. A former name of Calcium iodide.

C. l'odide. Cal<sub>2</sub>. A solution of iron iodide is treated with milk of lime; the liquid is filtered and evaporated to crystallisation. It is in white pearly plates, often yellow from excess of iodine, deliquescent, and very soluble in water. Used instead of potassium iodide. Given in serofulous phthisis and erysipelas, and to arrest suppurative discharges. It is said to stop putrefaction. Dose, 1-3 grains after each meal.

C. iodobro'mide. Has been used with

apparent success in exophthalmic goitre.

C. lac'tate. (F. lactate de chaux; G. milehsaurer Kalk.) Ca(C<sub>3</sub>H<sub>5</sub>O<sub>3</sub>)<sub>2</sub>, 2C<sub>3</sub>H<sub>6</sub>O<sub>3</sub>. A white granular mass, soluble in water and alcohol. Used as an easily assimilable form where lime is indicated.

C. lactophos'phate. A solution of calcium phosphate in water by means of lactic acid.

Dose, 2-5 grains.

C. monosulfura'tum. A synonym of C

sulphite.

C. monosul'phide. Same as C. sulphide. C. monoxide. (L. calx viva; F., chaux, chaux vive; I. calee; S. cal viva; G. Altkalk, qebrannter Kalk.) CaO. Quicklime, caustic lime; an alkaline earth. Obtained by exposing chalk or limestone, calcium carbonate, to a red heat, by which the carbonic acid is expelled. Lime obtained in this manner is impure from mineral admixture. Pure lime may be formed by igniting to whiteness, in a platinum crucible, artificial calcium carbonate. It is white, hardish, infusible, and phosphorescent at a high temperature. When moistened with water it develops

heat, crumbles into hydrate, and is said to be slaked. Exposed to the air it absorbs moisture and carhonic acid. Lime is a caustic, and, as such, it was used to sloughly ulcers. It forms part of the officinal caustic, Potassa eum valce.

C. mu'riate. Same as Calcii chloridum.
C. nl'trate. Ca(NO<sub>3</sub>)<sub>2</sub>. Made by saturating chalk with nitric acid. In its anbydrous state it is a white porous mass, which, after being heated and exposed to sunshine, becomes luminous in the dark. It is very deliquescent, and is soluble in alcohol. It forms the white efflorescences on walls into which urine has soaked. In its anhydrous state it is used for drying organic substances instead of calcium chloride.

c. orthophos'phate, monohy'dro-HCaPO<sub>4</sub>+2H<sub>2</sub>O. Obtained as a white gen. crystalline precipitate when calcium chloride and sodium phosphate in solution are mixed. It occurs in urinary concretions, and forms the stellar phosphate crystals deposited from

urine.

C. orthophos'phate, nor'mal.

tribasie C. phosphate.

 $C_2CaO_4+4H_2O$ . C. ox'alate. A white powder formed by the addition of oxalic acid, or an oxalate, to a soluble calcium salt; it is insoluble in water and in acctic acid, soluble in nitrie acid. It occurs in the urine and in plant cells in minute octahedral or dumbhell-shaped crystals.

- C. ox'ide. Same as C. monoxide. C. oxychlor'uret. The Calcium chloride. C. oxyda'tum. Caustic, or quick-lime, C. monoxide.
- C. oxyda'tum hydra'tum. Slaked lime, Calcis hydras.

C. oxymu'riate. The Calcium chloride. C. oxysulfura tum, Ph. Aust. (F. foie de sulfure impure; G. funffach Schwefelealeium.) Calcium hydrate 3 parts, flowers of sulphur 1, water 5. The mixture is heated and evaporated, when there results a brown sulphurous-smelling mass. Used in a bath for scaly skin diseases.

C. phos'phate. (F. phosphate de chaux des os; I. fosfuto di calce; G. Kulkphosphut.) Several distinct salts of calcium and phosphoric acid are known. The salt used in medicine is the tribasic phosphate or bone phosphate, Ca<sub>3</sub>(PO<sub>4</sub>)<sub>2</sub>; a second tribasic calcium phosphate, HCa, PO<sub>4</sub>, is gelatinous. Both these salts occur in hones. Calcium phosphate is found in the bones, teeth, nails, and hair, and either free, in solution, or combined with albuminous principles, in the blood and other animal fluids, and it occurs in the urine. It dissolves in acids, in water charged with earbonic acid, ammoniacal and other salts.

C. phos'phate, precip'itated. Same

as Calcis phosphas.

C. phos'phate, tetrahy'drogen. H<sub>4</sub>Ca (PO<sub>4</sub>)<sub>2</sub>. Acid phosphate of lime; obtained by dissolving bone phosphate in phosphoric acid and crystallising. Given in disease of hone and caries of teeth.

C. phos'phide. Ca2P2. Little is known of this salt.

C. phosphor lcum. Same as Calcis phosphas.

C. phosphor'icum ex os'sibus. ex, out of; os, a bone.) Bone phosphate. See Calcis phosphas.

C. phos'phuret. A brown substance produced when phosphorus in vapour is passed over lime heated to redness. It is a mixture of calcium

phosphide and calcium pyrophosphate.

C. poi'soning. Death has occurred from drinking water in which a large quantity of lime had been mixed. It is caustic and irritant. Antidote, solutions of alkaline sulphates.

C. protochlo ruret. Same as Culvii chloridum.

C. protoxichlo'ruret. Same as Calcii chloridum.

C. protox'ide. Quick-lime, C. monoxide. C. quinquesulfura tum. Same as C. oxysulfuratum.

C. salts, tests for. Alkaline carbonates give white insoluble precipitates of chalk. Soluble oxalates give a white precipitate of

calcium oxalate, insoluble in acetic acid. Calcium chloride dissolved in alcohol causes it

to turn reddish. **C.** sarcolae'tate. ( $\Sigma \alpha \rho \xi$ , flesh.) 2[Ca  $(C_3H_5O_3)_2$ ]+9 $H_2O$ . A salt of sarcolaetic acid, the variety of lactic acid occurring in dead massle.

C. sulfura'to-stibia'tum. The Calcaria

sulfurato-stibiata.

C. sul'phate. CaSO4 Occurs in the anhydrous state, and also, in considerable abundance, crystallised with two molecules of water, as Gypsum; when in large monoclinic crystals it is called Selenite.

C. sul'phide. (F. sulfure de chanx; G. Schwefelcalcum.) Cas. Obtained by heating calcium sulphate with powdered coal. When pure it is a white, insoluble mass, smelling of hydrogen sulphide; it is often coloured from impurities.

C. sul'phite. CaSO<sub>3</sub>. Obtained by adding a solution of a normal sulphite to one of a calcium salt, or by passing sulphurous acid gas through milk of lime. It is a white powder, soluble in 800 parts of water. It dissolves in sulphurous acid, from which it crystallises in six-sided needles. It arrests fermentation and putrefac-tion, and bas been applied to foul ulcers and favus crusts, and has been used as a depilatory. Internally it is not much used, from its insolubility.

C. sulphocar'bolate. Ca2C<sub>6</sub>H<sub>5</sub>SO<sub>4</sub>.6H<sub>2</sub>O<sub>4</sub> Occurs in shining scales. Used as sodium sulphocarbolate.

C. sulphura'tum. Same as C. sulphide.

C. sul'phuret. Same as C. sulphide. C. sulphy'drate. CaH<sub>2</sub>S<sub>2</sub>. Prepared by passing hydrogen sulphide through a mixture of two parts of slaked lime and three of water. The muddy fluid is used as a depilatory.

Cal'cocos. A synonym of Bell-metal. Calcol'dea ossic'ula. (L. calx, the heel; ¿iĉos, likeness; ossiculum, a small bone.) Term applied by Fallopius to the cunciform bones of the tarsus, according to Bartholin, Anat. iv, 21, p. 756.

Calcokeu'menos. (L. æs ustum. G. Kupferschlag.) Burnt copper, or the oxide of copper. (Ruland.)

Calcosubphalange'us min'imi dig'iti. (L. culx, the heel; sub, under; phalanx.) A synonym of Abductor minimi digiti

Cal'cotar. Green vitriol, ferrous sulphate. Calc-spar. (L. calx, lime.) Crystalline ealcium carbonate.

Cal'culi cancro'rum. (L. calculus, a stone; cancer, a crab.) Crabs' eyes.

Cal'culifrage. (L. calculus, a stone;

frange, to break.) A name for an instrument introduced into the bladder for breaking down calculi.

Calculifragous. (Same etymon.) Applied to medicines having power to break or reduce calculus in the bladder.

Cal'culous. (L. calculosus. F. calculeux; 1. calculoso; S. calculoso; G. steinig.) Having,

or belonging to, a calculus.

C. disea'ses. (F. affections calculeuse; I. calcolosa affezione; G. Steinkrankheit, Steinleiden, Steinbeschwerde.) Diseases referable to presence of a calculus.

C. nephritis. See Nephritis, calculous,

C. ox'ide. A synonym of Cystic oxide.
C. phthi'sis. Disease of the lung, accompanied by broucheliths or pneumoliths.

C. pyelitis. See Pyelitis, calculous.

Cal'culus. (L. calculus, a small stone. Gr. \(\lambda it\) os, \(\lamb for concretions forming accidentally in the animal

Also, a term applied to any branch of mathematics which may involve or lead to calculation,

except pure geometry.

C., al'ternating. (L. alterno, to interchange with.) A urinary calculus consisting of laminæ of different chemical composition.

C., alvine. (L. alvus, the belly, excrement.) Same as C., intestinal.
C., ammoni'aco-magne'sian phos'-phate. Same as C., triple phosphate.
 C., arthritic. ('Αρθρῖτις, gout.) Same

as Chalk-stones.

C., artic'ular. (L. articulus, a joint.) A synonym of Chalk-stones.

C., aur'al. (L. auris, the ear. F. calcule de l'oreille; G. Ohrstein.) Hardened masses of cerumen in the external anditory canal.

C., bezoar'dic. A synonym of Bezoar.

C., bil iary. Same as Gall-stone.
C., blood. Coal-black bodies, varying in size from a coriander seed to a horse-bean, have been found by Dr. Scott Alison in the pelvis of an atrophied kidney. They were hard and triable; they dissolved in ammonia; and, when treated with a salme solution, amorphous forms, as of blood-corpuscles, were seen.

C., bone earth. A synonym of phosphate

of lime calculus.

C., breast. See C., lacteal.

C., bronch'ial. (Βρόγχια, the bronchial tubes.) A smooth, more or less globular concretion formed in a dilated bronchial tube.

C., cæ'cal. (Cacum.) A concretion in the intestinum cæeum or in the appendix caei vermiformis; it may consist of calcium carbonate and phosphate, with more or less feeal matter, and may contain foreign substances, such as seeds of fruit, bone, or entozoa. Dry semi-transparent masses of mucus are sometimes found in the appendix.

C., car bonate of lime. Urinary vesical calculi of this composition are rare in man, but common in the herbivora. Usually they are described as of the size of a pea, white, lamellar, and sometimes hard; they effervesce on the addition of acids. A concretion of this material has been found in the kidney, and not infrequently

in the prostate gland.

C., choles'terine. A variety of Gall-stone. C., com pound. A urinary calculus composed of several constituents.

C., cys'tic bil'iary. (Κύστις, a bladder.) A gall-stone in the gall-bladder.

C., cys'tic ox'ide. (Κύστις.) Same as cystine.

C., cys'tine. (Κύστις. I. calculo di cystina.) A rare urinary calculus, greenish, waxy, smooth, nnlaminated, of glistening fracand semitransparent appearance. It is soluble in ammonia, and crystallizes from the solution in hexagonal plates. See also Cystine.

C., den'tal. (L. dens, a tooth.) Same as

Tartar.

C., encyst'ed. A urinary calculus which has become included in a sacculus developed in the walls of the bladder; or, perhaps, enclosed in a new deposit of false membrane. A calculus may be known to be encysted if the sound strike it at times but not at others, if the stone always appear to be fixed in one situation, and if the beak of the instrument cannot be made to pass round it so as to isolate it, but a kind of tumeur projecting through the walls of the bladder is felt around or on one side of the point where tho calculus is struck (Erichsen).

C., fat'ty. Same as C., urostealith. C., fel'leous. (L. felleus, of bile.) Same

as Gall-stone.

C., fi'brinous. Very rare urinary calculus, consisting of a yellow, waxy, organic substance, closely allied to fibriu; soluble in potash and hot acetic acid, insoluble in water, alcohol, and ether.

C., fis'tulous. A urinary calculus found in a fistula communicating with the prethra or bladder; occasionally of large size; usually composed of triple phosphate and organic matter.

C., fix'ed. A nrinary calculus which has become adherent to the wall of the bladder.

C., fu'sible. A urinary calculus of triple phosphate and phosphate of lime, sometimes making up the entire mass, sometimes alternating with other deposits, and sometimes forming a crust to a uric acid nucleus. It fuses under the blowpipe flame with a readiness proportionate to the amount of triple phosphate in its composition. Dissolved in dilute hydrochloric acid, and ammonia added in slight excess, the mixed phosphates are deposited in crystals and recognised by the microscope.

C., fu'sible phosphate. Same as C.,

fusible.

C., gas'tric. (Γάστηρ, the stomach. F. calcul gastrique; I. calcolo gastrico; G. Magenstein.) A concretion of hair or such like.

C., hepatic. (H $\pi a \rho$ , the liver.) A gall-stone formed in a bile duct in the substance of

the liver.

C., hepatocys'tic. ( Ήπαρ; κύστις, a bladder.) A gall-stone in the hepatic duct.

C., impacted. (L. impactus, part. of impingo, to drive into. F. calcul chatonné; I. calcolo incastonato; G. eingekeilter Stein.) urinary calculus which has become arrested in the ureter or the arethra in the course of its natural expulsion.

C., inear'cerated. (L. in, in; carcero, to imprison.) An encysted or a fixed urinary vesical

calculus.

C., intesti'nal. (L, intestina, the bowels. F. calcul intestinal.) Concretions formed from the undigested parts of the intestinal contents, such as husks of the out, and other vegetable debris, hair, string, or other foreign matters, mixed with lime saits, and sometimes magnesian

salts. These concretions are uncommon in man, but frequent in the lower animals, forming bezoars. They produce sometimes serious obstruction.

C., joint. Same as Chalk-stones.

C., lach'rymal. (L. lachryma, a tear.

F. calcul tachrymal.) Same as Dacryolith.
C., lac'teal. (L. lac, milk. F. calcul mammaire; I. calcolo latteo; G. Milchstein.) A concretion in the mammary gland, consisting of inspissated milk.

C., lith'ie ac'id. Same as C., uric acid. C., lung. Same as C., pulmonary.

C., mam mary. (L. mamma, the breast.) Same as C., lacteul.

C., Meibo'mian. Yellowish-white concretions, consisting of inspissated secretion of the Meibomian follicles, and often some calcareous matter, projecting on the under or conjunctival surface of the eyelids, and sometimes producing considerable irritation.

C., mul'berry. (F. calcul mûraux; I. caleolo moriali; G. Maulbeerstein.) A term applied, from its resemblance to the fruit of this

name, to the C., oxalate of lime.

C., na'sal. (L. nasus, the nose. G. Nasenstein.) A concretion found in the nasal fossa. It may originate in the fossa or form around a darryolith or a foreign body; it consists generally of phosphate and carbonate of

C., nu'cleus of. (L. nucleus, a kernel.) The central part of a calculus. It is usually of different structure to the rest of the stone, and is commonly lithic acid; it may happen, especially in phosphatic calculi, that there is no nucleus, or its place may be taken by a foreign body accidentally introduced into the bladder.

C. of ear. See C., aural.

C. of veins. Same as Phlebolith.

C., ox'alate of lime. (F. oxalate de chaux; I. ossalato di calee; G. oxalsaurer Kalk.) Dark brown, rounded, moderate-sized, rough, tuberculated, and very dense. The colour sometimes approaches to black, and the tubercles are occasionally so sharp as to be like small thorns. On section the appearance is of wavy, imperfect lamellæ. Sometimes, especially when renal, this calculus is smooth, and like a hemp-seed; sometimes it is crystalline throughout, and of a pale brown colour; and sometimes it is milk-white and smooth. It is soluble, without effervescence, unless carbonate of lime is present, in dilute acid, from which a white precipitate, insoluble in acetic acid, is thrown down by ammonia. It blackens and gives off an unpleasant smell when heated, and afterwards becomes white, being converted into carbonate of lime. A urinary ealculus.

C., pancreatic. (Παν, all; κρέας, flesh.) A concretion in a pancreatic duct, varying in size from a pin's head to a filbert, and sometimes occurring in great numbers. It is chiefly com-

posed of calcium chloride.

C., phos'phate of lime. A very rare urinary calculus; it is moderately hard and smooth. When of renal origin it is usually pale brown, with laminæ loosely adherent, and contains much animal matter; it is composed of neutral phos-When of vesical origin it is usually soft, irregular in shape, and often consisting of small erystalline masses, held together by tenacious mucus. It is composed of "bone carth," a mixture of the two calcium phosphates. When heated it turns black, and gradually becomes white; it is infusible, except at a very high temperature indeed; soluble, without efferves-cence, in dilute nitric acid, from which it is thrown down as a gelatinous precipitate; soluble in acetic acid by ammonia.

C., phosphatic. A calculus composed of phosphate of lime, of triple phosphate, or of the two substances combined in various proportions.

C., pine'al. The sandy matter in the pineal gland, called Acervulus cerebri.

**C., podag**'ric. (Ποδάγρα, gout in the feet.) A synonym of *Chalk-stones*.

C., præpu'tial. (Præpuce. F. calcul préputial; I. calculo prepuziale; G. Vorhautstein.) A calculus which forms under the prepuce in cases of phymosis, from retention of some urine there. Indeed, a case has been recorded of the removal of 426 calculi from that position at one

C., prostatic. (F. calcul prostatione; I. calcolo prostatico; G. Prostatastein.) A valculus formed in the ducts of the prostate gland, composed of phosphate or carbonate of lime, and animal matter; seldom single, ashy grey in colour, smooth, polygonal from rubbing or pressure, and usually not very large, varying from a poppy-seed to a plum-stone. It gives rise to perinaal pain and weight, obstruction to the passage of the urine, and mucus in the urine. It may sometimes be felt from the rectum and by the sound before it enters the bladder.

C., prostato-vesi'cal. See C., vesicoprostatic.

C., pul'monary. (L. pulmo, the lung. F. calcul pulmonaire; G. Lungenstein.) A calcareous mass found in the lungs, and consisting of tubercle which has undergone a retrograde metamorphosis, or, according to some, of a pulmonary lobule, the cheesy intiltration of which has undergone calcification. The salt is chiefly calcium phosphate and carbonate.

C., re'nal. (L. ren, the kidney. F. calcul renal; G. Nierenstein.) See Renal calculus.

C., sal'ivary. (L. saliva, spittle. F. calcul salivaire; I. calcul salivali; G. Speichelstein.) Occurs most commonly in Wharton's duet, but is also found in the ducts of the submaxillary and parotid glands. It is composed chiefly of carbonate of lime, with some carbonate of magnesia and phosphate of lime, and mucus. A salivary calculns obstructs the duct in which it lies, causing distension and pain.

C., sanguin'eous. (L. sanguis, blood) Same as C., blood.

C., scro'tal. (L. scrotum, F. calcul scrotal; G. Hodensackstein.) Very rarely a calculus seems to form in the bladder to find its way through the urethra into the scrotum, and thence to be removed by ulceration or excision. One weighing 26 oz. has been recorded.

C., sem'inal. (L. semen, seed.) Same as C., spermatic.

C., silic'ic ac'id. There is no record of a calculus being composed altogether or chiefly of silicic acid, but now and then it has been found to contain a small quantity.

C., spermatic. (Σπέρμα, semen. F. calcul spermatique; I. calcolo spermatico; G. Samenstein.) A concretion, of unknown nature, described as occurring in the vesiculæ semi-

C., stercora'ceous. (L. stercus, excrement.) Same as C., intestinal.

C., stomach'ic. (Στόμαχος, the stomach.) Same as U., gastric.

C., subling ual. (L. sub, under; lingua, the tongue.) Same as C., salivary.
C., tonsillitic. (F. calcul des amygdales;

G. Mandelstein.) A concretion, chiefly composed of phosphate of lime, formed in the crypts of the

C., trip'le phos'phate. (F. calcul phosphate ammoniaco-magnesian; I. fosfato triplise; G. Trippelphosphat.) A somewhat rare urinary calculus, composed of maguesim and ammonium phosphate. It is white or slightly shaded, of an nueven surface, often studded with shining crystals, friable, imperfectly lamellar; sometimes it is hard, compact, and crystalline throughout. Heated in the blowpipe tiame it blackens, gives a smell of ammonia, swells up, becomes grey, and ultimately fuses. It dissolves in dilute hydrochloric acid, from which ammonia throws down a deposit, which, under the microscope, is seen to be composed of prismatic crystals, or, if there has been an excess of ammonia, of stellate crystals.

C., u'rate of ammo'nia. (F. calcul de l'urate d'ammoniaque; G. Harnsauresammoniakstein.) A rare arinary calculus. Generally small, ovoid, smooth, or slightly tuberculous; slate or clay colonred, compact, brittle, with an earthy fracture, and very indistinctly laminated. When heated it decrepitates, gives out a disagreeable smell, and almost disappears. It dissolves in hot water, from which hot solution, on the addition of dilute hydrochloric acid, uric acid is deposited in several varieties of rhombic,

prismatie, microscopic crystals.

C., uratic. Same as C., uric acid.

C., ure'thral. (F. calcul urethrol; 1. calcolo uretralo; G. Harnröhrenstein.) A urinary calculus, which, having been formed in the kid neys, or bladder, or prostate, has been arrested in the arethra; or a calculus originally deposited in the arethra itself. In the latter ease, which is rare, the deposit is usually of mixed phosphates, and ocears in connection with a stricture of the arethra, and in some diverticulum; sometimes the ealculus is of large size. When the stone has been formed higher up, and has become arrested in the arethra, it is small, rounded, or oval, and

usually of uric acid or oxalate of lime. C., u ric ac'id. (F. calcul urique ; I. colcolo urico; G. Harnsaurestein.) The commonest urinary calculus. It varies in colour from light fawn to reddish brown, or it may be whitish from derosit of urate of ammonia or phosphate of lime; it is generally ovoid and smooth, sometimes slightly mammillated, regularly laminated, hard, and of conchoidal fracture. It blackens when heated, gives off a disagreeable smell, and consumes entirely, with the exception of a slight amount of ash of phosphate or carbonate of soda. When a little of the calculus, in powder, is placed in a watchglass with a little strong nitric acid, it dissolves with effervescence, carbonic acid and nitrogen being given off, and alloxan, alloxantin, and other derivatives, being formed; when this is evaporated to dryness, and the cold residue treated with ammonia, a purple colour is produced from the formation of murexid.

C., u'ric ox'ide. Same as C., xanthic oxide. C., urinary. (l. urina, the urine. F. calcul urinare; G. Harnstein.) A calculus formed in some part of the coarse of the arinary

C., uroste'alith. (Οδρον, urine; στέαρ, tallow; λίθος, a stone.) An almost unique urinary calculus. It is soft and elastic when recent, hard when dry; it burns without melting, and when hot gives off a soull as of benzoin; it softens and swells up in water, but does not dissolve; it is sparingly soluble in alcohol, easily in other.

C., u'terine. (L. uterus, the womb.) A term applied to fibroid tumours of the womb when they have undergone calcareous degenera-

C., vesi'cal. (L. vesica, the urinary bladder. F. calcul vesical; G. Blascustein.)
A vesical calculus may be formed entirely in the urinary bladder, or may have had a renal stone for its nucleus, or may have been deposited around a foreign body which has obtained admission into the bladder by accident or design. It may be single, or there may be many; in the latter ease they may have facets. It may vary in size from a hemp-seed to several inches in diameter, and in weight from a few grains to apwards of 50 ounces. It may be spheroidal or polygonal, heavy or light, free or confined, encysted, incarecrated, or fixed. Stone in the bladder may be congenital. According to Coulson's statistics, of 2972 eases of lithotomy there are 1466 under the age of ten, 731 between that and twenty, 205 between twenty and thirty, 264 between thirty and fifty, and 306 above fifty years of age. It is more frequent in the male than in the female; in some districts than others, but the reason is unknown; it is of differing constitution, and may be altogether made up of one material, or of more than one, and in each case may be laminated Further details as to composition are given under the following subheads of this article calculus :- Blood, carbonate of lime, cystic oxide, fibrinous, fusible, oxalate of lime, phosphate of lime, silicic acid, triple phosphate, urate of ammonia, uric acid, urostealith, and xanthie oxide. Pain in the perinaum, groins, or peuis, increased frequency of mictarition, arine passed in small quantities, often containing macus or pus, and occasionally blood, sudden arrest of the flow of arine while in process of passing, sometimes tenesmus and priapism, and, in children, elongation of the prepuce from pulling, are symptoms suspicious of stone; the tup of the hard body by means of a sound passed into the bladder is proof positive of its presence. Unless removed, stone in the bladder produces

death, in a longer or shorter period, from kidney

disease, after much soffering.

It may be removed by lithotomy or lithotrity. Attempts have been made to procure the solution or disintegration of a calculus whilst still in the bladder, by means of a constant current of duid kept up for half an hour or more every second day, or as often as it can be horne. Dilute nitric acid, two minims to an ounce of distilled water, has been used for phosphatic calculi, and also a grain of acctate of lead to an onnee of water has been recommended, a granular precipitate of plumbic phosphate and calcium and magnesium acetate being formed. A weak alkaline solution has been proposed for uric acid stone, but it has been objected that it produces a phosphatic deposit and erust round the stone. Destruction of a phosphatic stone has been attempted by the mechanical action of the gases set free by the electrolysis of water, and electrolytic solution has been proposed by means of a current acting on the stone when surrounded by a solution of po-

tassium nitrate; so that the dissolving action of the alkali at the negative pole and of the acid at the positive pole would be brought to bear. Calculi while in the bladder have undergone fracture, occasionally from direct violence; sometimes, it has been suggested, by decomposition of the animal matter contained, and the evolution of gas.

C. vesi'co-prostat'ic. A prostatic cal-

culus projecting into the bladder.

C., xanth'ic ox'lde. (Ξανθός, yellow.) A very rare urinary calculus, laminated, without any crystalline texture, moderately hard, waxy when rubbed, variable in colour. Soluble in potash, from which it is precipitated by hydrochloric acid; when dissolved in nitric acid, and evaporated, it leaves a yellow residue, not reddened by ammonia.

Calda'na, La. Italy; in the Compartment of Siena. Mineral waters, springing from the trayertin, of a temperature of 28° C. (82.4° F.), and containing magnesium and calcium sufphate, calcium carbonate, and free carbonic

acid.

Caldanella. Italy; in Tuseany. Mineral waters, containing sodium carbonate and chloride, with free carbonic acid.

Caldanic'cia. Corsica; between Ajaceio and Bastia. Mineral waters, of a temp. of 40° C. (104° F.); the mineral constituents are small.

Caldar. (Arab.) Stannum, or tin.
Calda/rium. (As if calidarium, from caleo, to be hot.) A caldron to boil anything in. The hot bath.

Cal'das de Cun'tis. Spain; near Santiago. Mineral waters, containing sodium Spain; near sulphide.

Cal'das de Es'trac. Spain; not far from Barcelona. Mineral waters, of a temp. of 41° C. (105.8° F.), containing sodium chloride

and some hydrogen sulphide. Catalonia. Mineral waters, of a temp. of 69° C. (156.2° F.), containing, in two cubic feet, sodium sulphate 58 grains, calcium sulphate 24.5, sodium chloride 811, calcium chloride 42.5, and silica 65,

with much carbouic acid. Cal'das de Ovie'do. Spain; in Asturias. Alkaline mineral waters, containing a little

Cal'das de Rain'ha. Portugal; between Lisbon and Leyria. Saline waters, containing sodium sulphate and chloride, and calcium and magnesium sulphate.

Cal'das de Rey'es. Spain; in Galicia. A mild sulphur water.

Calde'riæ bal'neæ. Warm baths, near Ferrara, in Italy, much resorted to in cases of

dysuria. Forestus, xxvi, Obs. i, in Schol.

C. ital'icæ. Same as Calderiæ balneæ.

Caldie'ro. Italy; between Vicenza and Veroua. Mineral waters, of a temp. of 28° C. (82.4° F.), containing calcium and magnesium carbonate, calcium sulphate, and magnesium chloride. Known to the Romans as Aquæ Junonis.

Caldi'ne. Italy; in Tuscany. Mineral waters, containing calcium sulphate, sodium chloride, magnesium, iron, and calcium, with free carbonic acid and traces of hydrogen sulphide.

Cal'dus. (For L. calidus, warm.) A term formerly used for hot water.

Cale. The same as Kale,

Caledo'nia springs. United States;

in Peunsylvania. Pure water, of a temperature

of 11° C. (51.8° F.)

Springs of the same name in Canada, forty miles from Montreal. There are various sources one, the gas spring discharging carburetted hydrogen, a saline spring, a sulphur spring, and an intermitting spring, containing carburetted hydrogen, as well as iodine and bromine. (Dunglison.)

Calefa'cient. (L. calefacio, to make warm.) Having power to excite warmth, or a sense of heat.

**Calefa'cients.** (Same etymon. G. Erwarmungsmittel.) Applied to various substances which have the power to produce warmth or a sense of heat, as pepper, mustard, and turpen-

Calefaction. (Same etymon. G. Erwarmung.) The act or process of applying heat.

Calen'dula. (L. calendæ, the kalends, or first of each month; so called because it flowered every mouth.) A Genus of the Nat. Order Compositæ.

Also, the ray-florets of Calendula officinalis, C. alpina. (L. alpinus, Alpine.) The

wild marigold, Arnica montana.

C. arven'sis, Linn. (L. arvensis, from arvum, an arable field. F. souci des champs.) Stimulant and antispasmodic.

C. caltha. The Calendula arrensis.
C. officina'lis, Linn. (L. officina, a workshop. F. souci des jardins; G. Ringelblume.)

Pot marigold. Has been used as an autispas-modic, sudorific, deobstruent, aperient, and emmenagogue in fever, jauudice, amenorrhoa, and cancer. A tincture of the flowers is said to be useful in wounds, and has been employed as an hæmostatic, and an application to cancers.

C. palus'tris. The Caltha palustris.

Calen'dulæ martia'les. A synonym of Ferri ammonio-chloridum.

Calen'dulin. A gummy substance discovered by Geiger in the flowers of the Calendula officinalis, of the character of bassorin, although soluble in alcohol; it is yellow and tasteless.

Calentu'ra. (L. calco, to be hot.) A Spanish term for fever. A disease common to sailors in the tropics, consisting in depraved imagination, weak, equal, soft pulse, without fever and with reduced heat; in their delirium the patients, it is said, fancy the sea to be green fields, and are ready to leap into it if not withheld.

Also, a synonym of Sunstroke.

C. amaril'la. (S. amarilla, daffodil-coloured.) Yellow fever.

C. continua. (L. continuus, continued.)

Simple continued fever.

Calentu'ras. Cinchona, according to some; others state it to be the name of a tree in the Philippine Islands, the bark of which is very bitter and employed as febrifuge.

Cales'ium. A tree which grows in Malabar, the bark of which, it is said, made into an ointment with butter, cures tetanus from wounds, and heals ulcers; the juice of the bark cures aphthæ, and, taken inwardly, dysentery.

Calf. (Sax. cealf. L. vitellus; F. veau; I. vitello; G. Kalb.) The young of the common ox, Bos taurus.

C.'s-foot. The Arum maculatum, from the shape of its leaf.

C.'s-snout. The Antirrhinum majus, and other species, from the shape of the seed-vessel.

C. of the leg. (The word ealf here is probably derived from Icel. kalfi, or Gael. kalpa, the calf of the leg, and not from Sax. cealf, a calf. L. sura; Gr. γαστροκνήμιον; F. mollet; 1. polpaccio; G. Wade.) The thick hinder part of the leg, formed by the bellies of the gastroenemius and soleus muscles.

C. kill. The Kalmia latifolia.

C.-knee. Genn valgum, knock-knee.

Ca'li. See Kali.

Calibash. See Calabash.

Calibration. (Calibre.) The ascertaining of the irregularities in the bore of a thermometer, so as to allow for them in taking accurate observations.

Cali'bre. (F. calibre, from I. calibro, or S. calibre; these either from Ar. kalib, a mould, or L. quá librá, of what weight, in regard to a ball which fits the bore of a tube.) The size, diameter, or bore of a tube; the capacity of the

Calicantha'cem. Same as Calycan-

thacca

Cal'ice. (L. calix, a cup.) A shallow eupshaped depression in the upper part of the theca of a coralligenous Zoophyte, which contains the stomach-sac of the polyp.

Callices. (L. plural of calyx, a cnp.) Cups

or cup-shaped things.

C. of kid'ney. See under Calyx.

Calici'eæ. Same as Calycicæ. Calicifio'rae. Same as Calyciflorae.

Calicifioria. (L. calyx, a cup; flos, a cwc.) An Order of Dumortier's classification tlower.) An Order of Dumortier's cass of plants having the corolla perigynons. **Cal'icle.** The same as Calice.

The Kalmia lati.

Cal'ico bush. The Kalmia latifolia. Calicungu'lia. (L. calix, a cup; unquis,

a claw.) An Order of plants, according to Dumortier, having the claws of a polypetalous corolla perigynous.

**Calida'rium.** (L. calidus, hot.) The heating-room of a Roman bath; it was placed over the hypocaust.

Calidum animale. (L. calidus, hot; animalis, animal.) Animal heat.

C. inna'tum. (L. innatus, inborn.) An old term for animal or vital heat.

Calieta. Name, by Paraeelsus, for the young fungi growing on juniper bushes. (Ruland and Johnson.)

Caliette. Same as Calieta.

Califorinia, min'eral wa'ters of. Several mineral springs exist in California, near 10° north lat. and 40.5° long, west of Washington, directly upon the California trail, leading from the sink of Humboldt River to Pyramid Lake. Their temperature varies from cold to almost boiling; they ebb and flow at irregular intervals; they have not been analysed, but some have a taste of a strong solution of magnesium sulphate. They have had the singular effect of inducing blenuorrheeal symptoms both in man and animals. (Dunglison.)

C. nay lau'rel. The Orcodaphne californica,

C. nut'meg. The fruit of Torreya californica.

C. oak'balls. The galls of Quereus lobata.

Caligatio. (L. caligatio, mistiness.) Dazzling of the eyes.

Calig'idæ. A Family of the Order Siphonostomata, Subclass Epizoa. Flat, bucklershaped crustaceans, parasitic on fishes.

Calig'inous. (L. caliginosus, from caligo, a thick fog, darkness.) Applied to eyes which have lost their original brightness.

Cali'go. (L. caligo, a thick atmosphere.) Dimness of sight, approaching imperceptibly and without apparent cause; blindness.

C. a pacheablepharo'si. Same as Pacheablepharosis. (Sauvages.)

C. cor'neæ. (Cornea.) Opacity of the cornea.

C. humo'rum. (L. humor, a liquid.) Dimness of sight from want of transparency of the aqueous or vitreous humour.

C. len'tis. (Lens.) Dimness of sight produced by the opaque condition of the lens or its capsule.

**C.** palpebra'rum. (L. palpebræ, the eyelids.) Dimness of sight depending on some morbid condition of the eyelids.

(L. pupilla, the pupil.) C. pupil'læ. Dimness of sight depending on contraction or closure of the pupil.

C. synize sis. (Συνίζησις, a collapse.) Closure of the pupil.

C. tenebra'rum. (L. tenebræ, darkness.) Hemeralopia.

Calig'ula. (L. caligula, a military half-boot.) Name, by Illiger, for the skin which covers the tarsus of some birds.

Caliha'ca canel'la. A synonym of Laurus cassia.

Cal'ipers. (From F. calibre.) A pair of compasses with curved legs and a scale near the joint, affixed to one leg and moving on the other, by means of which the diameter of bodies may be measured.

C., Baud'elocque's. Same as Baudelocque's pelvimeter.

Calisa'ya bark. (F. quinquina jaune royal; G. Konigschinarind.) The commercial name of the yellow cinchona bark, obtained from the Cinchona calisaya.

C. bark, flat. (S. calisaya plancha.) The bark of the large branches and the trunk, destitute of epidermis; the outer surface is irregular with longitudinal furrows, of shades of a brownishfawn colour, darker than the inner snrface.

C. bark, New Grana'da. A bark brought from Carthagena by the Isthmus of Panama. It contains a large proportion of alkaloids,

C. bark, quilled. (S. calisaya arrolada.) The bark of the smaller branches and twigs, having a brownish lichen-covered epidermis, which is inert; the bark is of a brownish-orange

colour, and of short fibrous texture.

C. bark, spu'rious. The barks of Cinchona calisaya, var. Josephiana, C. boliviana, C. ovata, var. rufinervis, C. scrobiculata, C. pubescens, var. Pelleteriana, C. micrantha, var. rotundifolia, C. amygdalifolia, and of the Gomphosia chlo-

Calisay'in. (F. calisaync.) A supposed vegetable alkali, discovered by Pelletier and Caventou, in the bark of the Cinchona calisaya.

Calisthen'ios. (Καλός, beantiful; σθένos, strength.) A system of regulated movements of the limbs and body, intended to develop the muscles and assist in obtaining a graceful carringe. Wisely used so as not to fatigue or to exercise one set of muscles at the expense of others, calisthenic exercises are a valuable means of improving the physique of young people.

Callix. A varied spelling of Calyx.
Calla. (L. calla, the name of an undeter-

miued plant.) A Genus of the Nat. Order Acoracea.

C. aromatica. The Homalonema aro-

matica.

C. palus'tris, Linn. (L. paluster, marshy.) Water arum, water dragons. Rhizome creeping; leaves cordate. Used as a diaphoretic. A kind of bread is made in Lapland of the acrid rhizomes, when dried, washed, and ground.

C. virginica. The Peltandra virginica. Calla'ceæ. A synonym of Acoraeca. Callahua'la. The Polypodium cala-Callahua'la. guala.

Callea. A Tribe of the Nat. Order Acoraceæ, having the flowers naked and the ovules

Calleca'menon. Burnt copper; copper oxide. (Quincy.)

Calle'na. A kind of nitre, or saltpetre. Paracelsus. (R. and J.)

**Callian dra.** (Κάλλος, beauty; ἄνήρ, a man; signifying heautiful stamens.) A Genus of the Suhorder Mimosæ, Nat. Order Leguminosæ. Many species have an astringent juice.

Callia'no. Italy; in Piedmont. Mineral waters, containing calcium carbonate and sulphate, magnesium chloride and potassium nitrate, with free carbonic acid, nitrogen and hydrogen sulphide.

**Callibleph'arum.** (Κάλλος, beauty; Αέφαρον, the eyelid.) A medicine, used by βλέφαρον, the eyelid.) Galen, de C.M. sec. Loc. iv, 6, for beautifying the

eyelids.

Callican'thus. Same as Calycanthus. Callicar'pa. (Κάλλος; καρπός, fruit.) A Genus of plants of the Nat. Order Ferbenacca.

C. acumina'ta, Kunth. (L. acuminatus, pointed.) The flowers are purgative and sudorifie.

C. america'na. Hab. North America. The leaves are used in dropsy and in cutaneous

C. lana'ta, Linn. (L. lanatus, covered with wool.) The bark is bitter and rather aromatic; it is used in Ceylon as a substitute for betel leaves.

Callicarp'ous. (Same etymon. G. schonfrüchtig.) Having beautiful fruit.

Callichro'ma. (Κάλλος, beanty; χρωμα, colour.) A Genus of the Subfamily Cerambycina, Family Cerambycida, Group Cryptopentamera, of coleopterous insects.

C. moscha'ta. (Moσχος, musk.) A species used to adulterate cantharides; it may be known by its long antennæ, its rounded and large thorax, and its elytra, which are larger at the base than at the extremity. It is non-vesicant.

Callicoc'ca ipecacuan'ha, Brotero. (Κάλλος; κόκκος, a kernel.) The Cephaëlis

ipecacuanha.

Callicreas. (Κάλλος; κρέας, flesh.) The pancreas of certain of the lower animals, from its delicacy as food; the sweetbread.

Callif'erous. (L. eallus, hardness of skin; fero, to hear. G. schwielentragend.)

Callig'onum. (Κάλλος, beauty; γόνν, joint.) A Genus of plants of the Nat. Order Polygonaceæ.

Calligonum is also an old name of the Poly-

gonum aviculare.

C. palla'sla. Hab. Siberia. A leafless shrub, the roots of which furnish a substance like tragacanth, which is used as food by the Kalmucks; the acid branches and fruits are chewed to allay thirst.

Callimor phia. (Kallipopos, beautifully shaped. G. Schöngestaltigkeit.) Beauty of figure and form.

Calliomar'chus. Said to be the Gallic name for the Tussilago farfara, or colt's-foot.

**Callipæ'dia.** (Καλλός, beautiful; παῖς, child.) The art of begetting beautiful chila child.) The art of negetting occurred of the dren. The title of a Latin poem published in 1655 by Ol. Quillet.

Cal'lipers. Same as Calipers.

Callipho'nia. (Κάλλος, beauty; φωνή, the voice \( \) A fine voice.

Calliphyllum. (Κάλλος; φύλλον, α leaf.) Asplenium trichomanes, or common maidenhair.

Cal'lisen, Hein'rich. A Danish sur-geou, horn at Prätz, in Holstein, in 1720, died at

Copeuhagen in 1824.

C.'s operation. The operation for artificial anus, in which the colou is opened from behind in the left lumbar region, where it is not covered by peritoneum, was first proposed by Callisen, and put into practice on the living subject by Amussat.

Callisthen'ics. Same as Calisthenics. A Nat. Order of Callitricha ceæ. monochlamydeous, augiospermous Dicotyledons, or a Family of the Order Tricoccae, Subclass Eleutheropetalæ. Small aquatic herbs. Female flowers with a 4-corpered, 4-celled ovary, with 1 suspended ovule in each cell; fruit indehiscent, 4-celled; seeds 4, peltate, with fleshy albumen. embryo inverted, with very long superior radicle. Very mucilaginous.

Callitriche. (Κάλλος; θρίξ, the hair.) A name of the Genus Adiantum.

A Genus of plants of the Nat. Order Callitrichaceæ.

C. aquatica. (L. aquaticus, living in water.) The C. verna.

C. heterophylla, Pursh. ("Ηετερος, other; φύλλον, a leaf.) Hab. Southern United States of America. An aquatic species with broadly spatulate, petiolate, floating leaves. Used as C. verna.

C. interme'dia. (L. intermedius, inter-

mediate.) The C. verna.

C. ver'na, Liun. (L. vernus, belonging to spring. G. Wass rstern.) Water starwort. 11ab North America. A small herbaceous fresh-water plant, with a long stem and nearly sessile floating leaves. Used as a diurctic in dropsy and urinary affections.

Callitrichin'eæ. Same as Callitrichaceæ.

Callitrichon. Same as Callitricho. Callitris. A Genus of the Suborder Cu-

presseæ, Nat. Order Coniferæ. Flowers monæcious; cones woody, with 4 to 6, three- to sixseeded, scales.

C. articula'ta. (L. articulatus, jointed.) The C. quadrivalvis.

C. cupressoï des. (Κυπάρισσος, cypress; Eldos, likeness.) Yields a similar resin to the C. eckloni.

C. ecklo'ni. Hab. South Africa. Exudes resin, resembling sandarach, which is used as a fumigation in rheumatism, gout, and cedema.

C. quadrival'vis, Ventenat. (L. quatuor, four; valva, a folding door.) A large tree with straggling branches. Dry resin forms gum sanCallophis. (Κάλλος, beauty; ὄφίς, a snake.) Family Elapidæ. Order Ophidia, Class Reptilia. A genus of venomous snakes, of which several species are found in India The body is subcylindrical, very long, and slender; belly rounded; head short, obtuse, with broad snout, not distinct from neck, which is not dilatable; tail short; maxillary with a grooved fang in front, without other teeth behind. All the species are sluggish, and apparently defective both in sight and hearing. From their smallness and the shortness of their fangs, it is not probable that their bite would be fatal in man. They are not aggressive, but fowls bitten by them die in from one to three hours. They are ground snakes, prefer hilly to level country, and feed on other snakes.

C. annula'ris. (L. annularis, from annulus, a ring.) A species with yellowish belly and a black cross band in the middle between the rings. Hab. India. It attains a length of

twelve inches.

C. cerasinus. (L. cerasinus, cherry-colonred.) Back purplish brown, with shining nacreous instre, and about forty broad, transverse, black bands; sides and belly bright cherry huc. Length of one specimen, 21½ in. Hab. Malabar forests.

C. concin'nus. (L. concinnus, elegant.)

A synonym of C. nigrescens.

C. intestina'lis. (L. intestinum, a bowel ) A rare species, found in Central India (Malwah) and Burmah. Pale reddish-brown above, with a bright yellow dorsal line with black serrated margins. It attains a length of two feet. The poison glands extend from the head to about one third of the total length of the body, lying free in the cavity of the anterior part, and causing the heart to be much posterior to its usual position in other species of snakes.

C. maclelland'ii. Head and neck black above, with a yellow cross band behind the eyes. Body and tail reddish brown, generally with a black vertebral line from the nape to the tip of the tail. Belly yellowish, with black cross bands or quadrangular black spots. It is found in Nepal

and Assam.

C. malabar'icus. A synonym of C. ni-

grescens.

C. nigres'cens. (L. nigresco, to become black.) Upper parts darkish red, the lower uniform red, a black spot below the eye, a black horsesboe-like collar. Hab. Neilgherries. It attains a length of 4 feet.

C. trimacula'tus. (L. tris, three; maculatus, spotted.) Light bay above; an indistinct line formed by minute brown dots along each series of scales. Belly red, a yellow spot on each temporal shield; a subtriangular yellow spot

on the middle of the neck. Rengal, Rangoon.

C. univirga'ta. (L. unus, one; virgatus, striped.) A synonym of C. machellandii.

Calio'sal gy'rus. See Gyrus, callosal. Cal'lose. (L. callosus, thick-skinned.) Callose. (L. callosus, Having callo ities or hard lumps.

Calloselas'ina. (Κάλλος, beauty; σέλας, brightness.) A Genus of poisonous snakes

belonging to the Family Crotalidæ.

C. rhodos'toma. (Υόδον, a rose; στόμα, the mouth.) Hab, Java and Siam, Kuhl saw two men, bitten by the same snake, die in five minutes. It attains a length of three feet.

Callo'sitas. (L. cullositas, hardness of

skin.) Callosity; induration.

C. palpehra'rum. (L. palpebræ, the eyelids.) Induration of the eyelids.

C. vesica. (L. vesica, the bladder.)

Hypertrophy of the coats of the urinary bladder. Callosity. (L. callositas, hardness of skin. F. callosité, durillon; I. callosita; S. callositad; G. Schwiele.) A preternatural degree of hardness in the skin or in naturally soft parts.

Also, applied to the natural thickenings which exist on the inner side of the legs of the horse, on the breast of the camel, or on the buttocks of

some monkeys.

Callosomar'ginal sul'cus. Sulcus, callosomarginal.

Callous. (L. callosus, thick-skinned. F. calleux; G. harthäutig, schwielig.) Indurated; hard.

C. mediasti'no-pericardi'tis. Mediastino-pericarditis, callous.

C. ul'cer. An indolent uleer with thickened edores

Callu'na. (Καλλύνω, to beautify, to sweep

clean.) A Genus of the Nat. Order Ericaceæ.

C. eri'ca. (Έρείκη, heath.) The C. vul-

garis. C. vulga'ris. (L. rulgaris, common. F. bruyere ; G. Haidckraut, Besenhaide.) The common heather. Astringent, Has been used as a

diaphoretic and diuretic.

Callus. (L. callus, hardness. Gr. πωρος; F. cal; I. and S. callo; G. Schwiele, Knochennarbe.) The bony material thrown out around and between the two ends of a fractured bone during the process of bealing. At first the broken ends of bone are surrounded by extravasated blood; in ten or twelve days this is chiefly absorbed, and its place is taken around and in the bone by a reddish gelatinous mass of lymph poured out by the vessels of the periosteum, the endosteum, the bone, and the surrounding structures; this gradually gets firmer, and in three weeks or so is able to keep the broken ends together; bone is then deposited in granular, spongy form, it consolidates, and is covered with a membrane; this is the provisional callus. Gradually the bone ends become more vascular, new plastic matter is formed between them, which is converted into bone, definitive callus, and coincidently the provisional callus is absorbed.

Also, an unnatural hardness of a part. Also, in Botany, a spongy, succulent substance formed by the cambium at the extremity of a cutting of a plant when placed in the earth or in grafts and wounds of a branch, by which repair is accomplished, and from which, or from the neighbouring eambium in cuttings, roots grow.

The base of the inferior palea of grasses.

C., defin'itive. The callus ultimately thrown out between the broken ends of the bones, which in time becomes as the old bone, and is the

real repairing structure.

C., ensheathing. The C., provisional.
C., external. The C., provisional.

C., provisional. The callus thrown out at first round the broken ends of the bones, which in time is absorbed as the union of the fracture progresses.

C., tem'porary. The C., provisional.
Calm. (F. calme.) The interval between

the paroxysms of a disease.

Calm'ative. (F. calmant; S. calmante; G. beruhagend.) A medicine which quiets inordinate action of an organ; chiefly applied to

remedies which relieve nervous agitation and restlessness.

Cal'met. Antimonium, or antimony.

(Quincy.)

Cal'mus. The stalk of any plant. (Quincy.) wild poppy. (Quincy.)

Calomba. A synonym of Calumba. Calomel. (From καλός, beautiful; μέλας, black; given by Turquet de Mayerne in honour of a young negro who assisted him. Another derivation is from καλός, and mel, honey, a play on its name, Mercurius dulcis; auother is from black sulphuret of mercury, to which the name was first applied.) The Hydrargyri subchlori-

C. bath. See Mercurial fumigation.

C. cum cre'ta. (L. cum, with; creta, chalk.) Calomel 7 parts, conchæ marinæ preparatæ 3 parts.

C. pill, com'pound. The Pilula hydrargyri subchloridi composita.

C., precip'itated. A term applied to calomel made in the humid way, formerly offici-

nal in the Dublin Pharmaeopæia.

C. proti'odide. One part of calomel is heated in a matrass till it begins to sublime, and one part of iodine is then added by degrees. It is a mixture of biniodide and bichloride of mereury. Used in syphilitie, serofulous, and eaucerous affections.

C. subi'odide. Two parts of calomel are heated in a matrass to commencing sublimation, and then one part of iodine is gradually added. It is a mixture of biehloride and biniodide of mereury with some calomel. Used in syphilitic, serofulous, and eancerous affections.

C. va'pour bath. See Mercurial fumi-

C., veg'etable. A term applied to podophyllin.

C. vi'a bu'mida. (L. via, a way; humidus, moist.) Same as Hydrargyrum chloratum mite præcipitatione parutum.

Calomel anos Turque'ti. Calomel of Theod. Turquet de Mayerne. A purging pill, in former repute, made of calomel, sulphur, and the resin of jalap.

Calom'elas. Same as Calomel.

C. vapo're para'tum. (L. vapor, vapour; paratus, prepared.) The Hydrargyrum chloratum mite vapore paratum, G. Ph.

C. vaporo'sus. (L. vaporosus, from vaporo, to emit vapour.) A synonym of Hydrargyrum dulce vaporosum, Eelg. Ph.

Calo'nia. (Kalwia.) An old epithet of myrrh, according to Hippocrates, de Nat. Mulier.

ri, II. Calonyc'tion. (Καλός, fair; νῦξ, night.) A Genus of the Nat. Order Convolvulacea.

C. specio'sum, Choisy. (L. speciosus, handsome.) Hab. India. The bark of the roots is used as a purgative.

Calophyllous. (Καλός, fair; φύλλον, a leaf.) Having elegant foliage.

Calophyllum. (Kaλos, beautiful; φόλλον, a leaf.) A Genus of tropical trees of the Nat. Order Guttiferæ.

C. bin'tagor. The C. mophyllum.

C. brazilien'sis. Yields a resin like taeamahaea.

C. cal'aba, Jaeq. Yields a resinous juice known as East Indian tacamahaca and Baume de Marie. It is green, thickens on exposure, of a strong but not disagreeable odour. Used as copaiba and as a vulnerary.

C. inophyl'lum, Lamb. Alexandrian lau-A resin exudes from the bark; East Indian tacamahaea. It is in yellowish-brown pieces, semitransparent, soft and sticky, having a smell of lavender and a bitter taste. Used for indolent ulcers. A fixed oil is yielded by the seeds, weandee, which is used in India in rheumatism.

C. Mari'æ, Pl. A tree of New Grenada, which yields a resin similar to C. calaba.

C. spu'rium. (L. spurius, false.) The C. calaba.

C. spectab'ile. (L. spectabilis, remark-

able.) Same as C. inophyllum.
C. tacamaha'ca. Same as C. inophyllum. Calophy ta. (Καλός, fair; φυτόν, a plant.)
Applied by Bartling to a Class containing the Pomaceæ, Rosaccæ, Dryadeæ, Spireaceæ, Amygdalea, Chrysobalunea, Papilionucca, Swartziea, Cesalpiniea, and Mimosea.

Calopod ium. (Καλοπόδιον, a shoe-maker's last. F. calopode; G. Kolbenhulle.) Name Caloped ium. for the spatha of the Aroidene, from its form.

Cal'ops. (Καλός, fair; ωψ, the eye.) Having a very great or very brilliant eye.

Calor terous. (Καλός, fair; πτέρον, a wing.) Having beautiful wings.

Calo'pus. (Καλός, fair; πούς, a foot.)

Having a beautiful foot, or stipe.

Calor. (L. calor.) Heat. In olden phrase, the lowest of the three degrees of heat, the others being fervor and ardor. being fervor and ardor.

C. anima'lis. (L. animalis, animal.) Animal heat.

C. le'nis. (L. ferree, to be hot.) The heat of boiling water, 100° C. (212° F.) C. le'nis. (L. tenis, moderate.) A gentle heat, between 32° C. (89.6° F.) and 38° C. (100·4° F.)

C. mor'dax. (L. mordax, biting.) Same as C. mordicans.

C. mor'dicans. (L. mordico, white.) biting heat. The almost burning heat of the skin in fevers, which causes an unpleasant sensation on the fingers after touching the patient, as in typbus.

C. nativus. (L. nativus, inborn.) Animal heat.

Calores'cence. The transmutation of non-luminous into luminous heat; or, in other words, of the non-luminous heat rays beyond the red rays of the luminous spectrum into rays of greater refrangibility.

Calorice. (L. calor, heat. F. calorique; I. and S. calorico; G. Warmestoff.) Originally used to denote a hypothetical fluid which was supposed to be the eause of the sensation of heat. Now used as synonymous with heat.

Caloric'ity. (L. calor, heat.) That faculty which living bouies possess of developing calorie or heat.

Calorie. The French equivalent of the term Unit of heat, or Thermal unit, being in this instance the quantity of heat necessary to raise the temperature of one kilogramme of water through one degree centigrade.

Calorifa cient. (L. calor; facio, to make.) Heat making or producing.
Calorific. (L. calor; facio, to make. F. calorifique; G. erwärmend.) Heat giving or

C. capac'ity. Specific heat. Calorifica'tion. (L. calor; facio, to make. G. Wärmeerzeigung.) The production of heat in living animal bodies.

Calorificent. (L. calor; fio, to become.)

Heat producing.

**Calorig raphy.** (L. calor, heat; γράφω, write.) The continuous registration of the to write.) amounts of heat disengaged by an animal under

various physiological or pathological conditions.

Calorimeter. (L. calor, heat; Gr. μέτρον, a measure. F. calorimetre; 1. and S. calorimetro; G. Warmenesser.) An instrument for measuring the specific heat of a body.

Calorim'etry. (Same etymon. F. calorimetrie: G. Warmemessung, Warmeregulirung.) The measurement of the specific heat of a body.

Calorine'ses. (L. calor. F. calorinis es.)
A term under which Baumes included all diseases in which there was either an increase or a diminution of the principle of animal heat.

The same as Calorie.

**Calory.** The same as *Calorie*. **Calosan'thes.** (Καλός, beautiful; ἄνθη, a blossom.) A Genus of the Nat. Order Biguaniaceæ.

C. in'dica. (L. indicus, Indian.) The bark is a powerful sudorific; it has been used in acute rheumatism with apparent advantage.

Caloso'ma. (Καλός, beautiful; σῶna, the body.) A Genns of the Family Carabida,

Group Pentamera, Order Colcoptera.

C. sycophan'ta, Linn. (L. sycophanta, a deceiver.) A European species which exudes from its mouth and anus a very acrid fluid, which produces much irritation in a wound when the insect bites

**Callot'ropis.** (Καλόs, beautiful; τρόπις, a ship's keel. G. Kielkrone.) A Genus of plants of the Nat. Order Aselepiadaceae.

C. cor'tex, Ind. Ph. Mudar. The dried root-bark of several species of Calotropis occurs in small flat or curved pieces, having an aerid taste. It contains a principle called Mudarine. It is an alterative tonic, a diaphoretic, and, in large doses, an emetic and purgative. Used in leprosy, secondary syphilis, dysentery, diarrhœa, and chronic rheumatism.

C. gigante'a, Brown. (Tam. Fercum; Beng. Akund; Hind. Mudar, Ark.) Gigantic swallow-wort. Mudar. Hab. India. The aerid milky juice and other preparations of the plant are alterative, sudorific, emetic, and purgative, and are used by the natives in epilepsy, paralysis, leprosy, poisonous bites, and intestinal worms. Locally, the powdered root is used in chronic nlccrs, the leaves moistened with oil are applied to the abdomen in colicky pains, the juice of the young buds in earache, and mixed with salt in toothache. The active principle is Mudarine. It has usually been believed that this species supplied the true mudar, but latterly the C. procera has been discovered to be the one most usually used. Mudar is officinal in the Indian Pharmacopeia. See Calotropis cortex and C. pulvis.

C. Hamilto'nii, Wight. A synonym of C. procera, according to some; a different species with similar properties, according to others.

C. heterophyl'la. ("Ετερος, other; φύλ-

λου, a leaf.) The C. procera.
C. muda'rii. A synonym of C. gigantea. C. muda'rii in'dico-orienta'lis. Ac-

cording to Casanova, a species differing from C. gigantea, and which is the real source of mudar.

C. proce'ra, Brown. (L. procerus, high.) Mudar. Hab. India. Its action is the same as that of A. gigantea, and it probably affords the greater part of true mudar. It is used in leprosy and in dysentery; the fresh juice is a good ruhefacient, and the leaves are applied in Guinea-worm. It is said that in Persia a saccharine matter exudes from the leaves.

C. pul'vis, Ph. of India. Powder of mudar, Mudar root is washed and dried until the milky juice ceases to flow after an incision; the bark is then removed, dried, and powdered. Used in leprosy, constitutional syphilis, mercurial cachexia, chronic ulcerations, dysentery, diarrhea, and chronic rheumatism. Dose, as an alterative tonie, 3 grs. to 10 grs. three times a day; as an emetie, ½ to 1 dr.

C. Wallichii. A synonym of C. procera.

Calot'te. (F. calotte, a cap.) An old plan of treatment of favus, consisting in the application of poultices to the scalp to soften the crust, and then of rye and pea flour with strong vinegar; this last is retained three days, and then forcibly dragged off with the hair and the scabs.

**Cal'pa.** (Κάλπή, a cinerary urn.) spore-cases of mosses.

Cal'tha. (Κάλαθος, a vase-shaped basket.) A Genus of the Nat. Order Ranunculacea.

C. alpina. (L. alpinus, alpine.)  $m{A}rnica\ montuna$  .

C. amplexifo'lia. (L. amplexus, part. of amplector, to twine around; folium, a leaf.) The Calendula arvensis.

C. arven'sis. (L. arvum, an arable field.) The Calendula arrensis.

C. officina'lis. (L. officina, a workshop.)

The Calendula arrensis. C. palus tris, Linn. (L. paluster, marshy. F. souci deau; G. Sumpfdotterblume.) Marsh

marigold. Acrid and vesicant. Used externally in lumbar pains.

The plant in its flowering state is said to contain an alkaloid, resembling nicotin in many of its reactions.

Cases of poisoning from eating the plant have been recorded; the symptoms noted were abdominal pain, vomiting, diarrhœa, and a vesicular eruption.

C. vulga'ris. (L. vulgaris, common.) The Calendula officinulis.

Cal'thula. Same as Caltha.
Cal'trops. (Sax. coltræppe, from calcitrapa.) The Centaurea calcitrapa, and also the Trupa natans.

C., wa'ter. The Trapa natans.
Calum'ba. See Calumba radix.
C., Amer'ican. The Frazera Walteri.
C. root. See Calumba radix.

C. root, false. The wood of Menispermum fenestratum.

The wood of Menispermum C. wood. fenestratum. It contains bebeerin, and has been substituted for calumba root.

Calum'bæ ra'dix, B. Ph. (Colomba, in Ceylon; from whence it is brought; L. radix, a root. F. colombo, I. columba; S. raiz de columbo; G. Columbo.) The root of Jateorkiza calumba and J. miersii. It occurs in flat, circular, or oval slices, depressed in the centre, yellowish, of an aromatic odour and bitter taste. It contains a bitter crystallisable principle, calumbin, and berberin, in combination with calumbic acid; also an albuminous substance and starch in large quantities, with resin and a volatile oil. It contains no tannic or gallic acid. Calumba is adulterated with dyed white bryony root, with American

calumba and with calumba wood. It is a nonastringent, mild tonic, and stomachic. Used in dyspepsia, and in enfeebled states of the digestive organs, during the later stages of acute, or in ehronic, diseases; also, in vomiting of pregnancy. Doses of the extract, 5-10 grains; of the infusion, 1-2 oz. twice a day; of the tincture, 1-2 drachms.

Calum'bic ac'id.  $C_{22}H_{24}O_7$ . A yellow bitter substance found in calumba root; probably along with berberin, a derivative of calumbin.

Calum'bin. C21H22O7. (G. Columbin.) A substance found in calumba root; it consists of eolourless needles, inodorous and very bitter, soluble in alkalies and acetic acid, slightly soluble in alcohol and ether. Tonic and stomachic. Dose, 1-3 grains.

Ca'lus. A varied spelling of Callus. Cal'va. (L. calvus, bald.) A term for the Calvaria.

Calvanel'la de Mo'si. Corsica. A little-used mineral water containing a small quantity of sodium sulphate.

Calva'ria. (As if calvus, bald. G. Hirnschale.) That portion of the skull which is above the orbits, temples, ears, and occipital protuberance.

C. cur'ta. (L. curtus, mutilated.) Deficiency of the cranium.

Calva'rium. Same as Calvaria.

Calva'ta ferramen'ta. (L. calvatus, bald, smooth; *ferramentum*, an implement of iron.) An old term (Gr. φαλακρά σιδήρια), used for such instruments as probes, which have a smooth button or little knob at their extremity.

Calvel'lo. Italy; in Tuscany. waters, of a temperature of 33° C. (91.4° F.), containing sodium and calcium chloride, calcium, magnesium, and iron carbonate. Used against malaria.

Calvit'ies. (L. calvus, bald. F. calvitic; G. Kahlkeit.) Baldness.

C. palpebra'rum. (L. palpebræ, the eyelashes.) Loss of the eyelashes.

C. præmatura. (L. præmaturus, untimely.) Premature baldness; baldness occurring in young persons.

C. seni'lis. (L. senilis, belonging to old people.) The baldness of old age.

Cal'vus. (L. calvus, bald. G. kahlkopfig.) Bald; a bald person.

In Botany, applied to naked surfaces, as an achienium without pappus.

Calw. Wurtemberg. An alkaline sulphur water, containing iron.

Calx. (Lat.) The heel.
Also (Arab. Kulah, to burn), formerly applied to any oxide of a metal, effected by the action of the air, from its being earthy-looking like lime.

Also, the residue of the combustion of any substance.

The pharmacopæial name for lime recently prepared by calcination.

C. antimo'nii. The oxide of antimony

obtained by calcining the sulphuret. C. antimo'nii anglo'rum. The Anti-

monium diaphoreticum. C. antimo'nii cum sulphu're Hoff-

man'ni. The Calcaria stibiato-sulfurata. C. antimo'nii lo'ta. (L. lotus, part. of

laro, to wash.) The Antimonium ealcinatum.
C. bismu'thi. Bismuth subnitrate.

C. chlora'ta, B. Ph. Chlorinated lime. A dull white powder, obtained by exposing slaked lime to the action of chlorine gas until absorption ceases. It is believed to be a mixture of calcium chloride and calcium hypochlorite; by some, it is thought to be a double salt of chlorine and hypochlorous acid. It gives off chlorine freely, and is used as a disinfectant and for bleaching purposes.

C. chlorina'ta. Chlorinated lime. C. cum ka'li pu'ro. (L. cum, with; kali,

potash; purus, pure.) The potassa cum calce.

C. e tes tis. (L. c, from testa, a shell.)

Lime prepared from shells. C. extinc'ta. (L. extinctus, put out.) The ealcium hydrate, slaked lime.

C. hydrarg'yri al'ba. (L. hydrargyrum, mercury; albus, white.) Mercury ammoniochloride.

C. oxymuriatica. The Calcii chlori-

C. re'cens. (L. recens, fresh.) The Calcium monoxide, quicklime.

C. sacchara'tum. (Σάκχαρον, sugar.) The Liquor calcis saccharatus.

C. sali'ta. (L. salitus, part. of salio, to salt.) The Calcii chloridum.

C. us'ta. (L. ustus, burnt.) The Calcium monoxide, quicklime.

C. viva. (L. vivus, living.) The Calcium monoxide, quicklime.

Calybio. (Καλύβιον, dim. of καλύβη, a hut, from καλύπτω, to cover. F. calybion.) fruit formed of one or several glauds, contained wholly or partly in a cupula.

Calycan'dria. (Κάλυξ, the calyx; ἀνήρ, a man. F. calycandric.) Applied by L. C. Richard to a class of his modified sexual system, having more than ten stamens inserted into a calyx, the ovary being free and parietal.

Calycantha ceæ. A Nat. Order of epigynous calycifloral Exogens; or a Family of the Order Polycarpieæ. Shrubs with square stems; sepals and petals alike, numerous, imbricated, confined in a fleshy tube; cotyledons convolute.

**Calycanth** ω. (Κάλυξ, a flower-cup; ανθος, a flower.) A Class, in Perleb's system, of vascular Exogens having a double perianth and a monopetalous perigynous corolla.

Calycanth'ea. Same as Calycanthaeere. Calycanth'emæ. (Same etymon.) An Order of plants proposed by Linnæus including Enothera and Lythrum.

Calycanth'emous. (Κάλυξ, a flowereup; ἄνθος, a flower.) Applied to plants which have the corolla and stamens inserted into the

Calvcanth'emy. (Same etymon.) The conversion, partial or complete, of sepals into the appearance of petals.

Calycanth inæ. Same as Calycan-

The plants of the Nat. Calycanths. Order Culyvanthacca.

Calycanth'us. (Κάλυξ, the ealyx; ἄν-θος, a flower. G. Kelchblume.) A Genus of the Nat. Order Calycanthacea.

C. flor'idus, Linn. (L. floridus, full of flowers.) Carolina allspice. Hab. United States. A plant bearing purplish flowers of strong agreeable odour. The root is possessed of emetio properties.

Calyca'tus. Same as Calycine.

Calycera'ceæ. (Κάλυξ, a flower-enp.) A Nat. Order of epigynous corollifloral Exogens. Corolla monopetalous, valvate; authers syngenesious; ovule solitary, pendulous; ovary inferior, one-celled; seeds solitary, with fleshy

Calycer'em. Same as Calyceracea. Cal'yces majo'res. (L. major, greater.)

The infundibula of the kidney.

C. mino'res. (L. minor, lesser. G. Nierenkelehe, Nierenbecher.) The seven or eight small tubes which surround the papille of the kidney

Calyc'ia. (Κά\υξ.) A stipitate and sey-

phiform apothecium.

Calyci'eae. A Family of Lichenes gymnocarpi, or of crustaceous lichens, having stalked

apothecia.

Calyciflo'ræ. (L. calyx; flos, a flower.) A Subclass or the Division Angiospermia, Class Dicotyledones, or a Division of the Subclass Eleutheropetala, Class Dicotyledones. Flowers cyclic, usually with calyx and corolla, the latter generally with distinct petals, and inserted on the corolla; stamens equal to, or twice as numerous as, the petals, or in several whorls; gyncecium syncarpous or apocarpons. It is divided

thin sylvane and Epigynæ.

Calyciflo'ral. (L. calyx; flos, a flower.
F. caliciflore; G. Kelchblumig.) Plants having the petals and stamens inserted into the threat

of the calyx.

Calycifio'rous. Same as Calycifioral. Calyciform. (L. calyx; forma, likeness. F. caliciforme; G. kelchformig.) Formed like a calyx.

Calycina'lis. Same as Calycine. Calycina'ris. Same as Calycine. Cal'ycine. (Κάλυξ, a flower-cup. F. calice, calicinal; G. kelehartig, becherformig.)

Of, or belonging to, a calyx; cup-shaped. Calycin'ial. (F. calycinien.) Applied by Mirbel to the induvise when they come from the calyx.

Calycle. Same as Calyculus.

Also, a cup-like expansion of the polypary in Sertularidæ centaining the polypite. Also called Hydrotheca.

Cal'ycoid. (Κάλυξ; είδος, likeness. F. calycoide; G. kelchahnlich.) Resembling a

calyx.

**Calycopet'alæ.** (Κάλυξ, a flower-cup; πέταλου, a leaf, a petal.) A class, in Perleb's system, of vascular Exogens having a double perianth, a pleiopetalous corolla, and perigynous petals.

**Calycophor'idæ.** (Κάλυξ; φορίω, to ear.) An Order of the Subclass Siphonefera, Class Hydrozoa. Hydrosoma free and oceanic, consisting of several polypites united by a filiform and unbranched conosare, with the proximal end modified into a somatocyst, and propelled by one

**Calycoste monæ.** (Κάλυξ; στήμων, a stamen. G. Kelehmannehen.) A class of plants having the stamens inserted on the calyx.

**Calycozo'a.** (Κάλυξ; ζώου, a living animal.) An Order of the Subclass Discophora, Class Hydrozoa. Polypite single, in the middle of a cup-shaped umbrella, which is fixed at its proximal end; generative elements discharged into the body-cavity.

Calycular. (Káhug) Having relation

to a calyx.

or more nectocalyces.

C. bud. A term applied to reproductive buds in Actinozoa, which arise inside the cup or

Calyc'ulate. (F. calicule; G. gekelcht, beckerformig.) Having a calyculus.

Calyc'ulus. (Dim. calyx. F. calicule; G. Kelchchen.) A little calyx. Applied to the membranous margin surrounding the apex of a seed.

An accessory calyx placed behind the true calyx, consisting of contiguous bracts, so as to form a partial involucre.

A range of bractlets placed at the base of an

involucre.

**Calyphy'omy.** ( $Kd\lambda v\xi$ , a flower-cup;  $\phi \dot{w}o\mu au$ , to grew.) Accidental adhesion of the calyx to the corolla.

**Calyp'ter.** (Καλυπτήρ, a covering.) Λ blind-pile; so called because it seems as a fleshy excresceuce covering a hæmorrhoidal vein.

**Calypte** ria. (Καλυπτήρ, a covering. F. dypteres; G. Schwanzdekken.) The covertures calypteres; G. Schwanzdekken.)

of the tail of birds.

**Calyptoblast'ea.** (Καλυπτός, covered; βλαστός, a sprout.) A Suborder of the Order Hydroidea, Class Hydromedusæ. The ramifications of the colony clothed with a chitinous borny tube, which becomes cup-shaped round each polyp, the hydrotheca. The sexual bads arise in regular manner, and are sometimes sessile, sometimes become free medusæ.

**Calyp'tra.** (Καλύπτρα, a cover. F. calyptre, coiffe; G. Haube, Mütze.) A membranous covering or hood placed over the sporangium of mosses. It is the actively growing ventral part

of the Archegonium.

The proper exterior covering or coat of the seed,

which falls off spontaneously. **Calyptranth'es.** (Καλύπτρα, a veil; aveos, a flower. G. Kappenblume.) A Genus of the Nat. Order Myrtacea.

C. aromatica, St. Hil. (L. aromaticus, fragrant.) A species of which the dried flower bnds have the same properties as cloves.

C. caryophylla'ta. (Καρυόφυλλου, the clove tree.) A synonym of C. aromatica.

**Calyp'trate.** (Καλύπτρα, a veil. F. coiffe, calyptre; G. mützenformig.) Having a veil, hood, or covering; hooded, as when a caducous calyx is separated from its base, and is carried on the unexpanded flower like an extinguisher.

**Calyp'triform.** (L. calyptra, a veil; rma, shape.) Having the appearance of a forma, shape.)

calyptra or hood.

Calyptrimorph'ous. (Καλύπτρα; μουφή, form.) Applied in Botany to ascidia which have a distinct lid.

**Calysac'cion.** (Κάλυξ, a calyx; σακκίον, a small bag.) A Geuus of the Nat. Order Gut-

C. longifo'lium, Wight. The fragrant flowers are mildly stimulating, and are used as a perfume.

**Calyste'gia.** (Κάλυξ, calyx; στέγη, a roof.) A Genus of the Nat. Order Convolvaluecæ.

C. se'pium, R. Brown. (L. sepes, a hedge. F. liseron des haies; G. Winde.) Large bind-weed. Stem twining; leaves sagittate, truncate at base. Root purgative.

C. soldanella, R. Brown. (Etym. nn-known. F. chou marin; I. cavolo di mare; G. Meerwinde.) Sca bindweed. The leaves and juice are actively purgative.

**Cal'yx.** ( $K\dot{a}\lambda v\xi$ , the cup of a flower. F. I. calice; S. caliz; G. Blumenkelch.) The outermost envelope of the flower of plants when the perianth is double. When the perianth is single the use of the term is not uniform. Some botanists give the name calyx to every perianth which is single, others give it only to those single perianths which are green. The parts of which the calyx is composed are the sepals; these are usually green, sometimes otherwise coloured; in the latter ease the calyx is called petaloid.

Also (F. caliee; G. Nierenkelch), the truncated termination of the branches of the ureter in the kidney, each of which embraces two or more papillæ. The ealyx is composed of an external fibrous coat, uniting at the base of the papilla with the fibrous structure of the kidney; a middle muscular coat, containing both longitudinal and eircular fibres, except at the upper termination of the ealyx, where the latter only are present; and an inner mucous coat, the epithelium of which is continuous with that of the papilla.

The calvx of the ovum is the wall of the Graafian follicle, from which it has just escaped. Also, the body of a Crinoid or a Coral, which is placed on the top of the stem, and is more or less cup-shaped; its dorsal surface is composed of

calcareous plates, articulated at their margins; from its upper margin spring the arms; its ventral surface is leathery

Also, the body of a Vorticella.

C. vomito'rius. (L. romitorius, that which provokes vomiting.) A vessel made by pouring antimony iuto a mould; wine being allowed to stand in it some time produces and dissolves a salt of autimony, and was administered as an emetic.

Cam'acoa. A name of the fruit of Acro-

dichdrum camara.

Camandag. A tree of the Philippine Islands yielding a milky juice, called by the natives tague, which they use to poison their

Camandung. Same as Camandag. **Cam'ara.** (Καμάρα, a vaulted roof.) A chamber or arched vault.

The Fornix cerebri, Galen, de Us. Part.

viii, 11. The arched hollow part of the auricle at the entrance to the auditory foramcu, Lindenus, Phys. Med. ii, 11, art. 1, § 4.

Also (F. camare), in Botany, a membranous fruit composed of two united valves and enclosing one or many seeds attached to the internal angle.

Also, sometimes used for the cells of a fruit. C. nut'meg. The fruit of Acrodiclidium

camara. C. tree. The Acrodiclidium camara.

Cam'arez. France; Department of Avey-ron. Two springs of mineral water are found here, both of 13° C. (55° F.) One, Andabre, coutains calcium, magnesium, sodium, and fron carbonate, and sodium sulphate and chloride; the other, Prugnes, is much less mineralised, and contains no iron.

Camarion. (Καμάριον, a chamber in the brain.) The Fornix cerebri.

Camarium. Same as Camarion.

Camaro'ma. (Καμάρωμα, a vaulted chamber. G. Gewolbbruch.) Used by Galen, in Def. Med. for a fracture of the skull, where the bones appear arched or vaulted.

Camaro'sis. Same as Camaroma.

Camas'sia. A Genus of the Nat. Order

C. esculen'ta. (L. esculentus, eatable.) A species the bulbs of which are eaten as food by the North American Indians, under the uame of Quamash, bread root.

Cambai'ba. The Brazilian name of the Curatella sambaiba and other species, which are

employed as astringents.

Cambaibin ha. The Brazilian name of the Davilla braziliana and D. elliptica. Used as a vulnerary

Cambia lis. (Cambium. F. cambial.) Relating to vegetable structure called Cam.

C. an'nulus. (L. annulus, a ring. G. Cambiumring.) The layer of cells known as Cambium or Cambium-layer.

Cambie leaf. The Nymphæa alba and

the N. Inten.

Cam'biform. (L. cambium; forma, likeness.) Having the appearance of Cambium.

C. tis'sue. (G. Dauercambium.) Long,

thin-walled, succulent cells, like young bast cells, occurring in the bast tissue.

Cam'bil. Red earth. (Ruland.) Cam'bing. A tree of the Moluccas Islands, the bark of which exudes a juice much estcemed against dysentery.

Cambium. (L. cambio, to change. F. cambium; 1. cambio; G. Bildungsgewebe.) A layer of cells lying between the wood and the bark of Exogens, and from which each new annual zone of wood springs. The cells consist of a thin layer of cellulose containing a primordial utricle, a nucleus, and protoplasm. The cells are inactive during winter, but very succulent in spring. This name was formerly given to the fluid contents only of the cells.

Also, a supposed principle elaborated from the blood of animals, for the repair and increase of the various organs.

C. bun'dle. (G. Cambiumstrang.) A term applied to a cord of earnbium in an isolated position.

C. cells. See Cambium.

C. cyl'inder. A term applied to a central

rod of cambium.

C. Auid. The mucilaginous matter found between the bark and wood of plants in spring. It was supposed formerly to be a fluid poured out between the bark and the wood, which became organised into new wood; it is now known to be the layer of cambium, always present, made more succulent by the presence of much sap in the growing period of spring.

C. lay'er. The term frequently applied now to the whole cambium substance, from the inner portion of which new wood is developed, and from the outer new bark.

Also, the inner layer of the periosteum of a growing bone immediately beneath the fibrous layer; it consists of small nucleated cells, having numerous fine processes, which join the reticulum of the external layer.

Also, a layer of roundish cells with processes lying between the periosteum and the cementum of the fang of the tooth.

(G. Dauercambium.) C. per manent. Same as Cambiform tissue.

C. ring. A term applied to the cambium layer, as seen in transverse section.

C. sheath. (G. Cambiummantel.) A term applied to the annular layer of cambium which only surrounds the stem of a monocotyledonous plant in its earliest stage.

Cambo. France; Departement Basse-Pyrénées, near Bayonne; situated among pleasant scenery. There is a mild sulphur spring, 22°C. (71.6°F.), and a weak iron water.

Cambo dia. See Gamboge. Camboge. Same as Gamboge; see Cam-

bogra.

Cambo'gia, B. Ph. (Cambodia, or Kamboja, a river by which the tree affording it grows. F. gutte, gomme-gutte; I. gomma-gutta; S guta-gamba; G. Gutti, Gummigutt.) The Pharmacopoial name of gamboge; it is a gum-resin imported from Siam, and obtained from the Garcinia morella, var. pedicellata, a tree which is now regarded as a species and called G. Hanburii. Gamboge is obtained by cutting the bark and allowing the yellow juice to flow into hollow bamboo canes; as seen in commerce it is in pipes of 6" or 8" long and I" to 2" in diameter, orange yellow in colour, with a smooth conchoidal fracture and an acid taste. It contains cambogic acid and a gum. It is a hydragogue cathartic. Dose, I-5 grains.

C. gut'ta. Old name for the tree which affords gamboge, Garcinia morella, var. pedi-

cellata, or G. Hanburii.

Cambo'gic ac'id. A resinous substance found in gamboge, soluble in alcohol and ether, and, with a deep red colour, in alkalies.

Cambo'gium. Gamboge, see Cambogia.

Cam'bon. France; Departement du Cantal. A cold spring, containing bicarbonate of soda. Used in stomach affections.

Cambu'ca. Used by Paracelsus for a bubo in the groin or au ulcer there, or near the

Gambui. (Ruland.)

Cambui. The American myrtle of Piso and Maregrave. Said to be astringent.

Cam'el. (L. camclus, from Gr. κάμηλος, from IIeb. gámál. F. chameau; I. cammello; G. Kameel.) The Camelus bactrianus. The flesh is eaten, the hump being considered a great delieacy; the milk is very nutritious, but deficient in butter; anciently it was credited with many medicinal virtues.

C.'s hay. The Andropogon citratus.

C.'s thorn. The Alhagi maurorum.

Camelan. A small tree of Amboyna, the seeds of which smell like those of anise and are similarly used; it is therefore called Anisum moluccamum.

Came'lidæ. A Family of the Group Ruminantia, of the Section Artiodactyla, of the Order Ungulata. Hornless; feet long, two-toed, having imperfect nail-like hoofs, and an integumentary cushion to walk upon; navicular and cuboid bones not united; cervical vertebral arches pierced by the vertebral artery, not the transverse processes ; premaxillae have a single, strong, conical, laterally compressed incisor in each; two large, curved, pointed canines in each jaw; nos trils closable at will; esophagus opens directly into the paunch, which bas a smooth epithelial coat; from its walls go off two sets of diverticula, the water-cells, which store up water for future use; the reticulum is sharply defined from the rumen; the psalterium is only a tubular passage; the abomasum is large; the pyloric end of the duodenum is dilated; elecum short and simple; red blood-corpuseles elliptical; placenta diffuse. Types: Camel and Llama.

Camel'ina. (Χαμαί, on the earth; λίι ον, flax.) A Genus of the Nat. Order Cruciferæ.

C. sativa, Linn. (L. satirus, that which is sown. G. Leindolter.) Gold of pleasure. Used as a vermifuge; the seeds, called sesamum seeds, were used in paralysis; they yield an oil.

Camel'li. A priest who introduced the eamellia tree into England from Japan in 1739.

Camellia. (Camelli.) A Genus of the Nat. Order Ternstromiaceæ. C. drupif era, Lour. (L. drupa, an over-

ripe olive, a drupe; fero, to bear.) The seeds supply a useful oil.

C. japon'ica, Liun. Japan eamellia. The

leaves are used to mix with tea leaves.

C. oleif'era. (L. oleum, oil, fero, to bear.) A species, the seeds of which yield a good oil, used as fono.

C. sasan'qua. The flowers are used to give aroma to some kinds of tea.

(Chinese tscha.) Hab. C. the'a, Link. Asia. The plant the cultivated varieties of which yield tea. See Thea.

C. their era, Griffith. (L. thea; fero, to bear.) The C. thea.

Camellia'ceæ. A synonym of Ternstromucræ.

Camelus. (Heb. gámál.) A Genus of the Family Camelidie or Tylopodæ.

C. bactria nus, Linn. (L. bactrianus, belonging to Bactria, now Balk.) The camel

with two humps. C. dromeda'rius, Linu. (L. dromedarius,

from oponios, swift.) The dromedary or camel with one hump. Cam'era. (Kanapa, an upper gallery; also, a vaulted or arched roof.) A chamber, or vaulted

structure. C. cor'dis. (L. cor, the heart.) The peri-

cardium. C. cra'nii. (Koaviov, the upper part of

the head.) The vault of the skull.

C. lu'cida. (L. lucidus, bright.) A foursided glass prism, having one angle a right angle, the opposite angle one of I35° and the other angles of 67.5°. A ray of light falling on the face, which is formed by the right angle, is totally reflected from the first face of the obtuse angle, again from the second face of the same angle, and emerges towards the extremity of the other face of the right angle in a direction per-pendicular to its first incidence. The eye can thus perceive an image of an object on a piece of paper lying at right angles to it, and the out-lines may be traced with a peneil. The instrument is used in microscopic drawing.

C. oc'uli. (L. oculus, the eye.)

chambers of the eye.

C. oc'uli ter'tia. (L. tertius, the third.) The canal of Petit in the crystalline leus.

Camera'ria. A Genus of the Nat. Order Apocynacea.

C. iatifo'lia, Jacq. (L. latus, broad; folium, a leaf.) Bastard manchineel tree. Hub. West Indies. The milky juice is used by the natives as an arrow poison.

Cam'erated. (L. camera, a chamber.) Having chambers.

Camera'tion. (Καμάρωσις, an arching.) Synonymous with Camarosis.

(Καμάρα, a vault; Cameros'toma. στόμα, a mouth. F. camérostôme.) The anterior part of the cephalotherax of spiders, forming a kind of cover or vault above the organs of manducation.

Camer'ula. Dim. of Cumera.

Ca'mes. (Arab.) Argentum or silver. (R. and J.)

Ca'met. Same as Cames.

Camforos'ma. See Camphorosma. Camin'ga. The Canella alba.

Camin'ga. The Canella alba.
Caminus. (Kámivos.) A furnace, or its chimney, or a place where fire is made; also a bell. (Ruland.)

Camis'ia fœ'tus. (Arab. Kamisah, an under garment.) The chorion, as resembling the shirt or under garment of the feetus.

Cam'isole. (F. from I. eamiciula, a small shirt. I. camicia di sieurezza; G. Zwangsjacke, Zwangwamms.) A strait waisteeat, formerly used for the confinement of the violently insane.

Cam'maras. (Κάμμαρος.) The erah, Cancer pagurus, or the lobster, Hommarus gam-(Κάμμαρος.) The erah, murus. The name has also been applied to the river crayfish, Astacus fluviatilis.

Cam'maron. A plant supposed to be the Armea scorproules. (Hooper.)

Cam'marum. The Aconitum camma-

rum.

Cam'mock. The Ononis spinosa; and

also the Peucedanum officinale. France; De-Camoins les Bains. partement des Bonches-du-Rhône. An athermal mineral water, containing a small amount of calcium sulphate and a little carbonic acid and hydrogen sulphide. Used in non-inflammatory skin affections and in chronic eatarrh of the respiratory mucous membrane.

Cam'omile. See Chamomile. Camomil'la. The chamomile, Anthemis

nobilis. Camo'tes. The Convolvulus batatus. Camp. (L. campus, a field. F. camp; 1. campo; G. Lager.) The ground occupied by an

army at rest; also the army itself.

C. fe'ver. A form of fever prevalent in army encampments has been described under this term, which in most instances was typhus fever.

C. mea'sles. An epidemic of measles occurring among soldiers. The disease has been prevalent among the soldiers of the United States when encamped, and it has been suggested by Dr. Salisbury that it was caused by the development

of Puccinia graminis in mouldy straw.

Campag'ne. France; Department of Aude. Situated in a pleasant valley. Tepid sulphated saline waters, 26° C. (78'8' F.) to 27° C. (80.6° F.) Used in vesical catarrb, gravel,

and malarial engorgements.

Cam'pana. (Mod. L. campana, a bell, from Campania, in Italy, where they were first nsed in churches.) A bell. A dish or cover shaped like a bell, and employed in making sulphuric acid.

Cam'panal alli'ance. Same as the alliance Campanales.

Campanales. An alliance of epigynous Exogens in Lindley's classification, having dichlamydeous, monopetalous flowers, and the embryo with little or no albumen. Also, the same as Campanulinæ.

Campan'ellate. (Mod. L. campana, a bell. F. campanelle.) Applied to the corolla when thoular at the base, globular in the middle, and again tubular above, as in the Compositæ.

Cam'panelle. (I. vampanella, a small bell.) The Convolvulus sepium.

Campaniflo'rous. (Mod. L. campana, a bell; flos, a flower. F. campaniflore; G. glockenblattrig.) Having bell-shaped flowers.

Campan'iform. (Mod. L. campana, a bell; forma, resemblance. F. campaniforme; G. glockenformig.) Formed like a bell; bellshaped.

**Campan'ula.** (Mod. L. dim. campana, a bell.) The hell-flower. A Genus of plants of Nat. Order Campunulaeca.

C. bellidifo'lia. (L. bellis, a daisy; folium, a leaf.) The C. patula.

C. decurrens. (L. decurro, to run down.) The C. patula.

C. glau'ca. (L. glaucus, bluish-grey.) Used as a tonic.

C. glomera'ta, Linn. (L. glomero, to form into a hall.) Hab. Siberia. Used in rabies.

C. lacinia'ta, Linn. (L. lucinia, jagged end of a leaf.) Syrian campanula. Hab. Greece, Syria. Roots used as an antimenorrhagic, seeds as an emmenagogne.

(L. medius, in the C. me'dium, Linn. middle.) Canterbury bells. Hab. South Europe. Root used as a pot-herb.

C. pat'ula, Linn. (L. patulus, spread ont.) Field campanula. Hab. Europe. Leaves bitter.

C. plicat'ula. (L. plica, a fold.) The C. trachelium.

C. rapun'culus, Linn. (L. dim. of rapum, a turnip.) The rampion. The young roots are esculent. The juice is used in toothache, and the seeds in ophthalmia.

C. trache'lium, Linn. (Τράχηλος, the pat F. auntelee, aunt de Notre Dume.) The throat. F. gantelee, gant de Notre Dame.) great throat-wort. A decoction of the root is used in sore throat, relaxed uvula, as an astringent. It is also reputed antiphlogistic and vulnerary.

C. urticifo'lia. (L. urtica, a nettle; folium, a leaf.) The C. trachelium.

Campanula ceæ. Campanula'cem. (Campanula. G. Glockenblumengewachse.) A Nat. Order of epigynous corollifloral Exogens, or a Family of the Order Campanulina. Herbaccous plants, or under shrubs, with a milky juice; stamens often connate at the base; stigma naked; evary inferior, generally 3-celled.

Campanula ceous. Having an arrangement of parts as in the Genus Campanula. Campanula'ria. A synonym of Calyptoblastca.

Campan'ulate. (Mod. L. campanula, a little bell. F. campanula; G. glockenformig.) Bell-shaped. Applied particularly to the corols and nectaries of plants.

Campanuliflo'rous. (Mod. L. campanuta; flos, a flower.) Having bell-shaped flowers.

Campanuli'næ. (Campanula. Glockenblumige.) An epigynous, anisocarpous Order of the Subclass Gamopetalw. Flowers actinomorphic or zygomorphic, pentamerous; sepals leafy, narrow; ovary inferior. It contains the Families Campanulaeca, Lobeliaeca, and Cucurbitacea.

Campanulin'eæ. (Mod. L. campana, a bell.) Applied by Bartling to a Class comprehending the Goodenacieæ, Stylidiacæ, Lobeliaceæ, and Campanulaceæ.

Cam'per, Pi erre. A Dutch physiologist.

born at Leyden in 1722, died at The Hague in 1789.

C.'s fa'cial ang'le. See Angle, facial. C.'s lig'ament. The deep perinacal fascia. Cam'pfer. Switzerland; in the Upper

Engadine. A summer air-cure place, 6000 feet above sea level; in a picturesque and pleasant neighbourhood.

Cam'phene.  $C_{10}H_{16}$ . A terpene contained in camphor oil from Laurus camphora. It is formed by the decomposition of hydrochlorate of terebene by cold water or by dilute alcohol. It is a crystalline, colourless mass, fusible at 47°C. (116°0°F.); it varies in its action on polarised light according to its source.

Cam phine. A substance procured by distillation from common turpentine from a solution of caustic potash. Used for burning in

lamps. Cam'phire. Camphor.

Camphocre'asote. A synenym of Carvacrol

Cam'phogen. The same as Camphine. Cam'phol. A synonym of Camphor, oil

Campholeu'lea. Term by Béral for combinations of three parts of any ethereal oil with one part camphor.

Campholic acid. (F. acide campholique; G. Campholsanre.) C<sub>10</sub>H<sub>18</sub>O<sub>2</sub>. Obtained by passing camphor vapour over heated potash and lime. It crystallises from alcohol in prissus or colourless scales, fusible at 95° C. (203° F.),

sublimable, and slightly soluble in water. Cam'phor. (Camphora.) The generic name

of a series of oxygenated, volatile, odoriferous, aromatic, crystalline compounds. They are found in conjunction with, and are probably the results of the oxidation of, the terpenes in plants. The two principal types of this group are ordinary camphor,  $C_{10}H_{16}O$ , and borneol,  $C_{10}H_{18}O$ .

A camphor is found in the essential oils of many labiate plants, as rosemary, marjoram, and sage, in those of the feverfew and wormwood, and in oil of cloves isomeric with common camphor, except that this turns the plane of polarisation to the right, while the feverfew camphor turns it to the left, and the labiate camphors are inactive.

Borneol or Borneo camphor has isomerides in the liquid camphors contained in the oils of hops, cajeput, coriander, and others.

See also Camphora.

C., an'ise. A synonym of Anethol. C., artific'ial. C<sub>10</sub>H<sub>16</sub>.HCl. Is formed by the action of hydrochloric acid gas on turpentine. It is not a camphor, but a monohydrochloride of oil of turpentine. It has been used as an adulterant of officinal camphor. It may be detected by the deposition of a flocculent precipitate by the addition of ammonia to an alcoholic solution.

C., asarabac'ca. Same as Asarin.

C., baros'ma. See Barosma camphor. C., Ba'rus. A name of Borneol.

C., bergamot. A synouym of Bergaptene.

C. bibro'mide. Same as C. dibromide.

C., Blu'mea. Same as C., Nghai.
C., Bor'neo. Same as Borncol.

C., bro'mated. Same as C. monobromide. C. bro'mide. See C. monobromide.

C., bro'miscd. See Cumphor monobromide.

C., car'bolated. Carbolic acid, 15 grains, is mixed with an equal quantity of alcohol and 37.5 grains of powdered camphor added. Used with olive oil or infusion of saponaria as an antiseptic dressing.

C., Chi'na. Officinal camphor in its crudo form.

C .- chio'ral. A mixture of equal parts of powdered camphor and chloral hydrate, which, when allowed to stand, becomes liquid. It has been used with three parts of glycerin as an external antineuralgic.

C. cigars of Ras'pail. (F. cigarettes de camphre de Raspail.) A geose-quill filled with small pieces of camphor, and stopped with cotton The quill is put into the month and the camphor vapour inhaled; and the result, according to the originator, is the prevention of most diseases.

C., com'mon. The camphor of Camphora

officinarum. See Camphora.

C., cu'bebs. C<sub>30</sub>II<sub>18</sub>+2II<sub>2</sub>O. A hydrate of cubebin deposited from the essential oil of cubebs in large octohedra.

C. dibro'mide. C10H16OBr2. Formed by dissolving camphor in bromine. A colourless crystalline substance, melting at 114° C. (237.2° F.), distilling at 285° C. (545° F.)

C., dryobalanops. A synonym of Borneol.

C., Dutch. Japan camphor is so called because it was introduced into commerce by the Dutch.

C., el'ecampane. Same as Helenin. C. emul'sion. Camphor rubbed up with milk or almond emulsion in the proportion of one part to 420.

C., es'sence of. An alcoholic solution of camphor, 1 to 20. Dose, 5 mins. in water frequently. Used in diarrhea.

C., factitious. Same as Camphor, arti-

C., fe'verfew. A crystalline substance, resembling common campuor in every respect, except that its action on polarised light is different; obtained by the distillation of the essential oil of Pyrethrum parthenium. See also Camphor.

C., Formo'sa. Same as C., China.
C. gland. (G. Campferdrüse.) A cell, or a group of cells, in a plant having camphorous contents.

C., bydrochlo'rate of. An old preparation made by passing hydrochloric acid gas over camphor in small fragments.

C. ice. White wax 4 oz., benzoated lard 12 oz., are melted together, and when nearly cool powdered camphor 2 oz., and oil of lavender 2 drs., are added. Used for chapped hands and

C., inac'tive. The campher of the Labiatæ, which exerts no influence on the polarised light-

C., in'ula. (F. camphre d'aunie.) Helenin. C., l'odizeds Powdered camphor is put into a box with a hundredth part of its weight of iodine in a muslin hag, and shaken up; in a few hours they will have united. It is used as a snuff for the purpose of administering iodine vapour in phthisis and chronic bronchitis.

C., iris. A solid crystalline matter obtained in the distillation of the rhizomes of Iris florentina with water. It is probably the same as Myristic acid.

C., Japan. A variety of camphor grown

in Japan, and containing less impurity than China camphor.

C. ju'lep. The Aqua camphora. C., le'dum. The essential oil of Ledum

C., left. The camphor of feverfew which turns the plane of polarisation to the left.

C., lem'on. A name of the dihydrochloride of turpentine oil.

C., liq'uid. Same as Camphor, oil of.

C., matrica'ria. Same as C., feverfew.

C., min'eral, of coal tar. Carbolic acid. C., mint. Same as Menthol.

C. mix'ture. Same as Aqua camphora. C., monobro mated. Same as C. mono-

bromide. C. monobro'mide. C<sub>10</sub>H<sub>15</sub>BrO. Formed by heating camphor dibromide in a sealed tube to 100° C. (212° F.) It is in white, hard, colour-less, long, acicular crystals, of a camphorous odour and a bitterish taste. It is insoluble in water, slightly in alcohol, easily soluble in chloreform and benzin; it melts at 76° C. (168°8 F.), and distils at 274° C. (525°2° F.) It is an antispasmodic and sedative. Used in delirium tremens, hysteria, convulsions from teething, chorea, and paralysis agitans. Dose, 2 to 5 grains, to be repeated in an hour if needful.

C., ner'oli. A nentral, inodorous, tasteless, semi-crystalline substance found in oil of

neroli.

C., Nghai. A species of camphor obtained in Burmah and China by the distillation of Blumea balsamifera. It has the same composition as borneol,  $C_{10}II_{18}O$ , but is levo-rotatory; treated with nitric acid it yields ordinary camphor, but it is still levo-rotatory.

C., ni'trate of. An old preparation made by dissolving eamphor in cold nitric acid.

C., offici'nal. See Camphora.

C. of pyre'thrum parthe'nium. Same

as C., feverfew.

C., oil of. A pale yellow liquid, of strong camphorous edour, obtained by incision from the Dryabalanops camphora when young. It contains 94 per cent. of Borneène and essential oil, and 6 per cent. of a resin.

Also, the Oleum camphora, U.S. Ph.

C. ointment. Three parts of camphor is heated in a water bath with twelve parts of prepared lard, and stirred while cooling.

C., patch'ouli. C<sub>15</sub>H<sub>28</sub>O. Ă crystalline mass contained in oil of patchouli; homologons

with Borneol.

C., poi'soning by. It produces giddiness. nansea, vomiting, thirst, epigastric pain, cramp, dyspnæa, convulsions, and sometimes death. Recovery is preceded by sleep and perspiration. Ten grains have produced death in a child of a year and a half old. The membranes of the brain are congested, there is much reddening and occasional ulceration of gastro-intestinal mucous membrane, and also of the genito-urinary tract. Emetics should be given, and then easter oil, with dranghts of milk.

C., right. The camphor of the Lauraceae, which causes the plane of polarisation to deviate

to the right.

C., Suma'tra. A synonym of Borneol. C. tea. A solution made by pouring boiling water upon a lump of camphor.

C., thyme. A synonym of Thymol. C., tobac'co. A synonym of Nicotianin. C. tree. The Camphora officinarum.

C., tub. Same as C., Japan.

C., tur'pentine. A synonym of Ter-

pin.C. va'pour bath. The addition of some camphor, on a plate which can be heated, to the process described under Bath, vapour. It produces perspiration.

C. wa'ter. Same as Aqua camphora

Cam'phora, B.P. (Ar. kdfur; Malay, kapur, chalk; camphor was called Barus kapur, from the place where it was obtained. Gr. κα-φουρά; L. camphora; F. camphre; l. canfora; S. alcanfor; G. Kampher.) Camphor, C<sub>10</sub>U<sub>16</sub>O, is a concrete velatile substance, obtained in China and Japan from the Camphora officinarum by boiling, and purified by sublimation. Crude camphor is in small, grey or pinkish, sparkling, aggregated grains; it is refined by mixing it with a fiftieth part of quicklime and exposing to heat in an iron vessel, by which it is melted, and then, going off as vapour, is condensed in a receiver. Puritied camphor is white, translucent, of crystalline fracture, powerful odour, and pungent taste. Sp. gr. from 9857 to 996. It is volatile at ordinary temperatures, and inflammable; melts at 175° C. (347° F.), and distils at 204° C. (399·2° F.) It dissolves sparingly in water, more freely if sugar, magnesia, myrrh, or carbonic acid be present; it is easily soluble in alcohol, ether, chloroform, acctic, and dilute mineral acids, and volatile and fixed oils. It crystallises by slow sublimation, or from spirituous solutions, in large, shining, refractile hexagonal plates. It is poisonous to most insects. Camphor is an irritant locally. It is described by some as a sedative, by others as a stimulant. In moderate doses it produces a sense of warmth and exhibitation, with a fuller pulse. It allays nervous irritation and restlessness. It is said to be unaphrodisiae, yet in poisonous doses it is reported to cause voluptnous dreams. It will frequently arrest a catarrh; it is useful in diarrhea, especially in infants, in nervous headaches, in dysmenorrhœa, and in chordee. It has been used with doubtful advantage in adynamic fevers. It is of some value as an antidote to strychnia. Externally it is used in braises dissolved in oil or spirit. Dose, I to 10 grains of the solid camphor; of aqua e., I to 2 oz.; of sp. c., 10 to 30 mins., in milk. See Camphor.

Also a Genus of the Nat. Order Lauracea. C. broma'ta. (G. Bromkampher.) Same as Camphor monobromide.

C. carbolisa ta. (G. Kamphorisirtes phenol.) Carbolie acid, two parts, dissolved in alcohol, and camphor one part, are mixed together; the result is a reddish-yellow oil, in-soluble in water and glycerin. Given in zymotic diseases, and used locally as an antiseptic in wounds, and an anodyne in toothache and ear-

C. cum cre'ta. (L. cum, with; creta, chalk.) Powdered camphor 1 part, prepared chalk 8 parts. Used as a dentifrice.

C. monobroma'ta. See Camphor mono-

C. officina'rum. (L. officina, a shop.)
The eamphor tree. Hab. China, Japan, and Cochin China. The roots, wood, and branches yield camphor on hoiling.

Also, a name of officinal camphor. See Cam-

phora.

C. tri'ta. (L. tritus, part. of tero, to grind.) Camphor to which a little alcohol has been added, and then rubbed in a mortar till it is reduced to a fine powder.

Camphora'ceous. (L. camphoraceus; G. kampferartig.) Belonging to, containing, or resembling, camphor.

Camphora'ta hirsu'ta. (L. hirsu-tus, hairy.) A name for the Camphorosma monspeliaca.

C. monspeliens'ium. The Camphorosma

monspeliaca.

Cam'phorate. A salt of camphoric acid. C. of quini'ne. See Quinine camphorate. Cam'phorated. (F. camphré; G. gekamphert, kampferhaltig.) Associated or combined with camphor.

C. ace'tic ac'id. See Acidum aceticum

camphoratum.

C. chlo'ral. Same as Camphor-chloral. C. chlo'roform. One part of camphor dissolved in two parts of chloroform. Used externally in toothache and rheumatism.

C. lin'iment. The Linimentum camphoræ. C. oil. The Linimentum camphora

C. phe'nol. Same as Camphor, carbulated. C. tinct'ure of o'pium. The Tinctura cumphora composita.

C. tine ture of soap. The Linimentum

saponis.

C. vin'egar. Camphor 1 part, alcohol 60, vinegar 180; dissolve and mix. C. wine. See Vinum camphoratum.

Camphor'ic. (F. camphorique.) Of, or

belonging to, camphor.

**C.** ac'id.  $C_{10}II_{16}O_4$ . (F. acide camphorique; G. Camphersaure.) Obtained by prolonged boiling of eamphor with nitrie acid. Polarisation is dextro-rotatory; erystallises from water in colourless plates; fusible at 187° C. (368-6° F.); soluble in alcohol. It forms crystallisable salts.

Camphoric acid obtained from Borneo camphor

is levo-rotatory.

Cam'phoride. Generic name by Fechner for substances of vegetable origin that approach camphor in their properties, as alcornin, betulin, cerin, succinic camphor, and that of bitter almonds.

Camphoros'ma. (L. camphora; ὁσμή, a smell.) A Genus of plants of the Nat. Order

Chenopodiacca.

C. monspeli'aca, Linn. (F. eamphrée de Montpellier; S. alcanforada; G. Kampferkraut.) Stinking ground-pine. Said to smell of eamphor; it is acrid, bitter, and aromatic. Formerly used in decoction for dropsical and asthmatic complaints, and esteemed in anodyne fomentations.

C. monspelien'sis. The C. monspeliaca.

**C. peren'nis.** (L. perennis, lasting the whole year through.) The C. monspeliaca.

Campic olous. (I. campus, a field; colo, to inhabit. F. campicole; G. feldbewohnend.) Living or growing in fields.

Campiglia. Italy; not far from Pisa. A thermal water, temp. 38° (100 4° F.), containing sodium chloride 5 grains, calcium carbonate 5, and calcium sulphate 1.5, in sixteen onnees.

Campim'eter. (L, campus, a field; μέτρου, a measure.) An instrument for measuring the field of vision.

Cam'pion. (I. campione, a champion.) A name of some plants, it is said, from being included in the chaplets with which champions at the public games were crowned.

C., blad der. The Scienc inflata.

C., corn. The Githago segetum.

C., mead'ow. The Lychnis flos-caculi.

C., rose. The Lychnis cormaria.

C., white. The Lychnis vespertina. Campsichro'tes. ( $K \dot{a} \mu \pi \tau \omega$ , to fold; χρώς, the surface of the body.) An Order of the Reptilia, having the skin more or less soft and the body flexible, as the Sanrii and Batrachii.

Camp'sis. (Gr. κάμψις, a bending. G. Biegung, Krummung, Verbiegung.) Bending of

a bone without fracture.

C. depres'sio. (L. depressio, from deprimo, to press down.) Depressed fracture.

Camptot'ropal. Same as Camptotropous. Camptot ropous. (Καμπτός, flexible; τρέπω, to turn.) A term, in Botany, applied to an ovule which is folded on itself equally from the middle.

Cam'pula oblon'ga. A synonym of Distom., campula.

Campulit'ropous. Same as Campylotropous.

**Campylochi**rous. (Καμπόλος, bent; χείρ, the hand. F. campylochire; G. mit verkrummten Handen.) Having the hands, arms, or anterior extremities bent.

Campylocœ'lous. (Καμπύλος, bent; κοιλία, the intestines. F. campylocèle; G. mit verkrümmten Eingeweiden.) Having flexuosities of the intestines.

Cam'pylophyte. (Καμπύλος, bent; φυτόν, a plant. F. campylophyte.) Applied to plants the superior part of the corolla of which is obliquely inflected, and more frequently turned spirally before blooming.

Campylorrha chis. (Καμπύλος, bent; ράχις, the spine.) A malformed fœtus having a crooked back.

**Campylorrhi'nus.** (Καμπύλος; ρίς, the nose.) A malformed fætus haviug a crooked

Campylosper meæ. (Καμπόλος, bent; σπέρμα, seed. G. Gefurchtsamigen.) Applied to a Section of the Nat. Order Umbelliferæ, in which the seed has a longitudinal ventral furrow by means of the incurvation of the margins of the cudosperm.

Campylosper'mous. (Same etymon. G. krummsamig.) Having crooked seeds. Campylotis. (Καμπυλότης, crooked-

ness.) Distortion of the eyes.

Campylot'ropal. Same as Campylotronous.

**Campylot'ropous.** (Καμπύλος; τρέ-πω, to turn. G. krammlaufig.) Bent on itself. C. ovule. An ovule which is so bent on

its axis that the micropyle approaches the hilum ; but the two portions are unequal in length.

Cam'pylum. (Καμπύλος, bent, from κάμπτω, to bend.) Distortion of the eyes. Canab'ina. Same as Cannabina. Can'abis. Same as Cannabis.

Can'ada. A British colony of North America, now included, along with Nova Scotia, New Brunswick, Prince Edward's Island, Manitoba, and British Columbia, under the name Dominion of Canada.

C. ag aric. The Polyporus canadensis.

Used in acute rheumatism.

C. bal'sam. See Balsam, Canada. C. bur'net. The Sangainaria canadensis.

C. erig'eron. The Erigeron canadense. C. flea'bane. The Erigeron canadense. C. maid'enhair. The Adiantum cana-

dense, or Adiantum pedatum.

C., min'eral wa'ters of. See Caledonia springs, Charlotteville spring, St. Catherine's, Tuscarora acid spring.

C. pitch. See Pitch, Canada. C. rice. The Zizania aquatica.

C. snake'root. The Asarum canadense.

C. tea. The leaves of Gaultheria procumbens.

C. tur'pentine. Same as Balsam, Cunada.

C. yel'low root. The Hydrastis canadensis.

Can agong. The Australian name of the fruit of Mesembryanthemum aquilaterale.

Canal'. (L. canalis, from canna, a reed. Gr. σωλή»; F. canal; I. canale; S. canal; G. Kanal, Gang, Rohre.) A channel or duct which gives passage to some structure or other substructure. stance.

C., abdom'inal. (L. abdomen, the belly.) Same as C., inguinal.

C., alimen'tary. (F. canal alimentaire; G. Verdanungskanal, Speisekanal.) The continnous muscular, mucus-lined tube extending from the mouth to the anus, into which the food is introduced, in which it undergoes the changes necessary to fit it for absorption as nutriment for the body, and from which the refuse matter is expelled as fæces. In man, this canal is about thirty feet in length. It is an involution of a part of the external surface. See Alimentary system.

C., alveoloden'tal. (L. alveolus, a small hollow; dens, a tooth.) The canal in the upper and the lower jaw which, with its branches, transmits the dental vessels and nerves.

C., arach'noid. (Arachnoid, the cerebral membrane of that name.) Same as Bichat, canal of.

C., arte'rial. The Ductus arteriosus. C., au'ditory. (L. auditorius, relating to hearing. F. conduit auriculaire; G. Ohrgung.) It extends from the concha of the external ear to the membrana tympani, being 1.5" long. Its course is inwards. Its longest diameter externally is vertical; internally transverse. The outer part is eartilaginous, fibrous above; the inner hony. It is lined by thin skin, possessing sebaceous glands and hairs at the external orifice and many small oval glands, the ceruminous glands. It is supplied by the posterior auricular, internal maxillary, and temporal arteries, and by the temporo-auricular branch of the in-

ferior maxillary nerve. C., Bar'tholin's. See Bartholinus, duct of. C., Bi'chat's. See Bichat, canal of.
C., Bresch'et's. See Breschet's bone-

C., bul'lular, of Pet'it. (L. bullula, a watery vesiele.) Same as Petit, canal of; so ealled because of its sacculated appearance when inflated.

C., carot'id. A canal in the temporal bone, commencing below in front and on the inner side of the jugular fossa, ascending at first, and then running horizontally forwards and inwards, until it opens at the apex of the petrous portion of the bone. It transmits the internal carotid artery

and the carotid plexus.

C. cells. The series of axial cells, excepting the lowest, which is called oosphere, in the archegonium of mosses; the septa between the

cells often disappear.

C., cen'tral, of modi'olus. (L. modiolus, the nave of a wheel.) The largest of several canals in the modiolus of the coehlea, extending from its base to its summit; it transmits the central artery of the modiolus and filaments of the cochlear nerve.

C., cen'tral, of spi'nal cord. (F. eanul central de la moelle; G. Centralkanal des Ruckenmarks.) A canal extending from the calamus scriptorius to the bottom of the spinal cord; it traverses the substance of the grey commissure, and is lined with a layer of cylindrical ciliated epithelium. It is the remnant of the anterior division of the primary central canal of the nervous system of the embryo, and is more distinct in fishes, reptiles, and birds, than in mammals.

C., cil'iary. Same as Fontana, canal of. C., Clo'quet's. Same as C., hyaloid.
C., coch'lear. Same as Canalis cochlearis.

Also, see Canalis cochlea.

C., Cor'ti's. A canal lying between the membrana tectoria and the lamina basilaris of the cochlea of the inner ear.

C., Cotun'nius's. The Aqueductus vestibuli.

C., cru'ral. (L. crus, the leg.) The C., femoral.

C., cys'tic. The Cystic duct.
C., den'tal. (L. dens, a tooth. G. Unterkieferkanal.) The canal leading from the inferior dental foramen, which is situated about the middle of the inner surface of the inferior maxillary bone, and which transmits the inferior dental vessels and nerves.

C., den'tal, ante'rior. The hinder branch of the infraorbital groove of the superior maxillary bone. It runs in the substance of the anterior wall of the autrum, and transmits the anterior dental vessels and nerves to the incisor teeth.

C., den'tal, infe'rior. The C., dental. C., den'tal, poste'rior. Situated about the middle of the posterior part of the external surface of the superior maxillary bone. transmits the posterior dental vessels and nerves. There are usually two or three of these canals.

C., digestive. The alimentary canal.
C., ejaculatory. The Ejaculatory duct.
C., ethmoidal, anterior. A canal formed from a groove on the anterior part of the orbital surface of the frontal bone by articulation with the ethmoid, and which transmits the anterior ethmoidal vessels and the nasal branch of the ophthalmic nerve.

C., ethmoid'al, poste'rior. A canal formed from a groove on the posterior part of the orbital surface of the frontal bone by articulation with the ethmoid, and which transmits the pos-

terior ethmoidal vessels.

C., Eusta'chian. A canal in the petrous portion of the temporal bone leading from the lower part of the anterior wall of the tympanum downwards, forwards, and inwards to the angle between the squamous and petrous portions of the bone, where it ends by a ragged rim.

C., fa'cial. (L. facies, the face.) Aquæductus Fallopii for the transmission of the

facial nerve

C., Fallo'pian. The Fallopian tube.

Also, the Aquaductus Fallopii.

C., fem'oral. (G. Schenkeleanal.) innermost compartment of the sheath of the femoral vessels, containing a lymphatic gland and its vessels, with some connective tissue and fat. It is nearly half an inch long, larger above than below, and is the aperture through which

a femoral hernia escapes from the body. In front of it is the fascia transversalis, Poupart's ligament and the falciform process of the fascia lata; behind it the pectineus muscle, covered by the pubic portion of the fascia lata; on the inner side the femoral sheath formed by the junction of the transversalis and iliae fascise and the cribriform fascia; and on the outer side the femoral vein separated by the septum. Its inner opening is the femoral ring, its outer the saphenous opening.

Also, a synonym of Hunter's canal.

C., Fer'rein's. See Ferrein, canal of. C., Fonta'na's. See Fontana, canal of.

C. for Ar'nold's nerve. A small canal on the outer wall of the jugular fossa for the transmission of Arnold's nerve. Also called Canaliculus mastoideus.

C. for chor'da tym'pani nerve.

Canalis chorau tympani.

C., Gart'ner's. See Gartner, duct of.

C., Gui'di's. Same as C., Vidian.
C., hæ'mal. (Alμa, blood.) The canal formed by the apposition of several typical vertubrae in which a haemal arch is developed.

C., hepat'ic. ('H $\pi a \rho$ , the liver.)

hepatic duct.

C., Mo'vius's. Same as Fontana, canal

C., Huguier's. See Huguier, canal of. C., Hun'ter's. See Hunter, John, canal

C., hy'aloid. ("Yaλos, glass; εἶδos, form.) A canal in the vitreous body which, lined by a reflection of the hyaloid membrane, transmitted in the fœtus a branch of the central artery of the retina to the posterior surface of the lens

C., inci'sive. (L. incido, to ent; from its nearness to the incisive teeth.) The Canal, pa-

latine, anterior.

C., infraor'bital. (L. infra, beneath; orbit. G. Augenhöhlenkanal.) The larger branch of the canal leading from the infraorbital groove on the orbital surface of the superior maxillary bone. It opens on the external surface by the infraorbital foramen, and transmits the infraorbital

vessels and nerve.

G., in'guinal. (L. inquen, the groin, G. Leistenkanal.) An oblique canal, 2" long, parallel with and a little above the inner half of Poupart's ligament, commencing by an opening, the internal abdominal ring, in the abdomen opposite the middle of Poupart's ligament, running downwards and inwards, and ending over the crest of the pubis in the external abdominal ring. It is bounded in front by the aponeurosis of the external oblique muscle for its whole length, and by that of the internal oblique for its outer third; bebind by the fascia trans-versalis, the conjoined tendon of the internal oblique and transversalis, and the triangular ·ligament; above by the arched fibres of the internal oblique and transversalis; and below by Poupart's ligament and its junction with the fascia transversalis. It transmits the spermatic cord in the male, and the round ligament in the female. It is the scat of inguinal hernia.

C., intesti'nal. (L. intestina, the intes-s. G. Darmkanal.) The whole length of tines. G. Darmkanal.)

intestine from the stemach to the anns.

C., Ja'cobson's. See Jacobson, canal of. C., lach'rymal. (L. lachryma, a tear.) The Canal, nasal.

Also, see Canals, lachrymal.

C., Lowenberg's. A canal bounded by the membrana vestibularis, the membrana tectoria, and the stria vascularis of the cochlea ef the inner car.

C., me'dian. (L. medius, in the middle.)

The Aquaductus Sylvii.

(L. medulla, marrow. C., medul'lary. G. Markkanal.) The hollow interior of the shaft

of a long bone.

Also, in Botany, the cavity which eccupies the centre of the stem of dicotyledons, and contains the pith or medulla; cylindrical in plants with alternate leaves; eval or angular in those with opposite leaves.

C., Mill'ler's. See Müller, duct of.
C., na'sal. (L. nasus, a nose. G. Nasen-kanal.) The canal formed by closing in ef the lachrymal groove of the superior maxillary bone by the lachrymal and inferior turbinated bones; it is directed downwards and a little backwards and ontwards, is of the diameter of a goose-quill, slightly narrowest at the middle, and ledges the nasal duet.

C., naso-lach'rymal. (L. nasus; lach-G. Thrunennasenkanal.) The ryma, a tear.

nasal duct.

C., naso-pal'atine. (L. nasus; palatus, the palate. G. Nasengaumenkanal.) The anterior palatine canal.

C., neu'ral. (Νεῦρου, a nerve.) The series of vertebral rings when in sitû and connected by ligaments.

C., Nuck's. See Nuck, canal of.

C., ob'turator. (L. obturo, to stop up.) A small funnel-shaped canal in the upper part of the obturator membrane which transmits the ebturator vessels and nerve.

C. of coch'lea. The Canalis cochlearis. C. of epidid'ymis. (Επιδιδυμίς. G. Nebenhodenkanal.) The canal by the convolutions of which the epididymis is formed; when uncoiled it is 20' or more in length; it extends from the globus major to the globus minor, and is packed in coils separated from each other by fibrons septa and forming lohes; its diameter at its commencement is about 1-70th of an inch, it decreases to I-90th at the globus miner, and then increases as it approaches the vas deferens.

C. of style. (G. Griffencanal.) A canal running from the stigma down the centre of the style of a flower to the cavity of the ovary. It is generally filled with Conducting tissuc.

C. of ten'sor tym'pani. (L. tendo, to stretch; tympanum, a drum.) The upper of the two compartments of the Eustachian orifice at the anterior extremity of the tympanum. It runs forwards, inwards, and slightly downwards to the angle between the squamous and petrons portions of the temporal hone. It opens hy a conical projection into the tympanum, and transmits the tensor tympani muscle.

C., om'phalo-mesenteric. ('Ομφαλός, the umbiliens , μεσέντερον, the mesentery.) The tubular connection of the umbilical vesicle or

yolk-sac with the intestine.

C., op'tic. ('O $\pi\tau\iota\kappa\dot{o}$ s, ef er for sight. G. Schnervenloch.) The optic foramen of the sphenoid bone.

C., pal'atine, ante'rior. (G. Nasen-menkanal.) The communication between gaumenkanal.) the nose and the palate, commencing below at the incisive foramen of the superior maxillary bones; as it passes upwards it is divided into four smaller cauals, the two foramina of Stenson

and of Scarpa; the latter are in the middle line before and behind.

C., pal'atine, descend'ing. The same

as C., palatine, posterior.

C., pal'atine, poste'rior. A canal formed by a groove placed behind the opening of the antrum of Highmore, on the internal surface of the superior maxillary bone, when closed in by the articulation with the palate bone.

C., Petit's. See Petit, canal of.

C., pterygoid. (Πτέρυξ, a wing.) The

C., Vidian.

C., pter'ygo-pal'atine. ( $\Pi \tau i \rho v \xi$ ; L. palatum, the palate. G. Flügelgaumenkanal.) A canal formed by a groove ou the internal pterygoid plate of the sphenoid bone when closed in by the sphenoidal process of the palate bone.

C., pul'mo-aor'tic. (L. pulmo, the lung; aorta, the artery of that name.) The ductus

arteriesus.

C., rachid'ian. ('Pá $\chi_{is}$ , the spine.) The neural canal.

C., Reck'linghausen's. See Recklinghausen, canal of.

C., Reis'sner's. The Canalis cochlearis.
C., Rivi'nus's. See Rivinus, duct of.
C., Ro'senthal's. The C., spiral, of

modiolus.

C., sa'cral. (L. sacrum, the bone of that name. G. Kreuzbeinkanal.) The continuation of the neural canal in the sacrum; it is nearly triangular, follows the curve of the bone, and decreases in size as it descends, and is flattened from front to back; its posterior wall is deficient below. It contains four pairs of intervertebral foramina, opening laterally on the outer surface by the anterior and posterior sacral foramina, which give exit to branches of the sacral nerves which are contained in the caual.

C., Schiemm's. See Schlemm, canal of. C., semicir cular, anterior. The superior semicircular canal. See Canals, semi-

C., semicir'cular, ante'rior ver'tical. (L. vertex, the highest point.) The superior semicircular canal. See Canals, semicircular.

C., semicircular, external. (G. laterale Bogengang.) See Canals, semicircular.

C., semicir cular, horizon tal. The external semicircular canal. See Canals, semi-

C., semicir'cular, infe'rior. (G. untere Bogengang.) The posterior semicircular canal. See Canals, semicircular.

C., semicir'cular, lat'eral. (G. laterale Bogengang.) The external semicircular canal. See Canals, semicircular.

C., semicir cular, poste rior. (untere Bogengang.) See Canals, semicircular.

C., semicir'cular, poste rior ver'tical. The posterior semicircular canal. See Canals, semicircular.

C., semicir'cular, supe'rior. (G. obere Bogengang.) See Canals, semicircular.

C., spermatic. ( $\Sigma \pi \hat{\epsilon} \rho \mu a$ , seed.) as Canal, inguinal; because it transmits the spermatic cord.

\*\*C., spi'nal. (L. spina, the backbone. G. Rückenmarkskanal.) The neural or vertebral canal.

C., spiral, of coch'lea. (G. Schneckenkanal.) The osceous tube which, winding spirally round the mediolus, forms, along with it and the lamina spiralis, the eechlea. It is about an inch and a half long, and a tenth of an inch wide at its origin; it takes two and a half turns round the modiclus, gradually diminishing in diameter, and ends at the apex of the cochlea in a cul-de-sac, the cupola; it is partially divided in its length into two by a thin bony plate arising from the modiolus, the lamina spiralis. At its lower end it diverges slightly from the modiolus, where it communicates with the tympanum by the fenestra rotunda, and with the vestibule by the apertura scale vestibuli, and into it enters the aqueductus cochlee.

C., spi'ral, of modi'olus. (L. modiolus, the nave of a wheel.) A small canal running spirally round the modiolus in the base of the osseous lamina spiralis. It contains the gauglion

spirale of the cochlear nerve.

C., spiroid, of tem'poral bone.  $(\Sigma \pi \epsilon i \rho a, a \text{ spiral}; \epsilon i \delta os, likeness.)$  The aqueduct of Fallopius.

C., Ste'non's. Same as Stenon, duct of. C., Stil'ling's. A synonym of the C.. hyaloid.

C., supraor'bital. The supraorhital foramen of the frontal bone.

C., thorac'ic. The theracic duct.

**C., tympan**ic. (Τύμπανον, a drum.) Same as Jacobson, canal of.

C., urethrosex'ual. (L. urethra; sexus, sex.) A diverticulum on each side of the auterior extremity of the vaginal cul-de-sac of marsupials.

C., u'rinary. (L. urina, the urine.) The urethra.

C., urogen'ital. (L. urina; genitalis, belonging to generation.) The anterior common caual of the two vaginæ of marsupials.

C., uterocervi'cal. (L. uterus, the womb; cervix, a neck.) The part of the uterine cavity which represents at the time of labour the neck of the uterus.

C., vec'tor. (L. vector, a earrier.) The Fallopian tube.

C., ve'nous. (L. vena, a vein.) The duetus venosus.

C., ver'tebral. (L. vertebra, the bones of that name. G. Wurbelkanal.) The caual formed by the apposition of the foramina of the vertebrie; it extends from the occiput into the sacrum; it is wide and triangular in the lumbar and cervical regious, narrow and rounded in the dorsal

C., Vid'ian. A canal traversing horizontally the base of the internal pterygoid plate of the sphenoid bone; it transmits the Vidian nerve and vessels.

C., vul'var. (L. vulva, a wrapper.) The vestibule of the vagina.

C., vulvo u'terine. (L. vulva; uterus, the

womb.) The vagina.

C., Wharton's. Same as Wharton, duct

C., Wir'sung's. See Wirsung, canal of. C., zygomatico-fa'cial. (Ζύγωμα; L. facies, the face.) The branch of the malar canal opening on the anterior surface of the malar

C., zygomat'ico-tem'poral. (Ζύγωμα; L. tempora, the temples.) The branch of the malar caual opening on the temporal surface of the malar bone.

Can'al gros'so. Italy; in the Magra Valley, near Calice. A mild snlphur water, having a temperature of 13° C. (55.4° F.)

Canales. (L. plural of canalis.) Channels. Also, anciently applied to boxes or troughs in which a fractured limb, after being bound in splints, was placed.

C. aerif'eræ. (L. aër, air; fero, to carry. G. Luftrohren.) The air canals of plants.

Also, the tracheæ of insects and the air passages of other animals.

Also, the bronchial tubes.

C. alveola'res. (L. alveolus, a small hollow.) Term applied to the anterior and posterior dental canals.

C. circula'res. The semicircular caual

of the inner car.

C. coch'icæ. (L. cochica, a suail shell.) The scale of the cochica of the inner ear.

**C.** diploici.  $(\Delta i\pi\lambda\delta n, \text{ a fold, the diploë of the cranial hones.) The canals for the veins in the diploë; also called$ *Breschet's canals*.

C. lachryma les. (L. lachryma, a tear.)

The lachrymai ducts.

- C. laqueifor'mes. (L. laqueus, a noose; forma, shape. F. canaux en anse de Henle; G. Schleifenformigekanidehen.) Term applied to Henle's loops or the looped portion of the tubuli uriniferi.
- **C. membra'nei re'num.** (L. ren, the kidney.) Membranous canals of the kidneys. The calyces of the kidney; see Calyx.

**C. nutritil.** (L. nutritius, that which nourishes. G. Ernührungskunüle.) The same as Canals, nutritire.

C. semicircula'res. See Canals, semi-circular.

C. semicircula'res membrana'ceæ. See Canals, semicircular.

C. semicircula'res os'seæ. See Canals, semicircular.

C. semicircula'res petro'sæ. (L. petrosus, stony.) The osseous semicircular canals.

C. tubæfor'mes. (L. tubu, a trumpet; forma, shape.) The semicircular canals of the inner ear.

Canalic'ular. (L. canaliculus, a little canal.) Having small tubes.

C. ab'scess. A mammary abscess communicating with the lactiferous ducts.

C. tis sue. A tissue containing canals, as

Canalic'ulate. (L. canaliculus, a little canal. F. vunuliculé; G. rinnenformig, uusgehöhlt.) Channelled.

Canalic'ulated. (Same etymon.) Channelled.

Canalic'uli. (L. canaliculus, a small channel; dim. of canalis, a channel. G. kleine Gange, Rinnen.) Small channels.

Also, a name given to the lachrymal canals. Also, a synonym of Canals, juice.

C. accessorii. (L. accedo, to be added.)
The same as Forumina condyloiden accessoria.

C. bilif'eri. (L. bilis, bile; fero, to earry.)
The bile ducts.

**C.** calcif'cri. (L. calx, lime; fero, to carry.) Channels at oue time believed to exist in ossifying cartilage.

C. caroticotympan'ici. (L. carotid; tympanum.) Two or three small short canals which lead from the hinder wall of the earotid canal into the tympanum. One of these canals gives passage to the superior and the other to the interior caroticotympanie branch of the carotid plevus.

C. den'tium. (L. dens, a tooth. F. eana-

licules dentaires; G. Zahnbeinröhrehen.) Tho minute canals traversing the dentine of the tooth.

C. Haversia'na. The Haversian canals of bone.

F. conducts lacryma'les. (L. luchryma, a tear. F. conducts lacrymaux; G. Thranenkunatchen.) The lachrymal canals. They commence in the inner angle of the eye, at the papilla lachrymalis on the inner margin of each eyelid, by a small aperture, the punctum lachrymale, and open into the lachrymal sac. The upper canaliculus is smaller and longer; it first ascends vertically, and then suddenly bends inwards and downwards; the lower canaliculus first descends, and then is directed horizontally inwards. They are both dilated at the bend, and open into the lachrymal sac either separately or by a joint opening.

C. lima'cum. (L. limax, a snail.) The lachry and duets, from their likeness to the horns

of a snail.

C. of bone. (F. canalicules osseux; G. Knockenkanaleken.) Fine, tortuous, branching tubes running between the lacunæ of bone, or between an Haversian canal and a lacuna. See Bone.

C. petro'si. (L. petrosus, rocky; applied to a part of the temporal bone.) Two very narrow cauals, or sometimes only channels, on the upper surface of the petrous bone on the outer side of the superficial petrosal sulcus, transmitting the greater and lesser superficial petrosal nerves.

C. semicircula'res. The Canals, semi-circular.

C. semina'les. (L. semen, seed.) The

Tubuli seminiferi.

C. semina'les rec'ti. (L. semen, seed; rectus, straight.) The Vasu recta of the testiele.
C. seminif'eri.

The Tubuli seminiferi.

c. vasculo'si. (L. rocation, a small vessel.) The canals for the transmission of blood-vessels in bone, including the nutritious and the Haversiau cauals.

Canaliculisation of bone. (L. canaliculus.) The process of development of the canaliculi; also called *Lusculurisation of bone*.

Canalic'ulus. (L. canaliculus.) A small channel.

c. communicatio'nis. (L. communicatio, a making common.) A small canal frequently to be found at the hinder end of the superior angle of the petrons bone, by means of which the middle fossa of skull communicates with the sulcus transversus of the parietal bone.

C. innomina'tus. (L. in, neg.; nomen, a name.) A small canal situated near the foramen spinosum, or near the foramen ovale of the sphenoid bone, which transmits the small super-

ficial petrosal nerve.

c. mastoïdeus. (Maστόs, a breast; εἴδος, likeness.) A small cand, commencing in the lateral wall of the jugular fossa, which runs along the antero-lateral part of the mastoid process, and opens into the petromastoid fissure; it transmits the auricular branch of the vagus nerve, Arnold's nerve.

**C. pharynge'us.** (Φάρωγξ, the pharynx.) A groove on the under surface of the body of the sphenoid bone, which is more or less completely converted into a canal by the sphenoid process of the palate bone. It transmits the ptery gopalatine nerve.

**C. pharynge'us accesso'rius.** (Φ.i-ρυγξ, the pharynx; L. accedo, to be added.) Λ cand accessory to the Vidiau on the under surface of the processus ad vomerem of the sphenoid bone, or between the latter and the body of the sphenoid.

**C. pterygopalati'nus.** (Ητέρυξ, a wing; L. palatum, the palate.) The C. pha-

ryngeus.

C. sphenoida'lis latera'lis. (Sphenoid bone; L. lateralis, pertaining to the side.) A small canal taking origin in a small furrow of the sphenoid bone lying between the sulcus tubus Eustachii and the foramen ovale, and ending near the sulcus caroticus between the lingula and the foramen rotundum.

C. sphenoida'is media'is. (L. medialis, belouging to the middle.) A small, short canal, arising in a furrow of the sphenoid bone, lying between the sulcus tube Enstachii and the foramen ovale, and opening into the Vidian

canal.

**C.** sphenopalati'nus. ( $\Sigma \phi \hat{n} \nu$ , a wedge; palatum, the palate.) The Canal, pterygopalatine.

**C.** sphenopharynge'us. ( $\Sigma \phi \dot{\eta} \nu$ , a wedge; pharynx, the gullet.) The C. pharynarynarynaryn

- **C. tympan'icus.** ( $T^{\delta}\mu\pi\alpha\nu\sigma\nu$ , a drum.) A eanal commencing in the fossula petrosa or in the fossa jugularis of the temporal bone, and passing outwards and somewhat backwards to the tympanum, where it opens by a small aperture below the promontory; it transmits Jacobson's nerve.
- C. vomerobasila'ris latera'lis supe'rior. (L. vomer, the bone of that name; basis, a base; lateralis, belonging to the side; superior, upper.) The C. vomerosphenoidalis lateralis superior.

C. vomerosphenoida'lis latera'lis infe'rior. The Canalis vomerosphenoidalis laterales inferior.

C. vomerosphenoida'lis latera'lis supe'rior. (L. lateralis, lateral; superior, that is above.) A canal frequently found between the

vaginal process of the sphenoid bone and the lateral border of the ala of the vomer; it transmits blood-vessels and a pharyngeal branch of the

sphenopalatine ganglion.

C. vomerosphenoida'lis media'nus. (L. media'nus, middle.) A canal frequently found between the posterior extremty of the ineisura vomeris and the inferior surface of the body of the sphenoid; it transmits hlood-vessels to the body of the sphenoid, and to the sphenoidal sinuses.

Cana'lis. (L. canulis, from canna, a pipe.)
A channel.

C. alveola'ris aute'rior. (L. alveolus, a small hollow; anterior, in front.) The foremost channel descending from the infraorbital canal.

C. alveola'ris infe'rior. (L. inferior, lower, G. Unterkieferkanal.) The dental canal.

C. alveola'ris me'dius. (L. medius, middle.) The middle channel or channels descending from the infraorbital canal.

C. alveola'ris poste'rior. (L. posterior, hinder.) The posterior channel or channels descending from the infraorbital canal.

C. arterio'sus. The Ductus arteriosus.
C. auricula'ris. (L. canalis, a canal; auricula, the auricle of the heart.) The clongated

constriction between auricular and ventricular parts of the heart of the embryo.

**C. biflex'us.** (L. bis, twice; flexus, part. of flecto, to bend. F. canal biflexe.) A sac, bent upon itself, situated between the hoofs and screting a thick sebaceous substance. It is found in the sheep and sometimes in the goat.

C. Botal li. The Ductus arteriosus.

C. canalicula'tus. (L. canaliculatus, channelled.) The gorget formerly used in lithotomy.

**C. carot'icus.** (Καρωτίδης, the carotid arteries.) The carotid canal.

C. centra'lis. (L. centralis, in the middle.)
The Canal, central, of spinal cord.

C. centra'lis cochl'ea. (L. centralis, in the middle; cochlea, a part of the inner ear.) Same as Canal, central, of modiolus.

C. centra'lis medulla'ris. (L. centralis; medulla, marrow.) The Canal, central, of spinal cord.

C. centra'lls modi'oli. See Canal, central, of modiolus.

C. cervicis. (L. cervix, the neck.) The canal of the cervix uteri.

C. cervicis u'teri. (L. cervix, uterus, the womb.) The canal of the neck of the womb; it is tubular, slightly flattened from frent to back, widest in the middle, and communicates above with the uterus, below with the vagina. On its anterior and posterior walls is a longitudinal ridge, from which lateral upward springing rugæ arise, the Arbor vitæ uterina.

**C. choled ochus.** (Χολή, bile; δοχή, a receptacle.) The common bile-duct; Ductus

communis choledochus,

**C. ehor'dæ tym'pani.** ( $Xop\delta n$ , a cord;  $\tau \dot{v}\mu m a vov$ , a drum.) A canal on the outer side of the Enstachian tube in the angle between the petrous and squamous portions of the temporal boue; it transmits the chorda tympani nerve.

C. cochleæ. (L. cochlea, a snail-shell.) This term and its equivalents, cochlear canal and canal of cochlea, have been very loosely applied. It has been applied to the spiral windings of the osseons tube forming the cochlea, to the canal bounded by the membrane of Reissner and the membrana basilaris, and also, by the subdivision of this space, to the upper part of the same canal between the membrane of Reissner and the membrane tectoria.

C. coch'leæ os'seus. (L. cochlea; osseus, bony.) The bony part of the canal of the cochlea. C. coch'leæ spira'lis. See Canal, spiral,

of cochlea.

C. cochlea'ris. (L. cochlea, a snail-shell. G. Schneckenkunal.) The triangular canal at the outer part of the scala vestibuli of the cochlea, its inner boundary being the membrane of Reissner, its outer the osseous wall of the cochlea, and its lower the membrana basilaris with the organs of Corti. Also called ductus cochlearis, canalis eochleae, canalis membranaceus, scala media, and Reissner's canal.

C. condyloï deus. (Κόνδυλος, a knob; είδος, hkeness.) The canal for the transmission of a vein, the external opening of which, the posterior condyloid foramen, is situated in the depression behind each condyle of the occipital

bone.

C. condyloi'deus poste'rlor infe'rlor. (L. posterior, hinder; inferior, lower.) The Sulcus condyloideus.

C. craniopharynge'us. (Kpaviov, the

skull; φάρυγξ, the pharynx.) A canal perforating the floor of the sella turcica of the sphenoid bone in the focus, and often in the infant, which transmits a small artery and vein, with a process of dura mater which originally had relation to the development of the pituitary gland.

C. crura'lis. (L. crus, the leg.) Same as Canal, fimoral.

C. de'ferens. Same as Vas deferens.

C. eminen'tiæ quadrigem'inæ. eminentia, a prominence; quadrigeminus, four-fold.) The Aquaductus Sylvii.

- C. excrete rius linguae. (L. excerno, to separate; lingua, the tongue.) A short canal, present in 24 per cent. of subjects, which opens externally at the foramen excum of the dorsum of the tongue.
  - C. Fallo'pii. The Aquaductus Fullopii.
- C. fibro'sus vase'rum tibia'lium antice'rum. (h. fibra, a fibre; vas, a vessel; tibia, the bone of that name; unticus, in front.) A fibrous canal at the upper extremity of the interesseous ligament of the leg, which transmits the anterior tibial artery, veins, and nerve.

C. gangliona τis. (Γάγγλιον, a nerveknot.) The Tractus spiratis foraminalentus.
 C. guttura lis aur'is. (L. guttur, the

throat; auris, the ear.) The Eustachian tube.

C.guttura'lis tym'pani. (l. guttur, the throat; tympanum, a drum.) The Eustachian

- C. gynecophor'icus. (Γυνή, the female: φορέω, to bear.) A fissure in the ventral surface of the male of the Bilharzia hamatobia, which becomes a canal by the overlapping of the lateral walls; it receives the female when in the act of impregnation.
- **C. hypoglos'si.** ('Υπό, under; γλῶσσα, the tongue.) The anterior condyloid foramen of the occipital bone, which transmits the hypoglossal nerve.

**C.** intestino'rum. (L. intestina, the intestines.) The intestinal canal.

C. latera'lis. (L. lateralis, belonging to

the side.) The Canaliculus vomerosphenoulalis lateralis superior.

C. mandibula'ris. (L. mandibula, the lower jaw.) The dental canal.

C. maxilla'ris. (L. maxilla, the jaw.) The dental canal.

C. me'dius. (L. medius, in the middle.) The Aquaductus Sylvii.

C. medul'læ spina'lis. (L. medulla, marrow; spina, the spine.) The neural or vertebral canal.

C. membrana'ceus. (L. membranaceus, composed of membrane.) The C. cochleavis.

C. musculoperonæ'us. (L. musculus, a muscle; περόνη, the fibula.) A canal formed in the fibres of the flexor longus pollicis for the

transmission of the peroneal artery.

C. musculotuba rius. (L. musculus; tula, a trumpet.) The joint canals for the tensor tympani and the Eustachian tube.

C. ner'vus fistulo'sus re'num. nervus, a sinew; fistula, a pipe; ren, the kidney.) The meter.

C. er'bitæ nasa'lis. (L. orbita, an orbit; nusulis, belonging to the nose.) The nasal

C. palati'nus descen'deus. (L. palatum, the palate; descenden, to pass down.) Same as Canal, pulatine, posterior.

C. palati'nus tym'pani. (h. palatus the palate; tympanum, a drum.) The Eustachian tube.

C. peripher'icus medi'eli. (L. peripheria, the circumference; modiolus, the nave of a wheel.) The Canal, spiral, of modivilus.

C. reu'niens. (L. re, an inseparable particle meaning again; unio, to unite.) A short, narrow canal, connecting the saccule of the vestibule of the membranous labyrinth with the canalis cochlearis; it is haed with epithelium.

C. rotun'dus. The Forumen rotundum of

the sphenoid bone.

C. scala'rum commu'nis. (L. scala, a staircase; communis, common.) The infundibulum of the cochlea.

C. semicircula'ris horizonta'lis. (L. semi, half; virculus, a circle; horizon.) The external semicircular canal.

C semicircula'ris vertica'lis poste'rior. (L. vertex, the summit.) The posterior semieireular canal.

C. semicircula'ris vertica'lis supe'rior. The superior semicircular canal.

C. spira'lis membrana'ceus. (G. häntige Schneckenkunul.) The same as Reissner's canal.

C. spira'lis modi'oli. See Canal, spiral, of modrolus.

C. stigmaticus. (Stigma. G. Narben-kanal, Greffencanal.) The more or less distinct canal which exists in the centre of the style of a flower; it is generally occupied by loose cellular tissue.

**C. tar'si.** (Tap $\sigma$ o's, a broad flat surface.) The depression between the two articulating surfaces of the astragalus and calcaneus.

C. tar'si accesso'rius. (Τσρσός, the tarsus; accedo, to be added to.) The canal which exists when the anterior calcance-astragaloid articulation is divided into two.

C. transversa'rius. (L. transversarius, lying aeross.) The canal formed by the superposition of the perforated transverse processes of the six upper cervical vertebra connected by the intertransverse ligaments; it transmits the vertebral artery.

C. veno'sus. The Ductus venosus.

C. vo'meris. (L. romer, the bone of that name.) The Canaliculus vomerosphenoidalis medianus.

C. vomerobasila'ris latera'lis infe'rior. (L. vomer; basis, a base; lateralis, belonging to the side; inferior, lower.) The C. vomerosphenoidalis lateralis inferior.

C. vomerosphenoida'lis latera'lis

inferior. (L. vomer; sphenoid, the bone of that name.) The pterygopalatine, where a portion of the ala of the vomer enters into its formation.

Canalisa'tion. (Same etymon.) The conversion of a vessel, especially a vein, into a

rigid tube.

Also, the boring through a structure, as of the prestate gland for retention of urine from prostatic enlargement.

Canal's. (L. eunalis, a channel.) Channels, ducts.

C., ac'cessory pal'atine. (L. accedo, to be added; palatus, the palate.) One or more small orifices in the posterior part of the horizontal plate of the palate bone.

C., af'ferent. (L. affero, to convey to.) Same as C., incurrent.

C., a'picai. (L. apex, a summit.) Two

eanals proceeding from the funnel of some Ctenophora to the apical pore.

C., billiary. Same as Capillaries, biliary.
C., bone. The Haversian canals.

C., bone, of Eresch'et. C., Breschet's.

C., Bresch'et's. See Breschet's bonecanals.

C., ctenoph'oral. (Κτείς, a comb; φορέω, to bear.) A series of canals with cæcal extremities running longitudinally along the body of Ctenophora in the direction of the locomotive hands or ridges.

C., Cu'vier's. Same as Cavier, ducts of. C., demicircular. The semicircular canals of the internal ear.

C., ef'ferent. (L. effero, to earry out.) Same as C., excurrent.

C., ejac'ulatory. Same as Ducts, ejaculatoru.

C., excurrent. (L. ex, out of; curro, to run.) A series of canals in sponges, which commence in the interior by junction with the incurrent canals, and running to the surface open by the oscula; they convey the water to the outside.

C., galactoph'orous. See Ducts, galactophorous.

C., Havers'ian. See Havers, canals of.
C., incurrent. (L. in, into; curro, to run.) A series of canals in sponges, arising from the pores and joining the excurrent canals; by them water is conveyed into the substance of the

C., intralob'ular bil'iary. (L. intra, within; lobulus, a lobe; bilis, bile.) A fine network running between and amongst the hepatic cells, being the commencement of the biliary They are beheved to possess proper ducts. walls. Also called biliary capillaries.

C., juice. (F. canaux de suc; G. Saftkanälchen.) A term given to the inosculating branched connective-tissue cells, on the supposition that a circulation of plasma occurs in them.

It is not thus generally held.

C., lach'rymal. The canals leading from the eye to the lachrymal sac; also called Cana-

liculi lachrymales.

C., ma'lar. (L. mala, the cheek.) One or more small canals passing from the orbital to the facial and other surfaces of the malar bone and transmitting vessels and nerves.

C., nu'tritive, of bone. The Haversian canals.

Also, the canals for the transmission of bloodvessels to bone.

C. of Ha'vers. See Havers, canals of.

C., paragas tric. ( $\Pi \alpha \rho \dot{\alpha}$ , alongside of;  $\gamma \alpha \sigma \tau \dot{n} \rho$ , the stomach.) Two canals arising from the base of the stomach of Ctenophora, one on each side, and running along towards the oral extremity, where they have a blind ending.

C., perivas cular. (Περί, around; L. vasculum, a little vessel.) Sheaths derived from the connective tissue of the pia mater, which surround the blood-vessels of the membrane more or less loosely, and accompany them in their capillary ramifications in the encephalon and spinal cord. They may be injected from the subarachnoid space, and contain a clear lymphlike fluid.

C., po'rous. This term was originally given to the radiated strike of the vitelline membrane of the ova of fishes by Remak, who believed them to be very fine canals. This system of radiated pores is found in many Invertebrata, as the Echinoderma, and among Vertebrata in fishes and in mammals. Some have doubted the existence of these canals, and have attributed the appearance to deeper coloured lines.

C., por'tal. Tubular passages in the liver, commencing at the transverse fissure, and branching in all directions in the substance of the gland; the larger canals are liued by a prolongation of the capsule of Glisson; they contain a branch of the portal vein, of the hepatic artery, and of the biliary duct.

C., ra'dial. (L. radius, the spoke of a wheel.) Two primary canals arising from the lateral part of the stomach of some Ctenophora, one on each side, each branching into two secondary radial canals, and these again into tertiary, which last open at right angles into the ctenophoral canals.

C., resinif'erous. (L. resina, resin; fero, to bear.) Channels or duets in plants con-They may be either vascular taining resin. structures formed by the absorption of adjacent end-walls of contiguous cells, or they may be in-

tercellular spaces.

C., semicircular. (L. semi, an inseparable particle signifying half; circularis, circular. G. Bogengange.) Three bony canals, '05" in diameter, each forming two thirds of a circle, situated above and behind the vestibule of the inner ear, and opening into it by five orifices; one end of each is double the width of the remainder of the tube, and is called the ampulla. They are lined by a thin periosteum and contain a fluid, the perilymph, and the membranous

The superior semicircular canal is vertical and transverse in direction; the crown of its arch forms a smooth projection on the anterior surface of the petrous bone. The ampulla is the most outward end, and opens into the upper part of the vestibule, the other end joins the non-dilated end of the posterior canal; they open conjointly into the back part of the vestibule.

The posterior semicircular canal, the longest of the three tubes, is vertical and longitudinal in direction; its arch is directed to the posterior surface of the petrous bone; its ampulla is at the lower and back part of the vestibule, its other end joins the superior canal in the common orifice

ahove mentioned.

The external semicircular canal is horizontal and external in direction; its ampulla is just above the fenestra ovalis; its other end opens at the upper and back part of the vestibule.

The membranous semicircular canals are contained within the osseous canals; they are of the same shape, about one third the diameter, and open in the same manner into a central cavity, called the utricle. The ampulke are dense in structure, and nearly fill the osseons ampullæ. The convexity of the canals is attached to the osseous walls; in the ampulla it forms a projection, the septum transversum, and receives vessels and nerves. The canals have three coats: an outer fibrous layer of the same character as the periostenm, and containing irregular pigment cells, from it slender fibrous bands pass to the periostenm of the osseous canal, and convey minute blood-vessels; a middle layer, the tunica propria, clear and somewhat transparent, with numerous papilliform projections into the canal; an inner layer, consisting of tesselated epithe-

lium, excepting over the septum transversum of the ampulle, where it is columnar and conicalbesed; between and below these cells are small spindle-shaped cells, from which, or from the columnar epithelium, spring delicate non-vibra-tile hairs; the fibrils of the branches of the auditory nerve approach the base of, and have an intimate connection with, these two sets of cells, but the exact relationship is as yet unas-certained. Three branches of the vestibular division of the auditory nerve enter the respective ampullae of the three membranous canals, and, splitting up, are distributed to the ampullae The blood supply is from the vestibular branch of the internal auditory artery. The membranous canals contain a fluid, the endolymph.

C., semicir cular, membranous. See

C., semicircular.

C., semicir'cular, os seous. (L. os, a

bone.) See C., semicircular.

C., temporoma'lar. One or more canals the oritices of which are seen on the orbital surface of the malar bone; one opens on the posterior surface, and one or more on the facial surface of the bone. They transmit the temporomalar branches of the orbital branch of the superior maxillary nerve.

C., zygomatic. (Ζύγωμα, the eheck-hone.) Same as C., malar.
 Canan'ga. The Uvaria odorata.

Canapa cia. The Artemisia vulgaris. Cana'ra. A district on the west coast of

India, south of Bombay. C. veg'etable but'ter. A solid oil obtained by boiling the fruit of Vateria indica,

and used in rheumatism. Canarina. A Genus of the Nat. Order

Campanulacia. C. campan'ula. (L. campanula, a little bell.) A species the roots and young shoots of which are used as food.

Cana'rium. A Genus of the Nat. Order

Amyridacea.

- C. balsamif'erum. (L. balsamum, balsam ; fero, to bear.) Yields a resin resembling elemi.
- C. commu'ne, Linn. (L. communis, common.) Hab. Moluccas. The species said to furnish the officinal elemi. The seeds, called The seeds, called Java almonds, are made into bread.
- C. mehen bethen. The C. commune.
  C. stric'tum, Roxb. (L. strictus, drawn together.) A species which is the chief source of black dammar, which is used as a substitute for Burgundy pitch.

C. vulga're. (L. vulgaris, common.) The C. commune.

C. zephyri'num. (L. zephyrus, a gentle west wind.) A species supplying a resin.

Canary archil. Same as C. weed. C. grass. The Phalaris canariensis.

C. rose'wood. The Genista canariensis.

C. seed. (F. semence de canarie; G. Kanariensamen.) The fruit of Phalaris canarien-The flour of the seeds has been used as food for man, as well as birds, and as an emollient noultice.

C. weed. A commercial name of the litmus, Roccella tinctoria, obtained in the Canary

Islands.

C. wine. See Wine. Canary Islands. A group of seven islands, with several islets, situate in the North Atlantic, about sixty miles from the west coast

of Africa, between the parallels 27° 4' and 29° 3' N. Lat. and the meridians of 13° 3′ and 18° 2′ W. long. They are of volcanie origin. The climate is mild, dry, and salubrious, and in the plains very equable, the daily range seldom exceeding 3.33° C. (6° F.) From April to October a north or north-east wind is prevalent during the day, which produces during summer a stra-tum of sea cloud, which does not descend lower than 3000 feet above sea level. In the winter a south-east wind, the Levante, blows across the Asiatic deserts, and is very injurious to animal and vegetable life. Harricanes are rare. Teneriffe is the only one used as a residence for invalids.

Canaveilles. France; Departement des Pyréuées-Orientales. A thermal water, temp. 54° C. (129.2° F.), containing sodium and hydro-

gen sulphide.

Can'caman. (Κάγκαμον.) Λ term which seems to have been applied to various gums and mixtures of gums.

Also, a term for Animé.

Can'camum. See Cancaman.

Can'camy. See Animé.

Can cellate. (L. cancelli, lattices. F. cancelle; G. gitterformig, vergittert.) Having a latticed or reticulated appearance.

Can'cellated. (L. cancelli, lattice-work; cancellatus. G. gegittert.) Ilaving a structure

as of network.

C. os'seous tu'mour. Same as Exostosis, cancellous.

**Cancelli.** (L. dim. of cancer, a lattice; akin to κιγκλίς, a latticed gate.) The lattice-work of the spongy portion of bones, consisting of thin plates and bars interlacing with each other, and forming arches and buttresses in the direction of greatest pressure.

Cancellous. (Same etymon.) Having

a structure as of network.

C. exosto'sis. See Exostosis, cancellous. C. tis'sue. (G. schwammige Knockensubstanz.) The spongy tissue in the interior of bone, made up of fine interlacing fibres and plates of hone. It forms the bulk of the articulating ends of long bones and of the substance of the short bones; it is called diploë in flat bones. does not differ in essential structure from the compact tissue, but passes into it gradually by consolidatiou.

Cancellus. (Dim. caneer, a crab.) The

Cancer Bernhardus, or hermit erab.

Can'cer. (Kapkivos, a crab. L. cancer; F. cancer; I. cancro; S. cancer; G. Krebs. So called because the veins ramifying round the part involved are like a crab's claw; or because, as anciently believed, an animal was attacking the diseased parts.) A malignant disease defined, in the nosology of the Roy. Coll. Phys., London, as a deposit or growth that tends to spread indefinitely into the surrounding structures and in the course of the lymphatics of the part affected, and to reproduce itself in remote parts of the body, to which may be added, and to return after removal. Cancerous tumours are composed of a fibrous framework, or stroma, earrying bloodvessels, and so disposed as to form spaces, loculi or alveeli, communicating with each other, and containing, besides granular matter, nuclei and fat globules, many variously-shaped, uncleated, often vacuolated cells, lying close together, and having no intercellular material. Such tumours generally yield on pressure, after incision, a whitish, milky juice. The mode of origin is uncertain; by Thiersch it is looked on as a hyperplasia of epithelial structures, by Köster as arising in the lymph spaces, by Classen as a development from migrated leucocytes, by Virchow as an outcome of the connective-tissue corpuseles. The rapidity or grown. variable. The structures of cancer are very The rapidity of growth is very liable to degeneration; the cells may become fatty; inflammation, suppuration, and gangrene may occur; caseous degeneration and calcareons deposit are not uncommon.

Secondary deposits may occur, through the medium of the lymphatics, in the lymphatic glands; or through the blood-vessels in structures next in the order of circulation to the primary tumour; or by mechanical transfer of particles along other channels than these. The infective properties of cancer are believed to be generally in direct ratio to the amount of cell structure in the tumour, with the exception of epithelioma.

Cancer is doubtless in some amount hereditary; its frequency increases with increase of years; it attacks females much more frequently than males, and is believed to occur most often in those of sanguineous temperament. External violence or persistent irritation may secure the development of cancer. The female breast and the uterus are very frequently attacked; the tongue is a common seat of the disease, as also the pylorus, the sigmoid flexure, and the anus. Cancer is more common in the civilised than the savage races, in Europe than in other quarters. It is said to be less frequent towards the watersheds than in the low-lying districts around the mouths of rivers. Cancer causes death by producing cachexia and exhaustion, by interfering with the course of the contents of natural channels, by destruction of an organ of importance to life. When the tumour is external it usually produces inflammation and nlceration of the skin, from pressure and infiltration of disease; portions of the tumour slough, a factid sanious discharge occurs, blood-vessels are opened, and loss of blood results; and death is produced by pain and exhaustive discharges. Blood-vessels and lymphatics grow with the growth of a can-cerous tumour, but not nerves. Encephaloid consists of albuminous matter only, scirrhus contains gelatine also, and colloid possesses a special form of gelatine.

Also, a term for an eight-tailed bandage; those resembling, it was thought, a crab's

C., ac'inous. (L. acinus, a berry.) A synonym of Encephaloid cancer.

C., acu'te. Encephaloid cancer.
C., ad'enoid. ('Aòip', a gland'; ¿lòos, likeness.) Usually originates on a mucous surface. more rarely in a parenchymatous organ. It is very vascular, soft, and has an abundant milky juice; it has a well-marked stroma in the alveoli, on which are arranged cylindrical tubules, lined with columnar or spheroidal epithelium, and having a central canal. It is very malignent; and is often to be distinguished with difficulty from adenoma.

C., alve'olar. (L. alveolus, a small cavity.) Colloid cancer.

C., aneurys'mal. (Ανεύρυσμα, a widening.) Cancer accompanied by creetile tissue.

C., an'nular. (L. annulus, a ring.) Cancer affecting the whole periphery of a tube, such as the pylorus or the rectum.

C., ap'inoid. ('Aπινής, free from dirt;

eldos, likeness.) A synonym of scirrhus from the cleanness of its section.

C., aquat'ic. (L. aquaticus, watery.) Gangrenous stomatitis.

C., are olar. (L. areola, a small open space.) Colloid cancer.

C., black. Melanotic cancer.

C., bu'nioid. (Βούνιον, the earth-nut; or βουνιάς, a kind of turnip; or βουνός, a hill; eldos, likeness.) A scirrhous tumour of rounded

C., cavern'ous. (L. caverna, a hollow.) A term applied to a cancer, of a colloid or cystic nature, when the contents of the cysts or alveoli have been absorbed.

C. cells. (F. cellules cancereux; G. Krebs-zellen.) The cells which are found in all cancers. They are large, 1-600th" to 1-1300th" in diameter, varying in shape according to their surroundings, round, oval, polygonal, or candate, with round or oval, well-defined, large nuclei and one or more bright nucleoli. They undergo rapid degeneration, and frequently contain fat globules.

C., cel'lular. (L. cellula, a small room, a cell.) Encephaloid cancer, from the abundance of cancer cells.

C., cereb'riform. (L. cerebrum, brain; forma, shape.) Encephaloid cancer, from its consistence and appearance. C., chim'ney-sweep'ers'. (F. cancer des

ramoneurs; 1. canero de spazzocammini; G. Schornsteinfegerkrebs.) Epithelioma of the scrotum, caused by the irritation of soot; whence its name. It begins as a tubercle, which cracks and ulcerates; it spreads rapidly, involves the testes, the inguinal and pelvic glands.

C., chon'droid. (Χόνδρος, cartilage; εἶδος, likeness.) A cancerous tumour in which cartilage is also found.

Also, a term applied to cancers of cartilaginous appearance and density.

C., chron'ic. (Χρόνος, time.) Scirrbous

cancer, from its generally slow progress.

C., col'loid. (Κόλλα, glue; εἶδος, form.

F. cancer colloide; I. canero colloide, e. gelatinoso; G. Gallertkrebs.) The form in which the alveolar structure is most distinct. The spaces vary in size from that of a pin's head to that of a pea; they are round or oval, and communicate freely with each other; the walls are formed of a fibrous structure, usually thin and delicate, and containing obscurely defined fusiform cells; their contents are glutinous, semitransparent, whitish, or yellowish, or reddish brown, and contain mucin, but no gelatin. The cancer cells, some of which may be of endogenous origin, are found in all stages; in the later ones they are chiefly replaced by mucoid material, but in the early growths they are closely packed and fill the alveoli; very soon they undergo a mucous degeneration, increasing in size, breaking up, and leaving only a granular mucus in their place; fatty degeneration also occurs, and now and then calcareous deposit. Colloid occurs most frequently in the stomach and omentum; it is found in the ovaries, bones, kidneys, uterus, spleen, and occasionally in the lungs; it is prone to spread by immediate extension, but also propagates itself as a secondary tomour in the lyinphatic glands. It is the least malignant of the forms of cancer, and does not induce the cancerons cachexia in so marked a manner.

C., connect'ive-tis'sue. A term which

includes seirrhous and, according to some, encephaloid enneers.

C., connect'ive tis'sue, hard. A synonym of C., scirrhous.

C., connective-tis'suc, soit. A syno-

nym of C., encephaloid.

C., cyl'inder cell. A form of epithelial cancer in which the cells are of a more or less cylindrical form. Same as some forms of C., adenoid.

C., cys'tic. (Κέστις, a bladder.) A syno-

nym of colloid cancer.

This term is also applied to any of the forms of cancer when accompanied by the growth of eysts, which may be either simple or compound. The cystic condition may be produced by the growth of a cancer in a cyst-wall, by the increase of natural cavities, or by the softening and collapse or removal of the cancer cells.

C., dendrit'ie. (Δένδρον, a tree ) A form of cancer in which the stroma is developed in a

branched fashion.

C., eburn'eous. (L. chur, ivory.) A form of lardaccous degeneration of the mammary

gland, erroneously called cancer.

C., enceph'aloid. ('Εγκέφαλος, the brain; εlδος, form. F. encephaloide; 1. encephaloide; S. encephaloides; G. Markkrebs.) Medullary cancer. Encephaloid cancer is of rapid growth, and soft structure. The stroma is very debeate, the cells very abundant, and the milky juice very plentiful. Encephaloid may exist as a distinct tumour or a diffuse infiltration; it is white and opaque on section, and is much subject to softening and fatty degeneration; patches of pigment are not very uncommon. It is markedly malignant, rapidly producing a well-marked cachexia and lymphatic disease. Several varieties have been described, among which are villous, hamatoid, pultaceous, lipomatous, and melanotic cancers; it differs from seinhus only in the rapidity of its growth.

C., encephalo'matous. encephaloid. Same as  $C_1$ .

C. en cuiras'se. (F. en, in; euirasse, a breastplate.) A term applied to cancer of the breast when the neighbouring skin has become largely implicated, and when the disease has undergone atrophie change.

**C.**, endothe lial. (  $\Xi\nu\delta\sigma\nu$ , within;  $\tau i\theta\eta$ - $\mu\iota$ , to place.) A term given to cancers of the same nature as epithelial cancers, arising, it is asserted, from increase of the endothelium of

lymphatic vessels.

C., epithe'lial. ( Επιτίθημι, to place upon. F. epitheliama; I. canero epiteliale; G. Epitheliam.) This form of cancer originals almost entirely on epithelial surfaces or in secreting glands; it is most common on the lips, edges of cyclids, and tongue, in the anus, vagina, and uterus. It varies in size, is friable and granular, and yields a thick, whitish, pulpy juice. The stroma is fibrous, vascular, and contains remnants of the healthy tissue of the part in which the growth occurs. The cells are nucleated, polygonal, and are formed upon the strona, the older cells occupying, in confused or stratified manuer, the centre of the alveoli. It consists essentially in hyperplasia of the epithelial structures. It is the least malignant of all the forms of cancer, but it does contaminate the lymphatic glands. It is more common in older than in young persons, and in men than in women. It is liable to be produced by local irritation, as a pipe or a broken

tooth when in the lips, soot when in the scro-

C., epithe'lial, gelat'incus. The disease otherwise called Cylindroma.

C., epithe'Hal, of sero'tum. Chimneysweepers' cancer.

C., erectile. (L. erigo, to erect.) Hæmatoid cancer.

C., tascic'ulated. (L. fasciculus, a small bundle.) The same as Spindle-celled sarcoma.

C., fibrous. (L. fibra, a fibre.) Scirrhous cancer, from its appearance.

C., fung'ous. (L. fungus, a mushroom.) The humatoid variety of encephaloid cancer.

C., gelatin'iform. (tielatin ; L. forma, shape.) Colloid cancer, from its appearance.

C., gelatinous. (Gelatin.) Colloid cancer, from its consistence.

C., gland'ular. (L. glans, an acorn.) Adenoid cancer.

C., gland'ular-cell. Same as C, adenoid.

C., gum. Colloid cancer, from its appearance.

C., gum'mous. Colloid cancer, from its appearance.

C., hæ'matoïd. (Alua, blood; sidos, form. L. fungus hamatodes; F. fongus hematode; L. fungo cmatode; G. Blutschwamm.) A variety of encephaloid cancer in which the vascular element is largely developed. Serious bleedings often occur, and hasten death.

C., hard. Searthous cancer, from its firm

consistence.

C., hy'aloid. ("Yalos, glass; eldos, likeness.) A cancer having a translucent, glasslike appearance when cut.

C., integument'al. (L. integumentum, a covering.) Epithelial cancer, because it chiefly

attacks the integument.

C. juice. (F. sue cancéreux; G. Krebs-saft, Krebsmilch.) The milky fluid, containing cancer cells, which may be squeezed out of all cancerous growths.

C., lard'iform. (L. lardum, the fat of hacon; forma, likeness.) A scirrhous cancer

having an appearance of lard.

C., lari noid. (Λυρινός, fatted; εἶδος, likeness.) A seirrhous cancer having a greasy appearance. C. lentic'ular. See Carcinoma lenticulare.

C., lipo'matous. ( $\Lambda i\pi os$ , fat.) A variety of encephaloid cancer in which the cells contain oil in their earliest stage, increasing with their growth to such an extent as to give the tumour an appearance as of fat.

C., lu'pous. Same as lupus.

C., mas'toid. (Muoros, the breast; eldos, likeness.) A variety of scirrhous cancer which, on section, looks like boiled udder.

C., medul'lary. (L. medulla, marrow.) Encephaloid cancer.

C., mel'anoid. (Mélas, black; ellos,

likeness.) Melangtic cancer.

C., melanot'ic. (Milas, black. F. cancer melanique; 1. cancro melanotico; G. Pigment-A variety of encephaloid cancer in which the cells contain black pigment, or melanin. Tho growths which follow as secondary to a melanotic cancer do not always contain pigment.

C., milt-like. A soft, pale, encephaloid

cancer; like the milt of a tish.

C., mu'cous. Colloid cancer, from its appearance and consistence.

C. multicel'lular. (L. multus, many;

A term which cellula, a little room or cell.) includes adenoid and encephaloid cancers.

C., myxo'matous. (M $\acute{v}\xi a$ , mncus.) A cancer in which there has occurred a mucous degeneration of the stroma.

C., na/piform. (L. napus, a turnip; forma, shape.) A scirrhous cancer having the form of a turnip.

C., neph'roid. (Νεφρός, a kidney; είδος, likeness.) A cancer having the appearance of a kidney in structure.

C., oc'cult. (L. occultus, part. of occulo, to cover.) A cancer before it has ulcerated.

C., o'pen. A term applied to an ulcerating

C., os'teoid. ('Oστέον, a bone; είδος, likeness.) Tumour originating in, and chiefly composed of, hone; very malignant. It is probably an ossifying sarcoma.

C., pap'illary. (L. papilla, a nipple.) A variety of epithelial cancer in which the papillæ

of the corium are much developed.

C., pave'ment-cell. A term used to describe the typical epithelial cancer, in which the cells are more or less of the character of tesse-

lated or pavement epithelium.

C., pave'ment-cell, cicatric'ial. (L. cicatrix, a sear.) The form of epithelial cancer in which there is a retrograde and absorptive metamorphosis of the cells and a cicatricial contraction of the stroma. It is usually a slowlygrowing disease, and occurs on the skin of the face of old people.

C., pave'ment-cell, pap'illary. epithelial cancer having a warty or villous sur-

face.

C., phy'matoïd. (Φῦμα, a tumour; εἰδος, likeness.) The same as Cancer reticulare.

c., pig'mentary. (L. pigmentum, a paint.) A form of round-cell sarcoma.

Also, a synonym of C., metanotic.

C., primary. (L. primus, first.) The first growth; the original tumour, to which any others that may arise are secondary.

C., pulta'ceous. (Πόλτος, porridge.) A variety of encephaloid cancer in which the septa of the alveoli are thick and large, and from which the contents escape as a thick pulp.

C., ra'piform. (L. rapum, a turnip; forma, shape.) A scirrhous cancer having the

form of a turnip.

C., retract'ile. (L. retraho, to draw back.) A cancer of the breast in which retraction of the nipple occurs.

C., re'trograde. (L. retrogrado, to go back.) A term applied to cancers when they have become firmer and smaller, and so remain.

C., ro'dent. (L. rodo, to gnaw.) Lupus. Also, the same as Rodent uleer.

C. root. Several species of Orobanche and the Phytolacca decandra are thus named.

Also, the Orobanehe virginiana.

C., sarco'matous. (Σάρξ, flesh.) A combination of cancer with sarcoma, in which the epithelium of a gland undergoes cancerous degeneration, whilst the interstitial connective tissue undergoes a sarcomatous degeneration. Frequent in the testicle and kidney.

C., scir'rhous. (Σκίροs, a hard tumour. F. squirrhe; l. scirro; S. cirro; G. Faserkrebs, Hartkrebs.) Hard cancer. It is uneven, distinet, and hard. On section, during which it ereaks, it is greyish white, glossy, fibrous, and contains some milky juice. The stroma is abundant and thick; the alveoli few and small, the cells of the common cancer character. Scirrhus is slow in progress and in the production of secondary lymphatic or other tumours; it is liable to fatty and calcareous degeneration, and to partial atrophy. It is most common in the hreast of the female, the pylorus, and the rec-

C., sec'ondary. Cancerous tumours developed in the body after, and in consequence of the infective action of, the primary tumour. They may appear in the connective tissue near the original growth; in the lymphatic glands, and vessels proceeding from its neighbourhood and in internal organs, especially the liver and the lungs.

C. se'rum. (L. serum, the watery part of a thing.) The fluid otherwise called C.

inice.

C., sim'ple. The form of scirrhous cancer which, from excess of cell-growth, approximates to the characters of encephaloid cancer.

C., soft. Encephaloid cancer, from its soft

consistence

C., so'lanoid. (L. solanum, the potato; eloos, likeness.) A cancerous tumour having the

shape of a potato.

C., stroma of (Στρώμα, anything spread. F. trame cancereuse; G. Bindegewebstroma.) The interlacement of fibres in a cancerous tumour, forming intercommunicating spaces or alveoli, which contain the cancer cells and juice. This skeleton contains the blood-vessels, and is chiefly made up of connectivetissue fibres, with a few round or spindle-shaped cells when it is growing quickly.

C., telangiectatic. ( $T\eta \lambda \varepsilon$ , far off;  $\alpha \gamma \gamma \varepsilon i o \nu$ , a vessel;  $\varepsilon \varepsilon \tau \alpha \sigma i \varepsilon$ , extension.) A variety of hæmatoid encephaloid, in which, from the first, the development of blood-vessels pre-

dominates.

C., tu'berous. (L. tuber, a swelling.) A synonym of Encephaloid cancer, from its shape. Also, see Carcinoma tuberosum.

C., tu'bular. (L. tubulus, a small pipe.)

Adenoid cancer, from its structure,

C., villous. (L. villus, a tuft of hair. G. Zottenkrebs.) A name given to encephaloid cancer when projecting into a cavity in a villous form. According to Randfleisch it is a papilloma, and not a cancer.

Also, applied to epithelioma of a mucous mem-

brane having a papillated surface.

C. weed. The Gordycra pubescens and C. weed. also the Salvia lyrata.

Can'cer aper tus. (L. aperio, to uncover.) The ulcerated stage of a cancer.

C. aquaticus. (L. aquaticus, watery.)

A synonym of gangrenous stomatitis or cancrum oris; perhaps from the free secretion of saliva which often accompanies the disease.

C. caminario'rum. (L. caminus, a chimney.) Chimney-sweepers' cancer.

C. mol'lis. (L. mollis, soft.) Soft cancer; a synonym of encephaloid cancer.

C. mundito'rum. (L. mundo, to make clean.) Chimney-sweepers' cancer. C. occultus, (L. occultus, hidden. A

cancerous tumour before ulceration. C. o'ris. (L. os, the mouth.) A synonym

of Gangrenous stomatitis.

C. os'sis. (L. os, a bone.) A term for-merly applied to caries of bone in children. C. purgato'ris infumic'uli. (L. purgator, a cleanser; infumiculus, a chimney.) Chimney-sweepers cancer.

C. reticula're. (L. reticulum, a little net.) A term applied to certain forms of encephaloid caucer in which there is a yellow reticulation over the surface, caused by more or less linear fatty degeneration.

C. scro'ti. Same as C., chimney-sweepers'. C. spu'rlus. (L. spurius, false.) A synonym of the disease Zarathan.

Can'cer. (Kapkivos, a crab.) A Genus of the Tribe Brachyura, Order Decapoda, Subclass Malacostraca, Class Crustacea. Crabs.

C. as'tacus. ('Aστακός, a kind of lobster.) The Astacus fluriatilis.

C. Bernhard'us. The Pagurus Bernhar-

dus. C. cran'gon. The Crangon vulgaris.

C. fluviatilis. The Astacus fluviatilis, C. gam'marus. (Κάμμαρος, a lobster.)

The Homarus vulgaris.

C. marinus. (L. marinus, helonging to the sea.) The C. pagurus.
C. mæ'nas. See Carcinus mænas.

C. pagurus. ( $\Pi\acute{a}\gamma ov\rho os$ , a crab. F. crabbe; I. granchio; S. cangrejo; G. Krabbe.) The crab. The flesh is somewhat difficult of digestion, and with most persons needs the addition of pepper and vinegar. Occasionally it produces urticaria, even when fresh. From this crustaceau is obtained the substance termed Chelæ cancrorum, or crab's claws.

C. ruric'ola. (L. ruricola, a countryman.) The great land-crab of the Bahama Islands, which is used as food by the negroes in many of

the sugar islands.

C. squil'la. (L. scilla, a kind of lobster.) The Palamon serratus.

Can'cer Gale'ni. A term given to Galen's bandage, in consequence of the ends in some fashion being supposed to resemble a crab's legs. See Bandage, Galen's.

Canceratic. (L. cancer. G. krebsartig.) Of the nature of, or related to, caucer.

Cancerid'eous. Same as Cancroid. Can cerism. The cancerous diathesis. Celsus's term for carci-Cancero'ma.

Can'cerous. (G. krebsartig.) Having relation to, or being of the nature of, cancer.

C. cachex'la. See Cachexia, cancerous, C. insan'ity. A term applied to the mental derangements which sometimes accompany the early stages of intracranial cancer.

Canchala'gua. The Chironia chilensis. Canchas mus. (Καγχασμός, loud

laughter.) Immoderate laughter, as in hysteria.

Cancinpericon. An old term for the steam from hot horse-dung, which was supposed to have medical virtues.

Cancre'na. Used by Paracelsus and Langius instead of Gangrana.

Can'criform. (L.cancer; forma, likeness. F. cancriforme; G. krebsformig.) Formed like

Also, having the appearance of cancer.

Can'crinc. (L. cancer.) Of the nature of cancer.

Cancro'des. (L. cancer; elĉos, likeness.) The disease cancroid, or epithelial cancer.

Can croid. (L. caner, the disease cancer; tion, likeness.) Resembling the disease cancer. A synonym of Cancer, epithelial.
Also, a synonym of Kelvid.

C., cyl'inder-epithe'lial. Same as Cancer, cylinder-cell.

C., dry. Epithelial cancer of a chronic form, in which the cells become dry soon after their formation, and contain air.

C., epithello'ma. Same as Cancer, epi-

thelial.

C., mu'cous. A term for a tumour which has received various names from different observers, who have probably, under this title and its synonyms, described more than one diseased structure, such as an adenoid cancer or a sarcoma undergoing in part mucous degeneration. See Cylindroma.

Cancro'is. A synonym of Keloid.

Cancro'ma. A synonym of the disease Cancer.

Cancro'rum che'læ. (L. cancer, a crab, χηλή, the claws.) Crabs' claws.
C. cal'culi. (L. calculus, a pebble.) Crabs'

C. concremen'ta. (L. concrementum, that which grows together.) Crabs' eyes.
C. lapil'li. (L. lapillus, a small stone.)

Crabs' eyes.

C. oc'uli. (L. oculus, an eye.) Crabs'

Can'crum. (L. cancer, the disease cancer.) The canker. An eating, spreading sore.

C. o'ris. (L. os, the mouth.) Same as Stomatitis, gangrenous.

Can'de. France; Departement ienne. A cold chalybeate water, containing France; Département de la Vienne. iron bicarbonate and magnesium chloride. Used in anamia, chlorosis, and some forms of dyspepsia. It is said to be laxative and diuretic.

Cande'la. (L. candeo, to glow) A bougie. C. belladon'næ. Belladonna leaves and nitrate of potash mixed with althea root and water to form a pastile. To be burnt for the relief of asthma.

C. cinnaba'ris. Cinnabar 2 parts, nitrate of potash, althea root, of each 4 parts, water sufficient. Made into a candle and smoked with tobacco in syphilis.

C. fumalis. (L. fumus, smoke. G. Räu-cherkerzehen.) Old term for candles made of odoriferons and resinous substances, to purify the air and excite the spirits. (Quincy.)
A pastile, according to Welcherus, Antidot.
Spec. ii, 48, Schroderus, ii, 86.

C. hyoscy'ami. Hyoscyamus leaves, nitrate of potash, of each 4 parts, althea root 1 part, water sufficient. To be burned as a pastile for the relief of asthma.

C. loda'ta. Iodine 5 parts, nitrate of potash 35 parts, althea root, and spirit of wine, to form a caudle; each to contain 0.5 grm. of iodiue. Used as an inhalation while burning.

C. medica'ta. (L. medicatus, healing.) A medicated bougie.

C. mercuria'iis. A candle made of wax and grey oxide of mercury, which, heing lighted, is placed under a glass funnel with a curved neck, and so applied to the sore, or other part, to be treated.

Also, the same as C. einnabaris.

C. o'pii. Powder of opium 5 parts, althrea root and nitrate of potash, of each 80 parts, water to make a candle; each to contain 25 grm. Used as an inhalation.

C. probato'ria. (L. probo, to try.) A

C. re'gia. (L. regius, royal.) The black

mullein, Verbascum nigrum.

Candela'ria. (L. candela, a candle.) The Verbascum nigrum, from the resemblance of its stalk.

Can'di. (Candy.) The form of crystallised

sugar called sugar candy.

Candication. (L. candico, to make white.) The act or process of becoming or making white.

Candid'ulous. (L. dim white. G. Weisslich.) Whitish. (L. dim. of candidus,

Can'didum o'vi. (L. candidus, white; ovum, an egg.) The white of egg.

Can'didus. (L. candidus. G. glunzend

weiss.) Pure white.

Candisa'tion. (Candy.) The dissolving

of sugar in water and crystallising; candying.

Can'dle. (L. candela. F. chandelle; I. candela; G. Licht.) A rod-like mass of tallow, or other combustible material, with a wick in the centre. Used for illuminating purposes.

Also, applied to structures of the same shape. C., med'icated. A candle containing some drug for diffusion during burning. For the kinds see under Candela.

C., mercu'rial. See Candela mercurialis. C. snuff. The charred wiek of a candle. It has been recommended for the cure of ague.

C. tree. The Parmentiera cerifera.
Can'dleberry. The Myrica cerifera.
Can'dlenut tree. The Aburites tri-Loba.

Candolle', A. P. de. A Swiss botanist born at Geneva in 1778, and died there in 1841. Can'dum. Candied sugar, or sugar candy.

(Qninev.) Can'dy. (Ar. kand, or kandat, sugar in

erystals.) Sugar candy. Can'dy car'rot. (Candia, Crete.) The

Dancus creticus. Can'dytuft, bit'ter. (Candia.) The

Iberis amura.

Cane. (Kávva, a reed.) A stem of a reed or of a strong grass.

C. brim'stone. Sulphur in rolls.

C., dumb. The Duffenbachia sequina.
C., In'dian. The Canna indica.
C., sto'rax tree. The Styrax officinale.

C., sug'ar. The Saccharum officinarum.
C. sug'ar. The sugar obtained from the sugar cane, Saccharum officinarum.

C., sug'ar, Chine'se. The Succharum sinense.

C., sweet. The Acorus calamus.
Canella. (L. dim. of canna, a reed; the pieces being rolled up like a reed.) A Genus of the Nat. Order Cancilacia. Some authors refer it to Nat. Order Meliaceae.

The Pharmacopæial name, U.S.A., of the bark

of the C. alba.

C. al'ba, Mnrray. (L. alhus, white ) White or laurel-leaved canella. The bark is officinal.

C. axilla ris, Mart. (L. axilla, the arm-

pit.) A species supplying an aromatic bark used in Brazil, and called paratudo aromatico. C. bark. See Canella alba cortex.

C. caryophylla'ta. The bark of the Eugenia caryophyllata, or clove-berry tree.

C. cheir o. The Oreodaphne opifera.

C. cuba'na. The Canella albu.
C. javen'sis. The Cinnamonum cassia.

C. malabarica. The Cinnamomum cassia.

C. wiutera'na. The C. alha.

Canella'ceæ. A Nat. Order of thalamidoral Exogens having alternate leaves, unsymmetrical flowers, with contorted astivation and horny albumen.

Caneliae albae cortex, B. Ph. (L. albus, white; cortex, bark. F. cannelle blanche; I. canella bianca; S. canela blanca; G. Weisser Zimmt, Canell.) The bark of the Canella alba. In quills, yellowish white within, more orange externally, of an odour like cloves, and a warm, pungent taste. Contains 9 per cent. of a reddish, fragrant, aerid, volatile oil, mannite, a bitter extract, resin, gum, starch, albumen, and saline matters, chiefly calcium carbonate. No tannic acid. An aromatic stimulant, and warm mild tonic. Used in the West Indies as a condiment and an antiscorbutic. Contained in vinum rhei and pulv. aloes cnm eanella, U.S. Ph.

C. malabaricæ cor'tex. (L. cortex, bark.) The bark of the Cinnamomum cassia, or

wild cinnamon tree.

Canel'lic ac'id. A synonym of Cinnamic acid.

Canellif'era malabar'ica. Cinnamomum cassia.

A crystallisable material, Canel'lin. similar to mannite, which is contained in the canella bark

Cancot'ica. (Canca, the modern capital of Crete.) The name by which Aleppo evil is known in Crete, in consequence of its having been first observed in Canea.

Canes'cent. (L. canesco, to become white. G. weissgrau, graulich.) Hoary, greyish.

Canescentifus cous. (L. canesco; fuscus, swarthy. G. graubraun.) Grey hrown. Canica ceous. (L. vanis, a dog.) Of, or belonging to, the dog.

Also (L. canicæ, a kind of bran), furfuraceous. Canica'ceus pa'nis. (L. canicæ; punis, bread.) Old term for bread made of canicie, or coarse meal, because such meal was only fit for dogs' food.

Can'icæ. (L. canis, a dog; because only fit for their food.) An old name for coarse meal, in which the flour is much mixed with bran. (Quincy.)

Canici'da. (L. eanis, a dog; eædo, to kill.) An old name for Aconitum, because dogs were poisoned with it.

Cani'cula. (L. dim. canis, a dog. F. canicule; G. Hundsstern.) A name for Sirius, or the dog-star, which was supposed to have a great influence on disease.

(Canienla.) Canicula'ris. Of, or belonging to, the dog-star. Applied to the Dies caniculares, or dog-days, the hottest days of the year, from July 24th to August 23rd, being the time that the sun rises with Sirius, which were supposed to produce rabies, and increase disease.

Cani'da. (L. canis, a dog; ɛlòos, likeness.) A Family of the Section Digitigrada, Order Car-nivora. The dog family. Pointed muzzles, smooth tongues; non-retractile claws; fore feet with five toes, hind feet with four; six molar teeth in each side of upper jaw, occasionally seven, seven in lower; carnassial tooth with a large process.

Cani'na appeten'tia. (L. caninus. belonging to a dog; appetentia, desire.) A synonvm of Bulimia.

Canina'næ ra'dix. A synonym of Cahincæ radix.

Canine'. (L. caninus; canis, a dog. F. canin; G. hundisch.) Of, or belonging to, or of the nature of, a dog.

C. ap'petite. From the likeness to the mode of eating of a dog. Same as Bulimia.

C. em'inence. Same as C. prominence. C. fos'sa. (L. fossa, a pit. F. fosse canine; G. Oberkie fergrube.) A depression on the external surface of the superior maxillary bone behind the cauine prominence, and giving origin to the levator anguli oris and compressor nasi

C. hun'ger. So called from the imitation by the patient of the voracity of a dog. Same as

Bulimia.

C. laugh. Because in the effecting this contortion of the face the canine muscles are much used. Same as Risus sardonicus.

C. mad'ness. Same as Hydrophobia. C. mus'cle. Because it is chiefly used in producing the facial change accompanying the snarling of a dog. The Levator anguli oris.

C. prom'inence. A vertical ridge on the anterior surface of the superior maxillary bone, caused by the fang of the canine tooth.

C. tooth. (F. dent canin; G. Eckzahn.) Cuspitate tooth, eye tooth. The first tooth behind the premaxillo-maxillary suture ou each side of the upper jaw, and the corresponding teeth in the lower jaw of mammals. They exist in both the deciduous and the permaneut dentition. In man they are larger and stronger than the incisors, with a central point or cusp. The fang is long, single, conical, and laterally compressed. In the carnivora and other animals the canine teeth are very large and strong.

Cani'num ma'lum. (L. caninus; ma-lum, an apple.) Dog's apple. The fruit of the

Atropa mandragora.

Caninus. (L. caninus.) Belonging to a

C. mi'ner. (L. minor, less.) applied by Winslow to a few muscular fibres sometimes given off from the levator anguli oris or canine muscle to the musculi incisivi.

C. mus'culus. The canine muscle. The

Levator anguli oris. C. ri'sus. The Risus sardonicus.

C. sen'tis. (L. sentis, a theru.) The Rosa canina.

C. spas'mus. (Σπασμός, a spasm.) Same as C. risus.

Caniram. (Arab.) The Nux vomica. Canirami'num. A synouym of Bru-

Caniru'bus. (L. canis, a dog; rubus, a bramble.) The Rosa canina.

Ca'nis. (L. canis. Gr. κνών; F. chien, chienne; G. Hund, Hündinn.) A dog or bitch. A Geuus of the Fauily Canidæ, Group Cynoidea, Order Carnivora.

Also, anciently used as a name for the frænum

of the prepuce.

C. cer'ebrum. (L. cerebrum, brain.) Dog's brain. The Antirrhinum, from its seed-

vessels resembling a dog's skull.

C. familia'ris, Linn. (L. familiaris, belonging to the family.) The domestic dog. The fat was, till the seventeenth century, included in the London Pharmacopoia. It was used in paralysis. The dung is Album gracum.

C. interfector. (L. interfector, a slayer.) The dog-killer; the Verutrum sabadilla. C. lu'pus, Liun. (L. lupus, a wolf) The wolf. The fat was used in joint and uterino diseases and the liver in hepatic affections,

C. marinus. (L. marinus, belonging to the sea.) The white shark, Carcharius vulgaris.

C. pon'ticus. (L. ponticus, Pontic, relating to the Black Sea.) A synonym of the beaver, Castor fiber.

C. vul'pes. The Vulpes vulgaris.
Canit'ies. (L. canities, hoariness, from canus, grey-haired. Gr.  $\pi o \lambda (a; F. canitie; I. canitie; canuteza; S. canicie; G. Grauwerden.)$ Greyness of the hair.

C. acquis'ita. (L. part. of acquiro, to acquire.) Greyness of the hair coming on in

after life.

C. præmatu'ra. (L. prematurus, too early.) The loss of colour of the hair at an early period of life while in full vigour. The whole hair may become white or grey, or it may be ringed with colourless spots. Premature greyness is not always permanent. A deficient supply of pigment by the papilla is the cause of greyness. A sudden change in a few hours is not admitted by the best authorities.

C. seni'lis. (L. senilis, aged.) The greyness of the hair which occurs in persons of ad-

vanced life.

Can'ker. (Cancer.) A common name for disease in trees and plants, or rust in metals. Also, gangrenous stomatitis.

C. of mouth. Gangrenous stomatitis. A term for sloughing sore C. rash. throat.

The Papaver rheas, from its C. rose. colour, and from its injuring corn land.

C., wa'ter. A term for gaugreuous stoma-

Can'na. (Κάννη, a reed. G. Rohr, Schilf.) A cane or reed. A Genus of the Nat. Order Marantacea.

The officinal name, U.S. Ph., of the Tous les

Also, anciently applied to the tibia and fibula, from their likeness to a reed or pipe.

Also, the trachea.

Also, a synonym of Cassia fistula.

C. achi'ra, Gillies. One of the species supplying Tous les mois.

C. a'gria. (L. agrius, wild.) Hab. South America. The juice has been employed in diabetes mellitus.

C. ar'rowroot. A synonym of Tous les mois.

C. auranti'aca. (Mod. L. aurantiacus, orange-coloured.) Tubers diuretic and diaphoretic.

C. bra'chil. (L. brachium, the arm.) A synonym of the Ulna.
C. coccin'ea. (L. coccineus, scarlet.) One

of the species supplying Tous les mois.

C. dis'color. (L. discolor, having different colours.) A species supplying Tous les mois.

C. domes'tica cru'ris. (L. domesticus, familiar; crus, the leg.) A synonym of the

C. ed'ulis, Ker. (L. edulis, eatable.) Hab. Peru. Oue of the species supplying Tous les mois.

C. fis'tula. (L. fistula, a pipe.) The Cassia fistula.

C. glau'ca. (Γλαυκός, silvery.) One of the species supplying Tous les mois. The fresh tubers are said to be diuretic and diaphoretic.

C. gut'turis. (L. guttur, the throat.) A

synonym of the Windpipe.

C. in'dica. (Tam. Kull-valci-mannic; Beng. Surbo-jaya; Mal. Katon-hala; Tel. Krishna-tamarah.) Indian shot. Root aerid and stimulant. Used as a remedy for poisoned arrow wounds, and given by the natives to cattle when they have eaten poisons.

C. ma'jor. (L. major, greater.) A synonym of the Tibia.

C. mi'nor. (L. minor, less.) A synonym of the Fibula.

C. soluti'va. (L. solvo, to relax.) The Cussia fistula.

**C. specio'sa**, Roxb. (L. speciosus, handsome.) The rhizome is believed to be a kind of turmeric, called African turmeric.

C. starch. Same as Tous les mois.

Can'nabene. C18H20. According to Personne, a volatile, colourless, strong-smelling liquid obtained from Indian hemp; it boils at 240° C. (464° F.) According to Bohlig, it contains oxygen. This is believed to be the active principle.

C. hy'dride.  $C_{18}\Pi_{22}$ . A compound which, according to Personne, along with cannabene, composes the volatile oil of Indian hemp.

Can'nabin. (Κάνναβις, hemp.) The resin

of the extract of Indian hemp.

Cannab'ina. (Κάιναβις, hemp.) A term for remedies containing Indian hemp, Cannabis indica.

C. aquatica. (L. aquaticus, living in

water.) A synonym of Eupatorium cannabina. Cannabina cess. (Cannabis.) An Order of monochlamydeous angiospermous Exogens, or a Family of the Order Urticine. Rough stemmed herbs, with a watery juice. Ovary free, onecelled; ovule solitary, pendulous; embryo hooked, exalbuminous; radicle superior.

Cannabin'eze. Same as Cannabinacea. Cannabis. (Κάνναβις.) A Genus of the Nat. Order Cannabinac.æ.

C. america'na, U.S. Ph. americain; G. Americanischer Hanf.) The flowering tops of Cannabis sativa, enlivated in North America.

C. in'dica, B. Ph. (F. chanvre indien; G. Indischer Hanf.) Indian hemp. The dried flowering tops of the female plants of *C. sativa* grown in India. The officinal part is called in India Gunjah; the larger leaves and fruits, withont the stalks, Bhang, Subjee, and Sidhee; and the concrete resinous exudation from the plant, Churrus. In Arabia a preparation is called Haschish; in Western Africa, Diamba and Dakka; and under other names it is largely used as an intoxicant or narcotic in other parts of the tropics. Cannabis indica has a bitter taste and a peculiar odour; it contains a bitter substance, chlorophyll, a green resinous extractive, cannabin, a volatile oil, cannabene, gnm, albumen, lignin, and salts. Indian hemp, when given in full doses, produces great exhibitation, intoxication, and stupor. It acts as an aphrodisiae, and increases the appetite. It produces sleep, relieves pain, relaxes spasm, and allays restlessness, without producing constipation or headache, but it is somewhat uncertain in its action on some persons. It is useful in neuralgia, migraiue, dysmenorrhea, and nervous restlessness and sleeplessness. It has been recommended in tetanus and hydrophobia.

C. sativus, Linn. (L. sativus, that which

is sown. F. chanvre cultive; I. canapa; S. canamo; G. Hanf.) Hemp. Anative of Persia. Supplies hemp-fibre and hempseed. See Fructus cannabis and Oleum cannabis.

C. sati'va, var. in'dica. This variety, which supplies the drug known as Indian hemp, appears to differ from the common hemp only in that it contains a larger quantity of the resin, in consequence of being grown in a hot climate. Hemp grown in the hotter parts of the United States furnishes the drug of a fairly active cha-

C. se'men, Belg. Ph. (L. semen, seed.) The seeds of hemp, C. sativa. See Fructus cannahis.

Can'nabum. (L. canuabum.) Hemp. C. arracan'icum. Arraean hemp, or Jute.

C. corchorieum. (Corchorus.) A synonym of Jute.

Canna'ceæ. (Canna.) A synonym of Marantacea.

Cannac'orus radi'ce cro'eca. (L. cunna, a reed; acorus, the sweet flag; radix, a root; croccus, saffron-coloured.) The Curcuma

Can'næ. Jussien's term for the combined Orders Zingiberaceæ and Marantaceæ.

Can'nea. (Canna.) A synonym of Ma-

Can'nel. (L. canna, a reed.) The Cianamomum zeylanicum.

C. bone. The clavicle.

C. wa'ter. Cinnamon water.

Can'nel coal. A hard, dull, black variety of coal, breaking with a conchoidal fracture, and obtaining the name from its burning with flame like a candle. Formerly used as a vermicide and a destroyer of ectozoa.

Can'nellate. **iellate.** (L. canna, a reed. F. G. rohrenformig.) Reed-shaped, cannelé ;

tubular.

Also (from canneler, to groove), furrowed, channelled, grooved.

Can'nellated. Same as Cannellate.
C. bodies. (F. corps cannelis.)
corpora striata of the brain.

Cannes. France; Departement des Alpes-Maritimes. Well-situated at the extremity of the Bay of Napoule, twenty-one miles from Nice. It is protected on the north and west by the Maritime Alps and the Estrelles, but less completely on the east. The hotels and lodging-houses are comfortable. The chimate is very equable; and the rainfall not extreme. The mistral is less severe than at many other winter resorts. The mean temperature of spring is 10° C, (50° F.), of summer 22° C. (71.6° F.), of autumn 13° C. (55.4° F.), and of winter 10° C. (50° F.) Number of rainy days in the year 52, rainfall 25 inches. Its climate is less irritating and more equable than that of Nice; less damp than Pau. The

and general nervous debility constitute the class of cases which may be expected to obtain benefit at Cannes. Can'net, Le. France; near to Cannes. A well-protected winter place for phtbisical and rheumatic invalids.

carly stages of phthisis, scrofulous diseases, re-

laxed conditions of bronchial mucous membrane,

Can'non-ball tree. The Couroupita quianensis.

Can'non-bone. See Canon-bone. Cann'statt. Würtemberg, on the Neckar,

three miles from Stuttgart, 700 feet above sea level. Many saline chalybeate springs are found here, of a temperature about 19° C. (66.2° F.) They contain sodium chloride, calcium and iron carbonate, sodium, magnesium and calcium sulphate, with much carbonic acid. They are used in chronic mucous catarrh, especially of the intestinal and genito-urinary mucous membrane, and in some cases of anamia and chlorosis.

Can'nula. (L. dim. canna, a reed. Σύριγξ; F. canule ; I. cannello ; G. Röhre, Rohrlein.) A tubular instrument introduced by means of a stilette, to which it forms a sheath, into a cavity or tumour, in order that, on removing the stilette, any fluid present may be allowed to pass through

it. The sheath of a trocar.

C. of Bel'loc. Same as Belloe's sound. C. of Rey'bard. See Roybard's cannula. Can'nulæ pulmo'num. (L. cannula, small reed; pulmo, the lung.) The bronchial a small reed; pulmo, the lung.)

Can'nulate. (Cannula. G. rohrartiy,

schilfformig.) Tubular.

Can'on-bone. (Kavév, a straight rod.) The third and only metacarpal bone of the horse having on each side the rudimentary second and fourth metacarpals, the splint bones.

Canopite. Term used by Celsus, vi, 6, §

25, for a collyrium made of cadmia, exide of

copper, aromatics, &c.

Cano'pum. (Κάνωπον, the elder flower.) Term, by Paulus Egineta, Adams's Transl. vol. iii, b. vii, s. 3, p. 155, for the flower or bark of the Sambueus nigra, or elder tree.

Ca'nor stethoscop'icus. (L. canar, A term for metallic melody; stethoscopic.) tinkling.

Cano rous. (L. canor. G. klangreich, Having a singing or ringing wohltomend.) sound.

Also, having a voice more or less harmo-

Cano-tomento'sus. (L. canus, grey; tomentosus, from tomentum, a stuffing for cushions. G. graufilzig.) Having a grey downy or velvety surface.

Cano viridis. (L. canus; viridis, green. G. graugrun.) Of a greyi-h-green colour.

Can'quoin. A French surgeon of the first half of the nineteenth century.

C.'s antimo'nial paste. Antimony chloride 3 parts, zine chloride 6, flour 16, mixed into a paste with a little water. Used to destroy

cancerous tumours.

C.'s paste. Equal parts of zinc chloride and flour. The zinc chloride is dissolved in water, and the flour added to form a paste. Used in the treatment of cancerous ulcers, either superficial or dried, and introduced into the tumour as small rods, crayons caustiques.

Cansco'ra. A Genus of the Nat. Order

Gentianacea.

C. decussa'ta, R. and Sc. (L. decusso, to divide crosswise.) Hab. India. A laxative, alterative, tonic, and nervine. Used in insanity and epilepsy.

(Cantabri, a people of Cantabrica. Spain, in whose country it was first discovered.) A plant which some have thought to be a Dianthus, others a Campanula, but most generally it is supposed to have been the Convolvulus cantabrica of Linnaus.

Can'tabrum. (Latin.) Bran, or very coarse bread.

Can'tacon. Name for the Crocus sativus. (Ruland.)

Cantarella a'qua. See Acqua toffana. Cantarellus. The Meloe proscarabæus. Can'tel. The vertex of the skull.

Cant'erbury. Kent. A sulphurous and chalybeate spring was formerly in use bere.

C. bells. The Campanula modium and the

C. trachelium.

Cant'ering. (Eng. canter, an easy gallop; from Canterbury pilgrims and their ambling pace.) Going as a horse in an easy gallop. C. ac'tion. Same as Bruit de gulop.

Canterium. (Καντέριος.) Term used by Hippocrates, de Artic. t. 20, for a rail or spar between two upright posts or pillars, employed as a lever in dislocations.

Cantharel'lus. (Λ diminutive of κάνθαρος, a cup. F. chanterelle.) A Genus of the Family Agaricini, Suborder Hymenomycetes,

Order Basidiomycetes.

C. auranti'acus, Fr. (Mod. L. aurantiacus, orange-coloured. F. chanterelle fausse; G. falscher Eierschwamm.) False chanterelle. Stem stuffed, often amber-coloured at base; pileus fleshy, tomentose; gills crowded, moderately slender, darker than pileus; colour orange yellow. In fir woods and heaths. Not good to eat, but doubtfully poisonous.

C. ciba'rius, Fr. (L. cibarius, fit for food. F. girole ordinaire, jaunetet, chevrette; G. Enerschwamm, Pfifferling, Gellmännel.) Edible chanterelle. Stem solid, ringless, thickening as it rises; pileus fleshy, smooth; gills thick, distant; colour yellow; odour pleasant, as of apri-cots or iris root. Found in woods. Esculent,

and very good in flavour.

Can'thari figuli'ni. (L. cantharus, a pot; figulinus, belonging to a potter.) Old term for eartben cucurbits.

Canthariasis. (Kándapos, a kind of beetle.) A term applied to the condition in which the larva of Colcoptera develop in the animal body.

Can'tharic ac'id. A substance having the same composition as cantharidin, and formed by heating the latter body with hydriodic acid. It is monobasic, soluble in water, slightly soluble in other, and when dissolved in glycerin is nonvesicant.

Canthar'idal. (Kavθapis, the blistering beetle.) Made with, or containing, eantharides.

C. collo'dion. See Collodion cum cantharide.

Cantharidate of pot'ash. (G. Cantharidensaures Kali.) A salt of eantharidin and potash, slightly soluble in water. Used in a glycerin solution spread on linen as a vesicant.

Canthar'idated. (Κανθαρίς.) taining cantharides.

Cantharides. (Κανθαρίς. F. cantharide; I. cantarelie; S. cantarida; G. Kantharide, Spanische Fliegen.) The Pharmacopeeial name of the dried beetle, Cantharis vesicatoria. They are of the form and colour of the living insect, with a disagreeable edour and acrid burning taste; the powder is greyish brown, containing shining green fragments of the elytra and limbs; it soon decomposes when moist. Cantharides contain a green oil, soluble in water, insoluble in alcohol, and non-vesicant; a black matter, soluble in water, insoluble in alcohol, and inert; a vellow, viscid matter, soluble in water and alcohol, and

non-vesicant; cantharidin; a fatty matter, insoluble in alcohol; ealeium and magnesium phosphates; acetic and, in the fresh insect, uric acids; and a volatile principle, on which the fætid odour of the beetle depends. Adulterated with other insects and with euphorbium. In moderate doses diuretic and stimulant to genito-urinary organs; in large doses a poisonous irritant. Used in gleet and leucorrhœa, in seminal weakness, in incontinence of urine, in amenorrhoa, in asthenic dropsy, and in scaly diseases of the skin. Externally as a rubefacient and vesicant. Dose, tinct. canthar. 5-20 minims.

C. cam'phor. A synonym of Canthari-

C. pois'oning. Mouth and throat hot and irritable; epigastric pain gradually becoming abdominal; vomiting of mucus, often bloody; tenesmus; strangury, bloody urine, painful priapism, hard breathing, quick pulse, coma, sometimes tetanus, convulsions. Recovery, when it occurs, is always slow. Affected organs are all intensely inflamed or gangrenous. Fatal doses have been 24 grains of the powder, 1 oz. of the tincture. Vomiting should be promoted and diluents used, opium suppositories and the warm bath. Particles of green elytra should be looked for, and a chloreform solution of contents of stomach tried as a vesicant.

Cantharid'ic ac'id.  $-C_{10}H_{14}O_5$ . development of cantharidin by the absorption of one equivalent of water. It forms salts, and in this condition is by some supposed to be the form in which cantharidin exists in the beetle.

Canthar'idin. (F. cantharidine; I. cantaridina; S. cantaridino; G. Kantharidin) C<sub>20</sub>H<sub>24</sub>O<sub>8</sub>. The vesicating principle of cantharides. It is in white, micaceous plates, or four-sided prisms; insoluble in water, soluble in hot alcohol and ether. It is volatile, fuses at 210° C. (410° F.), and sublimes in acicular crystals at a lower temperature.

Cantharidin'ic ac'id. (G. Cantharidinsaure.) Same as Cantharidin.

Cantharidi'num. Same as Cantharidin.

C. oleo'sum. Same as Oleum canthari-

Cantharidism. (Kavθapis.) symptoms of Cuntharides poisoning.

Can'tharis. (Κανθαρίς, blistering A Genus of the Family Trachelida, beetle.) Section Heteromera, Order Colcoptera. Head with strong central furrow; head and thorax with fine scattered punctures; elytra punctured closely in wrinkles. All the following species possess blistering powers.

C. æne'as. (L. æneus, of bronze.) native of Pennsylvania.

C. al'bida. (L. albidus, whitish.) A large species found near the Rocky Mountains, Ame-

C. aszelia'na. A native of the Sonthern States of America.

C. atoma'ria. (L. atomus, undivided.) A native of Brazil.

C. atra'ta, Latr. (L. atratus, clothed in black.) The black cantharis. Black; 4"-5" long; feeds on aster and solidago. Found in the northern and middle parts of the United States and in Barbary.

C. cinere'a, Latr. (L. cinereus, ash-coloured.) The ash-coloured cantharis. Leugth 6"; elytra and body black, covered and hidden by an ash-coloured pubescence; antennæ black. Feeds on the potato plant. Inhabits the northern and middle parts of the United States.

C. gi'gas. (L. gigas, a giant.) Found in India.

C. margina'ta, Latr. (L. marginatus, bordered.) Elytra black, with ash-coloured suture and margin; head, thorax, and abdomen black, nearly covered with an ash-coloured pubescence. Feeds on elematis. Inhabits the United States and the Cape of Good Hope.

C. melæ'na. (Méhas, black.) Found in

California.

C. Nuttal'lii. Head deep green, with a red frontal spot; thorax golden green; clytra golden purple, rugose; thighs purplish, tarsi black. Found in the plains of the Missouri.

C. poli'ta. (L. politus, refined.) Found in southern part of the United States.

C. ru'ficeps. (L. rufus, red; caput, the

head.) Found in Sumatra and Java. C. syri'aca. (L. syriacus, Syrian.) Found

in Arabia. C. vesicato'ria, Latr. (L. vesica, a blister.)
The officinal cantharis. Length 6"-10"; head large, subcordate, with a longitudinal furrow, which is short and quadrilateral; thorax and body covered with greyish hairs; elytra long, flexible, golden green; antennæ black, long, filiform; legs violet. Inhabits France, Spain, Italy, Germany, South Russia and Western Asia. Feeds on many trees, as ash, poplar, privet, lilae. When caught they are plunged into diluted vinegar,

then exposed to the vapour of heated vinegar, and afterwards dried. C. viola'cea. (L. violaccus, violet-colour.)

Found in India.

C. vitta'ta, Latr. (L. vittatus, having a fillet or chaplet.) The potato fly. Length 4"; head light red, with dark spots; antennæ black; thorax black, with three yellow lines; elytra with a yellow margin and central line; abdomen and legs black, covered with a cinereous pubescence. Feeds on the potato plant. Inhabits the middle and southern parts of the United States. At one time it was officinal in the United States.

C. vulnera'ta. (L. vulnus, a wound) Found in California.

Canthec'tomy. (Kaνθόs, the angle of the eye; ἐκτομή, a cutting-out. G. Augenwin-kelausschnutt.) Excision or incision of either canthus of the eye.

Canthe rius. See Canterium.

Canthitis. (Kavbós, the angle of the eye. F. canthite.) Inflammation of one or both canthi.

Canth'ium. A Genus of the Nat. Order Cinchonaceæ.

C. corona tum. (L. corona, a erown.) The Rundia dumetorum.

C. parviflo'rum, Lamb. (L. parvus, small; flos, a flower.) Hab. India. Used in dysentery and as an anthelmintic.

Canthoplas'tic. (Κανθός, the angle of the eye;  $\pi\lambda\dot{\alpha}\sigma\sigma\omega$ , to form.) Of, or belonging to,

the operation of eanthoplasty.

**Can'thoplasty.** (Κανθός, the angle of the eye; πλάσσω, to form.) An operation for increasing the palpebral aperture when too small, as in chronic entropium. The outer canthus may be cut by a bistoury or by seissors, and the skin and conjunctival portion of the incision united by suture. In some instances a portion of

conjunctiva, either of man or of an animal, has been inserted into the wound.

Canthor raphy. (Κανθός; ραφή, α seam.) The operation for reducing the size of the opening of the cyclids by putting a suture in the angle of the lids.

Can'thum. Same as Candum. Can'thus. (Kawbós, the angle of the eye. F. canthus; I. angolo dell' cechio; G. Augenwinkel.) The angles formed by the junction of the eyelids.

C., external. The outer canthus.
C., great'er. The inner canthus.

C., in'ner. The angle formed by the junetion of the eyelids by the side of the nose. It contains the plica semilunaris and the caruncula lachrymalis.

C., inter'nal. The inner eanthus.
C., les'ser. The outer canthus.

C., na'sal. (L. nasus, the nose.) The inner

C., out'er. The angle formed by the junction of the eyelids furthest from the nose. It is more scute than the inner.

C., temporal. (L. tempora, the temples.) The outer canthus.

Cantia'nus pul'vis. Lady Kent's powder. Name for a cordial, in former high repute, composed of crabs' claws, prepared pearls, red coral, oriental bezoar.

Old name for Succharum, or Can'tion.

sugar.

can'ton's phos'phorus. Composed of three parts of calcined oyster shells with one of flowers of sulphur, subjected to a strong heat for an hour in a covered crucible; the product is luminous in the dark.

Canto'res. (L. canto, to sing.) A syno-

nym of Passeres.

Canula. A misspelling of Canula.
Ca'nus. (Καίω, to burn; because of the colour of ashes. G. Aschgrau.) A hoary grey

Caout'chin. C10H16. One of the constituents of eaoutchicin, boiling at 171° C.

(339·S° F.)

Caout'chouc. (F. caoutehoue, from the Caribaan, gomme elastique; I. gomma clastica; S. goma elastica; G. Kaoutschouk, Federharz.) The concrete milky juice of different species of Siphonia, especially S. clastica, imported chiefly from Brazil, and of Ficus elastica, from India. Many plants of the Nat. Orders Apocynacca, Artocarpacea, and Euphorbiaceae, yield a similar product. It is a mixture of several hydrocarbons, isomeric or polymeric, with turpentine oil. It is insoluble in water and alcohol, soluble in ether, chloroform, petroleum, benzin, turpentine, and most oils. Its chief characteristic is elasticity, which it loses after melting at a little above 100 C. (212° F.) It is miscible with sulphur, when it retains its elasticity at much lower temperatures, and for a longer period, than pure caout-choue. When mixed with half its weight of sulphur, heated, and subjected to pressure, it forms the hard material called vulcanite. Caoutchouc, in one form or other, is used in the formation of dexible tubes, for eatheters, pessaries, stethoscopes, plates for artificial teeth, and other surgical appliances. It forms, when applied in solution, an impervious backing to leather for formentations or plasters, and on a felted fabric it forms spongio-piline. The fresh juice, to which some ammonia has been added to prevent solidification, has been used as a local application in erysipelas and burns, and a solution of caontehouo in chloroform is applied to the same purpose. It has also been given in phthisis, in doses of two grains, gradually increased.

C., artific'ial. Tungstic acid, or sodium tungstate, added to a solution of glue, and then hydrochloric acid, produces this substance, which

is elastic when warm.

C., min'eral. An undetermined substance covering large tracts of ground in Australia.

C., vul'canised. (L. Vulcanus, the fire ) Caontchone subjected to the action of melted sulphur or a bisulphide. It becomes black and horny, and retains its elasticity when exposed to cold and heat. The process is called vulcanization, and if it is continued for some time at a high temperature the eaoutehoue becomes hard, and is called Vulcanite.

Caoutchou'cin. A thin, volatile, oily liquid, of naphtha-like odour, obtained by destruetive distillation of caoutchouc. It is composed of two polymeric hydroearbons, Caoutchin and Iso-

prene.

Cap. (Low L. cappa, a hooded cloak, from caput, the head; or capio, to receive.) A cover.
In Dentistry, used to denote a small somewhat concave piece of gold, ivory, or other substance used to cover over an opening into the pulp

cavity of a carions tooth prior to filling the tooth; its purpose is to prevent pressure on the pulp.

Also, in Botany, the pileus of agaries.

Capacity. (L. capacitas, capability of holding much, from capax, roomy. F. capacite; I. capacita; G. Raumigkeit, Rauminhalt.) The power of containing.

C., brea'thing. Same as C., vital.
C., elec'trical. See Electrical capacity. C. for calo'ric. (L. calor, heat.) Samo

as Heat, specific. C., lung. Used in the same sense as C.,

rital. C., men'tal. (L. mens, a mind.) faculty or ability of the mind.

C. of satura'tion. (L. saturo, to fill.) The whole number of the combining units of an

C., phys'ical. (Φυσική, natural.) The amount of room in a place.

Also, the power of the body, or of an organ, to cudure or perform work.

C., pulmon'ic. (L. pulmo, a lung.) Used in the same sense as C., vital.

C., respi'ratory. (L. respiro, to breathe back.) Same as C., vital. C., specific inductive. See Inductive

capacity, specific.

C., testament'ary. (L. testamentum, a will.) The mental competency of a person to make a will.

C., thorac'ic. (θώραξ, the chest.) Samo as C., vital.

C., vi'tal. (L. vita, life.) The measure, obtained by the spirometer, of the amount of air which can be expelled from the lungs by the deepest possible expiration after the deepest possible inspiration. It averages 3000-1000 c.c. (200-250 cubic inches).

Capa'iba. Same as Copaiba. Capa-isiakka. The pine-apple, Ananassa sativa.

Cape. The Cape of Good Hope.

C. al'ocs. See Aloes, Cape.

C. bad'ger. The Hyrax capensis. It fur-

nishes Hyraceum,

**C. Col'ony.** A British colony occupying the southernmost part of Africa. There are several military stations, all of which are healthy. Rheumatism and heart disease are common. There is no malaria.

C. gum. The produce of Acacia karrov and A. horrida.

C. saf'fron. The substance known under this name consists usually of the florets of Carthamus tinctorius, and sometimes of the corolla of Lyperia crocea.

C. tu'lip. The Homeria collina.

C. wine. Wine made in the Cape Colony.

The varieties are highly brandied, and are now

little used in England.

Cape Coast Cas'tle. West coast of Africa; in Upper Guinea. It is a military station for black troops. It is the healthiest of the West coast stations; dysentery is common among the whites; phthisis, pneumonia, and bronchitis among the black troops; and dracun-

culus among all.

Capelina. Same as Bandage, capelline.

Capella. Same as Cupel.

Caper. (F. capre, from L. capparis, from Gr. κάππαρις, from Pers. kabar. I. cappero; G. Kaper.) The bud or nnexpanded flower of the Capparis spinosa. Used as a pickle, and esteemed

c. bean. The Zygophyllum fabago.
c. bush. The Euphorbia lathyris.
c. plant. The Capparis spinosa. Also, the Euphorbia lathyris.

C. spurge. The Euphorbia lathyris.
C. tree. The Capparis spinosa.
Caphopi crite. A synonym of Rhein, which itself is ehrysophanic acid.

Caph'ora. Saine as Camphora. Caph'ura. Camphor.

Capilla ceous. (L. capillaceus, from capillus, a bair. F. capillace; G. haarfiin, haarig.) Hair-like in dimension; also, hair-like

in appearance.

Cap'illaire. (F. from capillus, a hair.) A name given to several ferns of different species, the fronds of which are used in medicine; such are Adiantum pedatum and A. capillus-veneris, Asplenium adiantum nigrum and A. trichomanes, Ceterach officinarum, and others. The name was originally given to Adiantum capillus-veneris, and, according to some, was derived from the slenderness and hair-like appearance of its frond stalks; according to others, because it was used to prevent baldness.

Capil'lament. (L. capillamentum, from capillus, a hair. G. huardunne Fiber.) A very

fine fibre. Also, a hairy covering.

Cap'illaries. (L. capillaris, hair-like; from capillus, a hair. F. vaisseaux capillaires; G. Kapillaren, Haargefasse.) The fine network of vessels connecting the arterial and venous systems; discovered by Malpighi in 1661. They are of nearly uniform size, from 1-3500th to 1-2000th of an inch in diameter; the smallest are found in the brain and intestinal mucous membrane, the largest in the skin; the meshes of the network vary in size, being smallest in the lungs, skin, glands, and grey matter of the brain, largest in ligaments and tendons. The wall of the capillaries is a layer of cells continuous with the epithelial lining of the arteries and veins. The

cells are united to each other at their edges, flat, long, and uncleated; when a capillary gives off branches, offshoots of the cells at the point of junction run into the diverging vessels. The existence of openings in the walls, stomata, is still unsettled, as well as the question of their contractility.

C., bil'iary. (L. bilis, bile. F. canaliculi biliaires; G. Gallenkanalchen.) The intercellular passages in the liver which form the commence-

ment of the biliary ducts.

Capillarim eter. (L. capillus; μέτρον, a measure.) An instrument for determining the alcoholic strength of wines, based on the fact that alcohol prevents the rise of water in capillary

tubes in proportion to its amount.

Capillarity. (L. capillus, a hair. F. capillarite; I. capillarita; S. capillarita; G. Capillaritat, Haarröhrehenkraft.) The series of phenomena which are observed when capillary tubes are placed in a liquid, and which are dependent on the attraction between the walls of the tube and the molecules of the liquid, and on the mutual attraction of these latter towards each other. The phenomena observed when a solid is placed in or upon a liquid are of the same nature.

Capillary. (L. capillaris, like a bair. F. capillaire; I. capillare; S. capilar; G. haarfein.) Hair-like; having the fineness of a

C. attrac'tion. Same as Capillarity. Also, the force which produces the phenomena of eapillarity.

C. blood-ves'sel. Same as Capillaries. C. bronchi'tis. See Bronchitis, capillary.

C. circula'tion. The circulation of blood in the Capillaries.

C. em'bolism. See Embolism, capillary. C. fis'sure. A fracture of a bone as fine as a bair.

C. frac'ture. See Fracture, capillary.

C. hæm'orrhage. Bleeding from a surface and not from a distinct vessel. Supposed to come from the capillaries.

C. lymphatics. The vessels forming the

plexiform origin of lymphatics.

C. næ'vus. See Nærus, capillary.
C. phenom'ena. Same as Capillarity.

C. pulse. (G. Capillarpuls.) A beating, synchronous with the systole of the heart, which may either exist naturally, or may be made to appear on slight pressure, as of the finger-nails.

C. sys'tem. The system of blood-channels lying between the ultimate arteries and veins; the Capillaries.

Also, by some, applied to the hairy structures of the body.

C. thrombo'sis. See Thrombosis, capillary.

C. tubes. Tubes of a hair-like fineness,

which exhibit the phenomena of Capillarity.

C. ves'sels. The Capillaries.

Cap'illate. (L. capillus, a hair. G. behaart, faserig.) Covered with hair; also, having the fineness of a hair.

Capilla'tio. (L. capillus, a hair.) Old term for a capillary fracture of the cranium. A

fracture as fine as hair. Cap'illi ven'eris her'ba, Belg. Ph. (L. herba, a herb.) The plant Adiantum capillus-veneris.

Capillic'ulus. (L. dim. capillus, a hair.)

Arterial and venous radicles described as carrying on a circulation, forming a diverticulum of the general circulation, and pervading, more minutely than the capillaries, the ultimate elements of every organ. An erroneous idea.

Capillifo lious. (L. capillus; folium, a eat.) Having hair-like leaves, as the Polygalu

Cap'illiform. (L. capillus; forma, likeness. F. capilliforme; G. haarformig.) Having the form or appearance of hair, or of a hairy

Capillitium. (L. capillitium, the hair. G. Haupthuar.) The hair of the head.
Also (G. Haargewebe), any hairy covering or

Also (G. Haargeflecht), a filamentous network formed along with conidia in some of the sporangia of Myxomycetes,

Also, a synonym of entropion.

C. intrica'tum. (L. intrico, to entangle. G. Weichselzopf.) A synonym of Plica polonica.

Capillo rum deflu'vium. (L. capillus, a hair; defluvium, a falling off.) Baldness. Baldness. Cap'illose. (L. capillus. G. haarig, be-haart.) Covered with hair or down.

Cap'illus. (L. as if capitis pilus, from caput, the head; pilus, hair.) The hair, particularly on the top of the head. Different names are given to the hair as it exists on particular parts; as on the head generally, Capillitium; on the top of the head, Capillus; on the back of the head, Crinis; on the temples, Circinnus; on the eyelids, Cilium; on the eyebrows, Supercilium; in the nostrils, Vibrissa; on the chin, Barba; on the middle of the chin, Pappus; under the chin, Hypene; on the upper lip, Mystax; on the body, Pilus: under the armpits, Grandebala.

C. ven'eris. See Adiantum capillus-vene-

C. ven'eris canaden'sis. The Adiantum

pedatum.

Capiple'nium. (L. caput, the head; plenus, full.) A barbarous term, used by Schneiderus, de Catarrho, i, 3, for a species of catarrh; also, for a peculiar heaviness or disorder of the head.

Capistra'tio. (L. capistrum, a bridle.) An old term for phymosis, because the prepuce

seemed fixed as if by a bridle.

Capis'trum. (L. capistrum, a halter, from capio, to hold.) A bridle. Old term for trismus or lock-jaw.

Name used by Galen, de Fasciis, for a bandage used in fractures or injuries of the lower jaw.

Also (G. Halfterbinde; F. capistre, capiline), a term for bandages for the head, such as the capeline and the chevestre.

Also, the frænum of the prepuce.

C. au'ri. (L. aurum, gold.) Borax; because it is used in soldering gold. (Ruland.)

Cap'ita papav'eris. (L. caput, head.) A synonym of Fructus papaveris, G. Ph. Cap'ital. (L. caput, the head.) Of, or belonging to, the head.

Applied, by way of eminence, to the more im-

portant operations.

Applied as a name for the head or upper part of an alembic.

Capitalia medicamen'ta. capital, a thing pertaining to the head; medicamentum, a drug.) Medicines for affections of the

Cap'itate. (L. caput, the head. F. capité;

G. beknopft, köpfig, kopftragend.) Having a head or heads; growing in heads.

Capitel'ium. A lixivium or the lees of soap, Paræus, Chir. xxv, 32, Fallopius, de Caut. tom. i, c. v, p. 537; also, soapy water, according to Johnson.

Capitel'late. (L. capitellum, dim. of caput, a head. G. kleinkopfig.) Having a (L. capitellum, dim. of rounded termination like a small head.

Also, similar to Capitulate.

Capitel'lum. (L. dim. caput.) A small ad. The rounded eminence on the external surface of the lower end of the humerus for articulation with the radins.

Also, the apothecia of mosses.

Also, an alembic.

Capitilu'vium. (L. caput; lavo, to wash. F. capitilave; G. Kopfbad.) A lotion or a bath to be applied to the head.

Capitiple nium. See Capiplenium.
Capitipurgia. See Caputpurgium.
Capititraha. (L. caput, the head; traho, to draw.) An instrument, of the character of the midwifery forceps, for extracting an impacted feetal head from the pelvis.

Capit'ium. (L. capitium, a cover for the head. G. Kopfbinde.) A bandage for the head.
C. mag'num. (L. magnus, great.) An appliance in former use; the great head-bandage.

(Quincy.)

C. mag'num quadrangula're. (L. magnus, great; quadrangularis, four-sided.) A handkerchief, about one yard square, is so folded that the long border of the upper half lies about 10 cm. behind the long border of the lower half. An oblong is thus produced, which is so placed on the head of the patient that the centre of the handkerehief covers the sagittal suture, whilst the free border of the lower fold hangs down to the tip of the nose, and the border of the upper fold to the eyebrows; the upper, or outer, of the two borders is tied beneath the chin, the lower, or inner, is tied behind the head.

C. quadrangula're. (L. quadrangulus, four-cornered.) A capitium in which a square or oblong piece of material is used. See C. magnum

quadrangulare.

C. triangula're. (L. triangulus, threecornered.) A head bandage made of a three-cornered piece of material, as Esmarch's bandage.

Capito'nes. (L. capito, one who has a large head, from caput, the head) Fœtuses which have so large a head as to render their birth difficult.

Cap'itose. (L. capito. G. grossköpfig, dickkopfig.) Having a large head.
Also (G. storrisch), obstinate, headstrong.

Capit'ular. Same as Capitulate. C. pro'cess. The lower or ventral transverse process of the dorsal vertebræ in certain Vertebrata, the articulation of the head of a rib. Also called Parapophysis.

Capitulate. (L. capitulum, a small head. F. capitule, G. kleinkopfig.) Having a

capitulum, or a little head. Capit'uliform. (L. capitulum; forma, likeness. F. capituliforme; G. kopfehenformig.) Having the appearance of a small head.

Capit'ulum. (L. capitulum, dim. caput, the head. F. capitule; S. capitule; G. Konfchen.) A little head or knob. A protuberance of bone received into a hollow

portion of another bone.

Also, the body of a lepatoid Cirripede, from its being on a peduncle.

Also, the terminal lip of the haustellum of

some insects.

Also (F. capitule; G. Köpfehen), a form of racemose inflorescence with shortened, globular, orbicular or cup-shaped axis, and sessife flowers.

Also, the rounded extremity of the authoridium of some plants.

The stalked, globular-headed apothecia of cer-

taiu lichens. An alembic, or moor's head.

C. arytenor deum. ( Αρύταινα, a ewer; είδος, likeness.) The cartilage of Santorini, because it is attached to the upper part of the arytænoid cartilage

C. cos'tae. (L. costa, a rih.) The head of

a rib.

C. laryn'gis. (Λάρυγξ, the larynx.) The cartilages of Santorini, because they are situated at the top of the larynx.

C. mar'tis. (L. Mars, the god of war.) The Eryngium campestre.

C. Santori'ni. The same as Santorini, cartilage of.

Capi'vi oil. Copaiba balsam.

**Capnelæ'um.** (Καπνός, smoke; ἔλαιον, oil.) Old term (Gr. πίοστανθος) for a liquid species of resin, mentioned by Galen, de C. M. sec. Loc. ii, 13, and Foesius, in Ec. p. 305, because it gives off smoke when heated.

**Capnis'ma.** (Κάπνισμα, an offering of smoke.) Fumigation.

Capni'ta. A kind of gem, according to Pliny. Capni'tis. Old term for an uncertain herb.

Also, a fine species of Cadmia.

Cap'nium. Same as Capnos.

Capnoï'des ca'va. (Καπνός, smoke; eldos, likeness; L. eavus, hollow.) The Fumaria bulbosa.

Cap'nomor. (Καπνός, smoke; μοίρα, a part.) A colourless transparent oil, one of the constituents of smoke, of a peculiar odour, obtained from beech tar. It dissolves caoutchone. It is probably a mixture.

**Capnor'chis.** (Καπνός; ὄρχις, a testicle.) The Fumaria bulbosa, from its bulbous

roots.

Cap'nos. (Καπνος, smoke.) The Fumaria officinalis, or fumitory, because the juice, if applied to the eyes, gives a smarting sensation as if produced by smoke.

Cap'nus. Same as Capnos.
Capon. (L. capo, from κάπων, a capon.)
A castrated cook of the domestic fowl.
C.'s tail. The Valeriana officinalis.

Ca'pon springs. United States of America; West Virginia; Hampshire County; United States of on the western slope of the ridge of the Alleghanies, about 2000 feet above sea-level. Three sources of mineral water, containing sodium carbonate 6 grains, calcium carbonate 8.3, magnesium carbonate 1.4, ferrous carbonate .011, and small quantities of potassium and calcium sulphate, in an imperial gallon; carbon dioxide, oxygen, and nitrogen, are found in the water free and dissolved. The water is used in uric acid calculi, in vesical catarrh, in acid or gouty dyspepsia, in hepatic congestion and enlargement and in menstrual deficiencies.

Cappacaro'ca. The name of species of Myrsine used as an adulterant of Paraguay tea,

Hex paraguayensis.

Cappar'ess. A Tribe or Section of the Nat. Order Cappariduceæ, having the fruit an indeliscent berry.

Capparida'ceæ. (Capparis.) A Nat. Order of thalamifloral Exogens; or a Family of

the Order Cruciflor@ having tetramerous flowers, one-celled ovary, a closed-up fruit, and exalbuminous seeds.

Capparid'ea. Same as Capparidacea. Capparids. The plants of the Nat. Capparids. Order Capparidaecæ.

Cap'paris. (Κάππαρις, the caper plant.) A Genus of the Nat. Order Capparidacca.

C. ægypt'aca. Said to be the hyssop of the Bible. Used in Egypt as C. spinosa.

C. amygdali'na. ('Αμυγδάλινος, of almonds.) The bark of the root blisters the skin. Used in South America as a diuretic.

C. aphyl'la. ('A, neg.; φύλλον, a leaf.) Grows in India. Used as food, but is supposed to be heating and aperient. Medicinally it is used in hoils, joint diseases, skin diseases, and as an antidote against poisons.

C. baduc'ca. An Indian species. The juice is made into a liniment, which is used as

an anodyne; the flowers are purgative.

C. caran'das. The Carissa carandas.

C. cynophalloph'ora, Linn. (Κύων, a dog;  $\phi a \lambda \lambda \delta s$ , the penis;  $\phi o \rho \delta \omega$ , to hear.) The bark of the root is a vesicant. Used in South America as a diurctic.

**C.** ferrugin'ea. (L. ferrugineus, rust-coloured.) The bark of the root is a vesicant.

C. fontane'sii. Used in Burbary as C. spinosa.

C. in'dica. The Cadaba indica.

C. mithridat'ica. (Mithridate.) Iudian species, said to be efficacious against poisons and snake-bites.

C. pulcher'rima, Jacq. (L. pulcher, beautiful.) Fruit believed to be poisonous.

C. rupes'tris. (L. rupes, a cliff.) Used Greece as C. spinosa.

C. sati'va. (L. sativus, sown.) The C. spinosa.

C. siliquo'sa. (L. siliqua, a pod.) Hab. Antilles. Root aperient, anthelmintic, and antihysterie.

C. sola'da. Has a narcotic odour; fruit aerid and stimulating. Used by women to procure fecundity.

C. spino'sa, Linn. (L. spinosus, thorny, F. caprier; I. cappero; S. alcaparro; G. Kappernstrauch.) The caper plant. A low trailing plant growing on the shores of the Mediterranean. Leaves roundish, blunt, or emarginate; stipules spiny, curved. The unexpanded buds form the pickle capers. The dried bark of the root is wrinkled, and greyish without, whitish within; inodorous, bitterish in taste. It is said to be diuretic, and was used in amenorrhœa, chronic rheumatism, and liver disorders.

Cap ping. In Dentistry, the process of applying a Cap.

Cappo'ne. Italy; in the Island of Ischia, in the Bay of Naples. Warm, saline, slightly aperient waters, of temp. 37° C. (98°6° F.), and smelling like chicken broth. Contain sodium chloride and carbonate, calcium and sodium sulphate, and carbonic acid gas. Used in dyspepsia, chronic derangements of alimentary canal, and in uterine affections.

Cap'ra. (L. capra, a she-goat; fem. of caper; akin to κάπρος.) A Genus of the Family

Ovidæ, Group Ruminantia, Order Ungulata, Class Mammalia. Both sexes have horns; no lachrymalsinuses; the throat is furnished with a beard, generally in both sexes.

C. ægag'rus. (Λίγαγρος, a wild goat.)
The paseng, or wild goat, supposed to be the ancestor of the common goat. In the fourth stomach is found the Bezoar orientale.

C. alpina. (L. ulpinus, alpine.) The chamois, Rupicapra tragus.
C. hir'cus. (L. hircus, a he-goat. F. chirre; l. capra; S. cabro; G. Ziege.) The common goat. The horns were formerly used in epilepsy; the dried blood as an aperient; the tallow as a relaxant; and the dung as a detersive. Goats' milk is much used for the making of cheese, and in some countries as food.

C. sylves'tris. (L. sylvestris, belonging to a wood.) The wild goat, which was formerly

used in medicine.

**Capra'ria.** (L. capra, a she-goat.) A Genus of plants of Nat. Order Serophulariacea.

C. biflo'ra. (L. bis, twice; flos, a flower.)
The Mexican tea plant, used in America as a substitute for tea.

Cap'rate. A salt of capric acid.

Capren'ne. See Borro di Caprenne. Capreola'ria va'sa. (L. capreolus, d tendril; vas, a vessel.) The spermatic vessels, so called from their twisted appearance.

Cap'reolate. (L. capreolus. rankig.) Twisted like the tendril of a vine.
Also, bearing a tendril.

Cap'reolus. (L. capreolus.) The helix of the ear.

A tendril or cirrus.

C. au'ris. (L. auris, the ear.) A term for the helix of the ear, from its twisted form, according to Bartholin, iii, 9.

Cap'ri. Italy; an island in the Bay of Naples. On the south side is a winter residence

for invalids.

Cap'ria. The Capparis spinosa.

Capric ac'id. (L. eaper, a goat. F. acide caprique; G. Caprinsaure.)  $C_{10}\Pi_{20}O_2$ . Rutic acid. An acid found as a glyceride in butter and in cocoa-nut oil; occurs in fusel oil; and is formed in the oxidation of oleic acid and oil of rue. It is colourless, crystalline, of a goaty smell. Melts at 27°–30° C. (80°6–86° F.); boils at 268°–270° C. (514°4°–518° F.) Soluble in cold alcohol and ether, insoluble in water. It is found in the faces of meat-caters.

Capricer'va. (L. caper, a goat; cerva, a stag.) A name for the Antilopus, or antelopus. Capricor nus. (L. caper; cornu, horn.)
Plumbum or lead. (Ruland.)
Capridæ. Same as Ovidæ.

Caprifico di Valas'pra. An Italian mineral water; also called Acqua Bolle.

Caprificus. (L. caper, a goat; ficus, a fig.) The wild fig-tree, Ficus carica, because goats feed upon its fruit.

Cap'rifoils. The plants of the Nat. Order

Caprifoliacea

Caprifo'lia. (L. caper, a goat; folium, a The Lonieera periclymenum, or common leaf.)

honeysuckle.

Caprifolia'cea, (G. Geieblattgewiichse.) An Order of epigynous corollifloral Exegens; or a Family of the Order Aggregatæ. Shrubs or herbaceous plants, with opposite exstipulate leaves; stamens opipetalous; anthers straight, bursting longitudinally; ovules pendulous; fruit consolidated; embryo small, in fleshy albumen; radicle next the hilum.

The Caprifoliacea of Kunth is synonymous

with Cornares.

Caprifo'lium. (Etymology doubtful; L. capra, a goat; or capreolus, a tendril; or a corruption of capparis, the caper plant; folium, a leaf; because goats like it, because of the tendril-like tendency of the young shoots, or because of the likeness of its leaves to those of the caper plant.) The boneysuckle, Lonicera caprifolium.

C. distinc'tum. (L. distinctus, separated.)

The Lonicera periclymenum.

C. horten'sis. (L. hortensis, belonging to a garden.) The Lonicera caprifolium. C. periclym'enum. The Lonicera peri-

clumenum.

C. rotundifo'lium. (L. rotundus, round; folium a leaf.) The Louisera caprifolium.

C. sempervi'rens. The Lonicera semper-

C. sylvaticum. (L. sylvaticus, growing wild.) The Lonicera periclymenum.

Caprilo'quium. (L. caper, a goat; loquor, to speak.) Egophony.

Cap'rin. A supposed body which, by saponification, is transformed into capric acid and gly-

Caprin'ie ac'id. C10 II 20 O2. The same as Capric acid.

Cap'rizans pul'sus. (L. caprizo, to leap like a goat; pulsus, the pulse.) A name first applied by Herophilus (Gr. δορκαδίζων, see Galen, de Diff. Puls. i, 28, vol. viii, p. 556, ed. Kuhn), to that kind of pulse called bounding.

It has also been described as a pulse, one beat of which is so delayed in its movement that the succeeding beat closely approaches it, and the

pulse is felt as if it were double.

Cap'roate. A salt of caproic acid. Cap'roic ac'id. (Hexoic acid.) C<sub>6</sub>H<sub>12</sub> O<sub>2</sub>=C<sub>5</sub>H<sub>11</sub>. CO<sub>2</sub>H. There are eight theoretical forms of this acid, but five only are known.

C. ac'id, nor'mal. (Pentylformic acid.) CII3(CH2)4. CO2H. It is produced, along with acetic, butyric, and other acids, during the oxidation of many albuminous substances, as bran, cheese; occurs in a free state in sweat and in the f.eces of meat-eaters, and as a glyceride in butter of cows' milk. It is an oily liquid, with a disagreeable sweaty odour. It boils at 205° C. (401° F.)

Cap'roin. A supposed neutral fatty body, which, by saponification, is transformed into

caproic acid and glycerin.

According to some, the same as Caprin. Capro'næ. (L. capronæ, a herse's forclock; if a capite pronæ.) The hair which hangs as if a capite pronæ.) down over the forchead.

Capron'ic ac'id. (G. normalbutylessig-säure, isobutylessigsäure.) C<sub>6</sub>H<sub>12</sub>O<sub>2</sub>. An acid found by Chevreul in cows' and goats' butter. It exists under two forms, a normal and an isomeric form; the former is transparent and colourless, not miscible with water. It boils at 204.4° C. (400° F.): sp. gr. 0.9449 at 0° C. (32° F.) The isomeric form is characterised by its lower boiling point, 198° C. (388.4° F.).

Gap'ryl. The hypothetical radicle of the eighth term of the series of normal primary

alcohols; otherwise Octyl.

C. hy'dride. (G. Coprylwasserstoff.) C<sub>b</sub>H<sub>18</sub>. A paraffin beiling at 124°C, (255·2°F.) It is an anæsthetic when inhaled, but produces much excitement and vomiting; recovery is not Casy

Cap'rylic acid. (F. acid octylique.)  $C_8H_{10}O_2=C_7H_{15}$ .  $CO_2H$ . It occurs as a glyceride in the butter of cows' milk, and in cocoa-nut oil, also in fusel oil, and in the faces of meat-eaters. It has a faint unpleasant odour. It solidities at  $12^{\circ}$  C. (53·6° F.), melts at  $16^{\circ}$  C. (60·8° F.), and boils at  $227^{\circ}$  C. (440·6° F.)

Caprylin. A supposed neutral body furnishing, by saponification, caprylic acid and

glycerin. Cap'sa. (Κάψα, a case. G. Behältniss,

Kiste.) A capsule. An enclosing substance.
C. cor'dis. (L. cor, the heart.) The pericardium.

**Capsa'icin.**  $C_0H_{14}O_2$ . The active principle of capsicin. It is a fusible, volatile, crys-The active printallisable body, soluble in alcohol and ether, and very irritating,

Capsa'rium. (Κάψα, a case.) A box for substances used in dressing wounds.

Capsel'la. (L. dim. capsula, a little coffer or chest.) A Genus of the Nat. Order Cruciferæ.

Also, the viper's bugloss, Echium vulgare.

Also, C. bursa-pastoris, or shepherd's purse.

C. bur'sa-pas'toris, De Cand. (F. bourse à pasteur, molette; G. Hirtentäschlein.) Shepherd's purse. A mild astringent. Used in diarrhea, dysentery, and menorrhagia; it has

also been employed to promote menstruction.

Cap'sici fruc'tus, B. Ph. (F. piment rouge, poivre d'Inde; 1. peperone; S. pimient de Indias; G. Spanischer Pfeffer, Cayenneyfeffer.)

Capsicum fruit. The dried ripe fruit of Capsicum fastigiatum, imported from Zanzibar, and distinguished in commerce as Gninea and pod pepper. An orange-red membranons pod, 1' to 6' long, '25' broad, straight, conical, pointed, smooth, shining, somewhat wrinkled, and very pungent to the taste. It is an active stimulant. Applied to the skin it produces redness and vesication. nally it gives a sense of great warmth in the stomach, and in large doses it may produce vo-miting, diarrhoa, and gastro-intestinal inflamma-It is chiefly used as a condiment. It is added to purgative or tonic pills to relieve flatulence or griping, and to astringents in diarrhoa; it may be given in atonic dyspepsia, and is of use in the craving for drink of drunkards. Locally it is of service as a gargle in the very early or the chronic stages of sore throat; and as an application in muscular rhenmatism, neuralgia, and chilblains. Dose, 1-2 grains; of the tincture, I0-20 minims.

C., pois'oning by. Capsicum has been found in the stomach of a child, and was believed to be the cause of death; as also in other cases.

Capsic'ia. Same as Capsicin. A reddish oil, obtained by Cap'sicin. treating an alcoholic extract of capsicum fruit with It is a compound substance, and contains an alkaloid having an odour of conium, which has not yet been completely separated. Capsicin is very pungent to the taste, and gives off an intensely irritating vapour when heated; it forms

crystalline salts with acids.

Cap'sicol. A red, oily liquid. It is a

mixture containing capsaicin.

Cap'sicum. (L. capsa, a case.) A Genus of the Nat. Order Solanaceæ.

Also, the officinal name, U.S. Ph., of the Capsici fructus, B. Ph.

**C. an'nnum,** Linn. (L. annuus, annual. F. piment des jardins.) The Chilli plant. An annual. Hab, the warmer parts of Asia and America, and cultivated generally for its pods, which are one source of ordinary Cayenne pepper.

C. bacca'tum, Willd. (L. baccatus, bearing berries.) Bird pepper. Furnishes the Cayenne pepper of the West Indies and South America.

C. brasilia'num. The C. frutescens. C. cerasifor'me, Willd. (L. cerasus, a

cherry; forma, shape.) A species sometimes

C. chlorocla'dum, De Cand. (Χλωρός green; κλάδος, a shoot.) A species with small oblong fruit; occasionally used.

C. fastigia'tum, Blnme. (L. fastigium, a projecting point.) Hab. Tropical America, Africa, and India. The officinal source of capsieum.

C. fruit. See Capsici fruetus.

C. frutes'cens, Linn. (L. frutex, a shrnb.) Goat pepper. One of the sonrces of West Indian

Cayenne pepper.

C. gros'sum, Willd. (L. grossus, thick.) Bell pepper. One of the sources of Cayenne pepper, and is used as a pickle. Probably a variety of C. annuum.

C. hispan'icum. (L. hispanicus, Spanish.)

The C, annuum.

C. in'dicum. The C. annuum. C. long'um, De Cand. (L. longus, long.) Probably a variety of C. annuum. It is the source of Spanish pepper, called in Anstria Pap-

C.nepalen'se. Nepaul pepper. A variety which produces a pleasant tasting pepper when made from the not quite ripe pods.

C. toxica'rium. (Τοξικόν, a poison in which arrows were dipped.) Said to be used by the natives of Peru to poison their arrows.

**Capsitis.** (L. capsa, a case.) Inflammation of the capsule of the crystalline lens.

Capsocatarac'ta. (Capsula; cataracta. G. Kapselstaar.) Capsular cataract.
Cap'sula. (L. dim. of capsa.) A cap-

C. articula'ris. (L. articulum, a joint.)
The capsular ligament of a joint.
C. circumscis'sa. (L. circumscindo, to

tear off around.) A capsule, in Botany, opening

with a lid; a pyxidinm. C. commu'nis Glisso'ni. (L. communis,

common ) See Glisson, capsule of.

C. cor'dis. (L. cor, the heart.) The pericardium.

C. den'tis. (L. dens, a tooth.) The capsule of a tooth ; Nasmyth's membrane.

C. humoris a'quei. (L. humor, fluid; aqueus, watery.) The membrane enclosing the aqueons humour, which at one time was believed to exist.

C. interna. (L. internus, within.) A layer of fibres separating the optic thalamus from the corpus striatum.

C. len'tis. (L. lens, a lentil.) The capsule of the erystalline lens.

C. lumba'ris. (L. lumbus, the loin.) The receptaculum chyli.

C. nervo'rum. (L. nervus, a nerve.) The neurilemma.

C. re'nis adipo'sa. (L. ren, the kidney; adiposus, fat. G. Fettkapsel.) The loose connective tissue, containing many fat cells, in which the kidney is embedded.

C. sequestralis. (L. sequestro, to sepa-The portion of hone sorrounding a rate.) sequestrum.

C. venæ portæ. (Tena portæ.) Same as Glisson, capsule of, inasmuch as it surrounds the vena portie.

Cap'sulæ. (L. plural of capsula.) Cap-

sules, cases.

C. atrabilia'riæ. (L. ater, black; bilis,

bile.) The adrenals.

C. hæmat'icæ. Blood dried in vacuo, mixed with a tenth part of sodium phosphate, and enclosed in a capsule. Used as a nutrient and roborant in anamia and chlorosis.

C. hibis'ci esculen'ti. The fruit of Hi-

biscus or Abelmoschus esculentus.

C. hydrarg'yri. Five grains of unguentum hydrargyri, in a gelatin capsule, for introduction into the vagina.

C. mat'icæ. Powdered matico, mixed with balsam of copaiba, and enclosed in a capsule.

Used in generalica.

- C. mat'icee vagina'les. Ethercal oil of matico is mixed with lycopodium, or earbonate of magnesia, in conjunction with fannin, alum, or sulphate of zinc, for an astringent vaginal suppository.
- C. papav'eris. See Papaveris capsula. C. rena'les. (L. ren, the kidney.) The adrenals.

C. semina'les. (L. semen, seed.) The vesiculæ seminales.

Also, applied to the sacculated portion of the vasa deferentia before their junction with the ducts of the vesiculæ seminales.

C. synovia'les. (Synovia.) The burse mucosæ.

C. unguino'see. (L. unguen, an ointment.) The bursa mucosa.

Capsulæs'cie ac'id. (L. capsula; asculus, the chestnut.) An acid found in the capsules of the fruit of the horse-chestnut, Esculus hippocustanum.

Capsular. (L. capsula. F. capsulaire; I. capsulare; S. capsular; G. kapselformey.) Belonging or related to, or like, a capsule. C. ar'tery. The suprarenal artery.

C. cat'aract. Cataract depending on an opaque deposit on the inner surface of the capsule of the lens. See Cataract, capsular.

C.lig'ament. The ligamentous expansion

round a joint.

C. vein. The suprarenal vein.

Capsulaires seminailes. (L. cap-The sacsula; seminalis, belonging to semen.) culated portion of the vas deferens before it joins the duct of the vesiculæ seminales.

Cap'sulate. (L. capsula.) Provided or enclosed in a capsule.

Capsula tion. (L. capsula.) The enclosure of a drug in a capsule to render it more

convenient or more pleasant in administration.

Cap'sule. (I. capsula. F. capsule; I. and S. capsula; G. Kapsel.) A name given to various structures which act as enclosing agents.

In Anatomy, besides the various structures of this name with an adjectival qualification, the term capsule is given to that part of the corpus collosum of the brain which extends into the anterior lobe and forms the under part of the medullary capsule of the corpus striatum.

In Surgery, it has been used to denote the

eyst of an encysted tumour; also, the wall of an abscess.

In Botany, a capsule is a superior, one or more celled, many seeded, dry, dehiscent fruit, formed of two or more carpels.

Also, it is applied to the rounded spore-cases

of ferns or sporangia.

In Chemistry, a capsule is a shallow vessel for evaporating substances, or other purposes.

In Pharmacy, an envelope of gelatin, gluten, or membrane, enclosing a drug for the purpose of disguising its taste or securing its entrance into the stomach unchanged.

C., a'queous. A synonym of Descemet's membrane, from its relation to the aqueous humour of the eye.

C., artic'ular. (L. articulum, a joint.) The ligamentous expansion around a joint,

C., cartilag'inous. The concentric layer

around certain cartilage cells, especially in the costal and intervertebral cartilages.

C., crys'talline. The capsule of the crystalline lens.

(L. devoro, to swallow C., devo'rative. down.) A layer or film of gelatin. Used for the enclosure of a medicine to be swallowed.

C., fi'brous. The capsular ligament of ioints.

C., fold'ing. Same as C., devorative.C., gel'atin. A case for the enclosure of medicine. These capsules are made by dipping a bulb or oblong mould into a solotion of gelatin, allowing the coating partially to dry, removing it, filling with the drug and closing the hole with semisolid gelatin; or they are made in half spheres, and joined after filling.

C., hæmorrhoïd'al. (Λίμαρροίδες, piles.) A cup-like instrument, with a perforated bottom, which was placed around a pile and received the

caustic which was used to destroy the structure. C., hy'aloid. The same as Hyaloid mem-

C., medul'lary, of Reil. The outer coating of white or medullary fibres of the grey The onter matter of the corpus striatum.

C., mem'brane. A capsule made as a gelatin capsule, but with gut skin.

C., oc'nlar. The Tunica vaginalis oculi.
C. of a'queous hu'mour. The supposed

membrane lining the anterior and posterior chambers of the eye and secreting the aqueous humour.

C. of Bon'net. See Bonnet, capsule of. C. of Bow'man. See Bowman, eapsule of.

C. of eye, cel'lular. The Tunica vaginalis oculi.

C. of Glis'son. See Glisson, eapsule of. C. of glomer'ulus. (L. glomerulus, dim. of glomus, a ball of thread; and, from its likeness, applied to the vascular tuft of the Malpighian eorpusele.) Same as Bowman, capsule of.

C. of heart. The pericardium.

C. of kid'ne. See Kidney, capsule of. C. of lens. (G. Kristallinsenkapsel.) The transparent elastic membrane enclosing the lens. It is structureless and brittle, and curls up outwards when broken. It allows of easy osmosis, and slowly dissolves in boiling water.

C. of lens, vas'cular. A membranous capsule, containing the ramifications of the hyaloid artery, which invests the lens soon after its first appearance in the feetus, and in man remains until about the seventh month. Its anterior

part, adherent to the margin of the iris, is the membrana pupillaris, and itself is also called capsulo-pupillary membrane.

C. of Malpigh'ian bod'y. Same as Bowman, capsule of.

C. of Muller. See Müller, capsule of.

C. of nerves. The neurilemma. C. of teeth. Same as Nasmyth's membrane.

C. of Te'non. See Tenon, capsule of. Same as C., membrane.

C., periotic. (Hepi, around; ovs, the ear.) The tissue surrounding the auditory sacs in the embryo.

C., re'nal. (L. ren, the kidney.) The adrenal.

C., sem'inal. (L. semen, seed.) The vesicula seminalis, and also the dilated entrauce of the vas deferens into it.

C., suprare nal. (L. supra, above; ren, the kidney.) The adrenal.

C., syno'vial. Same as Synovial membrane, articular.

Cap'sules, pop'py. See Capsulæ pa-

Capsuliferous. (L. capsula; fero, to bear. F. capsulifere; G. kapseltragend.) Bearing

bear. F. capsaules.
or containing eapsules.
(L. capsula, a capsule. Capsulitis. (L. capsula, a capsule, F. capsulite; G. Linsenkapselentzindung.) Insupposed to occur in cases where the capsule and the iris are adherent to each other; also in cases of traumatic and of secondary cataract after operation, when vessels appear on the membrane; and it has also been applied to simple capsular and secondary cataract, on the assumption that they represented Virehow's non-vascular parenchymatous inflammation.

Capsulo-pu pillary mem brane. (L. capsula; pupilla, the pupil of the eye.) The vascular investment of the fætal lens. See Capsule of lens, vascular.

Cap'uli. The Prunus capulin.

Cap'uloid. (L. capula, a cup; ellos, likeness. F. capuloïde; G. becherähnlich.) Resembling a cup.

Cap'ulum. **Cap'ulum.** ( $K \dot{\alpha} \mu \pi \tau \omega$ , to bend.) A contortion of the eyelids or other parts.

Cap'ulus. (L. capulus, à handle.) A term for the pems.

Capur. (Arab. Cafur. Κάφουρα.) Camphor. (Quincy.)

Capuron. A Freuch physician born 1767, died 1850.

C.'s pills. Catechu 12 parts, alum 6, opium 2, mixed with syrup of red rose.

**Ca'put.** (L. caput, the head; akin to Sauserit kapāla; Gr. κεφαλή; F. tēte; I. testa; S. cabeza; G. Kopf.) The head, including the skull and face.

Also, the rounded top or articulating end of a bone.

Also, a term for the glans penis.

Also, applied in Biology to the top or rounded end of structures.

C. al'lii. (L. allium, garlic.) The kind of garlic called Molyza.

C. angula're. (L. angularis, angular. G. Augen-mediale, or Winkelzacke.) Term applied by Henle to the musculus levator alæ nasi et lahii superioris, which he unites with other muscles to form a single stratum named the musculus quadratus labii superioris.

C. as'peræ arte'riæ. (L. aspir, rough; arteria, the windpipe.) The head of the rough artery or windpipe. A term for the larynx.

C. cæ'cum co'li. (L. cæeus, blind; colon, the intestine of that name.) The blind head of the colon. The ewcum.

C. co'li. The head of the colon. A synonym of the Cæcum.

C. concu'tiens. (L. concutio, to shake.) A name given to the first of the intertransversales nuscles, from its action on the head.

C. cor'nu posterioris. (L. cornu, a horn; posterior, hinder.) The binder, somewhat enlarged, part of the posterior corun, or horn of the crescent-shaped mass of grey substance in each lateral half of the spinal cord.

C. epididym idis. (G. Kopf des Nebenhodens.) The upper enlarged extremity or head of the epididymis.

C. galea tum. (L. galeatus, helmeted.) The head of the new-horn child when covered with the caul.

C. gallina'ceum. The same as C. gallinaginis.

C. gallinag'inis. (L. gallinago, a woodcoek.) A longitudinal elevation of the mucous membrane of the prostatic urethra, extending outwards for eight or nine lines from the uvula vesicæ; it gradually rises from its origin until it attains a height of a line and a half, when it sinks again.

C. genita'le. (L. genitalis, causing generation.) A term for the glans penis.
C. inclava'tum. (L. in, in; clarus, a

plug.) Applied to cases of labour in which the fœtal head is impacted. C. incunea tum.

**C. incunea'tum.** (L. in, in; cuneo, to drive in a wedge.) Applied to impaction of the fœtal head in labour.

C. infraorbitale. (L. infra, beneath; orbis, a circle. G. mittlere, or Infraorbitalzacke.) A name applied by Henle to the levator labia superioris proprius, which forms the middle head of his musculus quadratus labii superioris.

C. liberum. (L. liber, free.) A term applied to the head of insects when it is free from protection or cover of the thorax.

C. lu'bricum. (L. lubricus, shippery.) A synonym of the Penis.

C. ma'jor. (L. major, larger.) The head, or upper end, of the epidhdymis.
C. medu'sæ. (Medusa, the daughter of Phoreus, whose golden hair, having captivated

Neptune, was turned into snakes by Minerva.) A term given to the appearance produced by dilatation of the small cutaneous veins around the navel, the result of congestion of the portal vein in those cases in which the umbilical vein remains pervious in the abdomen, and is joined by the parumbilical vein.

C. mi'nor. (L. minor, less.) The tail, or lower end, of the epididymis.

C. mon'achi. (L. monachus, a monk.) A name of the dandelion, Taraxacum dens thonis.

C. mor'tuum. (L. mortuus, dead. G. Todtenkopf, Rückstand.) The dead head. A term applied to inert or useless residue after distillation or sublimation. Seldom used now, except to the deposit left in the retort after the distillation of the fuming sulphuric acid of Nordhausen.

C. obsti'pum. (L. obstipus, hent on one side.) A term for wry-neck.

C. obtec'tum. (L. obtectus, part. of ob-

tego, to cover up.) A term applied to the head of an insect when it is covered by the thorax.

C. papav'eris. (G. Mohnkopf.) The head, or capsule, of the poppy, Papaver somniferum.

C. po'nis. The head, or glans, of the

C. pur'gum. (L. purgo, to cleanse) An old name for remedies which produced a dis-

charge from the head, as errhines, sialogogues, and sternutatories. C. recep'tum. (L. receptus, part. of

recipio, to receive.) A term applied to the head of an insect when it is received into a notch on the anterior border of the thorax.

C. scap'ulæ. The head of the shoulder-

blade. A term for the acromion.

C. succeda neum. (L. succedancus, substituted. G. Kopfgeschwulst der Neugebornen.) A term applied to the edematous swelling of the scalp of the child observed in many cases of labour where there is sufficient amount of resistance of the maternal parts; it is situated on that part of the head which presents. Also, called Cephalha matoma.

C. tes'tis. (L. testis, the testiele.) The

epididymis.

C. zygomatieum. (Ζυγόυ, a yolk. G. laterale or Jochbeinzacke.) Term applied by Henle to the zygomaticus minor, which forms the external head of his museulus quadratus labii superioris.

Caputpur'gium. Same as Caput pur-

Cap'vern. France; Departement Haute-Pyrénées. Pleasantly situated in a narrow valley about twelve miles from Bagneres de Bigorre. Waters, of temp. 21° C. (69.8° F.) to 23° C. (73.4° F.), contain calcium and magnesium salts, with a little iron and carbonic acid, oxygen and introgen. The source Hount-Caoude is said to be stimulant; it is used in indelent conditions of the abdominal viscera, in urinary calculus, and in elimacteric affections, and is contraindicated in homorrhages. The source Bouridé is said to be calmative, and of use in hysteria.

Caque'ta. A river of the north-western side of South America running into the Amazon. C. bark. One of the names of the bark of

Cinchona lancifolia.

Car'a. (Kapa.) The head. Car'a schulli. Name of a plant of Malabar. Used externally as suppurative, internally against suppression of urine; supposed to be the barleria burifolia.

Car'aba. Same as Carabë. Also, a name for the oil of cashew nuts, the fruit of Anacardium occidentale.

Carabay'a. A province of Brazil.

C. bark. A thin bark, probably the produce of Cinchona ovata and its varieties.

Car'abe. (Pers. karubah.) Amber. applied to other substances, as asphalt. Paracelsus, de Tart. Morb. c. 9.

C. tu'nerum. (L. funus, burial.) Bitumen; because used in embalming the dead.

Car'abus. (Kápaßos, a stag beetle. F carabe; S. carabo; G. Laufkafer.) A Genus of the Order Colcoptera, Class Insecta.

Also, a name of the cray fish, Astacus fluria-

C. chrysoceph'alus. ( $X\rho\nu\sigma\delta s$ , gold;  $\kappa\epsilon\eta\epsilon\lambda\delta h$ , the head.) Formerly used locally in toothache.

C. terrugin'eus. (L. ferrugineus, rust-

coloured.) Common around Paris, where it is used, when bruised, and rubbed on the gum in toothache.

Caracar'acal. A name for a form of tinea. (Littré and Robin.)

Cara'cas. The capital of the United States of Venezuela.

C. ki'no. A form of the gum probably obtained from the Coccoloba uvifera.

C. sarsaparil'la. The produce probably of Smilax medica.

Cara'cha. A name applied in Peru to a pustular eruption on the arms and ehest, which leaves white cicatrices in negroes and mulattoes, and black sears in white people. (Littré and Robin.

Caracos'mos. Sour mare's milk, much esteemed by the Tartars. Lindenns, S. M. Ex.

xvi, § 127.

Car'agaheen. Same as Carrageen. Caraga'na. A Genus of the Nat. Order

Leyuminosw.

C. arbores'cens, Lamb. (L. arboresco, to grow like a tree.) Hab. Siberia. Seeds are eaten as food.

Cara'gna. See Curanna. Caraib'a. A synonym of Caroba.

Carama'nia. A province in the eastern part of Asia Minor.

C. gum. A variety like Bassora gum. Used to adulterate gum tragacanth.

Carama'tu. A tree growing in Pomeroon. It furnishes a febrifuge bark, which may be used in typhoid and remittent fevers, when einchona would be useless or pernicious. (Dunglison.)

Carambola. The Averrhoa carambola. Caramel. (S. caramelo, from L. canna, a cane; mel, honey.) A black porous mass produced when sugar is exposed to a temperature of 204 4° C. (400° F.), by which it loses two equivalents of water. It is used as a colouring matter.

Caramelan. (Same etymon.)  $C_{12}H_{18}O_{9}$  or  $C_{4}ll_{6}O_{3}$ . One of the principal constituents of caramel. It is colourless.

Caranna. (Span.) Name of a resin which exades from a large tree in New Spain, mentioned by Schröderus, l. iv, cl. 2, n. 380; it is of a brownish colour streaked with white, and was formerly employed in vulnerary balsams, strengthening, discutient, and suppurating plasters. It is believed to be the produce of Amyris caranna, or, according to some, of Bursera gummifera.

Caran'næ gum'mi. (L. gummi, gum.)

See Caranna.

Cara'pa. A Genus of the Nat. Order Tropical trees with hitter bark and Meliaceæ. oily seeds.

C. guianen'sis, Aubl. Hab. Brazil and The bark is bitter and astringent. It Guiana. is used in malarious fevers and as a vermifuge. The oil of the seeds is hitter and anthelmintic, and is used against the bites of insects.

C. guineen'sis. The C. touloucouna. C. molucceh'sis. The Xylocarpus gra-

C. obova'ta, Linn. (L. ob, towards; ovatus, egg-shaped.) Yields a bitter and astringent hark.

C. proce'ra. (L. procerus, tall.) Ilab.

India. A bitter and tonie.

C. touloucou'na. Hab. Western Africa. The seeds furnish a bitter, pale yellow oil, called Kunda, or Tallicoonah, which is purgative and anthelmintie. The bark is bitter.

Car'apace. (S. carapacho. G. Rückenschuld.) The dorsal part of the hard epidermic exoskeleton of the Chelonia; it is composed of the expanded extremities of the spinous processes of the dorsal vertebræ in the centre; of the broad and flat costal plates, supported by the ribs, which form the chief extent; and of the series of marginal plates around the edges.

The upper shell of certain Crustacea, in which it is a development of the epimera of the cephalic

segments of the cephalothorax.

The enclosing case of certain Infusoria.

Car'apat. Castor oil. Car'apin. An alkaloid found in the bark of the Carapa guianensis. It forms crystallisable salts with nitrie and hydrochloric acids.

Cara'te. A cutaneous disease occurring in Santa Fé, and supposed to be syphilitic. consists of blotches, sometimes coffee-coloured, sometimes crimson, and sometimes a livid blue.

Carawala. The native Indian name of

the Hypnale nepa.

Caraway. (S. alkarahueya, from Ar. karwıya, caraway; perhaps from κάρου, cummiu.) The Carum carui.

C. fruit. See Carui fructus.
C. seed. The seeds of the Carum carui.

See Carui fructus.

Carballi'no. Spain ; Province of Santiago. A mineral water from several springs, of a temperature varying from 26° C, to 38° C, (78.8° F, to 100.4° F.) They contain calcium and magnesium chloride, calcium carbonate, calcium and magnesium sulphate, with free earhonic acid and hydrogen sulphide.

Carbal'lo. Spain; Province of Corunna. A sulphur water, of 30° C. (86° F.) Used in

theumatism.

Carbam'ic ac'id. CO.NHo.OH. seid not known in the tree state. It is said to be contained in the serum of blood.

**Carbamide.**  $CO(NH_2)_2$ . A synonym of Urea.

Carbasus. An old name, used by Scribonius Largus, n. 227, for very fine linen; also, lint used in surgery.

Carbazo'tate. A salt of carbazotic or pierie acid.

Carbazo'tic a'cid. A synonym of picric acid.

Car'bide. A compound of carbon and some other element, as hydrogen or iron.

C., magnetic. A substance used for water-filters, said to be made by heating hematite with sawdust.

C. of sul'phur. Same as Carbon disulphide.

Car'binol. A term for methyl alcohol. The alcohols formed from it by substitution of methyl, ethyl, or other radicle, for one of its atoms of hydrogen, are called methyl carbinol, ethyl carbinol, and so forth.

Carbo. (L. earbo, a coal; also, a live coal.) Charcoal, carbon.

A term for carbuncle, from the hot sensation

and fiery appearance attending it.

C. anima'lis, B. Ph. (F. charbon animal; I. carbone animale; S. carbon animal; G. Thurischekohle, Thierkohle.) The pharmacopoeial name of impure animal charcoal, or bone black. The residue of bones which have been exposed to a red heat without the access of air. Consists of 88 per cent. of calcinm carbonate and phosphate, 2 per cent. of ferrie carbide and silicide and 10 per cent. of carbon. It is bitter to the

The G. Ph. (G. Thierkohle, Fleischkohle) directs carbo animalis to be made from ealf's flesh, deprived of fat, to be burnt with a third

part of bone in a covered vessel.

C. anima'lis purifica'tus, B. Ph. Purified animal charcoal. Animal charcoal 16 ounces, hydrochloric acid 10 fluid ounces, and a pint of water, are digested for some time, so that the salts may be dissolved, and the carbon collected on a calico filter, washed and dried. It is a black powder, inodorous and tasteless, and is used as a decolouriser. It is used as an antidote to poisonous alkaloids, and to hydrocyanic acid, when it should be given very soon. Half an ounce absorbs and neutralises about a grain of the alkaloid.

C. car'nis. (L. caro, flesh.) The C. ani-

malis, G. Ph.

C. e lig'no. See C. ligni.

C. fos'silis. (L. fossilis, dug up ) Coal. C. huma'num. (L. humanus, belonging to man.) Human faces.

C. jugland'is. (L. juglans, a walnut.) Charcoal made from walnut wood. Used in

flatulent dyspepsia.

- C. lig'ni, B. Ph. (L. lignum, wood. F. charbon de bois; I. carbone di ligno; S. carbon de lena; G. Holzkohle.) Wood charcoal. Wood charcoal by exposure to a red heat without the access of air. Black, brittle, light, porous, tasteless, inodorous, insoluble in water, a good conductor of electricity, but a bad one of heat. When burned in the air at a high temperature it leaves not more than 2 per cent. of ash. It is able to absorb gases. A cubic inch will condense within itself 90 cubic inches of ammonia, 55 of sulphuretted hydrogen, 35 of carbonic acid, 9 of oxygen, 7.5 of nitrogen, and 1.7 of hydrogen. Charcoal is disinfectant when applied in substance, between mushin, to foul ulcers and slonghing wounds. It is useful in diarrhoea and indigestion, with foul breath and eructations; for this it is best given in capsulc. Dose, 20 to 60 grains.
- C. lig'ni depura'tus, Belg. Ph. lignum; depuro, to purify.) Poplar wood deprived of its bark, exposed to a strong heat in a closed vessel; after cooling, soaked in frequently renewed water for three days, dried and powdered.

C. mineralis. (F. mineral, ore.) Graphite, and also anthracite.

C. nu'cis coco'is. (L. nux, a nut; cococs, the cocoa-nut.) Charcoal made from cocoa-nut shells. Used in flatulent dyspepsia.

C. os'sium. (L. os, a bone. G. Knochen-

kohle.) Animal charcoal.

C. os'sium depura tus, Belg. Ph. (L. os ; depuro, to purify.) The C. animalis purificatus.

C. palpebra'rum. (L. palpebræ, the eyelids.) A carbuncular disease of the eyelids.

C. pa'nis. (L. panis, bread. G. Brotkohle.) Charcoal made by burning bread. Used as a tooth powder.

C. pe'træ. (L. petra, a stone.) Coal. C. po'puli. (L. populus, a poplar tree. G. Pappelkohle.) Charcoal made from poplar wood. Used in atonic stomach and intestinal diseases.

pare.) The C. liqui. (L. præparo, to pre-

C. pulvera'tus, G. Ph. (L. pulvero, to reduce to powder.) Wood charcoal. See C. ligni.

C. san'guinis. (L. sanguis, blood. G. Blutkohle.) Blood charred as hone in C. animalis, and used in the same way.

C. spong'iæ. (L. spongia, sponge.) Burnt

sponge.

C. su'beris. (L. suber, the cork tree. G. Corkkohle.) Charcoal made from cork bark. Used in dysentery.

C. trichlora'tus. Carbon trichloride. C. vegetab'ilis. (G. Holzkohle.) Carbo

ligni, wood or vegetable charcoal.

C. vegetab'ilis præpara'tus. (L. praparo, to prepare.) The C. ligni deparatus.
Carbohæ'mia. (Carbon; alua, blood.)
A condition in which the blood is imperfectly

oxidised.

(Carbon; ΰδωρ, Carbohy'drates. water.) A term applied to certain organic compounds containing six or twelve atoms of carbon, united with a variable number of atom of hydrogen and oxygen, but always in the pro-portion to form water. They are divided into Glucoses, Succharoses or Sucroses, and Amyloses.

Carbolate. A salt of carbolic acid. C. of lime. See Calcis carbolas.

C. of quini'ne. (G. carbolsüures Chinin.) One part of quinine aud two parts of carbolic acid are dissolved in alcohol and evaporated. Used in puerperal fever, typhus, pyæmia, aud septicamia.

C. of so'da. See Sodium carbolate.
Car'bolated. Containing carbolic acid.
C. cam'phor. See Camphor, carbolated.

Carbol'ic ac'id.  $C_6H_6O$ . (L. carbo, coal; oleum, oil. F. acud phenique; G. Phenol, Carbol, Carbolsaure.) Phenic acid. It is produced by the action of nitrous acid on anilin, by the dry distillation of salicylic acid, and by the dry distillation of coal. Coal-tar oil is distilled, and the portion which passes over between the temperatures of 150° C. (302° F.) and 200° C. (392° F.) is collected and mixed with a hot strong solution of caustic potash, when a pasty crystalline mass is obtained; this, on the addition of water, separates into a light oil and a dense alkaline solution; which latter, when decomposed by hydrochloric acid, yields carbolic acid in the form of an oily liquid, it is then purified by calcium chloride, and crystallised by exposure to a low temperature. The crystals are long, colourless, prismatic needles, of sp. gr. 1.066, melting at about 40 C. (104° F.), and boiling about 1815 C. (358.7° F.) It is very deliquescent, soon liquefying on exposure. It is soluble in 20 to 33 parts of water. easily in glycerin, oils, alcohol, ether, and acetic acid. It is neutral to test paper, and precipitates albumin. It has a hot, corrosive taste, and a peculiar odour. Carbolic acid is poisonous to the highest as well as the lowest forms of life, by which action it prevents fermentation and putrefaction. When taken internally it is absorbed into the blood and eliminated by the kidneys. It produces stupor, and convulsions, and failure of heart action. Locally it is used as an anti-septic and disinfectant in foul wounds and in burns, in the treatment of recent wounds according to Lister's method; as a local anæsthetic preparatory to stopping a decayed tooth, or the use of caustic in lupus, and other skin diseases. It is used in cezema, psoriasis, parasitic skin diseases, and hoils, and as au injection into the vagina when the discharges are foul, and into a suppurating cavity, and, in substance, to ulceration of the os uteri. It is used as a gargle or paint in sloughy sore throat and diphtheria, and as a spray where the expectoration is feetid; as a disinfectant in infectious diseases it is largely employed. Internally it is given in vomiting produced by nervous irritation. It has been used with apparent success as an injection into the subcutaneous tissue, a parenchymatons injection as it is called, in glandular swellings and inflammations, in crysipelas, poisoned wounds, inflamed bursae, in phlegmons, into the sac of hydrocele, and into the joint cavity in chronic synovitis. Dose, 1 to 3 grains in solution. As a lotion and injection, I part to 50 or 60.

C. ac'id, pois'oning by. Intense burning and whiteness of month, sometimes vomiting of frothy muens, intoxication, contracted pupils, quick irregular pulse, oppressed and jerky breathing, cold claimmy skin, smoky urine, coma, sometimes convulsions, and death in half an hour to four hours, the shortest period recorded being ten minutes, the longest sixty hours. The mouth, gullet, and stomach are found shrivelled and white, the intestines, and sometimes the stomach, congested, and the lungs gorged. Dangerous symptoms have been produced by less than ten

drops.

C. ac'id, tests for. The odour is distinct, a splinter of firwood, moistened with the acid and then with hydrochloric acid, turns blue when dry; ferric chloride colours it violet; bromine

water gives a white precipitate.

C. band'age. A flannel or calico bandago which has been soaked in carbolic oil, and often

stiffened with wax.

C. gauze. (G. Carbolgaze.) Thin muslin impregnated with carbolic acid.

C. jute. Jute impregnated with carbolic acid, and used as a surgical dressing.

C. oil. (G. Carbolsäureöl, Carbolol.) A solution of carbolic acid in boiled linseed oil in a proportion varying from 5 to 10 per eent. Used in the dressing of wounds as an antiseptic.

C. put'ty. (G. Carbolkitt.) One part of carbolic acid is mixed with four parts of boiled linseed oil, and chalk added till it is of the

consistence of putty.

C. soap. (G. Carbolseife.) Carbolic acid added to soap in the proportion of 1 to 10. A disinfecting agent in washing.

C. spray. A solution of 1 part of carbolic to 25 of water, used with a spray apparatus in ulcerated sore throat.

Also, a weaker solution, I to 100, used as a steam spray to produce a cloud of carbolised vapour around the part, when an operation is performed by the antiseptic method.

C. wax. (G. Carholwachs.) Carbolic acid I part, melted with yellow wax 10 parts. Used

to impreguate ligatures or bandages.

Carbolici ac'idi a'qua, U.S. Glycerite of carbolic acid ten drachms, distilled water sufficient to make a pint; one drachm contains a grain of the acid.

C. ae'idi giyceri'num, B. Ph. Carbolic acid 1 part, glycerine 4; rubbed together till dissolved. Dose, 5 to 10 minims in water.

C. ac'idi glyceri'tum, U.S. Similar to the Glycerinum of the B. Ph.

C. ac'idi supposito'rium cum sa-po'ne. Carbolic acid 12 grains, and soap, in powder, 180, starch to form a mass sufficient for twelve suppositories.

C. ac'idi unguent'um, U.S. Carbolic

acid 60 grains, cintment 420; mix. Requires dilution in using.

Car'bolisated. (Same etymon.) Prepared, or charged with, carbolic acid.

Carbolised. (Same etymon.) Containing, or prepared with, carbolic acid.

C. cam'phor. An oleagiuous liquid obtained by mixing 2 parts of a solution of 9 parts of carbolic acid in one of alcohol, with 12 parts of powdered camphor. Used as an antiseptic dressing, in the proportion of 1 part to 20 of water or more.

c. cat'gut. See Catgut, carbolised.

c. res'in-cloth. Thin calico muslin steeped in a solution of carbolic acid 2 parts, castor oil 2, resin 16, spirits 40. Used as an

autiseptic dressing.

Carbon. (L. carbo, a eoal. F. carbone; I. carbone; S. carbono; G. Kohlenstoff.) Symb. C. At. weight 11.97. A tetratomic element existing in three forms: the diamoud, crystallizing in cubes or regular octahedra; graphite, occurring in hexagonal plates belonging to the rhombohedral system; and charcoal, an amorphous form. It constitutes a large part of all animal and vegetable matter, from which it may be obtained by burning in close vessels.

C. ac'ids. A term for organic acids.

C. bichlo'ride. An incorrect name for carbon tetrachloride.

C. bisulph'ide. Same as C. disulphide. C. bisulph'uret. Same as C. disulphide.

C. bro'mide. A compound said to be present in some specimens of commercial bro-

C. dichlo'ride. C2Cl4. Formed by passing the vapour of the tetrachloride of carbon through a red-hot tube. A mobile liquid, sp. gr. 1.6.9, boils at 117° C. (212.6° F.) Its vapour is an-

C. diox'ide. (F. acide earbonique; I. and S. acido carbonico; G. Kohlensaure.) CO2. Carbonic acid. Formed when charcoal burns in the air, and when a carbonate is decomposed by a stronger acid, as marble by hydrochloric acid. It is a colourless gas, with pungent smell and taste, sp. gr. 1 5211, soluble iu water, but expelled by boiling. It will not support combustion, and destroys animal life. It has been liquefied and solidined by pressure and cold. It exists in atmospheric air in the proportion of 2 to 5 per 1000, and in water in variable proportions. It is a product of respiration, and is decomposed and the earbon fixed by the green leaves of plants.

Carbonie acid gas has been used in the photophobia of strumous ophthalmia, and has been inhaled in a dilute form in chronic cough and asthma. In solution, as soda water, it relieves vomiting and gastrodynia. It is used as a local

sedative in a yeast poultice.

Poisoning by earbonic acid gas occurs when it is present in the proportion of 50 per 1000 of air and upwards. A smaller quantity produces headache, sickness, and loss of appetite. pure it is instantly fatal. Poisoning by this gas has occurred in close rooms from burning a charcoal stove, in fermenting vats, in hime kilns. in old wells, and in coal mines (choke damp). There is, when death does not occur at once without a struggle, pain in the head, drowsiness, giddiness, weakness, blueness of the hips and kin, palpitation, quick breathing, sometimes convulsions and vomiting, coma, and death. The brain is congested with effusion of scrum into the ventricles, the blood is dark and uncoagu-

Tests for earbonic acid are the reddening of litmus paper, and the production of a white precipitate in solution of lime or baryta.

C. disulphide. CS2. Formed by passing the vapour of sulphur over charcoal at a high It is a volatile, transparent, temperature. colourless liquid, of great refractive and dispersive power, of disagreeable odour and pungent taste. It is of sp. gr. 1.292; it boils at 46°C. (114.8°F.) It is a diffusible stimulant, exciting the secretions of the skin and kidneys. It has been used internally in rheumatic and arthritic affections, in paralysis, and in skin diseases. Externally it has been used for the cold produced by its evaporation; its vapour has been applied to enlarged lymphatic glands, and to the skin for the relief of neuralgia. It is also used as a local application

to chronic ulcers. Dose, one minim. Its vapour arrests putrefaction of organic substances and destroys the lower forms of life. When inhaled it produces headache, giddiness, and other nervous disturbances, and, in the end,

anasthesia.

A hard, iron-grey substance de-C., gas. posited in the upper part of the retort used in the manufacture of coal gas. It may also be obtained by passing eletiant gas through a red-hot porce-hain tube. It is used for the carbon cylinders or plates of Bunseu's battery and the poles for the electric light.

C. huma'num. (L. humanus, belonging to man.) An old term for the human faces or

excrement.

C. hydri'odide. Iodoform.
C., min'eral. Name for charcoal with various proportions of earth and iron, without bitumen; it is of a grey blackish colour, has a silky lustre, and the fibrous texture of wood; found in small quantities stratified with brown eoal, slate coal, and pitch coal.

C. monochlo'ride. C2Cl2. Obtained by passing the vapour of chloroform through a red-

hot tube. It is in white needles.

C. monosulph'ide. CS. Obtained by exposing carbon bisulphide, in sealed tubes, to direct sunshine. It is a maroon-coloured powder, of sp. gr. 1.66, tasteless and inodorous.

C. monox'ide. (Carboneum oxydatum. F. oxyde de carbone; G. Kohlenoxyd.) CO. Carbonic oxide. Prepared by heating potassium ferro-cyanide with sulphuric acid. It is colourless, tasteless, does not support combustion, burns with a pale blue flame. Its sp. gr. is '9678, and it is only slightly soluble in water. It is very poisonous; has been recommended as an anæsthetic, but is very dangerous.

In poisoning by carbonic oxide there are no other symptoms than insensibility and coma. The blood is very red, the brain slightly congested, and the auricles distended. It is supposed that the hæmoglobin is converted into a new and

stable compound by earhonic oxide.

Tests for earhonic oxide in the blood are the extension of the hæmoglobin absorption band towards the red; and the deposit of a red precipitate when caustic soda is added to the blood. iustead of the brownish-green precipitate of healthy blood.

C. monoxide hæmoglobin. See Hæmoglobin, carbon monoxide.

C. exychlo'ride. Same as Carbonul chloride.

C. oxysulph'ide. Same as Carbonyl sulphide.

C. protosulph'uret. (Πρῶτος, the first.) Same as C. monosulphide.

C. sesquichlo'ride. (L. sesqui, one half more.) Same as C. trichloride.

C. sesquii'odide. Iodoforiu.

C. sulph'ide. Same as C. disulphide. C. sulph'uret. Same as C. disulphide.

C. terchlo'ride. (L. ter, thrice.) Chloroform.

C. tetrachlo'ride. (Tetpas, four. tetrachlorure de carbone. G. Carbontetrachlorur.) CCl. Formed by passing the vapour of earbon bisulphide, together with chloriue, through a red-hot porcelain tube, and the resultant distilled with potash. A colourless, transparent liquid, with an agreeable odour, of sp. gr. 1.56, and a vapour density of 5.33. It boils at 77° C. (170.6° F.) Its vapour is anæsthetic, like that of chloroform, but it is unsafe, in consequence of its depressing influence on the heart. Locally it is useful in neuralgia.

C. trichloride. (Toxis, three.) C2Cl6. Is produced by the action of chlorine, in sunshine, on ethyl chloride. It is white and erystalline, and of a camphorous odon; insoluble in water, easily soluble in alcohol and ether; it melts at 160° C. (320° F.), and boils at 182° C. (359° 6° F.) It has been given in Asiatic cholera, and used as a disinfectant in foul ulcers. Dose, four grains. Carbona ceous. (G. kohlenstoffhaltig,

kuhlig.) Of, or belonging to, or of the nature of, earbon.

C. ac'id. Carbonic acid, Carbon dioxide. C. lungs. The same as Anthracosis pul-

Carbonæ'mia. (Carbon; alµa, blood. F. carbonhemie.) A term for the accumulation of carbonic acid in the blood.

Carbo nas. A carbonate, a salt of carbonic acid.

C. ammo'niæ, Belg. Ph. The Ammoniæ carbonas.

C. ammo'niæ py'ro-oleo'sus liq'uidus, Belg. Ph. Ammonium carbonicum pyrooleosum two parts, dissolved in eight parts of distilled water.

C. ammo'niæ solu'tus, Belg. Ph. (L. solutus, dissolved.) One part of carbonate of ammonia dissolved in nine parts of distilled

C. ammon'icus. The Ammoniæ carbonas. C. ammon'icus py'ro-oleo'sus, Belg. Ph. Same as Ammonium carbonicum pyrooleosum.

C. ammon'icus solu'tus. (L. solutus, dissolved.) The Liquor carbonatis ammonici.

C. bary'tæ. Barium carbonate.

C. baryt'icus. Barium carbonate.
C. bismu'thi. See Bismuthi carbonas.
C. cal'cicus. Same as Creta præparata.

C. cal'cicus præcipita'tus. The Calcis carbonas pracipitatus.

C. cal'cis depura'tus, Belg. Ph. ca'x, lime; de, from; puro, to purify.) Same as Creta praparata.

C. cal'cis præpara'tus. Same as Calcis carbonas pracipitatus.

C. fer'ri, Belg. Ph. Same as Ferri carbonas.

C. ferre'sus sacchara'tus. The Ferri carbonas saccharata.
C. ka'licum. The Potassæ carbonas.

C. ka'licus depura'tus. (L. de, from; puro, to purify.) Carbonate of potassium, obtained by dissolving and recrystallising the commercial salt.

C. ka'licus pu'rus, Belg. Pb. (L. purus, pure.) Same as Carbonus potassæ purus.

C. lith'icus. The Lithia carbonas.

C. lixi'viae cru'dus. (L. lixivium, lve; crudus, undigested.) Commercial potassium earbonate.

C. iixi'viæ pu'rus. (L. purus, pure.) Purified carbonate of potash.

C. magne'siæ, Belg. Ph. Same as Magnesiæ carbonas.

C. magne'siæ cum hydra'te magne'sico. Carbonate of magnesia.

C. magne'sicus. The Magnesia carbo-

C. magne'sicus cum a'qua. (L. cum, with; aqua, water.) Same as Magnesice carbonas.

C. mangane'sii, Belg. Ph. Manganese carbonate.

C. mangano'sus. Same as Manganese carbonate.

C. na'tricus. (Natron.) A synonym of Sodæ bicarbonas.

C. na'tricus exsicea'tus. (L. exsicco, to dry up.) The Sodæ carbonas exsiccata.

C. na'tricus pu'rus. (L. purus, pure.) The C. sode depuratus.

C. plum'bicus. (L. plumbum, lead.) A synonym of Plumbi carbonas.

C. plum'bi vena'lis, Belg. Ph. (L. venalis, for sale.) Commercial carbonate of lead.

C. potas'sæ comple'tus. (L. completus, filled full.) Potassium bicarbouate.

C. potas'sæ cru'dus. (L. erudus, undigested.) Commercial carbonate of potash.

C. potas'sæ depura'tus, Belg. Ph. (L. de, from; puro, to purify.) Commercial potassium earbonate dissolved in water and recrystallised.

C. potas'sæ pu'rus, Belg. Ph. purus, pure.) Carbonate of potash obtained by deflagrating six parts of cream of tartar with three parts of nitre, dissolving and crystallising.

C. potas'sæ vena'lis, Belg. Ph. (L. venalis, for sale.) Commercial potassium carbonate.

C. potas'sicus. The Potassæ carbonas. C. so'dæ. See Sodæ carbonas.

C. so'dæ acid'ulus. (L. acidulus, sourish.) Bicarbonate of soda.

C. so'dæ anhy'drus, Belg. Ph. neg.; ὕδωρ, water.) Same as Sodæ carbonus exsiccata.

(L. completus, C. so'dæ comple'tus. filled full.) Sodium bicarbonate.

C. so'dæ depura'tus, Belg. Ph. (L. de, from; puro, to purify.) Commercial carbonate of soda dissolved in water and recrystallised.

C. so'dæ exsicea'tus. See Sodæ carbonas exsiccata.

C, so'dæ solu'tus, Belg. Ph. (L. solutus, dissolved.) Purified earbonate of soda dissolved in four parts of distilled water.

C. so'dæ vena lis, Belg. Ph. (L. renalis, for selling.) Commercial carbonate of soda.

C. so'dicus. The Sodæ carbonas. C. zin'cicus. The Zinci carbonas.

C. zin'cleus nati'vus. (L. nativus, natural.) Native carbonate of zinc or calamine.

Carbonate. (F. carbonate; I. carbonato; G. kohlensaur.) A salt of carbonic acid.

Carbonated. (F. carboné. G. carbonisirt.) Containing carbonic acid.
C. wa'ters. Mineral waters containing a greater or less amount of carbonic acid in solu-They are sparkling in appearance, sharp and brisk to the taste, and redden litmus paper. They are also called acid or sonr waters

Carbo'nei bisulphi'dum. The Carbon disulphide.

C. tetrachlori'dum. The Carbon tetra-

chloride. Carbo'neous. (F. carboné.) Containing

earbon. Carbo'neum. (L. carbon. G. Kohlen-

stoff.) The element carbon. C. bichlora tum. Same as Carbon di-

chloride.

C. chlora'tum. A synonym of Chloroform.

C. oxida'tum. Carbonic oxide.

C. protochlora'tum. (Πρῶτος, the first.) Same as Carbon dichloride.

C. sesquichlora'tum. (L. sesqui, once a balf.) The Carbon trichloride.

C. sulfura'tum. The Carbon disulphide. and a balf.)

C. sulphura'tum. A synonym of Carbon disulphide.

C. superchlora'tum sulfuro'sum. Same as C. trichlormethylosulfurosum.

C. trichlora tum. (Τρείς, three.) Λ synonym of Carbon trichloride.

C. trichlormethylosulfurosum. Same as Methylium trichloratum sulfuroso-chloridum. Carbon'ic. (L. carbo, a coal. F. car-

bonique; I. carbonico; G. kohlensauer.) Containing, or having relation to, carbon.

C. ac'id. Same as Curbon dioxide.

C. ac'id bath. See Bath, carbonic acid. C. ac'id gas. Same as Carbon dioxide. C. ac'id wa'ter. The Aqua acidi car-

bonici.

C. anhy'dride. ('A $\nu$ , neg.;  $\ddot{\nu}\delta\omega\rho$ , water.) Carbonic acid or carbon dioxide.

C. ox'ide. Same as Carbon monoxide. C. oxychlo'ride. Same as Carbonyl chloride.

Car'bonide. A term formerly applied to some of the salts of exalic acid, such as those of zinc and lead, after they had been exposed to a certain temperature; oxalic acid being looked upon as an hydraeid composed of hydrogen and a radicle containing oxygen and carbon, heat was supposed to drive off all but the metal and the radicle, and the compound was called a earbonide.

Carbonif'erous. (L. carbo, a coal; fero, to bear. G. kohlehaltig.) Bearing, having, or Bearing, having, or

containing, coal or earbon. Carbo'nii disulphi'dum. See Car-

bon disulphide. C. tetrachlori'dum. See Carbon tetrachloride.

Carbo'nis bichlori'dum.

twice.) Same as Carbon tetrachloride.
C. sesquichlori'dum. (L. sesqui, one

half more.) Same as Carbon trichloride. C. sesquiiodi'dum. A synonym of Iodoform.

C. sulphure'tum. Same as Carbon disulphide.

C. trichlori'dum. (Toeis, three.) See Carbon trichloride.

Carbonisa'tion. (L. carbon, ebarcoal or

earbon. F. carbonisation; I. carbonizzazione; G. Verkohlung.) The process of converting organic substances into charcoal, by the application of heat and the admission of a little air.

Carbonisation is adopted in some toxicological researches, for the purpose of destroying organic substances which might mask the chemical re-

actions.

The term is also applied to the destruction of tissue occurring in very severe burns

Carbonised. (L. earbo.) Being converted into charcoal.

Also, applied to simply blackened surfaces. Carbonite. A salt of Carbonous acid.

Carbo'nium. Same as Carboneum. **Carbonom'etry.** (Carbon; μέτρου, a easure.) The measurement of the quantity of measure.) carbonic acid exhaled in the breath.

Carbonous. (F. carboneux.) Having

relation to carbon.

C. ac'id. (F. acide carboneux.) A name proposed for oxalic acid, inasmuch as it was snpposed to be an oxyacid of earbon intermediate between carobnic oxide and carbonic acid.

Carbonox'ide. A name proposed for the

combination of carbon and oxygen.

Carbonycinchon'ic ac'id. A crystallisable acid, the product of the action of potassinm permanganate on einchonin.

Car'bonyl. CO. A dyad radical which, in the free state, is carbon monoxide.

C. chlo'ride. COCl2. Obtained when a mixture of equal volumes of dry chlorine and carbonic acid gas are exposed to sunlight. It is a colourless gas, having a pungent, unpleasant, suffocating smell. It liquefies below 8° C. (46·4° F.)

C. sulph'ide. COS. Produced when carbon monoxide, mixed with vapour of sulphur, is passed through a red-hot tube. It is a gas of sp. gr. 2·104, having a resinous odour and an acid reaction. It burns with a faint blue flame; it is soluble in water. It exists in some snlphur springs, and in volcanoes.

Carbonyldiure'a. C<sub>3</sub>H<sub>6</sub>N<sub>4</sub>O<sub>3</sub>. A white powder formed by heating mrea to 100° C. (212° F.) with carbonyl chloride.

Carbores'cens. A name of the Capparis pulcherrima.

Carbosulph'uret. A carbon sulphide with an alkali. A combination of

Carbovinic acid. H. Æth. CO2 KCO2. An acid that has not been obtained in a separate condition. Carbovinate of potash is supposed to be produced when carbonic acid is transmitted through a solution of potassium hydrate in absolute alcohol, and is decomposed into ether and

carbonate of potash. Carbox'yl. CO.OH. A hypothetical monad radicle supposed to he contained in all the organic acids.

Carbuncle. (L. carbunculus, dim. of carbo, a live coal. F. escarboucle; I. carbonchio; (L. carbunculus, dim. of G. Carfunkel.) A precions stone; a variety of the garnet, of a deep red colour, with a tinge of scarlet. Formerly used as a preservative against poisonous and infectious diseases.

Also (ἄνθραξ; L. anthrax; F. anthrax; I. antrace, carbone; S. carbunculo; G. Kohlenbeule, Brandschwar, Karbunkel.) A circumscribed intlammation of the subcutaneous connective tissne always terminating in a slough and supportation. It begins by a small vesicle on a dusky-red indurated base, with considerable pain; pus forms and

the base enlarges, and becomes doughy and elevated; then small openings appear, giving passage to greyish sloughs and pus; the openings enlarge, the sloughs separate, and healing by granulation occurs; or the carbuncle increases, the suppuration becomes very copious, the strength wastes, and the patient dies. The general condition is that of weakness, with disturbed digestive organs. Bad food, wasting diseases, especially diabetes, and the acute febrile conditions, induce a condition in which carbuncle is likely to occur. It is a disease of mature life. There is often no distinct local cause, though septic infection may now and then be traced. Carbunele differs from boil chiefly in degree, and in its greater tendency to advance from its eircumference. The larger the disease, the nearer the head, and the more unhealthy the patient, the greater is the danger to life.

C., ber'ry. A synonym carbunele called Terminthus. A synonym of the variety of

C., es char. (Εσχάρα, the scab on a wound caused by a burn.) A synonym of the variety of carbunele called Pruna.

C., fa'cial. By some authors described as malignant pustnle, but by most recognised as a distinct disease. Commences as a small pustule on the hp, usually the upper, which rapidly produces a hard ædematous swelling of the adjacent parts, of a dusky hue, and very painful. The constitutional symptoms are severe, and of the character known as typhoid. It is very fatal. Pyæmia is a common termination. It has been supposed to be connected with the growth of bacteria or micrococci.

C., fun'gous. A synonym of Terminthus. C., malig'nant. Same as C, fucial.

Carbuncled. (L. carbunculus, a precious stone.) Having the appearance of a earbuncle. Pimply and red.

C. face. A synonym of Good's Ionthus corymhifer, or of Acne rosacea.

Carbun'cular. (L. carbunculus. carbunculaire.) Of the nature, or appearance, of earbunele.

C. exan'them. A synonym of Anthracia, of Dr. Mason Good.

Carbun'culate. (L. carbunculus, a earbuncle, the precious stone.) Like to carbuncle. tuberculate.

Carbuncula'tio. (L. corbunculo, to suffer with a carbunele.) A carbunele.

C. oc'uli. (L. oculus, the eye.) A term

for earbunele of the eyelids.

Carbuncula tion. (Same etymon.) The occurrence of canker, or blight, in the bud of a plant.

Carbun'culoid. (L. carbunculus; ɛlôos, form.) Resembling earbuncle.

Carbunculous. (L. carbunculus. F. carbonculeux.) Relating to a carboncle, or to anthrax.

Carbun'culus. (L. dim. of carbo, a glowing coal.) See Carbunele.

C. angino'sus. (L. angina, the quinsy.) Same as Cynanche maligna.

C. benig'nus. (L. benignus, mild.) A synenym of Boil.

C. contagio sus. (L. contagio contagion.) Same as Malignant pustile.

C. gal'licus. (L. Gallicus, French.) Same us Malignant pustule.

C. gra'vis. (L. gravis, severe.) A term applied to ordinary carbuncle, accompanied by serious constitutional symptoms, and often py-

C. hungaricus. (L. Hungaricus, Hungarian.) Same as Malignant pustule.

C. labiorum et gena rum. (L. labium, a lip; gena, a check.) Same as Gangronous stomatitis.

C. polon'icus. (L. Polonia, Poland.) Same as Malignant pustule,

C. pulmo'num. (L. pulmo, a lung.) Same as Gangrene of the lung.

C. rubi'neus. (L. rubineus, ruby-red.) The gem Carbuncle.

C. septentrionalis. (L. septentriones, the north.) A syuonym of Malignant pustule.
C. sim'plex. (L. simplex, simple.) Ordinary carbuncle.

C. ulcusculo'sus. (L. ulcusculus, a small sore.) A synonym of Cynunche maligna.

Carbure'ic ac'id. A synonym of Allophame acid.

Carburet. (F. carbure; 1. carburo.) A term for the combination of earbon with any other substance; now usually called Carbide.

Carburetted. Of the nature of a car-

C. hy'drogen. Same as Methane. Carbure'tum. Same as Carburet.

C. fer'ri nati'vum. (L. nativus, natural)

Native carbon of iron or graphite.

C. hydrogen'ii. Light carburetted hydrogen or methane.

C. sulfu'ris. Carbon disulphide.

Carbylic sulphate. C2H4. 28O3. A substance supposed by Robiquet to be a first formed and temporary product in the making of ether.

Carcan'ieres. France; Departement de l'Ariége. A pleasant village, 2290 feet above saclevel. Thirteen springs, of a temperature varying from 25° C, to 59° C, (77° F, to 138-22° F.), and containing sodium sulphide. The water is used in skin diseases, in rheumatic and in catarrhal affections.

**Car'earos.** ( $Ka\rho\kappa ai\rho \omega$ , to vibrate or quake.) Trembling; shaking. A term applied to a pernicious intermittent fever speedily fatal.

Car'carus. Same as Carcavas.
Car'cax. (Κάρα, a head.) Name for a kind of poppy, the head of which is so large that it will contain a pint and a half, according to Hartmannus, de Opio, ii, 3.

Carcer. (L. carcer, a prison.) An old term, used by Paraeelsus, de Morb. Ament. tr. ii, c. 3, for a medicine proper for restraining inordinate movements of mind or body, as in chorea.

Car'cerule. (L. dim. of carcer. F. carcirule.) A superior dry, indehiseent, one or many seeded fruit, with the carpels adherent around an axis, as in the mallow. Each cell of a carcerule is essentially like an achænium.

Carcer ular. (L. carcer. F. carcerulaire.) Bearing, or being like, a careerule.

Carcharadonta. (Καρκαρος, sharp-pointed; όδους, a tooth.) Old term for those tribes of animals having sharp-pointed teeth.

Carcharias. A Genus of the Suborder Scluchoider, Order Chondropterygii, Class Pisces.

C. vulgaris. (L. vulgaris, common. F. requin; 1. pesce cane; S. tiburon; G. Haifisch.)
The white shark. The liver supplies an oil used instead of cod-liver oil; the teeth are popularly used to help the cutting of the teeth in children by rubbing the gums; the flesh is eaten.

**Carche'sium.** (Καρχήσιου, the highest point of a ship's mast, or the holes at its top, through which the ropes pass.) Term, used by Galen, de Artie. iii, 25, for a kind of noose formerly used in reducing dislocations, which resembles the rope passing round the topmast of a

ship, keeping it stendy on both sides.

Carche sius. The same as Carchesium. Carcinelco'sis. (Kupkívos, cancer;

ελκωσις, ulceration.) A cancerous ulcer. Carcine thron. (Καρκίνηθρον.) Name of a plant, supposed to be the Polygonum avica-

Car'cinic. (Καρκίνος, cancer.) Alibert's term for cancer of the skin.

Carcino'des. (Καρκινώδης, cancerous.) Having cancer; full of cancer.

Also, ulcerated, gangrenous.

Car'cinold. (Κυρκίνος, a crab, cancer; είδος, likeness. F. carcinoide; G. krchsühnlich.) Resembling the crab; also, resembling cancer.

Carcinoï des. (Kapkivos, cancer; είδος,

form.) Resembling cancer.

**Carcinoma.** (Καρκίνωμα, a cancer, from καρκίνος, a crab. F. carcinome; G. Krebs.) Although now generally used to signify the disease cancer, this word has been applied by authors in other ways.

Indolent non-malignant tumours have been

so named.

Those forms only of cancer in which the structure resembles brain matter have been thus called. This designation has by some been restricted

to the early stages only of cancer. C. adenoï des. See Cancer, adenoid.

C. alveola're. (L. alveolus, a hollow

- vessel.) Colloid cancer.

  C. arborum. (L. arbor, a tree. G. Banmkrebs.) The diseased condition of a tree, called canker.
- C. asbol'icum. (' $\Lambda \sigma \beta \delta \lambda \eta$ , soot.) Chimney-sweepers' cancer.
- C. atrophicum, ('Ατροφία.) which has undergone atrophic degeneration in whole or in part.
- C. cami'nos purgan'tium. (L. eaminus, a furnace; purgo, to eleanse.) Chimneysweepers' cancer.
- C. cleatricia'lis. (L. cicatrix, a sear.) A scirrhous cancer in which the softer structures have degenerated in parts and been absorbed, and the stroma has hardened and contracted.
- C. colloï'des. Same as Cancer, colloid.
   C. des moid. (Δέσμα, a bond; είδος, likeness.) Under this term, R. Schulz includes all those malignant atypical connective-tissue new growths which are included under the names of lymphosarcoma, lymphadenoma, and pseudoleucæmic tumours.
- C. du'rum. (L. durus, hard.) Scirrhous cancer.
- C. encephalol'des. (Εγκέφαλος, the brain; sidos, likeness.) Encephaloid cancer.
- C. epithelio'des. ('Επιτίθημι, to place upon.) Epithelial cancer.
- C. epithelio'sum. (Same etymon.) Epithelial cancer.
- C. fascicula'tum. Same as Sarcoma, fascieulate.
- C. fibro'sum. (L. fibrosus, fibrons. Faserkrebs.) Scirrhous cancer, from its appearance.

C. gelatino'sum. Same as Cancer, gelatinous.

C. glandula're. (L. glandulæ, glands; G. Drüsenzellenkrebs.) Primary carcinoma of the glandular organs; the female mammary gland, liver, thyroid glauds, salivary glands, including the panereas, prostate gland, kidneys, testicles, and ovaries, are stated in their order of frequency.

C. hæmato'des. ('Αιματώδης, blood-like.)

Hæmatoid epithelial caneer.

C. lenticula're. (L. lenticula, a little lentil. G. lenticularer Bindegewebskrebs.) A term applied to a brownish-red nodular appearance of the skin sometimes observed over a mammary or other scirrhous cancer as it involves the skin.

C. lin'guæ. (L. lingua, the tongue.) Cancer of the tongue.

C. medulla're. (L. medulla, marrow.) Encephaloid cancer, from its resemblance to medullary nervous tissue.

C. medullo'sum. (L. medulla.) cephaloid cancer.

C. melano'des. (Μέλας, black. G. Pig-

mentkrebs.) Melanotic cancer. C. melanoticum. (Μελανότης, black-

ness.) Melanotic cancer. C. mol'le. (L. mollis, soft.) Encephaloid

cancer, from its softness. C. myxomato'des. See Cancer, myxo-

matous. C. ni'grum. (L. niger, black.) Melanotic

cancer. C. osteoï'des. (L. os, bone; ¿lôos, likeness.) Osteoid cancer.

C. reticula're. (L. reticulum, a web.) Scirrhous cancer, from its reticulated appearance.

- C. reticula'tum. (Same ctymon.) A term applied by Müller to those forms of scirrhous caucer in which the cancer cells become converted into yellowish granule corpuscles, and the larger trabeculæ of the stroma become more distinet and prominent on section.
- C. sarcomato'des. Same as Cancer, sarcomatous.
- C. scro'ti. (L. scrotum, the scrotum.) Chimney-sweepers' cancer.
- C. sim'plex. (L. simplex, simple.) Scirrhous cancer.
- C. spongio sum. (L. spongia, a sponge.) Encephaloid cancer, and its hamatoid form.

C. teleanglecto'des. See Cancer, teleangiectatic.

**C. tubero'sum.** (L. tuber, a swelling. G. knotiger Bindegewebskrebs.) A cancer of the skin, primary or secondary, occurring in flat or rounded, red or livid, nodules of varying size, and frequently in large numbers; they often ulcerate, sometimes are thus entirely destroyed, and cicatrisation takes place.

**C. ventric'ull.** (L. ventriculus, the stomach.) Cancer of the stomach.

C. villo'sum. (L. villosus, shaggy.) Villous cancer.

Carcino'matous. (F. carcinomateux; G. krebsartig.) Having the nature of, or resembling, carcinoma.

(Struma.) A term for ma-C. stru'ma. lignant disease of the thyroid gland or of lymphatic glands.

Carcinomeleo'sis. (Καρκίνωμα, eancer; ελκωσις, ulceration.) An ulcerated cancer. Carcinopol'ypus. (Καρκίνος, cancer; πολύς, many; πούς, a foot.) A cancerous or

malignant polypus.

Carcino'scs. (Kapkivos. G. Karkinosen.) A name by Eisenmann for a family of diseases, including the different forms of cancer and cancer-like diseases, tubercular, seirrhous, and encephaloid.

Carcino'sis. (Kapkinos) The production and development of cancer.

Also, a synonym of the disease Cancer.

C. milia'ris acu'ta. (L. milium, millet seed; acutus, violent.) A rapid primary or secondary development of minute cancerous masses in or on the surface of the internal organs.

Carcinous. (Kapkivos, eancer.) Belonging to cancer.

Carcinus. (Kapkivos, cancer.) A synonym of Caneer.

C. spongio'sus. (L. spongia, a sponge.)

Encephaloid cancer.

C. vulga'ris. (L. vulgaris, common.) A term under which Dr. Mason Good includes all forms of eancer, with the exception of encepha-

Car'cinus. (Καρκίνος, a crab.) A Genus of the Family Portunidæ, Tribe Brachyura,

Order Decapoda.

C. mœ'nas, Leach. (L. Mænas, a Bacchante. F. crabe enragé.) The shore crab. Used as food.

Carcyth'ium. Name by Necker for the mycelium of fungi.

Cardaman'tica. (Κάρδαμον, the nasturtum or cress.) The Lepidium iberis; also, the Cardamine pratensis.

Cardamele'um. A medicine mentioned by Galen, C. M. per Gen. vii, 7.

**Cardamin'dum.** (Κάρδαμον, eardamine; Ινδός, Indian.) The Indian eress, Tropwolum indicum.

Cardami'ne. (Καρδαμίνη.) A Genus of the Nat. Order Cruciferce. C. ama'ra, Linn. (L. amarus, bitter. F.

- cresson amer.) Bittercress, Used as an antiscorbutic.
- C. asarifo'lia, Linn. (L. asarum, wild spikenard; folium, a leaf.) Used in Europe as an antiscorbutie.

C. fonta'na. (L. fontanus, belonging to a The Nasturtium officinale. spring.)

C. hirsu'ta, Linn. (L. hirsutus, hairy.) Small bittercress. Used as an antiscorbutic. The seeds are said to be diuretic.

C. impa'tiens, Linn. (L. impatiens, that will not suffer anything.) Hab. Europe. Used as an antiscorbutie.

C. nasturtioi'des, Berter. (L. nasturtium, a kind of cress; eldos, likeness.) Used in Chili as an antiscorbutic.

C. nastur'tium. The Nasturtium officinale.

C. praten'sis, Linn. (L. pratensis, growing in meadows. F. cresson des prés; 1. cardamindo ; S. nastuerzo de prados ; G. Wiesenkresse, Kukukskraut.) Cuckoo flower. Leaves pungent, rather bitter. Used as an antiscorbutic, and in ealculus; the flowers were supposed to be diuretie, diaphoretie, and antispasmodie, and were used in chorea and asthma; the flowering tops had a reputation in epilepsy.

Cardami'num mi'nus. A name for the Tropuolum minus.

Car'damom. See Cardamomum.
C., Alep'po. The fruit of Eletturia cardamomum.

C., bas'tard. The fruit of Elettaria major.

C., Ben'gal. The fruit of Amomum aromatieum.

C., Bir'mah, bas'tard of. The fruit of Amomum xanthioides.

C., Ceylon'. The fruit of Elettaria major. C., Chi'na, hair'y. The fruit of Amomum villosum.

C., Chi'na, o'void. The fruit of Amomum medium.

C., Chi'na, round. The fruit of Amomum globosum.

C., Clu'sius's. The fruit of Amomum

C., Clu'sius's, pol'ished. The fruit of Amomum Danielli and A. Clusii.

C., clus'ter. The fruit of Amomum cardamomum.

C., com'mon. The officinal cardamom. C., Gärt'ner's. The product of Amomum Danielli.

C., Gart'ner's black. The Zingiber migrum.

C. galan'ga. The fruit of Alpinia gulanga.

C., great'er. The fruit of Elettaria major. C., great-wing'ed. The Amomum maxi-

mum. C., Java. The fruit of Amomum maximum.

C., korari'ma. The Amomum korarima. C., large. The fruit of the Elettaria major. Also, the C., Java.

C., les'ser. A variety of the officinal cardamom.

C., long. The fruit of Elettaria cardamo-2022227 .

C., Madagas'car. The fruit of Amomum angustifolium.

C., Madras'. The fruit of Elettaria cardamomum.

C., Mal'abar. The fruit of Elettaria cardamomum.

C., Nepaul'. The fruit of Amomum subulatum, or perhaps of A. maximum.
C., officinal. The fruit of Elettaria car-

damomum. C., round. The fruit of Amomum cardamomum.

C., Si'am, bas'tard. The fruit of Amomum xanthioides.

C., Sibe'rian. A name of the seed of the star-anise, Illicium anisatum.

C., small. The officinal cardamom.

C., spi'ny. The fruit of Amomum xanthioides.

C., true. The fruit of Elettaria cardamo-

C., wild. The fruit of Elettaria major, and Amomum xanthioides; and also a name given in the Cape Colony to the fruit of Fagarastrum capense. C., wing'ed. The fruit of Amomum maxi-

12271227.

Cardamo'mi sem'ina. seed.) Cardamom seeds. See Cardamomum.
Cardamo'mum. (Καρδάμωμον. F. car-

damone; 1. and S. cardamono; G. kleine Kardamonen, Kardamonenfrücht.) Cardamons. The dried capsules of the Elettaria cardamonum. The other varieties are not officinal. The capsules, when ripe, are picked and dried at a fire; they are 3" to 10" long, 2" to 4" thick, three-sided, with rounded angles, and yellowish-white in colour.

They contain several seeds, which are small, angular, roughish, reddish-brown without, white within, of a warm, pungent, aromatic taste and an aromatic odour. They contain 10.4 per cent. of fixed oil, 4.6 per cent, of volatile oil, 4.7 per cent. of colouring and mucilaginous matters, 3 per cent. of starch, and 77.3 per cent. of woody The volatile oil contains a crystalline camphor. Cardamom is a warm, pleasant aromatie. Used as an adjunct to purgatives and stomachics.

C. Bandaën'se, Martius. The Amomum macrospermum.

C. ma'jus. (L. major, greater.) The fruit of Elettaria major.

C. malabaren'se. The fruit of Elettaria cardamomum.

C. malabar'icum. The fruit of Elettaria eardamomum.

C. mi'nus. (L. minor, less.) The fruit of Elettaria cardamomum.

C. pipera'tum. (L. piperatus, peppered.) Grains of Paradise.

C. rotun'dum. (L. rotundus, round.) The fruit of Elettaria cardamomum.

Car'damon. (Κάρδαμον.) The Greek name for the *Tropwolum majus*, or nasturtium. **Car'damum.** Same as *Cardamomum*.

Car'den's amputation. A mode of amputating the leg at the knee through the condyles of the femur, suggested in 1863 by Carden. The flaps resemble those made in Teale's mode of operating.

Car'dia. (Καρδία, the heart, the stomach. F. cardia; I. cardia; S. cardias; G. der oberc Magenmund) The upper or œsophagæal orifice of the stomach. It is situated at the level of the eleventh dorsal vertebra and the inner end of the sixth costal cartilage of the left side.

The heart, according to some uses.

Cardiace. (Kapĉia. F. cardiaque; I. and S. cardiace.) Belonging to the heart, or situate near the heart or the cardiac oritice of the stomach.

Applied to medicines supposed to invigorate the heart.

C. affec'tions. (L. afficio, to affect. G.

Herzleiden.) Diseases or disorders of the heart.

C. anxiety. (L. anxietas, solicitude. G. Herzbeklemmung.) The feeling of distress accompanying irregular or imperfect action of the heart.

C. apnœ'a. See Apnæa, cardiac.

C. ap'oplexy. Extravasation of blood, in larger or smaller patches, into the muscular structure of the heart, generally accompanied by atheromatous disease of the neighbouring branches of the coronary artery and fatty degeneration of the surrounding tissue.

C. ar'teries. (F. artères cardiaques.) See Coronary arteries of heart.

(G. Herzasthma.) C. asth'ma. Asthma, cardiac.

**C. cæ'cum.** (L. cæcus, blind.) A cecal appendage to the stomach. The Dugong possesses two, and the blood-sucking bat, Desmodes, has one highly developed, the pyloric end of the stomach being very small, and the cardiac end developed into a long pouch, the cardiac elecum; the food requiring little provision for digestion, but much for storing.

C. concre'tions. (L. concretus, from coneresco, to grow together. G. Herzgerinnsel.) Masses composed of more or less firm blood-clot

or of coagulated fibrin, some formed after death. some in the act of dying, and others by slow increase sometime before death; they often extend into the vascular trunks.

C. concre'tions, embol'ic. ('Εμβολή, from εμβάλλω, to throw in.) A sanguineous or fibrinous clot enclosing matters, such as pus-corpuscles, which have come from a distant part.

C. concre'tions, fibrinous. Clots consisting for the most part of fibrin, firm, solid, or gelatinous, of a yellow colour, and moulded on the wall of the containing eavity, and entangled in the irregularities of, and projections from, the surface; they often extend into the blood-vessels. They are formed during life, in most instances probably in the act of dying, but in some cases they are formed much more slowly and are accompanied by great dyspnea, anxiety, and palpitation, accompanied often with a livid complexion and tendency to syncope. It is supposed that some diseases, such as scarlatina and febrile puerperal conditions, tend to fibrinous clotting.

C. concre'tions, glob'ular. Smoothsurfaced, buff-coloured, sometimes red-streaked clots, most commonly found in the left ventricle, sometimes solid throughout, sometimes containing, in one or more cavities, a thick puriform, often brownish-red fluid; the solid parts consist of a fibriform network, with granular matter, compound granular cells, oil globules, and sometimes crystalline needles; the fluid matter consists of molecules, broken-up corpuscles, oil globules, and colourless crystals, and, when dark coloured, in addition, altered blood-corpuscles and rhomboidal crystals of hæmatoidin.

C. concre'tions, lam'inated. (L. lamina, a layer.) Coagula formed of layers like those in an aneurysm, occasionally met with in the left auricle and in aneurysms in the ventrienlar walls.

C. concre'tions, mould'ed. whether of blood or of fibrin, found in the heart after death, and moulded to the shape of the cavity or the part of the cavity in which they

C. deform'ity. (L. deformo, to disfigure. Herzmissbildung.) Malformation of the G. Herzmissbildung.) heart.

C. dias'tole. See Diastole, cardiac.

C. disea'se. Disease of the heart.

C. distress'. Same as C. anxiety.

C. drop'sy. Dropsy depending on heart

C. dul'ness. (G. Herzdampfung.) The note obtained by percussion of the chest over the heart. It varies in quality in different individuals, and in extent according to the greater or less inflation of the lungs, the presence or absence of disease, and the strength or lightness of the percussion. The lower edge of cardiac dulness is not generally to be distinguished from the left upper edge of hepatic dulness.

C. dul'ness, deep. The note obtained by strong percussion. According to Walsh, it extends normally in a vertical direction from the third to the edge of the sixth costal cartilage, and transversely from the left nipple to a little beyond the right edge of the sternum, opposite the fourth costal cartilage; the longest measurement is the diagonal one from the upper part of the third right costal cartilage to the point of the apex

C. dul'ness, superfic'ial. The note obtained by light percussion. According to Walsh, it is a rudely triangular space, bounded on the right by a vertical line extending at mid-sternum from the level of the fourth rib to that of the sixth; on the left by an oblique line passing outwards and downwards, at a more or less acute angle from the latter, opposite the fourth eartilige, and curving inwards again, somewhat within the site of the nipple, to the sixth rib, beside the heart's apex; and inferiorly by a line gently sloping to the left, from the central point of the lower edge of the sternum along the sixth cartilage. Forced inspiration diminishes its extent; expiration increases it above and on the

C. dyspnœ'a. (Aus, an inseparable prefix meaning hard; πνοιή, from πνέω, to breathe.) Difficulty of breathing, from disease or disorder

of the heart.

**C. engor'gement.** (F. engorger, to be choked up; from en, into; gorge, the throat.) Over-much blood in the heart from cardiac muscular weakness, valvular deficiency or obstruction, or distal impediment, evidenced by a dusky complexion, oppression at the pracordia, and dyspnœa.

C. excitement. (L. excito, to rouse up. G. Herzaufregung.) Rapid or tumultuous action

of the heart.

C. fe'ver. Same as Carditic fever.

C. gang'lia. Numerous small ganglia found on the branches of a plexus of nerves, ramifying under the endocardinm and penetrating the muscular tissoe. Also, see Remak, ganglion of; Ludwig, ganglion of; Bidder, ganglion of; and Wrisbery, ganglion of. C. ganglion. (F. ganglion cardiaque.) Same as Wrisbery, ganglion of.

C. glands. (G. Cardialdräsen.) The glands found in the walls of the cardiac extremity of the stomach.

C. herb. The Leonurus eardiaca, or motherwort.

C. impulse. (L. impulsus, part of impello, to urge on. F. ehoc du eeur; G. Herzschock, Herzstoss.) The shock or blow felt and often seen over the apex of the heart at the same time as the systole of the ventricles. In man, it is ordinarily most distinctly felt in the fifth costal interspace, about an inch below and a little to the inner side of the left nipple.

G. inhibition. (L. inhibeo, to restrain. G. Herzhemmung.) The more or less complete arrest of the heart's action through influence

conveyed by filaments of the vagus nerve.

C. irrita'tion. (L. vrilo, to excite. G. Herzreizung.) Same as C. excitement.

C. lymphatic glands. (G. Herzlymph-drisen.) Three or four lymphatic glands lying behind and one in front of the arch of the aorta.

- C. lymphatics. The lymphatic vessels accompanying the coronary vessels. Those of the right side collect into a trunk, which courses the arch of the aorta to reach the trachea, and opens into the right lymphatic duct. Those of the left side pass along the pulmonary artery, and, running by the side of the trachea, join the thoracie duct.
  - C. mur'murs. See Murmurs, cardiac. C. mus'cles. See Heart, muscles of.

  - C. nerve, deep. The middle cardiae nerve.
- C. nerve, great'er. The middle cardiac
- C. nerve, infe'rlor. The lower cardiac nerve.

C. nerve, low'er. A sympathetic nerve arising from the third cervical or first thoracie ganglion. The right nerve runs behind the subclavian artery, where it communicates with the middle cardiae and the recurrent laryngeal nerves, and joins the deep cardiae plexus. The left nerve generally joins the middle cardiac before reaching the plexus.

C. nerve, mid'dle. A sympathetic nerve arising from the middle cervical ganglion. The right nerve passes behind the carotid sheath, where it communicates with the upper cardiac and recurrent laryngeal nerves, runs along the trachea, where it joins again branches of the recurrent laryngeal, and ends in the right side of the deep cardiac plexus. The left nerve enters the chest between the carotid and subclavian arteries, and joins the left side of the deep cardiac plexus.

C. nerve, smaller. The lower cardiac nerve.

C. nerve, superfic'tal. The apper cardiac nerve.

C. nerve, superrior. The upper cardiae nerve

C. nerve, up'per. A sympathetic nerve arising from the upper cervical ganglion, and sometimes from the cord connecting the first two ganglia on the right side. Both nerves lie in the neck on the longus colli, behind the carotid sheath, and run in front of the lower thyroid artery, where they send branches to the thyroid hody and the recurrent laryngeal nerve. In the thorax the right nerve, after crossing in front or behind the subclaviau artery, runs along the innominate to the deep cardiae plexus, while the left follows the left carotid to the aortic arch, and joins sometimes the superficial, sometimes the deep, cardiac plexus.

C. nerves. The nerves of the heart are derived from the cardiac plexus, and are partly of cerebro-spinal, partly of sympathetic origin; they run across the direction of the superficial muscular fibres, and in their course present small

ganglia.

C. nerves, cervi'cal. Branches of the pneumogastric. The upper branches are given off in its course through the neck, and join the sympathetic cardiac nerves. The lower branch arises as the pneumogastric enters the thorax; that of the right side runs along the iunominate artery and joins the deep cardiac plexus; that of the left side joins the superficial cardiac plexus.

C. nerves, thorac'ic.  $(\Theta \acute{\omega} \rho a \xi$ , the ehest.) Branches of the pneumogastric nerve in the neck and of its recurrent laryngeal branch. They end

in the deep cardiac plexus.

C. neural'gia. (Νεῦρον, a nerve; ἄλγος, pain.) A synonym of Angina pectoris.
Also, applied to the severe præcordial pain

sometimes accompanying disease of the mitral valve of the heart.

C. oppression. (L. oppressio, from opprime, to press down. G. Herzbeklommenheit.)
Same as C. anxiety.
C. or'ifice. (L. orificium, an opening. F. cardia; G. Kardia.) The opening by which

the exophagus communicates with the stomach. Called, also, Cardia.

C. er'ifices. (L. orificium.) A term which usually includes the two auriculo-ventricular orifices and those of the aorta and the pulmouary artery.

C. pas'sion. (L. passio, a suffering.) An old name for cardialgia, or heartburn.

C. plex'us. (L. plexus, a twining. F. plexus cardiaque; G. Herzgeflecht.) A plexus of the sympathetic nerve lying upon the aorta and pulmonary artery, receiving the several cardiac branches of the cervical gaughia and the pneumogastric nerve, and supplying the heart and some small branches to the lungs. It is divisible into a superficial and a deep portion.

C. plex'us, ante'rior. The superficial

cardiae plexus.

C. plex'us, deep. The larger of the two divisions has between the arch of the aorta and the termination of the trachea, just above the division of the pulmonary artery. It receives all the cardiac sympathetic branches, with the exception of the left upper cardiac nerve, and the cardiac branches of the pnenmogastric and the recurrent laryngeal nerves, with the exception of the left lower cervical cardiac branch. branches from the plexus on the right side run chiefly in front of the right pulmonary artery, and join branches of the superficial cardiac plexus to form the anterior coronary plexus; the rest, passing behind the right pulmonary artery, supply the right auriele and communicate with the posterior coronary plexus.

C. plex'us, great. The deep cardiac

plexus.

C. plex'us, superfic'ial, This plexus lies in the concavity of the aortic arch in front of the right pulmonary artery. It receives the left upper cardiac nerve, the left and sometimes the right lower cervical cardiac branch of the pneumogastric, and filaments from the deep cardiac plexus. It frequently contains a small ganglion, the ganglion of Wrisberg. The branches from the plexus mostly run into the anterior coronary plexus, and some, passing along the pulmonary

artery, join the left anterior pulmonary plexus.

C. pol'ypus. (G. Herzyewachs.) A fibrinous clot in the heart. See C. concretions,

**C. pulsa'tion.** (L. pulso, to beat.) The beating of the heart, as felt in the precordial

region.

C. re'gion, deep. (G. tiefe Herzgegend.) A term used by Walsh to indicate the actual position of the heart, extending vertically from the second intercostal space to the sixth costal cartilage, and transversely from a little within the left nipple to a finger's breadth or more to the right of the sternum.

C. re'gion, superfic'ial. (G. oberflachliche, Herzgegend.) A term applied by Walsh to the somewhat triangular space over that part of the heart which is uncovered by lung; the upper angle of the triangle corresponds to the middle line on the level of the fourth costal cartilage, and the hase to a line drawn horizontally from the place where the apex beats to the middle line of the sternum.

C. sed'atives. (L. sedo, to allay.) Medicines which reduce the power of the heart and decrease the activity of the circulation; such are antimony, aconite, hydrocyanic acid, veratrin,

and others.

C. sep'tum. (L. septum, a wall. G. Herzscheidewand.) The septum or partition between the auricles and ventricles of each side.

C. sounds. See Heart sounds. C. stim'ulants. (L. stimulo, to drive onwards) Medicines which are believed to strengthen the action of the heart and to increase the force of the circulation; such are digitalis and, in a different fashion, ammonia, and alcohol, in moderate doses.

C. sys'tole. See Systole.

C. thrombo'sis. (Θρόμβωσις, a hecoming curdled.) The occurrence of a clot in the heart. See C. concretions.

C. valves. (L. valvæ, folding doors.) The valves of the heart; being the mitral and tricuspid, the right and left scruilunar, the Eustachian, and the coronary valves.

C. veins. Same as Coronary veins of heart.

Cardi'aca cris'pa. (L. cardiacus, helonging to the stomach; crispus, curled.) A name for the Leonurus cardiaca,

C. pas'sio. (L. passio, a suffering.) Hearthurn.

C. triloba'ta. (Τρεῖς, three; λοβός, a lobe.) The Leonurus eardiaca.

C. vulga'ris. (L. vulgaris, common.) The Leonurus cardiaca.

Cardi'acal. Same as Cardiac. Car'diacs. (Καρδί ι, the heart. F. cardiaques; G. herzstarkendes Mittel.) Medicines which are supposed to stimulate the heart and to excite the circulation, such as alcohol, ether, opium, and volatile oils, in small doses.

Cardiacus. (L. cardiacus, pertaining to

the stomach.) Cardial.

C. mor'bus. (L. morbus, a disease.) A term given to a febrile disorder called nervous fever or typhus mitior.

**Cardiag'ra.** (Καρδία, the heart; ἄγρα, a seizure.) Pain of the heart.

**Cardiag raphy.** (Καρδία; γράφω, to write.) A description of the heart. Car'dial. (Καρδία.) Belonging to the

**Cardial'gia.** (Καρδία, the heart; ἄλγος, pain; because to the sufferer the pain seems to be in the heart, which is popularly fancied to be located about the pit of the stomach.) A term which has been variously used; by some authors, as synonymous with gastrodynia in general; by others, as with stomach pains on the left side only; and by others, as with acidity or heartburn.

A synonym of Angina pectoris.

C. inflammato'ria. (L. inflammo, to burn.) Gastritis.

C. nervo'sa. (L. nervosus, nervous.) Pain of stomach without organic disease.

C. sputato'ria. (L. sputum, spittle.) A

term for pyrosis.

Cardial'ogy. (Kapôia; course.) A treatise on the heart. (Καρδία; λόγος, a dis-

Cardiamor phia. (Καρδία; ά, neg.; μορφή, form.) Malformation or deformity of the heart.

Cardianæsthe'sia. (Καρδία; ἀναισθησία, want of feeling.) Want of sensation in the heart.

Cardianas'trophë. (Καρδία, the heart; ἀναστροφή, a turning about.) A malformation in which the heart is placed on the right side

Cardianeu'ria. (Καρδία; ἄ, neg.; νεῦ-ον, a nerve.) Want of nervous power in tho ρον, a nerve.) heart.

Cardianeurys'ma. (Καρδία; ἀνεύρυσμα, an aneurysm.) Aneurysm of the heart. Cardiarc'tia. (Καρδία; L. arcto, to contract.) Diminution in size of the heart. The condition called concentric by pertrophy.

Cardia rius. (Kapita. G. Herzwurm.) A worm said to have been found in the heart or pericardium.

Cardiasth'ma. (Καρδία; ἄσθμα.) Difficulty of breathing, or asthma depending on heart

Cardiatel'ia. (Καρδία; ἀτελής, imperfeet.) Incomplete development of the heart.

Cardiatom'ia. Same derivation and meaning as Cardiatomy.

**Cardiat'omy.** (Καρδία; τομή, a cutting.) Dissection of the heart.

Cardiatroph'ia. (Καρδία; ατροφία, atrophy.) Atrophy of the heart.

Cardiaux e. (Καρδία; αὔξη, growth.) Hypertrophy of the heart.

Cardieche mata. (Καρδία; ἤχημα, a sound.) The sounds of the heart.

Cardiec'tasis. (Καρδία; ἔκτασις, extension. G. Herzerweiterung.) Dilatation of

the heart. C. partia'lis. (L. pars, a part.) Aneurysm of the heart.

Cardielco'sis. (Καρδία; ἔλκωσις, ulceration.) Ulceration of the heart.
Cardiethmolipo'sis. (Καρδία; ἡθμός, a sieve;  $\lambda i\pi os$ , fat.) Fatty deposit about the

heart. Cardieurys'ma. (Καρδία; εὐρύς, wide.) A morbid dilatation of the heart.

Cardilæ'a. A synonym of Cardialgia. Cardim'elech. (Καρδία, the heart; Heb. melech, a king.) Λ supposed active principle in the heart, superintending what are now called the vital functions. Dolaus, Encyclop. l. ii

Cardimo'na. An old term for heartburn. Car'dinal. (L. cardinalis, pertaining to a door-hinge.) Principal, chief.

C. flow er. The Lobelia cardinalis, because its searlet flower was the colour of a cardinal's robes.

C. flow er, blue. The Lobelia syphilitica. C. flow'er, com'mon. The Lobelia cardinalis.

C. hu'mours. An old term for four principal humours of the animal body, viz. blood, phlegm, yellow bile, and black bile, which were said to be formed by the four elements variously combined, and from which all the solids and fluids of the body were derived. Such was the doctrine taught by Hippocrates, after the Pythagorean school, and adopted by Galen and his followers. The same doctrine was prevalent among the ancient Hindoos, and it is probable, as pointed out by Dr. Allen Webb, that Pythagoras and the Greeks derived it from this source.

C. plant. The Lobelia cardinalis.

C. points. (G. Cardinalpunkte.) The points of section of the horizontal plane and the meridian, hence the north point and south point, and, with the equator of the heavens, thus the east and west points. These are the chief points of the compass.

In Listing's diagrammatic eye there are six points termed cardinal, namely: (1) the focus situated upon the retina, in which rays falling parallel upon the cornea are united; (2) the anterior focus, at which rays, coming from the retina, and whose course is parallel in the vitreous humour, are brought to a focus; (3 and 4) the two "principal" points, which he on the optic axis in the anterior chamber, close behind the cornea; (5 and 6) the two "nodal" points, in which the lines of direction cut each other, and which are near the posterior surface of the lens.

C. pro'cess. (L. processus, a projection.) The median process on the hinge line of the

dorsal valve of Brachiopoda.

C. teeth. A term applied to those projections. tions of one valve of the shell of lamellibranchiate Molluses, which, fitting into corresponding depressions of the other valve, lie directly under the beak.

C. veins. (F. veines cardinales; G. Hauptblutader.) The venous trunks, one on each side of and beneath the hinder section of the primitive skeletal axis, which transmit the blood in the early embryo from the Wolffian bodies, the vertebral column and the parietes of the trunk to the sinus venosus by means of the duets of Cuvier. Similar veins from the anterior part of the body, the primitive jugnlar veins, join the duct of These are sometimes called anterior Cuvier. cardinal veins and the others posterior cardinal veins. In the course of development the cardinal veins become discontinuous with the primitive jugular veins, and form the azygos veins. In fishes they are permanent.

The term has also been given to the veins of

the clow-joint or Cardinamentum.

C. vein, ante'rior. The primitive jugular vein.

C. vein, posterior. The C. vein. Cardinalis de Lu'go cor tex. (L. cardinalis; cortex, bark.) Cardinal de Lugo's bark. A name for einchona bark, from his having administered it in 1658 to a great many patients, it being then newly introduced as a medicine.

C. flos. (L. flos, a flower.) The Lobelia

cardinalis.

Cardinamen'tum. (L. cardo, a hinge.) An old term (Gr. γιγγλυμοειδής), used by Hippocrates for ginglymus, or the hinge-like articulation. Galen, de Fract. i, 10.

Cardinif'erous. (L. cardo; fero, to bear.) Applied to bivalve shells the valves of which are articulated in form of a hinge.

Cardioarte rial. (Kapôia, the heart; ἀρτηρία, an artery.) Belonging to the heart and artery.

C. in'terval, con'jugate. (L. intervallum, a space between ; conjugo, to join together.) The interval which occurs between the commencing systolic rise in an artery and the closure of the acrtic valve at the heart.

C. in'terval, first. The interval which occurs between the commencing systole of the heart and its indication with a registering in-

strument in an artery, as the radial.

C. in'terval, sec'ond. The interval which occurs between the closure of the aortic valve at the heart and its indication in an

Cardiobot'anum. (Καρδία, the heart; βοτάνη, grass.) The Centaurea benedicta.

Car diocele. (Καρδία, the heart; κήλη, a tumour. F. cardiocèle; G. Herzbruch.) Protrusion of the heart through a wound of, or aperture in, the diaphragm.

Cardiocrys'talli. (Καρδία; κρύσταλ-os, erystal.) Whitish microscopical crystals λοs, erystal.) Whitish microscop found in the substance of the heart.

Cardiode mia. (Kapôla; δημός, fat. F. cardiodemic.) Fatty degeneration of the heart.

Cardiod'yne. (Καρδία; δόύνη, pain,) Pain at the heart.

C. spasmod'ica intermit'tens. spasmus, a spasm; intermitto, to leave off for a while.) Intermittent spasmodic pain of the heart. A synonym of Angina pectoris.

Cardiodyn'ia. (Καρδία; όδύνη, pain.)

Pain in the heart.

Cardiodysæsthe'sia. (Kapôia; δυσinsensibility.) Disturbed nervous power of the heart.

Cardiodysneu'ria. (Καρδία; δυς, a nerve.) The prefix signifying bad; νεῦρον, a nerve.)

same as Cardiodysæsthesia.

Cardiogastroscir'rhus. - (Καρδία, the cardiac end of the stomach; γαστήρ, the stomach; σκίρρος, a hard tumour.) Scirrhus of the cardiac opening of the stomach.

Cardiog'mus. (Καρδία; ωγμός, a crying oh! F. cardiogme.) An old term for cardialgia. Also, applied to incipient aneurysm of the heart

or of the aorta.

Also, applied to general dilatation of the heart. Applied, by some modern authors, to angina pectoris.

C. cor'dis sinis'tri. (L. cor, the heart;

sinister, left.) Angina pectoris.

Car'diograph. (Καρδία, the heart; γράφω, to write.) An instrument which registers, in the form of alternately ascending and descending curves, the systole and diastole of the auricles and ventricles of the heart. It consists of an indiarubber air-bag, the exploring hag, which is introduced into the cavity of the heart, and which communicates with a second, the indicating bag, by a tube; when the heart contracts on the first bag the second is dilated, and vice versa. A lever is so adapted by one end to the indicating bag that its movements are amplified by the other, which is furnished with a marker, which, touching a band of paper kept in constant and even motion by clockwork, registers the various motions of the heart.

Also, applied to a modification of the sphygmograph, which, being attached to the chest wall, marks and records the character of the heart's

impulse.

Cardiograph'ic. (Same etymon.) Relating to Cardiography.

Cardiog'raphy. (Same etymon.) The application and use of the cardiograph.

Car'dioid. (Kapôla; elôos, likeness.) Heart-shaped.

Cardioinhib'itory. (Kapčiu; L. inhiheo, to restrain.) Restraining or arresting the heart's action.

C. cen'tre. The part of the medulla oblongata at and around the place of origin of the pneumogastric nerve, which is believed to be the centre for the reception of peripheric influences and the propagation of the consequent inhibitory impulse through the pneumogastric nerve, which results in the arrest of the heart's action.

Cardiology. (Kapčia; λόγος, a dis-The knowledge of, or a treatise on, course.)

the heart.

Cardiomala'cia. (Καρδία; μαλακία, softness. G. Herzerweichung.) Softening of the heart's substance.

Cardiom'eter. (Καρδία; μέτρον, α measure.) Same as Hæmadynamometer.

Cardiom'etry. (Same ctymon.) measurement of the size of the heart by percussion and auscultation.

Cardiomyolipo'sis. (Kapôla; μῦς, a muscle:  $\lambda i\pi os$ , fat.) Fatty degeneration of the muscular structure of the heart.

Cardion'chus. (Kapdía; dynás, a tu-

Aneurysm of the heart. mour.)

Cardioneural gia. (Κυρόία; νεύρον, a nerve; äλγος, pain.) Neuralgia of the heart. A synonym of Angina pectoris.

Cardion'osus. (Kapčía; voos, disease.) Heart disease.

Cardiopal'mus. (Καρδία; παλμός, palpitation. F. cardiopalmie; G. Herzklopfen.) Palpitation of the heart.

Cardioparap'lasis. (Καρδία; παρά-λασις, transformation.) Deformity of the  $\pi\lambda a\sigma\iota s$ , transformation.)

heart.

Cardiopath ia. (Καρδία; πάθος, dis-

case.) Disease of the heart.

Cardiopericardi'tis. (Καρδία; πεκάρδιου, the pericardium.) Inflammation of ρικάρδιον, the pericardium.) the heart and pericardium.

Cardiopet'alous. (Kaphia; πέταλον. a petal.) Having the limb of the petals centrally at the base.

Cardiophthal'mos. (Kapdia; opθαλμός, the eye.) A synonym of Exophthalmia

**Cardiophthar**'sis. (Καρδία; φθάρσις, from φθείοω, to corrupt.) Corruption or decay of the heart's substance.

Cardiophyl'lous. (Καρδία; φύλλον, a leaf.) Having leaves in the centre.

**Cardioplectic.** (Καρδία; πληκτικός, from πλήσσω, to strike.) Relating to Cardioplegia.

(Καρδία; πληγή, α Cardiople gia. stroke.) Paralysis of the beart.

Also, applied to a wound of the heart, and to sudden failure of its strength.

Cardioplethora. (Καρδία; πληθώρή, fulness.) Plethora of the heart's substance.

Cardiopolyæmia. (Καρδία; πολύς, much; αίμα, blood.) Same as Cardioplethora. Cardiop'terous. (Καρδία; πτέρου, α

wing.) Having fins sloping towards the heart or its openings.

Cardiopul'monary. (Καρδία; L. pulmo, the lung.) Belonging to the heart and lungs.

C. mur'murs. (G. Herzlungengeräusche.) Murmurs heard in the lungs at the time of the systole or the diastole of the heart, and depending on conditions of altered lung structure; such are the blowing nurmur heard in connection with large thin-walled vomice near the heart, the systolic murmur heard in the pulmonary artery when there is pneumonic consolidation and con traction of the upper part of the left lung, and the murmur heard in the subclavian artery in connection with apical pulmonary induration.

Cardiopulmon'ic. (Καρδία; L. pulmo.) Belonging to the heart and lungs.

Cardiorrheu'ma. (Καρδία; ἡεῦμα, a fluxion.) Rheumatism of the heart.

Cardiorrhex'is. (Καρδία; ρῆξις, α rupture. G. Herzzerreisung.) Rupture of the

Cardiosclero'sis. (Καρδία; σκληρώς, hard. G. Herzverhartung.) Induration of the tissues of the heart.

**Cardiosperm'um.** (Καρδία; σπίρμα, seed.) A Genus of the Nat. Order Sapindaece. C. corin'dum, Linn. Hab. Brazil. Similar in use to C. halicacabum.

C. halteac'abum, Linn. ('Αλικάκαβον, the plant alkekengi. F. pois de merveille, pois de caur.) Hab. India. Leaves, when boiled, are eaten as food. A decoction of the root is mucilaginous, aperient, diurctic, and diaphoretic-It is used as a hthontriptic, and in gonorrhea;

the seeds are used in rheumatism.

Cardiosphyg'mograph. (Καρδία; σφωγμος, the julse; γραφω, to write.) An instrument, suggested by Garrod, consisting of a Marcy's sphygmograph attached to a piece of board, to which a cardiograph is also connected in such a way that the levers of both instruments record their movements on the same paper, one giving the motion of the reflex of the heart, the other the pulsation of the artery at the wrist.

**Cardiosteno ma.** (Καρδία; στενόω, to straighten. G. Herzverengerung.) Contrac-

tion of the heart.

Cardiosteno'sis. (Same etymon.) The

progress or formation of cardiostenoma.

Cardiothyr'oid exophthal'mos. (Kapčia; thyroid body.) A synonym of Exophtholmic goitre. Suggested by the pulpitation and the enlargement of the thyroid body which accompany the disease.

**Cardiot'omy.** (Καρδί ting.) Dissection of the heart. (Καρδία; τομή, a ent-

Cardiotrau'ma. (Καρδία; τραύμα, α wound. G. Herzwunde.) A wound of the heart.

**Cardiot romus.** (Καρδία; τρόμος, a tremor. G. Herzzittsrn.) Tremor, or a slight degree of palpitation or fluttering of the heart.

Cardiotroph'ia. (Καρδία; nourishment.) Nutrition of the heart. (Καρδία; τροφή,

Cardiot rotus. (Καρδία; τιτρώσκω, to wound.) One who has a wound of the heart. Cardipericardi'tis. Same as Cardio-

pericarditi Cardit'ic. (Kapôia. F. carditique.) Relating to the heart.

Also, of the uature of carditis.

C. fe'ver. (G. Herzfieber.) A variety of pernicious intermittent fever, accompanied by palpitation and tendency to fainting.

Carditis. (Kapčia. F. cardite; G. Herz-fleischentzundung.) Same as Myocarditis. C. exter'na. (L. externus, ontward.) Peri-

carditis.

C. inter'na. (L. internus, inward.) Endocarditis.

C. membrano'sa. (L. membrana, a membrane ) Pericarditis.

C. muscula'ris. (L. musculus, a muscle.) Myocarditis.

C. musculo'sa. Same as C. muscularis.
C. polypo'sa. (L. polypus, a polypus.)
Fibrinous clots in the heart.

C. sero'sa. (L. serum, the watery part of

a thing.) Pericarditis.

Cardium. (L. cardo, a hinge; from the hinge-like connection of the two shells; or from καρδία, the heart, from its shape. F. bucarde; I. bucardia; G. Herzmuschel.) The cockle. Δ Genus of the Family Curdiada, Order Siphoniata, Class Lamellibranchiata.

Cardiyperæ'mia. (Καρδία, the heart; ὑπίρ, in excess; αΙμα, blood.) Term for Cardioplethora.

Cardiypertroph'ia. (Καρία; ὑπέρ;

τροφή, nourishment.) Hypertrophy of the heart.

Card-like teeth. (F. dents en eardes, or dents en rape.) The teeth of fishes are so called when fine conical teeth are mixed with coarser

Car'do. (L. cardo, a hinge.) Applied to the kind of articulation called ginglymus.

Also, a term for the basal articulation of the maxilla of some of the Colcoptera.

Car'do, San'to. The Argemone mexicana. Card'ol. C<sub>21</sub>H<sub>30</sub>O<sub>2</sub>. A reddish-yellow, tasteless oil, contained in the cashew nut, the fruit of Anacardium occidentale and A. orientale. It is insoluble in water, soluble in alcohol. Its external and internal action is similar to cantharides, but the blistering process is more painful, and healing is less readily induced.

Cardo'leum. The Anacardium occiden-

tale.

Also, the same as Cardol.

C. prurlens. (L. prurio, to itch.) The eardol obtained from Anacardium orientale. It is a rubefacient like mustard.

C. ve'sicans. (L. vesica, a blister.) The cardol from Anacardium occidentale. It is an

active blistering agent.

Cardo'nium. A wine medicated with herbs. Paracelsus, de Ulcer. c. 56. (Ruland and Johnson, in Lex.)

Cardoon'. (F. cardon, from L. cardunculus, dim. of carduus, a thistle. 1. cardone; S. Cynara cardunculus. The stalks of the inner leaves, when blanched, are eaten as a vegetable.

C., Span'ish. The Scolymus hispanicus.

The roots and young shoots are eaten as food.

**Cardopath'ium.** (Kapôla, the heart;  $\pi \dot{a}\theta o s$ , disease.) A Genus of plants of the Nat. Order Compositæ.

C. apu'lium. A variety of C. corymbosum,

found in Apulia.

C. corymbo sum, De Cand. (L. corymbus, a cluster. F. chamæleon noir.) A plant having parcotico-acrid properties. It has been used externally in scaly and parasitic skin diseases.

C. Fontane'sil. A variety of C. corym-

bosum, found in Tunis.

C. orienta'le. (L. orientalis, eastern.) A variety of C. corymbosum, found in Greece and Muccdonia.

Cardopat'ium. Same as Cardopathium. Cardopa'tum. A plant supposed to be the Carlina acautis, or carline thistle. Also, a synonym of Cardopathium.

Cardopericardi'tis. Same as Cardiopericarditis.

Cardua'ceæ. (L. carduus, a thistle.) Same as Cynaracephalæ.

Cardua'ceous. (L. carduus.) Having the characters of the thistle.

Cardun'eous. Same as Carduaceous. Cardun'culus. (L. dim. of carduus, a thistle.) The Cinura scolymus, or artichoke. (Quincy.)

Carduus. (L. carduus, a thistle.) A Genus of plants of the Nat. Order Compositæ.
C. acanth'us. The Acanthus mollis, or

bear's breech.

C. al'tilis. (L. altilis, nutritive.) Tho Cinara scolymus, or artichoke.

C. arven'sis. (L. arvum, a field.) The Serratula arvensis, or common creeping way-

C. benedic'tus. (L. benedictus, blessed.) The Centaurea benedicta, or blessed thistle.

C. brazilia'nus. The Ananassa sativa.

or pine-apple.

C. casabo'næ. The Chamæpence casabonæ. C. chrysan'themus. (Χρυσός, gold; ανθεμον, a flower.) The Cinara scolymus, or artichoke.

C. domes'ticus. (L. domesticus, belonging to the family.) Same as C. chrysanthemus.

C. erioceph'alus. ( Εριον, wool; κεφαλή, the head.) The Cirsium eriophorum.

C. erioph'orus. The Cirsium eriophorum. C. fullo'num. The Dipsacus fullonum, or fuller's teazel.

C. hæmorrhoida'lis. (Λίμορφοίδες, piles.) The Serratula arvensis, or common creeping way-thistle.

C. lac'teus. (L. lacteus, milky.) The C.

marianus.

C. Mari'æ. (L. Maria, the mother of Jesus. F. chardon Marie; G. Mariendistel.) Same as C. marianus.

C. maria'nus. (Same etymon. F. chardon Marie, Notre Dane; I. cardo di Maria; G. Mariendistel, Frauendistel.) The common milk-thistle, or Our lady's thistle. Has been used as a sudorific and tonic. The seeds are oleaginous, and have been used in hamorrhages from the intestines and the uterus; also in amenorrhoea with hepatic disturbance. Two onnees of seeds are boiled in a pint of water, and a tablespoonful given every two honrs.

The Cirsium C. monspessula'nus.

monspessulanum.

C. pine'us. (L. pineus, belonging to the pine.) The Atractylis gummifera, gummyrooted pine-thistle.

C. polyacanth'us, (Ho\vs, many; aκανθa, a thorn.) The Chamæpence casabonæ.

C. sati'vus. (L. sativus, that which is sown.) The Cinara scolymus, or artichoke.

C. solstitia'lis. (L. solstitialis, belonging to midsummer.) The Centaurea solstitialis, or St. Barnaby's thistle.

C. stella'tus. (L. stellatus, starred.) The Centaurea calcitrapa, common star-thistle.

C. syr'iacus. The Notobasis syriacus.

C. tomento'sus. (L. tomentum, a stuffing The Onopordon acanthium, or for eushions.)

cotton thistle. C. ven'eris. (L. Venus, the goddess of

love.) The Dipsacus sylvestris, or wild teazel. C. virginia'nus. (Tirginia, the state of that name.) Rocky mountains thistle. A starch is obtained from the root.

Carebare'sis. Same as Carebaria. Carebaria. (Καρηβάρεια, from κάρη, the head; βάρος, weight.) Old term, used by Hippocrates, Aph. v. 22, and Galen, in Comm. for heaviness of the head.

Care'na. An old term for the twenty-fourth

part of a drop. (Ruland and Johnson.)

Car'eum. (Κάρου, caraway; or from Caria, its native country.) The carnm or caraway.

its native country.) The earnm or earaway.

C. vi'num. (L. vinum, wine.) Term for wine boiled down to two thirds of its original quantity.

Ca'rex. (L. carex, reed grass. G. Riedgras.) A Genus of the Nat. Order Cyperacea. The sedge.

C. arena'ria, Linn. (L. arenarius, belonging to sand. F. luiche de sables, chiendent rauge; I. carvee; S. esparganio; G. Queckenwurzel, Sandsegge.) German sarsaparilla, scasedge. Grows plentifully on the sea coast; its root is red without, white within, of a mild but somewhat disagreeable taste; is said to be serviceable in affections of the trachea, in rheumatism and gout, and is used as a substitute for sarsaparilla.

**c.** dis'ticha, Hnds. (Δίστιχος, two-rowed.) Soft brown sea-sedge; German sarsa-

parilla. Used as C. arenaria.

C. hir'ta. (L. hirtus, hairy.) Same as C. disticha.

C. interme'dia. (L. intermedius, that which is between.) Same as C. distucha.
C. pat'ula. (L. patulus, spreading.) The

C. sylvatica.

C. sylvatica, Huds. (L. sylvaticus, helonging to a wood.) Pendulous wood sedge. Used as C. arenaria.

C. villo'sa. (L. villosus, shaggy.) Same as C. disticha.

Ca'reya. A Genus of the Nat. Order Bar-

ringtoniaceæ. C. arbor'ea, Roxb. (L. arboreus, tree-like.) Hab. India. The flowers or bark are used as a poultice. The bark is astringent.

Car'iacou. A fermented liquor made in Caycune, being a mixture of cassava, potatoes, and cane syrup.

Ca'riated. Same as Carious.

Caribbe'an. A name applied to the sea on the northern coasts of Granada and Venezuela.

C. bark. A false einchona bark, the product of Exostemma caribeum.

Car'ibs. (G. Karaiben.) A people originally inhabiting the islands of the Caribbean Sea and the adjoining coast, but now nearly confined to the Republic of Honduras; they are of Red Indian race, and were eannibals.

C., black. Half-bred Caribs, having Negro

blood in them.

C., red. A term applied to pure bred Caribs.

Carica. (Caria, a region of Asia Minor, where they were cultivated.) A dried fig. A Genus of the Nat. Order Papayaceæ.

C. digita'ta. (L. digitatus, fingered.) Hab, the banks of the Amazon. Supplies a poison having the same reputation as the npas poison.

C. papa'ya, Linn. The papaw tree, a native of East and West India, and the Gninea Coast. The fruit is boiled and eaten with meat, as turnips are in this country; every part of the tree, except its ripe fruit, yields a milky juice. The juice of the fruit is used in the Mauritius as a remedy for tapeworm; it, as well as the seeds, are said to be emmenagogne and abortifacient. The juice (F. lait de mamociro) is also used to make tough meat tender; it has been proposed as a substitute for pepsin.

Carica, G. Ph. (L. carica. F. figues; Feigen.) Dried figs.

G. Feigen.)

C. fruc'tus. (L. carica; fructus, fruit.) Dried figs.

Caric'eæ. (L. carica.) A synonym of Papayaceæ.

Also (L. carex), a Tribe of the Nat. Order Cyperaceæ, having diclinous flowers, the males being unlike the females.

Caricin. An oily substance of peculiar unpleasant smell and taste, contained in the seeds of Carica papaya.

Caricin'eæ. A Tribe of the Nat. Order Cyperaceæ; same as Cariceæ.

Caricous. (L. carica.) Resembling a

(Kapikóv, a kind of salve.) Caricum. Used by Hippocrates, de Ulcer. l. xi, 7, seg., for an escharotic and detergent application made of black hellebore, sandarach, scales of copper, burnt lead, sulphur, orpiment, and cantharides, made up in form of a liniment, with oil.

Ca'ries. (L. caries. F. carie; I. carie; G.

Faule, Morschheit.) Rottenness, decay.

The discuse described under C. of bone.

In vegetables, the disease produced by Uredo. See C. vegetable.

C., artic'ular. (L. articulus, a joint.)

Caries affecting the joint ends of bones.

C., central. Caries originating on the

medullary surface of hone.

C., dent'al. (L. dens, a tooth. F. cariv dentaire; G. Zahnfaule.) A condition of progressive softening and destruction of the hard structures of the tooth, beginning usually in the dentine or the enamel, and depending probably on the chemical action of acid and other products of the fluids of the mouth, and frequently accompanied by the growth of low vegetable forms, such as Ordium albicans, species of Leptothrix, Protococcus dentalis, and some Bacteria. The enamel tissue loses coherence and is broken up, and the dentine tubes become softened and present varicosities; the secretion is neid, and the tooth in the vicinity is discoloured.

C., dent'al, pen'etrating. (L. penetro, to pierce into.) Dental caries starting from a fissure and spreading deeply and widely, without

much external manifestation.

C., dent'al, spread'ing. Same as C., deutal, penetrating.

C., dry. Same as C., sicca. C. from phos'phorus. See Phosphorus

poisoning. C. fungo'sa. (L. fungosus, spongy.) The condition of bone in those cases of joint-disease which are called fungous arthritis, and in which the caries of hone is accompanied by exuberant granulations arising from the medullary mem-

brane. C. gal'liea. (L. gallieus, French.)  $\Lambda$  synonym of hard chancre.

C. granulo'sa. (L. granulum, a small

grain.) Same as C. fungosa.

C. inter'na. (L. internus, inner.) A term given to dental earies originating in the substance of the dentine, a view which is not generally held.

C. inter'na suppurativa circumscrip'ta. (L. internus, inward; suppuro, to form matter; circumscribo, to describe a line around.) A term for the condition of bone ab-

C., necrotic. (Νεκρός, a dead body.) Caries accompanied by the death and discharge of greater or smaller fragments of hone; it is most frequent in the cancellous structure.

C. non-gal'lica. (L. non, not; gallicus, French.) A synonym of soft chancre.

C. of bone. (Τερηδών; F. carie; I. carie; S. caries; G. Beinfrass, Knockenfrass.) A condition of inflammatory disintegration of hone analogous to ulceration of the soft parts. When superficial the periosteum is loosened, generally thickened, and in advanced conditions villous, from the growth of granulation tissue, the projections on its under surface fitting into depressions of the bone produced by disintegration; the bone itself is softened, its cancelli enlarged, and its surface ragged and irregular. The cavities are occupied by a brownish fluid containing oil globules and blood-cells, greater or less granules of dead bone, and structureless debris; the deeper part is often condensed. When caries occurs in the interior of bone the same process is observed; granulation tissue is developed from the medullary structures, and a eavity containing caseous matter, sanious pus, and hone debris may result. The short bones are the most liable to be uttacked; and the disease is most common in scrofulous and syphilitic persons. Caries occurs at first with pain in the bone, accompanied by a red swelling, which before long suppurates; this bursts or is opened; it then gets smaller and degenerates into a sinus with everted edges, discharging a sanious offensive pus, and having at its bottom the hone ulcer, which may be felt by a probe as an unequal surface, which is rongh and yields to pressure.

According to some, caries is less an inflammatory condition than a destructive fatty degeneration of the corpuseles contained in the

lacunæ of bone.

**C.**, **peripher'ic.** (Περιφέρεια, the line round a circular body.) Caries arising from the articular or periosteal surface of hone.

C. profund'a. (L. profundus, deep.) Rokitansky's term for a condition in syphilitie bone disease in which there is destruction of tissue, beginning in the medullary cavity.

C. pudendo'rum. (L. pudenda, the privy parts.) An old term for a chancre.

C. sic'ca. (L. siccus, dry.) Caries with free granulation and considerable destruction of bone, but with no formation of pus.

C. sim'plex. (L. simplex, simple.) The ordinary caries attacking bone, in which the disease is comparatively shallow and its floor shows no fungating granulations, only molecular debris and pus cells.

C., syphilit'ic. Caries of bone occurring in the course of constitutional syphilis following

the development of gnmmata.

C., veg'etable. A term applied to the destructive changes which take place in wood, as the result of old age or the presence of larvæ of colcopterous, lepidopterous, or other insects. It is also used to denote the conditions of disease, especially in cereal plants, produced by the lower fungi, as in smut and brand.

C., worm-eat'en. A form of syphilitic caries in which there is an appearance, as of small pits, on the surface of the diseased bone-

Ca'rim curi'ni. The Justicia ecbo-

Carina. (L. carina, the keel of a ship. F. carine; G. Kiel.) The lower petals of the papilionaccous corolla.

Also, any structure like the keel of a ship, such as occurs on the lower surface of the glumes of some grasses.

Also, the median longitudinal projection from the sternum of hirds.

Also, the dorsal single plate of the shell of Cirrinedes.

Also, formerly applied to what is described as the primal seminal rudiment communicated by the male to the ovum, which, if it undergoes incubation, becomes, after various changes, the animal itself.

Also, the vertebral column, especially of the fœtus.

Also, a deformity in which the sternum projects in its middle.

Cari'nal. (L. carina.) Relating to, or possessing, a Carina.

C. æstiva'tion. See Estivation, carinal. Carinalis. (L. carina, a keel.) Same as Carinate.

Carina'tæ. (L. carina.) An Order of Aves containing all birds which have a carina or (L. carina.) An Order of keel to the sternum.

te. (L. carina. F. carèné; G. Keeled, keel-shaped. Car'inate. kielformig.)

Carinf'erous. (L. carina; fero, to bear. F. carinifere; G. kieltragend.) Bearing a keel.

Carin'ulate. (L. carinula, dim. carina. F. carinuli.) Having a very light keel.

Cariopsid'ium. (F. cariopside.) Caryopsidium.

Cariop'sis. Properly Caryopsis.
Carios'ity. (L. caries, rottenness.) Same

as Cartes.

Carios'se. A Portuguese name for the

Ca'rious. (L. cariosus, rotten. F. caricux ; G. morsch, faul, knockenfrassig.) Affected with caries.

Ca'ris. A Genus of the Order Acaridea, Class Arachnida.

C. ellip'tica. (Ελλειψις, the conic section called ellipse.) A parasite found on the common bat, Vespertilio pipistrellus.

A Genus of the Nat. Order Caris'sa. Apocunaceæ.

C. caran'das, Linn. Hab. India. Berries edible.

C. diffu'sa. (L. diffusus, extended.) Hab. India. Berries edible. Wood of old trees used as an aromatic.

C. edu'lis, Vahl. (L. edulis, eatable.)

Berries esculent.

C. zylopic'ron, Dup. Th. (Ζύλον, wood; πικρός, bitter. F. bois amer de Bourbon.) Hab. Réunion. Wood bitter. Used as a stomachic. Caris seæ. A Tribe of the Nat. Order

Apocynaceæ having a single two-celled ovary and naked seeds.

Ca'rium ter'ræ. (L. caries, decay; terra, the carth.) Lime.

Cari've. Pimento berries, the fruit of Eugenia pimenta.

Carivilland'i. Sarsaparilla, Smilax offi-

Carli'na. (Carolus magnus, Charlemagne, whose army, by using it, was preserved from the plague.) The carline thistle. A Genus of plants of Nat. Order Compositæ.

Also the C. acaulis.

C. acanthifo'lia, All. (L. acanthus, the plant of that name; folium, a leaf. F. carline chardousse, artichaut sauvage.) Hab. South Europe. A species the receptuele of which is used in the mountainous regions in the South of France as a substitute for the artichoke, called there artichant sauvage.

C. acaul'is, Linn. (L. a, neg.; caulis, a stem. F. carline sans tige; I. carlina; G. Eber-wurz.) The carline thistle. Hab. mountainous districts, the Alps and Pyrenees. The root, officinal in the G. Ph. as Radix carlinæ, is of a strong smell, and an aromatic hitter taste. The bark contains a bitter, strong scented oil. Used as a tonic, emmenagogue, and sudorific. Employed in magic incantations.

C. acaul'is, Lamb. The C. acanthifolia, All.

C. caules'cens. The C. acaulis.

C. chamæ'leon, Vill. The C. acaulis. Linn.

C. ela'tior. (L. elatior, higher.) The C. subacaulis.

C. gummlf'era. The Izia or Iziun of the ancients. Has been used as an anthelmintic. When fresh the root, which is large and fleshy, is said to be poisonous. The fleshy receptacles are preserved in sugar and eaten. The Atractylis gummifera.

C. subacaul'is, De Cand. The C. acaulis, Linn.; or a variety with a stem about 30 centi-

mètres, nearly 1 foot high.

C. utz'ka, llacq. The C. acanthifolia, All. C. vulgaris, Linn. (L. vulgaris, common.)
The earline thistle. Hab. Europe and Siberia. Used as a diapheretic and diuretic.

Car'line. See Carlina.

gums.

Also, a name of the Ranunculus glacialis.

C. this'tle. The Carlina acaulis, and also the U. vulgaris.

C. this'tle, prick'ly. The Carlina vulgaris.

Carlisle springs. United States; near the tewn of Carlisle, in Pennsylvania. A mild sulphur water. (Dunglison.)

Carlo Sancto. (S. Carlo, Charles; santo, saint.) St. Charles' root. Hab. Mechoacan. An undetermined plant, the bark of which is aromatic, bitter, and acrid. It is said to be sudoritic, and to strengthen the stomach and

Carls bad. d. Austria; in the north-west Altitude 1124 feet; beautifully of Bohemia. situated in a narrow valley, surrounded by wooded hills. The climate is subject to considerable fluctuations, and is often damp and cold. The mineral waters, which spring from the granitie formation, are numerous, and vary in temperature from 44° C. (111.2° F.) to 75° C. (167°F.) The chief spring, the Sprudel, contains potassium sulphate 1.6, sodium sulphate 23.7, sodium chloride 10.3, sodium carbonate 13.6, calcium carbonate 2.9, magnesium carbonate 1.2 iron carbonate '028, silica 7 parts, in 10,000, and free carbonic acid 7.6 cubic inches in a pint. The other sources have the same composition, with very little variation. The so called Sprudelstein is an incrustation of salts on the fountains from evaporation of the water. The treatment at Carlsbad comprises both the drinking of the waters and their use as baths, and is indicated in chronic catarrhal affections of the stomach and intestines, in constipation and piles, in liver congestions from diet mistakes, in fatty liver, and in malarial engorgements; in jaundice and in gall-stones; in splenic enlargements, in renal calculus of lithic acid or oxalate of lime, and in chronic cystitis; in obesity, gout, and diahetes; in hypochondriasis.

Carlsbad waters are contraindicated in organic diseases of brain, heart, or lungs, and in cancer.

C. wa'ter, artific'ial. Sodium sulphate, crystallised, 669 grains, sodium carbonate, in crystals, 862, sodium chloride 104, calcium chloride in crystals 103, magnesium sulphate 164 grains, water 2 gallons; dissolve and charge with carbonic acid.

Carls'brunn. Austrian Silesia; in a valley of the Sudeten Mountains, 2350 feet above sea level. Mineral waters, containing magnesium,

ealeium, and iron earbonate, and a little manganese, with free carbonic acid. Used, with or without ewe's milk, in uterine debility, anæmia, and chlorosis.

Carlsha'fen. Germany; Province Hesse Nassau. Mineral springs, containing sodium chloride 203 grains in 10,000. Used as salt springs generally.

Car'mantine. Malabar nuts, the fruit

of Adhatoda vasica.

Car'melite wa'ter. (After the monks of the Carmehte Order, who make it, and who took their name from Mount Carmel.) The Eau took their name from Mount Carmel.) des Carmes. See Aqua carmelitana.

Car'men. (L. carmen, a verse.) An amulet or charm, so called because it often consisted of a

verse.

Car'minans. (L. carmino, to turn into verse.) Same as Carminative.

Carminant. Same etymon and meaning as Carminative.

Carminan'tia. (L. carmen, a charm.) Carminative medicines.

Carminati'va. See Carminatives.

Carmin'ative. (L. carmen, a song, a formulary. F. carminatif; I. carminitivo; G. windtreibend, blahungtreibend.) Having power to relieve pain of the bowels from flatulence, and acting speedily as by a charm or earmen.

Carmin'atives. (Same etymon. blahungtreibende Mittel.) The class of carmina-

tive medicines.

C., four great'er. An old term for the seeds of anise, caraway, cummin, and fennel.

C., four les'ser. An old term for the seeds of bishop's weed, stone parsley, smallage, and wild carrot.

Carmine: (F. carmine; I. carmino; G. Carmin, Karminstoff.) A red pigment obtained by treating a solution of cochineal with alum. It is used for staining structures for microscopic purposes.

C. blue. See Indigo carmine.

C. injecting fluid. Carmine 5 grs., glycerin, with 8 or 10 drops of hydrochloric acid, ½ oz., glycerin 1 oz., alcohol 1 dr., solution of ammonia a few drops, water 6 drs. Mix the carmine with a few drops of water, then add 5 drops of hquor ammonia, to this add ½ oz. of the glycerin, and shake; then add by degrees the acid glycerin; it should now have an acid reaction; lastly, mix the alcohol and the water. Used for injecting into the vessels. (Beale.)

C. stain'ing flu'id. A solution of carmine used for staining structures to facilitate microscopic examination, inasmuch as growing structures and nuclei of eells absorb the colour the most easily. Dr. Beale's formula is-Carmine 10 grains, dissolved by the aid of gentle heat in half a drachm of strong solution of ammonia, when it has cooled glycerin 2 oz., water 2 oz., and alcohol \$ oz. are to be added. Others omit the glycerin. Both strong and weak solutions are used; the former for rapid, the latter for slow, staining.

Carmin'ic ac'id. C17H18O10. Contained in cochineal and in the flowers of Monarda didyma. A watery decoction is precipitated by lead acetate, the resulting lead carminate is decomposed by hydrogen sulphide, and the solution of carminic acid evaporated, treated with alcohol, lead carbonate, and ether in succession, and then evaporated. It is soluble in water and alcohol, and slightly in other. It is a glycoside of red carmine.

Carmot. An alchemical name fratter composing the philosopher's stone. An alchemical name for the

Carnaba'dia. An old name of caraway

Carnaba'dium. An old name for cummin seed.

Carnahu'ba. The same as Carnauba. Car'nal. (L. carnalis, from caro, flesh.) Fleshly, sensual.

C. knowledge. Sexual connection. Carna'ria. (L. carnarius, one who loves flesh, from caro, flesh. F. carnassicrs.) Flesheating animals; divided into Cheiroptera, Insectivora, and Carnivora.

Carnas'sial. (F. carnassier, earnivorous.)

Relating to flesh eating.

C. teeth. Teeth adapted to the mastication of flesh, such as the pointed fourth premolar tooth of most carnivora, which meets with its fellow of the upper jaw in a scissors-like action.

Carna'tio. (L. caro, flesh.) A synonym

of Syssarcosis.

Carna'tion. (According to some, through F. carnation, from its flesh colour, from L. carnatio, fleshiness, from caro, flesh; according to Prior, its original spelling was coronation, as representing the Victorica coronaria of the early herbalists, and so called from its flowers being used in chaplets, coronæ. Gr. καρυόφυλλου; F. willet; I. garofano; S. clavel; G. fleischfarbene Nelke.) The Dianthus caryophyllus.

C. grass. A name given to several of the species of Carex, from their likeness to the leaves

of the carnation.

C., Span'ish. The Poinciana pulcher-

Carnaub'a. Palm wax, collected in Brazil from the Corypha cerifera and other It occurs as a powder on the leaves, which, when melted, becomes a hard, dry, yellowish, brittle mass, having a smooth fracture; it melts at 89° C. (192°2° F.)

C. root. The root of Corypha cerifera.

Used in like manner to sarsaparilla. C. wax. Same as Carnauba.

Car'neæ colum'næ. See Columnæ carneæ.

Carne'lian. (L. caro, flesh. F. cornaline; I. corniola; G. Carneol.) A flesh-coloured variety of calcedony in its original application, but now employed to distinguish the transparent varieties of other colours. It is of uniform colour, but is sometimes clouded. It contains silica, alumina, ferric peroxide, magnesia, soda, potash, and carbon. It was highly valued for its medical properties. Also called Cornelian.

Carne olus. The carnelian.

Carneous. (L. carneus, of flesh. F. charnu; G. fleschig, fleischartig.) Consisting of, or resembling, flesh.

Also (G. fleischfarbig), of a flesh colour.

C. col'umns. See Columnæ carneæ. C. fibres. (L. fibra, a fibre.) The fibres of a muscle.

C. leaves. Leaves which contain between the upper and lower epidermic surface a more or less solid pulp.

ss solid pulp.

Car'neum marsu'pium. (L. carneus, marsunium. a pouch.) The gemelli fleshy; marsupium, a pouch.) muscles.

Carnic'ula. (L. dim. of caro, flesh.) Term by Fallopins, Expos. de Ossib., for a small fleshy substance. A carunele.

Also, a term for the gums.

Car'nifex spagyr'icus. (L. carnifex, an executioner; spagyric.) Au alchemical name for fire when employed in the quest after the philosopher's stone.

Carnification. See Carnification.

C. pulmo'num. (L. pulmo, a lung.) Hepatisation of the lung.

Also, see Curnification of lung.

(L. caro, flesh; facio, Carnification. to make. F. carnification; I. carnificatione; S. carnificacion; G. Verfleischung, Fleischwerdung.) An alteration of tissue, whereby it assumes an unnatural appearance, as of flesh.

The term has also been used to designate amy-

loid or lardaceous degeneration.

C. of bone. Same as Ostcosarcosis.
C. of lung. (F. carnification pulmonaire.)
A term applied by Laennec to simple coudensation of the lung, without inflammation, in which it becomes tough, leathery, inelastic, and having the appearance of muscle; it is the condition which is found in the feetal lung, in atelectasis, and in pressure from pleural citusions and such

Also, a synonym of Hepatisation of lung.

C. of lung, congest'ive. An induration of lung caused by congestion, dependent on heart disease.

Car'nified. (Same etymon. F. carnific.) Changed into muscle, or into the likeness of muscle or flesh.

Carniform'is. (L. caro; forma, shape. F. charnu; G. fleischahnlich.) Flesh-like.

C. absces'sus. (L. abscessus, an abscess.)
An abscess, ordinarily occurring near the joints, which has a thick sac and a hard-edged opening.

Carnin. (L. caro, flesh.)  $C_7H_8N_4O_3+H_2O$ . Found as yet only in Liebig's extract of meat. It is obtained in small, white, barely crystalline masses, slightly soluble in cold water, freely in hot water, insoluble in alcohol and ether; it has a slightly bitter after-taste.

Carnisa'tion. Same as Carnification of

lung **Čarniv'ora.** (L. caro; voro, to devour. F. carnassiers; G. Fleischfressers, Raubthiere.) An Order of the Class Mammalia. Orbits and temporal fossæ communicate; a distinct coronoid process; lower jaw possesses vertical motion only; cla-vicles absent or small; hallux and pollex not opposable; terminal phalanges of digits provided with sharp, curved claws; teeth in distinct sockets, with their surfaces simply covered with enamel'; incisors generally six in each jaw; canines long, curved, and pointed; stomach simple; cacum small, sometimes absent; teats abdominal; placenta deciduate and zonular; cerebellum never completely covered by cerebrum; usually three convolutions around the fissure of Sylvius.

Carniv'orous. (Same etymon. F. earnivore; I. earnivoro; G. fleischfressend.) Eating flesh. Applied to certain animals which live on

flesh.

Also, to certain plants which have the power of dissolving and absorbing animal structures on the surface of their leaves, as the Drosera.

Also, applied to caustics as destructive of flesh.

Carno'sa cu'tis. (L. carnosus, fleshy; cutis, the skin.) An old term for the Panniculus

C. musculo'sa membra'na. (L. mus-

culosus, muscular; membrana, a membrane.) Riolan's name for the corrugator supercilii

Car'nose. (L. carnosus, fleshy.) Having a fleshy consistence or resemblance.

Carnos'ity. (L. carnosus. F. carnosité; I. carnosita; S. carnosidad; G. Fleischauswuchs.) A fleshy growth.

**C. of ure thra.**  $(0i\rho\eta\theta\rho a.)$  Granulations of the urethral mucous membrane, said to occur in gonorrhœa.

Also, a synonym of Urethral caruncle.

C., vene'real. A synonym of Condyloma. (L. carnosus, from caro, Carno'sus. flesh, G. fleischig.) Fleshy.

C. pannic'ulus. See Panniculus carnosus. Ca'ro. (L. caro, by transposition connected with κρέας, and Sans. kravya.) Flesh. Muscular structure.

Also, the soft portion of fruits.

C. accessoria. (Mod. L. accessorius, from L. accedo, to be added.) The flexor accessorius muscle of the foot.

C. adna'ta ad tes'tem. (L. adnatus, part. of agnascor, to grow in addition; ad, to; testis, the testicle.) An old name for a sarcocele originating in the epididymis.

C. adna'ta ad va'sa. (L. adnatus ; ad vas, a vessel.) An old term for a sarcocele which apparently springs from the spermatic vessels.

C. anseri'na. Same as Cutis anserina. C. bu'bula. (L. bubulus, of oxen. G. Rind fleisch.) Beef.

C. contu'sa. (L. contusus, part. of contundo, to bruise.) A deep-seated bruise. (L. crudus, raw. G. rohes

fleisch.) Raw meat.

C. excres cens. (L. excresco, to grow out.) An excrescence, whether a skiu growth, as a wart, or a large granulation, springing from a sore.

C. fungo'sa. (L. fungosus, fungons.) The exuberant granulations known as proud flesh.

C. gallina'cea. (L. gallinaceus, belonging to poultry.) A synonym of Cutis anserina.
Also (G. Hühnerfleisch), the flesh of poultry.
C. glandulo'sa. (L. glandulosus, glandu-

lous.) A term for the epiglottic glands.

C. luxu'rians. (L. luxurio, to abound in. G. wildes Fleisch.) Exuberant granulation of wounds.

C. orbicula'ris. (L. orbicularis, eircular.) The placenta.

C. ovi'lis. (L. ovilis, belonging to sheep. F. mouton; G. Schöpsenfleisch, Hammelfleisch.)

C. parenchymatica. (Παρένχυμα, anything poured in beside.) The texture of organs, such as the glands.

C. quadra'ta. (L. quadratus, square.) The palmaris brevis muscle.

C. quadra'ta Syl'vii. (L. quadratus; Sylvius.) The flexor accessorius muscle of the foot.

C. vis'cerum. (L. viscus, the inner part of an animal.) A synonym of Parenchyma.

C. vituli'na. (L. vitulinus, belonging to a calf. F. veau; G. Kallyfeisch.) Veal.
Ca'rob tree. The Ceratonia siliqua.
Caro'ba. A Brazilian name for the bark

of the Bignonia copaia, and probably other

species; also the bark of Jacaranda procera.

C. alnaba'ti. The Ceratonia siliqua.

C. bran'ca. The Sparattosperma lithontriptica.

C. cera'tia. The Ceratonia siliqua.
C. leaves. The leaves of Geissospermum lave.

Caro'des. (Καρώδης, drowsy.) A synonym of Carotic.

Ca'roli. An old name for chancres on the

Carolina. United States. The name of two of the Southern States, North and South Carelina.

Also, the same as Carlina.

C. all'spice. The Calycanthus floridus.

C. ce'dar. The Juniperus virginiana. C. hip'po. The Euphorbia ipecacuanha. C. ip'ecac. The Euphorbia ipecacuanha.

C. jas mine. The Gelsemium sempervirens.

C., North, min'eral wa'ters. Several sulphurous and acidulous saline springs are found in the Counties of Warren, Montgomery, Rockingham, Lincoln, Buncomb, and Rowan. (Dunglison.)

C. pink. The Spigelia marilandica.

C. pop'lar. The Populus balsamifera. Also called P. tucamahaca.

C. shrub tre'foil. The Ptelia trifoliata. C., South, min'eral wa'ters. Pacolet springs, on the west bank of the Pacolet river, contain snlphur and iron; other waters with similar properties are scattered about the State. (Dunglison.)

Carolin'ea. A Genus of the Nat. Order Bumbacca, or of the Tribe Bombacca, Nat. Order Sterculiacew.

C. prin'ceps, Linn. (L. princeps, first.) A species the seeds of which are esculent.

Car'ony bark. A synonym of true Angustura bark.

Caro'pi. The Elettaria Caros. Same as Carus. The Elettaria cardamomum.

Caro'sis. (Κάρωσις, drowsiness.) Profound or deep sleep.

Also, the act of inducing sleep; also, vertigo.

Caro'ta. (L. carota, from Gr. καρωτόν. F. carotte; G. Mohre.) The carrot, Daucus carotu, var. sativa.

Also, the efficinal name, U.S. Ph., of Carrot seed.

Carotic. (Καρωτικός, from καρόω, to stupefy. F. caròtique; I. carotico; G. schlaf-bringend.) Having power to stupefy or produce stupefaction.

Also, a synonym of Carotid.

C. artery. The carotid artery.

C. gang'lion. The carotid ganglion.

C. nerve. The carotid nerve.
C. plex'us. The carotid plexus.
C. sleep. (F. sommeil earotique.) Profound drowsiness.

Carotica. (Same etymon.) Narcotics. Caroticus. Same as Carotic and Corotid. Carot'id. (Kapwrides, the carotid arteries, from καροω, to throw into heavy sleep.) A term given to the great arteries of the neck by the ancients, because they were believed to be the seat or cause of stupor.

C. ar'tery, com'mon. (L. arteria carotis communis; F. artère carotide; I. arteria carotide; S. arteria carotida; G. gemeinschaftliche Kopfschlagader or Kopfpulsader.) common carotid is the inner branch of the division of the innominate artery. It arises behind the upper part of the sterno-clavicular articulation, and extends to the upper horder of the

thyroid cartilago, where it divides into the internal and external carotids; it is enclosed in the same sheath with the jugular vein and the pneumogastric nerve, each occupying a separate compartment. It gives off no regular branch, but occasionally it gives origin to the superior thyroid artery, and in very rare cases to a laryngcal, or an inferior thyroid, or the vertebral artery. Tho artery is deeply placed at its origin, but becomes more superficial as it extends upwards; it also separates from its fellow of the opposite side during its course. Below it is covered by skin, fasciæ, the platysma myoides, sterno-mastoid, sterno-hyoid, and sterno-thyroid muscles; near the lower margin of the cricoid cartilage it is crossed by the omo-hyoid muscle; above this it is covered by the skin, fasciæ, the platysma, and the inner horder of the sterno-mastoid muscles, and is contained in a triangular space, bounded behind by the sterno-mastoid, above by the posterior belly of the digastric, and helow by the anterior belly of the omo-hyoid musele. The anterior belly of the omo-hyoid muscle. artery lies on the cervical vertebræ, separated from them first by the longns colli musele, then by the rectus anticus major; internally it is in relation with the traches and the thyroid body, higher up, with the larynx and the pharynx; on its onter side is the internal jugular vein, nearer to it in the upper part, and between and behind the two is the vagus nerve. The upper part of the vessel is crossed by the sterno-mastoid artery and the superior thyroid veins; the middle part by the middle thyroid vein, and the lower part by the anterior jugular vein; the inferior thyroid artery lies between it and the trachea. The vagns nerve lies in the sheath between and behind the artery The vagns nerve and vein; the descendens noni and its commnnications lie on the sheath, crossing it from the outer to the inner side, or occasionally run within the sheath; the sympathetic nerve lies between it and the cervical muscles, and the recurrent laryngeal lies between it and the trachea, and crosses behind it at its lower part.

The left common carotid arises from the arch of the aorta near the origin of the innominate artery, and also reaches to the upper border of the thyroid cartilage. It ascends obliquely outwards from its origin behind the upper. part of the sternum and the sterne-hyoid and sterno-thyroid muscles, separated from them by the remains of the thymns, and crossed by the innominate vein; it lies in front of the trachea, the esophagus, and the thoracic duct; on its inner side is the innominate artery, and on its outer side the left subclavian artery, the vagus, and the eardiac branches of the sympathetic In the neck it has the same relations as the right carotid, except that the jugular vein is closer to it throughout its course, and at the

lowest part lies in front of it.

The common carotid results from the persistence of the third aortic arch of the embryo of man; it is the first aortic arch in the adult frog. Its place of division varies, and sometimes it does not divide at all. In man, the right carotid may arise directly from the aorta, as in birds, or by a common trunk with the left earotid. The left common trunk with the left earotid. carotid may arise from the innominate, as in the hedgehog. In the ox, the carotids and innominates of both sides arise by a common trunk. In the lion, the two carotids and the right subclavian have a joint origin.

C. ar'tery, external. (F. carotide externe; G. aussere Kopfschlagader.) One of the divisions of the common carotid, commencing at the upper border of the thyroid cartilage, and extending to near the neck of the condyle of the inferior maxillary bone, where it divides into the temporal and internal maxillary arteries. Its branches are the superior thyroid, the lingual, and the facial, running forwards; the occipital and the posterior auricular, directed backwards; and the ascending pharyngeal, the temporal, and the internal maxillary, proceeding upwards; they supply the face, part of the neck, and the cranial walls.

The external carotid lies nearer to the middle line, and soon becomes more superficial than the internal carotid artery; at first it is contained in a triangular space, bounded by the sternomastoid muscle behind, the omohyoid below and the stylohyoid and posterior belly of the digastric above, and which is covered in by skin, platysma muscle, and the cervical fascia, the hypoglossal nerve and the lingual and facial veins; it then passes beneath the digastric and stylohyoid to penetrate the substance of the parotid gland, where it lies beneath the facial nerve and the junction of the temporal and internal maxillary veius. On its inner side are the hyoid bone and the pharynx below, and the ramus of the lower jaw above, the latter separated by a piece of the parotid gland. Behind it are the superior laryngeal nerve below; and above, separating it from the internal carotid, are the styloid process, the styloglossus, and the stylopharyngeus muscles, and the glossopharyngeal uerve. It is crossed by small venous branches, but is not accompanied by a vein, except by the internal maxillary vein, when it happens to join the deep jugular.

The external earotid has been known to arise directly from the aorta, and its length varies according to the place of division of the common carotid, which is occasionally much higher or much lower than the usual point. The branches may vary in number by coalescence, and in position by being nearer or further from each

other.

C. ar'tery, inter'nal. (F. carotide interne; G. innere Kopfschluguder.) One of the two branches of the common carotid at its division opposite the upper horder of the thyroid cartilage, from whence it ascends to the carotid foramen of the temporal bone, traverses the carotid canal, crosses the foramen lacerum medium, passes upwards and then forwards by the side of the sella turcica in the wall of the cavernous sinus, turns abruptly upwards on the inner side of the anterior clinoid process, where it perforates the dura mater, and divides opposite the inner end of the Sylvian fissure into the anterior and middle cerebral arteries. It supplies the anterior part of the brain, the eye with its appendages, and a portion of the forehead, by means of its branches, which are the tympanic from the part in the carotid canal, the arterize receptaculi, the anterior meningeal and the ophthalmic arteries from the cavernous portion, and from the remaining portion the anterior cerebral, the middle cerchral, the posterior communicating, and the anterior choroid arteries, in addition to its terminal division into anterior and middle cerebral arteries. In the neck it lies on the rectus antiens major muscle, the superior cervical ganglion, and the superior laryngeal nerve; on its inner side is the pharynx, the tonsil, and the ascending pharyngeal artery; on its outer side the internal jugular vein and the vagus nerve, and it is covered below by the steruomastord and the platysma muscles, the deep fascia, and the skin; it then passes under the parotid gland, being crossed first by the occipital artery, the hypoglossal nerve, and the di-gastric and stylohyoid muscles, and afterwards by the styloglossus and stylopharyngeus muscles, the glossopharyngeal nerve, and sometimes the pharyngeal branch of the vagus, which separate it from the external carotid. In the carotid caual it lies in a sheath of dura mater, close to the front wall of the tympanum and surrounded by the carotid plexus and its branches. In the cranium it is placed in the inner and lower part of the wall of the cavernous sinus, and covered by its lining membrane, having the third, fourth, and ophthalmic nerves on its outer side. When it reaches the inner side of the anterior clineid process it perforates the dura mater, becomes covered by the arachnoid, and has the optic nerve on its inner and the third nerve on its outer side.

Sometimes the internal carotid arises directly from the arch of the aorta; occasionally it is absent. It is partly derived from the third branchial arch. In the ox, it breaks up into a network of small branches, the rete mirabile; in the cat, it penetrates the foramen lacerum posterius; in the dog, the foramen lacerum medius; and in the opossum, it perforates the sphenoid bone; in snakes, it perforates the basisphenoid; in birds, the aperture is in the pituitary fossa,

C. artery, primitive. The U. artery,

common.

C. canal. (F. canal carotidien; G. Carotiskanal.) The tunnel through the petrous portion of the temporal bone, which transmits the carotid artery and its sympathetic plexus. It is absent in some mammals, when the internal carotid passes through other foramina into the cavity of the cranium, as in monkeys, through the periotic bone; in tigers, it is a more furrow in the foramen lacerum posterius.

C. fora'men. (L. foramen, an opening. F. orifice inferieur du canal carotidien.) The

inferior extremity of the C. canal.

C. fora'men, exter'nal. (F. trou caro-n externe.) The outer and lower opening tidien externe.) of the C. canal.

C. fora'men, inter'nal. (F. trou carotidien interne.) The inner and upper opening of the C. canal.

C. gang'lion. A small sympathetic ganglion occasionally found on the under surface of the internal carotid artery while in the carotid foramen, and formed from filaments of the carotid

C. gland. (G. Carotisdrüse.) A cavernous non-glandular structure of the carotid artery of many Vertebrata, consisting of a network of trabeculæ, given off from the muscular wall and enclosing spaces. It contains many small heaps of ganglion cells, and doubly-contoured fibres, proceeding from the carotid plexus. It is very vascular. It appears to be the remains of the branches of the third embryonic branchial arch.

C. mur'murs. See Murmurs, carotid. C. nerve of glossopharynge'al. branch of the glossopharyngeal nerve which accompanies the internal carotid artery, and unites with the pharyngeal branch of the vagus and with the sympathetic nerve.

C. nerve of Wid'ian. A branch of the Vidian nerve, of reddish colour, soon after it leaves the Vidian canal; it joins the carotid

plexus of the sympathetic.

C. plex'us. (L. plexus, a twining. F. plexus carotulien.) A plexus of sympathetic nerves upon the internal carotid artery while in the carotid canal, and derived from the external division of the ascending branch of the superior cervical ganglion. It communicates with the Gasserian gauglion of the fifth nerve, with the sixth nerve, and with the spheno-palatine gan-glion by means of the carotid branch of the Vidian nerve; it sends filaments to the artery and to the dura mater.

C. sounds. The sounds heard by means of

the stethescope over the carotid artery at the same time as its expansion and its contraction; the first sound is in part the transmitted aortic sound, in part probably is caused by the stretching of the arterial walls; the second sound is the transmitted second agric sound. See Arterial

sounds.

C. tri'angles. See Neck, triangles of. Carotidæ'us. A Latin synonym of Carotic.

(Καρωτίδες, Carotidaneurys'ma. the carotids; ανεύρυσμα, an aneurysm.) Aneurysm of the carotid artery.

Carotidocy phus. (Καρωτίδες; κύφος, a lump.) Term for tuberele of the carotid

artery.

Caro'tin. C<sub>18</sub>II<sub>21</sub>O. A colouring matter contained in the form of microscopic crystals in the cells of the *Dancus carota*. They are redbrown, cubic, insoluble in water, slightly soluble in ether and alcohol.

Car'oua. A synonym of Caraway.

Carp. (F. carpe; I carpione; G. Karpfen.) The Cyprinus carpio. Used as food.

The soft roe or milt was considered very nutritive and aphrodisiac. The hard roc was made into red caviare. The fat was also esteemed as an aphrodisiac. The bile was used against feebleness of sight.

C. stone. (F. pierre de carpe; G. Karp-fenstein.) A term applied to one of the harder palate bones of the carp, and also to the petrous hone and otoliths, which were supposed to have

many medicinal properties. **Carpade lium.** (Καρπός, fruit; ἄδηλος, secret. F. carpadile.) An indehiscent plurilo-cular fruit, enveloped in a calyx, with distinct, monospermous, opposing compartments, as in the Umbelliferse.

Car'pal. (Καρπός, the wrist. F. carpien.) Belonging or relating to the carpus or wrist.

C. ar'tery, ante'rior ra'dial. (F. transverse anterieure radiale du carpe; G. vordere Handwurzelarterie.) A branch of the radial artery arising near the lower border of the pronator quadratus, and running inwards to unite into an arch with the anterior ulnar carpal artery, from which branches supply the carpal joints.

C. ar tery, anterior trans verse radial. The C. artery, anterior radial.

C. ar'tery, anterior trans verse ul'-

nar. The C. artery, anterior ulnar.

C. ar'tery, ante'rior ul'nar. (F. trans-verse anterieure cubitale du carpe.) A small `A small branch of the ulnar at the lower border of the pronator quadratus joining with the above.

C. ar'tery, dor'sal. (L. dorsum, the back.)

The C. artery, posterior radial.

C. ar'tery, dor'sal ul'nar. The C. artery, posterior ulnar.

C. ar'tery, poste'rior ra'dial. (F. dorsale du curpe ; G. Rückenarterie der Handwurzel.) A branch of the radial artery as it lies against the carpal articulations, which, passing beneath the extensors of the thumb, reaches the back of the wrist, and joins with the corresponding branch of the uluar to form an arch beneath the extensor tendons of the fingers, from which arise the third and fourth dorsal interesseous arteries and a branch which joins the termination of the anterior interesseous artery.

C. ar'tery, poste'rior ul'nar. (F. dorsale cubitale du carpe; G. Handruckenarterie.) A branch of the ulnar artery a little above the pisiform bone, which, passing backwards beneath the tendon of the flexor earpi uluaris, joins the

above.

C. articula'tions. (F. articulations carpiennes ) The articulations of the carpal bones with each other are arthrodial, and are so arranged as to allow of little movement between any two bones laterally, but of a considerable amount of antero-posterior movement between the two rows of the bones.

C. bones. (F. os carpiens.) See Carpus. C. lig'aments. The bones of the carpus are united to each other by dorsal, palmar, lateral, and interesseous ligaments; the pisiform is connected by a capsular ligament to the cuneiform, and by strong fibres to the unciform and the fifth metatarsal bone.

See also, Carpus, annular ligaments of, anterior

and posterior.

C. syno'vial mem'brane. The synovial sac of the earpus is interposed between the two rows of bones, and sends off-shoots between the bones of each row; occasionally it communicates with the radio-carpal synovial membrane. The articulation of the pisiform and nuciform bones is lined with a separate synovial sac. **Carpalia.** ( $Ka\rho\pi\delta s$ .) The bones of the

wrist.

Carpapi'ga. The Piper carpapiga. Carpasa. (Sans. karpasa, cotton.) A Carpasa. term for hut.

Carpa'sium. Same as Carpasus.

Carpasus. (Κάρπασος.) A plant not now known. Its juice, called Opocarpason, resembled myrrh in appearance, and was a powerful narcotic poison. (Quincy.)

Carpa thian. A name of the eastern

range of the great central mountain system of

Europe.

C. bal'sam. See Balsam, Carpathian. C. oil. Same as Balsam, Carpathian. Carpathicum. (Carpathian.) The Pinus cembra.

Car'pel. (Kaρπός, a fruit. F. carpelle; G. Fruchtblatter.) A modified leaf, one or more of which forms the pistil of flowers. It consists of a hollow inferior part, the ovary; and of a superior part, the stigma; the latter is sometimes mounted on a style. The carpels of single flowers may develop into more or less perfect leaves. They appear at first as slightly concave bodies of a green colour, gradually grow more concave, the edges then unite to form a sac, and ovules are developed.

**Carpella.** (Dim. from  $\kappa \alpha \rho \pi \acute{o}s$ , a fruit. G. Fruchtchen.) A small fruit.

Carpellary. (Same etymon.) Belonging to a carpel.

Carpel'lum. Same as Carpel. Carpentaria. (L. carpentarius, a carpenter.) A vulnerary herb, supposed to be the Achillea millefolium, or the Sanicula europæa, or the Nasturtium barbarea, so called because used hy carpenters for wounds made by their tools.

Car'penter. (L. carpentarius, a carriage maker; from carpentum, a chariot on two wheels.) A maker of wooden articles.

Also, a name of Oniscus ascilius.

C.'s herb. The Pruncila vulgaris, because, as its corolla in profile resembles a bill-hook, it was of old supposed to be a proper application to wounds.

C.'s leaf. The Galax aphylla, because it

was applied to cuts and bruises.

Carpe'sium. (Καρπήσιον.) A diuretic plant, like valerian, growing on mountains, mentioned by Galen. It has been supposed to be the Ruscus hypophyllum.

Carpho'des. (Κάρφος, any small dry body, as twigs, stalks, shrubs; sicos, likeness.)

Flocculent.

Carphoï des. (Κάρφος; εἶδος, likeness.)

Like straw; flocculent.

Carphology. (Κάρφος, chaff; λίγω, to collect. F. carphologie; I. and S. carfologia; G. Flockenlescn.) The movements of delirious patients in searching for or grasping at imaginary objects, or picking the bed-clothes.

Car'phos. (Κάρφος.) Chaff. Also a name for the Trigonella fanum gracum, or fenu-

greck.

A term for a small pustule. v, 85.

Car'pia. Car'pia. (L. carpo, to pluck; because plucked from linen cloth.) A name for lint. (Quincy.)

Carpiæ'us. (Καρπός, the wrist.) The palmaris brevis muscle.

**Car'pial.** ( $Ka\rho\pi\delta s$ .) Of, or belonging to,

the carpus. C. lig'aments. The carpal ligaments proper.

Also, the annular ligaments of the wrist.

Car'pid. Same as Carpel.

Carpid'ium. (Dim. from καρπός, fruit. F. carpidie.) Same as Carpel.

Carpin'eæ. A synonym of Corylaceæ. Carpinifolious. (L. carpinus, the hornbeam; folium, a leaf. G. hainbuchenblatterig.) Having a leaf like the hornbeam.

Carpinus. (L. carpinus, the hornbeam.)

A Genus of the Nat. Order Corylacea.

C. bet'ulus. (L. betula, the birch. F. charme; G. Weissbuche, Hainbuche, Hornbaum.) The hornbeam. Bark used, but inefficaciously, as a febrifuge.

**Carpio.** The carp, Cyprinus earpio. **Carpis mus.** The carpus. **Carpis mus.** (Kap $\pi$ os.) Of, or belonging

to, the carpus.

Carpobal'samum. (Καρπός, fruit; βάλσαμου, a balsam. G. Balsamkörner.) The dried fruit of the Balsamodendron gileadense. It is of the size of a small pea, lengthened at each end, of a reddish-brown colour, and is stimulant and aromatic.

Also, an ethercal oil, of yellow colour and clove-like odour, contained in the pods and seeds

of Myrtus pimenta. It is heavier than water. **Carpoc'ace.** ( $Ka\rho\pi\delta s$ , the wrist;  $\kappa a\kappa\delta s$ , evil.) Disease of the carpus.

Carpocar'pal. ( $Ka\rho\pi\delta s$ .) That which concerns the relations of parts of the carpus to each other.

Carpoc'erite. (Καρπός ; κέρας, a horn.) A segment of the antenna of Crustacea.

Carpocervi cal tie. (Καρπός, the wrist; L. cervix, the neck. F. cravate carpocervicale.) A bandage for flexing the forearm on the upper arm. The middle of a piece of calico is fixed to the wrist, and its two ends tied to a bandage fixed in the fashion of a collar round the neck.

**Carpochori'za.**  $(K\alpha\rho\pi\delta s; \chi\omega\rho i\zeta\omega, to parate.)$  Term applied by some botanists to separate.) multiple fruits, or fruits formed of separate

carpels.

Carpoclo nium. (Καρπός; κλωνίον, dim. of κλών, a young shoot.) A term applied to free organs in which the tetracarps of certain Florideæ are contained, for example, those of the Carpoblepharidese.

Carpode teæ. A synonym of Escallonvacea.

Carpog lyphus. (Καρπός; γλυφεύς, a rver.) A Genus of the Family Zyroglyphidæ, carver.) Order Acarida.

C. passula'rum, Ch. Robin. passula, dim. of passa, a raisin.) A mite which is often found living on dried figs, dates, and

prunes, and on conserves. Car pogone. (Καρπός; γόνος, offspring.) A term applied by Stahl to the vertical filaments in the thallus of Collemaces. These filaments are enlarged and contorted at their base, which constitutes the origin of the apothecium, and are prolonged to the surface of the thallus, forming a projecting point, when fecundation is effected by the contact of spermatia. Stahl names the contorted part ascegone, and the articulated filament which extends to the surface trichogyne.

Carpolith. (Kapmos, fruit; Xidos, a stone. F. carpolithe; G. Fruchtstein.) The hard granular material around the pippins of certain fruits, as the pear, and occasionally in connection with the epidermis; they are composed of thick, bard-walled cells, occasionally con-

taining mineral matter.

Also, a term for a fruit stone. Also, a term for fossil fruits.

Carpolog'ia. A wrong spelling of Carphologia or Carphology.

C. spasmod'ica.  $(\Sigma \pi \alpha \sigma \mu \delta s, \text{ cramp.})$  A

synonym of Subsultus tendinum.

**Carpol'ogy.** ( $Ka\rho\pi \delta s$ , fruit;  $\lambda\delta\gamma \sigma s$ , a discourse. F. carpologie.) The study of fruits. A branch created by Gärtner, to whom is owing the first correct description of fruits and seeds. A word not to be confounded with carphology. Also, a misspelling of Carphology.

**Car'pomel.** ( $Ka\rho\pi\delta$ s, fruit; L. mel, honey.) The sugar of fruits.

Carpometacar pal. Relating to the Carpus and the Metacarpus.

C. articula'tions. (F. articulations earpométacarpiennes; G. Handwurzelmittelhandge-lenke.) The articulations between the metacarpal bones and those of the carpus. Those of the four inner bones are connected by carpal, dorsal, and interesseous ligaments, and that of the thumb by a capsular ligament; the synovial membrane of the carpometacarpal joint of the thumb is sepa-rate; that of the rest is continuous with the synovial membrane belonging to the carpal bones.

Carpometacar pus min'imi dig'iti. (Carpus; metacarpus.) The opponens minimi digiti muscle.

C. pol'licis. The opponens pollicis muscle.

(Καρπός, fruit; Carpomorph'ous. μορφή, form. F. carpomorphe; G. fruchtformig.) Applied to those apothecia of lichens which resemble fruits.

Carpomy'zous. (Καρπός, fruit; μυζάω, to suck. F. carpomyz; G. fruchtsaugend.) Applied to a Group of the Muscidae, supposed to

live on the juices of plants on which the most part habitually fix themselves.

Carpo olecranal tie. (Καρπόs; ώλενη, the ulna; κρανίον, the head. F. eravate carpo-olecranicame.) A bandage for maintaining extreme flexion of the hand. One end of a wide bandage is wound round the wrist, then the whole hand, to the points of the fingers, is encircled, and the other end is fixed, after flexing the hand, firmly round the upper arm above the elbow.

Carpope'dal. (L. carpus, the wrist; pes, the foot.) Relating to the hand and the

fout.

C. contrac'tion. The contraction noticed

under C. spasm.

A term applied to the local C. spasm. convulsions which affect the hands and feet of children, and which may occur during an attack of laryngismus stridulus, or of general convulsions. The hands are flexed and the thumb drawn across the palm; the feet are forcibly flexed, and sometimes drawn outwards; and the great toe is violently separated from the rest. Sometimes carpopedal spasm occurs in cases of chronic diarrhoea, and then there is often wdema of the dorsum of the foot and the back of the hands.

In consequence of the frequency of the occurrence of carpopedal convulsions in that discase, the term has been used as a synonym of Laryn-

gismus stridulus.

Carpoph'aga. (Καρπός, fruit; φαγεῖν, eat.) A Tribe of the Order Monotremata, to eat.) A Tribe of the Order monocromaca, having the anterior incisors large and long in loth jaws, and a long eaccum.

**Carpoph'agous.** (Kup $\pi$ 6s, fruit;  $\phi$ a- $\varepsilon$ 1 $\nu$ , to eat. F. carpophage; G. fruehtfressend.)

Eating fruits.

Carpophalange'us min'imi dig'iti. (t'arpus; phalangeus.) The abductor minimi digiti muscle.

Carpoph'ilous. (Καρπός, fruit; φιλέω, to love.) Growing on fruits, as the Peziza car-

pophila.

**Carp'ophore.** (Καρπός, fruit; φέρω, to bear. F. carpophore; G. Fruchttrager.) A prolongation of the thalamus beyond the ovary, as in the Geraniacea and Umbellifera.

Car'pophyl. Same as Carpophyllum. **Carpophyllum.** (Kap $\pi$ os, fruit,  $\phi \delta \lambda \lambda \delta \nu$ , a feaf. F. carpophylle; G. Frachtblatt.) The medified leaf which by its folding produces a carpel.

Carpophy'tæ. (Καρπός, fruit; φυτόν, A section which, according to Oken, a plant.) with Anthophytæ, formed the class of plants now

known as Exogens.

**Carpop'odite.** ( $Ka\rho\pi\delta s$ ;  $\pi\delta us$ , a foot.) The fifth basal joint of the hinder antennæ of certain Arthropoda.

Carpopo'gon gigante'um. Mucuna giganteum.

C. pru'riens. The Mucuna pruriens, Carposubphalange'us min'imi dig itî. (Carpus; sub, under; phalanx. F. carpo-susphalangien du petit doigt.) The oppo-Lens minimi digiti muscle.

**Carpothe** ca. (Καρπός; θύκη, a case, G. Fruchtbehalter.) The receptacle for the fruit in the Algae.

Carpot'ica. (Kap $\pi$ ós.) A term applied to an Order of Mason Good's Class Genetica, being

diseases affecting impregnation.

Carpot'okous. (Καρπός; τόκος, α bringing forth. G. Fruchtegebarend.) Bearing

**Carpozy'ma.** (Καρπός, fruit; ζύμη, ferment.) Term applied to a peculiar kind of

alcohol ferment.

Carpus. (Καρπός, the wrist. F. carpe; I. and S. carpo; G. Handwurzel.) The part of the upper or fore limb lying between the forearm and the hand. In man it consists of two rows of four bones each, so arranged as to he convex on the dorsal surface, concave on the palmar. The proximal row contains the scaphoid, semilunar, cunciform, and pisiform bones, reckoning from the radial to the ulnar side; and the distal row, reckoning in like manner, the trapezium, trapezoid, the os magnum and unviform. In Chelonia there are ten bones, in birds but two. In the chameleon the bones of the distal row coalesce with the metacarpals. When least modified there is reason to believe, says Huxley, that the carpus and the tarsus are composed of skeletal elements, which are alike in number and arrangement. One of these, primitively situated in the centre of the earpus, is termed the centrale; on its distal side are five carpalia articulating with the several metacarpal bones; on its proximal side are three bones, a radiale and ulnare, and between them an intermedium.

Also  $(\kappa a \rho \pi \delta s$ , fruit), a term for fruit.

C., an'nular lig'ament, ante'rior. (L. annulus, a ring. F. ligament annuluire antérieure du carpe.) A thick band of ligamentous fibres stretching from the trapezium and scaphoid over to the pisiform bone and the unciforin process. and converting the palmar arch of the carpus into a ring for the transmission of the flexor tendons. Its upper margin is continuous with the anterior fascia of the forearm, and its lower with the deep palmar fascia and with the origins of many of the hand muscles.

C., an'nular lig'ament, poste'rior. (F. ligament annulaire posterieure du carpe.) The thickened lower part of the aponeurosis of the back of the forearm. It stretches from the outer border of the lower end of the radius to the inner part of the cunciform and the pisiform bones; it is attached also to the longitudinal ridges on the posterior surface of the radius, converting them iuto canals for the extensor tendons.

C., lig'aments of. See Carpalligaments. France; near Hyères. A somewhat primitive place, having the same advantages for a winter residence as Hyères, but

less exposed to the mistral.

Carrageen moss. (F. mousse perlée, mousse d'Irlande ; G. Irlandisches Moos, Perlmoos, Knorpeltung.) The Chondrus crispus dried and bleached in the sun, when it becomes of a yellowish-white colour, cartilaginous, and somewhat translucent. It swells, but does not dissolve. in cold water, but is soluble in boiling water, and gelatinises on cooling. It contains pectin (carrageenin), mucilage, some fatty matter, and small quantities of iodides and bromides. It consists of C. 21.8, H. 4.87, N. 21.36, S. 2.51, O. 49.46 per cent. It is nutritive and demulcent, and is easy of digestion. Used in chest affections, scrofula,

dysentery, diarrhea, and urinary affections, as a decection or jelly, flavoured with lemon or some spice. It is named after a place near Waterford, where it grows.

C. sea'weed. Same as Carrageon moss. Carrageen in. The form of pectin found in Carrageen moss. It is distinguished from starch by not turning blue with iodine, and from gum by alcohol not precipitating it from its watery solution.

Italy; Province of Massa-Carra'ra. Carrara. Famed for the purity of its statuary

C. mar'ble. A pure form of marble ob-

tained from Carrara.

C. wa'ter. Lime water made from lime, produced by calcining Carrara marble, and saturated under strong pressure with carbonic acid, so that the calcium carbonate first thrown down is dissolved. It contains 8-10 grs. of calcium carbonate in 10 oz.

Carratra'ca. Spain; in the Province of Malaga, 500 feet above sea level. Mineral waters, temp. 19° C. (66.2° F.), having a slight mineralisation, and containing carbonic acid and hydrogen sulpbide. Used in skin diseases and where sulphurous waters are useful.

Car'raway. A varied spelling of Cara-

Car'ron oil. (Because much used at the Carron Iron Works, in Scotland.) A liniment applied to burns, composed of equal parts of linseed oil and lime water; the Linimentum calvis, B. Pb.

Car'rot. (F. carotte, from L. carota, a carrot. 1. carota; S. zanahoria; G. Mohre.) The Daucus carota, var. sativa. See C. root.
C., can'dy. The Daucus creticus.
C., dead'ly. The Thapsia asclepias.
C. fruit. (F. fruits de la carotte sauvage; G. Mohrenfrucht.) The fruit of the wild carrot, Pagague carotta Eropp, out that on one side

Daucus carota. Brown, oval, flat on one side, convex, with five primary and four secondary longitudinal bristled ridges; has an aromatic odour and warm pungent taste. Yields a pale yellow volatile oil on distillation. Used as a diuretic in dropsy and chronic nephritic conditions; also in the strangury from blisters, and as an emmenagogue. Dose, 30 grains or more, in powder, or infusion.

C. oint'ment. Carrot root, grated, ½ lb., wax 4 oz., lard 1 lb.; melt, evaporate, and strain. Used to ulcerated surfaces requiring gentle

stimulation. (Procter.)

C. poul'tice. May be made of the boiled root well mashed; or of the raw root scraped; the former is emollient, the latter is slightly stimulating, and is used in sloughing or cancerous ulcerations.

C. root. (F. racine de carotte; G. Mohr-rübe.) The root of Daucus carota, var. sativa. A useful article of diet, but prone, from the quantity of sugar, to produce flatulence. It contains, in 100 parts, nitrogenous matter 1.3, starchy substance 8.4, sugar 6.1, fat .2, mineral matter I, and water 83. The colouring matter is Carotin. It is used to make Carrot poultice and ointment.

The juice of the root is used to relieve the itching of cutaneous disease.

C. seed. See C. fruit.

C., wild. The uncultivated Daucus carota. Also, the Ammi visnaga.

Carroval. A variety of curare.

Carrovalin. An alkaloid found in carroval.

Carthage'na. A town of New Granada

on the Caribbean Sea.

C. bark. A variety of einchona bark exported from the Northern Atlantic ports of South America. Formerly this bark was of inferior quality, but now many specimens are found inferior only to Calisaya bark. It is distinguished by a soft, easily removed, whitish epidermis, or by the traces which have been left of its removal, and it contains all the alkaloids of cinchona bark. Carthagena bark was formerly divided into yellow, orange, red, and brown barks. The authors of the U.S. Dispensatory consider that the varieties may all be referred to the three following forms:

C. bark, fibrous. (F. quinquina Carthagene spongieux.) Quills or half quills, with or without epidermis, of an ochreous yellow, an orange, or a red colour, a loose spongy texture, a splintered fracture, and a bitter or sometimes an insipid taste. The amount of alkaloids is sometimes very small. It is the product of the Cin-chona lancifolia of Mutis.

C. bark, hard. (F. quinquina de Carthagène jaune pale.) Quills or flat pieces, of a pale, dull, brownish-yellow colour, a firm and compact texture, an abrupt fracture, and a bitter nauseous taste. It is the product of Cinchona

cordifolia.

C. bark, hard Pitay'a. (F. quinquina brun de Carthagene.) Small, irregular pieces, of a yellowish or reddish-hrown colour, a hard compact texture, a partly fibrous and partly smooth fracture, and a very bitter taste. It contains a large proportion of alkaloids and much resin. It is the product of the Cinchona pitayensis.

C. ipecacuan'ha. One of the grey varieties of ipecacuanha.

Cartham'ic ac'id. A synonym of Car-

Carthamin. (F. carthamine; G. Safflorroth.)  $C_{14}H_{16}O_7$ . The red colouring matter of safflower, Carthamus tinctorius. Ob-Car'thamin. tained by exhausting the flowers with cold water to remove a yellow substance, treating the residue with a dilute solution of sodium carbonate, and then precipitating the carthamine by acetic acid. It is an amorphous dark red powder, with a green metallic reflection, slightly soluble in water, more easily in alcohol and alkaline solutious. It is used as a dye, and mixed with powdered tale forms the cosmetic rouge.

Car'thamus, U.S. Ph. (F. safran batard; G. farber Safflor.) The florets of the C. tinetorius. A red mass, with yellow streaks of the filaments, baving a rather aromatic and a slightly bitter taste. It contains a red colouring matter, Carthamin. Safflower is sometimes used to adulterate saffron, from which it is distinguished when moistened by its being manifestly a floret. It is said to be laxative and diuretic; and is used as a diaphoretic, like saffron, for the promotion of the eruption in exanthematous diseases.

Also, a Genus of the Suborder Tubuliflora, Nat. Order Compositæ.

C. corymbo'sus, Linn. The Cardopatium corymbosum.

C. glaucus, Bieb. (L. glaucus, bluishgrey.) Said to be a remedy for scorpion bites. C. lana'tus, Linn. (L. lanatus, woolly. F. chardon binit des Parisiens.) A bitter plant, formerly accounted sudoritic, febrifuge, and anthelmintic.

C. leucocau'lon. (Λεῦκός, white; καυλός, a stalk.) A species said to be an antidote to scorpion bites.

C. macula'tus, Lamb. (L. maculatus, spotted.) The Cardaus marianus.

C. officina'rum, Bank. (L. officina, a workshop.) The C. tinetorius.

C. per'sicus. (L. persicus, Persian.) The fruits yield a nutritious oil, and the leaves are esculent; it is believed to increase the secretion of milk.

C. tincto'rius, Linn. (L. tinctorius, belonging to a dyer. F. carthame des teinturiers, safranum; 1. and S. cartamo; G. Safflor.)
Saflower or dyers' saffron. Hab. India, Egypt. The seeds (F. graines de perroquet; G. Saffor-korner) are laxative and diuretic. An oil which the plant yields is used in India in rheumatism and paralysis. It supplies safflower, officinal in U.S. Ph. as Carthanus.

Carthe'gon. The seed of the box, Buxus sempervirens.

Carthu'sian. (Cartusia, the Latinised form of Chartreuse in France, Department of Isère.) Relating to an order of monks of that name, so called from the village where their first monastery was built.

C. pow'der. (F. poudre des Chartreux.) A name of Kernies mineral, in consequence of its successful use in a brother monk by a Carthusian

in 1714.

Cartilage. (L. cartilago, perhaps from charta, a thin leaf. Gr. χόνδρος; 1. cartilagine; S. cartilago; G. Knorpel.) Gristle. A dense, firm, opaque substance, pearly white or yellowish, highly also substance. highly elastic, easily cut, of sp. gr. 1-15. Cartilage is temporary or permanent. Temporary lage is temporary or permanent. Temporary when it is to be ossified as growth proceeds, as the feetal skeleton; permanent when it remains such during life, as the articular, costal, and larvngeal cartilages. It is covered with a fibrous membrane, the perichondrium, except on the joint surfaces. It consists of a matrix of nearly homogeneous appearance, in which are eavities, chondroplasts, lined with a dense structure, eartilage capsules, which enclose nucleated cells, the cartilage corpuscles; in elastic cartilage and fibrocartilage fibrous tissue is intermixed. Cartilage contains no blood-vessels, except such as penetrate a short distance from neighbouring organs, and it is destitute of nerves. Ordinary permanent cartilage contains from 67 to 73 per cent. of water, 24 to 30 of organic matter, and 1.5 to 2 of mineral matter, 100 parts of which contain po-tassium sulphate 26.66, sodium sulphate 44.81, sodium chloride 6.11, sodium phosphate 8.42, calcium phosphate 7.88, and magnesium phosphate 4.55; it is also said to contain some sodium and calcium carbonate, as well as iron. It becomes transparent by drying, and by prolonged boiling it is resolved into chondrin, which gelatimises on cooling.

C., acciden'tale. (L. accido, to happen. 1. cartilagine accidentale.) A synonym of Enchondroma.

**C., alieth'mold.** (L. ala, a wing;  $\tilde{\eta}\theta\mu\sigma$ s, a sieve.) That portion of the posterior part of the nasal capsule on each side, which is formed by the primordial skull, and which constitutes the roof and posterior part of the true olfactory region. It becomes ossified into the pars plana of the ethmoid bone, which is the posterior part of the upper and middle turbinals. Each is perforated postero-mesially by the olfactory nerve.

C., alina'sal. (L. ala, a wing; nasus, the nose.) A portion of cartilage constituting the foremost part of the nasal capsule, and which forms a conchoidal structure round the external nostril.

C., alisep'tal. (L. ala, a wing; septum, a division.) This forms so much of the roof and wall of the nasal labyrinth as is united with the septum nasi in front of the perpendicular plate of the ethmoid. Growing round inside the maxillary it gives rise to a coiled outgrowth named the inferior turbinal. After this has ossified it coalesees, in most manimals, with the maxillary bone.

C., an'nular. (L. annulus, a ring. F. cartilage annulaire; 1. cartilagine anulaire.) The

cricoid cartilage.

C., anon'ymous. ('Aν, neg.; ονομα, a name. F. cartilage anonyme.) The cricoid

cartilage.

C., artic'ular. (L. articulus, a joint. F. cartilages articulaires; I. eartilagini articolari, c. d'incrostamento epidermichi, c. jalini; G. Gelenkknorpel.) The thin layer of cartilage which covers the joint-ends of bones. It is firmly attached to the osseous substance by a roughened surface; its free surface is smooth, and possesses no epithelium, except in the embryo. The matrix is finely granular, very seldom contains fibres, and rarely ossifies. The cells at the surface are flattened and parallel with it; oblong, and vertically arranged nearer the bone.

C., arytæ'noid. See Arytænoid cartiluae.

C., arytæ'noid, small. The apex or head

of the arytenoid cartilage.

C., at rophy of. ('Λ, neg.; τροφή, nourishment.) From pressure, the articular cartilage occasionally becomes absorbed; its place may be supplied by a hard, firm, grey substance, consolidated, probably, from a fibrinous exudation.

C., auric'ular. (L. auricula, the external eur. G. Ohrknorpel.) The cartilage of the pinna

of the ear.

A term applied to calcified C. bone. patches which are found in cartilage in rickets.

C. bones. Bones developed by the metamorphosis of eartilage. A very large proportion of endo-skeletal bones are formed in this way. The ossification may take place both within (endostosis), as in the epiphysis of a long bone, or without (ectostosis), as in the commencing shaft.

C., calcifica'tion of. (L. calx, lime; fio, to become.) A deposit of salts of lime in the matrix of cartilage, commonly called ossification, but not consisting in the deposit of true bone, as sometimes happens. In the adult, this is a morbid condition, but is normal in the fœtus where persistent cartilage joins bone.

C., cal'cified (Same etymon.) A term given to the structure of the exoskeleton of clasmobranchiate fishes. See Placoid exoskeleton.

C. callus. (L. callus, hardness.) The condition in which the callus developed between the fractured ends of bone does not ossify, but obtains a structure like cartilage.

C. cap'sulcs. (L. capsula, a little case. F. capsules cartilagineuses; G. Knorpelkapseln.) The lining of the cavities in cartilage, chondroplasts, which contain the eartilage cells.

G. cells. (F. cellules cartilagineuses; G. Knorpelzellen.) The cells of cartilage are more or less oval, and consist of a cell-body. which is homogeneous or granular, containing a clear or a granular nucleus, with one or more nucleoli; they vary in size from  $6\mu$  to  $30\mu$ . The cells lie in a cavity of the matrix, the chondroplast, which is lined by a transparent capsule. They multiply by fission, and sometimes a double nuclens is seen in a cell; they are sometimes solitary, more often in groups of two or more; towards the surface they are flattened horizontally. Water, eyrup, saline solutions, and acetic acid cause the corpuscle to be detached from the chondroplast, or this from the matrix in which it is embedded. Cartilage cells may undergo fatty degeneration, and they sometimes contain pigment.

C., cel'lular. A synonym of C., paren-

chymatous.

C., circumferen'tial. See Fibro-cartilage, circumferential.

C. corpuscles. (L. corpusculum, a little body.) A synonym of C. cells.
C., cricoid. See Cricoid cartilage.
C., cu'neiform. See Canciform cartilage.

C., dent'al. (L. dens, a tooth.) A synonym

of the Maxillary ridge.

C., devel'opment of. Hvaline cartilage consists at first of ordinary embryonic cells. The contents of these gradually become clearer, so as to show more distinctly the nucleus, and a hyaline capsule is developed; by degrees, as the cells divide, amorphous matter is interposed between them, constituting the matrix; the mode in which the capsule is developed and the source of origin of the matrix are still unsettled.

C., elas'tic. (F. cartilage clastique; G. elastiche Knorpel.) This variety is opaque, yellowish, very flexible, and not prone to ossification. The matrix is traversed in all directions by fibres of elastic tissue, except immediately around the cells, which are somewhat loosely confined in the capsules. It constitutes the structure of the epiglottis, the cornicula laryngis, the pinna, and the Eustachian tube.

C., en'siform. (L. ensis, a sword; forma, shape.) The metasternum or ensiform process of the Sternum.

C., epiglot'tic. The cartilaginous part of the Epiglottis.

C., ero'sion of. (L. erodo, to eat away.) A condition occurring in the articular cartilages of elderly people, especially when subject to pressure, in which larger or smaller pieces, after becoming yellow, softish, and docculent, break down and disappear; the matrix having previously become fibrillated, and the cells showing signs of growth and proliferation, or of fatty degeneration.

C., ethmoidona'sal. (Ethmoid bone; L. nasus, a nose.) The plate of cartilage from which the ethmoid and nasal bones are subsequently developed, together with the aliethmoid, aliseptal,

and alinasal cartilages.

C., ethmopræsphe'noid. bone; pra, in front of; sphenoid hone.) A plate of cartilage which, in the primordial skull, rises up from the midline of the coalesced trabeculæ. In front and below it sends out the prænasal cartilage, and at a later stage it presents two fenestræ.

C., Eusta'chlan. See Eustachian tube. C. fi'bres. The rigid, closely-lying, unbranched parallel fibres which develop in the hyaline matrix of some cartilages, such as those of ribs and larynx, soon after birth.

C., fi'brous. Same as Fibro-cartilage. C. fish'es. A synonym of the Chondro-

pterygida.

C., fœ'tal. (L. fætus, the young of an animal.) The appearance of the cartilage of the fætus differs from that of the adult. The matrix is homogeneous and hyaline. The chondroplasts are narrow and long, fusiform, or triangular in section. Blood-vessels are only observed when ossification is about to com-

C., hy'aline. ("Yalos, glass. F. cortilage hyaline; I. cartilagine jalina, c. vera, c. pura; G. hyaline Knorpel.) The matrix in this, the typical form, is homogeneous and translucent. The articular, costal, and temporary fœtal cartilages are hyaline.

C., hyper'trophy of. ( $\Upsilon \pi i \rho$ , in excess; τροφή, nutrition.)
True hypertrophy perhaps,
hardly ever exists. What is usually called by
this name consists of softening and swelling, with

a tendency to break up into fibres.

C. in old age. In advanced life the cartilages are the seat of considerable change. costal cartilages become ossified in striæ. The articular cartilages become fissured and wrinkled or assume a velvety appearance, especially in the knee- and hip-joints. This fissuring may extend into the chondroplasts, and so the cells may escape usually in a granular or fatty condition. The laryngeal and tracheal cartilages undergo calcareous degeneration.

C., incrusting. (F. incruster, from L. incrusto, to cover, as with a coat.) A synonym

of Articular cartilages.

C., inflamma tion of. A rare condition in its completeness; but not infrequently pro-cesses, which may be looked upon as essentially inflammatory, occur. The cells may enlarge and become granular, and their nuclei may subdivide preparatory to a disintegration of the cell. According to Barwell, inflammatory diseases of the cartilage occur only when surrounding structures are inflamed.

C., innom'inate. (L. in, neg.; nomen, a name.) A synonym of the Cricoid cartilage.

C., interartic'ular. (L. inter, between; articulus, a joint.) Cartilages lying in the interior of a joint and hetween the bones, as the semilunar cartilages of the knee-joint. See Fibrocartilage, interarticular.

The inter-C., interartic'ular, of hip.

articular or round ligament of the hip.

C., interarticular, of jaw. See Temporomaxillary articulation.

C., interarticular, of wrist. The triangular fibrocartilage of the inferior radio-ulnar articulation.

C., interos'seous. See Fibro-cartilage, interasseaus.

C., invest'ing. (L. in, in; vesto, to clothe.) A synonym of Articular cartilages.

C., ma'trix of. (L. matrix, a source.) The intercellular substance, hyaline or fibrous in structure, which makes up the chief part of car-

C., Meck'el's. The cartilage of the third visceral arcb. See Meckel's cartilage.

C., mem'brane of. Same as Perichondrium.

C., mu'cronate. (L. mucronatus, fur-

ni-hed with a sharp point.) The metasternum or ensiform process of the sternum.

C., na sal. (L. nasalis, belonging to the nose.) See Nase, eartilages of.

C., necrosis of. (Nikpwois, death.) Death of cartilage occurs most frequently in the larynx as a result of chronic inflammation, commonly tubercular or syphilitie. It produces serious and often fatal consequences.

C. of ear. The Pinna.

C. of pin'na. See Pinna.
C. of ribs. See Costal cartilages.
C. of Weitbrecht. The interarticular

fibrecartilage of the aeromic-elavicular articulation.

C., ossification of. (L. os, a bone; facio, to make.) True bone becomes deposited in some cartilaginons structures as life advances. For the ossification of the cartilage in the focus, see

Bonc. development of.

C., parenchym'atous. (Παρέγχυμα, anything poured in beside. I. cartilagine cellulare, c. parenchimatosa.) A form of cartilage in which the matrix is wanting, the cells only being present. The embryonic chorda dorsalis, certain cells in some tendons in the frog. and other structures, have been referred to this form, the existence of which, however, is by no means certain.

C., per manent. (L. permaneo, to continue. G. permanente Knorpel.) Those cartilages which naturally remain cartilages during

the whole of life.

C., præna'sal. (L. præ, in front of, nasus, the nose.) This cartilage is an azygous outgrowth of the primordial skull, often much prolonged, forming a rostrum in front of the head. It is found chiefly in Sclachians, Birds, and Cetaceans.

C., prolifera'tion of cells of. (L. proles, off-pring; fero, to bear.) In some diseased conditions of cartilage the cells multiply by fission or otherwise; the exact value of the

condition is not yet settled.

C., retic'ular. (L. reticulum, a net. I. cartilagine reticoluta.) A synonym of C., elastic.
C., sep'tal. (L. septum, a wall.) The cartilaginous portion of the septum nasi.

C., spong'y. A synonym of C., clastic,

from its soft consistence.

C., stra'tiform. (L. stratum, a layer; forma, likeness.) See Fibro-cartilage, strati-

C., supra-arytæ'noïd. (L. supra, above; arytanoid cartilage.) A synonym of the Corni-culum laryngis, from its position. C., tar'sal. See Tarsal cartilage.

C., tem'porary. (L. temporarius, lasting but for a time.) Cartilages which remain such only during the immature condition of the being. becoming normally converted into bone as life advances.

A synonym of C., fortal.

C., tes selated cal'cified. (L. tesselatus, furnished with small square stones; calx, lime: fio, to make.) J. Müller's name for the form of cartilage composing the exo-keleton of clasmobranchiate fishes. See Placoid exoskeleton.
C., thy'roid. See Thyroid cartilage.

C., trans'itory. (L. transco, to pass away.)

Same as C., temporary.

C., triang'ular, of nose. (L. triangulus, three-cornered.) The cartilaginous part of the septum masi.

C., true. A synonym of C., hyaline.

C. tu'mour. Same as Enchondroma. C., ulcera'tion of. In ulceration the cartilage cells increase in size, the nuclei multiply, and the matrix becomes soft and granular; a false membrane, furnished with blood-vessels and covered with nucleated cells, spreads over the ulcerated surface and dips into its substance; processes of vascular structure arise from the bone and often meet the projections of false membrane; the cartilage becomes disintegrated, and the chondroplasts open and discharge their cells. The diseased structure may be absorbed or may be broken up into fragments, or suppuration in the joint may result.

C., xiph'oid. (Eldus, a sword; eldos, likeness.) The metasternum or ensiform process

of the sternum.

C. yellow. A synonym of Elastic carti-

lage, from its colour.

Car'tilages, ac'cessory. (L. accedo, to be added.) A synonym of the Sesamoid fibrocartiluges.

C., acciden'tal. A synonym of Enchondromata.

C., a'lar. (L. ala, a wing.) The lateral cartilages of the Nose.

C., bas'ket. Same as Basket of lamprey. **C., bronch'ial.** (Βρόγχος, the windpipe.) The fibrocartilaginous rings of the bronchi and bronchial tubes.

C., connec'ting. (L. part. connecto, to tie together. I. cartilagini fibrosi.) These cartilages are represented by the interarticular fibrocartilages, the circumferential cartilages, and the cartilages lining the sheaths of tendons. Fibro-cartilage

C., cos'tal. See Costal cartilages.

C., epiph'ysal. (Επίφυσις, an outgrowth. F. cartilages epiphysaire.) The intervening cartilage between the diaphysal and the epiphysal centre of ossification, in which growth continues to take place until the two centres meet

C., interartic'ular, of knee. The semi-

lunar cartilages of the knew-joint.

C., interarticular, of ver'tebræ. The Intervertebral discs.

C., interver'tebral. The Intervertebral discs.

C., larynge'al. See Laryngeal cartilages. C., loose. See Joints, loose bodies in.
C., obdu'cent. (L. obduco, to lead to-

wards.) A synonym of Cartilage, articular.

C. of ossification. The cartilaginous structures of the fætus which, in the natural course of development, will be converted into

C. of Santori'ni. See Santorini, carti-

lages of.

C. of trache'a. The fibro-cartilaginous rings of the trachea. C. of Wrisberg. See Wrisberg, carti-

lages of.

C., primordial. (L. primordius, original.) A synonym of Cartilage, fixtal.

C., pyram'idal. (L. pyramidalis, formed after the manner of a pyramid.) The Arytenoid cartilages, from their shape.

C., quad'rate. (L. quadratus, square.) Small cartilaginous nodules or plates in the posterior edge of the alæ of the nose.

C., semilu'nar. See Semilunar cartilages.
C., ses'amoid. See Sesamoid fibro-cartilages.

C., sig'mold. (Σ, the letter sigma; είδος, likeness.) A synonym of the Semilunar cartilages

C., sutu'ral. (L. sutura, a suture. I. cartilogini sutural; G. Nathknerpeln.) The fibro-cartilage which forms au edging to the flat bones of the skull.

**C., trian**'gular. (L. tres, three; angulus, a corner.) A synonym of the upper lateral cartilages of the nose. See Nasal cartilages.

Cartilagin. A principle which was supposed to exist in eartilage, and which, by boiling in water, gives rise to chondrin.

Cartilagin'ei. A synonym of Chondro-pterygii.

Cartilagin'ecus. Same as Cartilaginous.

Cartilagines. Plural of Cartilago.

C. accessoriæ. (L. accedo, to be added.)
A synonym of the Sesamoid fibro-carcilages.
C. a'læ na'si. (L. ala, a wing: nasas.

C. a'tae na'st. (L. ala, a wing; nasus, the nose.) The lower labial cartilages of the nose.

c. a'læ na'si ma'jores. (L. ala, wing; nasus, nose; major, greater. G. grösser Nus n-flügel Knorpel.) The anterior or greater alar cartilages of the nose.

C. a'læ na'si minores. (L. ala; nasus; minor, lesser. G. hinteren, or kleineren Nasen-flügel Knorpel.) The posterior or smaller alar cartilages of the nose.

C. ala'res. (L. ala, a wing.) The lower lateral cartilages of the nose.

C. ala'rum mino'res. (L. minor, less.)
A synonym of the Cartilages, quadrate.
C. ala'rum na'si. (L. nasus, the nose.)

C. ala'rum na'si. (L. nasus, the nose. The lower lateral cartilages of the nose.

**C. epac'tiles.** (E $\pi a\kappa \tau \delta s$ , adventitions. G. Schaltknorpel.) A synonym of the lesser cartilages of the nose.

C. falca'tæ. (L. falcatus, scythe-shaped.)
The semilunar cartilages of the knee-joint.

**C. falcifor'mes.** (L. falx, a sickle; forma, likeness.) The semilunar cartilages of the knee-joint

C. guttura'les. (L. guttur, the throat.)
The arytenoid cartilages.

C. Interarticula'res cos'to-vertebra'les. (L. inter, between; articula, joint; costa, rib; vertebra, the spine. 4: Zwischengelenkbund.)
The interarticular ligament of the costo-vertebral

articulation.

C. luna'tæ. (L. lunatus, bent like the half moon.) The semilunar cartilages of the knee-joint.

**C. menis'ci.** (L. meniscus, a lens concave on one side, convex on the other.) The semilunar cartilages of the knee-joint.

C.minores. (L. minor, less.) The Sesamoid fibro-cartilages.

C. mino'res inferio'res. (L. minor, less; inferior, lower.) The lower lateral cartilages of the nose.

C. mino'res posterio'res. (L. minor; posterior, hinder.) The quadrate cartilages of

C. na'si. (L. nasus, the nose.) The Nasul cartilages.

c. na'si accesso'riæ. (L. nasts, the nose; accessorius, accessory. G. Schultkuorpel.) Three small cartilaginons plates situated in the posterior part of each ala of the nose. Same as C. epactiles.

C.na'si inferio'res. (L. nasus, nose; in-

firus, that is beneath.) The same as C. ala nasi majores.

C. na'si latera'les. (L. nasus, the nose; lateralis, belonging to the side.) The upper lateral cartilages of the nose.

C. na'si sesamoi'deæ. (L. nassa, nose; σήσαμου, the seed of the sesame tree.) The posterior or smaller cartilages of the ala of the nose. They are usually two or three in number.

C. na'si superio'res. (L. nasus; superus, that which is above.) The lateral cartilages of the nose.

C. na'si triangula'res. (L. triangularis, three-angled.) The lateral or superior cartilages of the nose. See Cartilages, triangular.

C. pinnales. (Puna.) The lower lateral cartilages of the nose.

C. posterio'res na'si. (L. posterus, that is behind; nasus, the nose.) The posterior or small alar cartilages of the nose.

**C. pyramidalles.** (L. pyramidalis, pyramidal.) The arytenoid cartilages, from their shape,

C. quadra'tæ. See Cartiloges, quadrate.
C. semiluna'res. The Semilunar carti-

C. sesamoi'deæ. The Sesamoid jibro-cartilages.

**c.** sesamoi'deæ anterio'res laryn'-gis. (Σήσαμον, sesame seed; είδος, like; auterior, foremost; λάφυγξ, the upper part of the windpipe.) Small cartilages, one of which is found on each side of the larynx in the anterior part of the ligamentum thyreoxystenoideum inferior.

C. sesamoi'deæ na'si. (L. nasus, the nose.) Same as C. nasi accessoria.

**C.** sesamoide'ce posterio'res laryn'gis. (L. posterior, that is behind.) Small masses of elastic cartilage sometimes found near the arytenoid cartilage on cach side, to which, as well as to the cartilage of Santorini, they are attached by means of perichondrium.

C. sesamoi'deæ tu'ba Eustachii. (Σήσαμον, sesame sced; είδος, form; tuba, a tube; Enstachius, the anatomist of that name.) Small eartilages, formed partly of hyaline, partly of clastic cartilage, sometimes ossitying, which are found near the points of flexure of the cartilaginous part of the Eustachian tube.

C. sigmol'deer. See Cartilages, sigmoid. C. sternocostalles interarticulaires. (Στέρους, the chest; costa, rib; inter, between; articulas, a joint.) Fibro-cartilages found between the cartilages of the ribs and the sternum from the second to the fifth inclusive.

**C.** superio'res latera'les. (L. superior, upper; lateralis, belonging to the side.) The upper lateral cartilages of the nose.

Cartilaginification. (L. cartilago; facio, to make.) The development of cartilage in a structure, whether normal or abnormal.

Cartilag'inis arytenoi'dee capit'ulum. (L. cartilago; arytenoid cartilago; capitulum, a little head.) The Corniculum larumais.

Cartilag'inous. (L. cartilago. F. cartilaginese; I. and S. cartilaginese; G. knorpelig.) Hard. Of the nature, or consistence, of cartilage.

Applied to leaves whose brim is furnished with a hard margin of different substance from the disc.

C.ares. (L. areus, a bow.) Rods of carti-

lage found in some sharks, and supporting the outer border of the partitions which divide the branchial chamber.

C. bas'ket. See Basket of lamprey. C. fishes. (F. poissons cartilagineux; G. Knorpelische.) A synonym of Chondropterygii.
C. tis'sue. The organisation peculiar to Cartilage.

C. tu'mour. Same as Enchondroma.

Cartila'go. See Cartilage.

C. annula'ris. (L. annulus, a ring.) The Cricoid cartilage.

C. anon'yma. ('Av, neg.; ōvoµa, a name.
I. cartilaque anonima.) The cricoid cartilage.
C. arytænoi'des. The Arytenoid carti-

C. auric'ulæ. (L. auricula, the outer The same as C. auris.

C. au'ris. (L. auris, the ear. G. Ohr-knorpel.) The eartilage of the pinna of the ear.

C. clypealis. (L. clypeus, a shield.) The thyroid eartilage.

C. cornicula'ta. The Corniculum laryngis.

C. cricol'des. The Cricold cartilage. C. cuneiform'is. The Cuneiform carti-

C. ensiform'is. (L. ensis, a sword; forma,

shape.) The ensiform process of the sternum. **C.** epiglot tica. ('E $\pi i$ , upon;  $\gamma \lambda \hat{\omega} \tau \tau a$ , the tongue.) The cartilage entering into the formation of the epiglottis.

C. glan'dis. (L. glans, an acorn. G. Scheidewand.) The same as the Septum glandis. C. innomina'ta. (L. innominatus, un-

named.) The cricoid cartilage.

C. interarytenoïdea. (L. inter, between; ἀρύταινα, a cup. I. cartilagine inter-aritenoidea.) A small cartilage found occasionally in the connective tissue uniting the apex of the cartilage of Santorini with the upper border of the cricoid cartilage.

**C.** interme dia ra'dii. (L. intermedius, between; radius, the bone of that name.) The interarticular fibro-cartilage of the wrist-joint.

C. lingua'lis. (L. lingualis, from lingua, the tongue.) The septum linguæ.

C. mucrona'ta. (L. mucronatus, pointed.)

The ensiform process of the sternum. C. na'si media'na. (L. nasus, nose; medianus, that is in the middle.) The eartilage

of the septum of the nose.

C. nic titans. (L. nicto, to wink.) cartilage sometimes found in the Membrana nictitans, like a tarsal cartilage.

C. pelta'lis. (L. pelta, a buckler.) The thyroid cartilage.

Also, the ensiform process of the sternum. C. pelta'tus. (L. pelta.) The thyroid

cartilage. C. quadrangula'ris na'si. (L. quad-

rangularis, four-angled.) The cartilage forming the septum narium.

C. Santorinia'na. The Corniculum la-ryngis, or Santorini's cartilage.

C. scutiform'is. (L. scutum, a shield; forma, shape.) The thyroid eartilage.

C. sep'ti na'rium. (L. septum, a wall; naris, a nostril.) The cartilage of the septum of the nose.

C. thyroi'des. The Thyroid cartilage.

C. trique'tra car'pi. (L. triquetus, three-cornered; carpus, the wrist.) The triangular fibro-cartilage of the wrist-joint.

C. trique'tra laryngis. (L. triquetrus, three-cornered.) The arytenoid cartilage, from its shape.

C. tritic'ea. (L. triticum, wheat. Weizenkorn.) An oblong cartilaginous uodule contained in the lateral thyro-hyoid ligament. Sometimes it is ossified.

C. u'vifer. (L. uva, grape; fero, to hear.) The uvula.

C. Wrisberg'ii. (I. cartilagini bastonci-niformi, or coniche.) The cunciform cartilages of the larvnx.

C. xiphoi'des. (Ξίφος, a sword; είδος, likeness.) The ensiform process of the sternum.

Cart'mel. Lancashire; on Morecombe Bay. Three miles from the town, at the foot of a limestone rock called Humphrey Head, is a chalybeate spring called Holy Well, which contains also sodium chloride.

Car'ui. The fruit of Carum carui. See C.

fructus.

C. fruc'tus, B. Ph. (L. fructus, fruit. F. carvi, I. carvi; G. Kümmel.) The dried fruit of Carum carui. The fruit consists of two halves ·125" to ·16" long, curved, tapering at each end. brown, having a rounded styloped above, five pale fine ridges, and four dark brown tubes containing oil tubes. Caraway seed bas an agreeable aromatic odonr and a spicy taste. Formerly used as a diuretic, now as a carminative.

**Ca'rum.** (Κάρον, caraway.) A Genus of the Nat. Order *Umbelliferæ*.

Also, the officinal name, U.S. Ph., of the caraway seed.

C. aj'owan. The Ammi copticum.

C. bulbocas'tanum. The Bunium bulbocastanum.

C. car'ui, Linn. (F. carvi; G. Kümmel.) The caraway. Hab. Europe. Supplies caraway seeds. Carui fructus.

C. car'vi. The same as C. carui.

C. ni'grum. Hab. India. The fruit, called in Hindustani Zira-siah, does not differ, according to Dr. Waring, from the common caraway.

C. petroseli'num, Benth. (Πέτρος, rock; σέλινον, parsley.) Common parsley. See Petroselinum.

The Ptychotis C. Roxburgia'num. Roxburgianum

Car'uncle. (L. caruncula, dim. of caro, flesh. Gr. σαρκίου; F. caronele; I. and S. carnnoula; G. Fleischwarzehen.) A fleshy exerescence. Applied, in Anatomy, to certain natural formations.

In Pathology, it was formerly used to designate

a stricture.

In Botany, the word has by no means an exact signification. Some authors use it as synonymous with strophiole, to signify certain small projections found on the testa of the fertilised seed; others restrict the term to those projections which occur on the seed independently of the micropyle; and still others use the term to denote projections coming from the micropyle.

C., lach'rymal. See Caruncula lachrymalis.

C., ure'thral. A synonym of the vascular excrescence of the female urethra, which occasionally occurs.

Carun'cula. (L. caruncula.) A fleshy excreseence. See Caruncle.

C. lachryma'lis. (L. lachryma, a tear. caroncule lacrymale; G. Thranchhugel, Thaänen Karunkel.) A reddish elevation of tho

conjunctiva in the inner canthus of the eye, occupied by a few very fine hairs, and the large sebaceous glands which open into their follicles.

C. ma'jor. (L. major, greater.) The same

as Papilla duodeni.

C. mammilla'ris. (L. mamilla, a teat.)

A synonym of Tuber olfactorium.

C. Morga'gnii. The middle lobe of the prostate.

C. saliva'lis. (L. saliva, the saliva.) The same as C. sublingualis.

C. seminalis. (L. seminalis, belonging to seed.) A synonym of the Crest of the urethra.

C. sublingua'lis. (L. sub, beneath; lingua, the tongue.) The small elevation on either side of the frænum linguæ, at the apex of which is the aperture of the duet of the submaxillary gland.

Carun'culæ cuticula/res. cutis, the skin.) A synonym of the Nymphie. The C.

C. hymena'les. (Hymen.) myrtiformes.

C. mammilla'res. (L. mammilla, a teat.) A synonym of the ampullæ of the galactophorous ducts. See Ampulla luctifera.

Also, an old name for the olfactory bulb.

C. myrtifor'mes. (L. myrtum, a myrtle berry; forma, shape. F. caroncules myrtiformes G. Scheidenklappenwürzchen.) Three to six small projections of the mucous membrane near the orifice of the vagina, generally supposed to be remains of the hymen after its rupture; but they have been found consistent with integrity of the hymen; according to Schröder, they are the result of the passage of child through the vagina and the consequent rupture of the base of the hymen.

C. papilla'res. (L. papilla, a nipple. F. caroncates papillaires; G. Nicrenwarzchen.) A synonym of the papilla or summits of the pyramids of Malpighi in the kidney.

Carun'culate. (L. caruncula. F. caroncule.) Having a caruncle.

Carunc'ule. (L. caruncula.) A small, irregular protuberance found on the testa of the seed near the hilum. Same as Caruncle.

Carun'culous. (L. caruncula. F. carunculeux.) Of, or helonging to, a caruncle.

Ca'ruon. The Carum carui, or caraway Ca'ruon.

plant.

Ca'rus. (Kápos, heavy sleep.) term for profound sleep, with quiet respiration.

Also, for loss of sense and voluntary motion,

respiration remaining unaffected.

Also, for a profound sleep without fever. Also, variously by authors, but all to some form of coma.

Also, and especially, the fourth and extremest degree of insensibility, the others being sopor, coma, and lethargy

Also (Kápov), the Carum carui, or caraway plant.

C. ab insola'tione. (L. ab, from; insolatio, a placing in the sun.) Sunstroke.

**C. apoplex'ia.** (' $A\pi o\pi \lambda \eta \xi la$ , apoplexy.) The heavy sleep of apoplexy, or apoplexia itself.

C. asphyx'ia. Same as Asphyxia. C. cataleps'ia. Same as Untulepsy. C. ec'stasis. Same as Ecstasy.

C. hydroceph'alus. A synonym of Hydrocephalus internus. C. lethargus. (L. lethargus, drowsiness.) A synonym of Lethargy.

C. lethar'gus cataphora. (Καταφορά, an oppression.) Somnolency

C. lethar'gus veter'nus. (L. veternus, drowsiness.) A slight form of coma from which the patient may be roused, but into which he soon relapses.

C. lethar'gus vig'il. (L. vigil, awake.) That state of coma in which the patient may be

roused and is delirious.

C. paral'ysis. (Παράλυσις, palsy.) The same as Paralysis.

C. paral'ysis paraple'gia. A synonym of Paraplegia.

C. veter'nus. Same as C. lethargus vetermis.

Car'va. The Cassia lignea. (Quincy.) **Car'vacrol.** A viscid, oily substance, which solidifies at -25° C. (-13° F.) and boils about 234° C. (453.2° F.) It may be obtained by distilling oil of caraway with potash until the carvene has been expelled, and decomposing the residue by sulphuric acid.

Car'vene. CuoH16. An almost tasteless and inodorous compound contained in oil of caraway, and hoiling at 173° C. (343.4° F.)

Car'vi. Caraway seeds. (Quincy.)

C. semen. (L. semen, seed.) Carui fructus.

C<sub>10</sub>H<sub>14</sub>O. A pleasant-smelling Car'vol. liquid contained in oil of caraway, which hoils at 227° C. (440.6° F.)

Car'vy seeds. A synonym of Caraway seeds.

**Car'ya.** (Καρύα, the walnut tree.) Α Genus of the Nat. Order Corylaceæ. Trees with aromatic leaves.

C. al'ba. (L. albus, white.) The common hickory. The fruit is edible. The leaves are aromatic and astringent; the bark is astringent and bitter. A tincture or infusion of the bark has been used with success in intermittent fever.

(L. amarus, bitter.) C. ama'ra. seeds, combined with oil of camomile, have been used in colic.

C. basil'ica. (Βασιλικός, royal.) The Juglans regia.

C. gla'bra. (L. glaber, smooth.) Used as C. alba.

C. microcar'pa. (Μικρός, small; καρπός, fruit.) Used as C. alba.
C. olivæfor'mis. (L. oliva, an olive;

forma, form.) The Pecan-nut. Fruit edible.

C. porci'na. (L. porcinus, belonging to a pig.) Used as C. alba. C. sulca'ta. (L. sulcus, a furrow.) Fruit

C. tomento sa. (L. tomentum, a stuffing

for cushions.) Fruit edible. Carydion. (Kapidiov, a small nut.)

The Corylus avellana. Ca'rydon. Same as Caryedon.

Caryedon. (Καρυηδόν, from κάφυον, a nut.) A fracture, where the boue is broken into small pieces like a shattered nut-shell.

C. catag'ma. (Κάταγμα, a breakage.)

Same as Caryedon.

Caryobranch'iate. (Kápvov. a nut; βράγχια, the branchiæ.) A synonym of Nucleobranchiate.

Cary'ocar. A Genus of the Nat. Order Rhizobolaceæ.

C. butyro'sum, Willd. (L. butyrum, butter.) Souari nut tree. Hab. Guinea. Kernel

of the nut highly esteemed. They yield a pleasant edible oil or butter.

C. gla'brum, Pers. (L. glaber, smooth.)

Also supplies Sonari nuts and butter.

C. tomento'sum, Willd. (L. tomentum, a stuffing for cushions.) Guiana almond tree. Kernel of nut esculent.

Caryoces. A Portuguese name for the

Caryocos tinus. (Καρυδφυλλου clove tree; κοστος, the Arabian costus. (Καρυόφυλλου, the electuary into the composition of which costus and cloves entered.

Caryodaph'ne. A Genus of the Nat.

Order Lauraeew

C. densifio'ra, Blume. (L. densus, thick; flos, a flower.) Bark bitter and balsamic. Infusion of leaves used in colie and puerperal convulsions.

Car'yon. (Κάρυον, a nut.) The walnut. Also, any nut. Also, the kernel of stone-fruit.

C. pon'ticon. (Ποντικός, from Pontus.) The fruit of the Corylus avellana.

Caryophylla. Same as Caryophyllata. Caryophylla'ceæ. (Caryophyllus.) A Nat. Order of thalamitloral Exogens of the Alliance Silenules, having symmetrical flowers, a conspicuous corolla, amphitropal ovules, and opposite leaves without stipules; or a Family of the Order Caryophyllinea.

**Caryophylla ceous.** (Καρυόφυλλου, the clove tree. F. caryophylle; G. nelkenartig.) Belonging to, or resembling, the clove tree, or its

flowers.

C. corol'1a. A corolla consisting of five petals, with long claws, enclosed in the tube of the calvx, and with their limbs generally placed at right angles to the claws.

Caryophyllata. (Καρνόφνλλον. G. Nelkenwarzel.) The Geum urbanum, because it has the odour of cloves; or because of the shape of its flower-buds being that of a clove.

C. aquatica. (L. aquaticus, living in

water.) The Geum rivale.

C. cor'tex. See Cortex caryophyllata.
C. na'tans. (L. natans, part. of nato, to swim.) The Germ rivale.

C. ur'bana. The Germ urbanum.

C. vulga'ris. (L. vulgaris, common.) The Geum urbanum.

Caryophylla'tæ ra'dix. etymon.) The root of Geum urbanum.

Caryophyllate. A synonym of Caryophyllaceous.

Caryophylleæ. Jussieus's term for Carnophyllacia

Caryophylli, G. Ph. Cloves. See Cu-

ryophyllum.

Caryophyl'lic ac'id. (Same etymon.) C20 H32O6. A substance obtained by the action of nitric acid on earyophyllin. It occurs in white needles, soluble in alcohol and other, almost insoluble in water.

Also ealled Eugenic acid.

(Καρυόφυλλου. Caryophyllin. caryophylum; I. cariofillina; S. cariofilina.)  $C_{2\theta}H_{32}O_2$ . A polymeric camphor contained in oil of cloves, consisting of colourless needles, insoluble in water, soluble in hot alcohol, and melting at 300° C. (572° F.) The stearoptene of the essential oil of the Caryophyllus aromaticus.

Caryophyllin'ea. Applied by Bartling to a Class including the Chenopolica, Amoran-

thucea, Phytolacea, Scleranthea, Paronychica, Portulacea, and Alsinea.

Caryophyllin'eæ. (Caryophyllus.) An Order of the Subclass Eleutheropetalie, having a simple periauth, or one composed of calyx and corolla, and a unilocular or multilocular ovary, containing one or more anatropous or campylotropons ovules on a basal placenta.

Caryophylloid. (Καρυόφυλλου; είδος, resemblance.) Resembling the clove tree.

Caryophylloï des cor tex. (Καρυόφυλλου; είδος; L. cortex, bark.) Name for Culilawan.

Caryophyl'lum. (Καρυόφυλλου, the clove tree.) The Caryophyllus aromaticus.
Also (Καρυόφυλλου. F. girofle, clou de girofle; I. garafani; S. claros de expicia; G. Gewürznelken), the officinal name, B. Ph., of cloves, the unexpanded dried flower buds of the Caryophyllus aromaticus. Cloves are nail-shaped, 5" long, dark reddish brown, having a cylindrical body, the tube of the ealyx; a rounded head, the unexpanded corolla; and four teeth below it, the limb of the ealyx. They have a strong fragrant smell and a hot, hitterish, pungent taste. Cloves eontain a volatile oil, eugenin, earyophyllin, salicylic acid, a poculiar tannin, gum, extractive, and lignin. They are aromatic and stimulant. Used to relieve flatulence, and as an addition to other medicines. Dose, 5-10 grs.

C. ru'brum. The Dianthus caryophyllus. **Caryophyl'lus.** (Καρυόν, a nut; φύλλον, a leaf; because it was supposed to be the leaf of the Indian nut plant.) A Genus of the Suborder Myrtew, Nat. Order Myrtacew.

C. america'nus. Pimenta berries.

C. aromaticus, Linn. (L. aromaticus, fragrant. F. girottier; G. Gewürznelkenbaum.)
The clove tree. Hab. Moluccas, Zanzibar, West Indies. Supplies cloves. See Caryophyllum.

C. arven'sis. (L. arrum, cultivated land.) The Holosteum umbellatum.

C. horten'sis. (L. hortensis, belonging to a garden.) The Dianthus caryophyllus. C. pimen'ta. The Engenia pimenta.

C. praten'sis. (L. pratensis, growing in meadows.) The Dianthus armeria.

C. ruber. (L. ruber, red.) The Dianthus caryophyllus.

C. vulga'ris. (L. vulgaris, common.) The Geum urbanum.

Caryopsid'ium. Same etymon and meaning as Caryopsis.

Caryopsis. (Kápvov, a nut; őlyis, appearance. F. caryopse; G. Schliessfrucht, Schalfrucht.) A superior, one-celled, one-seeded, indehiseent fruit, with a thin, dry membranous pericarp inseparably united to the seed. It resembles the achenium, but is distinguished by its adherence to the seed. The fruit of most grasses and cereals is a caryopsis.

Caryo'ta. (Καρυῶτις, a palm with walnutlike fruit.) A Genus of the Nat. Order Palmacea. Many of the species supply a saccharine sap called toddy, from which a spirituous drink is obtained

by fermentation.

C. Rumphia'na, Mart. A species having

the same uses as C. urens

C. u'rens, Linn. (L. urens, part. of uro, to burn.) Bastard sago palm. A species from the sap of which sugar is obtained, and from the pith sago is prepared. The fresh sap, or toddy, is used as a laxative, and an excellent spirit is obtained from it by fermentation and distillation. It obtains its specific name from the acridity of

the thin yellow rind of the fruit.

**Caryo'ti.** (Καρνωτοί.) An old name used by Galen, de Alim. Fac. ii. 26, for dates, or the best fruits of the palm, which grow in Syria and Palestiue.

Ca'sa Stronchi'no. Italy; in the Valley of Modigliano. A very strong sodium chloride water, containing a small quantity of potassium iodide.

Casamiccio'la d'Is'chia. Ischia.

Cas'amum. The Cyclamen europæum. Casamu'nar. Otherwise Cassumuniar.

Casa'res. Spain; in the district of Ma-

laga. A sulphur water.

Cas'ca. The bark of the Erythrophlæum ineense. Used as an ordeal poison by the guineense. natives of the West Coast of Africa. If the suspected person drink of an infusion of it with a few grains of rice, and vomit all the rice and be not purged, he is innocent; if he he purged, he is guilty; or he is made to walk, stooping, under an avenue of arched boughs, when, if he stagger or stumble, he is guilty. Casca acts as a purgative and an emetic; it produces contraction of the minute blood-vessels, and retards the action of the heart; it also acts as a diuretic.

The name is also applied to the cinchona barks. Also, it is a Spanish name of the Rhamnus

alaternus.

C. d'an'ta. The bark of Drimys granatensis and D. Winteri.

Casca'de effect'. Same as Avalanche

effect. See Avalanche theory.

Casca'ra. A Spanish name in Peru for cinchona bark, and especially that of the Cinchona grandiflora.

C. sagra'da. (S. sagrado, sacred.) The

bark of Rhamnus purshiana.

Cascarilla. (S. dim. of cascara, bark.) A new Genus of the Nat. Order Cinchonacca, separated from the true Cinchonas, and differing from them in the dehiscences of the capsules being from above downwards, and in the absence of cinchonine and quinine from the bark.

Also, the name of the bark of the Croton eleuteria.

C. acutifo'lia, Weddel. The Cinchona

C. bark. See Cascarilla cortex.

C. bark, false. The bark of Croton lucidum. Also, called false sweet-wood bark.

C. bush. The Croton eleuteria.

C. carabay'a. The Peruvian name of the bark of the Cinchona orata, var. rufinervis.

C., Colora'do. A name of the bark of the Cinchona oblongitolia.

C. macrocar pa. A false eineliona known as Cinchona macrocarpa, Vahl, and Lodenbergia macrocarpa.

C. magnifo'lia, Weddel. (L. magnus, great; folium, a leaf.) The Cinchona oblonyi-folia, Mutis; and the C. caducifolia, Humb. (L. magnus.

C. rox'a. Another name of the bark of the Cinchona oblongifolia.

C. sebif'era. The Stillingia sebifera.

C. tincto'ria. (L. tinctorius, belonging to a dyer.) The Crozophora tinctoria.

Cascarillae cor'tex. (Dim. of cascara, the Spanish word for bark. F. cascarille; I. cascariglia; S. chacarilla; G. Cascarillenrinde.) Cascarilla bark, obtained from the Croton cleuteria. Quills 2"-3" long, dull brown, more or

less coated with white lichens. It has an aromatic odour, and a warm, bitter taste. Burns with a fragrant smell. It contains albumen, tannin, casearillin, colouring matter, fatty matter, wax, gum, resin, starch, peetie aeid, salts, and a volatile oil. It is an aromatic tonic. Used in dyspepsia, dysentery, chronic charrhea, and torpid conditions of digestion. It is only a weak febrifuge. Supposed to increase the secretion of milk. Dose 20 to 30 grains twice a day.

C. infu'sum. One ounce to ten of water. Dose, 1-2 ounces.

C. tinetu'ra. Two and a half ounces to a pint of proof spirit. Dose, I—2 drachms.

C., vol'atile oil of. Yielded to the amount

of 1 per cent. It is greenish yellow, fragrant. Sp. gr. 938; and isomeric with oil of turpentine.

**Cascarillin.** C<sub>12</sub>H<sub>18</sub>O<sub>4</sub>. Obtained, by means of alcohol, from cascarilla bark, in colour-Obtained, by less prisms, bitter, inodorous, slightly soluble in water and cold alcohol, more easily in boiling alcohol and other, neutral, and destitute of nitrogen. It fuses at 205° C. (401° F.)

Cas'carin. A crystallisable alkaloid ob-

tained from Casca bark.

Casch'eu. A synonym of Catechu.

Casch'u. A synonym of Catechu. (Quincy.)

Cascia'ni. Italy; district of Montajone. A mineral water containing sulphates, chlorides, and carbonates of sodium, calcium, and magnesium, with a little iron.

Case. (L. casus, a fall, that which comes to pass.) The condition of disease in a person.

Also, a record of the progress of disease in an individual.

Also (F. caisse, from L. capsa, a box), a recep-

tacle, an euclosing thing.

C. weed. The Capsella bursa-pastoris, from its case-like or purse-like capsules.

Casea ria. A Genus of the Nat. Order Samydaccæ.

C. anavin'ga. Same as C. canziala.

C. astring ens. Mart. (L. astringo, to hind.) Hab. South America. Bark mucilaginous and somewhat acrid. Applied to foul ulcerations.

C. canzia'la, Wall. Hab. India. Bark bitter. Leaves used in haths; pulp of fruit din-

retic, diaphoretic, and purgative.

C. esculen'ta. (L. esculentus, eatable.)
Root bitter, purgative. Leaves and fruit escu-

C. lin'gua. Hab. Brazil. A decoction of the leaves is used in inflammatory diseases, and as a touic in malignant fevers.

C. ova'ta, Roxb. (L. ovatus, egg-shaped.) The C. canziala.

C. ulmifo'lia. (L. ulmus, an elm; folium, a leaf.) Hah. South America. Leaves applied to wounds; juice used against snake-bites.

Ca'seate. (L. caseus, cheese.) A salt of caseic acid, now called lactic.

Casea'tion. (L. cascum, cheese.) The coagulation of milk, whereby the conversion into cheese is accomplished.

Also, a form of fatty degeneration of morbid products, as pas, tubercle, cancer, in which the structure becomes shrivelled and dried, and is converted into a soft, yellowish, cheesy material, containing shrivelled cells of the original deposit, fatty and other debris, and crystals of cholesCa'sete ac'id. (L. cascus, cheese.) A synonym of Lactic acid.

Ca'selform. (L. cascus. F. casciforme; G. kuscformug.) Cheese-like. Ca'sein. (L. cascus, cheese. F. cascine; G. Kascus, Kasstoff.) A proteinous substance found in milk, and constituting the chief part of the curd which is separated by rennet. soluble in dilute acids and alkalies, and is reprecipitated on neutralisation. In its main reactions it behaves itself like alkali-albumin; indeed, by many they are believed to be identical. Casein is said to exist in the serum of blood and other fluids, in muscle and in grey nerve-substance; although, by many observers, globulin has been mistaken for it. It is also called natural alkalialbumin.

C., blood. A synonym of Paraglobulin. C. of glu'ten. Same as Paragasein.

C. of sali'va. A synonym of Ptyalin.

C. of small intes'tine. The substance formerly so called is probably an albuminose. C., veg'etable. A synonym of Legumin.

Ca'seous. (L. cascus. F. caséeux; I. and S. caseoso; G. käsig, käseartig, käsehaltig.) Of, or belonging to, cheese.

C. infiltra'tion of lung. Same as Pneu-

monia, caseous.

C. matter. A synonym of Casein.

Also, a synonym of pus, which has undergone Caseation.

C. ox'ide. The name given by Pronst to the substance now called leucin.

C. phthi'sis. See Phthisis, cuseous. C. pneumo'nia. See Pneumonia, cascous.

Ca seum. A synonym of Casein. Ca seus. (L. caseus.) Cheese.

C. equi'nus. (L. equus, a horse.) Cheese made from mare's milk.

Cashew gum. A product of the Anacardium occidentale. Used as a substitute for gum arabic, and as a varnish to books, to keep off insects.

C. nut. The fruit of the Anacardium accidentale.

C. nut, Orient'al. The Anacardium orientale, the fruit of Semecarpus anacardium.

C. nut tree. The Anacardium occiden-

Cash'ioberry bush. The Viburnum cassinoules.

Cashoo'. An aromatic drug of Hindostan, said to possess pectoral virtues.

Cashow. Catechu. (Quincy.) Cas'ia. Same as Cassia.

Also, the bark of the Daphuc guidium.

Casimiro'a. A Genns of the Nat. Order Aurantiacræ.

C. ed'ulis. (L. edulis, eatable.) delicious; said to be soporific. Fruit

Casi'no del'le Curiglia'no. Same as Pontedera.

Casio'la. Italy; near the rise of the Magra in the Apennines. A mild sulphur water. Cas'minar. Same as Cassumuniar.

Cas'monar. Otherwise Cassumuniar. Cas'que. (F. casque, from I. casco, a

helmet.) A helmet. In Botany, applied to the upper lip of the eorolla of certain Labiatie; and also to the upper

division of the perigone of orchids. Also, in Zoology, used to describe certain helmet-like structures, as the eallosity on the head of the cassowary.

Cas'sa. The thorax. Fallopius, Expos. de Ossib. tom. i, c. 18, p. 508.

Cas'sa bark. One of the native names of the bark of Erythrophlaum guincense. Cassa'da. The Manihot utilissima.

Cassa'da. The Manihot utilissima. C., wild. The Jatropha gossypifolia. Cas'samum. The fruit of the balsam (Quincy.)

Cas'sareep. A sauce made from the juice of the Manihot utilissima. It is a powerful antiseptic.

Cassa'va. The Manihot utilissima.
C. bit'ter. The Manihot utilissima.
C. bread. Made of C. meal, mixed with water and baked in thin cakes.

C. meal. (G. Cassavamehl.) The flour of the tubers of Manihot utilissima, obtained by grating them, expressing the juice, which is poisonous, drying the residue, and haking it.

C. starch. (G. Cassavastarke.) The produce of Manihot utilissima; also called Brazilian arrowroot. Obtained by washing C. meal with water; it consists of muller-shaped granules, of medium size, having a small variously-shaped nucleus and indistinct markings.

C., sweet. The Manihot aipi.
Cassa've. The Manihot utilissima. Cassee'na. The Ilex vomitoria.

Casse'rian. Relating to Casserio, Giulio. C. gang'lion. ( $\Gamma \dot{a} \gamma \gamma \lambda \iota o \nu$ , an enlargement of a nerve.) The ganglion of the larger root of the fifth nerve. It occupies a depression near the apex of the petrous portion of the temporal bone; it is flattened, crescentic, with its convexity in front, and striated on the surface. It receives on its inner surface filaments from the carotid plexus, and gives off from its posterior surface some branches to the dura mater of the middle lateral fossæ of the skull. From its convex anterior border proceed the ophthalmic, the superior maxillary, and the inferior maxillary divisions of the fifth nerve.

The ganglion is also often ealled the Gusserian ganglion.

Casse'rio, Giulio. An Italian anatomist, born at Piacenza in 1545, died at Padua in 1616.

C., per'forated mus'cle of. name of the coracobrachialis muscle. An old

Cas'sia. (L. cassia; Gr. kasia; from Heb. qetsi'ah, from qátsa', to ent; the bark being stripped from the tree.) A Genns of the Suborder Cæsalpineæ, of the Nat. Order Legnminosæ.

C. ab'sus, Linn. Hab. Egypt. The seeds are small, black, cordiform, very bitter, somewhat aromatic, and mucilaginous; they are pulverised with an equal quantity of sugar, and the inhabi-tants put a little of the powder under the eyelids at the commencement of their cases of ophthalmia; an extract of the seeds is used to purify the blood, and in mucous disorders. The seeds are called chichim.

C. acoca'lis. The C. absus.

C. acutifo'lia, Nees. The C. clongata, Lém.

C. acutifolia, Delile. (L. acutus, sharp; folium, a leaf.) Legume flat, elliptical, membranous. Produces Alexandrian senna. Hab. Egypt, and other parts of Africa.

C. æthiop'ica, Guib. Legume I" long,

dat, smooth, rounded, 3 to 5-sceded. Hab. Nubia. The source of Tripoli senna.

C. ala'ta, Linn. (L. alatus, winged, F.

dartrier; G. Kassie geflugelte.) Ringworm shrub. Legumes long, with a broad crenulated wing on each side. Hab, Travancore, Juice of leaves, mixed with lime-juice, is used in ring-worm and in herpes. The leaves are cathartic. The plant is used against poisonous bites.

C. alba. (L. albus, white.) A synonym

of Canella bark.

C. alexandri'na. The C. fistula.
C. angustifo'lia, Vahl. The C. elongata. Lémaire.

**C. arbores'cens,** Vahl. (L. arboresco, to grow to a tree.) The C. glauca.

- C. auricula'ta, Linn. (Mod. L. auriculatus, ear-shaped.) Legumes compressed, straight. Hab. India. Bark is astringent, and used as a gargle and injection. Seeds are used in purulent ophthalmia.
- C. bacilla'ris, Linn. fil. (L. bacillus, a small staff.) Legume yields a pulp like C. fistula.

C. Bonplandia'na. The C. fistula.

C. bractea'ta. (L. bracteatus, clothed with bracts.) The C. alata.

- C. brazilia'na, Lam. Hab. Brazil. Legume larger than that of C. fistula, flattened, woody on the exterior, rugose, marked with strong nervures. Pulp purgative, bitter, and disagree-
- C. bre'vipes, De Cand. (L. brevis, short; pes, a foot.) Hab. Central America. Leaves with three veins running parallel from the base to the apex, which is blunt. Believed not to be purgative.

C. ca'na. (L. canus, grey.) The C. obtu-

C. canel'la. Same as Cassia bark.

C. caryophylla'ta. Same as Cortex caryophyllatus.

C. cathart'ica. (Καθαρτικός, purgative. Br. seno do Campo.) Hab. Brazil. Used as a substitute for senna.

- C. chamæcris'ta, Linn. (Xaµaí, lowly: L. crista, a crest.) Prairie seuna. Hab. United States. Leaves aperient. A decoction was said to be efficacious against the poisonous effects of the night-shade.
  - C. chinen'sis. China cinnamon.
- C. cinnamo'mea. (G. Zimmtkassie, Kancel.) A synonym of Chinese cinnamon; the bark of Cinnamomum aromaticum.
- C. coc'ta. (L. coctus, part. of coque, to cook.) A synonym of Conserva cassiæ, Belg. Ph.

C. cuneaphylla. (L. cuneus, a wedge; Gr. φύλλον, a leaf.) The C. glauca. C. Ehrenberg'ii, Bisch. Furnishes Aleppo

- senna, with narrow leaves, and is often mixed with Mecca senna.
- C. elonga'ta, Lémaire. (L. clongo, to leugthen.) Legumes oblong, membranous, 2" to 3" long by '6" broad. Hab. Southern Arabia, India. Supplies Indian or Tinnevelly seuna, as well as some of the Mecca senna.

C. emargina'ta, Linn. (L. cmargino, to deprive of its edge.) Hab. The Antilles. A source of cassia pulp; leaves purgative.
C. excel'sa. (L. excelsus, lofty.) The C.

fistula.

C. exig'ua, Roxb. (L. exiguus, short.) Hab Beugal. The pounded seeds are used, like those of C. absus, in purulent ophthalmia.

C. fis'tula, Linn. (L. fis'ula, a pipe. F. caneficier; G. Röhrencassie.) Senua. Legumes woody, pendulous, smooth, cylindrical, inde-

hiscent, 1" to 2" long; seeds numerous, embedded in a soft, dark brown, sweet pulp. Hab. Upper Egypt, India, West Indies. Furnishes the pods from which eassia pulp is obtained.

C. fistula'ris. (Same etymon.) The C.

Also, the same as C. lignea.

C. glau'ca, Lam. (L. glauens, bluishgrey.) A tree of Coromandel and Malabar. The bark is used by the natives, with sugar and water, in diabetes; and as a decoction in gonorrhœa.

C. gran'dis, Linn. fil. (L. grandis, great.)

The C. braziliana.

C. herpet'ica, Jacq. The C. alata. C. javan'ica. The C. braziliana.

C. lanceola'ta, Nectoux. The C. acutifolia, Delile.

C. lanceolata, Wight and Aru. (L. lanceolatus, lance-shaped.) The C. elongata,

C. Latino'rum. (L. Latinus, Latin.) The

Osyris alba, or poet's cassia.

C. leniti'va, Bischoff. (L. leno, to make soft.) The C. acutifolia.

C. lig'nea. (L. ligneus, woody. G. Holzzimmt.) An inferior cinnamon obtained on the Malabar coast, probably from Cinnamomum zeylanieum, var. cussia.

Also, often used for Chinese einnamon of all

kinds.

C. lig'nea malabarica. The C. lignea.

C. ligustri'na. (L. ligustrum, the privet.)

A species supplying senna at times.

C. marylan'dica, Linn. (F. séné américain; G. Amerikanisches Senna.) American senna. Legumes pendulous, 2" to 4" long, linear, curved, swelling at the seeds, somewhat hairy, blackish. Hab. Southern United States. Less active than ordinary senna.

C. med'ica. (L. medicus, healing.) The

elongata, Lém.

C. medicina'lis. (L. medicinalis, medical.) The C. elongata, Lém.
C. mol'lis, Vahl. The C. braziliana.

- **C.monspelien'sium.** (L. monspeliensis, belonging to Mount Peliou in Thessaly.) The Osyris alba, or poet's eassia.
- C. moscha'ta, H. B. K. (Μόσχος, musk.)

The C. fistula.
C. ni'gra. (L. niger, black.) The C.

fistula.

- C. obova'ta, De Cand. (L. ob, towards; ovatus, egg-shaped.) Legumes compressed, curved, greenish brown. Hab. Egypt, West Indies. Yields Aleppo senna, and contributes to Alexandrian.
- C. obtu'sa, Wallich. (L. obtusus, blunt.) The C. obtusata.
- C. obtusa'ta, Hayne. (Same etymon.) A variety of C. obovata, with obovate, truncated. emarginate leaflets.
- C. obtusifolia. (L. obtusus; folium, a leaf.) Hab. Antilles. Used instead of ordinary senna. Perhaps same as C. Tora.
- C. occidentalis, Linu. (L. occidentalis, western.) Leaves purgative, root diuretic. Used in India in skin diseases.
- C. officina'lis. (L. officina, a shop.) The C. acutifolia.
- C. orientalis. (L. orientalis, eastern.) The C. acutifolia. Also, the C. lanccolata.

C. ova'ta, Merat. (L. ovatus, egg-shaped.) The C. ath opica.

**C. platycar'pa.** (Πλατύς, broad; καρπύς, fruit.) A variety of *C. obovata*, which supplies Senegal senna. Legumes large, incurved.

C. poetica. (L. poeticus, poetic.) The Osyris atha, or poet's easia.

C. præpara'ta, Ind. Ph. The pods of C. fistula, bruised in a mortar, one pound; macerate, with occasional stirring, for one hour in water sufficient to cover; strain, and evaporate to the consistence of a confection.

C. pubes'ccns, R. Brown. (L. pubescens, downy.) A species the leaves of which are occa-

sionally found in Mecca senna.

C. putchella. The C. chamæcrista.

C. Roylea'na. (After Dr. Royle.) A variety of C. acutifolia.

C. Schimp'eri. The C. pubescens.

C. sen'na, Linn. A name under which Linnaus included many of the varieties now reckoned as separate species; especially the C. acutifolia and C. elongata.

C. sen'na,  $\beta$ . Linn. The C. acutifolia,

C. sen'na ital'ica. The C. obovata.

C. soluti'va. (L. solvo, to loosen.) The C. fistula.

C. Sopho'ra, Linn. Leaves used in India in skin diseases. Bark given in diabetes. Bruised

leaves and bark applied to ringworm and ulcers. C. sulphu'rea. (L. sulphureus, sulphur-

eoloured.) The C. gloucu. C. sy'rinx. (Σῦριγξ, a pipe.) Same as

C. lignea. C. Tage'ra. A variety of C. Tora.

C. tomento'sa. (L. tomentum, cushion-

stuffing.) The U. obtusata.

C. To'ra, Linn. An annual. Legumes very long, sharp-pointed. Hab. India. Leaves are used as an aperient, as a cataplasm for boils, and fried in castor oil as an application to ulcers. They are also given in gout and sciatica. The seeds, mixed with butter-milk, are used to allay itching. The root, mixed with lemon-juice, is

said to be a cure for ringworm.

C. turatten'sis. The C. glauca.

C. ve'ra. (L. verus, true.) Cinnamon. C. vet'erum spu'ria. (L. reteres, the ancients; spurius, false.) The Osyris albo.

Cas'sia. (Same etymon.) A synonym of Senna.

Also, the same as C. bark.

C. bark. (F. cannelle de chine; G. Chinazimmt, Zimmtcassie.) The China cinnamon. The product of Cinnamomum obtusifolium, C. pauciflorum, C. tamala, C. iners, C. cassia, and other unascertained species. It is very like ciuramon, but larger, thicker, rougher, and darker red, and of a more pungent taste. The quills are single or double, '25" to 1'" in diameter.

C. buds. Exported from China. Aromatic. Small pedicellate unripe fruits, the product prohably of Cinnamomum cassia, and other species. They consist of the thick six-lobed perianth folded over the ovary. They taste like ciunamon, and contain a volatile oil and tannin. Used as cinnamon.

C., Egyp'tian. The Cassia acutifolia. Also, a synonym of Senna alexandrina.

C., flow'ers of. Same as C. buds. C., horse. The Cassia braziliana, from its very active properties.

C. oil. Of the same composition as oil of cinnamon, but not so delicate in taste and smell.

C. pulp. See Cassia pulpa.

C., purg'ing. The Cassia fistula. C .- stick tree. The Cassia fistula. C. wa'ter. See Aqua cassia. Also, a synonym of Cinnamon water,

Cas'size artamen'tum. A synonym of C. pulpa.

C. flo'res. (L. flos, a flower.) The flowers of the Cinnamomum zeylanicum. Aromatic and stimulant.

C. pul'pa. The pulp obtained from the pods of Cassia fistula. It is blackish brown, with a siekly smell and sweet taste. It contains sugar, pectin, gum, a substance analogous to tannin, and a cathartic principle. Laxative in 1-2 dr. doses.

Cas'sida galericula'ta. (L. cassida, dim. of cassis, a helmet.) The Scutellaria gale-

Cassid'eous. (L. cassida, dim. of cassis, a helmet.) Helmeted; having a helmet-shaped petal, as the aconitum.

Cassid'ony. (Contracted from L. stachas, French lavender; sidonius, from Sidon, whenee it was obtained.) The Lavandula stæchas.

Cas'sie. The perfume obtained from the

flowers of Acacia furnesiana, and used to give a pleasant scent to ointments and other applica-

Cas'sin. A name given by Caventou to a bitter extract obtained from the Cassia fistula; soluble in water and alcohol.

Cassi'na. The Hex vomitoria. Cassi'në. The Hex vomitoria. The Ilex vomitoria.

Also, a Genus of the Nat. Order Aquifoliacea.

C. gougu'ba, Mart. The leaves possess

similar stimulating properties to Paraguay tea, and are used as a substitute.

C. paragua. The Ilex vomitoria. Cassi'ola. The Hyssopus officinalis. Cassi'ri. A spirituous liquor obtained by fermenting a decoction of the root of Manihot utilissima.

Cas'sis. The Ribes rubrum.

Cassiter'ides. (Κασσίτερος, tin.) A Genus of simple hodies having tin for their type, and comprising also antimony, zine, and eadmium. (Ampere.)

Cassit'erus. (Kaσσίτερος.) Tin. Cas'sius, Andre'as. An alebemical physician of the latter half of the seventeenth century; he was a native of Schleswig, and practised at Hamburg.

C.'s precip'itate. The purple of Cassius. C.'s pur'ple. A brownish purple precipitate, formed when a mixture of stannous and stanuic chlorides is added to dilute gold solutions. Used in enamel painting and as a staining material.

Cas'sob. (Arab.) An alkali or alkaline salt. (Quiney.)

Cassole'ta. A kind of moist fumigation. Cas'sous. (L. cassus, empty. G. leer.) Empty, as when a nut contains no kernel, or an anther no pollen.

Cassué'jouls. France; Departement de l'Aveyron. Cold waters, containing a small quantity of earbonate of iron and much carbonic acid. A good chalybeate in amemia.

Cassumu'niar. (Supposed Ind.) The root of the Zingiber zerumbet or the Z. cassumuniar. It is brought from the East Indies in

irregularly cut pieces of various shapes; the cortical portion is marked with circles of a dusky brown, the inner part is paler and unequally yellow; it is warm, bitter, and aromatic in its qualities, and smells like ginger. Used in hysterical, epileptic, and paralytic affections.

Cassuvie'æ. A synonym of Anacar-

diacea.

Cassu'vium pomif'erum, Lamk. (L. pomum, an apple; fero, to bear.) The Anacardium occidentale.

C. occidentale. The Anacardium occi-

dentale.

Cassy'tha. A Genus of the Nat. Order Cassythuceæ.

C. filiform'is. (L. filum, a thread; forma, shape.) Hab. Cape of Good Hope. A parasitic plant used as an insecticide and in timea capitis, and chrenic ulcers.

It is also used in syphilis and gonorrhea.

Cassytha'ceae. The Dodder laurels. A Nat. Order of monochlamydeous Exogens of the Alliance Daphnales, having authers bursting by recurved valves, scales instead of leaves, and the fruit enclosed in a succeulent permanent calyx.

Cassy'theæ. Same as Cussythuceæ. Cast. (Dan. kaste, to throw. F. moule.)
A mould of an interior, specially applied to casts of the urinary tubules in kidney disease, or of the respiratory tubes in croup or similar diseases.

C. of the eye. Same as Strabismus, Casta'lia specio'sa. (L. Castalia, a fountain on Parnassus, sacred to Apollo and the Muses; speciosus, beautiful.) The Nymphaa

**Castan'ea.** (Κάστανος, from Castania, in Thessaly, where it was abundant. F. chataigne; I. castagna; S. castana; G. Kastanie.) Genus of the Nat. Order Corylacea.

Also (F. f-uilles de châtaignier; G. Kasta-nienblätter) the pharmacopæial name, U.S.A., of the leaves of Castanea vesca. They have little smell and a slightly bitter, astriugent taste. An infusion or fluid extract is used in hooping-

C. america'na, Persoon. The C. vescu, growing in America.

C. ed'ulis, Gartn. The C. resca.

C. equina. (L. equinus, belonging to a horse.) The Esculus hippocastanum, or horsechestnut tree.

C. porci'na. (L. porcinus, belonging to

swine.) The earth nut, Lathyrus tuberosus.

C. pu'mila, Willd. (L. pumilus, dwarfish.)

Hab. United States. The bark is used under the name Chinquapin.

C. ves'ca, Linn. (L. vescus, small.) The Spanish or sweet chestnut. Nuts esculent. The inner bark is used in dysentery. The mature leaves form Castanea.

C. vulga'ris. (L. vulgaris, common.) The C. vesca.

Castanea'ceæ. (Castanea.) A synonym, hy Link, of Sapindaceæ.

Castan'eæ. A synonym of Corylaceæ. Castan'eous. (Kaorava, chestnuts.) Of a chestnut or orange-brown colour.

Castanocarp'ous. (Κάστανα, chestnuts: καρπός, fruit.) Having fruit like that of the chestnut.

Castanop'terous. (Κάστανα; πτέρον, a wing.) Of a chestnnt colour: applied to the elytra of beetles and the wings of birds.

Castanosperm'um. (Kaorava, chest-

nuts; σπέρια, seed.) Δ Genus of the Tribe Papilionacea, Nat. Order Legaminosa.

C. australie. (L. australis, southern.) The seeds, called Moreton Bay chestnuts, from the habitat of the tree, are roasted and caten like chestnuts

Cas'teljaloux. France; Departement de Lot-et-Garonne. Mild chalybeate waters.

Castellama're. Italy; on the Bay of Naples. It is situated on the lower slopes of the Monte Sant'Angelo, the ancient Mons Gaurus, and near the site of the old town, Stabiæ, at which the elder Pliny lost his life during the eruption of Vesuvius, which destroyed this place along with Pompeii and Herculaneum. It is a well-frequented sea-batbing place, and has several mineral-water springs. The climate is healthy and dry, except in winter, when it is

The Acqua media contains sodium bicarbonate 2.4 grains, magne-ium bicarbonate 1.9, calcinm bicarbonate 1.1. sodium sulphate 6.7, calcium sulphate 2.3, sodium chloride 18.1, calcium chloride 7.5, calcium, magnesium, and iron silicates 1.1, and carbonic acid 1.36 cubic inches, in 16 oz., with small quantities of nitrogen and oxygen.

The Acqua sulfurica contains nearly three times as much sodium bicarbonate and twice as much sodium chloride, along with a little hydro-

geu sulphide.

The Acqua ferrate del Pazzillo has much the same composition as the Acqua media, with the addition of a small quantity of iron, as also the Acqua ferrata nuova.

The Acqua acidula contains barely half the amount of solid contents of the Acqua media in

about the same proportion.

The Acqua del Muraglione contains a large proportion of sodium bicarbonate and chloride. They are used to excite scauty secretion and to

remove deposits.

Castellet to Masca gni. Italy; in Tuscany; named after the celebrated anatomist Mascagni. A water containing magnesium and ealcium sulphate, calcium, ammonium, and iron carbonate, with free carbonic acid and a little hydrogen sulphide.

Castera-Verduzan. France; De-rtement du Gers. Mild chalybeate waters partement du Gers. containing a little hydrogen sulphide.

Cas'tigant. (L. castigo, to set right.) A term used in the same sense as Corrigent.

Castiglio'ne. Italy; near Casamicciola. Mineral waters, of a temp. of 77° C. (170.6° F.), containing sodium chloride 40 grains, and magnesium sulphate 11 grains, in 15 ounces.

Castiglio'nia. (After L. Castiglione, a South American traveller.) A Genus of the Nat.

Order Euphorbiaceæ.

C. loba'ta. (Λοβός, a lobe.) Hab. Peru. The fruit is eaten roasted. An incision in the stem causes a bright fluid to flow, which dries into a black, horny mass, and is a powerful caustic. (Dunglison.)

Cas'tilhon, pow'der of. A synonym

Castille. (S. castilla, from castillos, forts.) An ancient kingdom of Spain, so called from the numerous forts on its frontiers.

C. soap. See Nonp. Custille

Castillo'a. A Genus of the Nat. Order Artocarpaceae

C. elas'tica, Cav. Hab. Mexico. A species supplying india rubber.

Castil'lon's pow'ders. Sago powdered, salep powdered, tragacanth, of each 8 parts, prepared oyster-shells 2, eochineal 1. A drachm boiled in a pint of milk is drunk in diarrheea and dysentery.

Cas'tin. A name given to a bitter crystallisable substance, soluble in alcohol and ether.

Found in Agnus castus.

Cast'ing hairs. Fine hairs springing from the surface of the inner epidermis, by the growth of which the outer skin is thrown off in Crustacea and Ophidia. The hairs are subsequently converted into striæ, warts, and other markings.

Castjoe. A synonym of Catechu. Cas'tle-Con'nell. Ireland; County Limerick, nine miles to the north-east of Limerick. A pleasantly situated village on the east

bank of the Shannon, having a chalybeate water, **Cas'tor.** (Ká $\sigma\tau\omega\rho$ , the beaver, from  $\gamma\alpha\sigma$ - $\tau\dot{\eta}\rho$ , the belly; from its large size in that animal.) A Genus of the Family Castorida, Order Rodentia, Class Mammalia.

Also, the product of C. fiber. See Castoreum.
C. america'nus, Cuv. Same as C. fiber.

Supplies Canadian castor.

plies Canadian easter.

C. fiber, Linn. (L. fiber, a braver. F. sector G. Biber.) The castor; I. castoro; S. castor; G. Biber.) The heaver. Hah. North America, Europe, and Asia. Produces officinal easter. See Castoreum.

**C. oil.** (The word castor here has by some been derived from *castoreum*; hy others, it is thought to be a corruption of castus, inasmuch as the castor-oil plant was, among other names, formerly called Agnus castus.) The Oleum ricini.

C .- oil beans. The seeds of Ricinus com-They are acrid and poisonous, and yield munis.

castor oil on expression.

C .- oil plant. The Ricinus communis.

Castoreum, B. Ph. (L. castor, the beaver. F. castor; I. castorio, castoro; S. castoreo; G. Bibergeil.) Castor. The dried preputial follicles and their secretion, of the beaver, Custor fiber, obtained from the Hudson's Bay Territory. Opening into the cloaca of both sexes, between the anus and the prepuce, are two pairs of membranous follicles, one pair of which contain oil and are not used, and the other pair are the castor sacs. They are pear-shaped and compressed, have a corrugated mucous living covering a small brownish body, and contain an unctuous, yellowish-brown substance-castor. The dried follicles are imported attached to each other, 3 long, pear-shaped, firm, and brownish black, and containing the secretion which is strongly odoriferous, hitter and nauseous in taste, and reddish in colour. It is composed of volatile oil, resinous matter, albumen, a kind of osmazome, mucus, calcium urate, carbonate, benzoate, phosphate and sulphate, sodium acetate and chloride, potassium chloride, sulphate and benzoate, ammonium carbonate, castoriu, salieme, and carbolic acid. Castor produces a frequent pulse, heat of skin, perspiration, determination to the head and giddiness, according to Richter. It is used as an antispasmodic and emmenagogue in hysteria, chorea, and epilepsy. Dose, 1-10 grs.; of the tineture, 1-4 drs.

C. america'num. Same as Castoreum, B. Ph.

C. ang'lienm. Same as Castoreum, B. Ph. C. canaden'se, G. Ph. Same as Castoreum, B. Ph.

C. europæ'um. The C. sibiricum.

C. german'icum. German castor. Same as the C. sibiricum.

C. moscovit'icum. Muscovite castor. Same as the C. sibiricum.
C. polon'ienm. Polish easter. Same as

the C. sibiricum.

C. ros'sicum. Russian castor. Same as C. sibiricum.

C. sibir'icum. Caster ehtained from Siberia and Western Russia. Saes more globular, less wrinkled and folded than the officinal easter. It is much rarer.

Castor'ic acid. An acid produced by

the action of nitric acid on castorin.

Castor'idæ. A Family of Rodentia, of which the Castor, or heaver, is the type; distinguished by having distinct clavicles, five toes to

each foot, and usually webbed hind feet.

Cas'torin. (F. castorin; I. and S. castorino; G. Bibergeilcampher, Kastorin.) Long, diaphanous, fasciculated prisms, having the smell of castor and a metallie taste. Obtained from easter by crystallisation from an alcoholic solution. Its composition is unknown.

Castori'na. (Κάστωρ, the heaver.) Medi-

cines containing castoreum.

Castran'gula. The Scrophularia aqua-

Cas'trate. (L. castro, to cut off. G. ver-schnitten.) Deprived of testicles. Having the male organ removed.

Also, to remove the testicles.

C. sta'men. (G. entmannte Staubfaden.) A stamen which possesses no anther.

Cas'trated. (L. castratio. F. châtré; I. castrato; G. verschnitten.) Having the anther removed. Deprived of the testicles.

Castration. (L. castratio, from castro, to cut off. Εύνουχισμός, έκτομή, όρχοτομία; F. castration; I. castrazione; S. castracion; G. Hodenausschneidung, Verschneidung, Entmannung.) The extirpation of one or both testicles. It is performed in the early stages of malignant disease and in some non-malignant diseases of the testicle. The scrotum having been drawn tense over the tumour, a longitudinal or a double elliptical incision is made on the anterior surface, the scrotal attachments are divided, and the tumour is removed by division of the cord; or the cord may be divided first. In either case care must be taken that the cord does not retract into the abdomen before the vessels have been secured.

The term has also been applied to removal of

the ovaries. See Oophorectomy.

In Botany (G. Ausputzen, Auslichten), the word castration signifies the removal of the anthers or the pistil before fecundation has occurred.

C. fe'male. The removal of the ovaries.

See Oophorectomy.

C. in'guinal. (L. inquen, the groin.) The operation for the removal of a testicle which has not descended and remains in the groin.

Castroca'ro. Italy; nineteen leagues om Florence. Mineral waters, containing from Florence. sodium chloride 303 grains, sodium iodide 88, sodinm bromide '06, and sodium sulphate 15.9 grains, in 12 ounces. Used in scrofulous diseases and in tertiary syphilis, in rickets, and in obesity.

Casts. (Icel. kasta, to throw.) Moulds. C., bronch'ial. See Bronchitis, plastic. C., re'nal. (L. ren, the kidney.) Moulds of the urinary tubes found in the urine in kidney disease. See Renal custs.

C., u'rinary. (L. urina, urine.) Same as

Renal casts.

Casuarina. A Genus of the Nat. Order Casuarinaccue, so called because of the resem-blance of the leaves to the feathers of the cassowary.

C. equisetifo'lia. borse tail; folum, a leaf.) (L. equisetum, the gent, a decoction of the seaves is used in colic, and the bruised fruits are employed as a cataplasm in headache.

C. litor'ea, Rumph. (L. litoreus, belonging to the shore.) The C. muricata.

C. litoralis. (L. litoralis, belonging to the sea shore.) The C. muricata.
C. murica'ta, Roxb. (L. muricatus,

pointed.) Tinian pine. The bark is used in chronic diarrhœa and dysentery. It has also been used as a nervine and tonic.

Casuarina'ceæ. Beefwoods; so called because the wood is of the colonr of raw beef. A Nat. Order of monochlamydeous Exogens; described by Lindley as amental Exogens with a one-celled ovary, one or two ascending ovules, and a superior radicle.

Casuarin'eæ. Mirbel's term for Casua-

rinaceæ.

Also, a Family of the Order Amentacea. Casumu'niar. See Cassumuniar.

Ca'sus. (L. cado, to fall.) A fall, hap, or chance. Anciently used for symptom; also for an accident; for a present disease; for prolapsus; for an entire history of a disease or a case.

C. pal'pebræ superio'ris. (L. palpebra, the eyelid; superior, upper.) A synonym of

C. u'vulæ. (L. dim. of uva, a grape.) Œdema of the uvula.

Cat. (Etymology obseure. F. chat; I. gatto; S. gato; G. Katze.) The Felis domesticus. It is said to be good eating, and is used as food in China. The cat is infested by the fluke worms, Amphistoma truncatum and Hemistoma corda-tum; by the tapeworms, Tenia crassicollis, per-haps Tania lineata, Bothriocephalus decipiens; among the nematodes are Trichosoma felis cati, Dochmius tubæformis, Olulanus tricuspis.

C.'s claw. The Inga unguis-cati.

C.'s ear, spotted. The Achyrophorus maculatus, or Hypochæris maculata.

C.'s eye. (G. Katzenangen.) A name formerly given to those affections of the eye in which there is a glistening, yellowish reflection behind the pupil, having some resemblance to the reflection of the tapetum in the eye of a cat. Several distinct disorders were included nnder this term; among them, and distinguished by the epithet amaurotic, was glioma of the retina.

C.'s eye amauro'sis. See Amaurosis,

cat's eye.

C.'s foot. The Antennaria dioica, the Gnaphalium polycephalum, and also the Nepeta glechoma.

C.'s milk. The Euphorbia helioscopia. C.'s purr. The Fremissement cataire of Laennee. A thrill felt over the region of the heart in certain cases of valvular disease of the

C.'s tail. The Typha latifolia, and also

Phlwum pratinse.
C. thyme. The Teucrium marum; because eats are fond of it.

Ca'ta fam'bra. A vegetable product from Japan, analogous to Gambir.

Catab'asis. (Καταβαίνω, to descend.)

The descent of a humour or an organ.

Catabates. A synonym of Truffles.
Catabatic. (Καταβαίνα, to descend.)
Descending or declining by degrees. Applied to a fever which gradually abates in severity till its termination.

Catable ma. (Κατάβαλλω, to pack up.) An old term (Gr. κατάβλημα) used by Hippoerates, de Artic. ii, 32, for the outermost fillet by which the bandages are maintained in their proper situation.

Catab ophyte. (Καταβύπτω, to plunge; φυτόν, a plant.) A plant which grows beneath the surface of water.

Catabythismoma'nia. ( $K lpha au lpha eta_{oldsymbol{t}} heta_{oldsymbol{t}} heta_{oldsymbol{t}}$ μός, making to sink; μανία, madness.) The drowning mania.

Catabythis'mus. (Καταβυθίζω, to

make sink.) Voluntary drowning

Catacas mus. (Κατά, down; ἀκάζω, obsolete present, from whence the particle anaxμένος, sharp-edged.) A term for cupping or scarification.

Catacaum'a. (Κατακαίω, to burn.) Α former term (Gr. κατάκαυμα), used by Hippocrates, Coae. Prænot. i, 158, for a burn or seald.

Catacaus is. (Κατακαίω, to burn.) Α

term applied by Young and Good to the phenomena called preternatural or spontaneous combustion.

C. ebrio'sa. (L. ebriosus, sottish.) The spontaneous combustion of a spirit drinker.

Catacaustic. (Κατά; καυστικός.) See Caustic in optics.

Catacemodermi'tis. (Κατάκειμαι, to lie down; δέρμα, the skin.) Inflammation of the skin from bed-pressure.

Cataceras ticus. (Κατακεράννυμι, to mix together.) Having power to neutralise, or dull the acrimony of, the humours by mixing with them.

**Catach'loos.** (Κατάχλοος, from κατά, exeess; χλοή, grass.) An old term signifying of a very green colour. (Castellus.)

Catach risis. (Καταχρίω, to anoint.) Inuuction, or an anointing.

Catachris'ma. (Καταχρίω, to anoint.) An ointment.

Catachris'ton. (Καταχρίω, to anoint.) An old term (κατάχριστον φάρμακον), applied to a medicament used as an ointment. Hippocrates de Morb. Mulier. l. i, exxiii, 16.

Catachy ma. (Κατάχυμα.) An affusion of water.

**Catach'ysis.** (Καταχύω, to pour out.) Used (Gr. κατάχυσις) by Hippoerates, Aph. v. 21, for an effusion or pouring out, and for affusion of water.

Cataclasis. (Κατακλάω, to break.) Α distortion of the eyelids. Also, a fracture of bone. Cat'acleis. (Κατά, under; κλείς, the clavicle.) Old name (Gr. κατακλείς) used by Galen, de Ossib. c. 14, for the first rib, from its situation; also applied to the subclavicular portion of the thorax. Also, the sterno-elavicular fibro-cartilage

Catacleis'is. (Κατάκλεισις, a shutting up. from κατακλείω, to confine.) Unnatural union of the eyelids.

Catacle'sia. (Κατά, downwards; κλείω, to shut up.) A monospermous indehiscent fruit

with coriaceous pericarp, not ligneous, covered by the pericarp, which never becomes fleshy, as in the Chenopodiacem.

Catacle'sium. See Cataclesia.

Cat'aclysm. (Κατακλυσμός, from κατα-κλυζω, to inundate.) Λ Geological term for a violent deluge or inundation.

In Medicine, an effusion of water, or an enema. Cataclys ma. (Κατάκλυσμα, from κατακ \ύζω, to wash.) An old name used by Hippoerates (κατάκλυσμα) for a elyster, or for a

Catacorolla. (Κατά, against; corolla.) An additional corolla, either inside or outside the

natural one.

Catacoustics. **Catacoustics.** (Κατά, downwards; άκούω, to hear. F. catacoustique.) That branch of acoustics which treats of reflected sounds, or

the properties of echoes.

Catac rotous. (Κατά; κρότος, a striking.) A term applied to a dicrotic pulse, in which the dicrotism occurs in the descent of the bloodwave, and is shown in the downward stroke of the sphygmographic tracing.

Catacys'ta. (Κατά; κύστις, a bladder.) A term applied to the condition of some Echinoidea, in which the anns opens on the ventral

surface of the perisome.

Catadiop'tric. (Kard, downwards; ôiυπτρικός, belonging to the use of the δίοπτρα, an optical instrument. F. catadioptrique.) Applied to certain telescopes because they unite the combined effects of reflection and refraction.

Catæone'sis. (Καταιόνησις, a fomentation, from καταιονάω, to pour upon.) A fomen-

tation or affusion.

Catagaun'a. A term for gamboge. Cataglos'sum. (Κατά, downwards; γλώσσα, the tongne. F. cutaglosse.) An instrument for pressing down the tongue and lower jaw.

A synonym of the Speculum oris.

Catag'ma. (Κάταγμα, from κατάγω, to break.) An old name for a fracture. (Castel-

lus.) C. fissu'ra. (L. fissura, a cleft.) A fissure.

C. fractura. (L. fractura, from frango, to break.) A fracture.

Catagmatic. (Same etymon.) Of, or belonging to, a fracture. Applied to remedies necessary for the cure of fractures, that is, for the formation of callus.

**Catagraphol'ogy.** (Καταγράφω, to write down; λόγος, a discourse.) The doctrine of the writing of prescriptions.

Catagy'ne. Aucient name of gamboge. Catalan'gans. Part of the mixed race of Irayan Malays inhabiting the castern arm of the Rio de Ilagan.

Catalen'tia. A Paracelsian name for a kind of epilepsy.

Catalep'sia. Same as Catalepsy.

C. ce'rea. (L. cereus, waxen.) Catalepsy with such passive rigidity that the limbs may be placed in any position and will retain it as if they were of sort wax.

C. spu'ria. (L. spurius, false.) A term

for Eestaen.

Catalepsy. (Καταλαμβάνω, to seize or a tack. F. catalepsic; I. catalessia; S. catalepsia; G. Starrsucht.) A suspension of sensation and of consciousness, with rigidity of muscles to a greater or less extent, and without important

change in the condition of respiration and circulation. The attack commonly occurs in females, is usually sudden, and generally follows upon some great mental trouble or excitement. It may last hours or days. Catalepsy is a condition which is very frequently simulated.

Catalepsy, after repeated attacks, has terminated occasionally in death; but then there has been found other grave lesions, such as eerebral hamorrhage, or congestion or softening of

brain.

C., ac'cessory. (L. accedo, to approach.) Catalepsy associated with hysteria, epilepsy, tetanus, mania, or other nervous affection.

C., artific'ial. Catalepsy occurring during

C., comple'te. The form in which there is entire loss of consciousness, with complete rigidit, and fixature of the limbs, in any position in which they may be placed.

C., epidem'ic. (Επιδήμιος, prevalent among a people.) Catalepsy propagated by irritation, in impressionable persons of a nervous temperament, under the influence of a present case and certain unfavorable hygicnic and moral conditions.

C., idiopath'ic. (Ίδιος, peculiar; πάθος,

affection.) Same as C., complete.
C., incomple te. The form in which there is rigidity of muscle, so that the limbs will easily take and retain any position; but the rigidity is imperfect or affects only one limb or one side of the body.

C., sec'ondary. Same as C., accessory. C., true. Same as C., complete.

Catalep'tic. (F. cataleptique; G. kataleptisch.) Of, or belonging to, eatalepsy.

C. meth'od. See Method, cataleptic. Catalep'toid. (Κατάληψις, catalepsy; cicos, likeness.) Resembling catalensy. Catalit'ia. Same as Catalysis.

**Catallac'ta.** (Καταλλάσσω, to change.) An Order of the Subkingdom *Protozoa*, according to Häckel. Small ciliated spheres, living in the sea, formed of a great number of ciliated, pyriform cells, with the thin end central. When the sphere breaks up the cellules lose their ciliæ, and move like an ainæba; subsequently they become encysted, divide and subdivide into a mass of cellules, which again obtain ciliae, and, having broken their common envelope, escape as new eiliated spheres.

Catalon'ga. A name of St. Ignatius's hean

Catalotic. (Καταλοάω, to crush in pieces.) Having power to destroy or remove ugly cicatrices.

Catal'pa. (G. Trompetenbaum.) A Genus of the Nat. Order Bignoniaceae.

C. arbor'ea. (L. arborcus, tree-like.) The C. bignonioides.

C. arbores'cens. (L. arboresco, to grow to a tree.) The C. syringifolia.

C. bignoniordes, Walt. (L. zidos, likeness.) Hab. United States. (Bignonia; Reputed poisonous. Decoction of the seeds used in Italy in asthma and in coughs. A similar species is used in Japan for the same purpose. The juice of the root is used in scrofulous ophthalmia.

C. cordifo'lia. (L. cor, the heart; folium,

a leaf.) The C. bignoniondes.

C. longis'sima, Sims. (L. sup. of longus, long. F. chène noir d'Amerique.) Used as C. bignonioides.

C. syringifo'lia, Sims. (Syringa; L. folium, a leaf.) The C. bignonioides.
Catal'ysin waters. See Gettysburg.

Catal'ysis. (Καταλύω, to dissolve. F. catalyse; I. catalesi; S. catalisa; G. Katalysis.) The phenomena which occur when chemical alteration takes place in a substance by the mere presence of another body, which itself undergoes no recognisable change, as when potassium chlorate gives off oxygen when heated in the presence of manganese dioxide, or when starch is converted into grape sugar in the presence of diastase.

It was anciently applied to palsy, and to the exhaustion of impending dissolution.

C. ace'tica. (L. acetum, vinegar. I. catalisi acetica.) The oxidation of alcohol in contact with spongy platinum, by which acetic acid is produced.

C. benzo'ica. (From benzoin, the gum of that name. F. catalyse benzoique; I. catalisi benzoica.) The same as C. hippurica.

C. benzoilica. (L. benzoinim, the gum of that name. F. catalyse benzoylique; I. catalisi benzoilica.) In this kind of catalysis amygdalin, under the influence of emulsin or synaptase, is converted into essence of bitter almonds and hydrocyanic acid.

C. dextrin'ica. (L. dexter, the right side. 1. catalisi destrinica.) In this form of catalysis cane sugar, cellulose, and gum or starch, in contact with weak mineral acids, are first converted

into dextrin, and then into glucose.

C. gal'lica. (L. galla, the gall-nut. F. catalyse gallique; I. catalisi gallica.) The substance undergoing catalysis is tannin, and the active agent is probably albumin. The products are gallic and ellagic acids, which, however, do not together quite represent the formula of

C. glucosaligen'ica. (Γλυκύς, sweet; L. salix, a willow. F. catalyse glycosaligenique; 1. catalisi glucosaligenica.) The decomposition of salicin under the influence of synaptase.

**C. gluco'sica.** (Γλυκύs, sweet. I. catalisi glucosica.) The same as C. dextrinica.

tisi glucosica.) The same as C. dextrinica.
C. glycocol'lica. (Γλυκύs, sweet; κόλλα, glue. F. catalyse glycocollique; I. catalisi glicocollica.) The same as C. hippurica.
C. hippurica. ("Ιππος, a horse. F. catalyse hippurique; I. catalisi ippurica.) The body undergoing catalysis is hippuric acid, which, under the influence of mucus aftered by the air,

yields gelatin or glycocol.

C. ny'drica, ("Υδωρ, water. I. catalisi idrica.) The combination induced between oxygen and hydrogen under the influence of contact with platinum, iridium, gold, silver, and other With some metals the influence is exerted at a low temperature, but with others, as silver, a temperature of 300° C. (572° F.) is required.

C. lac'tica. (L. lac, milk. I. catalisi lattica.) The eatalysed body is glucose, or sugar of milk, and the catalysing agent is casein, fresh gluten, or some other nitrogenised vegetable substance, which, however, must have been exposed

for a time to the air.

**C. nitro'sa.** (Νίτρου, saltpetre. I. catalisi nitrosa.) An exidising catalysis in which ammonia, under the influence of spongy platinum, yields nitric acid.

C. pec'tica. (Πήγνυμ, to coagulate. I. catalisi pectica.) A form of catalysis in which pectin, parapectin, and metapeptin, in contact with alkalies and alkaline earths, yield at first pectosic and then pectic acids.

Catalytic. (Same etymon.) Of, or belonging to, catalysis.

C. bod'y. A term sometimes used to denote a ferment.

Catalytical. Same as Catalytic.

Catame'nia. (Κατά, according to; μήν, the month. F. menstrues, règles; G. Mondfluss.) The monthly discharge from the uterus; the

C. al'ba. (L. albus, white.) A synonym

of Leucorrhwa.

Catame'nial. (Same etymon.) taining to the catamenia or menses.

C. synovi'tis. See Synovitis, catamenial.

Catamenio'rum fiux'us immod'icus. (Catamenia; L. fluxus, a flow; immodicus, beyond bounds.) Immoderate flow of the menses; menorrhagia.

Catanan'che. (Κατανάγκη.) A plant of the vetch tribe, mentioned by Dioscorides,

either an Errum or an Astragalus.

Also, a Genus of the Nat. Order Compositæ. C. cæru'lea, Linn. (L. cæruleus, skyblue.) Used as a substitute for Cichorium intybus. It has been said to be an astringent and vulnerary

Catan'gelus. The Ruscus aculcatus. Cata'nia. Sicily; a seaside town at the

foot of the southern spurs of Mount Etna, by which it is sheltered. A warm and sunny winter residence, having, except when the north wind blows, little daily variation of temperature, and a mean higher than that of the Riviera.

**Catantle'ma.** (Καταντλέω, to pour over.) A fomentation or affusion of warm

water. Catapas'ma. (Καταπάσσω, to sprinkle.) A former term (Gr. καταπάσμα), used by Paulus Ægineta, vii, I3, for any dry medicine in powder, which was sprinkled on ulcers. These applications

were called Smegmata, and were distinguished into Catapasmata, Diapasmata, Empasmata, and Sympasmata, according to Gorræus.

Catapas'tum. Another term for Catavasma.

Catapaus'is. (Καταπαύω, to put to rest.) The effect of a sedative.

**Catapep'sis.** (Κατά, downwards; πέψις, digestion.) Perfect digestion.

Catapet'alous. (Κατά, downwards; πέταλον, a petal.) Applied by Linnaus to a corolla, which, being monopetalous, has its petals lightly adherent by their base to the androphorum, so that they do not fall separately after flourishing.

**Catapha'sia.** (Κατάφασις, an affirmative proposition.) **A** morbid condition of the speech, in which the patient repeats for several times the same word in answer to a question, or spontaneously; frequently, if the word be of many syllables, the latter ones are gradually omitted until, perhaps, the first only is pro-nounced. It has only been observed as a condition accompanying extensive disease.

Cataphis'ma. A thick poultice made of meal and herbs.

Cataphon'ics. (Kaτά, downwards: φωνή, sound.) That branch which treats of the reflection of sound.

Cataph'ora. (Καταφέρω, to fall down.) A term for coma. Also a very deep sleep.

C. co'ma. (Κώμα, drowsiness.) Sanguineous apoplexy.

("Υδωρ, water; C. hydrocephalica.

κεφαλή, the head.) Scrous apoplexy.

C. magnet'ica. Same as Mesmeric coma. Cataphracta. (Καταφράσσω, to fortify.) A breastplate or cuirass. Formerly applied (Gr. καταφράκτης) by Galen, de Fasciis, c. vol. xviii, part i, p. 816, to a bandage for the chest in fracture of the sternum or ribs, as shown by Scultetus, ed. Amstel. 1672, tab. ult.

Also, a synonym of Chelonia.

Cataphracted. (Same etymon.) Covered with a horny skiu, as with a sealy enirass.

Cataphrac'ti. (Same etymon. G. Panzerwangen.) A Family of acanthopterous fishes. It includes Gasterosteus, Trigla, and other similar

Cataphyl'la. Same as Cataphyllary leaves.

Cataphyl'lary leaves. (Κατά, down; φύλλον, a leaf. G. Niederblatter.) Scales produced usually on underground shoots and remaining buried in the earth, although they also frequently occur above ground, especially as an envelope to the winter buds of woody plants, as the horse-chestnut.

Catapi'esis. (Καταπίεσις, a keeping down, from κατά, down; πιέζω, to crush.) De-

pression, as in a fracture.

(Καταπίνω, to drink Catapino'sis.

down, to absorb.) Absorption.

**Cataplasis.** (Κατάπλασις, a plastering, from καταπλάσσω, to plaster over.) The application of plaster.

Cat'aplasm. A poultice. See Cataplasma. Cataplas ma. (Καταπλάσσω, to overlay with plaster. F. cataplasm; I. and S. cataplasma; G. Breiumschlag.) A poultice. An application to the external surface, of a soft pulpy consistence, used for the purpose of supplying warmth and moisture, with or without medicinal adjuncts.

C. ace'ti. (L. acetum, vinegar.) The vinegar poultice. Made of vinegar and bread erumb, or the like. Used for bruises and sprains.

C. aceto'sæ. (Acctosa.) The sorrel poultice. For scorbutic ulcers; the leaves beaten into a pulp.

C. ad decubitum. (L. ad, to; decubitus, from decumbo, to lie down, is here used to signify bed-sore.) The Plumbum tannicum pultiforme.
C. aera'tum. (L. aer, air.) The C. fer-

menti.

C. althæ'æ. The powdered root of marshmallow, Althou officinalis, mixed with hot water to a fit consistence; an emollient.

C. alu'minis. Alum poultice. The whites of two eggs and alum one drachin, shaken until a coagulum is formed. Used, between muslin, in chilblains, sore nipples, and purulent oph-

thalmia. **C. anod'ynum.** ('Aν, neg.; ὁδύνη, pain.) White poppy heads 25 parts, dried henbane leaves 50, boiled for a short time in 600 parts of water,

and made into a poultice, with 100 parts of an emollieut powder composed of equal parts of the dried leaves of mallow, marshmallow, mullein, and pellitory.

C. anthelmint'icum. ('Aντί, against; τλμων, a worm.) Aloes, olibanum, assafætida, gamboge, of each 2 parts, wormwood and tansy,

of each 90, linseed oil q. s. C. antiarthriticum. (' $\Delta \nu \tau l$ ;  $\alpha \rho \theta_{\nu} \tilde{\imath} \tau \iota s$ , gout.) Extr. opii, extr. stramonii, of each 5 parts, bread crumb 1000, water and alcohol, of each equal parts, to make a poultice, which is to be sprinkled with powdered camphor 15 parts. Applied topid in gout.

C. anticancero'sum. ('Aντί; L. cancer, the disease.) Arsenious acid 15 parts, camphor 30, vinegar 500, juice of carrots 1000, hemlock powder sufficient to make a poultice. The arsenic should be dissolved in the vinegar. Used in open cancer.

**C. antiophthal micum.** (' $A\nu\tau i$ ;  $\delta\phi$ - $\theta a\lambda \mu ia$ , inflammation of the eyes.) The yolks of three eggs, saffron 2 parts, bread crumh 100. Applied, between mushin, in acute ophthalmia.

C. antisep'ticum. ('Αντί; σηπτικός, putrefying.) Charcoal 30 parts, quinine 40, camphor 4, linseed meal 250, claret sufficient to make

a poultice. Used in gangrenc.

C. antispasmod icum. (' $\Lambda \nu \tau i$ ;  $\sigma \pi a \sigma$ μός, spasm.) Poppy heads 125 parts, camphor 2, opium 1, boiled in water, and used with infusion of saffron to make a poultice with linseed meal.

C. astringens. (L. astringo, to draw tight.) 1ron sulphate 15 parts, white bole 30, alum 15, vinegar 60, made into a poultice with bread crumb aud water.

C. azadiracht'æ, Ind. Ph. Poultice of nim leaves. Fresh leaves of nim, Azadirachta indica, a sufficiency, bruise and moisten with tepid water. A stimulant application in ill-conditioned ulcers.

**C. by nes.** (Βύνη, malt.) The malt poultice. For gangrene. Finely ground malt mixed

with yeast and applied warm.

- **Č. carbo'nis**, B. Ph. (L. carbo, charcoal, F. cataplasme au charbon; G. Kohlenumschlag.) Two ounces of bread crumb is macerated in ten fluid ounces of boiling water for ten minutes, an ounce and a half of linseed meal is then mixed with it, and a quarter of an ounce of wood charcoal; an equal quantity of charcoal is sprinkled on the surface of the poultice. The charcoal on the surface of the poultice. poultice. For correcting the fætor and state of ill-conditioned ulcers.
- C. cerevis'iæ. (L. cerevisia, beer.) The C. fermenti.

C. communis, (L. communis, common.) The C. lini.

C. coni'i, B. Ph. (Κώνειον, hemlock. F. cataplasme avec le ciguë; G. Schierlingumschlag.) The hemlock poultice. Hemlock leaves, powdered, 1 oz., linseed meal 3 oz., mixed with boiling water. For cancerous, scrofulous, and other ill-conditioned ulcers.

C. con'tra anthra'cem. (L. contra, against; anthrax, carbuncle.) Treacle 4 parts, honey 45, burnt alum 4, the yolk of oue egg, flour of rye 3 parts, made into a poultice.

in carbuncle.

C. con'tra epididymi'tem. (L. contra, against; epididymites.) Linseed meal 120 parts, tormentil, in powder, 120, mercurial ointment 30, extract of belladonna 4, made into a poultice with oil of hemp seed.

C. cumi'ni. (L. cuminum, cumin.) poultice, formerly called Theriaca londinensis. Used as an irritating antiseptic application to gangrenous ulcers. Cumin seeds, buy berries, and leaves of water germander, Virginian snakeroot, cloves, and honey.

C. datu'ree, Ind. Ph. Fresh and bruised leaves of Datura aba and flour equal parts; mix

to the consistence of a poultice with water. An anodyne to nodes, rhenmatic swellings, and

C. dau'ci. (Δαυκος.) The carrot poultice. For cancerous, scrofulous, and other unhealthy ulcers; the boiled roots bruised into a pulp.

C. digita'lis. The fox-glove poultice. For allaying pain in irritable sores. Linseed meal, oatmeal, or bread crumb mixed with a strong decoction of the leaves of Digitalis purpurea.

C. diuret'icum. (Διουρέω, to pass urine.) Squills, pulped, 100 parts, potassium nitrate 10; mixed and applied to the abdomen as a diuretic. C. emol'liens. (L. emollio, to soften.) The

C. lini.

C. fæc'ulæ cerevis'æ. (L. fær, grounds; cerevisia, beer.) Same as C. fermenti. C. fæculo'sum, Fr. Codex. (Mod. L. fæcula, starch, from L. fæx, grounds. plasme de fécule.) One part of potato starch is F. catamixed with two parts of cold water, and then with eight parts of boiling water. In the same manner are prepared rice and starch cataplasms. Used as an emollient.

C. ferment's, B. Ph. (L. fermentum, yeast. F. cataplasme de levure de biere; G. H. fenumschlag.) The yeast poultice. For sloughing and mortification. Beer yeast 6 oz., wheat flour 14 ez., water, at 100° F., 6 oz.; mixed and heated till

C. fu'ci. The sea-weed poultice. scrofula, white swelling, and glandular tumours. Sea-tang or sea-weed, Fucus vesiculosus, bruised. When this is not procurable in a fresh state, seawater and oatmeal have been substituted.

C. hu'muli. (Humulus lupulus, the hop.) Hops made into a poultice with boiling water.

Used in gangrenous nleers.

C. hydrocotyles, Ind. Ph. Hydrocotyle poultice. Fresh leaves of Hydrocotyle asiatica, bruised and moistened with water. A valuable stimulant application to syphilitic and other forms of ulceration.

C. lini. (L. linum, flax. F. cataplasme de farine de lin; G. Leinsamenumschlag.) The linseed-meal poultice. Used as emollient for all common cases. Linseed meal, gradually added to hot water, and quickly mixed together. The B. Ph. orders olive oil 2 oz. to linseed meal 4 oz., and water 10 oz.

C. maturans, Fr. Codex. (L. maturo, to ripen. F. cataplasme maturatif.) Pulvis emolliens (q. v.) 100 parts, ung. basilici (q. v.) 20, water sufficient to make a poultice.

C. mi'cæ pa'nis. (panis, bread.) See C. panis. (L. mica, a crumb;

C. narcot icum. (Ναρκοτικός, making numb.) Hemlock, belladonna, black nightsbade, linseed, of each 15 parts, made into a poultice

with decoction of poppy heads. In cancers.
C. ory'zæ, Ind. Ph. (Oov'a, rice. F. cataplasme de riz.) Rice flour is placed in an open vessel on the fire, and water is added, constantly stirring until the required consistency is obtained. An emollient and soothing applica-

C. pa'nis. (L. ponis, bread.) The bread poultice. Stale bread crumb in milk or water, allowed to simmer over a fire till properly softened. A lighter poultice is made by pouring boiling water on to bread crumb, and then straining without pressure. Used as emollient in ordinary

C. papav'eris. (L. papaver, a poppy.)

Bread crumb made into a poultice with decoction of poppy heads.

C. plum'bi aceta'tis. The sugar of lead poultice. For cases of inflammation. Solution of acetate of lead, distilled water, and bread

C. quer'eus mari'ni. (L. quereus, the oak; marinus, belonging to the sea.) A name

C. resoluti'vum. (L. resolvo, to dissolve.) Bryony 90 parts, oil of hemlock 60, sal ammoniac 7, gum ammoniacum 15, elder 30, digested in sufficient vinegar. Applied to serofulous tu-

C.rosæ. (L. rosa, a rose.) Alum half an ounce, confection of roses two ounces. An

C. rubefa'ciens. (L. ruber, red; facio, to make.) Black pepper and fennel seed, of each 15 parts, sprinkled on a poultice made of barley meal 125 parts, vinegar 30, the whites of three eggs, and water. Also, the C. sinapis.

F. cataplasme de montarde; G. Senficig.) The mustard poultice. Used as stimulant. Ground mustard seed and linseed meal, in equal parts, mixed with boiling water.

C. so'dæ chlora'tæ, B. Ph. (F. cataplasme chlorinée; G. Chlornatronumschlag.) Solution of chlorinated soda 2 oz., linseed meal 4 ez, and boiling water 8 oz. Used in sloughing

C. sola'ni tubero'si. (Solanum tubero-

sum, the potato.) Skinned raw potatoes scraped to a pulp, and applied cold.

C. ul'mi. The powdered bark of slippery elm, Ulmus fulra, made into a poultiee with boiling water. Soothing.

C. vermifu'gum. (L. vermis, a worm; fagio, to fly.) Two cloves of garlie, bruised, assafeetida ½ dr., triturated with camphorated oil, and made into a poultice with bread crumb, and applied to the abdomen.

Cataplec'tic. (Καταπλήσσω, to strike down.) Attacking suddenly.

**Cataplex'is.** (Καταπλήσσω, to strike down.) Old term (Gr. κατάπληξις), used by Hippocrates, vii, *Epid.* 30, 8, for a sudden stupefaction, or deprivation of sensat on, in any organ or member.

Also (F. agacement des dent; G. Stumpfsinn der Zuhne.) An old term for what is called setting-on-edge of the teeth.

Catap'osis. (Κατά, down; πόσις, a drinking; κατάποσις used by Galen, de Us. Part. vii, 16.) A descension of food, drink, or medicine by the gullet.

Catapot'ium. (Καταπότιον, a pill; from αταπίνω, to swallow or drink down.) Old term for a pill.

Also, a term for deglutition.

Catapotra. (Καταπότρα.) The cardiae orifice of the stomach.

**Catapsyx'is.** (Καταψύχω, to refrigerate; κατάψυξις, used by Galen, de Rigor. Trem.) A considerable degree of chilliness, but without shivering. Hippocrates applies it to cold of the extremities, or a bad sign in fevers.

**Catapto**'sis. (Καταπίπτω, to fall down; κατάπτωσις, nsed by Galen, de Tot. Morb. Temp. c. 4, 5.) A sudden falling down of a person, as a symptom of epilepsy or of apoplexy; also the failing or paralytic seizure of any particular limb.

Catapul'ta virilis. (Καταπέλτης, a eatapult, from καταπαλλω, to shake down; L. varilis, manly.) The penis.

Catapulta'rum a'gua. (L catapulta, an engine of war; aqua, water.) A lotion for

Catapu'tia. (L. catapoticon, a pill, because the seeds were swallowed like pills; or from καταπύθω, to make rotten, from its disagreeable taste.) A name applied to the following three plants:

C. ma'jor. (L. major, greater.) The Ricinus communis.

C. max'ima. (L. maximus, greatest.) The Ricinus americanus.

C. mi'nor. (L. minor, less.) The Euphorbia lathyris.

Cataract. (Low L. cataracta, from κατα-ράκτης, down-rushing, from καταράσσω, to fall down. F. cataracte; I. cataratta; S. and Port. catarata; G. Staar, graner Staar.) Opacity of the crystalline lens, or of its capsule, or of both, producing more or less impairment of sight, but never complete blindness. The term was suggested by the idea of a veil falling over the eye, and formerly was made to include any pupillary opacity.

The term cataract is applied to many conditions, distinguished from each other by some prefix, as true, false, capsular, knticular, senile, traumatic, but all agreeing in the circumstance that the passage of light to the retina is interfered with by an opaque substance occupying the pupil, and consisting either of the modified lens or capsule, or of some deposit in or on the lens and its

capsule.

The causes of cataract are not perfectly known.

As a rule, it is a disease of old age, but it is often associated with an enfeebled condition of the general health, as in diabetes, and may be caused by ergot or by eating bread made of discased corn. It is sometimes congenital, occurring especially in children inheriting a syphilitic taint. It is produced also by all circumstances affecting the nutrition of the lens itself, such as an inflammatery or atrophic condition of the choroid coat, eiliary body, or useal tract, and by any injury of the lens, permitting the entrance of aqueous humour into its substance, opacity being then apparent within a few hours.

Microscopical examination of the lens in cataract shows that there is often proliferation of the epithelium of the capsule. The lens fibres are at first but little altered, or present only a finely punetated aspect. They sometimes, when broken down in water, exude myelin drops and coils; at others, and more frequently, they appear to have undergone fatty degeneration. Tabular plates of cholesterin are of very common, if not of constant, occurrence. At a late period calcarcous granules are deposited. Pus has been observed, and the tint of deep-coloured cataracts has been attributed to absorption of blood-

colouring matter.

The symptoms are impairment of sight, usually increased in bright light; loss of definition in small objects, such as print; a circle of diffusion around the flame of a candle or other brilliantly illuminated object; diplopia or polyopia, the moon, for example, being doubled or trebled; musca; oceasionally myopia. As a rule the index of refraction is increased, owing to the presence of a highly refracting body, cholesterin.

Formerly simple inspection, the statements and

attitude of the patient, and the cateptric test were relied on for the diagnosis, but its presence is now far more certainly ascertained by the use of the ophthalmoscope and of oblique illumination.

That catarnet is really due to opacity of the lens was shown by Maitre Jan in 1707, by Bris-scau in 1709, and by Heister in 1711. The last-named celebrated anatomist dissected, before many medical men, the cataractous eye of a soldier who died of a wound received in battle. and demonstrated that the crystalline lens itself was opaque.

C., adhe'rent. (L. adhæreo, to cleave to. F. cataracte adhérente; G. complicirter, or angewachsener Staar.) Cataract complicated by the adhesion of the iris to the capsule of the

C., artific'ial. (L. artificialis, according to the rules of art.) The production of cataract in an animal, such as a frog, by the injection of a solution of sngar or other substance under tho skin.

C., axial. (L. axis, an axle-tree. G. Axensiaur.) The same as C., fusiform. Also, the same as Cataracta centralis.

C., black. (F. cataracte noire, c. pigmentaire; I. cataracta nera; G. schwarzer Staar.)

A form of cataract in which the colour of the cataractous lens is very dark brown. It is believed by some that the tint is intensified by the absorption of the colouring matter of blood, hut the evidence is unsatisfactory. Also, a synonym of Amaurosis.

C., break'ing up of. See C., discission of.

C., calca'reous. (L. calcarius, pertaining to lime. F. cataracte pierreuse.) Term applied to sponfaneous or traumatic cataracts which have, in the course of time, undergoue degeneration, and become the seat of the deposit of calcareous

C., cap'sular. (L. capsula, a little case. F. cataracte capsulaire, c. capsulaire phosphatique; G. Kapselstaar.) In this disease the capsule remains clear, but certain hyaline or fibrous structures are formed on its inner surface, owing to the preliferation and degeneration of the cells lining it, and to chalky granules and cholesterin scales being deposited in them. It is commonly associated with irido-choroiditis, but may be the result of proliferation of epithelial cells during intrauterine life.

C., cap'sular, anto'rior. (F. c. polaire antérieur; G. vordere Rindenstaar.) Term applied to opacity of the anterior cortical lamella of the lens, or to cretaceous deposit in hyaline or fibrous substance formed by the preliferation and degeneration of the intracapsular cells. Also, a condition often seen in cases of iritis, and then

synonymous with false cataract.

C., cap'sular, ante'rior cen'tral. (F. cataracte capsulaire phosphatique.) A small white central spot situated on the front surface of or beneath the capsule of the lens, and due either to some defect of development, to the contact of the capsule with the swollen cornea in purulent ophthalmia, or to the occurrence of a perforating ulcer at the centre of the cornea. In this latter case the escape of the aqueous humour leads to the contact of the capsule with the inner margin of the ulcer, and to the deposit of some lymph upon the capsule after the closure of the ulcer. The rescerction of the aqueous restores the anterior chamber and separates the capsule from the cornea, but the lymph remains and becomes

the seat of cretaceous deposit.

C., cap'sular, poste'rior. Term applied to opacity chiefly affecting the posterior cortical lamellae of the lens, or to deposits between the lens and the posterior layer of the capsule.

C., cap'sulo-lentic'ular. See Cataracta

capsulo-lenticularis.

C., cen'tral. (G. Central-Linsenstaar.)

The same as C., nuclear.

C., chees'y. (F. cataracte casécuse.) A term used when the opaque lens is of the consistence of cheese.

C. choles'terin. (G. Cholesterinstaar.) A cataract in which numerous cholesterin scales are imbedded in the more or less fluid cortical layers of the lens.

C., comple'te congen'ital. genitus, grown together with.) A condition occasionally found at birth, in which the whole

of the lens is opaque.

C., com'plicated. (L. complico, to fold together. G. compliciter Staar.) Cataract accompanied by adhesions, amaurosis, or other

C., concus'sion. (L. concutio, to shake.) Cataract resulting from shock to the system generally, or from contusion of the eye.

C., congen'ital. (L. congenitus, grown together with. F. cataracte congénitale; G. angeborene Staar.) Cataract appearing at, or shortly after, birth. It may present the zonular or laminated, anterior polar, pyramidal, posterior polar, or soft form of cataract.

C., cort'ical. (L. cortex, shell or bark. G. Rindenstaar.) Opacity affecting the outer or superficial layers of the lens. See Cataracta cor-

ticalis anterior and posterior.

C., couch'ing of. (E. couch, to lay down; from F. coucher, to lay down; from L. colloco, to place with.) The same as C., reclination of.

C., cys'tic. (Κύστις, a bladder. L. cataracta bursata; F. cataracte cistique.) Soft cataract, in which the cortical portion has undergone regressive changes. It frequently contains crystals of cholesterin.

C., cys'tic cap'sulo-lentic'ular. (Κόστις, bladder; L. capsula, a small chest; lenticula, a lentil. F. cataracte arido-siliqueuse.) Cataract, arising either spontaneously or from injury, in which the subcortical substance of the lens undergoes absorption, a dense white cortical layer remaining adherent to the capsule and forming a kind of cyst, which contains the brown shrivelled

nucleus of the lens.

C., depres'sion of. (L. depressio, a pressing down. F. abaissement de la cataracte; G. Dislocationsmethode, Niederdrückung, or Umlegung der Linse.) The thrusting down into the vitreous of an opaque lens. At one time a needle. slightly bent at the point, was introduced through the sclerotic, as in the operation for reclination, but, instead of passing behind, was applied to the front of the lens, and pressed that body downwards till it had disappeared. In a modification suggested by Egerton the needle is straight, and is introduced as in reclination, but is made to penetrate the lens by a rotatory movement, and, when fairly engaged, is made to depress it into the vitreous, and is then carefully withdrawn.

C., diabe'tic. See Cataracta diabetica. C., discission of (L. discindo, to tear across. F. discission, division, or broisment de la cataracte; G. Discisionsmethode, Zerschneidung,

or Zerstückelung des Staares.) A mode of treating cataract in which, by the introduction of a needle through the capsule of the lens, the aqueous humour is allowed access to the lens substauce, and its absorption effected. It is usually performed in the soft cataracts of young people. The needle may simply be introduced with a twisting movement, as in the drilling operation of Tyrrell: or the capsule may be more or less extensively divided or torn. The needle is usually introduced through the cornea-keratonyxis, but may be passed through the selerotic-seleronyxis.

C., disloca'tion of, sponta'neous. (L. dis, insep. particle, meaning a part; locus, a place; spontaneus, of one's free will. F. cataracte luxée.) This may either be partial or complete. In partial dislocation the edge of the lens remains more or less visible in the pupil. In complete dislocation the whole lens falls out of sight behind the pupil in the vitrcous, or enters

the anterior chamber.

C., dislocation of, traumatic.  $(T\rho a\tilde{v}$ μα, a wound. F. luxation traumatique.) event that sometimes occurs in cases of mature cataract, where, as the result of a blow on the head or eye, or from succussion of the body generally, the suspensory ligament is ruptured, and the lens enters the anterior chamber through

the pupil or falls behind the iris.

C., displa'cement of. (F. déplacement de cataracte; G. Luxation der kataraktôse Linse.) Term synonymous with depression and with reclination. It appears to have been known as a means of removing cataract ages ago in India and in China. It was practised by Herophilus (300 A.C.) and Erasistratus (280 A.C.), and was well described by Celsus.

C., division of. See C., discission of. C., extraction of. (L. extraho, to draw out. F. extraction à lambeau.) The removal of a cataract through a cut made in the cornea or sclerotic coat of the eye.

C., extraction of, Beer's. (F. extraction à lambeau; G. Lappenschnitte, Extraction mit dem Bogenschnitte.) The method of operating suggested by Beer was the formation of a flap of the lower half of the cornea by means of a triangular knife, the back of which was in a straight line with the handle; he lacerated the capsule by means of three or four vertical, and as many horizontal, incisions, and then pressed out the lens.

C., extrac'tion of, by flap. (F. extraction à grand lambeau, extraction de Daviel; G. Staarausziehung, extraction mittelst Lappen. schnittes.) This operation, which was suggested and practised by Daviel, and improved by Beer, is performed with the patient in a sitting posture. The cyclid is raised by an assistant, or by the operator, and the eye gently steaded by the fingers of the operator. A triangular-bladed cataract knife is then made to penetrate the margin of the cornea just above or just below the hori-zontal diameter, according to whether the flap is to be made upwards or downwards, and, by pushing the blade steadily forward, a semicircular flap is formed, the cut running parallel and close to the corneal border. A cystotome is introduced, the capsule freely lacerated, and the lens is then gently pressed out, assisted, if need be, with a The edges of the wound are then adjusted, and a pad and bandage applied for several days.

C., extrac'tion of, by lin'ear peri-

**pheric section.** See C., extraction of, v. Grafe's.

C., extrac'tion of, by mod'ified lin'ear method. See C., extraction of, v. Gräfe's. C., extrac'tion of, by spoon. The same

as U., extraction of, Waldan's.

C., extrac'tion of, by suc'tion. suga, to suck. F. aspiration, or succion; G. A prationsmethode, Suctionsmethode.) In this operation, which is only applicable to soft cataracts, or to those in which the lens has been previously broken up by a needle, a small opening is made in the cornea with a broad needle, and the nozzle of a syringe is introduced into the substance of the lens. By raising the piston of the syringe, or by sucking through a piece of indiarubber tubing attached to a tubular curette, the greater part of the soft lens substance may be removed.

C., extrac'tion of, Critchett's. (G. Tractions methode.) This method, adopted by Mr. Critchett, consists in making an incision with an iridectomy knife extending along one fourth of the selero-corneal junction. An iridectomy is then performed, and, after laceration of the capsule, the lens is lifted from its bed with a peculiar kind of spoon. See Critchett's

C., extrac'tion of, Da'viel's. (G. Lappenbildung.) To Daviel belongs the merit of being the first amongst the moderns to introduce, about 1745 or 1746, a method of removing a entaract by operation. He employed a straight lance-shaped instrument, which was introduced at the lower edge of the cornea; the wound was enlarged with a blunt-pointed knife and with two pairs of scissors, one curved to the right, the other to the left, the capsule was ruptured with a needle, and the exit of the lens assisted with his well-known

C., extrac'tion of, Des'marres'. This method consists in performing a flap operation. but allowing a portion of the conjunctiva to remain undivided. The lens is pressed out after laceration of the capsule beneath the conjunctiva.

C., extrac'tion of, Ja'cobson's. In 1863 Professor Jacobson, of Königsberg, adopting a suggestion previously thrown out by de Wecker, performed an iridectomy simultaneously with the flap operation after the removal of the lens. He made the section forming the flap of the cornea downwards through the extreme limit of the anterior chamber, and therefore through the selerotic.

C., extrac'tion of, Jä'ger's. Jäger (1825) made the section of the cornea npwards, but for some time employed a double triangular knife, one of the blades of which could be made to glide over the other, after transfixion by the thumb of the operator, and thus complete the section.

E. Jäger in 1866 recommended a lance-shaped knife, curved on the flat, which made a wound

10 mm. long.

C., extrac'tion of, Rüch'ler's. The same as the simple linear extraction, except that the incision is coincident with the transverse or

horizontal diameter of the cornea.

C., extrac'tion of, Le'brun's. puncture and counter-puncture are made with a linear knife, from 1 to 2 mm. below the horizontal diameter of the cornea, and the knife directed so as to make a short flap 3 or 4 mm. high; no iridectomy is performed.

C., extrac'tion of, Lieb'reich's. this method the puncture and counter-puncture are made with a linear knife in the sclerotic, and the cornea is divided about midway between the horizontal diameter of the cornea and the inferior border. The capsule is lacerated and the lens pressed out. Iridectomy is not performed.

C., extrac'tion of, Loe'bel's. A method adopted by Loebel, a Dutch oculist, in which the lens was extracted through an opening made in

the sclerotic.

C., extrac'tion of, Macnama'ra's. The special points of this operation are that a broad iridectomy or triangular knife is used. The cut is made to coincide with the selerocorneal junction. No iridectomy is performed, and the lens is removed, if possible, with the capsule by means of a fenestrated scoop, which is passed behind it.

C., extrac'tion of, Moor'en's. Austofflung des Staares.) Mooren (1862), generalising a mode of operation adopted by v. Gräfe in some exceptional instances, recommended that an iridectomy should be per-

formed some weeks before every flap operation, which he performed in the usual way.

C., extrac'tion of, Pa'genstecher's. Pagenstecher endeavours to extract the leus whilst still enclosed in the capsule. He makes a flap incision usually downwards and entirely through the sclerotic, leaving a small bridge of conjunctiva at the apex of the flap. He now makes a large iridectomy, and then completes the section of the conjunctiva. The lens enclosed in the capsule is now gently pressed or spooned out.

C., extrac'tion of, Poy'et's. M. Poyet proposed to pass a thread through the cornea by means of a cutting needle or narrow knife, perforated near its point. This thread, being disengaged from the hole through which it passed in the needle, he made use of to fix the cornea during its section, and also to suspend the flap when the capsule was lacerated. The operation otherwise was that of Daviel.

C., extrac'tion of, Rich'ter's. Richter (1772) employed a straight, flat, sharp-pointed, lance-shaped instrument, which was introduced at the outer and inferior segment of the peri-phery of the cornea. In 1775 he recommended that the lens and capsule should be removed to-

gether.

C., extrac'tion of, S. Sharp's. Mr. Sharp (1753) performed the whole operation with one instrument only, which was a small knife, a little convex on the back and concave on tho edge. The point of this was entered on the outer edge of the cornea, and a flap of the lower half made; the lens, and, if possible, the capsule with it, was removed by digital pressure

C., extrac'tion of, Schuft's. The same as Waldau's-the name assumed by Schuft.

C., extrac'tion of, Si'chel's. In this operation Siehel (pere), using the triangular knife of Beer, paused when five sixths of the section had been executed, to give time to the patient to recover. The section was completed as the knife was withdrawn.

C., extrac'tion of, sim'ple lin'ear. (F. extraction lineaire simple; G. einfache Linear extraction.) The term linear is applied to this operation because the incision is made in one of the chief planes of the eye, that is, in a plane passing through the centre of the eye. The pupil is widely dilated with atropine. The lids are separated with a speculum, the eye steadied with fixing forceps, and the ent made at or near the periphery of the cornea with a sharp-pointed lancet-shaped knife, broad enough to make, by its simple insertion, a wound sufficiently large to permit the lens to escape after laceration of the capsule with a cystotome. No iridectomy is performed.

C., extrac'tion of, Tay'lor's. In this method a linear knife is introduced at the sclero-corneal junction, and an upper section of one third of the cornea made. The capsule is lacerated, and a portion of the periphery or attached border of the iris removed with scissors, the lens escapes through the gap, and a round pupil is left.

C., extrac'tion of, v. Gräfe's. (F. extraction lineaire périphérique; G. modificirte Linear extraction.) In this operation, suggested by v. Gräfe in 1865, the lids are separated by a spring speculum; the eye is fixed with a pair of toothed forceps. The point of a 32 mm. long, 2 mm. broad, straight, sharp-pointed knife is introduced into the sclerotic, 1.5 mm. from the outer edge of the cornea, and 2 mm. below the horizontal tangent of the upper border of the cornea. The point is at first directed downwards (about 8 mm.) and inwards into the anterior chamber, then elevated, and the counter-puncture made, the point reappearing 1.5 mm. from the edge of the cornea. The blade of the kuife is then turned so as to form an angle of 20° with the plane of the iris, and made by a slight sawing movement to cut its way out. An iridectomy is then performed. A eystotome is introduced, the capsule ruptured, and the lens gently pressed out. The clearing away of the remains of the lens from the pupil and the coaptation of the edges of the wound are carefully attended to, a pad and bandage are applied, and the parts kept at rest. Various modifications of this operation have been adopted by different surgeons.

C., extrac'tion of, ver'tico-lat'eral. An operation suggested by v. Grāte, in which, the pupil being previously widely dilated with atropine, a straight lance-shaped knife was made to penetrate the cornea near the outer border, the capsule of the lens was then ruptured with a cystotome, and through the vertical wound thus made the opaque lens was extracted.

C., extraction of, Waldau's. (G. Auslofelung.) This method of operating is the same as the linear operation for eataract with iridectomy, except that Waldau made use of a enrette, expanded at the extremity into a small spoon, with which he lifted the lens out of its place.

C., extrac'tion of, Wen'zel's. Wenzel's operation (1779) was almost the same as that of Richter, but he used a double-edged knife of oval form. He occasionally cut npwards, and before completing the section of the cornea, opened the capsule with the point of the knife.

C., false. (G. falscher Staar.) A deposit of lymph, blood, or other material in the pupil, obstructing sight.

C., fibrinous. (L. fibrum, a fibre. F. caturacte fibreuse.) Same as C., fulse.

C., firm. Same as C., hard.

C., fix'ed. A cataract which remains steadily fixed behind the pupil.

C., flu'id. (L. fluidus, flowing. F. cata-

racte liquide, c. interstitielle, or e. sans noyau flottant; 1. cataratta liquida, or facoidropsia; G. Milehstaar.) A form of cataract in which, owing to regressive changes, the lens is reduced to a finid consistence. It is milky in aspect, of large size, causing the iris to project forwards, and diminishing the anterior chamber. It may be treated by rupturing the capsule with a needle, and allowing the contents to escape into the aqueous, where it undergoes absorption.

**C., fu'siform.** (L. fusus, a spindle; forma, a form. G. Spindelstaur, Axenstaur.) Cataract in which a spindle-shaped opacity extends from the posterior surface of the anterior capsule to the anterior surface of the posterior capsule, dilating near the centre of the lens, so as to in-

clude the nucleus of the lens.

C., gen'uine. A term which includes all eataracts having the seat of the opacity in the

lens or its capsule.

- C. glass'es. The glasses required by patients who have undergone the operation for the removal of cataract. They vary of course with the previous condition of the eye in regard to refraction. For the emmetropic eye the lens must be about 10 dioptrics for near, and 14 dioptrics for distant objects, or have a focal distance of 3-5 to 3 inches. The sharpness of vision can often be greatly improved by attention to such astigmatic conditions as may be present, and their correction by means of cylindrical glasses.
- C., glauco'matous. See Cataracta glau-

**C.**, **green.** (F. cataracte verte.) The same as Cataracta glaucomatosa.

C., gyp seous. (Γύψος, chalk.) A cata-

raet with a chalky opacity.

C., hard. (F. cataracte nucléolaire dure, c. dure des veillards; I. cataratta lenticolare dura, or facoseleroma.) A eataract iu which the lens is hard; phaeoselerosis.

C., hy'aloïd. (Υαλος, glass; είδος, likeness. I. cataratta ialoidéa.) Cataract supposed to be due to opacity of the anterior layers of the

vitreons hamour.

C., im'mature. (L. immaturus, unripe. G. unreifer Stuar.) Cataract in its early stage. Incipient, unripe, or imperfectly developed eataract.

C., in fantile. (L. infantilis, belonging to infants.) The same as Congenital cataract

C., ju'venile. (L. jurenis, a yonth.) Cataract occurring about the age of puberty. In one form the opacity commences near the nucleus, and gradually extends towards the periphery. In another form the stellate arrangement of the fibres of the lens is well marked; and in a third and more slowly developing form, the opacity is diffuse with radiatious towards the periphery of the lens, and with white dots and patches distributed in it.

C. knife, Barth's. The same as Beer's knife, which was indeed first used by Barth.

C. knlfe, Beer's. This knife is made of two sizes; the longer one 34 mm. long, 10 mm. wide; small one 32 mm. long, 9 mm. wide. It is of triangular shape, with straight back, and oblique or slanting cutting edge; it gradually increases in thickness from the point to the handle. The back forms an angle of 180° with the entting edge. The back is cutting for 1-10th of an inch from the point.

C. knife, blunt-point'ed. (F. conteau mousse.) The same as C. knife, secondary

C. knife, Coop'er's. Resembles Beer's, with the lower angle rounded off; length 28 mm, breadth 6 mm.

C. knife, Dix'on's. Resembles Beer's

knife; length 31 mm., breadth 8 mm.

C. knife, F. Ja'ger's. This consisted of a Beer's knife fixed to a handle, and of a smaller blade connected to the other by a lintton screw, so that it can be pushed forward upon it or withdrawn. This knife is introduced, carried across the eye, and through the cornea on the opposite side, in the same way as Beer's. By pressing on the button with the thnmb the smaller blade is now pushed forward, so as to complete the section of the cornea, while the globe is kept steady by the fixed blade,

C. knife. Guth'rie's. A knife similar to that of F. Jäger, except that one blade is of silver. In using it, the cornea was first pene-trated by a Wenzel's knife; the double knife is then inserted, with the silver blade towards the iris, till the point touches the opposite of the cor-

nea, when the cutting blade is pushed forwards.

C. knife, La Faye's. This knife was a little bent near its point on the flat side, which he thought would prevent injury to the iris in its passage to the opposite side of the cornea.

C. knife, lin'ear. The same as v.

Gräfe's.

- C. knife, Ro'sas'. A double-edged triangnlar knife, cutting at the back as well as the
- C. knife, Santarel'li's. A lance-shaped knife, 10 mm. broad, ground hollow on the under surface.
- C. knife, sec'endary. There are two forms of this-the straight and the convex. the latter the blade has a convex cutting edge. They are both round-pointed, 20 mm. long and 2 mm. wide. They are employed to enlarge the opening made in the first incision for cataract extraction, when it is found that the lens is too large to escape by it.

C. knife, Si'chel's. Is of two sizes; the longer one is 40 mm. long, 10 mm. wide; the shorter is 36 mm. long, 8 mm. wide. Closely resembling Beer's knife.

C. knife, Si'chel's (fil). A knife resembling v. Grafe's linear knife, with the cutting border slightly convex.

C. knife, Tyr'rell's. Is 35 mm. long, 10 wide. Closely resembles Beer's knife, but is shorter, so that the breadth increases more snd-

denly. C. knife, v. Gra'fe's. Is 32 mm. long, 2.5 mm. wide, central point, and straight back and edge.

C. knife, Walker's. A narrow triangular-pointed grooved knife, with blunt sides, 30 mm. long, and 2.5 wide. The cutting part is 3 mm. long. Used for removal of soft cataract.

C. knife, Wal'ton's. Resembles that of Beer; is 26 mm. long, 9 mm. wide, and has the cutting edge forming a segment of a circle.

C. knife, Ware's. The same in form as Beer's knife.

C. knite, We'ber's. This is lance-shaped, 10.25 mm, in length, and a breadth of 10 mm, at a distance of 6.5 mm. from the point. The posterior or inferior surface is hollowed out, the enrye being of 10.719 mm. radins.

C. knife, Wen'zel's. This knife is double-

edged, 35 mm. long, 7 mm. wide, with lancetshaped blade, point not quite central, but rather inclined towards the back.

C., lamel'lar. (L. lamella, a small plate)

Same as C., zonular.

C., lam'inar. (L. lamina, a thin plate.) A synonym of C., zonular.

C., lam'inated. (Same etymon.) A sy-

nonym of C., zonular.

C., lentic'ular. (L. lenticula, the shape of a lentil. F. cataracte lenticulaire; I. cataratta lenticolare, or cataratta cristallina; G. Linsenstaar.) A cataract of which the opacity is in the lens.

C., lenticular, cort'ical. (L. lenticula; cortex, bark. F. cataracte lenticulaire corticale; G. Rindenstaur.) Same as C., cortical.

C., lymphat'ic. (Lympha, water, from νύμφη.) Opacity produced by effusion of lymph

into the pupil.

C., matu're. (L. maturus, mature, ripe. F. cataracte mure, or complète; G. reifer Staar.) Complete or fully formed entaract. The term is usually applied to cataract when fit for operation.

C., mem'branous. (L. membrana, a

membrane.) Same as C., capsular.

C., milk'y. (F. cataracte lactée sedimentaire; G. Milchstaar.) A cataract in which the opaque lens has the colonr and consistence of

C., Morgag'nian. (Morgagni, an Italian physician. G. Morgagnischer Staar, Milch-staar.) That form of cataract in which the cells lying beneath the anterior capsule and the onter layers of the lens substance are fluid, whilst the nuclear portion of the lens is transparent.

C., nu'clear. (L. nucleus, a kernel. F. eataracte nucleaire.) This is a cortical cataract, in which the greater part of the perinuclear substance of the lens has become affected with sclerosis. It occurs in advanced life, and is stated never to become perfectly ripe. Striæ are few. The colour is sometimes deep, almost approaching to black. The size of the lens is not reduced, hence a large section is required for its removal.

C., nu'clear sta'tionary. (L. stationarius, belonging to a post; nucleus, a nnt. cataratta nucleare stazionari de giovanni; G. der stationare Kernstaar.) A form of laminar cataract in which there is a small, white, spherical, rather dense opacity in the nucleus. The remainder of the lens is often transparent. This is often associated with other forms of cataract. The eye is frequently microphthalmic and affected with nystagmus.

c., part'ial. (L. pars, a part. F. cataracte partielle.) Cataract in which only a portion of the lenticular system is opaque. The opacity may be anterior or posterior polar or axial, and is usually stationary.

C., perinuclear. The same as C., laminar.

C., pigment'ous. See Cataracta pigmentosa.

C., pc'lar. (L. polus, the end of an axis. F. c. polaire.) A term applied to a cataract in which the opacity is confined to a central spot on the lens in front or behind.

C., pollar, anterior. (L. polus; anterior, that is before. F. c. polaire anterieure; G. der vordere Polarstaar.) A cataract in which hencath the anterior part of the capsule of the lens is a

small white, and usually round, flat opacity. If it projects into the anterior chamber, it is termed pyramidal cataract, Cataracta pyramidata.

C., po'lar, poste'rior. (L. polus, a pole; posterior, behind. F. cataracte polaire posterieure; G. hinterer Polarstaar.) A rounded, well defined, white disc, usually situated on the onter or posterior surface of the posterior capsule. Its anterior surface is concave. It may sometimes be due to imperfect retrogression of the hyaloid artery. It is often associated with anterior eapsular cataract, and with posterior cortical cataract.

(L. primus, first.) An C., primary. opacity, either of the lens, of the capsule, or of the lens and capsule, which is not the result of an operation, nor of the deposition of lymph in the area of the pupil. Also, a term applied synonymously with congenital cataract.

C., prim'itive. (L. primitivus, earliest of its kind.) Same as C., primary.
C., pyram'idal. (Πυραμίς, a pyramid.)

See Cataracta pyramidata.

C., reclina'tion of. (L. reclino, to bend backwards. G. Umlegung, Dislocation durch den Sklerulstich.) An operation by which an opaque lens is removed from the pupil with a needle. The needle is fine, flattened, and slightly curved towards the point. The pupil is dilated with atropine. The lids being separated with a speculum, and the eye fixed by means of forceps, the point of the needle is made to penetrate the selerotic, about one sixth of an inch from the margin of the cornea, and a little below the horizontal diameter, so as to avoid the ciliary processes, retina, and long ciliary artery. It is slowly pushed inwards behind the lens to the distance of one third of an inch, and the posterior capsule is freely divided. The needle is now partially withdrawn, and the point made to pass between the iris and the lens. When the lens is fairly embraced by the concavity of the needle applied to its upper part, it is pressed downwards and backwards and a little outwards, and is retained in this position for a short time. The needle is then freed from the lens by gentle

Reclination has also been accomplished by means of a needle introduced through the cornea (G. Dislocation durch den Cornealstich).

C., regres'sive. (L. regredior, to go back. F. cataracte regressive; G. regressive Staar.) A rynonym of C., soft.

Also, the same as Cataracta hypermatura.

C., remo'val of, by absorp'tion. The

same as C., discission of.

C., remo val of, by drilling. A method, suggested by Tyrrell, in which a fine needle is introduced through the temporal edge of the cornea, and made to puncture the lens to the extent of 1-16th of an inch; it is then rotated two or three times and withdrawn. The operation requires to be repeated every three, four, or five weeks, the capsule being punctured in a new place on each occasion.

C., remo'val of, by need'ling. The

same as  $C_{\bullet}$ , discission of. C., remo'val of, by solu'tion. See C.,

discission of.

C., sanguin'eous. (L. sanguis, blood. F. cataracte sanguine.) A clot of blood in the pupillary aperture.

C., secondary. (L. secundarius, in the second rank. F. cataracte secondaire; I. cataratta secondaria; G. Nachstaar, häutiger Staar.) Cataract forming after the removal of the lens by accident or operation. It is usually composed of the two surfaces of the capsule, separated only by epithelial cells and remains of the lens substance, which have become opaque.

C., sec'ondary, adhe'rent. (L. adhæreo, ick together.) The adhesion of the iris to to stick together.) the membrane forming a secondary cataract, con-

sequent on iritis.

C., sec'ondary, complicated. (L. secundarius; complico, to fold. F. c. secondaire compliquée.) Secondary cataract, in which the opacity is in part produced by the exudation of lymph and inflammatory products, or in which irido-choroiditis, glancoma, or other disease of the e**y**e, exists.

C., sec'ondary, mem'branous.

same as Cataract, secondary.

C., sedimentary. (L. sedimentum, a settling. F. cataracte sedimentaire.) Soft cataract in which the denser parts have subsided.

C., se'nile. (L. senilis, aged. F. cataracte nucliolaire, c. sénile; G. Altersstaar, Greisenstaar.) Cataract occurring in old persons. It is one of the most frequent forms of cataract, and is usually synonymous with hard or nuclear ca-

C., silic'ulose. (L. dim. of siliqua, a pod.)
The same as Cataracta arido-siliquata.

C., sil'iquose. (L. siliqua, a pod.) Same as Cataracta arido-siliquata.

C., sim'ple. (L. simplex, nneomplicated.) An uncomplicated cataract.

C., soft. (F. cataracte molle, c. liquide regressive, phacohydropsie; I. cataratha molle, facomalacia; G. weicher Kernstaar.) Cataract in which the lens substance is of soft consistence and milky aspect. It usually occurs in young subjects, in diahetic patients, and in cataracts which have undergone degeneration or regressive

C., sol'id. (L. solidus, dense, firm.) The same as Cataract, hard.

C., spindle. Same as C., fusiform.

C., spu'rious. (L. spurius, of illegitimate birth.) Same as C., falsc.
C., sto'ny. (F. cataracte pierreuse; I. cataratta pietrosa.) A cataract in which the lens is very hard.

C., strat'ified. (F. cataracte stratifice.) The same as Cataract, zonular.

C., trabec'ular. Same as Cataracta trabecularis.

**C., traumat'ic.** (Τραῦμα, a wound. F. cataracte traumatique; I. cataratta traumatica; G. Wundstaar.) Cataract resulting from contusion or penetrating wound of the eye, or from violent concussion of the head. The capsule is usually, but not always, ruptured.

C., true. Cataract caused by opacity of the crystalline lens or its capsule.

C., vac'illating. (L. vacillo, to sway to and fro.) A term given to a cataract which is not steady behind the pupil, but moves and vibrates.

C., zo'nular. (L. zonula, a little girdle. F. cataracte zonulaire, or stratifice; I. cataratta zonulare, lumellare, stratificato; G. Schichtstaar.) A form of cataract in which a portion of the lens substance becomes opaque, lying between the cortex and the nucleus, which remain transparent. The opaque part sometimes forms two or three layers. It is more opaque at the periphery than at the centre,

and by oblique light the transparency of the margin of the lens is easily recognisable. Sometimes the centre of the opacity presents a white spot (anterior polar entaract). Vision is bad by spet (anterior polar cataract). Vision is bad by day, but better by night. The amplitude of accommodation is almost always small, and apparent myopia, disappearing under the influence of atropine, is often present. It is frequently associated with rachitis and with convulsion. It may be congenital, but it may also form shortly after birth. It usually affects both eyes simultaneously.

Catarac'ta. See Cataract.

C. accre'ta. (L. accretus, growing on to. G. angewachsener Staar.) That form of cataract in which, after the lens has become opaque, the iris is adherent to the capsule of the lens. It is usually white and opaque. The consistence varies, but it often presents calcareous and phosphatic masses. The presence of the adhesions indicates past iritis or irido-choroiditis, and cataracts are often associated with other disease at the fundus. They are dangerous eyes to operate upon.

C. acquis'ita. (L. acquiro, to add to.) Acquired cataract, in opposition to congenital

cataract.

C. albumino'sa. (L. albumin, white of egg. 1. cataratta albuminosa.) One of Beer's four species of spurious cataract caused by a false membrane occluding the pupil.

C. arbores'cens. (L. arboresco, to grow like a tree. G. baumformiger Staar.) A cataract in which the opacity has a branched form.

C. argent'ea. (L. argenteus, silvery. G. Cholesterinstuar.) The same as C. accreta, but with the addition of deposit of cholesterin scales, giving to the cataract a pearly or silvery aspect.

- C. ar'ido-siliqua'ta. (L. aridus, dry; siliqua, a husk. F. cataracte aride-siliqueuse, c. siliqueuse; G. trockenhülsiger Staar.) Dryshelled cataract. A form of capsular cataract in which the substance of the lens has to a great extent undergone absorption, and the two more or less corrugated layers of the capsule are almost in contact with each other, being separated only by the remains of the lens, impregnated with lime salts and cholesterin scales, and by similarly degenerated cells proceeding from the irregular proliferation of those which line the anterior capsule.
- C. axia'lis. (L. axis, an axle-tree.) See Cataract, jusiform.
- C. brunes'cens. (Mod. L. brunesco, to become brown.) Amaurosis. Also, the same as C. nigra.

C. bursa'ta. (L. bursa, a pouch.) The

same as C. cystica.

C. calca'rea. (L. calcareus, chalky, G. Kulkstaar.) A form of cataract in which, in consequence usually of irido-choroiditis and evelitis, the substance of the lens is infiltrated with salts of lime, especially the carbonate.

C. capsula'ris. (L. capsula, a small

chest.) See Cutaract, capsular.

C. capsularis centralis anterior. Same as Cataract, capsular, anterior.

C. capsula'ris puncta'ta. (L. punctatus, dotted.) Same as C. punctata.

C. capsula'ris spu'ria. (L. capsula; purius, false.) Opaque masses of whatever kind deposited on the anterior surface of the lens. These are sometimes the remains of the pupillary membrane of the feetus, sometimes the remains of iritis and posterior synechiæ; sometimes lymph deposited on the capsule, when it has been in contact with the margins of a perforating nlcer.

C. cap'sulo-centra'lls ante'rior. capsula, a small chest; centralis, in the middle; anterior, that which is before. G. vorderer Centralkapselstaar.) The same as Cataract, polar, anterior.

C. cap'sulo-lenticula'ris. (L. capsula; lenticularis, lentil-shaped. G. Kapsellinsenstaur, Beutelstaar.) Cataract in which opacity was formerly held to be present in both the lens and the capsule. Microscopical examination has, however, demonstrated that the lens is rarely or never affected, remaining clear in very dense cataracts.

C. caseo'sa. (L. caseus, cheese.) A lenticular cataract having the consistence and

appearance of cheese.

C. centra'lis. (L. centralis, in the middle.) Cataract in which the opacity is situated in the centre of the lens; nuclear cataract. See Cataract, central.

- C. centra'lis ante'rior. (L. centralis; anterior, foremost. G. wahrer Kapselstaar.) A small white spot situated on the anterior surface of the anterior capsule of the lens. It is sometimes the result of a perforating ulcer of the cornea and the escape of the aqueous humour, which has allowed the capsule to be temporarily in contact with the edges of the ulcer. Lymph is thrown ont, which subsequently becomes calcified.
- C. centra'lis poste'rior. (L. centralis; posterior, coming after. G. hinterer Centralkapselstaar.) An opacity situated at the posterior pole of the lens, and affecting its posterior lamellæ or the capsule. In the latter case it may be the result of imperfect involution of the hyaloid artery.

C. chorioïda'lis. (Choroid coat.) A synonym of C. pigmentosa.

C. complica'ta. (See Cataract, compli-

C. confirma'ta. (L. confirmo, to strengthen.) The same as Cataract, mature.

C. congen'ita. See Cataract, congenital. C. congen'ita caeru'lea. (L. caerulèus, blne.) A variety of C. punctata, in which, by strong illumination, the spots have a blnish tinge.

C. congen'ita puncta'ta. Same as C. punctata.

C. consecuti'va. (L. cum, with; sequor to follow.) Cataract following the occurrence of other diseases of the eye.

C. cortica'lis ante'rior. bark; anterior, in front. F. cataracte polaire anterieur; G. vorderer Rindenstaar.) Opacity affecting the anterior layers of the lens.

C. cortica'lis poste'rior. (L. cortex; posterior, hinder. G. hinterer Rindenstaar.) Opacity affecting the posterior layers of the lens. It is often stellate, or variously formed.

C. cum bur'sa icho'ram continen'te. (L. bursa, a pouch; Gr. ἰχώρ, corrupted jnice; L. continco, to hold.) The same as C. putrida. C. cum zo'nula. (L. eum, with; zonula,

a little girdle.) Same as Cataract, zonular.

C. cys'tica. (Κύστις, a bladder. F. cataracte burscolée; G. Bentelstaar, Balgstaar.) Cataract in which the whole substance of the lens is reduced to a fluid consistence, with cholesterin scales and calcarcous granules diffused through it, whilst still enclosed in the nnrup-

tured capsule.

C. dehis'cens. (L. dehisco, to split open.)
Term applied by Siehel to that form of cortical cataract in which the opacity is chiefly marked in the direction of one or several meridians corresponding to the natural sectors.

C. dendritica. (Δενδρον, a tree. G. banmformiger Staar.) A form of anterior capsular cataract in which the opacities present a

branched or tree-like form.

Also, one of Beer's four species of spurious cataract caused by the detachment of the uveal pigment, and its adherence to the capsule of the

lens in an irregular tree-like form.

C. diabe tica. (Διά, through; βαίνω, to walk. F. cataracte diabetique.) Cataract occurring in the course of diabetes. It is believed to be due to the augmented density of the blood causing an exosmosis of the watery constituents of the lens. followed by loss of transparency of the fibres, and a deposit of salts. The lens is usually soft and uniformly opaque. Both eyes are commonly affected. In consequence of other diseased conditions of the eye being often present, the question of operation should be very carefully winhed. weighed.

It has been artificially produced in frogs by

injecting sugar into the blood.

C. dimidia ta. (L. dimidiatus, part. of dimidio, to divide into halves.) A form of cataract in which a line of opacity divides the lens

into two more or less unequal parts.

C. dissemina'ta. (L. disseminatus, part. of dissemino, to spread abroad. F. c. disseminee.) Term applied to a cataract in which the opacity appears to be due to a number of fine cloudy or opaque spots distributed over the surface or throughout the substance of the lens.

C. du'ra. (L. durus, hard.) See Cataract, hard.

C. elas'tica. (Mod. L. elasticus, from Gr. ελασμα, a nuctal plate.) Term applied to those forms of eystic or of secondary cataract in which the capsule becomes so firmly adherent to the adjoining parts as to resist repeated efforts to lacerate it in needle operations.

**C. ergot'ica.** (F. ergot, a spur. G. Krivrankheitstaar.) Cataraet occurring in the belkrankheitstaar.)

course of ergotism.

C. fenestra'ta. (L. fenestra, a window. gefensterter Staar.) A form of eataract in C. fenestra'ta. which the opaque lines are so disposed as to present a kind of trellis-work pattern on the lens.

C. fibro'sa. (L. fibra, a fibre.) A term applied to old-standing cataracts, in which secondary metamorphoses have occurred, and a dense layer of connective tissue has formed on the inner side of the capsule. Occasionally the whole lens is converted into this kind of tissue.

C. flu'ida. (L. fluidus, fluid.) See Cata-

ract, fluid.

C. flu'ido-du'ra. (L. fluidus; durus, hard.) A cataractous lens with a hard nucleus surrounded by soft or fluid cortex.

C. fusiform'is. (L. fusus, a spindle; forma, likeness.) See Cataract, fusiform.

C. gelatino'sa. (Gelatin.) A large, swollen cataract, having a gelatinous consistence. The opacity is chiefly cortical.

C. glau'ca. (Γλαυκός, bluish-grey.) Λ synonym of Glaucoma.

C. glaucomato'sa. (Γλαύκωμα, glau-

coma.) This form of cataract is hard and bulky. The degeneration commences at the centre, and extends peripherically. In glaucoma the lens often appears opaque by direct light, when the ophthalmoscope shows that it is capable of transmitting a large amount of light.

C. hæmorrhag'ica.

(Αίμορραγικύς, biable to hæmorrhage.) A synonym of C. nigra.

C. heredita ria. (L. heres, an heir. G. angeborener Staar.) The same as Cutaract,

congenital.

C. hypermatu'ra. (' $\Upsilon \pi \ell \rho$ , above; L. matura, to ripen. G. uberreifer Staar; regressiver Staar.) Term applied to cataract which has usually been of long duration, and in which the lens is shrivelled, and its remains, blended with that of the capsule, are variously marked. The iris is often retracted and tremulous. The chances of success after an operation are considerably reduced in such cases.

C. icho'rem te'nens. (' $I_{\chi}\omega\rho$ , serous matter; L. tonens, part. of teneo, to contain.) The same as C. putrida.

C. immatu'ra. (L. immaturus, unripe.)

Incomplete opacity of the lens.

C. incipiens. (L. incipio, to begin. G. rudimentar Staar.) Commencing opacity of the lens. The early or immature state of cataract.

C. interstitia'lis. (L. intersto, to stand between. F. cataracte interstitielle.) The same as Cataract, fluid.

C. lac'tea. (L. lacteus, milky. G. Milch-staar.) Same as Cataract, fluid.

C. lactico'lor. (L. lac, milk; color, colour.) Same as Cataract, milky. C. lapid'ea. (L. lupis, a stone.) A sy-

nonym of U. ossea.

C. lenticula'ris. See Cataract, lenticular. C. lenticula'ris cortica'lis. See Cataract, lenticular, cortical.

C. lenticula ris nuclea ris. C. nuclearis.

C. lenticula'ris tota'lis. Same as C. totalis.

C. liq'uida. (L. liquidus, fluid.) Cataract, fluid.

C. lymphat'ica. See Cataract, lym-

C. marmora'cea. (L. marmora, marble. G. marmorrirter Stuar.) A form of cutaract in which the opacity presented a marbled appear-

C. matu'ra. (L. maturus, ripe. F. cataracte mûre.) Complete opacity of the lens. Advanced or developed cataract.

C. matures'cens. (L. maturesco, to

ripen.) Cataract not yet mature.

C. membrana cea. (L. membrana, a membrane. G. hautiger Staar.) Same as C. arido-siliquata.

Also, false cataract from effusion of lymph into

the pupil.

C. mi'grans. (L. migro, to wander.) A dislocated and opaque lens which at times occupies its ordinary position, and at others shifts into the anterior chamber.

C. mix'ta. (L. mixtus, mingled.) A cataract with a hard nucleus and a softer peri-

pherv

C. mol'lls. (L. mollis, soft.) See Cataract,

C. Morga'gnian. See Cataract, Morgagnian. C. na'tans. (L. natans, part. of nato, to swim. F. cataracte tremblante; G. Zitterstaar, Schwimmstaur.) Swimming or floating cataract. A term applied to a cataractous lens when dislocated into the anterior chamber, or when, though still in its proper position, it moves with every movement of the head, owing to partial or complete rupture of the suspensory ligament.

Also, used synonymously with C. cystica.

C. nata'tilis. (L. natatilis, able to swim.) Same as C. natans.

C. ni gra. (L. niger, black. F. cataracte noire ; G. schwarzer Graustaar.) Black cataract. Cataract in which the lens is deeply stained. It is believed that this is sometimes due to the colouring matter of blood.

Also (G. schwarzer Staar), a synonym of

Amaurosis.

C. nuclea'ris. (L. nucleus, a kernel. G. Kernstaar.) Opacity of the substance, and especially of the central portion, of the lens.

C. os'sea. (L. osseus, bony. F. cataracte purreuse, or platreuse.) Bony cataract. A form of cataract resulting from the calcification of fibrous cataract.

C. partia'lis stationa'ria. (L. stationarius, belonging to a post.) The same as C. pyramidata.

Also, applied to other cataractous opacities which long remain unchanged in extent. See Caturact, nuclear stationary.

C. perinuclea ris. (Περί, around; L. nucleus, a kernel.) Same as Cataract, zonular.

C. peripher'ica. (Περιφίρω, to earry around. F. c. peripherique.) Cataract iu which the opacity affects the external or marginal layers of the lens.

C. pigmento'sa. (L. pigmentum, paint. F. cataracte pigmenteuse, c. uveene.) A term for that form of opacity which depends upon the deposit of the black pigment of the uvea on the lens capsule.

C. polaris anterior. (L. polus, the end of an axis; auterior, foremost.) The same as

C. centralis anterior.

C. pola'ris poste'rior. (L. polus; posterior, that which is behind.) The same as C. centralis posterior.

C. progressiva. (L. progredio, to advance.) Cataract which more or less rapidly

advauces, which does not remain stationary.

C. pseu do-membrano'sa. (Vévõos, falsehood; L. membranacus, of skin. F. cataracte pseudomembraneuse.) A form of false racte pseudomembraneuse.) A form of false cataract, consecutive upon iritis or upon iridocyclitis, and characterised by the presence of a sheet of false membrane covering the auterior surface of the lens, its thickness bearing a certain relation to the violence of the previous inflammation.

C. puncta'ta. (L. punctatus, pointed. F. cataracte ponctuée; G. Punktstaar, punctirtir Staar.) A form of cataract in which the opacity

presented a dotted aspect.

C. purulent'a. (L. purulentus, suppurating. F. cataracte purulente; G. Eiterstaur.) Supporation of the lens which may follow injury, either with or without coincident iritis and eyelitis.

Also, one of Beer's four species of spurious cataract caused by pus in the anterior chamber

of the eye (hypopyon).

C. pu'trida. (L. putridus, rotten. cataracte fetide.) In extremely rare cases an oily fluid, sometimes of penetrating rancid odour, has been found to occupy a cavity in the substance of the lens, or between the lens and the posterior capsule, which has received the name of putrid eataraet.

C. pyramida'lis. (L. pyramis, a pyra-

mid.) Same as C. pyramidata.

C. pyramida'ta. (L. pyramidatus, in the form of a pyramid. F. cataracte pyramidule, c. vegetante; I. cataratta piramidule; G. Pyramidenstaar, vorderer Centralkapselstaar.) minute, well-defined, white spot of conical form, the base placed on the lens substance, and the apex pointing forwards and covered by the capsule. The remainder of the lens is often quite clear. It is usually congenital, and is believed to be due to the abnormal contact of the capsule with the membrane of Descemet. Occasionally, remains of iritis and evidence of the previous occurrence of an ulcor of the cornea, in the form of a leucoma, may be observed. In these cases vision may be fairly good, but in the true congenital forms there is more or less nystagmus, with irregular astigmatism and indifferent vision.

C. rudera'ta. (L. rudero, to cover with rubbish.) The same as C. incipiens.
C. sanguinolen'ta. (L. sanguinolentus, full of blood.) One of Beer's four species of spurious cataract caused by effusion of blood into the anterior chamber of the eye (hyphæma).

C. scabro'sa. (L. scabrosus, rough.) That

form of cataract in which the cortical part of the lens is of a dense white and rough-looking aspect.

C. secunda'ria. See Cutaract, secondary. C. secunda ria accre'ta. (L. secundarius, of the second class; accresco, to grow.) The same as Cataract, complicated.

C. seni'lis. (L. senilis, belonging to old people. G. Greisenstaar.) Cataract occurring in an old person.

C. siliqua'ta. (L. siliqua, a pod.) The same as C. arido-siliquata. C. siliqua'ta arida. See C. arido-sili-

quata. C. siliquo'sa. (L. siliqua, a pod.) Same

C. arido-siliquata. C. spu'ria. (L. spurius, false. G. falscher

Staar.) Same as Cataruet, fulse.
C. stella'ta. (L. stella, a star. F. cataracte etoilie; G. Sternstuar.) A form of cataract in which the opacity presents a star-like aspect.

C. stria'ta. (L. strio, to furrow. F. cataracte strice.) Streaked cataract. A form of anterior capsular cataract in which the opacities form hues.

C. tota'lis. (L. totus, all. G. Totalstaar.) Cataract affecting both the nuclear and the cortical substance of the lens.

C. trabecula'ris. (L. trabecula, a little beam. F. cataracte barrie.) A synonym of C. striata.

Also, a term for that condition of pupil in which there is a bar of lymph stretching across it.

C. traumat'ica. See Cutaract, traumatic. C. trem'ulans. (L. tremo, to shake. F. cataracte volante; 1. cataratta tremula; G. Zitterstuar.) Shaking cataract. Cataract in which there is partial or complete luxation of the lens, which so becomes unstable.

C. tumes'cens. (L. tumesco, to begin to swell.) That stage of developing cataract in which the lens is enlarged by the imbibition of water. It sometimes produces well-marked

myopia.

C. variega'ta. (L. variego, to make of various colours. G. gefleckter Staar.) The same as C. marmoracea.

C. ve'ra. (L. verus, true.) Trne or genuine cataract, in opposition to false cata-

C. zonula'rls. See Cataract, zonular. Cataractocatapiesis. (Cataract; καταπίεσις, a keeping down.) Depression of a

Catarac'tous. (Cataract.) with, or being of the nature of, cataract.

Cata'ria. (L. catus, a cat.) The Nepeta cataria, so called because cats like it.

Also, U.S. Ph., the officinal name of the leaves and tops of catnep, Nepeta cataria. It contains a volatile oil, and is stimulant and slightly tonic. It is used to relieve flatulent colic and toothache, and to promote menstruction.

C. vulga'ris. (L. vulgaris, common.) The

Nepeta cataria.

**Catarrh.** (Κατάρροος, eatarrh; from καταρρίω, to flow down. L. eatarrhus; F. catarrhe; I. and S. catarro; G. Katarrh, Schleimfluss.) Inflammation of a mucous membrane, usually restricted by English authors to that inflammation of the upper part of the respiratory mucous membrane which constitutes a cold, for which see Coryza and Catarrh, bronchial. The term was originally applied in consequence of the profuse discharge from the nose and eyes which generally accompanies a cold, and which was supposed to run down from the brain.

Catarrh is also used by some authors as syno-

nymous with Caturrhal inflammation.

C., alcohol'ic. A synonym of the gastritis produced by excessive drinking of alcoholic

liquors.

C., alve'olar. (L. alveolus, a small eavity.) A condition described as a form of inflammation of the lung, in which the organ is found after death of a mottled grey or slatecolour, solid, but not firmly and uniformly so, the consolidated portions being surrounded by greater or less areas of still crepitant lung; bronchial mucous membrane extensively and intensely congested, with much secretion; very often serous effusion into pleura, and generally dilated and thin right ventricle of the heart. Microscopically the lung presents numerous alveoli packed with corpuscular contents, as in catarrhal pneumonia, and also tracts of lines characteristic of the disorder, presenting unequally-filled alveoli with large epithelial cells budding from the walls. It occurs in the adult, and very commonly in children; it generally superveues on chronic bronchial catarrh, and in children, on an acute attack of bronchitis in which there has been lobular collapse.

C., auric'ular. (L. auricula, the outer ear.) A syuonym of Otorrhea.

C., Bos'tock's. A synonym of Hayasthma, after J. Bostock, who wrete about it early

in the nineteenth century.

C., broneh ial. (Βρόγχια, the bronehial tubes.) A term applied to those cases of common cold in which the mucous membrane of the larger bronehial tubes is implicated, but not to such an extent, or with such severity, as to entitle the disorder to the term bronchitis. Aching of limbs, chilliness and heats, sneezing, nasal and lachrymal discharge, hoarseness, soreness under the sternum, loss of appetite, and quick pulse, usually herald the attack; soon there is cough, more or less painful, and then expectoration.

C., chron'ic. Same as Bronchitis, chronic.

C., cys'tic. A synouym of Cystitis.
C., dry. (G. Trockencatarrh.) A applied to cases of bronchitis in which the expectoration is absent, or very scanty and painful, and consisting of small, semitransparent, pearly musses.

C., epidem'ic. (Ἐπιδήμιος, prevalent among a people.) A synonym of Influenza.

C., epithe'lial. (Epithelium.) Catarrhal inflammation of a mucous membrane in which epithelial cells predominate in the secretion.

C., gas'tric. (Γαστήρ, the stomach.) A synonym of Gastritis.

Also, see Gastric catarrh.

C., gas'trie, chron'ic. A synonym of Purosis.

Also, see Gastric catarrh, chronic.

C., gut'tural. (L. guttur, the throat.) A synonym of Laryngitis, catarrhal.

C., hæmorrhag'ic. (Αἰμορραγικός, liable to hamorrhage.) Bronchial catarrh in which there is bleeding from the bronchial mucous surface; or catarrhal inflammation of any mucous surface when there is blood in the secretion from it.

C., intesti'nal. (L. intestina, the intestines.) A synonym of Enteritis, catarrhal.

Ć., larynge'al. A synonym of the catarrhal

form of Laryngitis.

C., mycotic. (Μύκης, a fungus.) Bronchial and nasal catarrh, in which various fungoid forms-bacteria, vibriones, and micrococci-have been found, and bave been supposed to be the cause of the disease.

C., na'sal. (L. nasus, the nose.) A synonym of Coryza.

C. of blad'der. A synonym of Cystitis. C. of fau'ces. (L. fauces, the back of the throat.) A term applied to those cases of a common cold in which the faucial mucous membrane is specially affected, and which go by the name of a sore throat. With the ordinary symptoms of coryza there are redness and puffiness of the soft palate and the neighbourhood, a sense of dryness and itching or pain shooting towards the inner ear, some stiffness and soreness in swallowing, with a short dry cough.

C. of mid'dle ear. See Tympanum, catarrh of.

C. of skin. A term applied by some to the morbid condition of skin resulting in vesicles or pustules.

C. of stom'ach. Same as Gastritis. C. of tu'buli urinif'eri. A term used to describe the condition of the tubuli uriniferi in desquamative nephritis.

**C.**, **pharynge'al.** (Φάρυγξ, the gullet.) A term for pharyngitis of catarrhal origin.

C., post-na'sal. (L. post, behind; nasus, the nose.) Catarrh chiefly affecting the hinder part of the nasal cavities and the upper surface of the soft palate.

C., pul'monary. (L. pulmo, the lung.) A term applied to both bronchial catarrh and

bronchitis.

C., pu'rulent. (L. purulentus, full of pus.) Catarrhal inflammation of a mucous surface in which pus-cells predominate in the secretion.

C., rose. A synonym of Hay-asthma. C., se'nile. (L. senules, belouging to old people.) The chronio bronchitis of the aged, in which there are frequently small patches of pneumonic inflammation. The condition was formerly called peripneumonia notha.

C., sporadic. (Σποραδικός, scattered.)

Ordinary occasional catarrh.

C., suf'focating, nerv'ous. A synonym of Laryngismus strudulus.

C., suffocative. (L. suffoco, to choke.) Bronchial catarrh of an extreme character, or capillary bronchitis, or catarrh with astlimatic or emphysematons complications, so that dyspnœa is a promineut symptom.

Also, a synonym of Croup.

A synonym of Hay-C., sum mer. asthma.

C., ure'thral. (Οὐρήθρα, the urethra.) A term for non-specific inflammation of, and discharge from, the urethra.

C., u'terine. (L. uterus, the womb.) A

synonym of Leucorrhaea.

C., vaginal. (L. vagina, the vagina.) A synouvin of Leucorrhaa.

C., vesical. (L. vesica, a bladder.) A synonym of Cystitis.

Catarrhac'ta. Same etymon and meaning as Cataract.

Catarrh'al. (L. catarrhalis; from κα-ταρρίω, to flow down. F. catarrhal; l. catar-rale; S. catarral; G. katarrhalisch.) Of, or belonging to, or of the nature of, catarrh.

C. croup. See Croup, catarrhal.
C. fe'ver. The fever accompanying bronchial catarrh, consisting chiefly in the sensation of cold-creeping in the flesh.

Also, see Firer, catarrhal.

C. inflamma'tion. A form of inflammation of mucous membrane in which there is at first more or less hyperamia and swelling, succeeded by increased mucous discharge, containing cellular structures, partly escaped white corpuscles of blood, partly products of endogenous growth of the epithelial cells. As the disorder pursues its course the discharge, at first thin and watery, becomes thicker and opaque, and the corpuseles, which rapidly increase in number, undergo a gradual change in appearance until they resemble, or are really, pus cells; there is often swelling, and sometimes ordema, of the submucous tissue: and the exfoliation of epithelium, which from the beginning is more rapid than natural, becomes often so accelerated that exceriations or ulcers are produced. The mucous follicles and other glandular structures often participate in the indammation; they become enlarged by increase and seftening of their cell contents, and frequently ulcerate. When the inflammation becomes chronic the discharge is usually more purulent, the submucous connective tissue may become the seat of fibrillated growth, which produces thickening and hardening, and, it may be, atrophy of the glandular elements; the surface has a granular appearance, and a brownish pigmentation is often noticed. Catarrhal inflammations are most common in weakly and scrofulous persons and in parts subjected to frequent exposure to irritating substances.

C. jaun'dice. See Jaundice, catarrhal. See Nephritis, catar-C. nephri'tis.

rhal. C. ophthal'mia. See Ophthalmia, ca-

tarrhul. C. pneumo'nia. See Incumonia, catar-Phal.

Catarrhan'sis. **Catarrhan**'sis. (Κατά, downwards; ρ'αίνω, to sprinkle.) Infiltration, bosprinkling.

Catarrhec'tic. (Καταρφήγνυμα, to break rth. to have a violent discharge.) Having forth, to have a violent discharge.) Having power to cause the bowels or bladder to act. Applied formerly to certain medicines.

Catarrheu'ma. (Καταρρέω, to flow down.) A defluxion. Formerly used for ca-

tarrh.

Catarrhex'ia. Otherwise Catarrhexis. Catarrhex'is. (Καταρρήγνυμι, to burst forth; κατάρρηξις, used by Hippocrates, Coac. Pranot. t. 240.) A sudden and violent effusion. Applied formerly to a profuse diarrhea; also to a large and rapid discharge of blood from the bowels.

C. ve'ra. (L. verus, true.) Hæmorrhage from the bowels.

Cat'arrhine. Of, or belonging to, the Catarrhini.

Catarrhi'ni. (Κατά, near; ρίε, the nose.) A Section of the Order Quadrumana, Class Mammalia, having the nostrils close together and oblique, the septum being thin; a bony meatus auditorius; opposable thumbs on all the limbs; a dental formula as in man, with prominent incisors and large pointed canines. They inhabit the Old World, and are represented by the mandril, gibbon, chimpanzee, orang, and gorilla.

Catarrhoe'a. (Kará, down; pola, a flow.) A synonym of Rheumatism.

Catarrhoitic. (Κατάρρους, catarrh.). Catarrhal.

Catarrh'opa phyma'ta. (Karao- $\dot{\epsilon}\pi\omega$ , to hang down;  $\dot{\phi}\bar{\nu}\mu a$ , a growth on the body.) Tubercles or excrescences which depend from the body.

**Catar rhophe.** (Καταρροφέω, to swallow down.) Term for absorption.

Catarrhophe'sis. (Καταρροφέω, to swallow down.) Absorption.

**Catarrhóp'ia.** (Κατά, dowu; ροπή, a sinking.) The tendency of fluids to the lower parts of the body.

Catarrhopneumonia. Catarrhal pneumonia.

Catar'rhopos nou'sos. (Κατάρροπος, inclining downwards; νωῦσος, a discase.) A remission of a disease or its decline.

Catarrho-rheumatic ophthal'mia. See Ophthalmia, catarrho-rheumatic.

Catarrhos'chesis. (Κατάρρους, catarrh; σχέσις, a checking.) A suppression of catarrh.

Catarrh'ous. Same as Catarrhal. Catarrh'us. Same as Catarrh. Also, in some old authors, peripuenmonia

C. a conta'gio. (L. a, from; contagium, contagion.) Influenza.

C. à frigo're. (L. a; frigus, cold.) Catarrh.

C. ad na'res. (L. nuris, a nostril.) Nasal eatarrh.

C. æsti'vus. (L. æstirus, belonging to summer.) Hay fever.

C. aur'is me'diæ. (L. auris, the ear; medius, in the middle.) See Tympanum, caturrh of.

C. bellinsula'nus. Mumps.

C. bronchia lis. (Βρόγχια, the bronchial tubes.) Bronchial catarrh.

C. bronchio'rum. (L. bronchia, the bronchial tubes.) Bronchitis.

Also, a synonym of Senile catarrh, or Perinneumonia notha.

C. ca'vi tym'pani. (L. cavum, a hollow; See Tympanum, catympanum, a drum.) tarrh of.

C. communis. (L. communis, common.) Ordinary eatarrh,

C. epide micus. (Έπιδήμιος, prevalent among a people.) Influenza.

C. genita'lium. (L. genitale, the genital member.) Leucorrhœa.

C. gonorrhœ'a. Gonorrhœa.

C. intestina'lis. (L. intestina, the intestines.) Mucous diarrhœa.

C. laryn'gis.  $(\Lambda \dot{a}\rho \nu \gamma \xi, \text{ the larynx.})$ Catarrhal laryngitis.

C. muco sus. (L. mucosus, slimy.) Bronchial eatarrh with free secretion.

C. pec'toris. (L. pectus, the ehest.) Bronchial catarrh.

C. pharyn'gis. Pharyngeal catarrh.

C. pulmona'lis. (L. pulmo, the lung.) Bronchial eatarrh.

C. pulmo'num. (L. pulmo.) Bronehi-

C. senilis. (L. senilis, belonging to old people.) Chronic bronchitis. See Catarrh, senile.

C. sic'cus. (L. siccus, dry.) Bronehial eatarrh with seanty secretion or none.

C. suffocati'vus. (L. suffoco, to cheke.) Croup.

Also, a synonym of Senile cutarrh, or Peripneumonia notha.

C. suffocati'vus barbaden'sis. Croup. C. trachea'lis. (Τραχεία, the windpipe.) Croup.

 $\hat{\mathbf{C}}$ . urethra'lis.  $(O\dot{\nu}\rho\dot{\eta}\theta\rho a, \text{ the urethra.})$ Gleet, gonorrhœa.

C. u'teri. See Uterine catarrh.

C. vagina. (L. vagina, the vagina.) Leucorrhœa.

C. ventric'uli. (L. ventriculus, the stomach.) See Stomach, catarrh of.

C. vesicae. (L. vesica, the bladder.) Cystitis.

Catar'rhysis. (Καταρδέω, to flow down.) A defluxion, or voiding downwards.

Catar'tisis. Otherwise Catartismus. Catartis'mus. (Καταρτίζω, to replace a luxated bone; καταρτισμός, used by Paulus Egineta, l. vi.) The restoration of a dislocated bone to its place.

Catasar ca. (Κατά, down; σάρξ, flesh.) Synonymous with anasarea.

(Κατασκευή, preparation, Catasceu'e. the constitution of a thing.) A term for structure.

**Cataschas'mus.** (Κατασχάζω, to scarify, or open with a sealpel.) A scarification, or even the deeper incisions necessary in gangrenous or sphacelated parts. Dioscorides, vii. I.

Catastag'mos. (Καταστάζω, to distil.) An old term for distillatiou.

Applied to eatarrh, according to Celsus, iv, 5; also to coryza, and especially to that form which chiefly attacked the fauces and chest.

**Catastalag'mus.** (Κατασταλάω, to let fall in drops.) Coryza; nasal eatarrh.

**Gatastal'tic.** (Κατά, downwards; στέλλω, to contract.) This term was originally employed to signify astringeut.

Term applied by Dr. M. Hall, in his 'Diastaltie

Nervous System,' to the action of the vis nervosa

from above downwards. Catas'tasis. ( $K\alpha\theta i\sigma\tau\eta\mu$ , to appoint.) Used by Hippocrates for the constitution, state, or condition of a thing.

The restoration of a bone or member to its own place; reduction of a dislocation, Hippocrates, de

Fract. iii, 38.

Catatasis. (Κατατείνω, to extend.) Used by Hippocrates, as stated by Erotianus, Onomast. fol. 64, for the extension of a fractured or dislocated limb; also, to replacement or reduc-

Catath'esis. (Κατατίθημι, to lay down.)

Deposition or depression.

Catathlip'sis. (Kaτά, down; θλίβω, to press.) Oppression.

Catat'ony. (Κατατείνω, to stretch tight.) A name for a psychosis with motor tension symptoms, which on the motor side take the form of catalepsy, tetanus, and stuper, and on the psychical, the form of simple melancholy and melancholia attonita.

Catatropha. (Κατά, downwards; τρο-

φή, food.) Diarrhæa.

Cataver tebral el'ements. (Kará, down; vertebra.) The portions forming the spinous process of the hemal arch of a vertebra, being the hæmal spine.

Catawba tree. The Catalpa syringifolia.

Catax'is, (Κατάγω, to break.) A breaking; the progress of catagma.

Catch'fly. The Apocynum androsæmifolium, and also the Silene virginiea.

C., Lo'bel's. The Silenc armeria.

C., red. The Silene muscipula.
C., red German. The Lychnis viscaria. Catch'weed. The Galium aparine.

Cate. Old name for Catechu. (Quincy.) Cat'echin. C19H18O8. A substance found in catechu. It forms white silky needles, soluble in alcohol and ether, sparingly in cold water; the latter solution is coloured green by ferric salts.

Cat'echu, U.S. Ph. (Hind. cate, tree; chu, juice. F. cachou; I. cacchiu; G. Kate-chu, Kaschu, Kateschu.) An extract prepared principally from the wood of Acacia catechu, originally known as Terra juponica. It is prepared by boiling the inner reddish-brown portion of the wood in water in unglazed earthen vessels until all the soluble matter is dissolved. It is evaporated, at first by artificial heat and then by the sun, till it has become thick; it is then spread upon a mat to dry, and while still soft it is divided by means of a string into square pieces. It is imported from Pegu, and is also made in Behar, Nepaul, and other parts of Northern India. It occurs in irregular masses of a blackish-brown to a yellowish-brown colour, enveloped in leaves, soluble in water, inodorous, with a bitterish sweet, very astriugent taste; the fracture is sometimes rough, sometimes resinous and shining. It contains catechu-tannic acid, catechnic acid, and a little querectin. Its properties are similar to those of Catechn pallidum. The B. Ph. does not recognise this form of eatechu.

C., are'ca. See Areca catechu.

C., Bengal'. A term applied to the C. pallidum; and also to the produce of Acacia catechu.

C., Ceylon'. Probably the same as Arica

catechu; but often mixed with the husks of

C., ni'grum. (L. niger, black.) A synonym of Catechu, U.S. Ph.

C., pale. See C., pallidum, B. Ph.

C., pallidum, B. Ph. (L. pallidus, pale. F. gambir cubique ; G. Gambir-catechu ; Hind. gambir.) An extract of the leaves and young shoots of Uncaria gambir, prepared at Singapore and in other places in the Eastern Archipelago. It occurs in cubes or masses of coherent enbes, the former about an inch in diameter, light and porous, reddish brown externally, yellowish or brick red internally, breaking easily, with a dull earthy surface. Taste bitter, very astringent, and mucilaginous, succeeded by slight sweetness; entirely soluble in boiling water, partially in cold. It contains catechu-tannic and catechuic acids, with gum, a colouring matter, and lignin. Catechu is a powerful astringent and a tonic in diarrhea and mucous discharges; it is used for toothpowders, and injection in vaginal discharges and genorrhea, and a gargle in sore throat. It has also been used as an application to indolent ulcers, and in epistaxis. Dose, 10-30 grains.

C., Pegu'. Large masses, obtained from Burmah, composed of flat cakes wrapped in leaves of the Nauclea brunonis. It is a good variety of

the dark catechu.

C., pla'no-eon'vex. A form obtained from India, in eircular cakes, flat on one side and rounded on the other. It is probably the produce of the Acacia catechu; but it has sometimes been supposed to be obtained by re-solution and evaporation from eatechu derived from other

C., square. Same as C., pallidum, B. Ph. Catechu'ic ac'id. A synonym of Ca-

techin.

Catechu'retin. C<sub>38</sub>H<sub>28</sub>O<sub>12</sub>. A product of the action of hydrochloric acid on catechin.

Catechutan'nic ac'id. (G. Catechurbsaure.) C<sub>38</sub>ll<sub>34</sub>O<sub>15</sub>. The tannic acid of gerbsaure.) C<sub>38</sub>ll<sub>34</sub>O<sub>15</sub>. The tannic actechu; ferric salts colour it a dirty green.

Cateia dion. (Dim. κατιάς, a surgical knife or instrument.) Name for a long instrument, mentioned by Aretæus, de Cur. Morb. Chron. i, 2, p. 297, ed. Kuhn, formerly introduced into the nostrils to induce hemorrhage for relief of headache.

Catelectroton'ic. Relating to Catelectrotonus.

C. a'rea. The space in which the condition

of catclectrotonus is manifested.

Catelectrot'onus. (Cathode; cleetro, for electricity; τόνος, tension.) The electrotonic condition of a nerve near to the cathode of a direct galvanie current; it is a condition of increased excitability. See Electrotonus.

Catello'rum o'lcum. (L. eatellus, a puppy; oh um, oil.) Olive oil in which whelps have been boiled with sweet herbs and afterwards

strained.

Catellus ciner'eus. (L. catellus, a puppy; cinereus, resembling ashes.) Old term for a enpel, which had a head resembling that of

a dog. (Quincy.)

Caterna. Italy; on the left bank of the water used, along with its mud, for bathing in theumatic affections.

Cate'næ mus'culus. (L. catena, a chain; musculus, a muscle.) The tibialis anticus muscle

Catenif'erous. (L. catena; fero, to bear.) Applied to a body the surface of which is marked with coloured lines like chains.

Cate'nula. (Dim. of L. catena, a chain. G. Kettehen.) The small twisted filaments found in the capsules of the Hepatica.

Cate nulate. (Same etymon.) Chainlike; placed end to end.

Cateone'sis. (Καταιόνησις, from κα-ταιοναω, to pour over.) A fomentation. Washing with warm water.

Caterpillar. (Old F. chatepeleuse, from chate, a she-cat; pclouse, hairy; from L. pilosus, hairy.) The larva of lepidopterous and other insects. Many species were formerly eaten; and the natives of Southern Africa esteem some species highly species highly,

C., proces'sionary. See Bombyx proeessionea.

C., veg'etable. The Spharia sinensis. Catesbæ'a. (Catesby.) A Genus of the Nat, Order Cinchonacca.

C. spino'sa, Linn. (L. spinosus, thorny.) Hab. Antilles. Fruit acidulous, and pleasant to eat.

Cates by, Mark. An English botanist, born in 1680, died January 3, 1750.

Catevala. Common aloe. (Quincy.)
Cat'gut. (F. corde à boyau; I. minugia;
G. Darmsaite.) The intestines of sheep removed while warm, soaked in water, scraped to remove the mucous and peritoncal coats, treated in a weak solution of potash, and then passed through

a polished hole in a piece of brass. Also, the Galega virginiana.

C., car'bolised. Catgut soaked for two months in an emulsion of one part of crystallised carbolic acid, dissolved in the smallest quantity of water and five parts of olive oil. It forms an excellent and reliable ligature for arteries.

Ca'tha. A Genus of the Nat. Order Celastraceæ.

C. edu'lis, Forskal. (L. edulis, eatable.) An infusion of the leaves, called khat or Abyssinian tea, is used as a heverage and an excitant, and to ward off infectious diseases; they are also caten to prevent fatigue.

C. parviflo'ra, Forsk. (L. parvus, small; flos, a flower.) Produces wakefulness.

C. spinosa, Forsk. (L. spinosus, thorny.) Used as C. cdulis.

**Cathæ'resis.** (Καθαιρέω, to destroy or waste; ι αθαίρεσις, used by Hippocrates, Ερία. vi, s. 3, t. 2.) A consumption or wasting of the body happening without any manifest evacua-tion; also, such loss as arises from purging or the like.

The thinning or depression produced by forced exercise.

The action of a eathartic.

Also, the action of a mild caustic or cathre-

Cathæret'ic. (Same etymon. G. schwächend.) Having power to destroy, waste, or consume, either by internal or external action. Applied to medicines which so act.

Cathæretics. (Καθαίρεω, to destroy.) Remedies which consume superfluons flesh. According to old anthors, a division of caustics which includes the mild ones.

Also, medicines which produce Catharesis.

Catharanth'us pusillus. Vinca pusilla.

Catharctic. Same as Cuthartic.

**Catharis'mus.** (Καθαρισμός, a cleausing.) Depuration.

**Cathariza'tion.** ( $K\alpha\theta\iota\iota\rho l\zeta\omega$ , to cleanse.) The process of thoroughly cleansing.

**Cathar'ma.** (Καθαίρω, to purge.) Faces or exerement. Anything purged from the body naturally, or by art.

Cathar mos. (Καθαίρω, to purge.) Purgation by medicines, also the cure of a disease by

superstitious remedies. (Quiney.) **Cathar'sis.** (Kaθaίρω, to purge. F. catharsie; G. Reinigung.) A natural or artificial purgation of any passage of the body.

Cathartic. (Καθαρτικός, from καθαίρω, to purge. F. cathartique; I. catartico; G. abführend, kathartisch.) Sometimes used as synonymous with purgative, but generally employed to denote a medicine which is capable of producing the second grade of purgation, of which laxative is the first and desired.

is the first and drastic the third.

C. ac'id. (F. acide cathartique; G. Cathartinsäurc.) C<sub>180</sub>H<sub>192</sub>N<sub>4</sub>SO<sub>82</sub>. The active purgative principle of seuna. A black, colloid. uncrystallizable glucoside, in part found free in the leaves, in part combined with ealcium and magnesium. Insoluble in ether, slightly only in alcohol and water; it is also dissolved by boiling with alkalies. It is decomposed by acids into grape-sugar and cathartogenic acid. It has a slightly astringent after-taste; it acts as a painful purgative in doses of 1·5 to 3 grains.

C. pota'to. The root of the Ipomaa qua-

moclit, or Batatas percarina.

C. salt. A name for Epsom salt, magnesium sulphate; and Glauber's salt, sodium sulphate.

Cathart'icum aur'eum. (L. catharticus, purgative; aureus, golden.) Gamboge.

Cathartin. (Same etymon.) A principle found in senna leaves, formerly supposed to be the active purgative principle, now considered a mixture. It is a reddish-yellow uncrystallizable substance, having a bitter, nauseous taste; soluble in water and alcohol, insoluble in ether.

**Cathartocar pus.** (Καθαίρω, to purge; καρπός, fruit.) A Genus of plauts, taken from

the Linn. Genus Cassia.

C. bacil'lus, Pers. The Cassia bacillaris.
C. fis'tula. (L. fistulu, a pipe.) The Cassia fistula.

C. moscha'tus, Don. The Cassia moschata.

Cathartogen'ic acid. (G. Cuthartogeninsaure.) C<sub>139</sub>II<sub>116</sub>N<sub>4</sub>SO<sub>44</sub>. Λ product of the action of hydrochloric acid on eathartic acid; it is a yellowish-brown powder.

Cathartoman nite. A crystalline sugar found in senna leaves; insusceptible of fermentation, and having no deoxidating action on cupric suboxide.

**Cath'edra.** (Καθέδρα, a seat, the sitting part.) The anus.

Cathemer inus. (Καθημερινός, daily, on this day.) Lasting a day. The same as Quotidian. (Galen.)

**Cathemerius.** (Καθημέριος, day by day.) Quotidian.

Catheretic. Otherwise Catheretic.
Catheter. (Καθετήρ, anything let down into; from καθίημι, to send down. L. fistula ænea; F. algalie, sonde; I. catetere, algalia, sciringa; S. algalia, sonda; G. Katheter, Hannanfer.) A loug tubular instrument, of metal or clastic gum, used for passing down the urethra into the bladder for

the purpose of removing the contained urine. Catheters are generally more or less curved at the end, and are made to contain a wire plug for the purpose of removing impediments; some use a straight catheter.

Also, a tube for introduction into other cauals. **C. à boule.** (F. à, with; boule, a ball.) A catheter having a narrow end, terminated by a larger or smaller bulbous enlargement.

C., A'mussat's. (l. catetere rettilineo.)
This eatheter is straight.

C., Beni'que's. A form of eatheter in which the shaft is at a right angle to the terminal part.

C., bent. The same as C., coulé.

C., bi coudé. (F. bis, twice; coudé, elbowed.) A doubly-bent eatheter; the angles are very obtuse.

C., blood. An ordinary large catheter with large orifice and a stylet, which completely fills the channel of the instrument. Used for clearing out blood from the bladder.

C., Bro'die's. The curve of this catheter is straighter or more open than that of Liston's

catheter.

**C.**, con'ical. (L. conus, a cone.) A catheter which tapers more or less rapidly towards the extremity.

**C.**, cou'dé. (F. coudé, elbowed.) The same as C., elbowed.

C., doub'le-chan'nel. (F. sonde à double courant.) A catheter having a septum down the middle, so that fluids injected down one side

escape, after entering the bladder, by the other.

C., el'bowed. (Sax. elboga, from el. a eubit; boga, a bow. F. algalie à condé.) A eatheter having a short bend about an inch from the extremity. Useful in enlarged prostate. It is usually made of elastic gnm, the extremity being of firmer substance than the remainder.

C., Eusta'chian. A fine tube of silver or clastic gum, about six inches long, the outer ond somewhat finnel-shaped, the distal end a little curved. It is used in the diagnosis and treatment of ear diseases; and is passed along the floor of the nasal fossa, close to the septum, to the mouth of the Eustachian tube, which it enters.

C., fe'male. The instrument used for the female is usually a short silver tube, sometimes telescopic, with a very slight curve at its extremity; but many prefer to use an ordinary

elastic male catheter.

C., Ge'ly de Nantes. This catheter has a curve equal to one third of a circle of 12 centimeters in diameter.

C., Heur'teloup's. A catheter in which the curve is one fourth of a circle, having a diameter of 8 centimeters.

C., Holt's self-retain'ing. A vulcanised india-rubber eatheter, having two wings, which fold down as they are pressed through the nrethra, but open on entering the bladder.

C., Le'roy d'E'tiolle's. A catheter the curve of which is one fourth of a circle of 12

centimeters in diameter.

C., Lis'ton's. The curve of this eatheter is a segment of a circle 4 inches in diameter.

C., Mer'cier's. The same as C., elbowed.
C., na'sal. (L. nasus, the nose.) Same as
C., Eustachian.

C., Pe'tit's. A eatheter of the form of an S.

C., pros'tate. A catheter of extra length and of greater and more extended curve than

usual. Used in retention of urine from enlarged

prostate.

A straight, gum elastic C., rail way. catheter, with large terminal aperture. It is introduced over a catgut bougie or guide, which is passed through the stricture.

C., self-retaining. Catheters made of vulcanised india rubber, bent sharply at the point, so as to hook over the neck of the bladder.

C., Sims'. A short sigmoid or siunous catheter, with a double curve, and perforated near the extremity with a series of fine holes. Used for retention in the bladder after the operation for vesico-vaginal fistula.

C., soft met'al. Catheters which are used on account of their plasticity, retaining any bend that is impressed on them. They are made of that is impressed on them. an alloy of tin and lead.

C., ta'per. The same as C., conical.

C., Thomp'son's stric'ture. A catheter made of silver, with fine tapering point and an

extra strong stem.

C., ver'tebrated. (L. vertebra, a joint.) An instrument, invented by Sayre, consisting of a series of hollow silver discs, which fit into each other end to end, and held together by a linked chain, which can be tightened at pleasure, so as to make the instrument a stiff rod to be used as a probe; or slackened, so that it may assume a curved shape, when it may be used as a catheter where the urethra is tortuous or the prostate is enlarged.

C., wing'ed. An elastic catheter having a wing-like projection on each side near the distal end, with the object of self-retention in the bladder; the wings lie by the side of the instrument during introduction, and expand when in

the bladder

C., Wor'mald's. A silver eatheter for prostatic diseases, made with flattened point.

C., Wright's self-retain'ing. A catheter made of vulcanised rubber, having a how or loop on each side. It is introduced with a stylet.

Cathet'eris. (Καθετήρ.) A catheter. Cath'eterise. (Same etymon.) To introduce a catheter.

Catheter'isis. (Same etymon.) Catheterism.

Cath'eterism. (Same etymon. F. catheterism; I. and S. cateterismo; G. Katheterismus.) The operation of introducing the catheter be it into the urethra, Eustachian tube, or other canal.

C., Eusta'chian. The introduction of the

Eustachian catheter.

C., fore'ible. The introduct on of a catheter into the bladder by main force through a stricture or an enlarged prostate. A procedure

not usually recommended now.

G. Catheterismus der Luftwege.) The introduction of a metallic or an elastic tube through the nose or mouth into the larynx, for the purpose of accomplishing artificial respiration in asphyxia, for the evacuation of a foreign body, for the enlargement of a narrowing of the laryngeal canal, or for the application of remedies to the interior of the larynx.

C., poste'rior. (L. posterior, hinder.)

The introduction of a catheter into the urethra from the bladder. It has been used in a case of stricture of the urethra, where snprapubic puncture of the bladder had been employed and a sinus discharging urine had remained, for the purpose of ascertaining the exact site of the

stricture, and cutting down upon it.

C., stomach'ic. (Στόμαχος, the stomach. G. Catheterismus des Magens.) The introduction of a tube into the stomach by the œsophagus, whilst the head of a patient is much lower than his pelvis, in order that the fluid contents may be evacuated.

C., tu'bar. (L. tuba, a trumpet.) The introduction of the Eustachian catheter.

C., ventric'ular. (L. ventriculus, the

stomach.) Same as C., stomachic.
C., vesi'cal. (L. vesica, a bladder.) The introduction of a catheter into the urinary bladder.

Catheteris'mus. (Καθετηρισμός.) Catheterism; the introduction of a catheter.

Catheteriza'tion. (Καθετήρ.) Cathe-

Cathetom'eter. (Κάθετος, let down, perpendicular; μέτρου, a measure.) An instrument intended to measure small vertical distances. It consists of a strong, finely-graduated vertical brass rod, on which moves a small telescope, accurately adjusted at a right angle, and provided with a finely-graduated vernier.

Cathidry'sis. (Καθιδρέω, to put together.) An old term for reduction of a fracture.

Cathi'mia. Alchemical term variously applied: to a mineral vein out of which gold and silver are dug; to concretion in the furnace of gold or silver; to gold, litharge, and the smoke arising from burnt copper. (Ruland.) Cath'mia. Same as Cathimia.

Cathochi'tes. An alchemical term for a substance said to be found in Corsica, which attracts flesh and binds the hands together, just as the magnet attracts iron or amber light objects.

Cathode. (Κατά, downwards; ὁδός, a way.) The negative pole of a galvanic battery, so called because through it the electric current passes out of the electrolyte.

**Cathod'ic.** (Κατά, downwards; ὁδός, a way.) Proceeding downwards. A term applied by Dr. M. Hall to the centrifugal or efferent course of the nervous influence.

**Cathol'ceus.** (Καθολκεύς, from καθέλκω, to draw down.) Old name, used by Galen, de Fasciis, for an oblong bandage which was applied over another, called pericepastrum, to keep it in its proper situation.

Catholici humo'res. (L. catholicus, from καθολικός, general; humor, a fluid.) Old epithet for humours which existed through the

whole body

Cathol'icon. (Kará, denoting increased power; όλικός, universal.) A supposed nuiversal medicine, capable of evacuating all bumours.

Catholicum du'plex. (L. catholicus, universal; duplex, double.) Old name for a purgative electuary, Electuarium de rheo compositum, Fr. Codex.

**Catholomelas'ma.** (Καθόλος, universal; μέλασμα, a black spot.) General or constitutional melasma.

Cathora'sis. (Κατά; ὅρασις, sight.) Sharp or quick sight.

Cathyp'nia. (Κατά, intensive; Επνος, Lasting or profound sleep.

Cathypno'sis. (Same etymon.) The progress of cathypnia.

Ca'tias. (Kariás.) A knife used in extracting a dead feetus, or in opening an abscess of the womb, according to Paulus Ægineta, vi, 73.

A weight of nine ounces. Catil'lia. (Quincy.) Catil'lus. (L. dim. of eatinus, a porringer.)

A cupel. (Ruland and Johnson.) Cati'num alu'men. (L. catinudish; alumen, alum.) Old term for potash.

(L. catinus; Cati'nus fuso'rius.

fusorius, molten.) A crucible. (Quincy.) Cat'ion. (Κατά, down; Ιών, part. of είμι, to go.) A term employed to designate the body which, when separated in electrolysis, passes in the direction of the current of positive electricity to the negative pole or cathode; an electro-

positive body. Catis'chon. One who is costive, or not

easily purged. (Quincy.) Catkin. (Dim. of E. cat. F. chaton; G. Katzchen, Lammerchen.) A deciduous scaly spike of unisexual flowers; so called from its resemblance to a cat's tail. An amountum.

Cat'lin. Same as Catling.

Catling. A long, narrow, double-edged, sharp-pointed, straight knife for performing amputations.

Limatura auri, or gold filings. Cat ma. (Ruland and Johnson.)

The Nepeta cataria. Cat'mint. The Nepeta cataria Cat'nep. The Nepeta cataria.

Catocænadel phus. (Κάτω, below; κοινός, common; άδελφός, a brother.) A cænadelphous monster, the two bodies of which are united by their lower parts.

Catocathar'tic. (Κάτω, downwards; καθάίρω, to purge.) Having power to purge Applied to purgative medicines in contradistinction to anacatharties or emetics. (Quincy.)

Catoche. (Κατοχή, detention, possession.) A former term, used by Galen, de Loc. Aff. iii, 5, for catalepsy. Used synonymously with Catochus.

C. Gale'ni. (Galen.) A synonym of Catalepsy.

(Κάτω, below; χείλος, Catochei lon. the lip.) An old term for the lower lip. Also, a person with thick lips.

Catochellum. See Cutocheilon. **Cat'ochus.** ( $Ka\tau \sigma \chi \dot{\eta}$ , from  $\kappa a\tau \dot{\epsilon} \chi \omega$ , to detain.) An old term for eatalepsy. Also, for an affection similar to catalepsy, but with rigid-

ity of the limbs; also, for coma-vigil. C. cervi'nus. (From L. cervix, the neck.)
Tetanus particularly affecting the neck.
C. diur'nus. (L. diurnus, daily.) Symptomatic tetanus. (Quincy.)

C. holotonieus. ("Ολος, whole; τονικός, belonging to stretching.) Tetanus.
C. infant'um. (L. infans, an infant.)
Induration of the cellular tissue. (Dunglison.) Catocœ'lia. (Κάτω, downwards; κοιλία, the belly.) The lower belly.

Cat'ode. Same as Cathode. Catœa'dion. Same as Cateiadion.

**Catomis'mus.** (Κάτω, below; ωμος, the shoulder; κατωμισμός, used by Hippocrates, de Artic. i, 13.) A mode of reducing a dislocation of the shoulder, hy throwing the patient's arm over the shoulder of a strong man, so that his body was raised from the ground, and the reduction effected by his weight, with the operator's shoulder as a fulcrum.

Cat'opode. (Κάτω, below; πούς, a foot.) A term applied to fishes and other animals which have fins or limbs on the under surface of the belly

Catop'ter. (Κατοπτήρ, a speculum, from κατοπτεύω, to spy out.) The Greek name for the speculum ani. (Galen.)

Catop'tric. (Κατοπτρικός, in a mirror;

from  $\kappa \alpha \tau \sigma \pi \tau \rho i \zeta \omega$ , to make images and reflections by means of a mirror.) Of, or belonging to, catoptrics.

C. examina'tion of eye. See C. test.

C. test. A mode of diagnosis of cataract now seldom used. When a lighted candle is held before the eye, after dilatation of the pupil, three images are seen; an erect image due to reflection from the cornea, and one also erect from the anterior suface of the lens; the third is inverted, and is due to reflection from the concave posterior surface of the lens. The erect images move in the same direction with the candle, the inverted in the opposite direction. In cataract the third image is lost, and the second soon becomes obscure.

Catoptries. (Same etymon. F. catoptrique; 1. catotrica; S. catoptrica; G. Katoptric, Reflexionslehre.) That branch of optics which treats of the reflection of rays of light.

Catoptroman'ey. (Κάτοπτρου, a mirror; μαντεύομαι, to divine.) A species of divination by means of a mirror.

Catop'tron. (Κάτοπτρου, a mirror.) Λ speculum.

Catop troscope. (Κάτοπτρου, a mirror; σκοπέω, to see.) An apparatus for investigating the parts of the body by means of a

Cato pus. (Κάτω, downwards; πούς, a foot.) Applied to the ventral fins corresponding to the pelvic limbs of other Vertebrata.

**Catorchi'tes.** (Κατορχίτης, from κα-τορχέομαι, to delight in dancing; from its exhilarating effects.) A demulcent wine prepared with figs. Used by the Greeks, and also called

Catoretic. (Κατώρης, from κάτω ρέπων, inclining downwards.) An old term for a pur-

**Cato'taphyte.** (Κατώτατος, inferior; φυτών, a plant.) A plant the stamens of which are inserted at the base of the calyx or at the disc.

**Catoter'ic.** (Κατώτερος, inferior, because operating downwards.) An old term (Gr. κατωτερικά) applied by Galen, Meth. Med. vii, 13, to cathartic medicines.

**Cato'tica.** (Κατώτατος, the lowest; from κάτω, down.) The second order of *Eccritica* of Mason Good's classification of diseases; and defined as diseases affecting internal surfaces, and consisting in pravity of the fluids or emunctories that open into the internal surfaces of organs. It included Hydrops, Emphysema, Paruria, and Lithia.

Catox'ys. (Κάτοξυς, very sharp, acute.) Very acute.

C. mor'bus. A very acute disease.

Catrobil. Alchemical name for earth. See New York, mineral Cats'kill. waters of.

Cattagau'ma. A synonym of Gamboge. Cattena'ja. Italy; in Tuscany. A mineral water containing sodium, magnesium,

and calcium carbonate, with a very little iron.

Cattit'erus. (Καττίτερος. Attic for κασσίτερος, tin.) An old term for tin. Cat'tle. (Old F. catel, goods; for Low L. capitale, property, especially herds and flocks.)

Domestic animals, especially bulls and cows. C. pla'gue. (F. peste des baufs; G. Rinderpest.) An infectious disease of cattle which arises originally in the steppes of Russia and Hungary. Its incubatory period is five or six days. An early symptom is running from the eves, nose, and mouth, often with vesication of nostrils; there is intense salivation and excoria-tion of buccal mucous membrane, frequent shiverings, increase of temperature, cessation of rumination, great prostration, much abdominal pain, rapid emaciation, at first constipation, then diarrhœa, with fetid and bloody stools, and before death more or less general emphysema. There is found ulceration of the psalterium and abomasum, of the duodenum, and of the colon; in the duodenum vibices and arborescent blood spots, and in the colon many small blood clots, are seen. Numberless micrococci are found in the submucous tissne and in the blood-vessels of the intestines and in the epithelium, the bloodvessels and the lymphatics of the mucous covering of the mouth and tongue. At one time it was thought that certain spindle-shaped, oval, eiliated bodies, which were often found in the muscles and in the heart, were the cause of cattle plague; these are psorosperms frequently found also in other animals and in other circumstances. They have been called Rainey's bodies.

**Catulot'ie.** (Κατουλόω, to bring about, or cover with a cicatrix.) Inducing or favouring cientrization. Applied to medicines; this word. however, in the only ancient authority for its use, a Latin fragmentary book. de Dynamidiis, falsely ascribed to Galen, signifies (Catulotica medicamenta) "those medicines which equalise

and smooth down rough cicatrices."

Cat'ulus. (L. catulus, the young of all animals.) An old term for a catkin.

Catu'rus. (Κάττα, a eat; ουρά, a tail.) A Geous of the Nat. Order Euphorbiaccæ. C. spiciflo'rus, Linn. (Ε. spice, from F. èpices; L. flos, a flower.) Hab. India. Flowers used in decoetion or conserve in diarrhea.

Caucalin'er. (Caucalis.) A Subfamily of campylospermous Umbelliferer having the

secondary ridges of the fruit spinons.

Cauc'alis. (Κανκαλίς, an umbelliferous erb.) Λ Genus of plants of the Nat. Order herb.)  $\Lambda$  ( Umbelliferæ.

C. anthris'cus. The Torilis unthriscus. C. as'pera. (L. asper, rough.) The Torilis anthriseus.

C. caro'ta. The Daucus carota,

C. daucoïdes, Linn. (Δαῦκος, a carrot; Eldos, likeness.) Used as a diuretic.

C. hu'milis, Jacq. (L. humilis, lowly.) The C. leptophylla.

**C. leptophyl'la,** Linn, (Λεπτός, thin; φύλλον, a leaf.) Hab. Europe. A diurctie.

C. leptophyl'la, Lamb. The C. dau-

C. mi'nor. (L. minor, less.) The Torilis anthriseus.

C. parvifio'ra, Lamb. (L. parvus, small.) The C. leptophylla, Linn. C. sanic'ula. The Sanicula europæa.

Caucalordes. (Kaukalis.) Applied to the patella, from a supposed likeness to the flower of the Caucalis.

Cauca'sian. One of the varieties of man, according to Blumenbach; so called because it was believed that the Caucasus Mountains was the centre from which the races sprang. head is delicocephalic; the colour varies; the hair is usually long, with a teudency to curl. The term is not now in use for purposes of classifica-tion, but is replaced by Mediterranean races.

Cauch'emar. (L. calco, to tread; Old G. mar, an evil spirit.) The French name for

nightmare.

Cau'chuc. Otherwise Caoutchouc.

Cauchum. A synonym in Avicenna of Chelidonium majus.

Caud'a. (L. cauda, a tail.) A tail. old name for the os eoceygis, which in tailed animals is the beginning of the tail. Bartholin, de Ossib. iv, c. 15, p. 737.

Also, the penis.

Also, the elitoris, particularly when unnaturally large. Waltherus, Sylv. Med. p. 1036. In Lutany, an appendage to a seed, like a tail.

In Zoology, the tail of an animal.

C. cornu posterio'ris. (L. cornu, a horn; posterior, hindmost.) A solid cord of vascular neuroglia, about one third of an inch long, one third of an inch broad, and one fiftieth of an inch thick, found sometimes in the occipital lobe of the brain, and representing an obliterated process of the posterior horn of the lateral ventriele.

C. cor'poris stria'ti. (L. corpus, body; striatus, part. strio, to furrow.) The thin pointed posterior extremity of the corpus stria-

C. epididym'idis. ('Επί, upon; δίδυμοί, the testieles. G. Schwanz des Nebenhodens.) The globus minor or tail of the epididymis.

C. equi'na. (L. equinus, belonging to a horse. F. queue de cheval; queue de la moëlle épinière; G. Pferdeschwanz.) The bundle of lumbar and sacral nerves which run, in close contact with each other, from the lower end of the spinal cord to the lumbar intervertebral and sacral foramina,

It is a condition of adult life, the spinal cord extending to the end of the canal in the feetus up to the fourth month; it does so in most fishes,

and nearly so in some reptiles.

Name for the horse-tail, Equisetum maximum. C. equi'na mi'nor. (L. minor, less.) The Equisetum arvense.

C. fe'lis. (L. felis, a eat.) The Caturus spiciflorus, from the shape of its flowers.

C. fe'lis agres'tis. (L. felis; agrestis, belonging to the fields.) The Acalyphu betulina.

C. helicis. (L. helix, a tendril of a creeping plant.) The free posterior extremity of the helix, which is prolonged downwards.

C. mu'ris. (L. mus, a mouse.) A species of Ranunculus.

C. mus'culi. (L. musculus, a muscle.) That extremity of a muscle which is connected with the movable point; the part forming the insertion of a musele.

C. pancre'atis. (Παν, all; κρέας, flesh.) The left or smaller extremity of the panereas.

C. porcina. (L. porcinus, belonging to a pig.) The Pencedanum officinale, or hog's found. C.puden'di. (L. pudenda, the privy parts.)

Polypus of the uterus.

C. sa'lax. (L. salax, lustful.) The penis. C. sem'inis. (L. semen, seed.) The clongated and usually feathery appendage to a seed, formed of the persistent style; it is simple, hairy, or geuiculate.

C. vul'pis rubicun'di. (L. vulpis, a fox; rubicundus, ruddy.) Alchemical name for red lead. (Ruland.)

Caud'al. (L. cauda, a tail.) Of, or belonging to, the tail, as the caudal vertebræ or

caudal fins.

C. feet. (G. Caudalfüsse.) The pleopodes of certain of the lower Crustacea.

C. hood. See Hood, caudal.
C. lig'ament. The filum terminale of eentral ligament of the spinal cord.

C. ver'tebræ. See Vertebræ, caudal. Cauda'ta. (L. cauda.) An Order of Am-

phibia synonymous with Urodela.

Caud'ate. (L. cauda. F. caudé; G. geschwanzt.) Having a tail, or some appendage like one.

C. lebe ef liv'er. See Lobus caudatus. C. nu'cleus. See Nucleus caudatus.

Cauda tio. (L. cauda, a tail. F. cauda-tion; 1. caudazione; S. caudacion.) Term used by Blasius, Med. Univers. p. 334, for an elongation of the elitoris.

Caud'ex. (L. caudex, the trunk of a tree. F. caudex; I. candice; G. Stock, Stamm.) The stem or stipe of a fern, in tropical climates rising to a height of 30 or 40 feet.

Some authors give it the signification of axis, whether above or below the ground, and apply it

to all plants and trees.

C. ascend'ens. (L. ascendo, to mount up.) The part of the stem which is above the ground.

C. cer'ebri. (L. cerebrum, the brain.) The medullary mass of the brain which is continuous with the crura cerebri below, and which, spreading out in a fan-like form, ascends to the interior of the central hemispheres above.

Also, same as Crura cerebri. C. descend'ens. (L. descendo, to descend.)

A synonym of Rhizome or Root. C. interme'dius. (L. inter, between; medius, the middle.) The point of divergeuce of stem and root.

Caudic'iform. (L. caudex ; forma, likeness. G. stockartig.) A stem that is not ramified.

Caud'icle. (Dim. cauder.) The stalk or process which supports the pollen masses, or pollinea, of the Orchidaeeæ.

Caudif erous. (L. cauda ; fero, to bear. F. coudifere; G. schwanztragend.) Having, or bearing, a tail.

Caudig'erous. (L. bear.) Same as Caudiferous. (L. cauda; gero, to

Caudima'nous. (L. cauda; manus, the hand.) Applied to animals that employ their tail like a hand to seize objects, as the apes.

Caudiso'na duris'sa. (L. cauda; sono, to sound; durus, hard.) The rattlesnake, Crotalus horridus.

Caudle. (Old F. caudel, from late L. caldus, for calidus, hot. F. chaudeau; G. Kraftsuppe.) A form of gruel, with stimulants, formerly given to women after labour. There are various forms given somewhat similar to the following: Half a pint of gruel is mixed with two tablespoonfuls of cream or an egg beaten up, a wineglass of sherry, some lemon peel, nutmeg, and sugar.

Caudotibialis. (L. cauda, a tail; tibia, the bone of that name.) A muscle in seals which arises from the upper caudal vertebra and

is inserted into the tibia.

Caud'ula. (Dim. of L. cauda, a tail.) The

filiform or setaceous organs about the anus of the Lepisma.

Caul. (Welsh caul, a covering for the bowels. F. coiffe ; I. cuffia ; S. cofia ; G. Haube.) The epiploon or omentum.

Also, the amnion, which sometimes being torn off by the child's head passing from the uterus, comes away with it, quite separated from the placenta, and is vulgarly supposed to be of good

Caule don. (Καυληδών, in the manner of a stem or stalk; from καυλός, a stem. F. cauledon; I. cauledon; G. Querbruch.) Applied to a transverse fracture, or that of a bone broken across, as of a stalk or stem of a plant. Galen, Meth. Med. vi, 5.

Caulerp'idæ. A Tribe of the Suborder Siphoneæ, Nat. Order Confervaceæ, having a monosiphonous frond, continuous and irregularly

branched.

Caul'es dulcama'ræ. es dulcama'ræ. (L. caulis, a The tops of the woody nightshade, stalk.) Solanum dulcamara.

**Caules'cent.** (L. caulesco, to grow to a stem. F. caulescent; G. bestengelt.) Having, or growing on, a stem.

Caul'icle. Same as Caulicule.

Caulic'olous. (L. caulis; colo, to inhabit.) Applied to parasitical phanerogamous plants that draw their nourishment by means of lateral suckers on their stems, as the Cuscuta.

Caulicule. (Dim. of L. caulis. F. caulicule.) The point of union of the base of the plumule with the radicle and the base of the eotyledons in a germinating seed.

Also, each of numerous stems proceeding from but one root.

Caulic'ulus. Same as Caulivle.

Cauliflo'rous. (L. caulis ; flos, a flower.) Having flowers on the stem.

Caul'iflower. (Mod. E. cole, a cabhage; flower; from F. chou, cabbage; fleuri, flowering. F. choufleur; I. cavol flore; S. colifor; G. Blumenkohl.) The Brassica florida.

c. excres'cence. (L. excresco, to grow out. G. Blumenkohlgewächs.) Originally employed to designate what is now known as epithelial cancer of the cervix uteri.

Doubtless this term has been applied at times

to non-malignant villous tumours.

C. growth. A term which has been used to describe all growths, natural or morbid, which are developed in the form of a stem, with branches and branchlets all closely applied to each other or crowded; such are acinous glands, papillomata of the skin, villous tumours, and such like

Caul'iform. (Caulis; forma, likeness.)

Having the appearance of a stem.

Caul'in. (L. caula.) The eolouring matter of red cabbage and broceoli.

C. stip'ules. Same as Cauline. Stipules which persist in a leaf-like fashion, and are not attached to the petiole but to the stem.

Caul'ine. (L. caulis, a stem. F. caulinaire; G. stengelständig, stielständig.) Of, or belonging to, a stalk or stem.

C. bun'dles. In Botany, applied to fibrovascular bundles, formed in the stem, having no connection with the leaves.

C. leaves. (F. feuilles caulinaires.) Leaves arising from the main stem.

Caulinic'olous. Same as Caulicolous.

(Kavlós, the stalk; Caulirhi'zous. ρίζα, a root.) Applied to plants the stems of which send forth roots.

Caul'is. (Καυλός, a stalk.) An old term

for the penis.

Also, for the neck of the uterus.

Also, the stalk or stem of herbaceous plants. Also, any kind of herb, especially potherbs.

C. flor'ida. (L. floridus, flowery. F. choufleur.) The cauliflower.

C. procumbens. (L. procumbo, to fall

forward.) A trailing stem.

C. ru'ber. The Brassica rubra, or red cabbage.

C. scan'dens. (L. scando, to climh.) A stalk climbing with the aid of tendrils.

C. tinospo'ree. The Indian drug Gulancha, the stem of Tinospora cordifolia.

C. u'teri. The Cervix uteri.

C. volu'bilis. (L. volubilis, that which is turned round.) A twining stem. A stem climbing without the aid of tendrils.

**Caul'obulb.** (Καυλός, a stem; βολβός, a bulb.) A leaf-bearing or floriferous stem swollen at the base, as in *Ranunculus bulbosus*, and many orchids.

Caulocar'pous. (Καυλός; καρπός, fruit. G. stengelfruchtry.) Applied to vegetables the stems of which persist and hear fruit many

**Caulo'ma.** (L. caulis, a stem.) A term applied in Botany to all parts which bear

Also, to the stem of a palm which is unbranched and bears leaves only on the top.

Caul'ome. Same as Cauloma. Caulophyl'lin. A resinon A resinous material precipitated by water from the tineture of the Caulophyllum thalictroides. It is believed to be composed of an alkaloid with some saponine. Used as an emmenagogue and an oxytocic.

Caulophyl'lum. (Kavlós, a stalk; φύλλου, a leaf.) A Genus of the Nat. Order

Berberidaceæ.

Also, the officinal name, U.S. Ph., of the rhizome of C. thalietroides. It contains saponin and caulophyllin.

C. thalictro'ides, Michx. (θάλικτρον, the thalictrum; ¿los, likeness.) The blue cohosh. Hab. United States. A perennial herbaceous plant, 2 feet high, with matted, knotty rhizomes, a naked stem to the summit, whence springs a compound triternate leaf and a paniele of greenish-yellow flowers. The root is sweetish and pungent. It is used as a diaphoretic and an emmenagogue and oxytocic.

Caulople'gia. (Kaυλός, the penis;

πληγή, a stroke.) Paralysis of the penis. **Caulorrha**'gia. (Καυλός; ἡήγυυμι, to hreak forth.) Hæmorrhage from the penis, either accompanied or not by erection,

C. ejaculato'ria. (i. ejaculo, to eject.) Hamorrhage from the penis during ejaculation of semen.

C. stillatit'ia. (L. stillo, to drop.) Hæmorrhage from the urethra.

Caulorrhœ'a. (Καυλός, a stalk; ρέω, to flow.) A flow of mucus from the male ure-

C. benig'na. (L. benignus, mild.) Simple gonorrhea.

Caul'osarc. (Kaulis, a stalk; σάρξ, flesh.) Same as Caulobulb.

Caul'us. (Kavlós, a stalk, the penis.) Tho

**Caum'a.** ( $Ka\bar{\nu}\mu a$ , hurning heat, from  $\kappa ai\omega$ , to bmrn.) The heat of the atmosphere. Applied to the burning heat of fever.

C. bronchi'tis. (Βρόγχια, the bronchial tubes.) Croup.

C. cardi'tis. (Καρδία, the heart.) Inflammation of the heart.

C. enterl'tis. (Εντερον, the intestine.) Inflammation of the bowels.

C. gastri'tis. (Γαστήρ, the stomach.) Inflammation of the stomach.

C. hæmorrhag'icum. (Αίμορραγικός,

liable to hæmorrhage.) Active hæmorrhage.

C. hepati'tis. ("Ηπαρ, the liver.) Inflammation of the liver.

C. ophthalmi'tis. ('Οφθαλμός, the eye.) Inflammation of the structures of the eye.

C. peritoni'tis. (Περιτόναιος, stretched over.) Inflammation of the peritoneum.

C. phreni'tis. (Φρήν, the mind.) Inflammation of the brain.

C. pleuri'tis. (Πλευρά, the side.) Inflammation of the pleura.

**C. podag** ricum. ( $\Pi o \delta \dot{a} \gamma \rho a$ , gout in the feet.) Gout.

C. rheumatis'mus. ( Ρευματισμός, a defluxion ) Acute rheumatism. (Καῦμα, burning heat.) Caumatic.

Relating to the burning heat of fever. Caumato'des. (Καυματώδης, feverish.)

Burning hot. C. fe'bris. (L. febris, a fever.) An inflam-

matory fever. Caun'ga. The areca nut.

Cau'rus. Alchemical term for the north-

Caus'a. (L. causa, a cause.) That by means of, on account of, or through which, a thing is done or takes place; a cause or reason.

C. ab'dita. (L. abdo, to hide.) The hidden or remote cause.

C. actua'lis. (L. ago, to drive.) The immediate cause.

C. antece'dens. (L. ante, before; cedo, to go.) The antecedent cause. Another term for the exciting cause. See C. excitans.

C. conjunct'a. (L. con, together; jungo, to join.) The proximate cause. See C. proxima.

C. con'tinens. (L. con, together; teneo, to hold.) The joining or continuing cause. Another term for the proximate cause. See C. proxima.

C. dispo'nens. (L. dispono, to dispose.) The disposing or predisposing cause. A term for a state of the system which makes it liable to assume any particular disease when the exciting cause is applied. Also called C. proegumena.

C. ex'citans. (L. ex, out of; eico, to summon.) The exciting cause; or that which immediately produces the disease. Also called C. antecedens, occasionalis, or procataretica.

C. facin'oris. (L. facinus, a deed.) The cause or motive of a deed, especially of a

C. occasiona'lis. (L. occasio, opportunity; from ob, and cado, to fall.) The occasional or accidental cause. Another term for the exciting cause. See C. excitans.

C. præincip'iens. (L. præ, before; incipio, to begin.) The exciting cause; that which immediately precedes.

C. procatare tica. (Πρό, before: καταρ-

κέω, to be fully sufficient.) The preceding cause. Another term for the exciting cause. See C. excitans.

**C. proegu'mena.** (Προηγίομαι, to go first.) The foregoing or precedent cause. Another term for the predisposing cause. See C.

disponens.

C. proxima. (L. proximus, nearest.) The proximate cause; or that deranged action from which all the symptoms arise; being really but another name for the disease itself. Also called C. continens.

Causal'gia. (Kavoos, harning heat; άλγος, pain.) Acute burning pain, such as is

often produced by gunshot wounds.

Also, neuralgia with a sensation as of burning. Causality. (L. causa, a canse. F. causa-lité; 1. causalita; G. Kausalitat.) The quality or power of tracing effects to a cause. A phrenological term for a faculty peculiar to man (its organ in the upper part of the forehead, on each side of Comparison), giving perception of the dependence of phenomena, furnishing the idea of causation as forming an invisible bond of connection between cause and effect, impressing with an irresistible conviction that every phenomenon or change in nature is caused by something, and so leading by successive steps to the great cause of all. In regarding the actions of men, it leads to consider the motives or moving causes from which they proceed.

Cause. (L. causa, that by means of, on account of, or through which, a thing is done or takes place. Altía, aïtiov; F. cause; I. and S. causa; G. Ursache.) That which produces an effect.

**C., ac'cessory.** (L. accedo, to approach. F. cause accessoire.) An incidental, assisting, non-essential cause of disease.

C., accident'al. (L. accido, to happen. F. cause accidentelle.) An occasional cause; that which does not always have the effect of producing the same disease; one which does not act

unless under certain given conditions.

C., com'mon. The same as C., acci-C., com'mon.

dental.

C., endopathic. (Ένδον, within; πάθος, a disease.) An exciting cause of disease which originates within the body.

C., essen'tial. (L. essentia, the essence of a thing. F. cause essentielle.) An exciting cause which produces a special disease.

C., exciting. (L. excita, to summon forth. F. cause excitante.) A canse which immediately produces or excites disease.

C., exopathic. (Έξω, outward; πάθος, a disease.) An exciting cause of disease which originates outside the body.

C., external. (L. externus, ontward.) A cause of disease which originates and acts from without the body.

C., hid'den. An undiscoverable cause.

C., imme'diate. (L. immediatus, with nothing standing in the middle.) A cause which directly produces a disease.

C., inter'nal. (L. internus, inward.) A canse which produces disease and originates within the hody.

**C., mechan'ical.** (Μηχανικός, belonging to mechanics. F. cause mécanique.) An obstruction of some duct, or a pressure on some organ, or a bruise or laceration of some structure, or other mechanical damage by which disease is produced.

C., neg'ative. (L. negativus, from nego, to deny.) A cause of disease which is an abstraction or removal of anything necessary for the well-being of the part or of the individual.

C., obscu're. (L. obscurus, dark.) A cause

not definitely known.

C., occa'sional. (L. occasio, an opportunity. F. cause occasionelle.) A cause which directly occasions disease.

C., oc'cult. (L. occultus, hidden.) A cause

not definitely known.

C., physical. (L. physicus, belonging to natural philosophy.) A cause which produces disease by means of its physical influence.

C., physiolog'ical. (Φύσις, nature; λόγος, an account.) A cause which acts in virtue of its power of altering the functions of living organs.

C., predispo'nent. The same as  $\ell$ ., pre-

disposing.

C., predispo'sing. (L. præ, before; dispono, to arrange. F. cause predisposante.) A cause which, whilst not producing disease itself, renders more effective, or is necessary for the action of the exciting cause. It may be either a natural or an acquired condition of the body, or a eircumstance of its surroundings.

C., prin'cipal. (L. principalis, first.) The chief and most important cause of disease. C., procatare'tic. See Causa procatare-

tica.

C., proximate. (L. proximus, nearest.) This term is used by some in the sense of the disease itself; by others, as meaning those morbid processes which the exciting cause induces; by others, as denoting the morbific cause itself.

C., remo'te. (L. remotus, distant; part. of removeo, to move back.) The same as C.,

predisposing.

C., specifice. (L. specificus, forming a particular kind.) A cause which, when acting, produces the same special disease.

C., vi'tal. (L. vitalis, belonging to life.)
The specific thing by which infectious or contagious diseases are produced, and which itself is supposed to be living.

Caus'is. (Κανσις, a burning.) A term which has been variously used to denote a burn, the act of boiling, fermentation, the intense burning of fever, and canterisation.

Causo'des. (Καυσώδης, burning.) Having an ardent burning sensation. Inflammation. Applied to an ardent fever, which is also called

Causo'ma. (Καύσωμα, from καύσος, burning heat.) Inflammatory swelling.
Caustic. (Καυστικός, capable of hurning,

from kaiw, to hurn. F. caustique; I. caustico; G. ātzmittel.) A substance which produces the death and disorganisation of a living tissue when hrought in contact with it. A caustic may act chemically, as zinc chloride; or mechanically, as the actual cautery.

Also (F. caustique; I. caustico; G. ätzend), having the destructive action of a caustic.

Also, in Optics, a term applied to a curve produced in space by the successive intersections of parallel rays by the successive rays of light when reflected from a concave surface; this is the caustic by reflection or catacaustic curve.

The caustic by refraction is a similar curve obtained from a refracting surface; also called

diacaustic curve.

C. al'cohols. A term applied to sodium

and potassium ethylates, in consequence of their caustic action on hving tissue

C. al'kali. A pure alkaline oxide free from

water. Usually applied to Potassa fusa.

C. ar'rows. Conical sticks of some firmish farinaceous or other material containing a caustic, such as zinc chloride, and which, being inserted into a puncture made in a tumour or o her structure to be destroyed, produce death of the surrounding structures.

C. barley. See Barley, caustic.
C., black. Strong sulphuric acid made into a paste with saffron. Used as a caustic in cancer.

C., Can'quoin's. See Canquoin's paste. C., com'mon. A synonym of silver nitrate,

Argenti nitras.

C., Du'bois'. Arsenious acid 1 part, red sulphuret of mercury 16, dragon's blood 8 parts. C., Frère Còme's. Arsenious acid 1

part, red sulphuret of mercury 5, burnt sponge 2. C., gold'en. Six grains of gold triehloride dissolved in an ounce of nitromuriatic acid.

C., Gon'dret's. The Unquentum ammo-

niacale, Belg. Ph.

C., l'odine. One part each of iodine and potassium iodide dissolved in two parts of water.

C., Landol'fi's. Equal parts of the chlorides of bromine, gold, zinc, and antimony, mixed with the same weight of flour.

C., lu'nar. The Argenti nitras.

C., mercu'rial. The acid nitrate of mer-

cury. C., mit'igated. (L. mitigo, to soften.)
Term applied to silver nitrate rendered less active by the admixture of an equal quantity, or with a still larger proportion, of potassium ni-

trate. C. of Fil'hos. The Causticum Viennense

fusum Filhos.

C. paste. Chloride of zinc mixed into a paste with wheaten flour or starch and alcohol, and used to destroy cancerous or other tumours.

C. pot'ash. See Potassa caustica.

C., Recam'ier's. Same as C., golden.

C., Rous'selot's. Same as C., Frère Come's.

C. so'da. See Soda caustica.

C. stron'tia. Same as Strontium monoxide.

C., sulphu'ric. Strong sulphuric acid made into a paste with plaster of Paris, saffron, or lint.

C., Vien'na. Same as Vienna paste. C. vol'atile al'kali. Liquor ammonia.

C., zinc. Chloride of zinc mixed with flour or starch, in the proportion of one to two or three or more of the latter.

Caus'tica adus'tio. (L. causticus, caustic; adustio, a burning.) A synonym of

Cauterisation.

Causticity. (L. causticus, caustic. F. causticite; I. causticita; S. causticidad; G. utzbarkeit, ätzkraft.) The quality which distinguishes caustic substances, that of having so strong a tendency to combine with organised bodies or substances as to destroy their texture.

**Causticoph orum**. (Καυστικός, eapable of burning; φορίω, to bear. **F**. caustico phore; G. atzmittellräger.) An instrument for carrying caustic.

Caus'tics. (Kaυστικός, capable of burning.) Same as Escharotics.

Caus'ticum. Same as Caustic.

C. æthiop'icum. (L. ætniopium., Same as Canstie, black.) Same as Canstie, black. Ethiopian, or a black.) Same as Caustic, C. alkali'num. The Potassa fusa.

C. america'num. The Veratrum saba-

dilla. C. ammoniaca'le Gon'dret. The Unquentum ammoniacale, Belg. Ph.

C. antimonia'le. The Antimonii chloridum.

C. arsenicale. Arsenical caustic. caustic used in the treatment of caucer, composed of two parts of white arsenic to one of levigated antimony, melted together in a crucible.

C. chirurgo'rum. (L. chirurgus, a surgeon.) An old name of nitrate of silver.

Ć. commu'ne. (L. communis, common.) A synonym of Potassa fusa.

Also, a term applied to a mixture of equal parts of quicklime and black soap. Used as a

C. commu'ne acer'rimum. (L. communis; acerrimus, very violent.) The Potassa

C. commune for'tius. (L. communis, common; fortis, strong.) A term for Potassa cum calce.

C. commu'ne mit'ius. (L. comp. of mitis, mild.) Caustie potash dissolved in thrice its weight of water, and mixed with quicklime to the consistence of a paste.

Also, equal parts of quicklime and soft soap.

C. cum chlorure'to zin'cico, Fr. Codex. (F. caustique avec le chlorure de zinc.) Same as Canquoin's paste.

C. cum ka'll hy'drico cum cal'ce. The C. Viennense fusum Filhos.

C. cum potas'sa et cal'ce, Fr. Codex.

Same as C. Viennense fusum Filhos. C. luna're. (L. Luna, the moon, a name

of silver.) The Argenti nitras. C. ni'grum. (L. niger, black.) Same as

Caustic, black.

C. ni'tricum. Nitric acid dropped on to cotton wool or lint until it is gelatinised. Used in the removal of cancer.

C. odontal'gicum. (' $0\delta o \nu \tau a \lambda \gamma i a$ , the toothache.) One part of morphia dissolved in twenty of dilute nitric acid. Applied with cotton wool to a carious tooth for the relief of pain.

C. potentia'le. (L. potentia, power.) Potassa fusa.

C. sali'num. (L. sal, salt.) Potassa fusa. C. Viennen'se fu'sum Fil'hos. fusus, poured out.) Equal parts of quicklime and caustic potash (which, mixed with spirit, forms Vienna paste) melted by means of heat and run into moulds; so called after its proposer.

Caustocy'clus. (Καυστικός, caustie; κύκλος, a circle.) The caustie ring, in which was fixed the nitrate of mercury, for cauterising the

Caustodermi'tis. (Kaυστός, burnt; δέρμα, the skin.) Inflammation of the skiu from

**Cau'sus.** (Καῦσος, from καίω, to burn.) An old term, used by Paracelsus, l. x, Paragr., § 3, for ardent fever, which was characterised by pungent heat internally, great heat of breath, desire of cold air, dryuess of the tongue, lips, and skin, coldness of the extremities, the urine loaded with bile, watchfulness, quick small and weak pulse; eyes clear shining and red, with good state of the complexion; it has been considered the same with the variety of malignant remittent of hot climates, called ardent or burning remittent fever; this, however, is only conjec-

Also, applied to those cases of febrile disturbance supposed to be caused by the direct rays of the sun, combined with excessive exertion, which are also called Fever, thermic.

C. endemialis. ('E'', among;  $\delta \tilde{\eta} \mu o s$ , a people.) A synonym of yellow fever. Cau'ter. ( $K a \nu \tau \dot{\eta} \rho$ , a burner.) An instrument for applying the actual cautery.

Also, a liniment or application of a canstic character.

Caut'erant. (Καυτήριου, a branding iron.) Relating to a cautery or to caustic, or having the properties of either.

Cauteret'ic. (Καυτήρ, a branding-iron.) Caustie.

Caut'erets. France; Département des Hautes-Pyrénées, Indifferent or mild sulphuretted mineral waters, from fourteen sources, of a temperature varying from 30° C. to 49° C. (86° F. to 120·2° F.) Cauterets is 3200 feet above sealevel, the climate is mild, and, being situated at the extremity of a valley enclosed by high mountains, it is moist and somewhat variable. The Raillère spring, the most renowned, contains only 0.1459 grain of sodium sulphuret in 16 ounces; it also contains sodium chloride and sulphide, silica, and baregine. The other springs are of more or less similar character. They are used in chronic bronchial catarrh, in rhenmatism, gout, syphilis, and disorders of menstruation. Horses with catarrhal affections are often treated, and successfully.

Cauterias'mus. Same as Cauterisation.

Cauterisa'tio. See Canterisation.

**Cauterisation.** (Καυτηριάζω, to cauterize. F. outterisation; I. cauterizazione; S. cauterizazion; G. ätzen, Brinnen.) The act or process of applying the cautery or a caustic.

C. by con'tact. Cauterisation accomplished by the direct application of the hot iron

to the part to be destroyed.

C. by points. The application of the point of a conical cautery, at equal distances on the skin, so as to destroy at each place the whole thickness.

C. dis'tant. Canterisation accomplished by holding a hot iron at some little distance from

the part to be destroyed.

C. en flè'ches. (F. en, in; flèche, an arrow.) A form in which chloride of zine or other caustic is made into a paste, with flour or other material, cut into pointed strips and dried. These are inserted into punctures made around, or into the substance of, the part to be destroyed.

C., inhe'rent. (L. inhereo, to be firmly fixed in.) The application of the actual cautery so as to produce complete and deep destruc-

C., Neapol'itan. The application of the actual cautery to the subjacent structures after an incision bas been made through the skin.

C., objective. (L. objicio, to throw hefore.) A milder eauterization, effected by holding a red-hot iron or a burning coal at a little distance from the diseased part.

C., slow. The application of the Moxa. C., transcur'rent. (L. transcurro, to run neross.) The rapid application of the actual cautery to the skin so as not to destroy the whole thickness.

Caut'erise. (Καυτηρείζω.) Το apply the cautery, or a caustic.

Caute rium. (Καντήριον, a branding

iron.) A cantery.

C. actuale. (L. actualis, active.) The actual cautery, or red-hot iron.

C. potentia'le. (L. potentia, power.) The potential cautery, or chemical caustic, as

zine chloride or caustic potash. Caut'ery. (Καυτήριον, a hranding iron. L. canterium; F. cautère; I. and S. cauterio; G. Brenumittel, átzmittel, Beizmittel.) An agent whereby disorganisation and death of organic tissue, to a greater or less extent, may be produced; the destroyed part being called an eschar. These agents are divided into actual

and potential; but practically the term cautery is confined to the first form, the actual; in other words, a heated metallic instrument.

C., ac'tual. (L. actualis, active. F. cautire actuel; G. Brinneisen, Brandeisen.) An instrument of metal of various shapes, which, being heated, is applied to the structures of the body, for the purpose of producing destruction of the tissue, or any minor degree of alteration between this and rubefaction. The metal usually employed is steel, in consequence of its capacity for heat, its readiness to give it up, its unlikelihood to break when plunged while hot into cold water, and its change of appearance when heated to different degrees of temperature; as, black heat (F. rouge-obscur), when the metal is heated only to the extent of not changing colour; red heat (F. rouge-cerise); and white heat (F. rouge-blane). The instrument consists of a handle of wood or ivory, and a stem, which at its extremity is bent at about a right angle, and terminated by the cauterising surface; this latter may be cir-cular and flat, conical, wedge-shaped, or otherwise. It is employed to destroy morbid surfaces and growths, to produce counter-irritation, and to arrest hæmorrhage.

C., but'ton. Same as Corrigan's cautery. C., elec'tric. Same as C., galvanic. C., galvanic. (F. galvano-cautère.) See

Galvano-cautery.

C., gas. (F. cautère à gaz.) An apparatus consisting of an india-rubber bag to contain the gas, which may be hydrogen or common coal gas, and an elastic tube connecting it to the burner, which is generally protected by a surrounding wire netting. The heat that can be obtained is very great. See also Thermo-cautery.

C., potential. (L. potentia, power.) A

term used formerly to include all caustics except

the hot iron.

Cau'tiousness. (L. caveo, to take heed of.) A mental faculty, according to phrenclogists, producing the emotion of fear and wariness in general, and prompting its possessor to take carc. It is situated in that part of the brain which lies beneath the parietal protuberance.

Cau'valat. France; Département du Gard. Mild sulphur water containing lime.

Used in skin diseases and catarrhal affections of

the larynx, bronchi, kidneys, and bladder.

Ca'va. The name of the intoxicating liquor made in the South Sea Islands from the rhizome

of the Macropiper methysticum.

Ca'va. (L. cavus, hellow.) A term applied to the vulva.

C. herbario'rum. (L. herbarius, a botanist.) The Fumaria bulbosa. C. ve'na. See Vena cava.

Ca'val. (L. carus, hollow.) Of, or belonging to, the vens cava.

Cav'alam. The Sterculia balanghas. Cavallium u'rens. The Sterc The Sterculia 2127718

Cavalry. (F. cavalerie, horseman; from I. cavaleria, from cavallo, a horse.) soldiers.

C. bone. A bony deposit in the adductor muscles of the thigh in horse soldiers, the result of inflammation produced by pressure.

Cava'tio. (L. cavatio, a cavern.) A eavity.

Ca've. Italy; in the district of Vico Pisano. A mineral water containing calcium earhonate and sodium chloride.

Ca'vea. (L. cavea, a hollow place.) A

C. na'rtum. (L. naris, the nostril.) The eavity of the nose.

Cav'endish, Hen'ry. An English chemist, born at Nice on October 10, 1731; died on February 24, 1810.

Caverna, (L. caverna, a hollow. F. caverna; I. caverna; S. caverna; G. Hohle, Hohlung.) A hollow or excavation in the lung or elsewhere from destruction of tissue or emptying of an abseess.

Also, sometimes applied to the cavity of a dilated bronchus.

Caverna. (L. eaverna, a hollow, from cavus, hollow. F. eaverne; G. Höhle.) Λ cavity. Also, a synonym of the Vulva.

C. na'rium. (L. naris, the nostril.) The cavity of the nose.

Cav'ernæ. Plural of Carerna. The C. dent'ium. (L. dens, a tooth.) alvcoli.

C. front'is. (L. frons, the forehead.) The frontal sinuses.

Caverna'rious. (L. caverna.) Growing in caverns or other subterranean places.

Caverni'tis. (L. caverna.) Inflammation of the corpora cavernosa of the penis.

Caverno'ma. A synonym of Angeioma, carernous.

Cavernous. (L. caverna, a hollow. F. caverneux; G. voll Hohlen.) Full of, or having, cells and hollows.

C. angeio'ma. See Angeioma, cavernous. C. arteries. A condition of arteries occurring but seldom. The carotid gland of the frog is an example in which filaments containing muscle cells spring from the arterial wall, and, interlacing with each other, form a network, Similar structures are found in the pulmonary arteries and aorta of some Cheloniæ. See C. blood - ressels.

C. ar'tery. See Corpus cavernosum, artery of.

C. blood-ves'sels. A condition in which the lumen of the vessel is in part or whole traversed by trabeculæ, so that it assumes a spongy character; the same condition also results from frequent and close anastomosis of blood-vessels of various sizes. See C. arteries, C. capillaries, and C. veins.

C. bod'ies. The corpora cavernosa of the penis; and also of the clitoris.

C. bod'y of pe'nis. See Corpus cavernosum penis.

C. bod'v of the vagina. The erectile tissue lying close to the bulbi vestibuli of the vagina.

C. brea'thing. A term applied to bronchial breathing having a hollow sound, produced by the reverheration of a eavity, either a largely dilated bronchial tube, or a tubercular, or other cavity; the characters are the more pronounced the freer the communication with the air passages, the firmer the surrounding lung tissue, and the emptier the cavity. Very occasionally eavernous breathing is heard where there is only indura-

C, cap'illaries. In these the trabeculæ consist of fine homogeneous connective tissue. See C. blood-ressels.

C. cough. The cough as heard by auscultation, when it is hollow and has a metallic character.

C. frem'itus. See Fremitus, cavernous. C. gan'gilon. A synonym of the Carotid ganglion.

C. groove. (F. gouttière caverneusc.) A broad, sinuous groove on the upper surface of the sphenoid bone at each side of the hody, which lodges the eavernous sinus and the internal carotid artery.

C. lymph-tu'mours. Same as Lymph-

angeioma, cavernous.

C. metamorph'osis. (Μεταμόρφωσις, a transformation.) The mode of production of the eavernous or erectile tumour called cavernous angeioma.

C. næ'vi. See Nærus, carernous.

C. nerves of pe'nis. See Corpus cavernosum, nerves of.

C. plex'us. (L. plexus, a plaiting. F. plexus caverneux; G. Zellblutleitergeflecht.) A sympathetic plexus lying in the eavernous sinus below and towards the inner side of the carotid artery at the sella turcica. It gives branches to the carotid artery, and communicates with the third, fourth, ophthalmic division of the fifth, and the sixth nerves, and with the ophthalmic ganglion.

C. râle. (F. rûle, a rattle in the throat.) Same as Rhonchus, cavernous.

C. respira'tion. (L. respiro, to hreathe back.) Same as C. breathing.

C. rhonch'us. See Rhonchus, cavernous. C. si'nus. (F. sinus caverneux; G. Zellblutleiter.) A large irregular sinus, situate at the side of the body of the sphenoid, receiving the ophthalmic vein in front, and extending from the sphenoidal fissure to the apex of the petrous bone, where it joins the petrosal sinus; on its inner side it communicates with the circular and the transverse sinuses. In its inner wall run the internal carotid artery, the sixth nervo and filaments of the carotid plexus, and in its outer wall are found the third, the fourth, and the ophthalmic division of the fifth, nerves. The cavity of the sinus is intersected by filaments of fibrous tissue. The inferior anterior cerebral veins join this sinus.

C. tex'ture A synonym of Erectile tissue.

C. tis'sue. A synonym of Erectile tissuc. C. tu'mour. (G. cavernöse Geschwulst.) Same as Angeioma, carernous.

C. veins. The traheculæ sometimes consist only of connective tissue, but in others they contain blood-vessels and museular hundles, as in the corpora cavernosa. See C. blood-vessels.

Also, the Corpora cavernosa, veins of. C. voice. The condition of the voice in Pectoriloguy.

C. whis'per. A blowing sound heard ever eavities in the lung during whispered words.

Cavern'ulæ. (L. cavernulæ.) cavities.

C. vena'rum. (L. vena, a vein.) Ancient name for the glands.

Cavern'ulous. (Same etymon.) A diminntive of cavernous.

C. râle. Same as C. rhonchus.

C. rhonch'us. ('Pόγχος, a snoring.) A term for a small cavernous rhonchus.

Ca'via. A Genus of the Order Rodentia, Class Mammalia. The eavy. Many species are used as food.

C. aper'ea. (L. aper, a boar.) Guinea-pig.

C. capen'sis. The Hyrax capensis.

Caviale. The same as Caviare.
Caviare. (F. caviar, from I. caviaro, from Turk. havyár; or from Mod. Gr. καυιάρι.) The hard roe or ova of several species of Acipenser, or sturgeon, especially A. huso, salted and preserved with oil. It is eaten as an article of luxury on toasted bread.

Cavic olæ. (L. eavus, a cave; colo, to inhabit. F. caveole; G. höhlbewohnend.) Applied to a Family of the Estri, the larvæ of which live in the nasal or auditory eavities of the bodies of

other animals.

Cavicorn'ia. (L. cavus; cornu, a horn. F. cavicorne.) A Family of the Group Ruminantia, of the Section Artiodactyla, of the Order Un-gulata, Class Mammalia. They have no incisors or canines in the upper jaw; they have six incisors and two canines in the lower jaw in a continuous series, separated by a large interval from the six molars on each side. Both sexes, or sometimes only the male, have permanent horns, consisting of a hollow sheath of horn on an osseous process of the frontal bone, the horn core. The feet are cloven, and are provided at the back with accessory hoofs.

Cavic'ula. (Dim. cavilla, the ankle-bone.) A name formerly applied by Forestus, Chir. Obs., vi, 57, to the malleolus, or protuberance of the

ankle.

Also, to the hollow between the tendons in front of the ankle-joint.

Also, applied to the enneiform bone.

Cavic'ulæ pe'dis no'dus. (L. cavicula; pes, a foot; nodus, a knot.) A synonym of the Tursus.

Cavilla. Old name, used by Forestus, Chir. Obs., vi. 57, for the malleolus or protaberance of the ankle. The same as Cavicula.

Also, applied to the cuneiform bone by Schneiderus, de Catarrho, s. ii, c. 2.

Also, to the astragalus.

Cavita'ria. (L. cavitas, a hollow. F. cavitaire.) An Order, according to Cuvier, of intestinal worms, having an intestinal canal toating in a distinct abdominal cavity.

Cav'itary. (L. cavus, hollow.) Relating

to cavities.

C. worms. (F. vers cavitaires.) Those intestinal worms which have an intestine with a distinct mouth and anus; an inner cavity, in short. Synonymous with Cælelmintha.

Cav'itas. (L. cavus, hollow.) A eavity or

hollow.

C. antro'sa au'ris. (L. antrum, a cave; auris, the ear.) The eavernous hollow of the ear; the tympanum of the ear.

C. aquæduc'tus vestib'uli mem-

brana'cei. (L. membranaceus, formed of a membrane.) The excal extremity of the aquæduct of the vestibule, which terminates near the sulcus petrosus inferior, and is formed by the union of two small tubes springing from the vestibular sacculi.

C. buccina'ta. (L. buccina, a erooked born.) The horn-shaped cavity; the cochlea of

the car.

C. cochlea'ta. (L. cochleatus, spiral.) The spiral-shaped cavity; the cochlea of the car.
C. digita'ta ventric'uli latera'lis.

(L. digitatus, fingered; ventriculus, a ventricle; luteralis, belonging to the side.) The fingershaped eavity of the lateral ventricle; the posterior cornu of the lateral ventricle of the brain.

**C. ellip'tlea.** (L. ellipsis, an ellipse; from ελλειψις, a defect.) The elliptic cavity; the ampulla of the semicircular canals of the ear.

C. hemisphæ'rlca. ('H $\mu$ , an insep. prefix meaning half;  $\sigma\phi\alpha\tilde{\imath}\rho\alpha$ , a sphere.) The hemispherical eavity; the fovea hemispherica of the vestibule of the ear.

C. hu'merl glenoi'des. (L. humerus, the upper arm; γλήνη, a cavity; εἶδος, form.)
The glenoid eavity of the scapula.

C. infe'rior tib'iæ. (L. inferior, lower.) The articular cavity at the lower end of the

C. innomina'ta. (L. innominatus, unnamed.) The unnamed eavity; the fossa of the helix of the ear.

C. intermalleola'ris. (L. inter, between; malleolus, dim. of malleus, a hammer.) The same as C. inferior tibie.

C. labyrinth'i. (Λαβύρινθος, a maze.) The cavity of the labyrinth of the ear.

**C. na'rium.** (L. naris, the nostril.) The cavity of the nostrils.

C. oc'uli. (L. oculus, the eye.) The cavity of the eye; the orbit.

C. orbicula'ris. (L. orbiculus, a small dish.) The round cavity; the fovea hemispherica of the vestibule of the ear.

C. o'rls. (L. os, the month.) The eavity of the month.

C. ovalis. (L. ovum, an egg.) The eval cavity; the fovea hemi-elliptica of the vestibule of the ear.

C. pul'pæ. (L. pulpu, pulp.) The pulp eavity of a tooth.

C. rotund'a. (L. rotundus, round.) The round cavity; the fovea hemispherica of the vestibule of the ear.

C. semiova'lis. (L. semi, half; ovum, an egg.) The semioval cavity; the fovea hemielliptica of the vestibule of the car.

C. subrotund'a. (L. sub, under; rotundus, round.) The nearly round cavity; the fovea hemispherica of the vestibule of the ear.

C. Valsal'væ. (Valsalva, the anatomist of that name.) A cavity situated in the mastoid process of the temporal bone above and behind the tympanic cavity.

Cavita tcs. (L. plural of cavitas.) Hollows or cavities.

C. cer'ebri. (L. cerebrum, the brain.) The cavities of the brain; the ventricles of the brain.

C. du'ree ma'tris. (L. durus, hard; mater, mother.) The cavities of the dura mater; the sinuses of the brain.

C. innomina'tæ. (L. innominatus, nn-

named.) The unnamed cavities; the auricles of the heart.

C. interscapula'res. (L. inter, between; scapula, the blade-hone.) The space between the hase of the scapula and the spinous processes of the adjacent vertebræ.

Cavities. (L. cavus, hollow.) Hollows.

C., aë'rial. (L. aër, air.) Same as Air cavities of plants; and also, a synonym of Air sacs of birds.

C., are'olar. See Areolar cavitics.

C., na'sal. See Nasal fossæ.

C. of reserve'. (G. Keservehohlen.) The offshoot or recess behind each milk tooth folliele, which in the course of growth becomes a closed cavity containing epithelium from the enamel germ, in each of which is developed a permanent tooth.

C. of reserve', poste'rior. (G. hintere Reservehohlen.) The successive extensions of the dental groove and enamel germ from which the three last permanent teeth, the melars, are developed.

C., respiratory. (L. respiro, to breathe back.) A synonym of the air passages or lobular passages of the lung.

Also, the eavities of the body which contain the

respiratory organs.

C., splanch'nic. ( $\Sigma \pi \lambda \dot{a} \gamma \chi \nu a$ , the viscera.) The visceral cavities; those of the eranium, the thorax, and the abdomen.

Cav'ity. (L. cavus, a hollow place. F. cavite; I. cavita; S. cavitad; G. Hohlung.) Any

hellow place or depression. A cell. C., an'kyroid. ('Αγκυρα, an anchor; εξδοs, likeness) The posterior cornu of the lateral ventricle of the brain; so called from its

curved shape. C., blastoderm'ic. (Βλαστός, a bud; δέρμα, the skin.) Same as Segmentation-cavity.
C., huc'cal. (L. bucca, the cheek.) The

cavity of the month.

C., cot'yloid. (Κοτύλη, a small cup; Licos, likeness.) The acetabulum.
C., cra'nial. See Cranial cavity.

C., dig'ital. (L. digitus, a finger.) term applied to the posterior cornn of the lateral ventricle of the brain, from its shape.

**C.**, epiplo'ic. ( $E\pi i\pi \lambda vov$ , the omentum.) The peritoneal cavity.

C., germ'inative. (G. germino, to bud.) A synonym of C., blastodermic.

C., glen'oid. See Glenoid cavity.

C., innom'inate. (L. innominatus, unnamed.) The part of the space existing between the semate-pleural and the splanchne-pleural layers of the blastoderm when somewhat developed, which lies outside the umbilical contraction.

C. of Arant'ius. (Aranzi.) The Ventricle of Arantius.

C. of pel'vis. See Pelvis, cavity of.

C., pleu'ro-peritone'al. The part of the space existing between the semate-pleural and the splanchno-plenral layers of the blastoderm, when somewhat developed, which lies within the umbilical contraction.

C., segmenta'tion. See Segmentationcavity.

C., semilu'nar, of ra'dius. See Radius, semilunar cavity of.

C., sig'mold, great'er. See Sigmoid cavity, greater.

C., sig'moid, les'ser. See Sigmoid cavity, lesser.

Ca'vum. (L. cavum, a hollow.) A cavity.
C. abdom'inis. (L. abdomen, the belly.
G. Bauchhohle.) The cavity of the abdomen.

**C. arachnoi'deum.** ('Αράχνη, a spider's web; εlδοs, likeness,) The Arachnoid cavity.

C. arterio'sum. ('Αρτηριά, an artery.) The left side of the ventricle of the heart of these Reptilia in which this organ is more or less completely divided by a septum.

C. cra'nil. (Kpavlov, the skull.) cavity of the skull.

C. dent'is. (L. dens, a tooth.) The cavity of a tooth; the pulp eavity.

C. Douglas'il latera'le. (Douglas, the name of an anatomist; latus, the side.) A narrow slit-like space on either side of the fossa It lies between the posterior recte-aterina. surface of the ligamentum nteri latum and the posterior internal wall of the pelvis.

C. fau'cium. (L. fauce's, the threat.) The hollow of the fauces. The part bounded by the tongue and soft palate, below and above, and the tonsils and the pillars of fauces on each side.

C. laryn'gis. (L. larynx, the upper portion of the windpipe. G. Höhle des Kehlkopfes.) The space situated between the inferior surface of the epiglottis above and the vocal cords below.

C. mediasti'ni. (L. mediastinus, standing in the middle.) The somewhat triangular space bounded by the sternum in front, and the reflections of the plenra on each side.

C. mediasti'ni anti'ci. (L. anticus, that which is in front.) The Mediastinum, anterior.

C. mediasti'ni posti'ci. (L. posticus, that which is behind.) The Mediastinum, pos-

C. na'rium. (L. naris, the nostril.) The cavity of the nostrils; the nasal fossæ.

C. na'si. (L. nasus, the nose. G. Nasenhöhle.) The general cavity of the nose into which various secondary cavities, as those of the antrum, ethmoidal, and sphenoidal sinuses open.

C. o'ris. (L. os, the mouth.) The cavity of the mouth.

**C. pericard'ii.** (Περικάρδιον, the membrane round the heart.) The cavity of the pericardium; the space between the two surfaces of the membrane.

membrane.

C. pharyn'go-nasa'le. (Φάρυγξ, the nose.) That part of the pharynx; nasus, the nose.) That part of the pharynx which, when the seft palate is in the horizontal position, is situated above the plane of the palate.

C. pharyn'go-ora'le. (φάρυγξ, pharynx; L. oralis, from os, the mouth.) That part of the pharynx which, when the soft palate is horizental, hes between it and the plane of the dorsum of the tengue.

C. pharyn'go-larynge'um. (Φάρυγξ, pharynx; λάρυγξ, larynx.) That part of the pharynx which lies below the plaue of the dorsum of the tengue.

C. præperitonea'le Ret'zii. (L. præ, before; περιτείνω, to stretch all over; Retzius, the name of a naturalist.) The space between the lower part of the fascia transversalis and the posterior surface of the linea alba and recti muscles. When the bladder is greatly distended it rises into this space.

C. pulmona'le. (L. pulmo, the lung.) Same as C. venosum.

C. pulvina're. (L. pulvinus, a cushion.) The central eavity in the tongue of certain Gas-

teropods.

C. subarachnoidea'le. (L. sub, beneath; άράχνη, a spider's web; είδος, form; G. Subarachnoidealraum.) A space existing between the inner surface of the arachnoid membrane of the brain and spinal cord and the pia mater; it contains a little fluid termed arachnoideal fluid.

C. subdura'le. (L. sub, beneath; durus, d. G. Subduralraum.) A lacuniform or hard. G. Subduralraum.) fissure-like space situated between the dura mater externally and the arachnoid internally.

**C. thora'cis.** (L.  $\theta \omega \rho a \xi$ , the chest.) The eavity of the chest; the thorax.

C. tym'pani. (Τύμπανον, a drum.) The

eavity of the tympanum of the ear.

C. tympan'icum supe'rius. (L. tympanum, the drum of the ear; superior, that which is above.) A large ellipsoidal cavity constantly present in the mastoid process of the temporal bone, situate above and behind the tympanie cavity anteriorly; it is in close relation with the auditory canal. It is sometimes called the antrum Valsalvæ.

C. u'teri. (L. nterus, the womb. G. Ge-hārmutterhohle.) The cavity of the uterus.

C. veno'sum. (L. vena, a vein.) The right side of the ventricle of the heart of those Reptilia, in which this organ is more or less completely divided by a septum.

Ca'vy. See Cavia. Ca'yan. The Phascolus creticus.

Cayapo'nia. A Genus of the Nat. Order

C. globulo'sa. (L. globulus, a little ball.) Fruit a drastic purgative. **Cayapo'nin.** The active purgative principle of *Cayaponia globulosa*.

Caya pos. An isolated tribe of Brazil inhabiting the upper Araguay.

Cayen ne. The name of an island, a river,

and a seaport town, which is the capital of French Guiana.

C. cin'namon. The produce of Cinnamomum zeylanicum.

C. pep'per. (F. poivre d'Inde, p. de Guinée; l. peperone; S. pimenton; G. Spanischer Pfeffer.) The ground pods and seeds of the Capsicum annum. Also called Guinea pepper. See Capsici fructus.

Cayla. France; Département de l'Aveyron. Weak earbonated irou waters, with much car-

bonic acid.

Cay'uput. Same as Cajuput. Cayupu'ti. Same as Cajuput.

Caz de Bag'ni. Italy; in the Masino Valley, 3300 feet above sea level. Mineral waters, of temperature 35° C. (95° F.), containing sodium chloride and sulphate.

Cazabi. The Jatropha manihot.

Ceano'thus. (Κεανῶθος, a kind of thorn.) Old name for the Serratula arvensis.

Also, a Genus of plants of the Nat. Order Rhamnaceæ.

C. america'nus, Linn. (G. Seckelstrauch.) The leaves are called New Jersey tea, and are used in some parts of North America as tea. The root is in long fragments, having slight odour, and slightly astringent taste; the epidermis is thin and greyish, the woody part reddish; and yields a cinnamon-coloured dye. It is used in gonorrhæa, dysentery, and scrofula, as a gargle in ulcerated sore throat, and locally in cancer.

C. azu'reus, Desf. (Pers. lazur, the lapis lazuli.) The C. cæruleus,

C. bengalen'sis, De Cand. A species used

in Senegal in dysentery.

C. cæru'leus, Lagasea. (L. cæruleus, sky-blue.) Hab. Mexico. A reputed febrifuge.

C. ova'lis, Bigeton. (I shaped.) Used as C. americanus. (L. ovalis, egg-

C. reclina tus, L'Herit. (L. reclino, to d backwards.) The Colubrina reclinata, bend backwards.) Rich.

C. triner'vis. (L. tres, three; nervus, a nerve.) A synonym of C. americanus.

Ce'ar. (Κέαρ, for κηρ.) The heart.

Ceas'ma. (Κέασμα, from κεάζω, to cleave.) Old term, nsed by Hipp-crates, de Morb. Mul. xxxiv, 10, for a fissure or fragment.

Cebadilla. Same as Cevadilla. Ceber. Arabie for the Aloes wood.

Ce'bi gallinæ. (L. gallino, a hen.) Old term for a hen's liver roasted. Paulus Bagellus, de Morb. Pucror.

**Ce'bidæ.** (K $\tilde{\eta}\beta$ os, a long-tailed monkey.) Spider monkeys. A Family of platyrrhine Quadrumana, having hairy prehensile tails and broad caudal vertebræ.

**Cehoceph'alus.** (Kißos, a kind of monkey;  $\kappa \varepsilon \phi a \lambda \eta$ , the head. F. echocéphale.) A monstrosity, with two distinct eyes, very close together, and a very rudimentary nose.

Cebypi'ra. A large Brazilian tree, the hark of which is used in decoction for baths and fomentations in rheumatism of the limbs and cutaneous diseases.

Ce cal. See Cacal.

Cecidodaph'ne. A synonym of Cinna-

Cecidomy'ia. (Κηκίς, a gall nut; μυία, a fly.) A Genus of the Suborder Nemocera, Order Diptera, Class Insecta, the larvae of which live in plants, and often do much damage.

C. destruc'tor, Gay. (L. destructor, a destroyer. G. Getreideverwüster.) Hessiau fly. Larva lives in the haulm of wheat, to which it is

very destructive.

Italy; Tuseany, between Cecinel'la. Monte Beechieri and Palaja. A mineral water, containing small quantities of sodium chloride, magnesium chloride, and sulphate and iron carbonate, with much free carbonic acid.

Ce'cis. (Kynis, a gall-nut.) An oak-gall. Ce'city. (L. cæcitas, blindness. Gr. τυ-φλότης; F. cécité; I. cecita; S. ceguedad; G. Blindheit.) Blindness.

Cecro pia. A Genus of the Nat. Order Artocarpaceæ.

C. pelta'ta, Linn. (L. peltatus, furnished with a shield.) Trumpet tree. Hab. South America. Properties similar to digitalis. ashes of the wood are used to mix with coca as a masticatory. The juice is astringent, and used as a vulnerary; the inner bark and the root arc astringent; and an infusion of the leaves is used in the diarrhea of cattle. The wood, from its porosity, is used instead of amadou.

**Cecryph'alon.** (Κεκρύφαλος, the net with which women confine their hair.) Term used by Hippocrates, de Steril. xi, 6, 8, for the reticulum or second stomach of the Ruminantia.

Cecryph'alos. Same as Cecryphalon. Ce'cum. See Cacum.

Cecu'tiency. (L. cacutio, to be blind.) Dimness of vision.

Ce'dar. (L. cedrus, from κέδρον, the cedar tree.) A name of several coniferous trees.

C., Barba'does. The Cedrela odorata. C., bas'tard. The Guazuma tomentosa.

C., ber'ry bearing. A synonym of the Juniperus oxycedrus and the J. sabina,

C., Caroli'na. The wood of Juniperus virginiana

C. of Leb'anon. The Cedrus libani.

C., oil of. This term appears to have been applied to the liquid resin of the Cedrus libani; and also by a variation in spelling to the Hulle de cedrat, or essential oil of bergamot.

C., red. (G. rothe Ceder.) The Juniperus

virginiana.

C. tree. Chiefly applied to the Cedrus libani.

C. tree, dwarf. The Artemisia santonica.

C., white. The Cupressus thyoides.

Cedeia. (Knôcia, care of the dead.) Em balming.

Ced'eru man'na. Manna obtained from the Cedrus libani.

Ced mata. (Kéduara, an obscure word applied by Hippocrates to certain affections which he attributed to the excessive horse exercise of the Scythians; it may also mean aneu-1 ysmal or varicose diseases; in Aretæus the word means dilatations of the vena cava when ending in rupture and sudden death.) Old name for chronic pains of the joints, particularly the hip-

Also, applied to a similar affection in the genital parts, according to Foësius and Keuchenius.

Ced'matoïd. (Κέδματα; είδος, likeness.) Resembling cedmata, or chronic pains in the

**Cedmatophthal'mia.** (Κέδματα; βθαλμία.) Inflammation of the eye from δφθαλμία.) catarrhal, rheumatic, gouty, and other causes.

Ced'matous. (Κέδματα.) Having, or full of, cedmata.

Cedra, essen'tia de. (L. essentia, the essence; de, from.) The essence of berga-

Ced'rat. The citron, Citrus medica. Cedrela, Linn. (Kέδρος, the order.) A Genns of the Nat. Order Cedrelacea.

C. febritu'ga, Blume. (L. febris, fever; fugo, to drive away.) A synonym of C. toona. According to others, a distinct species. Used in Java as a febrifuge.

C. odora'ta, Linn. (L. odoratus, fragrant. F. cedrel odorant.) Wood balsam. Used in rheumatism.

C. rosmari'nus, (L. rosmarinus, rosemary.) The C. odorata.

C. toon'a, Roxb. Hab. India. The resinous bark is used as a tonic and astringent in fever and dysentery.

Cedrela'ceæ. (Cedrela.) A Nat. Order of thalamifloral Exogens, described by Lindley as rutal Exogens, with consolidated capsular fruit, deeply monodelphous or free stamens, and numerous winged seeds.

Ced relads. The plants of the Nat. Order Centrelucea.

Cedrelæ'um. (Κεδρέλαιον, from κέδρος, the cedar tree; ¿λαιον, oil. F. cedrelcon; G. Cederal.) Old term for the liquid resin of the Cedrus libani, the cedar of Lebanon; sometimes obtained from the cone.

Cedre'lese. A Tribe of the Nat. Order

Cedrelaceae, having the stamons distinct, and the inflorescence convolute.

Ced'rene. Ca2Il21. A liquid hydrocarbon found in the liquid resin of the cedar of Lebanon. Ced'ria. (Κεδρία, resin from the cedar tree. G. Cederharz.) A name applied sometimes to the oil of cedar, sometimes to the pitch or resin; but it is properly the crude tears of the cedar. It was employed by the Egyptians in the process of embalment.

Ced'rin. The erystalline active principle of Cedron seeds.

(L, cedrus, the ocdar tree.) Of, Ced'rine. or belonging to, the cedar tree.

Ced'rinum o'leum. See Oleum cedri-

C. lig'num. (L. lignum, wood.) The wood of the Cedrus libani, the cedar of Lebanon.

C. vi'num. (L. vinum, wine.) Old term for wine in which the resin of the cedar tree has heen stoeped. Formerly used as vermifuge.

Ced'ris. (Κεδρίς.) Name for the fruit or cone of the cedar of Lebanon.

Ced'rites. The same as Cedrinum vinum.
Ced'rium. According to some authors, the term cedrium was applied to pyroligneous acid, which was employed in the process of embalin-

Also, the same as Cedria.

Ced'ro. The citron.

Cedrome la. (Κέδρος, the cedar; μελου, an apple.) The fruit of the Citrus bergamia. Cedromelon. The same as Cedromela.

Ced'ron seeds. (F. semences de cédron.) The fruit of the Simuba ecdron. They resemble a large bean, enclosed in a matty, thick, evoid drupe of the size of a lemon; they are employed as a remedy for the bites of serpents, for hydrophobia, and for intermittent fevers; when fresh they contain an oily matter, and the whitish farina obtained from them is extremely bitter, this bitterness being very lasting and disagreeable. It is used as a substitute for quinine.

Also called Quassia and Aruba cedron. Cedronel'la. A synonym of the Melissa

officinalis. C. mexica'na, Bth. A stimulant and

antispasmodie. C. triphyi'la. The Dracocephalum moldaricum.

Cedros'tis. (Κέδρωστις.) A name for the Bryonia dioica, or white bryony.

Cedro'ta longifo'lia. (L. longus, long; folium, a leaf.) The Amba guyanensis.

Ced'rula. (Dim. cedrus, the cedar tree.) The Juniperus oxycedrus, or berry-hearing cedar.

Ced'rus. (Kiôpos, from Heh. keder.) The cedar tree. A Genus of the Nat. Order Comfer a.

The American ecdar. C. america'na. The Thuja occidentalis.

C. bacelf'era. (L. bacca, a berry; fero, to bear.) The Jumperus oxycedrus, or berryhearing cedar.

Also, the Juniperus sabina.

C. deoda'ra, Lond. (L. Deus, God; do, rive.) The deodar. The wood is used in to give.) The deodar. India as a carminative, diaphoretic, and diuretie in flatulence, fever, dropsy, and urinary diseases. The turpentine is valued in skin diseases.

C. lib'ani. (Libanus, the mountain of that name.) The cedar of Lebanon. It yields a

peculiar kind of manna.

C. mahog'ani. The Swietenia mahogani, Ce'duon. Ancient name for the truffle. Cef'alu. Sicily; near Scalfuni, on the sea

coast. A mineral water, temp. 55° C. (131° F.), containing maguesium sulphate and carbonate, calcium carbonate, and a trace of iron.

Ceiria. (Κείρω, to waste.) An old name for the tenia, or tapeworm (κειρίαι); used by Galen, Meth. Med. iv, 17.

Cei'andine. (F. chélidoine; from Gr. χελιδόνιον, from χελιδών, a swallow. G. Schwalbenwurz, Schellkraut.) The Chelidonium majus, so called because of a very old idea that it is used by the parent swallows to restore the sight of their young when their eyes were put out.

Also, a name given to the Impatiens fulva and

I. pallida.

C., com'mon. The Chelidonium majus.
C., great'er. The Chelidonium majus.

C., les'ser. (F. herbe aux hémorrhoides, petite éclaire; G. Feiguarzenkraut, kleines Schellkraut.) The Rununculus ficaria, or pile-

C., pop'py. The Stylophorum diphyllum. Celastra'ceæ. A Natural Order of perigynous calcifloral Exogens, or a Family of the Order Frangulinæ, described by Lindley as rhamnal Exogens, with polypetalous flowers, an imbricated calyx, and five, or some multiple of five, distinct stamens. It includes the Euonymean and Elæodendreæ.

Celas'trin. A non-nitrogenous bitter principle found in the leaves of Celastrus ob-

scurus.

Celastrin'eæ. Same as Celastraceæ. **Celas'trus.** (Κήλαστρου, the privet, or the holly.) Old name of a plant, supposed to be the Rhamnus alaternus.

A Genus of the Nat. Order Celastraceæ.

C. america'nus. The Ceanothus ameri-

C. edu'lis, Vahl. The Catha edulis.

C. macrocarp'us, De Cand. (Μακρός, long; καρπός, fruit.) Seeds contain a useful oil.

C. mayte'nus. The Maytenus chilensis.

C. nu'tans, Roxh. (L. nuto, to nod.) A synonym of C. paniculatus.

C. obscu'rus. (L. obscurus, dark.) Hab. Abyssinia. Used as a tonic. Leaves yield an oil

similar to eucalyptus oil.

C. panicula'tus, Willd. (L. panicula, a tuft. Tam. Valuluvy; Tel. Bavungie; Hind. Malkunganee.) Staff tree. Hab. Neilgherries. A climbing shrub. The seeds afford an empyreumatic, deep scarlet oil, of acrid taste, which is burnt. It is a diaphoretic and tonic, and has been used in beriberi, paralysis, and rheuma-

C. parviflo'ra. The Catha parviflora.
C. scan'dens, Linn. (L. scando, to climb.)
Climbing staff tree. Hab. United States of
America. The root-bark is said to be purgative, emetic, and antisyphilitic.

C. senegalen'sis. A species having the

same properties as C. scandens.
C. venena'tus. (L. venenatus, furnished with poison.) A species the spines of which are

said to inflict very painful wounds

Cela'tion. (L. celo, to conceal. F. celation; G. Verheimlichung.) The concealment of pregnancy or of parturition.

Celauri'tis. Alchemical name for lithar-

gyrus, or litharge.

Cele. (Κηλή, a tumour. F. tumeur: G.

Geschwulst.) A word formerly used for hernia or rupture, and which, with the last letter mute, added to another to form a compound term, signifies a tumour caused by the protrusion of some soft part or parts, the nature of which is denoted by the first portion of the compound term, as Enterocele, Epiplocele.

It is also, in like manner, used to signify the swelling or increased size of a part, as Sarco-

Also, its enlargement by the presence of fluid, as Hydrocele.

Celeomorph'æ. (Κελεός, the green woodpecker; μορφή, form.) A synonym of Pici. Celerigra'di. (L. celer, quick; gradior, to walk.) An Order of the Mammifera, comprehending the Radentia, most of which are remarkable for the rapidity of their movements.

Cel'ery. (F. céleri, from Prov. I. seleri, from L. selimum, from Gr. σέλινον. I. sedimo; S. apio; G. Sellerie.) The Apium graveolens. Cultivation and blanching by earthing up the plant as it grows destroy its original acridity, and it is commonly used in soups and stews, or eaten raw; in the latter state it is probably not easy of digestion. The seeds are also used for flavouring.

C. salt. A culinary article composed of the oil of eelery seeds and common salt. Used

for flavouring.

C., wild. The Bubon galbanum.

Celes'tine. A synonym of Strontium sulphate.

Cele'tes. (Κηλήτης, from κήλη, a hernia. G. ein Bruchkranker.) One who has a hernia.

Ce'lia. An old term for yeast. Ce'liac. See Caliac.

Gelibacy. (L. cælibatus, from cælebs, unmarried. Gr. άχυγία, άγαμία; F. célibat; I. celibato; S. celibato; G. Ehelosigkeit.) Λ life without marriage or sexual connection. Celibacy is believed to conduce very materially to insauity. either religious, erotic, or hysteric; and more frequently in women than in men.

(Same etymon.) One who

Cel'ibate. (Seconforms to Celibacy.

**Celis.** (Κηλίς, a stain, a spot.) Old term for macula.

Also, an ulcer, or a cicatrix. See Kelis. Cell. (L. cella, a chamber; from celo, to conceal. F. cellule; I. celletta; S. celdilla; G. Zelle.) A small cavity. Applied to larger or smaller hollows in bone or other structure, as the

frontal and mastoid cells, the cells of the spongy bones, and such like.

In Biology, the term cell is applied to certain more or less spherical elementary structures having origin in the primary cell from which the animal or plant sprang, and constituting a large part of most of the important organs and fluids of the body. A typical cell consists of a central body, the nucleus, which often contains one or more highly refracting spots, nucleoli, surrounded hy more or less granular protoplasm, and the whole enclosed in a membranous investment, the cell wall. The cell wall is absent in some animal cells, such as those of blood, and pus, and embryonic cells; the nucleus is absent in some of the lowest animal and vegetable forms; so that it would appear that the protoplasm only is the essential part of the cell. The shape of cells varies; originally they are spherical, but they assume more or less regular polygonal shapes from pressure, and they may send out offshoots or

processes of varying length. Cells undergo multiplication by segmentation or fission, when the nucleus undergoes division, the parts separate from each other, the cell contents collect about each, a furrow is formed between them, which gradually deepens, and finally completes the separation. They also multiply by genuation or budding, by free formation, and by endogenous multiplication. See Cytogenesis.

Cells form the chief part of many morbid stenetures; these live and grow and die in the same

fashion as those of healthy organs.

Also, the space between the nerves of the wings

Also, applied to the cavity of the anther lobe which contains the pollen.

Also, each eavity of an evary or pericarp con-

taining one or more ovules.

Also, a cavity hollowed out of, or built up upon, a slip of glass called a slide, for the purpose of receiving an object for microscopical examina-

tion or for preservation.

C., an'imal. There is little perceptible difference between an animal and a vegetable cell in the carliest stage of development; both are masses of protoplasm destitute of cell wall, possessing the power of movement, and capable of self-nutrition, but subsequently they differ in the circumstances that the animal cell never has the character of a shut sac containing cellulose, which is very characteristic of the vegetable cell.

C., apoplec'tic. The Apoplectic focus.
C., built up. A cell made by cementing four pieces of glass, of the desired height and

size, on to a glass slide for the microscope. C. cav'ity. (L. cavitus, a hollow.) The interior of a cell; the space enclosed by the cell wall.

C., cement'. A cell made by forming a more or less thick ring of varnish or other microscopic cement on a glass slide, by means of a turn-table.

C., cent'ral. (L. centrum, a centre. Centralzelle.) The larger lower division of the secondary embryo-saes of gymnosperms which develops into an oosphere.

Also, a term applied to a large cell near the base of the archegonium of the Hepaticæ, into which the canal cells, after absorption of the

septa, open.

C. clus'ters. (Sax. clyster, or cluster, a bunch.) A term applied to aggregations of small corpuscles composed of nuclei, with a surrounding of protoplasm and an investing capsule of connective tissne, found in the sympathetic of the frog in connection with the nerve trunks.

C. con'tents. (L. contineo, to contain. G. Zelleninhalt.) The material within the cell wall, being protoplasm, nuclens, nucleolus, fat, pigment, calcarcous matter, special sceretions, and such like, in an animal cell; and protoplasm, nucleus, cell sap, pigment, starch, raphides, aleurone graius, resin, and other matters in a vegetable cell.

C., daugh'ter. (F. cellule fille.) A term applied to a secondary cell produced by fission of

or endogenous growth in a cell.

C. dis trict. (Old F. district, or destroict, from Low L. districtus, a part where a lord may exercise authority; from L. distringo, to draw asunder.) Same as C. territory.

C. divis'lon. (L. divide, to part asunder. G. Zelltherlung.) That process by which a cell

divides into two or more segments called daughter cells. New centres of formation may arise in a cell, around each of which a portion of the protoplasm of the mother cell gathers till all is used up, except, if it be present, the cell wall. The new cells acquire new nuclei and sometimes new cell walls, and by growth burst through the mother cell.

C. doc'trine. (L. doctrina, teaching.) See

Cell theory.

C., element'ary. (L. elementa, the first principles of things.) The ultimate cell structure of the tissues and organs of the body. C. fam'ily. A collection of cells originat-

ing from a mother cell.

C. fi'bres. (L. fibra, a thread.) A term formerly applied to pathological products oensisting of fibres which originate from cells.

C. Bu'id. (G. Zell'flussigkeit.) A term applied formerly to the contents of a vegetable cell, exclusive of the nucleus; it was considered to be composed of a watery fluid, the cell sap, and the more consistent protoplasm.

C. force. (Low L. fortia, strength, from L. fortis, strong.) The power of assimilation and

growth existing in a cell

C. forma'tion. (L. formo, to shape. G. Zellbildung.) The progressive development of cells one from another in the growth of an organ

Also, applied to a structure which consists mainly of cells.

Also, see Cytogenesis.

C. fu'sions. A term applied in Botany to canals or shorter tubes formed by the coalescence of cells and the absorption of the adjoining septa or walls; such are the true vessels of plants and the laticiferous vessels.

C. gen'esis. (Γένεσις, generation.) See Cytogenesis.

C., germ. (L. germen, a spront.) germinal vesicle of the ovum.

C. germ. (L. germen, a spront.) molecule, or part of a nucleus, of a parent cell from which every cell springs.

C., germ'inal. (L. germen.) The germinal vesicle of the ovum.

C., growing. Same as Growing slide.
C. life. A term applied to the supposed innate life of the ultimate cell on which the well heing of the structure depends.

C. mass, interme'diate. cells found in the two days old embryo of the fowl and other vertebrata lying between the proto-vertebra and the point where the mesoblast divides into somatopleure and splanchnopleure. At a very early period this cell mass becomes intimately connected with the proto-vertebra, and from it, in all probability, the Wolffian duct takes its origin.

C. mem brane. Same as C. wall.
C., moth'cr. (F. cellule mère.) A term given to a cell which is giving rise to other cells.

C., mo'tor. (L. moveo, to move.) A ganglion cell in connection with a motor nerve filament.

C. move'ment. The capacity which some animal and plant cells have of changing place; such as the amæboid movement of a lencocyte, the vibratile movement of a ciliated epithelial cell, the contractile movement of a muscle cell, and the migratory motion of a spermatozoon.

C. multiplica'tion. See Cytogenesis.

c. nests. Also called "concentric globes," or "epithelial nests," are the concentrically arranged groups of epithelial cells met with wherever squamous epithelium is undergoing rapid growth. The cell nests are characteristic, though not distinctive, of epithelioma.

C., nu'cleated. (L. nucleatus, provided with a kernel. F. cellule à noyau.) A cell which

possesses a nucleus.

C. nu'cleus. (L. nucleus, a kernel. F. noyau de cellule; G. Zellenkern.) A spherical corpuscle, semisolid or containing liquid, with numerous decussating protoplasmic fibrils, occupying the centre or, more rarely, the periphery of a cell, and composed of nitrogenous material like condensed protoplasm. Occasionally there are more than one in a cell, and frequently the nucleus contains one or more nucleoli. It is by many believed to be the physiologically active part of the cell; but it may be absent, as in some Cryptogams and in low animal forms.

C., pa'rent. A cell undergoing fission or

other mode of development of other cells.

C., plant. See C., regetable.

C., prl'mary. (L. primarius, chief.) Same as C., elementary.

C., primord'ial. A mass of protoplasm destitute of cell wall.

Also, used in the sense of C., elementary

C. pro'cess. (G. Zellenfortsatz, Zellausläufer.) A ramification or offshoot of the protoplasm and wall of a cell.

C. prolifera'tion. (L. proles, offspring; fero, to bear.) The development of cells from a parent cell; the multiplication of cells by endo-

genous development or by fission.

C. pro'toplasm. See Protoplasm

C. sap. (Low G. sapp, juice. G. Zellsaft.) In a wide sense, the whole of the fluid with which the cell wall, protoplasm, and all other organised structures of the cell are saturated. In a more restricted sense, it is applied to the fluids contained in the vacuoli of the protoplasm. It probably varies much in composition. It contains the materials ministering to the growth of the cell and to the production of the special products of

C. spa'ces. (L. spatium, space. G. Raumzellen.) The spaces in the ground substance of areolar tissue which more or less accurately enclose the connective-tissue corpuscles.

C. ter'ritory. (L. territorium, a district. F. territoire cellulaire.) A term used by Virchow to designate that range of extracellular substance in which he supposes each individual cell exercises an influence.

**C. the ory.** (Φηωρία, a looking at. F. théorie cellulaire.) An hypothesis according to which the essential element of each of the tissues of the body is a cell, bowever much in the course of development it may have been altered. The whole series of cells and derivatives of cells having arisen from the primary embryonic or germ cell, and by modification of growth having been differentiated into organs and tissues, and still retaining a federated unity, as it were, have each an individual existence and power, sufficient not only for its own individual life and wellbeing, but potent over a certain district ontside

C., thin-glass. A cell made by fixing with marine glne a piece of thin glass, perforated to the required size, on a glass slide for microscopic purposes.

C., vac'uolated. (I. vacuo, to make empty.) A cell containing one or more empty spaces. See Vacuolation.

(L. vegeto. F. cellule C., veg etable. végitale.) A mass of protoplasm sometimes containing a nucleus, and provided with a cell wall or investing membrane. After a time a fluid appears in vacuoles of the protoplasm, pressing the protoplasm towards the periphery of the cell, but often leaving bands or anastomesing processes. The protoplasm is the seat of the active changes of assimilation and disassimilation, which lead to the formation and deposit of cellulose, chlorophyll grains, starch grains, oil drops, resinous particles, and other hodies found in plants. See Nucleolo-nucleolus.

C. wall. The external membrauous investment of a cell. In plants, it consists of cellulose and inorganic substances; in animals, when present, it is albuminous, consisting of modified protoplasm; and when hard, as in the epidermic

cells, it is called Keratin.

Cella. (L. cella, a chamber.) A cell.
C. latera'lis. (L. lateralis, lateral.)
lateral ventricle of the brain.

C. me'dia. (L. medius, middle.) The central part or body of the lateral ventricle of the

C. tur'cica. The Sella turcica. Cel'læ, (L. cella, a chamber.) Name given

by Batsch to the perithecia of Spheriæ.

Celles. France ; Departement de l'Ardêche. Carbonated alkaline chalybeate springs; temp. 15° to 20° C. (59° to 68° F.) Recommended in dyspepsia, phthisis, scrofula, and cancer.

Cellicolous. (L. cella; colo, to inhabit.)

Living in cells or eavities.

Cellif'erous. (L. cella; fero, to bear.) Bearing or producing cells.

Celloid. (L. cella; eldos, form.) Cell-like. Cells. See, for etymon, Cell.

C., adelomorphous. See Adelomorphous. C., ad'ipose. (L. adeps, fat.) See Fat cells.

C., air, of lung. (F. vesicule pulmonaire; G. Luftblaschen, Luftzellen.) The vesicles clustered around and opening into the lobular passages of the lung. They vary in size from 1-150" to 1-70", and are largest at the thin edges and the apex, smallest in the interior of the lung. Their walls consist of faintly marked connective tissue, with a few corpuscles and some yellow elastic fibres, especially at the mouth; according to some, there are also unscular fibre cells. They are lined with a fine layer of pavement epithelium, and they often contain amœboid granular cells and particles of carbon

C., amœb'oïd. (Amæba; ɛidos, likeness.) Organic cells having the movements of an amœba.

C., angioplas'tic. ('Αγγεῖον, a vessel; πλάσσω, to form. F. cellules angioplastiques.) The branching nucleated cells of connective tissue, from which capillaries arise in the embryo.

C., an nular. (L. annulus, a ring. G. Ringfaserzellen.) Fibrous plant cells in which the fibre is broken and arranged in rings around the cell.

C., antip'odal. ('Λντί, against; πούς, a foot. F. cellules antipodes.) Two or more distinctly nucleated cells which make their appearance, after the foundation of a plant seed, near the chalaza.

C., aud'itory. (L. audio, to hear. F. cellules auditifs; G. Horzellen.) A synonym ef C., hair, external and C., hair, internal.

C. bast. Same as Liber cells.

C., beak'er. Same as C., goblet.
C., blastoderm'ic. (F. cellules blastodermique; G. Keimhautzellen.) See Blasto-dermic cells.

C., blood. The red and the white corpuscles of the blood.

C., bone. The lacung of bone.

**C.**, **bronch'ic.** ( $8\rho\delta\gamma\chi\iota\alpha$ , the bronchial tubes.) 'The air cells of the larges.

C., calcig erous. See Calcigerous cells.
C., caly c'itorm. (L. calyx, a flower-cup; forma, shape. F. cellules caliciformes; G. Kelchzellen.) Same as C., goblet.

C., can'cer. Cancer cells vary in size and shape; they range from '08' to '025"; they may be round, oval, polyhedral, fusiform, caudate, or with irregular hollows and projections; they may eontain one or more large, round or oval, distinct, highly retracting nuclei, with nucleoli; their other contents are granular, and often fatty, frequently with vacuoles, empty spaces called by Virehow physaliphores. The cell-wall is not distinct. There is no form of eell peculiar to any of the forms of eancer.

C., cart'ilage. See Cartilage cells.
C., caud'ate. (L. cauda, a tail.) Cells having a prolongation from one surface.

C., chalice. (F. calice, from κύλιξ, a

drinking-cup.) Same as C., goblet.

C., ciliated. (L. cilium, an eyelash. F. cellules ciliées, cellules vibratiles; G. Wimperzellen, Flimmerzellen.) Cells furnished at the free extremity with numerous fine vibratile hairs, as occurs in the ciliated epithelium of the air passages and other parts.

(Sax. cleofan, to split C., cleavage. asunder.) Cells arising by the fission, segmentation, or division of a pre-existing cell. Hence applied to the masses marked out by lines in the earliest stages of development of the ovum.

C., colos'sal. A synonym of C., grant.

C., colos'trum. See Colostrum. C., columinar. (L. columna, (L. columna, a pillar.) Epithelial cells of a prismatic shape attached by

C., concent'ric. (L. con, for cum, together; centrum, a centre. F. cellules concentriques.) Cells which contain another cell.

**C., conducting.** (L. conduco, to collect. F. cellules conductrices.) A term given by Caspary to fusiform spiral cells of some length found in certain plants.

C., connective-tis'sue. See Connective-

tissue corpuscles.

C., contract'ile. (L. contraho, to draw together. F. cellules contractiles; G. contractile Zellen.) A synonym of Fibre-cells, contractile.

C., cor'neal. See Corneal corpuscles.
C., Cor'ti's. The external hair cells of the organ of Certi.

C., cov'er. Same as C., investing.

C., crystal. See under Cinchona bark. C., cup. (L. cupa, a vat.) Same as C., goblet. C., Deit'ers'. See Deiters, cells of.

C., delomorph ous. (Δήλος, conspi-enous; μορφή, form. F. cellules délomorphes, cellules de revêtement; G. Belegzellen.) Same as C., peptic.

C., dentic'ulated. (L. denticulatus, furnished with small teeth. F. cellules dentelves.) Epithelial cells with serrated edges, found in the deep layers of the skin on the sole, palm, and the prepuce, on the tongue, and on the cornea.

C., dent'ine. A synonym of Odontoblasts. C., dot'ted. (F. cellules ponctuces.) Same as C., pitted.

C., element'ary. (L. elementa, the first principles of things.) The original cleavage cells

of the yelk.

C., embryon'ic. (Εμβρυόν, the embryo. F. cellules embryonaires.) Same as Blastodermic cells.

The term has also been applied to certain cells found in growing pathological products. They are small, roundish masses of protoplasm, about 1-1800th" to 1-2500th" in diameter, with no cell wall, and having a soft, faintly granular inter-cellular bed. It has been supposed, and hence the name, that these cells are developed from unused original embryonic cells. They are also called indifferent cells.

C., embryoplas'tic. See Embryoplastic cells.

C., enam'el. See Enamel cells.

C., endothe'lial. The cells of the Endothelium.

C., epiderm'ic. The eells of the Epidermis.

C., epiderm'oid. ('Επιδερμίς, the outer skin; ¿los, likeness.) Cells resembling those of the epidermis.

C., epithe'lial. The cells of the Epithelium.

C., ethmoid'al. See Ethmoidal cells.

C., exuda'tion. See Exudation corpuscles. C., fat. See Fat celts.

C., fibre. See Fibre cells.

Also, the fusiform cells seen growing into fibres in a granulation of a healing wound.

Also, the same as Cell fibres.

c., fi'brillated. (L. fibrilla, dim of fiber, a fibre. F. eellules en araignée.) Flattened, branched, hyaline, nucleated cells found in the neuroglia, and specially abundant in the gelatinous substance of the posterior cornua of the spinal cord.

C., fibroplas'tic. (L. fiber, a fibre; Gr.  $\pi\lambda\dot{\alpha}\sigma\sigma\omega$ , to mould. F. cellules fibroplastiques.) A synonym of Connective-tissue cells,

Also, the same as C., plastic.

C., fibrous. Plant eells in which the secondary thickening takes the form of fibres; arranged in a more or less spiral fashion.

C., fork'ed. (L. furca, a fork.) Cells found on the gustatory discs of the tongue of some Am-

C., th'siform. (L. fusus, a spindle; forma, shape. F. celiule fusiform; G. Spindelzellen.) Cells which bulge in the middle, and have two opposite more or less finely clongated poles.

C., ganglion'ic. (t'άγγλιου, an enlargement of a nerve. F. cellules ganglionaires; G. Ganglienzellen.) The cells of a gangli m, and of

the grey matter of the brain.

C., gi'ant. (F. myeloplaxes; G. Riesenzel-len.) Large protoplasmic masses, of irreguar outline, without cell wall, and containing many roundish nuclei, each possessing a bright nucleolus; sometimes they are attached to smaller masses of the same nature, at others they give off branched processes. They take origin from connective-tissue cells, from epithelium, or from the endothelium of blood-vessels or lymphatics. They are found in tubercle.

Also, a term applied to certain large ganglionic cells found in the frontal and the ascending

parietal convolutions of the brain.

C., gob'let. (F. gob.let, dim. of Old F. gobel, from Low L. cupeilus, a cup. F. cellules caliciformes; G. Becherzellen, Kelchzellen.) Open, vase-shaped, epithelial cells, with a thin cell wall and a nucleus embedded in protoplasm at the bottom, found on the mucous membrane of the alimentary, respiratory, and genital canals. They have been supposed to be unicellular mucus-secreting glands, or cylindrical or ciliated epithelial cells charged with mucus and then burst.

C. grain. (L. granum, a grain.)

same as U. granule.

C., granular. (L. granulum, a little grain. F. cellules granuleuses; G. Kornchenzellen.) Cells containing granular matter, such as a leucocyte. See, also, C., granule.

C., gran'ule. (L. granulum, a little grain.) A term applied by His to a cell, like an ordinary white blood cell, found in the stroma of the ovary. Also, generally applied to cells in main part

consisting of granules.

C., gustatory. (L. gusto, to taste. G. Tastz-den.) The central spindle-shaped cells of the Taste-buds. They are filterm at each extremity; the basal process being branched and connected with a fine piexus of nerve fibrils at its attachment to the corium of the mucous membrane; the apical process is surmounted by a tine hair, which projects at the apex of the taste-bud. See C., pin and C., rod.

C., hair, external. Three or four rows

of cells, longer than the internal hair cells, but of the same character, lying on the outer side of the outer rods of Corti. They have two nuclei, and are supposed to be really double cells.

C., hair, intern'al. (F. cellules ciliées internes.) A row of cells having on their upper surface a hrush of very fine hair-like processes lying on the inner side of the inner rods of Corti.

C., hepatic. See Hepatic cells.

C., indifferent. (L. indifferens, in which there is no difference.) A term given to those cells which are seen in the early growth of many tumours, and which are also called C., embryonic.
C., interstit ial, of o'vary. (F. ceilules

interstitielles de l'ovaire ; G. Stromazellen.) Cells similar to the interstitial cells of the testicle, found in connection with the connective tissue of

the stroma of the ovary.

C., interstit'ial, of tes'ticle. (L. interstitium, the space between. F. cellules interstitielles.) Cells found in the intertubular connective tissue of the testicle. They vary in form in different animals, sometimes being unipolar, more often branched; they contain a small nucleus, with a very distinct central nucleolus. By some, they have been thought to resemble ganglion cells, by others, connective-tissue corpuscles.

C., interstitial, of u'terus. similar to the interstitial cells of the testicle, found in the lower layers of the mucous mem brane of the body of the uterus; they are spherical or slightly polyhedral, granular, with an ovoid granular nucleus, and often a hright nucleolus. When, at the beginning of pregnancy, the uterine mucous membrane changes so as to develop into the decidua, the interstitial cells also change and multiply, some being small and ovoid or spherical, others large and irregular; about the third or fourth month they attain their larges: size, and become fusiform or polyhedral and irregular; the nuclei increase in size, and become more brilliant; and the nucleolus is often yellow. After the fifth month the nuclei increase largely

in number, and appear hypertrophicd and de-generated. They are numerous in the maternal surface of the placenta.

C. investing. See under Taste-buds. C., laticif'erous. (L. latex, juice; fero, to bear. F. cellules vasculaires laticiferes.) Long-branched simple cells, containing latex, occurring in the Aconitum, Euphorbia, and other

plants.

C., lymph. See Lymph cells. C., mar'row. (Sax. mearh.) Same as C., medullary.

C., mas'toid. See Mastoid cells.

c., medullary. (L. medulla, marrow. cellules medullaires; G. Markgeschwulstzellen.) The cells of a myeloid sarcoma. See C., myelord.

Also (F. cellules médullaires; G. Markzellen), the roundish, somewhat granular cells, containing one or more large nuclei, contained in the me-dullary eavities of bone. They are supported on a fine connective tissue network, are often reddish coloured, and are possessed of an ameeboid power of movement. They have been supposed to originate the red blood-corpuscles.

Also, a synonym of C, of hair.

C., mi'grating. Same as C., migratory. C., migratory. (L. migro, to remove from one place to another. G. Wanderzellen.) A synonym of C., amwboid, in consequence of their power of motion; specially applied to the leucocytes found in connective tissue.

C., mu'cous. (L. mucus. F. cellules

muqueuses.) A term applied to small cells found on some serons membranes, disposed in islets or streaks, in marked contrast, by their colour and their granular appearance, to the neighbouring cells; it has been supposed that these masses are centres of more rapid cell proliferation.

Also, the cells of Mucus.

C., mus'cle. Same as Fibre cells, muscular. C., mus'cle, prim'itive. (L. primitivus, the earliest of its kind ) The cellular mass from which it is believed by some that striped mus-cular fibre takes its origin. It contains three distinct nuclei and a considerable number of vitelline granules; it is doubtful whether it is a congeries of three cells or a trinucleated cell.

C., my eloid. (Μυελός, marrow; είδος, likeness. F. cellules medullaires; G. Markgeschwulstzellen.) Large multinueleated cells, like the medullary cells of bone, found in myeloid sarcoma. They are irregular in shape, often very large, and branched.

C., nerve. See Nerve cells.

C., nerve, primitive. (L. primitivus, the earliest of its kind. F. celtules nerveuses primitives.) The ovoid, radiately disposed cells in the embryo, from which the nerve tissue

C., neuromus'cular. (L. nervus, a nerve; musculus, a musele. F. cellules neuromusculaires.) Certain cells found in the fresh water hydra, the superficial surface of which is sensitive and represents a nerve, and the deep surface is contractile and represents a muscle,

C. of Claudius. See Claudius, cells of. C. of Dei'ters. See Deiters, cells of. C. of epen'dyma. The ciliated epithelial

cells of the Ependyma ventriculorum.

C. of hair. (Sax. har.) The small angular eells occupying the centre of a hair.

C. of insert'ion. (L. insero, to put into. F. cellules d'insertion.) A name given to certain cells in the thallus of lichens which carry gomidia.

C. of tu'nica granulo'sa. See Tunica

granulosa

C., olfact'ory. (L. olfacio, to smell. F. cellules olfactives; G. Ricchzellen.) Spindleshaped cells lying amongst the branching central ends of the columnar epithelial cells of the olfactory mucous membrane. The basal process passes inwards to the nucous corium, and is probably connected with a fibril of the olfactory nerve; the apical process terminates on the level of the epithelium.

C., os'seous. (L. os, a bone.) The lacunæ

of bone.

Also (F. cellules osseuses), the cells or nucleated masses of protoplasm which occupy the lacung of bone, and send branches into the canaliculi.

C., pcg. Same as C., pin.

C., pep'sin. ( $\Pi i\pi \tau \omega$ , to digest. F. cellules à pepsine.) A term applied to the cells of the gastric glands.

Also, see C., peptic.

C., pep'tic. ( $\Pi i\pi\tau\omega$ , to digest. F. cellules a pepsine.) Large spheroidal or ovoidal, coarsely granular cells of the peptic glands of the pylorus. Same as C., delomorphous.

C., perivas cular. (Περί, around; L. vasculum, a small vessel. F. cellules perivascu-

laires.) Same as C., plasma.
C., pig'ment. See Pigment cells.

C., pin. (L. penna, a pen. G. Stiftenzellen.) A term applied to one of the varieties of gustatory cells, the free extremity of which consists of a slender highly refracting style or point,

sharply truncated above.

(F. cellules ponctuées; G. Fibrous plant cells having C., pit'ted. getüpfelte Zellen.) numerous depressions in the cell wall, which are the external openings of canals in the walls produced by secondary layers of lignin deposited in perforated layers from within outwards, the opening of each successive layer being over the subjacent one. The openings of the canals of contiguous cells usually correspond with each other. The primary cell membrane remains unperforated for some time, but as they become old the thin membrane often gives way, and the canal communicates with the interior of the cell.

C., plant. (F. cellules régétales ; G. Pflanzenzellen.) The essential element of all vegetable structure, consisting, in an early stage, of an external cell wall enclosing protoplasm, within which is a nucleus; as the cell ages the protoplasm arranges itself in a layer round the inner surface of the cell wall, and in a more or less central mass containing the nucleus attached by bands to the peripheral layer; the spaces between the bands are called vacuoles, and contain the cell sap. The cells during growth assume various shapes.

**C.**, **plas'ma**. (Πλάσμα, anything formed. F. cellules plusmatiques; G. Bindegewebszellen.) The cells of connective tissue; so called because by some they are supposed to be tubular and to

convey plasma.

Also, a synonym of  $C_i$ , perivascular.

Also, a name for a variety of cartilage-corpuscles which differ from the ordinary form in being coloured by the violet of the dahlia.

C., plastic. (Πλαστικός, fit for moulding.) A term applied to the leneocytes seen in effused lymph on an inflamed serous surface.

C., polar. (L. polas, the end of an axis.)

Nerve cells having one or more processes, and so named, after the number of them, unipolar, bipolar, and so on.

C., polyg onal. (Πολός, many; γουία, an angle.) Epithelial cells, originally spherical, which hy mutual pressure have become flattened on several of their sides.

C., po'rous. (Hópos, a passage.) Same

as C., pitted.

C., prick'le. (Sax. pricu, a point. F. cellule dentelee; G. Riffzellen, Stachelzellen.) The eells of the deep layer of the epidermis, which possess hair-like processes, which interdigitate with those of the adjoining cells.

C., prin'cipal, of stom'ach. (F. cellules principales; G. Hauptzellen.) A synonym

of the Adelomorphous cells.

C., prop. Same as C., supporting. C. py'oid. (Huov, matter; elous, likeness.)

Same as C., plastic.

C., ram'ified. (L. ramus, a branch; facio, to make.) Fibrous plant cells in which the fibre is branched over the surface of the cell wall.

C., reproduc'tive. (F. cellules reproduetrices.) A synonym of the Spores of lichens. C., res'in. See under Cinchona bark.

C., retic'ulated. (L. reticulum, a little net. F. cellules grillagées; G. Netzfaserzellen) Fibrous plant-cells in which the fibre is arranged in a net-like fashion over the cell wall.

C., rib. Same as C., prickle. C., ring'ed. Same as C., annular.

C., rod. (Dut. roede. G. Stabzellen.) A term applied to one of the varieties of gustatory cells, the free extremity of which is shorter than that of the other variety, C., pin, and is not provided with a pin-like point.

C., roof. (Sax. hrof. G. Dachzellen.)

Certain columnar epithelial cells which form a harrow stria opposite the nerve epithelium in the ampullæ and utriculus of the membranous

labyrinth of the ear.

C., sal'ivary. See Salivary cells.
C., scaly. (Sax. secala, scales, shells.) Flattened, thin, and dry cells, overlapping at their edges, such as occur in the superficial layers of the epidermis.

C., sem'inal. (L. semen, seed.) Same as

Svermatic cells.

C., sperm. See Spermatic cells.

C., spher'ical. (Σφαΐρα, a ball.) Cells of a globular shape.

C., spind'le-sha'ped. See C., fusiform. C., squa'mous. (L. squama, a scale.) Same as C., scaly.

C., stellato. (L. stella, a star. F. cellules ctoiles; G. Sternzellen.) Epithelial and other cells giving off branches which frequently inosculate with those of neighbouring cells, as in the capillaries and the connective tissue.

C., stellate, of llv'er. Ramified cells seen in the course of the hepatic capillaries by the side of the hepatic cells; they are probably

connective-tissue cells.

C., supporting. (F. cellules de soutien; G. Stutzzellen.) The columnar epithelial cells immediately adjoining the external hair cells of the organ of Corti.

C., ten'don. See Tendon cells.

C., tes'selated. (L. tesselatus, checquered.) Flattened epithelial cells meeting at the edges; often used in the same sense as C., scaly.

C., testic'ular. (L. testis, a testiele. F. cellules testiculaires; G. Hodenzellen.) One of the

two forms of spermatic cells, the other being the spermatoblasts. They are spherical or slightly polyhedral, have one or two coarsely granular nuclei, and surround the spermatoblasts.

C., thorn. (G. Dornzellen.) Same as C.,

prickle.

C., tooth. (G. Zahnzellen.) The large, clear, columnar epithelial cells surrounding the hair cells of the coelilea of birds and Amphibia; they attain their most perfect condition on the anditory teeth, which are processes of the inferior quadrangular cartilaginous red.

C., tra'cheated. (Trachea. F. cellules

trachèes.) Same as C., annular.

C., trel'lised. (F. treillis, from L. trilix, woven with three sets of leashes.) Same as  $C_{\bullet}$ , reticulated.

C., twin. (F. cellules de jumelles.) A term applied to the conjoined cells of Corti and Deiters.

C., typhic. (F. cellules typhiques.) The epithelial cells of Peyer's patches in typhoid fever, when they have undergone a granular change.

C., va'grant. (L. vagor, to wander.) Same

as C., migratory.

c., vas cular. (L. vasculum, a little vessel. F. cellules vasculuires.) Branched cells, which are supposed to develop into capillaries.

C., vasoform'ative, of Ran'vier. (L. vas, a vessel; formo, to fashion. F. cellules vasoformatives.) Cells found in the milky spots of the omentum of the new-born rabbit; they are granular, highly refracting, and with ramifying outshoots, which often inosculate with each other. They are believed by some to develop into capillaries and blood-corpuscles; according to others, they are not cells, but interfascicular spaces filled with an exudation from the blood.

C., veg'etable. (F. cellules végétales.) Same as C., plant.

C., vi'bratile. (L. vibro, to set in tremulons motion.) A term for the cells of ciliated epithelium.

C., Vir'chow's. The C., osceous. C., wan'dering. A synonym of C., migratory, from the power of movement.

Cellula. (L. cellula, dim. of cella, a cell. F. cellule.) A cell, cavity, or hollow place.

Cellulæ. (L. plural of cellula, a little cell.) Cells.

Also, term applied to the receptacles or conceptacles of Fuugi, and therefore synonymous with the terms perithecium and peridium.

Also, a synonym of the secondary peridioles of

Polysacemu and Nidularia.

Also, a synonym of the alveoli on the tubes of

Polyporeæ. (I. aër, air.) The air cells of the lungs.

C. bronch'icæ. (Βρόγχια, the bronchial tubes.) The air cells of the lungs.

C. co'li. (Colon, the intestine of that name. F. cellules du colon; G. Grimmdarmszellen.) The sacculi of the colon.
C. Malpighia'nge. The cellules of Mal-

pighi; a term for the air cells of the lungs.

C. mastoï deæ. See Mastoid cells.
C. medulla'res. (L. medulla, marrow.)

- The interspaces of the arcolation of the medullary cavity of bone.
- C. pulmonales. (L. pulmo, the lung.) The air cells of the lung.
- C. san'guinis. (L. sanguis, the blood.) The blood-discs.

Cel'Iular. (L. cellula. F. cellulaire; G.

zellig, zellicht.) Relating to, or consisting of cells or cavities.

C. erysip'elas. See Erysipelas, cellular.

C. exostosis. See Exososis, cellular.
C. hypoth'esis. (Υπόθεσιε, a supposition.) Same as Cell theory.

C. inflation. (L. inflatio, a swelling up.) A synonym of emphysema of the areolar tissue.

C. mem brane. A synonym of Arcolar tissue.

C. pathol'ogy. The doetrine of the origin of disease in a perturbation of action, or an alteration of structure, of some or other of the ultimate cells of which the body is composed.

C. plants. Same as Cellulares.

C. sys'tem. The whole areolar tissue.
C. tis'sue. (F. tissu cellulare; G. Zellgewebe.) A synonym of Areolar tissue.

C. tis'sue of bone. The cancelli of bone. C. tis sue of plants. See Parenchyma.

Cellula'res. (L. cellula.) A name for cryptogamous plants, in reference to their markedly cellular structure.

C. folia'ceæ. (L. foli Candolle's term for the mosses. (L. folium, a leaf.)

Cellula'ria sep'ta. (L. cellula; septum, a wall. F. cloisons cellulaires.) The parenchymatous septa which, at a late period of development, divide various fruits, as those of many Leguminosæ.

Cellulated. (L. cellula.) Containing

or composed of cellules.

Cel'lule. (L. cellula, a little eell. F. cellule; G. Zellchen.) A small cavity or chamber,

or enclosed space; also, a small cell.

C., bronch'ic. (Βρόγχια, the bronchial tubes. F. cellules bronchiques.) An air cell of

the lungs.

C. cent'ral. Name applied, in Muscineze and vascular Cryptogams, to the cellule situated in the centre of the archegonium, which becomes the oosphere or female cell, and reproduces, after having been feeundated by the antherozoids, a new asexual plant.

Cel'Iulic ac'id. A name by Fremy for an acid supposed to be produced by the action of acids or alkalies on cell walls of fruits or of roots.

Cellulif'era. (L. cellula; fero, to bear.) A synonym of Polyzoa.

Cellulif erous. (L. cellula; fero, to bear.) Having cellules or cellulous hellows, as the perithecium of the Cytisporeæ.

Celluliform. (L. cellula; forma, like-

ness.) Having the appearance of a cellule.

Cellulin. A synonym of Cellulose.

Cellulitis. (Cellular tissue.) In Inflammation of the cellular or areolar tissue. Same as Erysipelas, cellular.

C., diffu'se. (L. diffundo, to shed abroad.)

Same as Erysipelas, cellular.

C., or bital. (Orbit.) Inflammation of the areolar tissue of the orbit. It is usually the consequence of some injury, but may also occur in typhus, scarlet fever, in puerperal states, and in suppurative meningitis. It is associated in some cases with osteitis and periostitis of the bones of the orbit, especially in scrofulous children and in those who have had syphilis. The lids are red and swollen, the coujunctiva chemosed, the eye fixed and protruding. The cornea and even the whole globe may suppurate. The pressure on the nerve often leads to optic neuritis, followed by atrophy. Pus forms with greater or less rapidity and makes an opening for itself, if

not artificially let out, through the conjunc-

C., pel'vic. Seo Pelvic cellulitis.

C., periu'terine. (il  $\epsilon \rho i$ , around; L. uterus, the womb.) The same as Pelvic cellulitis. C., pus'tular. A synonym of Malignant

pustule.

C. venena'ta. (L. venenatus, poisoned.) Inflammation of arcolar tissue from introduction of poisonous matter through a wound.

Cellulofi brous. Same as Fibro-cellular. Cellulose. (L. cellula, a little cell. G. Cellulose, Holzfaser.)  $C_0H_{10}O_5(x)$ , probably  $C_{18}H_{30}$ O15. The chief constituent of vegetable tissues, and having the same relative constitution as starch. It is amorphons, tasteless, inederous, insoluble in water, alcohol, ether, dilute acids, and alkalies, soluble in an ammeniacal solution of enpric exide, and uncolourable by iodine. Strong cold sulphuric acid converts it into an adhesive substance, soluble in water, and having the characters of dextrin.

It is found also in the animal hody, as in the corpora amylacea of the brain, in the mantle of some Mellusca, and the testa of Tunicata.

C., an'imal. A term applied to glycogen and to tunicin.

C. degenera'tion. A synonym of Amyloid degeneration.

**C.** mem'brane. (G. Cellulosehaut.) A term for the cell wall of a vegetable cell.

Cellulos'ity. (Same etymon.) The condition of a structure containing cells, as the spongy tissue of bone or the arcolar tissue.

Cellulous. (L. cellula, a small cell. F. celluleux; G. zellig, zellenformig.) Cellular, or

containing cells.

C. tis'sue. The cancellous tissue of bone. **Celocol'iea.** (Κήλη, a tumenr; κωλικός, having the colic. G. Bruchkolik.) Hernious colic, or that cansed by strangulated hernia.

Celodyspnœ a. (Κήλη, a tumonr; δύσ-

πνοια.) Hernious dyspnæa.

**Celo'des.** (Κύλη, a tumour.) Keloid. **Celol'ogy.** (Κύλη, a tumour;  $\lambda \delta \gamma \sigma s$ , a discourse. G. Bruchlehre.) A treatise en hernia. **Celo'pa.** A name of Jalap.

Celorrhaph'ia. (Κήλη, a tumonr; ραφή, a seam. G. Bruchnaht.) A hernial suture. Celo'sia. A Genus of the Nat. Order Amaranthacea.

C. adoën'sis. A species used in Abyssinia as a vermifuge

C. crista'ta. (L. crista, a crest.) The Cockscomb.

c. nit'ida, Vahl. (L. nitidus, shining.) The C. paniculata.

c. panicula ta, Linn. (L. panicula, a tnft.) Hab. Jamaica. An astringent used in diarrhoea, dysentery, and hæmorrhages.

C. populifo'lia. (L. populus, the poplar; folium, a leaf.) A species producing Belbelta. C. trigy na. (Τρείς, three; γυνή, female.)

One of the species affording Belbelta.

Celosie'æ. A Tribe of the Nat. Order Amaranthaceae, having the ovary multiovulate and the anthers bilecular.

**Celosome.** ( $K\dot{\eta}\lambda\eta$ ;  $\sigma\tilde{\omega}\mu a$ , the body.) A monster in which the abdominal wall is deficient, and there is eventration of the viscera, with absence or fissure of the sternum, and herniary displacement of the heart.

Celosomian. (Same etymon. somien.) Having the condition of a Celesome. Ce'lotome. (Κήλη, a hernia; τομή, a entting. G. Bruchschneider.) The knife or instrument for performing celetomy.

**Celot'omy.** (Κήλη, a tunnour, also hernia; τέμνω, to cut. G. Bruchschnitt.) A term for the operation for strangulated hernia by eutting down and dividing the stricture.

Alse, a synonym of Castration.

Cel'sa. An old fanciful term for what w called "musculns vitae," or a pulse or beating wandering through every part of the body, according to Ruland. Paracelsus intended by this, a flatus or vapour, or a certain spurious and wild spirit lurking under the integuments and seeking to escape, as causing or inducing some species of cutaneous affection.

Cel'sia. A Genus of the Nat. Order Scro-

phulariacea.

C. coromandella'na, Vahl. Knkshima. Hab. India. A common weed. Inspissated jnice used in dysentery.

Cal Sius. A Swedish physicist, who in-

C.'s thermom'eter. A thermemeter, graduated so that a hundred degrees separate the freezing and boiling points of water. Same as Centigrade thermometer.

Cel'sus. A Roman physician of the first century of the Christian era.

C., method of. The mode of performing lithotomy known as the Apparatus minor.

Cel'teæ. A Tribe of the Nat. Order Ulmaceae, having a one-celled evary and amphitropal ovnles.

Celtid'eæ. A synonym of Ulmaceæ. Cel'tis. (G. Zurgel.) A Genus of the Nat. Order Ulmacea.

C. austra'lis, Willd. (L. australis, southern.) Frnit sweetish, rather astringent; seeds yield an eil; a deceetion of the branches is nsed in dysentery and gleet.

C. occidenta'lis. (L. occidentalis. western.) Hab. United States. Nettle tree. sngar berry. The drupes are used in dysentery.

C. orienta'lis. (L. orientalis, eastern.) Hab. Asia. The root, bark, and leaves are aromatic, and are used in epilepsy.

Celts. (G. Kelten.) A delicecephalic orthognathic race. Speech Gaelie and Cymric. Gaels are represented by the natives of Scotland, Isle of Man, and Ireland; the Kymri by the natives of Brittany and Wales. Cem'bra. The Pinus cembra.

Cem'bra. The Pinus cembra.
C. nuts. The seeds of the Pinus cembra.

They are esculent, and yield an oil.

Cement'. (L. cæmentum, from cædo, to cut or divide; because made of minute pieces ef broken stone, sand, clay, or the like, mixed with lime.) Originally applied to rubbish, sherds, nnhewn stenes; mertar.

Term for any substance used for the purpose of uniting or cementing together pieces of what may have been broken, as lute, glue, solder.

Also, a term fer a composition by which metals are covered, and then subjected to heat without fusion, and are thereby changed in their qualities, or purified, a process which is termed cementation.

Also (G. Zahnkitt), a layer of true bone covering the fang of a tooth. It contains lacung and canaliculi of large size, and, when thick, vascular canals like the Haversian canals. Some of the canaliculi anastomese with the tubules of the underlying dentine. Sometimes it extends for a little distance on the corona of the tooth, and oecasionally appears to fill up the elefts between the tubercles of the molar teeth.

Also, a term applied to certain soft compounds used for stopping of earious teeth.

C. gland. A structure placed at the base of the pedicle of Cirrepedes, which secretes the substance which attaches the animal to its base.

C., involucral. (L. involucrum, a wrapper.) A term applied to cement which covers the whole tooth, as in ruminant and pachydermatous animals.

C. or'gan. A soft laminated structure enveloping the enamel organ of the embryo of herbivora.

C., rad'ical. (L. radix, a root. F. cement radiculaire.) A term applied to cement when found on the fang of a tooth, as in man, quadrumina, carnivora, and rodents.

C., rad'ico-cor'onary. (L. radix; corona, a crown.) Same as C., involucral.

Cementa'rium. Old term for a crucible, or aludel.

**Cementa'tion.** (L. camentatio, from camentum, cement.) The process of ecmenting, or state of being cemented. Term for a process by which metals are purified or changed in their qualities by heat without fusion, by means of a composition called a cement, with which they are covered. Thus, iron is converted into steel by eementation with charcoal.

Cement'um. The Coment of a tooth. Ce mos. (Κύμος, a muzzle.) A name of the bandage called Capistrum.

Also, the Alchemilla vulgaris.

Cenæsthe'sis. (Κοινός, common; alo-θησις, sensibility. F. cenesthésie; G. Gemein-gefühl.) Name by Reid for the vague sentiment of existence which is the result of the general impressions produced by bodily conditions unconnected with the special senses.

Cenangi'a. Same as Ceneangeia.

**Inth'y.** ( $K \in \nu o s$ , empty;  $a \nu \theta o s$ , a The condition of a flower when desti-Cenanth'y. flower.) tute of stamens and pistils.

**Cenchrecphiogio** is. (Κέγχρος, millet; ecphlogiois. G. Hirsenkorn varioloule.) Miliary smallpox modified by vaccination.

**Cench'rias.** (Κεγχρίας, from κέγχρος, a millet seed, from its likeness. G. Hirsenfechte.) Term, used by Galen, Meth. Med. xiv, 17, for a species of herpes.

Cenchro'des. (Κέγχρος; είδος, likeness.

G. hirsenathalich.) Shaped like a millet seed.

Cench'rold. (Κέγχρος, millet; είδος, likeness. F. cenchrode; G. hirsenähalich.) Resembling the millet.

**Cench'ros.** (Κέγχρος, a kind of millet. G. Hirsenkorner.) Millet.

**Cenchrosyphilion thus.** (Κέγχρός, millet; syphilionthus.) Miliary syphilionthus.

Cenchrosyphilopsy'drax. (Kéyχρος, millet; syphilopsydrax.) Miliary syphilopsydrax.

**Ceneangei'a.** (Κενεαγγείη, from κενός, empty; άγγείον, a vessel. G. Gefassleere.) A term used by Galen, Comment. in Hippoer. de Rat. Vict. in Acut. ii, 47, for emptiness of the vessels of the body.

Cenel'læ. An old term for haws, the fruit of Cratægus oxycantha.

Cenembate'sis. (Κενός, empty; έμβαίνω, to step into.) αίνω, to step into.) The same as Paracentesis. Also, the probing of a cavity or passage.

Cen'eon. (Κενεών, from κενεός, empty.)

Old term, used by Hippocrates, Coac. Pranot. 452, and elsewhere, for that hollow part of the hody between the ribs and the ilium, called the side; also, for the depression around the umbilions in infants, according to Moschion, de Morb. Mul. c. 41.

Ceneo'nes. Plural of Cencon.

Cenifica tum. Old term for a calx. Cenig'dam. Name, used by Paracelsus, Paragraph. iii, 4, § 1, of an instrument anciently employed in opening the head in epilepsy. Cen'ig'otam. Same as Centgdam.

Ceniote mium. Name by Paraeelsus for a purgative remedy formerly used in venercal disease, and supposed to contain mercury specially prepared for the purpose.

Cen'iplam. The same as Cenigdam. Cen'ipolam. Same as Cenigdam. Cenobion'neous. (Cenobium.) Pertaining to a cenobium.

Ceno bium. (Κοινόβιον, a society, particularly of monks. F. cenobion.) A name given to a fruit consisting of several pericarps without valves, sutures, styles, or stigmata, united at the base, as in Labiatæ and Boraginaceæ.

pericarp is an eremus.

**Cenogen'esis.** (Κενός, empty, fruitless; γένεσις, an origin. G. Falschungsgeschichte.) Α tendency in the process of ontogeny to adaptation to present conditions, resulting in the suppression or hurrying over of steps in the recapitulation and development of special larval or embryonic organs.

**Ceno'ma.** (Κένωμα.) Evacuation. **Cenomy'ce.** (Κενός, empty; μύκης, a mushroom. G. Becherftechte.) A Genus of Lichenes.

C. pyxida'ta. The Cladonia pyxidata. C. rangiferi'na. The Cladonia rangiferina.

C. vermicula'ris. The Thamnolia vermicularis.

Cenoramph'ous. Cenoramph'ous. (Κενός, empty; ράμφος, a beak. G. leerschnabelig.) Applied to birds which have the beak empty and very slight, notwithstanding its size.

Cenosiophthi sis. (Κένωσις, emptiness; phthisis.) Wasting from inanition.
Ceno'sis. (Κένωσις, from κενύω, to empty.)

An ancient term for an evacuation, especially one which diminished at once all the fluids of the body, as bleeding.

Also, a term for inanition.

**Cenospu'dia.** (Κενοσπουδία, zealous pursuit of frivolities.) A term for what is known as brown study.

**Genotic.** (Κενωτικός, for emptying, purgative.) Of, or belonging to, cenosis; drastic. **Genotica.** (Same etymon.) An Order of the Class Genetica in Mason Good's classification. tion, being diseases affecting the fluids, consisting of morbid discharges, or excess, deficiency, or irregularity, of such as are natural.

Also, a term for drastic purgatives.

**Centaur'ea**, Linn. (Κενταύριον, the herb centaury. F. centaurée; G. Flockenblume.) A Genus of the Family Cynaracea, Nat. Order Compositæ.

C. ama'ra, Linn. (L. amarus, bitter.) A bitter tonic.

C. be'hen, Linn. Systematic name of the Behen abiad of the Arabians, the B. album or white behen; also called Jacea orientalis patula, and Raphonticoides lutea. It grows on Mount Libanus, and its root is bitter, and is considered a nervine tonic.

C. benedic'ta. The Cnicus benedictus.

C. calcitra pa, Linn. (Calcitrapa is a Latinised form of Caltrop, an iron with four points, so made that one is always uppermost, and formerly used to throw down before and so impede and damage cavalry; it is derived from L. calx, the heel, and Mod. L. trappa, a snare, and has reference to the spring flower-heads of the plant. F. centaurée étoilée, pignerole; G. Sterndistel.) The common star-thistle, or star Sterndistel.) The common star-thistle, or star knapweed. The juice, extract, or infusion, is said to cure intermittent fever; the bark of the root and the seeds are recommended in uephritic complaints and in dyspepsia.

C. centaurium, Linn. (F. grande centauree.) The greater centaury. The root was formerly used as a tonic and vulnerary.

C. cerinthæfo'lia, Sibth. (L. eerinthus, the plant so called; folium, a leaf.) The C. behen. C. cy'anus, Linn. (Kúavos, dark blue. F. blavelle, bluet; I. ciano, fioraliso; G. blave Kornblume.) The systematic name of the blue-

bottle, or corn-flower plant; also called hurtsickle. The flowers were formerly used as antiphlogistic, antispasmodie, cordial, aperient, diuretic.

C. jace'a, Linn. (F. jace'e des prés.) Root

bitter and slightly astringent. Used as a deter-

sive gargle.

C. monta'na, Linn. (L. montanus, belonging to a mountain.) Great bluebottle, mountain knapweed. Infusion of flowers used to weak

C. sic'ula. (L. siculns, Sicilian.) The

C. solstitialis.

C. solstitia'lis, Linn. (L. solstitialis, belonging to midsummer.) St. Barnaby's thistle. Formerly used as an anticteric, anticachectic, and lithontriptie; it is only slightly tonic.

C. stæ'bë, Linn. (Στοιβή, a shrubby

plant used to stuff cushions.) Flowers cooling, astringent.

C. stella'ta. (L. stellatus, starry.) The C. calcitrapa.

C. sulfu'rea. (L. sulfurcus, like sulphur.) Leaves used as a local application to wounds to promote healing.

Centaur'eum. The Erythræa centau-

**Centaur'ii cacu'mina.** (L. cacumen, the extremity of a thing.) The tops of the Erythrau centaurium, or officinal centaury. Directed for use by the L. and E. Ph.

Cent'aurin. The bitter principle of the juice of Erythræa centaurium. It is slightly

purgative.

Centau'ris. (Κενταυρίς.) The Erythræa

centaurium, or lesser centaury.

Centaur'ium. (Κενπαύριου, from κένταυρος, a centaur; because Chiron, the centaur, is fabled to have cured, by its use, his foot which he had wounded by accident with a poisoned arrow. F. centaurie petite; G. Tausendyülden-kraut.) The pharmacopoial name (E.) of the common centaury, Erythraa centaurium. A bitter stomachie, with, perhaps, some action on the bowels.

C. mag'num. (L. magnus, great.) The Centaurea centaurium.

C. ma'jus. (L. major, greater.) Same as

C. mi'nus. (L. minor, less.) The Erythraa centuurium.

C. mi'nus vulga're. (L. vulga is, common.) The Erythræa centaurium.

C. officina'le. (L. officina, a workshop.) The Centaurea centaurium.

C. par'vum. (L. parvus, small.) Same as C. minus.

Cent'aury. See Centaurea, Centaurium, and Erythrea centaurium.

C., American. The Sabhatea, or Chironia angularis.

C., Europæ'an. The Erythraa centau-2º 277772.

C., great'er. The Centaurca centaurium; also, the Chlora perfoliata.

C., les'ser. The Erythræa centaurium. C., yel'low.

The Chlora perfoliata. (Κεντέρια.) A name for Center'ia. the Hypericum androsæmum, or St. Peter's wort.

Cent'ering. (L. centrum, the middle point of a circle.)
Term applied to such placing of a system of lenses that they have a common

Cente'sis. (Κίντησις, a pricking. Stecken, Durchstecken.) Puneture.

Cent'iare. (L. centum, a hundred ; F. are ; from L. area, a space.) A French metrical measure, being a square meter, or the hundredth part of an are, 0.01; equal to 10.7642993 English square feet.

Centifidous. (L. centum; findo, to G. hundertheilig.) cleave. Hundred-cleft,

many-eleft.

Centifolious. (L. centum; folium, a leaf. G. hundertblatterig.) Hundred-leaved, many-leaved.

Cent'igrade. (L. centum, a hundred; gradus, a step, degree, or grade.) Having a hundred steps or degrees.

C. thermom'eter. (Θέρμη, heat; μέτρον, measure.) A thermometer, divided into a hundred parts or degrees between the freezing and the boiling points of water, the former being 0°; also, called Celsius's thermometer.

The formula for the reduction of the degrees of centigrade to those of Fahrenheit is 9 C. =F.°; that for the reduction of centigrade to Reaumnr is & R.°=C.°.

Cent'igramme. (L. centum; gramma, a grainme.) Old term for the twenty-fourth part of an ounce.

A French weight, the hundredth of a gramme, or 0.01, equal to 0.154323 of a grain avoirdupois, or one sixth of a grain troy.

Cent'ilitre. (L. centum; F. litre.) A French metrical measure, the one hundredth part of a litre; it is equal to ten cubic centimetres or the measure of ten grammes of water; equal to 0.6102 of an English cubic inch.

Cent'imetre. (L. centum; F. mètre.) A French measure, the one hundredth part, or 0.01, of a metre; equal to 0.39371 or two

fifths of an English inch.

Centimor'bia. (L. centum; morbus, a disease.) A name for the Lysimachia nummularia, or money wort, from its efficacy in curing many diseases.

Centiner'via. (L. centum; nerrus, a A name for the Plantago major, or broad-leaved plantain.

Centino dia. (L. centum; nodus, a knot.)
A name for the Polygonum aviculare, or knot grass, from its numerous knots or joints.

Centipe dal. (L. centum; pes, a foot.

G. hundertfüssig.) Having a hundred or many

feet. Hundred-footed.

Centipede. (L. centum; pes, a foot.) The different Species of Scolopendra and other Genera of the Order Chilopoda. The bite of many of the kinds is very painful; it is accomplished by means of curved perforated fangs connected with the mandibles; the existence of a poison-gland is doubtful.

Cent'o virgina'lis. (L. cento, a garment of several pieces; virginalis, belonging to

a maiden.) The hymen.

Centoc'ulous. (L. centum; oculus, an eye. G. hundertaugig.) Having a hundred or

Cent'rad. A term applied by Dr. Barelay the same as Central used adverbially.

Centradiaph'anes. (Κέντρον, a centre; a. neg.; διαφανής, transparent.) Central opacity of the crystalline lens.

Cent'ral. (L. eentrum, the centre. F. central; 1. centrale; S. central; G. mittelpunkt-ständig.) Of, or belonging to, the centre.

Applied by Dr. Barclay, of Edinburgh, in his

Nomenclature, when treating of the aspect common to the body and organs generally, as meaning towards the centre.

C. ar'tery of ret'ina. See Arteria centralis retinæ.

C. as'pect. The face of an organ, or structure, which is towards the centre of the body, or of a limb.

C. canal'. See Canal, central, of spinal cord. C. cap'sule. (L. capsula, a small case.) The chitinous envelope of the endosarc of the Radiolaria; it is pierced by five pores.

C. cell. See Cell, central.

C. em'bryo. ( Εμβρυου. F. embryon central.) In Botany, an embryo which is placed in the centre of the perisperm.

C. flow'er. The flower terminating the

axis in certain cymes.

C. gaivanisa'tion. See Galvanisation, central.

C. lig'ament. The Filum terminale of the spinal cord.

C. neuri'tis. See Neuritis, central.
C. perinæ'al rup'ture. See Perinæal

laceration, central.

C. per'isperm. (Περί, around; απέρμα, a seed. F. perisperme central.) A perisperm

which is enveloped by the embryo.

C. placent'a. (F. placenta central.) In Botany, applied to a placenta situated in the centre of the ovary and directly continuous with the axis, to which the floral leaves are attached. It is termed a free central placenta when it has no connection with the carpellary leaves which form the walls of the ovary.

C. skel'eton. Same as Endoskeleton. Also (G. Achsenskelet), restricted by some to the spinal column and the cranium.

C. spot. Same as Forca centralis.

C. tend'on of di'aphragm. See Diaphragm.

Centra'le. See Os centrale. Central'ity. (L. centrum. F. centralité.) A term applied to describe the inherent action of the nervous centres as distinct from those of the peripheric nerves; it is used in contradistiuction to conductivity.

Centranth'us. (Κέντρον, a sharp point; ăνθοs, a flower. G. Spòrnblume.) A Genus of the Nat. Order Valerianaecæ. C. latifo'lius, Dufr. (L. latus, broad;

folium, a leaf.) The C. ruber.

C. marit'imus, Gray. (L. maritimus, belonging to the sea-shore.) The C. ruber.

C. ru'ber, De Cand. (L. ruber, red.) Spur valerian, red valerian. Young shoots eaten as salad.

Centra'tio. (L. centrum, a ceutre.) Old term, used by Paracelsus, l. iv, Chirurg. de Ulcer. c. 3, for the change of a saline principle into a corresive and ulcerating quality, whence Centrum salis is called the principle of nlcers.

**Cent're.** ( $\hat{K}i\nu\tau\rho\sigma\nu$ , the centre around which a circle is formed. F. centre; 1. centro; G. Mittelpunkt.) The middle point of a body.

C., accelerating, of heart. The same as C., cardio-accelerating.

C., acous'tic. ('Ακούω, to hear.) Same

as C., auditory.

C., a'no-spi'nal. (L. anus, the fundament; spina, the spine. F. centre ano-spinal; G. Centrum für Kothentleerung.) A direct centre in the lower part of the spinal cord, which, when stimulated, produces contraction of the sphincter

The afferent nerves run in the hæmorrhoidal plexus and the inferior mesenteric plexus. The centre is situated opposite the fifth lumbar vertebra in the dog, and between the sixth and seventh in the rabbit; the efferent nerves are contained in the pudendal plexus, and are distributed to the sphincters. The action of the centre is subordinate to the brain. After section of the cord it acts rhythmically.

C., arm-move'ment. (F. centre du membre supérieur.) A cortical centre in the fissure of Rolandi, divisible into two or into three distinct

centres, according to some.

C., arrest of heart. Same as C., cardioinhibitory.

C., artic'ulate lan'guage. See  $C_{\cdot \cdot \cdot}$ speech. C., aud'itory. (L. audio, to hear. F.

centre auditif.) See Auditory centre.

C., blad'der, u'rinary. Same as C., vesico-spinal.

C., cardio-accelerating. (Kapdía, the heart; L. accelero, to hasten. F. centre accélérateur du cœur, centre cardiaque; G. das centrum der beschleunigenden Herznerven.) direct centre believed to exist in the medulla oblongata, which, when excited, stimulates the activity of the heart. The accelerating fibres descend in the spinal cord, and, issuing by the rami communicantes of the lower cervical and upper dorsal nerves, enter the sympathetic and reach its first dorsal ganglion, from which they Some fibres also pass to the cardiac plexus. appear to run in the vagus.

C., card'io-inhib'itory. (Kapôla, the heart; L. inhibeo, to restrain. F. centre d'arrêt du cœur; G. centrum der Hemmungsnerven.) A direct centre helieved to be situated in the medulla oblongata. When stimulated, it inhibits the action of the heart. It may be excited directly or reflectively; directly by the sudden production of anæmia of the medulla oblongata, or of venous hyperæmia, or by the mere increase of carbonic acid gas in the blood, by increased arterial blood pressure in the vessels of the head; reflectively by stimulation of all sensory nerves, by stimulation of the vagus itself, hy a blow on the stomach. It is easily exhausted.

C., cil'io-spi'nal. (L. cilium, an eyelid;

spina, the spine. F. centre cilio-spinal; G. Centrum fur Papillenerweiterung.) A direct contresituated in the cat in the spinal cord, opposite the lower cervical and upper dorsal vertebre; here, according to F. Franck, the nerve-fibres which cause contraction of the pupil take their origin. and, emerging by the four lower cervical and two upper dorsal nerves, enter the cervical sympathetic cord, or pass directly to the first thoracic ganglion. Then, ascending by the anterior branch of the loop of Vienssens, they reach the inferior cervical ganglion, and, becoming isolated, run up to the ganglion Gasseri, and accompany the ophthalmic branch of the fifth to the iris. A distinct set of dilator fibres for the iris have been shown by Vulpian to have a cerebral origin, and to enter the Gasserian ganglion. Salkowski places the cilio-spinal centre in the medulla oblongata. It governs the smooth museles of the eyeball. Stimulation of it by electricity is followed by dilatation of the pupils. The centre is also excited by the absence of light during wakefulness. The centre for the constriction of the papil is situated at the root of the third and sixth nerve.

C., convul'sion. The same as C., convulsion, general.

C., convul'sion, gen'eral. (F. centre convulsif; G. centrum der Krampfbewegung.) A centre situated in the medulla oblongata, stimulation of which produces general convulsions. It is excited by rapidly increasing venesity of the blood, and by sudden auxunia of the medulla, however produced.

C., co-ordinating. (1., co-ordinatio, un arranging with. F. centre de co-ordination des reflexes.) Any centre which, by communicating branches with other ganglia or centres, governs, controls, and modifies the action of the latter. The term has been specially applied to a centre situated about 7 mm, below the calamns scriptorius in the rabbit.

C., cort'ical. (L. cortex, bark.) That part of the periphery of the central nervous system which, by means of its councetion with

the direct centre of a nerve, is supposed by some to be the cerebral instrument for the manifesta-

tion of its functions.

C., coughing. (G. Centrum des Hustens.) A direct centre believed to be situated in the medulla oblongata, a little above the inspiratory centre. The afferent fibres are the sensory fibres of the vagus distributed to the larynx and trachea; the efferent nerves are the nerves of expiration and the constrictors of the glottis.

C., deglutition. (L. deglutio, to swallow down. F. centre des mouvements de dégluti-tion; G. Centrum des Schlingens, C. für den Schlingact.) A direct centre situated in the medulla oblongata; the afferent fibres are branches of the second and third division of the tifth and of the glossopharyngeal and vagus nerves, distributed to the mouth, gums, and pharynx; the motor fibres are contained in the nerves forming the pharyngeal plexus.

C., diabe'tic. (Diabetes. F. centre diabitique, c. glycoginique.) A centre situated in the medulla oblongata, and nearly corresponding in area with the chief vaso-motor centre

C., direct'. (L. directus, straight.) The grey nervous tissue in immediate connection with, or constituting, the direct origin of a nerve.

C., ejacula tion. (L. ejaculo, to shoot out. G. das centrum für Ejaculation.) A direct

centre is situated in the cord opposite the fourth lumbar vertebra in the rabbit; the afferent fibres are the sensory nerves of the penis. The motor fibres of the vesiculæ seminales and dnets issno with the fourth and fifth lumbar vertebræ, and enter the sympathetic. The motor fibres of tho accelerator uring lie in the third and fourth

sacral nerves, and join the perinard nerves.

C., epigas'tric. (Επιγάστριος, the region of the stomach.) The solar plexus.

Also, the central tendon of the diaphragm. station.) A centre situated, in part, at least, in the pons Varelli, but partly also in the cerebellum, the function of which is to co-ordinate the muscles engaged in maintaining the erect posture

C., erec'tion. (L. crige, to raise up. G. das Centrum fur die Erection.)  $\Lambda$  direct centre situated in the lumbar region of the cord; the afferent tibres are the sensory nerves of the penis; the efferent are the vaso-inhibitory fibres distributed to the pudic artery, which pass ont between the first and third sacral nerve, called by Eckhard the nervi erigentes; and the motor nerves issuing with the third and fourth sacral nerves for the erector penis and transversus perinæi museles. These fibres can be voluntarily excited to action.

C., expiratory. See C., respiration.

C., eye'lid move'ment. (F. centre des paupicres.) A centre supposed to exist in the pons Varolii.

C., eye-move'ments. (F. centre des monvements des yeux.) The grey matter at the roots of the motor nerves of the eye in the pons Varolii is the direct centre,

The cortical centre is by Ferrier placed with the head-movement centre, by others at the

hinder part of the parietal lobe.

C., fa'cial move ments. (L. facies, the face. F. centre moteur de la face.) This centre is believed to be situated in the pons Varolii.

C., fa'cial move'ments, low'er. centre lying above the speech centre, at the lower part of the convolutions bounding the fissure of Rolando.

C., genitospinal. (L. genitus, a begetting; spina, the spine. F. centre genitospinal; I. centro genitospinale.) This centre is situated in the lumbar region of the cord. It is now sub-divided into the erection centre, the ejaculatory centre, and the parturition centre.

C., glycogen'ic. (Γλυκύς, sweet; γευνάω, to produce.) Same as C., diubetic.

C., gus'tatory. (L. gusto, to taste. F. centre gustatif.) A cortical centre said by Ferrier to be situated along with the olfactory centre at the summit of the temporosphenoidal lobe.

C., head-and-neck move ment. cortical centre supposed to be on the first or second frontal convolution in front of the arm-movement centre.

C., inhib'iting, of heart. The same as C., cardio-inhibitory

C., inhibitory, of re'flex move'-ments. (L. inhibeo, to restrain.) A centre which is supposed to exist in the optic lobes, which restrains the reflex actions of the spinal

C., inspiratory. See C., respiration. C., leg-move'ment. (F. centre de membre inferieure.) A cortical centre situated behind the arm-movement centre; according to Charcet, it occupies the paracentral lobule, the upper third of the ascending frontal convolution, and the upper two thirds of the ascending parietal convolution.

C., limb-move'ment. The grey centres

at and below the pons Varolii.

C., locomo'tion. (L. locus, a place; motus, motion. F. centre de la locomotion.) A centre situated either in the pons Varolii or ecrebellum, and co-ordinating the muscles used iu locomotion.

C., mastica'tion. (L. mastico, to chew. F. centre de la machoire inférieure; G. Centrum  $f\ddot{u}r$  Kaubewegungen.) A centre believed to be sitnated in the medulla oblongata; the afferent and efferent nerves are the same as those connected with the suction centre. See C., sucking.

C., mimet'ic. (Μίμησις, imitation. F. centre de la mimique et de l'expression faciale.) A centre co-ordinating the muscles employed in facial expression. It is believed to be situated in the pons Varolii.

C. of ac'tion. The chief organ, or part, by which a process or procedure, whether of health or disease, is accomplished, or in which it originates.

C. of flux'ion. (L. fluxus, a flow.) An old term for an irritated part or organ of the body, inasmneh as to it the fluids are attracted.

C. of gravity. (L. gravitas, weight. F. centre de gravité; G. Schwerpunkt.) That point in a body about which it will balance; or, in other words, through which the resultant of the lines of attraction between the earth and its several molecules passes.

C. of grav'ity of bod'y. According to Weber, the centre of gravity of the male human body is at the level of the sacral promontory; according to Meyer, in the eanal of the second sacral vertebra; according to Harless, at a distance of 414 parts from the vertex, if the measure of the whole body be taken at 1000. In females it is a little lower, in children a little higher.

C. of ossifica'tion. (L. os, a bone; facio, to make. F. centre d'ossification; G. Ossifica-tionspunkt.) The point in each immature bone where deposit of bone salts first takes place,

C. of rota'tion of eye. (L. rôto, to turn round. F. centre de rotation de l'æil.) The centre of rotation of the eye is a little behind the middle of the optic axis; in myopic eyes it is behind, and in hypermetropic eyes in front of, the normal centre.

C., olfactory. (L. olfacio, to smell at. F. centre olfactif; G. Riechseenter.) According to Ferrier, this centre is situated in conjunction with the gustatory centre at the summit of the temporo-sphenoidal lobe; according to Munk, it is situated in the hippocampus major.

C., op'tic. See Optic centre, and C., risual.

C., orbicula'ris palpebra'rum. orbicularis, circular; palpebra, an eyelid Centrum der Lidschlusses.) A centre situated in the medalla oblongata. The afferent fibres are those of the fifth nerve, distributed to the cornea, conjunctiva, and lids. The efferent are contained in the facial, and supply the orbicularis palpebrarum musele.

C., o'val. See Centrum ovale.

C., parturition. (L. parturio, to bring forth. G. das Centrum für den Gebaract.) This centre is situated in the spinal cord, opposite the first aud second lumbar vertebra. The afferent fibres proceed from the uterus and uterine plexus, and the efferent fibres are contained in the same plexus.

C., phona'tion. (Φωνή, voice, F. Centre de la phonation.) The centre for the movements for articulate speech is to be found in the medulla oblongata, and some have located it spe-

eially in the olivary bodies. See C., speech.

C., pho'nic. (Φωνή, the voice. F. centre phonique.) The place whence sound is derived, whether it be in a person speaking, or a body

emitting or producing sound.

**C., phonocamp'tic.** (Φωνή; κάμτω, to d.) The focus of reflected sounds; in other bend.) words, the spot where reflected sounds can be heard.

C., phren'ic. (Φρήν, the diaphragm.) The tendinous centre of the diaphragm.

C., pu'pil-dila'ting. This centre is probably higher than the cilio spinal centre, and in the medulla oblongata.

C., recoil'. (F. reculer, to draw back. F. centre de recul.) A centre supposed by Lussana and Lemoigne to be situated in the cerebellum.

C., respiration. (L. respiro, to breathe again. G. Athmungscentrum.) A centre situated in the medulla oblongata on each side of the middle line, close to the posterior extremity of the floor of the fourth veutricle, and near the point of emergence of the vagus. Each centre consists of two parts, an inspiration and an expiration centre. The compound centre is automatic, continuing to act when all afferent nerves have been divided, and being then excited partly by the absence of oxygen and partly by the presence of carbonic acid gas in the blood. It may be excited to activity, and also inhibited, hy reffex action.

C., sal'ivary. (L. saliva, spittle. F. centre salivaire.) A centre in the floor of the fourth ventricle at the level of the origin of the facial

C., secre'tory. (L. secerno, to separate. centre sécrétoire.) Any nerve centre, the centre secretoire.) efferent fibres of which are distributed to a gland, and excite it to activity.

C., snee'zing. (G. Centrum des Niesens.) A centre believed to be situated in the medulla oblongata. The afferent fibres are the branches of the first and second divisions of the fifth, and perhaps those of the olfactory. The efferent fibres are those of the olfactory nerve.

C., speech. (F. centre du langage articulé; G. Spracheentrum.) A cortical centre situated in the region of the posterior extremity of the third left frontal convolution, where it abuts on the fissure of Sylvius, and overlaps the island of Reil. In some men it is localised in the right hemisphere of the brain. Its destruction produces aphasia.

C., spleen. A centre situated in the dog between the first and fourth cervical vertebra.

C., suck'ing. (L. sugo, to suck. F. centre de la succion; G. Saugcentrum.) A centre believed to be situated in the medulla oblongata. The afferent fibres are the sensory fibres supplying the lips and oral cavity derived from the fifth and glossopharyngeal nerves; the efferent fibres are contained in the facial, hypoglossus, and third division of the fifth, and the branches of the cervical plexus supplying the depressor of the lower jaw.

C., sweat. (F. centre sudoripure, Schweisseentrum.) A centre situated in A centre situated in the medulla oblongata on each side of the middle line. It may be excited by eserin, nicotin, and picro-

C., temp'erature-reg'ulating. centre thermique.) A centre situated in the medulla oblongata, probably identical with the vaso-motor centre. Some locate the centre in the eerebrum, corresponding to the leg-and-armmovement centres. It is excited by stimulation of sensory nerves.

C., ten'dinous, of di'aphragm. Diaphragm, central tendon of.

C., up'right car'riage. (F. centre de la station.) The same as U., crect posture.

C., va'so-dila'tor. (L. vas, a vessel; di-latator, an extender.) A nerve centre, the efferent branches of which have the power of causing the walls of the vessels they supply to yield to the blood pressure, and become larger.

(L. vas, a vessel: C., va'so-mo'tor. motus, motion. F. centre vaso-moteur; G. Gefassnervencentrum.) A centre, the efferent fibres of which have the power of causing the vessels to centract. Many such centres are distributed through the whole length of the spinal axis, but the chief one is situated in the medulla oblongata. According to Owsjannikow, it is bilateral. Its lower limit on each side is a horizontal line, 4 or 5 mm. above the point of the calamus scriptorius, and the upper limit about 4 mm. higher up, that is, 1 or 2 mm. below the corpora quadrigemina. Dittmar confines it to a small prismatic space in the forward prolongation of the lateral columns, after they have given off their fibres to the decussating pyramids. Stimulation, whether direct or reflex, of this centre increases blood pressure.

C., vesico-spinal. (L. resica, a bladder; spina, the spine. F. centre de la vessie; c. resico-spinal; G. das centrum der Harnentlearning.) The centre for the sphineter vesice is situated, in the dog, opposite the fifth, and in the rabbit, opposite the seventh, lumbar vertebra. The centre for the muscular tissue of the bladder generally, the detrusor urinæ, is placed a little higher in the cord. It is controlled by the

C., vis'ion. (L. visus, sight. F. centre visuel.) According to Ferrier, the cortical centre for vision is in the gyrus angularis in the monkey, and in the parietal end of the second frontal convolution in the dog and cat; according to Luciani and Tamburini, it extends along the whole of the second frontal lobe in the latter animals, and in the monkey it includes, as well as the gyrns angularis, the neighbouring part of the occipital lobe. Munk places it a little further back than Ferrier. The few facts observed in man point to the anterior part of the occipital lobe.

C., vis'ual. (L. video, to see.) A centre described by Ferrier as situated in the angular gyrus. Destruction of this centre on one side causes complete, but temporary, blindness of the opposite eye. Destruction of it on both sides causes complete and persistent blindness of both

C., vom'iting. (F. centre du vomissement ; G. Centrum des Erbrechens.) A centre situated in the medulla oblongata.

C., wink'ing. (F. centre du clignement.) A centre believed to be situated in the pons Varolii.

Cent'res. See Centre.

C., cort'ical mo'tor. (L. cortex, the rind; motus, a motion.) Centres which, according to Ferrier, are situated in the convolutions which bound the fissure of Rolando in monkeys, and the stimulation of which gives rise to definite and constant movements of the hands, arms, legs, facial muscles, mouth, and tongue.

C., emo'tional. Little is known of the existence of such centres. Ferrier has suggested that in the occipital lobe is the centre of visceral sensations, and that in it is placed the centre for

pleasurable or painful emotions.

C., gland'ular. The presence of centres of stimulation and inhibition of gland action is uncertain, although some isolated observations have been made.

C., inhib'iting. (L. inhibeo, to restrain.) A term applied to such parts of the nervous system as control, moderate, or arrest the movements

or actions of other parts or organs,

C., intracard'iac. (L. intra, within; καρδία, the heart.) Term applied to the ganghonic cells, connected together by nerve fibres, which are lodged in the muscular substance of the heart. In the frog, one, named Remak's ganglion, is situated in the wall of the sinus venosus, and another, named Bidder's ganglion, is

situated in the aurienlo-ventricular furrow.

C., mo'tor. (L. motus, motion.) The mass of grey nervous tissue at the roots of motor nerves.

C., mo'tor, cort'ical. The centres in the surface of the cerebral hemispheres for the movements of the different parts of the body.

C., nerv'ous. A term for the brain, spinal cord, and sympathetic gauglia.

C., ner'vous, of heart. A term applied to the cardiac ganglia and to the cardio-accelerating and cardio-inhibiting centres.

C. of arrest'. Same as C., inhibiting. C. of modera'tion. Same as C., inhibiting.

C., op'tic. ('Οπτικός, for sight.) The Corpora quadrigemina.

C., psy chical. (Ψυκικός, belonging to the soul. F. centres psychiques.) The intellectual activity has its centre, according to some, in the anterior part of the frontal lobes; according to others, there is no distinct centre, but the whole cerebral superficies is involved in the operations of the mind.

C., psychomo'tor. (Ψυχή, spirit; L. moveo, to move. F. centres psychomoteurs.) Term applied to certain regions of the cortex of the brain, which are supposed to be the centres from which the mandates of the will for the perfermance of definite movements emanate. co-ordination of the muscles required to perform the movements in question is effected by lower The more important psychomotor centres. centres are the centre of the muscles of the neck, and those for the extensors and adductors of the fore limb, for the flexors and rotators of the fore limb, for the muscles of the hind limb, the muscles of the face, the muscles of the tail, of retraction and extension of the fore limb, the elevation of the shoulder, and for the movements of the eyes, eyelids, and pupils.

C., sensibil'ity, gen'eral. Ferrier locates in the region of the hippocampus major the centres of tactile and general sensibility. Munk believes that these centres extend over the whole cerebral convolutions, with the exception of the occipital and temporo-sphenoidal lobes; the surface he calls the Sensitive sphere.

C., vas'cular. (L. vas, a vessel. F. centres vasculaires.) The Vaso-motor and Vaso-dilator centres.

Cent'ric. (L. centrum, a centre.) Of, or belonging to, a centre. Used in medicine chiefly in relation to nervous diseases, in order to ex-press the origin of the disease in the central nervous system, as contradistinguished from the periphery.

Centrif'ugal. (L. centrum, the centre; fugio, to fly. F. centrifuge; I. centrifugo; G. centrifugal.) Flying, or receding, or tending to

go away, from the centre.

C. current. A term applied to that arrangement of a battery, in galvanising an animal body, in which the positive pole is nearer to the centre, and the negative nearer the periphery, of the nervous system.

C. force. (F. force centrifuge; G. Centrifugalkraft.) That by which a body moving in a circular, or eurvilinear, orbit strives to fall off from its motion in a tangent to the orbit.

C. inflores'cence. A synonym of In-

florescence, definite.

C. nerve fibres. A synonym of meter

nerve-fibres and vaso-motor fibres.

C. pres'sure. A term which has been used in relation to such conditions of disease as hydrothorax to indicate pressure which produces external bulging.

Centrip'etal. (L. centrum; peto, to seek. F. centripete; I. centripeto; G. centripetal.) Tending to, or seeking, the centre.

C. cur'rent. A term applied to that arrangement of a battery, during galvanisation of an animal body, when the negative pole is nearer to the centre and the positive pole nearer to the periphery of the nervous system.

c. force. (F. force contripéte; G. Centri-petalkraft.) That by which a body moving round another tends to seek, or is impelled to,

the centre.

C. inflores'cence. The same as Inflorescence, indefinite.

C. nerve fi'bres. A synonym of afferent,

excitor, or sensory fibres.

C. pres'sure. A term which has been used to express the pressure from disease, as that of aneurism on internal organs, towards the axis of the body.

Centrispo'reæ. (Κέντρον, the centre from which a circle is described; σπορά, a seed. F. centrisporé.) Applied by Agardh to a Class of phanerocotyledonous, complete, bypogynous, polypetalous plants, which have their seeds fixed to the centre of their fruit, as the Caryophylleæ, Lineæ, Oxalideæ, and Hypericineæ.

Cent'rium. (Κέντριον, from κεντέω, to prick.) Old name for a certain plaster for stitch in the side; mentioned by Galen, de C. M. per

Gen. i, 10.

Centrocatarac'ta. (L. centrum, a centre : cataract. G. Centralstaar.) cataract.

Centrodont ous. (Κέντρου, a sharp point; ôcous, a tooth.) Having sharp and subulated teeth.

Centrolepid'eæ. A synonym of Desvauxinceæ.

Centrolo'bium. (L. centrum; lobus, a lobe.) A Genus of the Tribe Dalbergiæ, Nat. Order Leguminosa.

C. robust'um. (L. robustus, hard.) A species to which, according to Martius, the name araroba is given.

C. tomento'sum. (L. tomentum, a stuffing.) Also called araroba.

Centromyr'sine.

(Κεντρομυρσίνη.) The butcher's broom, Ruseus aculcutus.

Centrophygadopsori'asis. (Kévau
ho v, the centre from which a circle is described; φυγάς, a fugitive; ψωρίασις, a being mangy.) Psoriasis which spreads in all directions from a central point.

Centrosper'mæ. (L. centrum, a centre; sperma, seed.) An Order of Helobiæ, including Lemnaceæ and Naiadæ.

Also, a Group of Dicotyledons, including Cary-ophyllineæ, Umbellifloræ, and Saxifragineæ.

Also, a Group of Eleutheropetale, having a superior ovary, with a single central ovule, or a central placenta, and seed containing endosperm. It includes Polygoninæ and Caryophyllinæ.

**Centrostaltic.** (Κέντρον, the centre; σταλτικός, contracting.) Term applied by Dr. M. Hall, in his 'Diastaltie Nervous System,' to the action of the "vis nervosa in the spinal eentre.

Centrosteosclero'sis. (L. centrum; ostcosclerosis.) Central osteosclerosis, or a filling of the eavity of cylindrical bones with osseous substance.

**Centrosto'matous.** (Κέντρον, a eeutre; στόμα, a mouth. F. centrostome; G. centralmundig.) Having the mouth perfectly eentral.

Centrosyphilol'epis. (L. centrum; syphilolepis.) Central, ulcerating syphilolepis.

Cent'rum. (Κέντρου, the stationary point of a pair of compasses, from Λεντίω, to prick or pierce. F. centre; G. Mitte'punkt.) The centre or fixed point round which a circle may be drawn; the middle point of a part.

Applied by Professor Owen to the body of a

vertebra and its homologues.

The centre, residence, or foundation, of matter. C. commune. (L. communis, common.) A term for the solar plexus.

C. gravita tis. See Centre of gravity. C. nerveum. (L. mrvus, a tendon.) old term for the tendinous portion in the middle of the diaphragm.

C. op'ticum. See Optic centre.

C. ova'le. (L. ovalis, egg-shaped. F. centre ovale.) The large white mass of medullary substance displayed on removing both eerebral hemispheres, at the level of the corpus callosum.

C. ova'le ma'jus. (L. major, greater.)

The C. ovale.

C. ova'le mi'nus. (L. ovalis; minor, less.) The C. ovale of Vicq d'Azyr.

C. ova'le of Vicq D'A'zyr. The white central mass of medullary substance displayed on section of one of the cerebral hemispheres.

C. ova'le of Vieus'sens. Same as C. ovale.

C. o'vi. (L. ovum, an egg.) The yolk of the egg.

**C.** phre'nicum. ( $\Phi \rho \dot{\eta} \nu$ , the midriff.) The same as C. tendinosum diaphragmatis.

C. semicircula're geminum. semicirculus, a half eirele; geminus, twin-born) Name given by Vieussens to the small band of medullary substance in the brain, otherwise termed Tania semicircularis.

C. semiova'le of Vieus'sens. (L. semi,

half; oralis, egg-shaped.) Same as C. orale of

Fieq d' Azyr.

C. tendino'sum diaphrag'matis. (Téνων, a tendon; διάφραγμα, a partition-wall.)
The central tendon of the diaphragm. It is trilobate in form, the middle lobe being largest, the left the smallest. Near the posterior border of the right lobe is a quadrangular opening for the passage of the inferior vena cava.

C. vita'le. (L. vitalis, belonging to life.)
Same as Vital point.

Cent'ry. The Chironia angularis. Cent'um. (L. centum, a hundred.) A hundred.

C. cap'ita. (L. caput, a head.) The

Eryngium campestre

Centumno'dia. (L. centum; nodus, a knot.) The Polygonum aviculare, from its many nodes.

Centun'culus. (L. dim. of cento, a coarse coverlet made of shreds and lists. G. Klvinling.)
A name for the Genus Filago, from its ragged appearance. Also, for Gnaphalium.

Century. (L. centum, a hundred. F. sicele, centurie; 1. secolo, centuria; S. siglo, centuria; G. Jahrhundert.) A period of a

hundred years.

C. plant. The Agave americana, so called because of its supposed period of flowering, once in a hundred years.

Cenu'rus. See Canurus.

Ce'pa. (Etymology doubtful; perhaps from κήπος, a garden. F. oiguon ; G. Zwiebel.) The onion. See Allium cepa.

C. ascalon'ica. (L. ascalonius, of Ascalon.) The shallot, Allium asculonicum.
C. mari'na. (L. marinus, belonging to the sea.) The squill, Scilla maritima.

C. por'ci. (L. porcus, a pig.) The squill.

(Ruland.) C. sec'tilis. (L. sectilis, eleft. G. Schnittzwielel.) The shallot, Allinm ascalonicum, so

called from its compound bulblets. C. victoria'lis. A synonym of Allium

C. vulga'ris. (L. vulgaris, common.) The

onion, Allum cepa. Cepa'ceous. (L. cepa, an onion. F. cipace; G. zwiebelahnlich.) Having the odour

of the onion or of garlie, or the form of the onion. **Cepæ'a.** ( $K\eta\pi aia$ .) Name of a species of the Linn. Genus *Ledum*. Also, of the *Veronica* beccalninga.

Cepatel'li. The Boletus edulis.
Ce peous. (L. cepa, an onion. G. Zwiebeluhnlich.) Having the characters of an onion. Cephaë'lin. (Cephaelis.) A synonym of Emetin.

Cephae'lis, Swartz. (Κεφαλή, the head; είλεω, to pack close.) A Genus of the Nat. Order Cinchonucea.

C. emet'ica, Pers. The Psychotria emetica, Mutis.

C. ipecacuan'ha, A. Richard. (Port. i, small; pe, on the roadside; eaa, plant; goene, emetic, F. ipecachuanha; 1. and S. ipecacuana; G. Brichwurzel.) Hab. Brazil. The root is Ipreucuanha.

C. musco'sa, Swartz. (L. muscosus, mossy.) An emetic species.

C. punic'eæ, Willd. (L. puniceus, purplered.) An emetic species.

C. reniform'is. The Geophila reniformis.

C. ruellifo'lia. (L. ruellia, the plant of that name; folium, a leaf.) A peisenous species, used to kill rats and mice.

Cephalacæ'nous. (Κεφαλή, the head; άκαινα, a spino.) Having spines on the head.

Cephalacanth'us. (Κεφαλή, the head; ἄκανθα, a spine.) A larval form of a nematode worm.

C. monacanth'us. (Móvos, single; ακανθα.) Found in the gastric cavity of the Tenebrio molitor.

C. triacanth'us. (Τρεις, three; ἄκανθα, a spine.) Found in the intestine of Geotrupes stercorarius.

**Cephalæ'a.** (Κεφαλαία, **F.** céphalée; G. eingewurzelter Kopfschmertz.) An inveterate

kind of headache.

In Mason Good's classification, a Genus of the Class Neurotica, consisting of aching pain in the head, intolerance of light and sound, and difficulty of bending the mind to mental opera-

C. arthrit'ica. ('Αρθριτικός, genty.) Gout in the head.

C. gra'vans. (L. gravans, part. of gravo, to weigh down.) Stupid headache; pain chtuse, with a sense of heaviness extending over the whole head, sometimes intermittent.

C. hemicra'nia. ('Hµ, an inseparable prefix meaning half; κρανίον, the skull.) Megrim. Pain vehement, confined to the forehead, or one side of the head, often periodical.

C. inten'sa. (L. intensus, violent.) Chronic headache. Pain vehement, with a sense of tension over the whole head, periodic, often chronic.

C. ju'venum. (L. juvenis, a yenth.) The headache that occurs about puberty.

C. nauseo'sa. (L. nauseosus, producing

nausea.) Sick headache.

C. pulsat'ilis. (L. pulso, to beat.) Throbbing headache. Pain pulsatory, chiefly at the temples, often with sleeplessness, and a sense of drumming in the ears.

C. spasmod'ica. ( $\Sigma \pi a \sigma \mu \delta s$ , a convulsion, a spasm.) A synonym of megrim, or sick headache, when characterised by spasmodic pain, as described by Dr. Fothergill.

Cephalæ'matocele. See Cephalhæmatocele.

Cephalæmato'ma. See Cephalhæma-

**Cephalæ'mia.** (Κεφαλή, the head; alμa, blood. F. cephalemie; G. Blutüberfüllung des Kopfes.) Hyperamia, or fulness of blood in the head.

Ceph'alagogue. (Κεφαλή, the head; äyω, to lead. F. céphalagogue; G. Geburts-zange, Kopfführer.) Name for the forceps for extracting the head of the child in difficult labeur.

Cephalag'ra. (Κεφαλή, the head; ἄγρα, a seizure.) Term for pain of the head, as from gout or chronic rheumatism.

Cephalagraph'ia. (Κεφαλή; γράφω, to write.) A description of the head.

**Cephalal gia.** (Κεφαλή, the head; άλ-γος, pan. F. cephalalgie; 1. cefalalgia; G. Kopfschmerz.) Term for headache. Pain in tho head.

C. catarrha'lis. Ordinary nasal catarrh. C. contagio'sa. (L. contagio, contagion.) Epidemic influenza.

C. her'ba. (L. herba, springing grass.)

The Verbena officinalis, from its use in head-

C. inflammato'ria. (L. inflammatio, inflammation.) Inflammation of the brain or its membranes.

C. nervo'sa. (L. nervosus, nervous.) Nervous headache, from whatever cause, be it anæmic, congestive, toxic, hysterie, or other.

C. period'ica. (Περιοδικός, that which returns at stated times.) Intermittent headache.

C. pulsat'ilis. (L. pulso, to beat.) Throbbing headache.

C. rheumatica. Rheumatism of the sealp or eranial periosteum.

C. spasmod'ica. Same as Cephalaa spasmodica.

**Cephalalog'ia.** (Κεφαλή; λόγος, an account.) An account of the structures of the head.

**Cephalanth'ium.** (Κεφαλή, the head; aνθος, a flower. F. cephalanthe; G. Blumen-kopfehen.) Name by L. C. Riehard for the compound flower of Linn: ous, the calanthidium of Mirbel, the head or capitulum of modern botanists.

Cephalanth'ous. (Same etymon. F. céphalanthe; G. kopfblumig.) Having flowers united in heads, like the inflorescence of Compositæ.

Cephalanth'us. (Κεφαλή; ἄνθος, α flower. G. Kopfblume.) A Genus of the Nat. Order Cinchonaceae.

C. africa'nus, Reicht. The Nauclea inermis.

C. occidenta'lis, Linn. (L. occidentalis, western. F. bois de marais.) Button wood, crane willow. Hab, Canada, United States. The bark is slightly astringent and somewhat bitter; it contains tanuin, a substance like saponin, an uncrystallisable bitter principle, and some resin. It has been used in syphilis, paralysis, and bronchial cough.

**Cephalapag'otome.** (Κεφα\ή; ἀπάγω, to carry off as a prisoner; τομή, from τέμνω, to eut.) Same as Cephalopagotome.

**Cephalar'tic.** (Κεφαλή, the head; καθαίρω, to purge; or κεφαλή; αρτίζω, to bring into order. F. cephalartique; G. kopfreinigend.) Having power to purge or elear the head.

Cephalatom'ia. See Cephalotomia. Cephalemy'ia. (Κεφαλή; μυῖα, a fly.) A Genus of insects which intest animals; now transferred to Gastrophilus and Estrus.

C. o'vis. See Estrus ovis.

**Cephalhæ matocele.** (Κεφαλή; αἶμα, blood; κήλη, α tumour.) A blood tumour underneath the perieranium, and communicating, by means of an opening through the eranial bones, with one or other of the sinuses of the dura mater.

Cephalhæmato'ma. (Κεφαλή: ai-ατόω, to make into blood. F. cephalemaματόω, to make into blood. F. cephalema-tome; G. Kopfgeschwulst der Neugebornen, Kopfblutgeschwulst.) A circumseribed clastic tumour, occurring on the feetal head in the later stage of labour on that surface where there is least resistance; it consists of extravasated blood and serum in the connective tissue between the perieranium and skin, or, less frequently, under the perieranium. Some authors restrict the term cephalhæmatoma to the subperieranial form, and give the name Caput succedaneum to the supraperieranial form.

C. spu'rium. (L. spurius, false.) Samo as C., subaponeurotic.

C., subaponeurotic. (L. sub, under; aponeurosis.) Sanguineous effusion in the newborn between the pericranium and the eranial aponeurosis.

C., subpericra'nial. (L. sub; pericra-nium.) Sanguineous effusion in the new-boru between the perieranium and the bono.

C., suprameninge'al. (L. supra, above; μῆνιγξ, a membrane.) Sanguiùeous effusion in the new-born child between the dura mater and the cranial bones.

C. ve'rum. (L. verus, true. G. eigent-liche Kopfblutgeschwulst.) Same as C., subpericranial.

Cephalic. (Κεφαλικός, belonging to the head. F. eephalique; I. cefalico; G. zum Kopfgehorig.) Of, or belonging to, the head.

C. ar'tery. (F. artère cephalique.) Chaussier's term for the common earotid artery.

C. drops. See Guttæ cephalicæ.

C. es'sence. The Eau de Bonferme.
C. gang'lia. (Γάγγλιον, a nerve knot.)
The anterior ganglia of the nervous cord in Arthropoda and Mollucea.

C. bood. (F. capuchon cephalique.) portion of that circular fold of the epiblast which develops into the amnion. At an early period of embryonic development this fold is most prominent at the anterior and posterior extremities of the embryo; the former part is named the cephalic, the latter the caudal, hood, whilst the folds at the sides are called the lateral hood, or capuchin.

C. in'dex. (L. index, anything that points out. F. indice cephalique.) A number which indicates the relation of the greatest transverse diameter of the skull to the greatest anteroposterior diameter, the latter being taken as one hundred.

According to Littré and Robin, the cephalic index is the number indicating the relation between the facial angle of one skull and that of another.

C. nerves. Same as Cranial nerves. C. paracente'sis. See Paracentesis of

the head. C. rem'edies. See Cephalica.

C. snuff. Name for an errhine powder, the active ingredient in which is asarabacea, mixed with an eighth part of dried lavender flowers.

Also, a powder composed of equal parts of dried tobacco leaves, marjoram leaves, and lavender leaves.

C. tinc'ture. The Eau de Bonferme. C. vein. (F. veine céphalique, so named because the head was supposed to be directly relieved by its being opened. G. äussere Hautvene des Armes.) Name given to the anterior or outermost vein of the upper arm, formed by the union

of the radial cutaneous and the median eephalic veins at the bend of the elbow. It ascends along the outer border of the biceps muscle, between the pectoralis major and the deltoid, and ends in the axillary vein, between the coracoid process and the claviele.

Chaussier has given this name, veine cephalique, to the internal jugular vein.

C. vein, me'dian. (L. medius, in the middle. F. veine médiane céphalique.) The outer and smaller division of the median vein which joins with the radial vein to form the cephalic vein; it is directed outwards from its origin in the groove between the bieeps and supinator longus

museles, and lies upon branches of the internal catancous nerve.

C. version. See Version, cephalic. Cephalica. (Κεφαλικός. F. cephaliques; G. kopfstarkende Mittel, Hauptmittel.) Remedies which are used against nervous headaches and similar affections; in general they are autispasmodies. Some restrict the term to remedies which act through the sense of smell,

C. pol'licis. (L. pollex, the thumb.) The

radial-cutaneous vein. C. ve'na. See Cephalic vein.

Cephal'ici. (Κεφαλή, the head.) Diseases

of the brain. Cephalid'ia. (Κεφαλίδιον, a little head.) Applied to a series of animals, without vertebræ,

which have a small head, or of which the part so called bears improperly that denomination.

Cephalidium. (Same etymon.) A small head; applied to those of bones.

Cephaline. (Κεφαλίνη.) An old name for that part of the tongue nearest the fauces, the head or root of the tongue, where the sense

of taste is most perfect. (Gorraus.)

Cephalitis. (Κεφαλή. G. Gehirnentzündung.) A term used for inflammation of the brain and its membranes, or all inflammatory conditions of the central nervous system.

**Cephal'ium.** (Κεφαλή. G. Kopfchen.) The head of a small bone.

Cephalobranchia'ta. (Κεφαλή; βράγχια, the gills.) An Order of the Class Annelida. Worm-like marine animals, generally possessing an external protecting tube; branchise nearly always present, filamentous, attached to, or near the head.

Cephalocathart'ic. (Κεφαλή; καθαρτικός, purgative. F. cephalocathartique; G. konfpurgirend, hauptreinigend.) Purging the head; applied to medicines supposed to possess this quality.

**Ceph'alocele.** (Κεφαλή; κήλη, a tumonr.) Same as Cephalhæmatocele.

Also, a synonym of hernia of the brain, or Encephalocule.

Cephalocente'sis. (Κεφαλή; κέντησιs, a pricking. F. céphalocentese; G. das Anstechen des Kopfs.) Puneture of the head, especially for hydrocephalus.

Cephalocholosis. (Κεφαλή; χόλος, bile. F. eephalocholose; G. ein Gallenleiden des Hirns.) An old term, said to mean bilions disorder of the brain.

Cephelochord'a. (Κεφαλή; χορδή, a chord.) A term by Lankester for the Division Arrania of Häckel; so named because the notochord extends to the auterior extremity of the head.

**Cephalocotyl'eum.** (Κεφαλή, the head; κοτύλη, a eup.) A sexually mature para-(Κεφαλή, the sitic cestoid worm, species of which are found in the stomach, intestine, or abdominal eavity of Colymbus septentrionalis, Cypselus affinis, Delphinus delphis, Murana conger, Mygales moschata, and Pleuroncetes solew, of various species of Rays and Sharks, and in the Torpedo and Trigla.

**Ceph alocysts.** (Κεφαλή; κύστις, a bladder.) An old name for Cestoda. (Littré

and Robin.)

Cophalo dea. (Kedalh; eldos, ness.) An Order of Spermatozoa, according to Czermak, consisting of round, orbienlar, or oval spheres, without any trace of a tail; such are the spermatozoa of fishes, and many Annelids.

Cephalodes mium. (Κεφ ελή; δεσμός,

a band. F. cephalodesmium; G. Kopfbinde,) Name of a bandage for the head.

Cephalo'dia. (Κεφαλή, head; είδος, form. F. cephalodie; G. Knopfehen.) Special organs found constantly in many gonidic lichens, either in the form of small scattered protuberances on the thallus, or of small masses conecaled in tho interior of the thallus. Their form differs with each species, and, speaking generally, their anatomical structure resembles that of a gonimic thallus, with the aspect of small parasitic sterile lichens, like Pannaria in miniaturo. They are divided into Cephalodia epigyna, C. hypogyna, and C. rudogena, according to their position. Their function is unknown.

Ceph'alodine. (Κεφαλή, head.) Forming a head.

Cephaloduc'tor. (Κεφαλή; L. ductor, a drawer.) Same as Cephalagogue.

Cerhalodym'ia. (Κεφαλή; δύω, to nter.) The condition of double monstrosity, enter.) in which the heads are united.

Cephalodyn'ia. (Κεφαλή; ὁδύνη, pain.) Same as Cephalalgia.

Cephalæde'ma. (Κεφαλή; οἴδημα, a swelling. F. ciphalædeme; G. die ædematose Kopfgeschwulst.) Edema of the head.

Cephalogen'esis, (Κεφαλή; γένεσις, generation. F. cephalogénésie; G. Kopfbildung.) The formation of the head.

**Ceph'alograph.** (Κεφαλή; γράφω, to write.) An instrument by which the contour of the head may be reproduced on paper.

**Cephalog'raphy.** (Κεφαλή; γράφω, to write.) A description of the head.

Cephalohæmato'ma. The same as Cephalhæmatoma.

Cephalohæ'mia. The same as Cephal-

**Cephalohæmom'eter.** (Κεφαλή; ἔαμα, blood; μέτρου, a measure.) An instrument for determining variations in the amount of intracranial pressure, devised by Dr. Hammond. It consists of a brass or iron nickel-plated tube, which is inserted into a round hole, made by a trephine, in the skull of an animal. Into the upper end of this tube is serewed another brass or iron tube, the lower opening of which is closed by thin sheet india rubber, and the upper opening by a brass cap, into which is fasteued a glass tube. This inner arrangement contains coloured water, and to the glass tube a scale is affixed. The second tube is serewed into the first till the thin india rubber presses upon the dura mater, and the level of the coloured water stands at 0°, which is in the middle of the scale. When the quantity of blood in the brain increases, the liquid rises, when it dimiuishes, it falls.

Cephalohumera'lis. (Κεφαλή: L. humerus, the arm.) The analogue in the horse of the cleido-mastoid part of the sterno-eleidomastoid muscle of man, which, in the absence of a clavicle, is inserted into the humerus.

Ceph'aloid. (Κεφαλή; είδος, likeness. F. cephaloide; G. kopfahnlich, kopfartig.) Re-

sembling the head.

Also, a synonym of Encephaloid.

Also, in Botany, having the appearance of a Capitulum.

**Cephalol'ogy.** (Κεφαλή; λόγος, a discourse. F. cephalologie; G. die Lehre vom Kopfe.) A treatise on the head.

Cephalolox ia. (Κεφαλή; λοξός, slanting.) Wry neck.

Cephalo'ma. (Κεφαλή.) A synonym of Encephaloid.

Cephalom'elus. (Κεφαλή; μέλος, a limb.) A monster having one or more limbs attached to the head.

**Cephalome'nia.** (Κεφαλή; μήν, a month.) Aberration of the catamenia to the

Cephalomeningitis. (Κεφαλή; μήμιγξ, a membrane.) Inflammation of the membranes of the brain.

Cephalom'eter. (Κεφαλή, the head; μέτρου, a measure. F. cephalometre; G. Kopfmesser.) An instrument formerly used for ascertaining the size of the feetal head during parturition.

Also, an instrument used in the measurement of the different angles of the skull. It consists of a circle of copper, which can be fixed horizoutally round the head, and a semicircular arm, which moves on it.

Cephalomyi'tis. (Κεφαλή; μύς, a muscle. F. cephalomyite; G. Entzundung der Kopfmuskeln.) Indammation of the muscles of the head.

Cephalomyodyn'ia. (Κεφαλή; μύς; οδύνη, pain. F. cephalomyodynie; G. Kopfmuskelschmerz.) Pain in the muscles of the

Cephalo'nia. (Κεφαλή.) Increase of size of the head with hypertrophy of the brain.

Cephalon'osos. (Κεφαλή, the head νόσος, a disease. F. cephalonose; G. Koppkrankheit.) A name for cephalic fever, or fever in which the brain is particularly involved. Applied by some to the Februs hungarica, according to Joh. Conrad Rhumel, in Prophylace luis epidemieæ.

Ceph'alo-orb'ital. (Κεφαλή; L. orbita, an orbit.) Relating to the cavity of the skull and the orbits.

C. in'dex. (L. index, a discoverer.) The relation of the cubic capacity of both orbits as compared with that of the skull, about 27 to 100; the extremes, according to Mantegazza, being 22.7 and 36.5.

**Gephalopa'ges.** (Κεφαλή; πήγνυμι, to make fast.) A double monstrosity, united only by some part of the head.

Cephalopag otome. ( $K \varepsilon \phi a \lambda \eta$ , the head;  $\pi \dot{\alpha} \gamma \eta$ , a thing that holds fast;  $\tau \dot{\epsilon} \mu \nu \omega$ , to cut.) An instrument intended to subserve the double purpose of dividing the head and exerting traction upon it in difficult labour.

Cephalopharynge al. (Κεφαλή: φάρυγξ, the pharynx.) Relating to the head and pharynx.

C. aponeuro'sis. The Pharyngeal aponeurosis.

Ceph'alo-pharyngeus.  $(K_{\varepsilon}\phi_{\alpha}\lambda_{\dot{\eta}};$ φάρυγξ, the pharynx.) A name for the Constrictor pharyngis superior muscle.

Also, an occasional muscle which arises from the vaginal process of the temporal hone, or the angle of the petrous bone, or the spine of the sphenoid, and loses itself in the inferior constrictor of the pharyux; it is separated from the stylopharyngeus by the glossopharyngeal nerve, and by some is described as a part of this muscle.

Cephaloph'ora. (Κεφαλή: φέρω, to hear.) Applied to a Class of the Mollusca, baving the head distinct from the rest of the body.

Cephaloph'orum. (Same etymon. ciphalophore; G. Kopftrager ) Name by Nees von Esenbeck for the base or pedicle of ventricose and filiform mushrooms.

Cephalophrag'ma. (Κεφαλή; φράγμα, a fence.) A name by Kirby for the partition which, in insects, divides interiorly the head into two chambers, the anterior and posterior.

Cephalophy ma. (Κεφαλή; φυμα, a tumour. F. cephalophyme; G. Kopfgeschrenkt.) Swelling, or tumour, of the head, especially a Cephalhæmatoma.

Cephalop oda. (Κεφαλή, the head; ποῦς a foot. F. cephalopodes; G. Kopffusster.) A class of the Subkingdom Mollusca. Free oceanie directions molluses with a distinct head, large eyes, two long beak-like jaws, a corona of long arms round the mouth, a foot which forms a funnel, and a sacciform body.

Cephalopon'ia. (Κεφαλή, the head; πόνος, pain. F. céphaloponie; G. Kopfleuden.) A term for a heavy pain in the head. The same as Cephalalgia, according to Forestus.

Cephalopsycter. (Κεφαλή; ψυκτήρ, a wine-cooler. F. cephalopsyctire; G. Kopfkalter.) A refrigerator of the head.

Cephalop terous. (Κεφαλή: πτέρον, a wing. F. cephaloptere; G. kopfgeftugelt.)

Having a winged or feathered head.

Cephalopyo'sis. (Κεφαλή; πίωσις, suppuration. F. cephalopyose; G. Kopfeiterang.) Abscess in the head.

Cephalorhachid ian. ράχις, the spine.) Belonging to the head and the spine.

C. en'velopes. Same as C. membranes. C. flu'id. The cerebro-spinal fluid.

C. mem branes. The dura mater, arachnoid, and pia mater.

Cephalorrheu'ma. (Κεφαλή; ρεῦμα. cephalorrhume; G. Kopfrheumatismus.) Rheumatic affection of the head.

**Cephalorrhi** zous. (Κεφαλή; ρίζα, a root.) Having knotted head-shaped roots.

Cephaloseisis. (Κεφαλή; σείσις, a shaking. F. ciphaloseisis, G. Erschätterung des Kopfes.) Shaking of the head.

**Cephalosomatodym ia.** (Κεφαλή; σωμα, a body; δύω, to enter.) A double monstrosity, in which the heads and trunks are united to each other.

Cephaloso matous. (Κεφαλή; σῶμα, a body. F. cephalosome; G. koptkerperu.) Having the body large anteriorly, and the head voluminous.

**Cephalospinal.** (Κεφαλή; L. spina, the spine.) Belonging to the head and the spine.

C. flu'id. Same as Cerebrospinal fluid.

C. in'dex. (L. index, a discoverer.) numerical proportion between the area of the occipital foramen and the capacity of the craninm.

**Ceph'alostat.** (Κεφαλή; στατός, standing.) A head rest; an instrument for fixing the head during an operation.

Cephalos tegite. (Κεφαλή; στέγω, to cover closely.) A term applied to the auterior division of the large calcified dorsal slueld of Podophthalmia.

**Ceph'alostyle.** ( $K \varepsilon \phi a \lambda \eta$ ;  $\sigma \tau \bar{v} \lambda o s$ , a pencil.) The bony sheath of the notochord of the embryo of vertebrates.

Ceph'alot. (Κεφαλή, the head.) Name given to a distinct fat supposed to exist in the brain, and to centain phesphorus and sulphur.

It is believed to be a mixture of cerebrates of sodium and potassium, with olein and oleophosphoric acid.

Cephalo'tem. A Nat. Order allied to the Rinunculacea, constructed for the purpose of including the single genus Cephalotus.

Cephalo'tes. (Κεφαλωτός, having a

head.) Having a large head.

**Cephalothe'ea.** (Κεφαλή; θήκη, a box or chest. F. eephalothèque; G. Kopfkasten.) Name by Kirhy for the anterior extremity of the chrysalis which covers and protects the head.

**Genhalothla**'sia. (Κεφαλή; θλάω, to crush.) A synonym of Cephalotripsy.

Ceph alothlast. (Same etymon.) A synonym of the *Cephalotribe*.

**Ceph'alothlibe.** (Κεφαλή, the head;  $\theta \lambda i \beta \omega$ , to compress. F. eephalothlibe; G. Kopfzermalmer.) A crusher of the head. Same as Cephalotribe.

Cephalothoracosteru menos.

(Κεφαλή; θωραξ, the chest; στερέω, to deprive.) A monstrosity having neither head nor thorax. Cephalotho'rax. (Κεφαλή; θώραξ,

the chest. F. cephalothorax.) The anterior division of the body, in certain Arachnida and Crustaeea, which consists of the coalesced head and thorax.

**Ceph'alotome.** (Κεφαλή, the head; τομή, section, from τέμνω, to cut.) An instrument for cutting or breaking down the head of the feetus in the operation of embryotomy. See Cephalotribe.

**Cephalotom'ia.** (Κεφαλή; τομή, a cutting, from τέμνω, to eut. F. cephalotomie.)

The dissection of the head.

Also (G. Kopfzerlegung), the excerebration of the feetns to reduce its size in difficult labour.

C., intern'al. A synonym of Sphenotripsy.

**Cephalotrac'tor.** (Κεφαλή; L. traho, to draw.) A term for midwifery forceps.

Ceph'alotribe. (Κεφάλή, the head; τρίβω, to break down.) An instrument, originally invented by Baudelocque, consisting of a forceps, with solid blades and a powerful screw, by which they are brought together forcibly so as to crush anything that is between them. It is used for the purpose of breaking down the feetal skull in the operation of cephalotripsy. The head having been perforated, the blades are applied to the base of the skull, and pressure made by turning the serew; by this means the bones are broken up, and delivery may be effected by using the instrument as an extractor. A second crushing in an opposite direction may be necessary. Its advantages are said to be that it crushes the base of the skull, and that crushing it within the integument the sharp fragments of the broken bones remain covered, and do not in the delivery lacerate the vaginal walls.

Cephalotri'dymus. (Κεφαλή; τρίδυμος, threefold.) A monster with three heads. **Cephalotrip'sy.** ( $K\epsilon\phi a\lambda\dot{\eta}$ ;  $\tau\rho\dot{\iota}\beta\omega$ .) The operation of breaking down the feetal head,

by means of the Cephalotribe, when the pelvis is so distorted as to prevent delivery. Dr. Barnes is of opinion that this operation is quite practicable with a pelvis measuring an inch and a half in conjugate diameter.

**Cephalot'rotous.** ( $K \epsilon \phi a \lambda \acute{n}$ , the head;  $\tau \mu \acute{n} \sigma \kappa \omega$ , to wound.) Wounded in the head. τιτμώσκω, to wound.)

A term anciently used.

Cephalotrype'sis. (Κεφαλή; τρύπη-

σιs, a boring.) The operation of trephining the

Cephalotryp'ter. (Κεφαλή; τρυπάω, to bore.) An instrument for perforating the skull.

**Cephalozo'a.** (Κεφαλή; ζῶον, an animal. F. ciphalozoon; G. Kopfthier.) Applied to animals having a distinctly apparent head.

**Cephalul'cus.** (Κεφαλή, the head; ελκω, to draw. F. cephalulcus; G. Kopfzicher.) An instrument for extracting the head of the feetus in labour, such as the whalebone fillet.

Cephaluroï'dea. (Κεφαλή; οὐρά, the tail; είδος, likeness. F. cephaluroïde.) The third Order of Spermatozon, according to Czermak, being those which have a spherical or head-shaped extremity, with a fine tail-like appendage; they are found in all mammals, and most insects.

Cepic'ium. (Dim. of L. cepa, an onion.) A small bulb.

Cepi'ni. Old name for vinegar. (Quiney.) Cepoph'agrus, Megn. (L. cepa, an onion; Gr. φαγείν, to eat.) A Genus of the Order Acarulea.

C. echino'pus, Ch. Robin. hedgehog; mods, a foot. F. capophage epineux.) An acarus found on Illiaceous bulbs, on potatoes, on dry flowers, and other dead vegetable matter.

Ce'pula. Old term for large myrobalans. (Quiney.)

Cepulla. (Dim. of The garlie, Allium sativum. (Dim. of L. cepa, an onion.)

Ce'ra. (Knpós, wax. L. eera; F. eire; I. eera; G. Wachs.) Wax, a solid, somewhat unctuous, tenacious substance, obtained from the honeycomb of the bee, Apis mellifica. It is secreted by glands on the sides of the ventral rings of the insect. See Wax.

Also, same as Cere.

C. al'ba. (L. albus, white. F. cire blanche; G. weisses Wachs.) White wax. The pharma-copoial name of yellow beesway, bleached by exposure to moisture, air, and light.

C. arbor'ea. (L. arborcus, pertaining to a tree. G. Baumwachs.) A synonym of Ceratum resince.

Also, a synonym of vegetable wax.

C. carbolica. One part of carbolic acid melted with ten of yellow wax. Used for the impregnation of silk ligatures, or of lint and other materials, for the dressing of wounds. See Wax. C. chinen'sis. (China.)

Chinese.

C. citri'na. (L. citrus, the citron tree.) Same as C. flava.

C. fla va. (L. flavus, yellow. F. cire jaune; G. yellos Wachs.) The prepared honeycomb of the hive bee, Apis mellifica. It is obtained by draining off the honey from the comb, which is then expressed, melted in water, allowed to subside, and then run into moulds. It is a yellowish solid, with a slight lustre, a peculiar aromatic odour, and a granular fracture. Its sp. gr. is about '965; it fuses at 62° C. to 63° C. (143.6° F. to 145.4° F.) It is insoluble in water and cold alcohol, soluble in oil of turpentine. It contains cerin, cerolein, myricin, aromatic and colouring matters. It is used externally as a protective, and internally in diarrhea. It enters into the composition of many plasters and ointments.

C. japon'ica. See Wax, Japanese. C. myri'cee. Myrtle wax from the Myrica cerifera.

U. pal'mæ. (L. palma, a palm.) Same as Carnauba.

C. vegetab'ilis. See Wax, vegetable. C. viridis. (L. viridis, green.)

Ceratum æruginis, or Emplastrum æruginis. Cera'ceous. (L. cera. F. ceracé; G. wachsartig.) Of the consistence or appearance

Cera'dia. A Genus of the Nat. Order

Composita. C. furca'ta. (L. furcatus, forked.) One of the species said to supply African bdellium.

Ceræ'æ. (Κεραίαι, from κέρας, a horn.) Old term for the cornua or horns of the uterus, according to Gorraeus and Lindenus.

Cerain. (L. cera, wax.) Name given to a body, the oxide of a radicle, which acts the part

of base in beeswax.

Ceramia ceæ. Rose tangles. An Order of Lindley's Alliance Algales, being cellular or tubular unsymmetrical bodies, multiplied by tetraspores.

Cerami'ce. (Κεραμεύω, to form or make

of earth.) Old term for potter's clay or argil. **Ceramid'ium.** (Κεραμίδιον, dim. of κεραμίς, a roof-tile; or of κεράμιον, a jar.) A term applied to the pear-shaped capsule of some Alga, which has a terminal opening and a tuft of spores springing from the base.

Cerami'tis. Same as Ceramice. Ceram'ium. Name of a Greek measure

of nine gallons.

Also (Gr. κεράμιον, a jar), a Genus of the Family Ceramiacea, Order Floridea, Class Carposporea, so called from its pear-shaped capsules.

C. helminthochor tus. ("Ελμινς, a worm; χόρτος, grass, fodder.) The Alsidium helminthochorton.

(L. ruber, red.) A C. ru'brum, Ag. species often found mixed with Carrageen moss, Chondrus crispus.

**Ceramu'ria.** (Κέραμος, potter's earth; οὐρου, urine.) A term given to the condition in which there is a deposit of phosphates in the

**Cerani tes.** ( $K_{\epsilon\rho\alpha\nu\nu\nu\omega}$ , to mix.) Old name for a pastil or troche, made of iris, birthwort, orpiment, alum, galls, &c., said to have been of extensive uses. Galen, de C. M. per Gen. v, 12.

Ceranoïd. (Κέρας; εἶδος, likeness.) Having branches arranged like horns.

**Ceran'themus.** (Κηρός, wax; ἀνθεμον, a flower.) A synonym of Propolis.

**Cer'as.** ( $Ki\rho as$ , a horn; from its shape.) A name for the wild parsuip.

Also, a term for a horu. Also, a term for the cornea.

Cer'asa. (L. pl. of cerasum, a cherry.) Cherries, the fruit of Prunus cerasus and other species.

C. an'glica. The fruit of Prunus cerasus. C. ni'gra. (L. niger, black.) Black cherries, the fruit of Prunus avium.

Cerasia'tum. (L. cerasium, from cera-

sum, a cherry.) Old name for a purging medicine of which cherries formed an ingredient, according to Libavius, Synt. Arc. Ch. viii, 12.

Cer'asin. (Prunus cerasus, the common

cherry tree; because found in the gum which exudes from it.) A term applied to certain gummy substances which are soluble in boiling water, and swell, but do not readily dissolve in cold water, of which gum tragaeanth is an example; also named Adraganthin and Prunin.

Cera'sios. (Κεράσιον, a cherry.) Old name for an ointment. There was a greater and a lesser cerasios, according to Mesuen, in Oper. fol. 159.

Cera'sium. (Κεράσιου.) A cherry.

Also, cherry-tree gum. Ceras ma. (Κέρασμα, a mixture.) mixture of hot and cold water. (Dunglison.)

Ceraspho'rium. (Κέρας, a horn; φέρω, to bear.) Applied by Illiger to a short apophysis of the frontal bone in certain mammals, which hears a solid horn at the extremity.

Cerastes. (Κεράστης, horned.) A Genus of the Family Viperidæ, Suborder Solenoglyphu, Order Ophidia. Poisonous snakes.

C. ægyptiacus, Duméril. The horned

viper of Egypt. It is of nocturnal habits, and its bite is very dangerous.

**C. loph ophrys,** Cuv. ( $\Lambda \delta \phi os$ , a crest;  $\delta \phi \rho \dot{\nu} s$ , the eyebrow.) A poisonous species inhabiting South Africa.

C. per'sicus, Duméril. The Persian horned viper. Poisonons.

Ceras'tium. (Képas, horn, G. Hornkraut.) A Genus of the Nat. Order Caryophyl-

C. aquat'icum, Linn. The Stellaria aquatica.

C. arven'se, Linn. (L. arvum, a field.) An antiscorbutic.

C. trivia'le, Link. (L. trivialis, belonging to the cross roads, common.) Au antiscorbutic. C. visco'sum, Linn. (L. viscosus, sticky.)

The C. triviale. Cer'asum. (Κεράσιον. F. cérise; G. Kirsche.) A cherry.

Also, a cherry tree.

Cer'asus. (L. cerasus, so called because brought to Rome by Lucullus, from Cerasus, a city in Pontus, where it greatly abounded. F. cerisier; G. Kirschbaum.) The cherry tree. See Prunus cerasus.

C. ac'ida, Gart. (L. acidus, sour. F. griottier.) The Frunus ecrasus.
C. as'pera. The Frunus aspera.
C. a vium. The Frunus avium.

C. capol'lin, De Caud. Hab. Mexico. Bark used as a febrifuge.

C. caprici'da. (L. caper, a goat; cædo, to kill.) The C. undulatu.

C. capronia'na, De Cand. (F. griottier.) The officinal name, Fr. Codex, of the morello

C. dul'cis, Gart. (L. dulcis, sweet. F. merisier.) The Prunus avium.

C. durac'ina, De Cand. (L. duracinus, firm. F. bigarreautier.) The common cherry, Prunus cerasus, var.

C. horten'sis. (L. hortensis, belonging to a garden.) The cultivated varieties of Prunus

C. jamaicen'sis. The Malpighia glabra. C. julia'na. (F. guignier.) A cultivated variety of Prunus cerasus.

C. laurocer'asus, Loiselle. The Prunus laurocerasus.

C. pa'dus. The Prunus padus.

C. racemo'sus sylves'tris. (L. racemosus, full of clusters; sylvestris, belonging to a

wood.) The Prunus padus.
C.ru'bra. (L. ruber, red.) The Prunus cerasus.

C. sero'tina, Ehrh. (L. serotinus, late, ripe.) The Prunus virginiana.

C. undula'ta, Ser. (L. undulatus, wavy.) Hab. Iudia. Leaves and fruit said to be poisonous.

C. virginia'na, Mich. The Prunus vir-

C. vulga'ris. (L. vulgaris, common.) The Prunus cerasus.
Ce'rate. See Ceratum.

C., Belleville's. The Unguentum hydrargyri oxidi vubri.

C., blis'tering. The Unguentum, and also the Emplastrum, cantharides.

C., Gou'lard's. The Unguentum plumbi subacetatis compositum.

C., Hu'feland's. Simple cerate 15 parts, exide of zinc and lycopodium powder, of each 1 part. Used in ulceration of the evelids.

C. of lard. The Ceratum, U.S. Ph. C. of lead. The Unguentum plumbi subacetatis compositum.

C., Tur'ner's. The Coratum zinci carbo-

natis. Ceratec'tomy. (Κέρας, a horn; ἐκτομή,

a cutting out. F. cératectomie; G. Hornhaut-schuitt.) Term for a section of the cornea.

Ce'rated. (L. cera.) Covered, or infiltrated, with wax.

**Cerathe'ca.** (Κέρας, a horn; θήκη, a chest or box. F. cerathèque; G. Hornkasten.) Name for that part of the chrysalis which lodges the antennæ.

Cera'tia. (Κερατία.) A name given to the Ceratonia siliqua, and several other plants.

Ceratiasis. See Keratiasis. Ceratichthyo'sis. (Kipus, a horn; ichthyosis. F. cératichthyose; G. Fischschuppenausschlag der Hornhaut.) Ichthyosis of the

Cer'atin. See Keratin.

Cera'tion. (Knoos, wax.) Alchemical term for the act of covering anything with wax, or of softening a hard substance or juice not capable of being liquefied; also, the fixation of mercury.

Ceratitis. (Képas, horn.) Inflammation of the cornea. Same as Corneitis.

C., dot'ted. A synouym of Aquocapsu-

C. puncta'ta. (L. punctatus, part. of pungo, to prick, or dot.) A synonym of Aquocupsulitis.

**C. sup'purans.** (L. suppuro, to suppurate) Same as Corneitis, suppurative.

Cera'tium. The same as Ceratia. Also, an ancient weight of four grains.

Also, a term for a siliquiform multiovular capsule, having two placenta, which are alternate with the lobes of the stigma, such as that of Corvdalis.

**Cer'ato**-. (Κέρας, a horn.) This word, used as a prefix in compound names, as of muscles, denotes connection with, or relation to, a cornu, as of the hyoid hone, or to the cornea.

**Ceratobranch** ia. (Κέρας, a horn; βραγχια, the gills.) A Subsection of nudibranchiate Gastropods, having cylindrical, fusiform, or club-shaped branchiæ.

(Same etymon.) Ceratobranch ial. One of the main portions of ossified or permanent branchial cartilage in fishes and Amphibia. Where there are only two segments, as in Urodeles, the lowest is the ceratobranchial, the upper being the epibranchial; but, in fishes, there are four segments, the uppermost being the pharyngobrauchial, and the lowermost the hypobranchial, which last thus intervenes between the ceratobranchial and the median single ele-ment, or basibranchial. This part is fibrous in man, the little cornu minor being the hypohyal.

Cer'atocele. (Κέρας, a horn; κήλη, a tumour. F. ceratocele; G. Hornhautbruch.) Α hernia of the cornea of the eye, consisting in the protrusion of the posterior elastic lamina, and often of some of the deeper layers of the cornea, by the pressure of the aqueous humour, at some point where the outer corneal layers are destroyed by ulceration.

Ceratoeri'coid mus'cle. See Keratocricoid muscle.

Cer'atode. (Képas.) The horny substance of sponges.

Ceratodei'tis. See Keratodeitis.

Cerato'deocelc. (Κερατοειδής, horn, and so the cornea; κήλη, a tumour.) Same as Ceratocele.

Ceratodeonyx'is. Same as Keratonyxis.

Ceratoderm'ia. (Kipas; δίρμα, the skin.) De Blainville's term for Echinodermata.

Cerato'des. (Κερατοειδής, horn-like. F. cérateux; G. hornartig.) Having, or pertaining to, hern.

C. membra'na. The cornea. Ceratogen'esis. (Κέρας, horn; γένεσις, generation. F. cératogénésie; G. Hornbildung.) The formation of horn, or of a Kerutoma.

Ceratoglobus. See Keratoglobus. **Ceratoglos'sus.** (Κέρας, a horn; γλῶσσα, the tongue. I. cerato-glosso.) A name given to that part of the hyoglossus musele which arises from the cornu of the hyoid bone.

**Ceratohy'al.** (Ké $\rho$ as, a horn; hyoides, hyoid.) The part of the hyoid arch in mammals below the styloid process. The lesser cornu or corniculum of the hyoid bone in man is, properly speaking, only the hypohyal segment. In man it is merely a short conical process arising from the upper surface of the hyoid at its junetion with the thyrohyal, to which it is attached by a synovial sac and sometimes by bone; it gives attachment to the stylohyoid ligaments.

Occasionally, as in some ages, the ceratohyal is absent; in other animals, as the dog, it is very long, and divided into three segments, the ceratohyal proper at the base, the epihyal and the stylohyal at the apex.

It is the distal portion of the hyoid arch on each side, which is primarily divided into two, the upper segment being the epihyal. Each of these may again subdivide. In Teleostei, in which the hyoid is at its greatest development, the ceratohyal is the infero-internal bar, which carries the branchiostegals; it is ossified by two centres. It is attached above to the synchondrosis between the hyomandibular and symplectic bones, by a separate interhyal bone; below it and the basal piece (glossobyal) is a short cartilage, the hypohyal, ossified also by two centres.

Ceratohyoïde'us. (Κέρας, horu; hyoides, hyoid. I. cerato-ioideo.) A small fasciculus of muscular fibres, extending from the styloid bone to the upper border of the thyroid cornu found in Solipedes and in fishes. It connects the hyoidean and the branchial arches; sometimes there is an external and an internal muscle.

Ceratoïdes. (Képas, a horn; eldos, like-

ness.) Resembling a horn; horn-like. A term for the cornea.

Ceratoleuco'ma. Same as Leucoma. Cerato'ma. See Kerutoma.

Ceratomala'cia. (Κέρας; μαλακία, softness. F. cératomalacie; G. Erweichung der Hornhaut.) Softening of the cornea, the result of inflammation, or of innutrition.

**Ceratomalag'ma.** (Κηρός, wax; μά-λαγμα, a poultiee. G. Wachssalbe.) Old term (Gr. κηρατομάλαγμα), according to Galen, de C.

M. per Gen. vii, 11, for a cerate.

**Ceratomandibular.** ( $K \not\in \rho as$ , a horn; L. mandibula, the lower jaw.) A muscle occurring in some mammals, arising from the cornu of the hyoid bone and passing to the lower jaw.

Ceratomeningi'tis. (Κέρας; μῆνιγξ,

a membrane.) Same as Cerutitis.

Ceratome ninx. (Κέρας; μῆνιγξ, α membrane. F. cératoméninge; G. Hornhaut.) The cornea.

**Ceratometaphytei'a.** (Κέρας; με-ταφυτεύω, to transplant. F. transplantation de cornée; G. Überpftanzung der Hornhaut.) Transplantation of the cornea.

Cerato'nia. (Κερατωνία, the locusttree; from κέρας, a horn, which its pod somewhat resembles.) A Genus of the Suborder Cæsalpineæ, Nat. Order Leguminosæ.

C. sil'iqua. (L. siliqua, a pod. F. carou-bier; I. carubo; G. Johannisbrodbaum.) The carob tree, or St. John's bread, a native of Eu-rope and Asia. The sweet pods are used as food and as a demuleent to improve the voice. The seeds are called Algaroba beans.

Cerato'niæ fruc'tus. (L. ceratonia; fructus, fruit. G. Johannisbrod.) The fruit of Ceratonia siliqua. See Algaroba bean.

Ceraton'osus. (Κέρας, a horn; νόσος, a disease. F. mal de cornée ; G. Hornhautkrankheit.) Disease of the cornea.

Ceratonyx'is. See Keratonyxis.

Ceratopharyng'eus. (Κέρας: φά-ρυγξ, the pharynx. I. cerato-pharyngien; G. Zungenbeinhornschlundmuskel.) The part of the middle constrictor of the pharynx which arises from the cornu of the hyoid bone.

Ceratophthal'ma. (Κέρας; ὀφθαλμός, the eye.) A synonym of Phyllopoda.

Ceratophylla'ceæ. (Κέρας; φύλλου, a leaf.) A Natural Order of monochlamydeons Exogens, or of the Alliance Urticales, or a Family of the Order Urticina, having an inferior radiele, exalbuminous embryo, and many-leaved, large plumule.

Ceratophyl'lous. (Κέρας; φύλλον, a leaf. F. ceratophylle ; G. hornbluttrig.) Having simple, linear, subulated leaves; horn-leaved.

**Cer'atophyte.** (Κέρας; φυτόν, a plant. F. ceratophyte; G. Hornpflanze.) A term for a polyp, the internal axis of which has the

appearance of wood or horn. **Ceratoplasty.** (Κέρας; πλάσσω, to form. F. ceratoplastique; G. die künstliche Hornhautbildung.) The artificial restoration of

the cornea.

**Ceratopter'ides.** ( $K \epsilon \rho a s$ ;  $\pi \tau \epsilon \rho i s$ , fern. F. ceratoptirides.) Name for the Equisetaeeæ, from the general form of the plants of which it is constituted.

Ceratorrhex'is. (Κέρας: bursting. F. ceratorrhexis; G. Zerreissen der Hornhaut.) Rupture of the cornea.

Cer'atose. (Képas.) Horny, horn-like.

Cerato'sis. (Κερατόω, to harden into horn. F. ccratose; G. Hornbildung.) formation of horn.

Ceratostaphyli'nus. (Képas, a horn; σταφυλή, the uvula when swollen at its tip like a grape.) A part of the Thyrcostaphilinus muscle of Winslow, being some occasional fibres running between the cornu of the hyoid bone and the nvula.

Cer'atostome. (Κέρας: στόμα, α mouth.) A perithecium with an elongated and

firm-walled neck.

**Ceratostro'ma.** (Κέρας; στρῶμα, anything spread out. F. ceratostrome; G. Ceratostrom.) An occurrence of horny seales on

**Ceratostro'sis.** (Κέρας; στρῶσις, a spreading. F. ciratostrose.) The progress of eeratostroma.

Ceratosyphilol'epis. (Képas; syphilolepis.) Horny syphilolepis, or syphilitic scaly eruptions of the hand.

Cer'atotome. (Κέρας, a horn; τέμνω, to cut. F. ceratotome; I. cheratotome; G. Keratotom, Staarmesser.) A knife for dividing the cornea. See Cataract knife.

**Ceratotom'ia.** (Κέρας; τομή, a section. F. ecratotomie; G. Hornhautschnitt.) Term for

a section of the cornea.

Ceratous. (Kipas.) Horn-like, horny. Cera'tum. (L. cera, wax. F. cerat; G. Wachssalbe, Wachspflaster.) A kind of stiff compound ointment, in which wax predominates as an ingredient. That which is officinal in the U.S. Ph. is composed of eight ounces of lard and four ounces of white wax, melted together and stirred till cold.

**C. ad fontic'ulos.** (L. fonticulus, a little spring.) Issue plaster. Yellow wax 6 oz., suct 2 oz., lard, turpentine, of each 1.5 oz., red lead 4 oz. Melt and mix. Used to keep issues open.

C. adipis. (L. adeps, fat.) The Ceratum,

U.S. Ph.

C. æru'ginis, G. Ph. (L. ærugo, verdigris. G. grünes Wachs, Grünspancerat.) Yellow wax 12 parts, resin 6, turpentine 4; melted together, and mixed with one part of finely powdered verdigris.

C. al'bum. (L. albus, white.) The Unquentum ectacei.

Also, a synonym of cold cream, Ceratum Guleni.

C. ammoniaca'le of Ro'choux. Cerate 32 grammes, earbonate of ammonia 4. Mix.

C. amyla'ceum. (L. amylaceus, starchy.) Starch 19 parts, cold cream 30. Mix.

C. belladon'næ, Fr. Codex. (F. cérat belladonné; I. cerato di belladonna.) Extract Extract

of belladonna 10 parts, simple cerate 90. Mix. C. calami'næ. Calamine, yellow wax, of each 3 oz., lard a pound. Melt and mix. old preparation, for which the Ceratum zinci carbonatis, U.S. Ph., is now substituted.

C. camphora'tum, Belg. Ph. Cerate 9

parts, eamphor 1.

C. canthar'idis, U.S. Ph. (F. emplatre resicatoire; G. Blasenpflaster.) Cantharides, in fine powder, 12 troy oz., yellow wax, resin, of cach 7 oz., lard 10 oz. Used as a blistering agent.

A synonym of Emplastrum cantharidis, B. Ph.

C. carbolicum. One part of carbolie

acid and 5 of simple cerate. C. ceta'cei, U.S. Ph.

(F. cerat de blanc de balcine; 1. cerato di bianco di balena; G. Wal-

ratherrat.) Spermaceti 1 troy ounce, white wax 3 oz., olive oil 5 oz. Melt and stir till cool. An emollicat application to blisters and sores.

In G. Ph., white wax, spermaeeti, of cach 2

parts, expressed oil of almonds 3 parts.

C. ceta cei ru brum, G. Ph. (L. ruber, red. G. rothe Lippenpomude.) Almond oil 90 parts, in which alkanet root I parts has been digested, white wax 60, spermaceti 10, are melted together, and I part each of oil of bergamot and of lemon is added.

C. ce'ti. (L. cetus, a whale.) The C. crtacci.

C. cicu'tæ. (L. cicuta, the hemlock.) The C. conii.

C. cit'rinum. (L. citrus, the lemon.) The C. resince pini, G. Ph., so called from its colour. C. commu'ne, Belg. Ph. White wax 25

parts, olive oil 75.

C. conii. (Κώνειον, the hemloek.) Unguentum conii a pound, spermaceti 2 oz., white wax 3 oz. An application to cancerous sores.

C. cum aceta te plumbi, Belg. Ph.

Same as C. plumbi subacctatis.

- C. cum a'qua, Belg. Ph. (L. cum; aqua, water.) Ceratum 5 parts, almond oil 2, rose water 3.
- C. cum laud'ano, Belg. Ph. Cerate 9 parts, landannm 1.

C. cum o'pio, Belg. Ph. Cerate 97 parts, water 2, extract of opium 1.

C. cum subaceta'te plum'bico. The C. plumbi subacctutis, U.S. Ph.

C. de althæ'a. (L. althæa, the marsh-

mallow.) The Unquentum flurum, G. Ph. C. de cerus'sa. The Unguentum plumbi

carbonatis. C. de min'io ru'brum. The Emplastrum

minii rubrum, G. Ph.

**C.** epuloticum. (Έπουλωτικός, promoting electrisation.) The C. ealaminæ.

C. extrac'ti canthar'idis, U.S. Ph. Five onnees of powdered cantharides are percolated with stronger alcohol 21 pints, or until the liquid passes nearly colourless; the fluid is filtered, evaporated, by means of a water bath, to the consistence of a soft extract, mixed with resin 3 oz., yellow wax 6 oz., lard 7 oz., previously melted together, then filtered, and stirred till cool. A blistering agent.

C. fla'vum, Fr. Codex. (F. cerat jaune.) Yellow wax 100 parts, oil of sweet almonds 350,

water 250.

C. Gale'ui. (I. cerato bianco, cerato di Galino.) Cold cream. The Unquentum aque rose, U.S. Ph., and the C. cum aqua, Belg. Ph.

In Fr. Codex (F. cerat de Galien), almond oil 400 parts, white wax 100, distilled rose water 300.

C. hydrarg'yri compos'itum. Compound mercury cerate. Unguentum hydrargyri, ceratum saponis compositum, of each 6 oz., cam-phor 1—5 oz. Mix. Used as a discuticut application to indelent tumours.

C. hydrargyro'sum, Fr. Codex. cerat mercuriel.) Pomatu parts, ceratum Galeni 100. Pomatum hydrargyrosum 100

C. labia'le al'bum. (L. labialis, belonging to the lips; albus, white.) The C.

C. labia'le ru'brum. (L. labialis, belonging to the lips; ruber, red.) White wax 9 parts, oil 16 parts, alkanet root to colour. Melt and mix. An emollient application.

C. lap'idis calami'næ. (L. lapis, a The C. calamina. stone.)

C. laudanisa'tum, Fr. Codex. (F. cérat laudanisé.) Laudanum of Sydenham 10 parts, ceratum Galeni 90.

C. litharg'yri aceta'ti compos'itum. The C. plumbi subacctatis.

**C.lyt'tæ.** ( $\Lambda \dot{v} \tau \tau a$ , a worm under a dog's tongue, said to cause rabies, and an old name of cantharides.) The C. cantharidis.

C. mercuria'ie. The Unquentum hy-

drargyri.

C. myris'ticae, G. Ph. (G. Muskatbalsam.) Nntmeg cerate. Yellow wax 1 part, olive oil 2, expressed oil of nutmeg 6. Melt and pour into paper capsules.

C. neutra'le. (L. neutralis, neutral.) Kirkland's neutral cerate. Lead plaster 8 oz. olive oil 4 oz., prepared chalk 4 oz., distilled vinegar 4 oz., Goulard's extract of lead ½ oz. Melt the plaster and oil, add the chalk, and then the lead mixed with the vinegar. An astringent application to burns and freely granulating sores.

C. ni'grum. (L. niger, black. I. cerato nero.) White wax 12 grammes, clive oil 36, carbon from burnt sugar 6, sulphur 3, carbon bisulphide 3. In great repute for tinea.

C. pica'tum. (L. pieutus, pitchy.) Same

as Pisselæum.

C. pi'cis. (L. pix, pitch.) The C. resinæ pini.

C. plum'bi compos'itum. plumbi subacctatis, U.S. Ph., and the Unguentum plumbi subacetatis compositum, B. Ph.

C. plum bi subaceta tis, U.S. Ph. Solution of subacetate of lead 2-5 oz., white wax 4 oz., olive oil 8 oz., camphor 30 grains. An astringent application to sores.

C. plum'bi superaceta'tis. Acetate of lead 2 drachms, white wax 2 oz., olive oil half a

pound. Melt and mix. Cooling and astringent. C. pro tac'tu. (L. pro, for; tactus, a touching. F. cérat pour le toucher.) Spermaceti, yellow wax, of each I part, are dissolved in 16 parts of olive oil, and then I part of caustic soda added. Formerly used to anoint the finger previous to making a vaginal examination in some lying-in hospitals. Other similar formulae without the alkali have been used. Latterly a carbolised cerate has been recommended.

C. refrigerans Gale'ni. (L. refrigero, nake cool.) The Unguentum aquæ rosæ, to make cool.)

U.S. Ph.

C. resi'næ, U.S. Ph. (G. Harzcerat.) Resin cerate. Resin 10 oz., yellow wax 4 oz. lard 16 oz. Melt, strain, and stir till cold. Used as an application to burns and indolent sores. Also called Basilicon ointment.

Also, a synonym of *Unquentum resinæ*, B. Ph. C. resi'næ burgund'icæ. The C. resinæ

C. resi'næ compos'itum, U.S. Ph. Compound resin corate, Deschler's salve. Resin, suct, yellow wax, of each 12 oz., turpentine 6 oz., flax-seed oil 7 oz. Melt, strain, and stir till cool. A stimulating application to indolent or nnhealthy sores.

C. resi'næ pi'ni, G. Ph. (L. resina, resin; pinus, the pine tree. G. gelbes Cerat.) Yellow wax 4 parts, Burgundy pitch 2, suet and tur-pentine, of each 1 part. Melt together.

C. rosa'tum, Fr. Codex. (L. rosa, a rose. F. cerat à la rose, pommade pour les levres.)

Almond eil 200 parts, white wax 100, earmine and volatile oil of roses of each 1 part.

C. sabi'næ, U.S. Ph. (G. Sadebaumsalbe.) Fluid extract of savin 3 oz., ceratum resinæ 12 oz. Mix at a moderate heat. Used to keep up the discharge from issues and blisters.

Also, a synonym of Unguentum sabinæ, B. Ph. C. sapo'nis, U.S. Ph. (F. cérat de savon; G. Seifencerat.) Soap plaster 2 ez., yellow wax 2-5 oz., olive oil 4 oz. Melt, mix, and stir till cool. Spread on linen, or other tissue, it is used to give support and pressure to sprained or swollen joints, and as an application in tumours and glandular swellings.

C. saturn'i. (L. Saturnus, Saturn, an old name for lead.) The C. plumbi subacetatis.

C. sim'plex. (L. simplex, simple. F. cérat simple.) Same as Ceratum.
Also (Fr. Codex, cérat simple, cérat sans eau),

oil of sweet almonds 300 parts, white wax 100.

C. sim'plex amygdali'num. (L. amygdala, almond.) The C. simplex, Belg. Ph. C. spermace'ti. The C. cetacei.

C. subaceta'ti plum'bi medica'tum. (L. medicatus, healing.) The C. plumbi subace-

C. sulphura'tum, Fr. Codex. (F. cérat souffré.) Sublimed sulphur 20 parts, almond oil 10, cerate of Galen 100.

C. tetraphar macum. ( $T \ell \tau \rho a$ , in cempounded words for τέσσαρα, four; φάρμακου, a drug.) A synonym of Pisselæum.

C. viride. (L. viridis, green.) Sub-acetate of copper 1 drachm, simple ointment 15 drachms. Melt, mix, and stir till cold. A detergent and escharotic.

Alse, the C. æruginis, G. Ph. C. zin'ci carbona'tis, U.S. Ph. Precipitated carbonate of zinc 2 oz., cintment 10 oz. Mix. An astringent application to exceriations and burns.

**Cerauniar gyrus.** (Κεραυνός, thunder; ἄργυρος, silver. F. cerauniargyre; G. Knallsilber.) Fulminating silver.

Cerauniochry'sos. (Kepavvos, thunder; χουσός, gold.) An old term for fulminating gold; also called Chrysoceraunius. See Aurum fulminans.

Ceraun'ion. (Κεραύνιον, from κεραυνός, a thunderbolt.) A stone supposed to be formed during a thunderstorm. It was believed to be a soporific, and to disperse swellings of the breast, knee, and other parts, when rubbed on them.

Also, a kind of truffle supposed to be generated by a thunderstorm.

**Ceraunydrarg'yrum.** (Κεραυνός, a thunderbolt; ὑδράργυρος, quicklime. F. céraunydrargyre; G. Knallquecksilber.) Fulminating mercury.

**Cerbera.** (Κέρβερος, the dog which guards the gate of the nether world. G. Schellenbaum.) A Genus of the Nat. Order Apocynacea.

C. ahou'al, Linn. A species with poisonous seeds. The milky sap is emetic and narcotic.

C. man'ghas, Linn. Bark and milky sap

purgative; seeds emetic, poisonous.

C. odol'lam, Gartn. Leaves and milky

juice emetic and purgative.

C. peruvia na. The C. theretia. C. tan'ghin. The Tanghinia venenifera. C. thevet'la, Linn. Milk sap poisonous, bark bitter, cathartic, febrifuge. Also called Thevetia neriifolia.

C. thevetioi'des. H. B. K. The Thevetia yccotli, De Cand.

C. venenif'era. The Tanghinia renenifera. Cer'berus. (Κέρβερος, the fifty-headed, or later three-headed, watch-dog who guards the gate of the infernal regions.) Au old name for compound powder of scammony; so called because it contained three ingredients, each of which pessesses very active powers; it was composed of equal parts of scammony, tartrate of potash, and antimonium diaphoreticum. Used as a cathartic in cutaneous diseases. Dose 1-1 dr. Also called Pulvis cornachini.

Also, a triple mercurial preparation of salt, mereury, and vitriol, according to Libavius, Synt. Arc. Chym. vii, 10.

C. mitiga tus. (L. mitigo, to render mild.) Calomel.

C. triceps. (L. triceps, three-headed.)

The same as Pulvis cornachini. Cer'cæ. Same as Cerci.

**Cerca'ria.** (Κέρκος, the tail.) A term applied to a larval form of certain Entozoa of the Suborder Digenæa, Order Trematoda. Cercaria appear as small, oval, internal buds, within a sporocyst or a redia, also larval forms, from which they in time escape; they possess a movable, sometimes a forked tail, two suckers, the fore-most developing into a pharynx and intestinal canal, and after a time a water-vascular system.
All the forms, and upwards of forty are known, are stages in the life history of particular parasitic worms, and develop into one or other of the species of Distoma. The egg of a Distema develops into an embryo, which migrates into some fresh or salt water molluse, as Limnæa, Unio, Anedouta, or Ostrea, and penetrating the liver or other viscus forms a redia and sporocysts or tubelike structures, from the inner grannlar and vesicular lining of which the Cercariæ develop as buds asexually. The Cercariæ escape by the expulsion-tube of the redia, enter the water and swim about for several days, then, penetrating the body of small fresh-water animals, especially molluses, they discard their tail, encyst themselves, become surrounded by a membranous bag, derived from the tissue of the organ in which they are embedded, and pass into a pupa state, which may last for two years, during which period they gradually develop into young Distomata. They and their intermediate bost heing now eaten by some (usually) vertebrate animal, the cyst is digested, and the Distomas are set free in a sexually ripe condition. Pagenstecher fed ducks with the encysted Cercarize of Paludina vivipara, and in fifteen days obtained sexuallymature specimens of Distoma echinatum from their intestines. Other Cereariæ encyst themselves, not in animals, but in water plants. It is believed that one of the most dreaded of these pests, the Distoma hepaticum of the sheep, which occasionally occurs in man, is derived from the Cercaria found in Planorbis marginatus, which occurs in marshy ground usually aveided by sheep. The following is an alphabetical list of the Cercarie at present known, with the animals in which they have been found.

The term was at one time very lossely applied, and included species of Infusoria, Rotifera, Vermes, and Spermatozoa; it is now applied also to the larval forms of some Aseidians.

C.ag'ilis. (L. agilis, nimble.) In Limnaa stagnalis.

C. arma'ta. (L. armatus, armed.) The

larval form of Distoma endolobum, found in Limnaa staqualis.

C. brachyu'ra. (Βραχύς, short; ουρά, the tail.) In Planorbis nitidus.

C. brun nea. (Mod. L. brunneus, brown.) In Limnæa stagnalis.

C. bue'cini mutab'ilis. In Buccinum mutabilis.

C. chlorotica. (Χλωρις, greenness.) In Vivipara vera

C. corona'ta. (L. corona, a erewn.) In

Limnæa stagnalis. C. cotylu'ra. (Κοτύλη, a cup; δυρά, a

In Trochus cincreus. tail.) C. cymbu'liæ. (L. cymbula, a småll boat.) In Cymbulia Peronii.

C. cystoph'ora. (Κύστις; φέρω, to carry.) In Planorbis marginatus.

C. diplocotyl'ea. (Διπλούς, donble;κοτύλη, a small cnp.) The larva of Amphistoma subclavatum.

C. dis'tomi retu'si. (L. retundo, to blunt.) In Limnæa stagnalis.

C. echina'ta. ('Exīvos, a hedgehog.) In Vivipara vera and Limnaa ovata.

C. echinatoï des. ('Exīvos, a hedgehog;

elòos, form.) In Vivipara fasciata.

C. fallax. (L. fallax, deceitful.) In Vivipara vera and Limnæa stagnalis.

C. fascicula'ris. (L. fasciculus, a small bundle.) In Nassa reticulata.

C. fissicau'da. (L. fin to, to split; cauda, a tail.) In Valvata piscenalis.

C. gibbus, hunched, crooked.) In Limnæa peregra.

C. grac'ilis. (L. gracilis, slender.) In Planorbis corneus.

C. hel'icis vivip'ara. (L. viviparus, that brings forth its young alive.) In Vivipara vera.
C. hymenocer'ca. (Υμήν, a thin skin;

κερκίς, a rod.) In Calyptræa sinensis.

C. la'ta. (L. latus, broad.) In Venus

C. linea'ris. (L. linearis, belonging to lines.) In Littorina litorea.

C. macrocer'ca. (Μακρός, great; κερκίς, a rod.) In Pisidium sp. and Cyclas cornea.

C. mag'na. (L. magnus, great.) Vivipara vera.

C. megacot'yla. (Μέγας, great; κοτύλη, a eup.) In Anodonta cygnea

C. micracanth'a. (Mikpós, small; akayθος, a spine.) In Limnæa palustris.
C. microcetyla. (Μικρός, small; κοτ-

ύλη, a cup.) In Vivipara fasciata.

C. micru'ra. (Μικρός, small; ὀυρά, a tail.) In Bythinia tentaculata.

C. neglec'ta. (L. neglectus, part. negligo, to disregard.) In Bythinia tentaculata.

C. nodulo'sa. (L. nodulus, a little knot.) In Bythinia tentaculata.

C. odontocot'vla. ('Oĉoús, a tooth: κοτύλη, a eup.) In Limnæa stagnalis.

C. orna ta. (L. ornatus, adorned.) The larval form of Distoma clavigerum, found in Limnæa stagnalis.

C. pachycer'ca. (Παχύς, thick; κερκίς, a rod.) In Trochus cinereus.

C. planor'bis carina'ta. (L. carinatus, keeled.) In Planorbis carinatus.

C. proxima. (L. proximus, nearest.) In Littorina litorea.

C. rena'lis. (L. ren, the kidney.) In Helix aspera.

C. sagitta'ta. (L. sagitta, an arrow.) In Nassa reticulata.

C. spinif'era. (L. spinifer, thorny.) In Planorbis corneus.

C. stylo'sa. (L. stylus, a pointed writing instrument.) In Planorbis vortex.

C. su'bulo. (L. subulo, a finte player.) In Tivipara vera.

C. thaumanti'adis. (L. Thaumas, the

father of Iris.) In Eucope sp.

C. trigonocer'ca. (Τρίγονος, three-cornered; κερκός, a tail.) In Limax cinereus.

C. tri'loba. (Τρίλοβος, three-lobed.) In

Limnæa stagnalis.

C. tubercula'ta. (L. tuberculum, a small swelling.) In Bythinia tentaculata.

C. vesiculif'era. (L. vesicula, a blister; fero, to hear.) In Vivipara vera.

C. vesiculo'sa. (L. vesiculosus, full of

blisters.) In Vivipara vera. C. virgula. (L. virgula, a rod.) In Bythinia tentaculata.

Cercariæ'um. (Κέρκος, the tail.) Larval forms of Trematode worms. About 23 varieties are known, chiefly inhabiting Gasteropods, as

Paludina and Planorbis. (Cercaria; L. forma, Cercar'iform. shape.) Having the shape of a cercaria; tadpole-

like. Applied to the larval forms of Tunicata. Cerchnas mus. Same as Cerchnus.
Cerch'nus. (Κίρχνος, hoarseness, from κίρχνω, to render hoarse.) Hoarseness of voice.
Cer'ci. (Κερκός, a tail.) Hair-like projec-

tions from the posterior segment of the abdomen of some orthopterous insects, as the cockroach. Cercid'ium. (Κερκίδιον, dim. of κερκίς,

a rod.) The rod-like myeelium of certain fungi. Cer'cis. (Kepais, an upright rod.) An old name for the radius, a bone of the forearm, from its form.

Also, an old name for a pestle.

Also, a Genus of the Nat. Order Leguminosa. C. siliquas'trum, Linn. The Judas tree. Hab. South Enrope. Flowers antiscorbutic.

Cercodia'ceæ. Jussieu's term for Haloragacea.

Cercomo'nas. (Κερκός, a tail; μονάς, a unit. F. monade à queue; G. Schwanzmonade.) A Genus of flagellate Protozoa, characterised by an oval body with a filiform tail and a long flagelliform cilium; by means of the candal prolongation they can become fixed temporarily.

C. hom'inis, Davaine. (L. homo, a man.) A species found in ordinary and in ebolera evaeuations. It is pear-shaped, bright, eolourless, and very contractile. There are two varieties, a larger and a smaller. The body of the one is from '018 to 021 mm.; of the other, 008 to 01 mm. in length.

C. intestina'lis, Lambl. (L. intestina,

the gut.) A species found in the alvine evacuations; probably the same as C. hominis

C. sal'tans, Ehr. (L. salto, to leap.) species found in certain ulcers; it is rounded in front, bristle-shaped behind, and 1-1000" 1-2000" in length.

(L. urina, urine.) C. urina'rius. doubtful species found in the urine of cholera patients; it is 1-1800" in length, 1-3000" in breadth. Also called Bodo urinarius.

Cerco'sis. (Κερκός, a tail.) Old name for polypus of the womb.

Also, for enlargement of the elitoris, according to Sennertus, l. iv, M. B. part 1, s. i, c. 2.

Also, a name of the clitoris.

C. clitor'idis. (Κλειτορίς, the chtoris.) Masturbation in the female.

C. exter'na. (L. externus, outward.) Masturbation in the female.

Cer'dac. (Arab.) An old name for mer-

cury. (Ruland.)
Cerde'la. Spain; near Fitero. Cold sul-

phur waters, used in atonic dyspepsia and skin diseases.

Cere. (L. cera, wax; so called from its waxy appearance.) A term for a membrane in birds which covers the base of the heak, and in which the nostrils are pierced; it is probably used as a tactile organ.

Ce'rea. (L. cera, wax. F. cerumen; G. Ohrenschmalz.) Old name for cerumen, or wax of the ear.

**Ce'real.** (L. Ceres, the goddess of corn and tillage. F. cereal.) Pertaining to, or of the nature of, corn. Applied to all kinds of corn of which bread or other similarly nutritious substance is made. Arranged in order, according to the quantities of proteids they contain, they stand —wheat, barley, rye, oats, maize, buckwheat, and rice-wheat containing 13.5 parts per cent., and rice 5. per ceut.

C. dust. The dust arising from the moving about of heaps of corn and other cereals. It contains many siliceous particles, and is productive of bronchial and other chest affectious in those exposed to it.

Cerea'lia. (Same etymon. F. les céréales ; G. Kornerfriehte.) A term which includes the graminaceous plauts which are used as food; and also, by many, leguminous plants having a similar

Cerealin. (Same etymon.) An albuminoid principle of cereals, soluble in water, which acquires the qualities of a ferment by a slight modification, due perhaps to contact with the air, and determines the transformation of starch into dextrine, sugar, and lactic acid. is largely contained in the external cells of the perisperm.

Gêrebel'la uri'na. (L. cerebellum; urina, urina.) Old term, used by Paracelsus, for urine of a colour like the brain, and from which it was pretended to judge of the disorders of that organ.

Cerebellar. (L. cerebellum.) Relating to the cerebellum.

C. ar'tery, ante'rlor infe'rior. (F. artère cerèbèlleuse inférieure et antérieure; G. vordere untere Kleinhirnarterie.) A branch arising about the middle of the basilar artery, one on each side, and passing backwards to the anterior part of the inferior surface of the cerebellum; it anastomoses with the inferior cerebellar artery.

C. ar'tery, poste'rior infe'rior. artère cérébelleuse inférieure et postérieure; G. hintere untere Kleinhirnarterie.) A branch of the vertebral artery, or sometimes of the basilar, rising near the pons Varolii. It passes between the hypoglossal and vagus nerves, backwards and outwards over the restiform body to the under surface of the cerebellum, and between the inferior vermiform process and the hemisphere it divides into two branches, one of which continues its course between the two hemispheres of the cerebellum, and the other runs outwards to the outer horder of the under surface of the cerebellum, when it joins the branches of the superior cerebellar artery. It supplies the cerebellar hemisphere and the vermiform process, and gives branches to the choroid plexus of the fourth ven-

C. ar'tery, supe'rior. (F. artère cérèbelleuse supérieure; G. obere Kleinhirn-arterie.) A branch of the basilar, near its bifurcation, which runs backwards and outwards behind the third nerve, round the crus cerebri, to the upper surface of the cerebellum, where it auastomoses with the branches of the inferior cerebellar arteries. It supplies the superior part of the cerebellar hemisphere, the vermiform process, the valve of Vieussens, and in part the velum interpositum.

C. lobes. See Cerebellum, lobes of.

C. pro'cess. The superior peduncles of the cerebellum or processus e cerebello ad testes.

C. veins. (G. Blutadern des kleinen Ge-hirns.) A series of veins occupying the surface of the cerebellum; the upper ones terminate in the straight sinus, and the veins of the lower in the lateral and occipital sinuses, and the outer in

the superior petrosal sinus.

Cerebel'li cap'sula. (L. capsula, dim. of capsu, a bag.) The layer of white medullary substance surrounding the nucleus dentatum in the cerebellum.

C. nu'clei cap'sula. (L. nucleus, kernel; capsula, dim. of capsu, a bag.) T same as C. capsula.

Cerebelli'tis. (L. cerebellum. F. cérébellite.) Inflammation of the cerebellum.

Cerebellous. Same etymon and meaning as Cerebellar.

C. ap'oplexy. Apoplexy of the cerebellum.

C., gan'glion of. (Γάγγλιον, an enlargement of a nerve.) The nucleus or corpus denta-tum of the cerehellum.

**Cerebellum.** (L. cerebellum, dim. of cerebrum, brain. F. cervelet; I. cervelletto; S. cerebelo; Port. eerebello; G. Kleinhirn, kleine Gehirn.) The hind brain; the part of the en-(L. cerebellum, dim. of

cephalon which lies behind the cerebrum and above the pons Varolii. The cerebellum occupies the inferior fossæ of the occipital bone, and is covered by the teuto-It is composed of two lateral parts or

hemispheres, between which is the vermiform process. Each hemisphere is connected with the root of the hrain by three processes, one ascending to the testes, one transverse to the pons, and one descending to the medulla oblongata. surface of the hemisphere is deeply furrowed, dividing it into lobes and laminæ, which, on section, present a tree-like appearance—the arbor vitae, owing to the alternate arrangement of the grey matter, which is superficial, and the white medullary substance, which is internal. The cerebellum is supplied by branches from the vertebral and basilar arteries, named the inferior and the anterior and posterior superior cerebellar. In man it is ellipsoidal in form, and flattened from above downwards; the transverse measuremeut is 115 mm., the sagittal in the middle line 41 mm., on either side of the median line 68 mm.; the thickness of hemispheres 54 mm. Its volume is 162 e.e.; its average weight is 169 grammes; sp. gr. 1.0415; the sp. gr. of grey matter 1.0308, of white I.0321. It is developed from the secondary hind brain or mesencephalon.

The grey substance of the cerebellum is divisible into three parts-the cortex cerebelli, the nucleus dentatus, and the nucleus tegmenti.

The cortex cerebelli presents a superficial layer, composed of neuroglia, in which lie triangular or quadrangular cells, with fine processes; a middle layer, composed of a single series of large cells of Purkinje, which resemble motor cells, and give off radiating processes to the surface and an axiscylinder process inwards, and a deep layer, containing numerous small granules. The nucleus dentatus lies in the medullary substance of the hemispheres. The nucleus tegmenti of Stilling is situated in the mednllary substance of the vermiform process.

Physiologically, the cerebellnm may be regarded as the centre of equilibration, and of the

co-ordination of movements.

In fishes, Amphibia, and reptiles, the median lobe or vermiform process is alone present, forming a smooth band or mass. In birds there are, in addition, two small lateral appendages. In the lower mammals similar lateral masses exist, apparently corresponding to the flocculi of the higher mammals. The cerebellum, and especially the hemispheres, increases in size through the Rodents, Ruminants, Carnivores, and Quadrumana to man, in whom it attains its highest development.

C., cru'ra of. (L. crus, the leg.) Same

as C., peduncles of.

C., fissures of. See Fissures of cerebel-

C., fo'lia of. (L. folium, a leaf.) Same as C., laminæ of.

C. hæm'orrhage. Bleeding into the substance, or on the surface, of the cerebellum from rupture of a blood-vessel. The signs are obscure and uncertain; vomiting is said to be the most constant symptom.

C., hem ispheres of. ('H/u, insep. prefix meaning half; opaipa, a sphere. F. hemispheres de cervelet; G. Hemispharen des Kleinhirns.) The two chief portions of the cerebellum, one on each side; they are separated behind by a deep notch, and joined below and in the middle by the inferior and superior vermiform processes. The upper surface is more or less flattened, the lower is convex and separated by the vallecula. The hemispheres are divided into several

C., lamel'læ of. (L. lamella, a small plate.) Same as C., laminæ of.

C., lam inæ of. (L. lamina, a thin plate. F. lamelles de cervelet; G. Markbluttehen.) The narrow, almost parallel, folds of the cerebellum, separated by sulci or farrows, and analogous to the convolutions of the cerebrum. There are ten or twelve primary laminæ, which, as they proceed outwards, give off secondary laminæ, and these again tertiary laminæ. They consist of white nervous tissue, covered with a layer of grey nerve matter. The latter consists of an outer layer, having a fine nenroglia containing delicate fibres from the cells of Purkinje, larger connective-tissue fibres connected with the pia mater, small granule-like bodies, and larger corpascles enclosed in protoplasm, and giving out processes; a middle layer, consisting of the cells of Purkinje, and an inner or granular layer, consisting of small bodies, 1-4000" to 1-2500" in diameter, round or angular in shape, enclosed in branched protoplasm, and lying in a gelatinons matrix, which contains a plexus of fine nerve fibres.

C., lobes of. (G. Lappen.) The following are the named lobes of the cerebellum:

Lobus inferior posterior, or semilunar lobe (G. unterer halbmondformiger Lappen).

Lobns inferior anterior, or cunciformis, or digastrie, or biventral (G. vorderer unterer, or keilformiger Lappen).

Lobus inferior medius gracilis, or slender lobe (G. schlanker, or mittlerer Unterlappen).

Lobus inferior interior, amygdala or ton-sil (F. l'amygdale, lobule tonsillaire du bulbe rachidien; G. Mandel or der innere Unterlap-

Lobus subpeduncularis, or flocculus (F. lobule

du pneumogastrique; G. die Flocke). Vermis (F. lobe moyen de Cervelet; G. der Wurm), divided into vermis superior (F. éminence remiforme; G. der obere Wurm) and the vermis inferior (F. vermiculaire inferiour; G. Unterwurm). The vermis superior presents the lobulus centralis (F. lobule median; G. medianes Centralisation), the vermissiperior presents the lobulus centralis (F. lobule median; G. medianes Centralisation), the vermissiperior (F. vermissiperior). trallappehen); the mouticulus (G. der Berg), consisting of the cacumen or culmen (G. Gipfel), and the declive (G. Abdachung); the folium cacuminis (G. Gipfelblatt); the lingula (G. Züngelchen).

The vermis inferior presents the pyramid (G. Pyramide); the nvuli cerebelli (G. das Zapf-chen); and the nodulus (G. das Knotchen). See

also under these several names.

C. pe'duncles of. (L. pedunculus, for pediculus, a small foot. F. pedonoules cérébelleux, cuisses de la moëlle alongées; G. Kleinhirnstiele, Kleinhirnschenkel.) The peduncles or erura of the cerebellum consist of three pairs of strands; the upper pair, crura ad cerebrum, connect it with the brain; the lower, crura ad medullam. pass to the spinal cord; and the middle pair, crura ad pontem, nnite the two hemispheres by the cerebellum itself.

Cer'ebral. (L. cerebrum, the brain. F. rebral; I. cerebrale; S. cerebral; G. cerebral.) Relating to the brain proper, or to the ence-

phalen.

C. ab'scess. (L. abscessus, from abscedo, to separate. F. abeès cérébral; G. Hirnabscess.) A collection of pus in the substance of the brain. It may be the result of simple cerebritis, of ex-tension of the inflammation of internal otitis to the membranes, and then to the substance of the brain, of pyamia, or of injury. Cerebral abscess is sometimes encysted, often the walls are composed of the infiltrated and softening down brain tissue; the contained pus is thick, glairy, and often offensive; it frequently undergoes retrogressive changes, which destroy the pus cells and leave only fatty matter and brain debris in the fluid. It may open into the arachnoid cavity, into one of the ventricles, or externally through the ear or the nose; most commonly it ends in death.

C. albu'min. A synonym of Blainville's Neurin.

C. anæ'mia. ('Av, neg.; alµa, blood. F. anémie cérébrale; G. Hirnanamie.) The condition in which there is a deficient amount of blood in the brain, evidenced in more or less impairment of sensibility, of muscular power, and of consciousness. The condition may vary in amount and in extension; it may affect the whole brain, either slowly, as from general eauses, or suddenly, as from rapid loss of blood; and it may disturb a part only, as when an artery is blocked.

C. apoph'ysis. ('Απόφυσις, an offshoot.) The pineal gland.

C. ap'oplexy. The disease ordinarily

called Apoplery.

C. ar'tery, ante'rior. (F. artère cèrébrale antérieure; G. Balkenschlagader.) branch of the internal carotid at the inner end of the fissure of Sylvins; it passes forwards to reach the longitudinal fissure, when, by means of the anterior communicating artery, it joins its fellow, and, lying close to it, turns round the anterior border of the corpus callosum, and running backwards on its upper surface, anastomoses at its hinder edge with the posterior cerebral arteries. It supplies the elfactory lobes, the optic nerves, the under surface of the anterior cerebral lobes, the third ventricle, the anterior perforated space, the corpus callosum, and the inner surface of the cerebral hemispheres. Sometimes the two arteries unite into one trunk to again divide.

C. ar'tery, mid die. (F. artére céré-brale moyenne; G. mittlere Gehirnschlagader.) One of the two terminal branches of the internal caretid; it runs obliquely outwards along the fissure of Sylvius to the island of Reil, where it divides into four branches, one supplying the orbital part of the anterior cerebral lobe and the inferior frontal convolution; the second supplies the posterior part of the middle frontal and the ascending frontal convolution; the third runs along the fissure of Rolando to the ascending frontal and the ascending parietal convolution and the anterior part of the superior parietal lobule; the fourth, lying in the posterior ramus of the Sylvian fissnre, supplies the inferior parietal lobnle and the superior temporo-sphenoidal convolution. Small branches given off early enter the locus perforatus anticus, and pass to the

corpus striatnm.

C. artery, poste'rior. (F. artere ce-rébrale postérieure; G. hintere Gehirnarterie.) The terminal hranch, with its fellow, of the hasilar artery opposite the anterior border of the pons Varolii; it curves round the erns cerebri to the under surface of the posterior lobe of the cerebrum, and divides into many branches, which supply the crura cerebri, the tubercula quadrigemina, the hinder portion of the optic thalamus, and the posterior and inferior parts of the occipital lobe of the cerebrum; branches enter the posterior perforated space, and one, the posterior choroid, supplies the choroid plexus.

Occasionally the posterior cerebral artery is a

branch of the internal carotid.

C. atrophy. See Brain, atrophy of. C. circula tion. See Brain, circulation in.

C. com'missures. See Commissures, cerebral. C. conges'tion. Same as C. hyperæmia.

See Convolutions. C. convolu'tions. cerebral. C. croup. A synenym of Laryngismus

stridulus. C. drop'sy. Same as Hydrocephalus.

C. em'bolism. See Brain, embolism of. C. exhaustion. A term applied to the aggregate of symptoms caused by over-work and over-worry of brain.

C. fat. (F. graisse cérébrale.) A synonym

of Cerebrin.

C. fe'ver. An old term for cases in which fever is associated with much mental disturbance. Latterly it is occasionally employed to designate cases of inflammation of the membranes or substance of the brain to whatever cause the inflammation may be due; in this sense it has been

applied, among other affections, to tubercular meningitis, acute hydrocephalus, encephalitis,

and abscess of the brain.

C. hæm'orrhage. (Αἰμορραγία. F. hæmorrhagie cérébrale; G. Hirnapoplexie, Hirnschlagfluss.) Bleeding on to the surface, or into the substance, or into a cavity of the cerebrum, usually the result of rupture of a blood-vessel, and constituting, when idiopathic, the condition formerly known as sanguineous apoplexy. It is most commonly the result of chronic degenerative changes of the arteries, but it may be dependent on an altered condition of the blood, as in seurvy and certain forms of acute specific fevers, and it may be eaused by the giving way of an aneurysm of one of the larger vessels, or by direct violence or by inflammation of the mem-branes of the brain. The vascular changes which lead to rupture are fatty degeneration, atheroma, the structural alterations accompanying Bright's disease, and miliary anenrysm. It is essentially an affection of advanced life. Cerebral hamorrhage may destroy life immediately, or after a longer or shorter period, or recovery may take place. The symptoms vary with the amount of the hæmorrhage and its locality. See also Apoplexy.

C. hem ispheres. ('Ημισφαίριου, hemisphere. F. hémispheres cérébraux; G. Hirnhalbkugel, Hemispharen des Gehirns.) The two halves of the cerebrum separated throughout their chief extent by the great longitudinal fissure, and united by the corpus callosum in the middle third of their lower surface. The outer and upper surface is convex, the inner surface is flattened and touches its fellow, and the under surface is somewhat irregular; all are marked by deep, winding furrows, and the resulting con-

volutions.

The average length of the hemispheres from before backwards is 162-172 mm., the width of the two together 123-142 mm.; height 102-108 mm.; volume in man 1185 e.e., in woman 1072 e.e.; weight in man 1228 grammes, in woman 1111; sp. gr. of the whole 1-0361, of the grey substance aver. 1.0313, of the white 1.0363. C. her'nia. See Hernia cerebri.

C. hyperee mia. (Y#io, in excess; alpa, blood. F. hyperonie circipale; G. Blutiberfullung des Gehirns.) The condition of excess of the amount of the blood in the vessels of the hrain, evidencing itself in symptoms indicative of more or less irritation of, and more or less pressure on, the encephalic structures. condition is described as being acute or chronic, sthenic or asthenic.

C. hyper'trophy. See Brain, hyper-

trophy of.

C. irrita'tion. (L. irrito, to provoke.) A term applied to irregular expressions of cerebral function, such as headache, undne sensitiveness to external impressions, restlessness, twitching or convulsions, peevishness or delirium, pro-duced by inflammatory or other diseases of the brain, and occurring also in some disturbed conditions of the body generally.

C. iocalisa'tion. (L. localis, belonging to a place.) The doctrine of the restriction of certain limited parts of the cerebral hemispheres to the regulation or exercise of special and not

interchangeable functions.

C. mac'ula. (L. macula, a spot. F. tache cérébrale.) A term applied by Trousseau to the bright red colouration which appears when the skin is gently rubbed or pressed with a hard body, as the nail, and which persists for ten or twelve minutes. According to him, although occasionally present in other febrile affections, it is specially distinctive of inflammatory affections of the membranes and substance of the brain.

C. mem'branes. (F. membranes céré-brales; G. Gehirnhaute.) The thiu membranous coverings of the brain; the Dura mater, the Pia mater, and the Arachnoid.

C. meningi'tis. See Meningitis, cerebral.

C. nerves. Same as Cranial nerves. C. œde'ma. See Brain, wdema of.

C. pachymeningi'tis. See Pachymeningitis, cerebral.

C. parai'ysis. See Paralysis, cerebral.

**C. paraple'gia.** ( $\Pi \alpha \rho \alpha \pi \lambda \eta \gamma' i \alpha$ , Ionic for  $\pi \alpha \rho \alpha \pi \lambda \eta \xi i \alpha$ , a stroke on one side.) A term proposed for Ataxy, locomotor.

C. pneumo'nia. Inflammation of the lungs, in which convulsion, stupor, delirium, or other brain symptom, masks the chest disease; in this form the apex is the part most commonly affected.

C. protuberance. (L. protubero, to swell out.) The Pons Varolii.
C. pulp. The white matter of the brain. C. respira'tion. A term applied to the quick, uneven, short, or sighing breathing, which often accompanies brain-mischief, especially in children. See also Cheyne-Stokes' respiration.

C. rheu'matism. A term for meningitis occurring during the progress of acute rheuma-

tism. See Meningitis, rheumatic.
C. sclero'sis. See Brain, sclerosis of, and Sclerosis.

C. si'nuses. See Sinuses of brain.

C. soft'ening. See Brain, softening of.

C. spot. Same as C. macula. C. surprise. (F. surprise cérébrale.) A

term used by Trousseau to express the instantaneous, but temporary, stupor which is caused by grave and sudden lesion of the brain.

C. sys'tem. Term which includes the cerebrum, the nerves of special sense, as the olfactory, the optic, and auditory, and those nerves which convey volition, together with the intraspinal or intravertebral chord of cerebral nerves, according to Dr. M. Hall. This system is insensible and iuexcitor-that is, there is no pain or muscular movements induced on irritating or lacerating the brain, or the nerves of special sense, with a probe. It connects the body with the external world mentally.

C. thermom'etry. See Thermometry,

cerebral.

C. tri'gone. (Τρεῖs, three; γωνία, an angle. F. trigone cérébral.) Chaussier's name for the fornix.

C. tu'bercle. See Brain, tubercle of. C. ve'sicles. (L. vesicula, a small bladder.) The encephalic vesicles.

Cerebral'gia. (L. cerebrum; ἄλγος, pain.) Neuralgic pain in the head of cerebral origin.

Cer'ebrate. (L. cerebrum.) A term applied by Fremy to compounds of cerebric acid, which is an impure cerebrine, with soda or lime.

Cerebra'tion. (L. cerebrum.) A term applied by Lewes to the assemblage of the cerebral actions consecutive on a perception.

C., uncon'scious. The unconscious operation of cerebral or mental action, such as may occur during sleep, or whilst the attention is distracted or occupied in some other direction.

Cereb'ria. (L. cerebrum, the brain. F. cerebrue; G. Geistesstörung.) Term by Scip. Pinel for mental derangement or disordered brain.

C. acu'ta. (L. acutus, severe. F. cérébrie

aigue.) Mania. (Χρονικός, relating to time. F. cérébrie chronique.) Imbecility.
C. partia'lis. (F. partial, from L. pars,

a part. F. cérébrie partielle.) Monomania.
C. sympathica. (Συμπάθεια, com-

munity of feeling.) Hypochondria, hysteria. Cerebric. (L. eerebrum, the brain.)

longing to the cerebrum or brain.

C. ac'id. A term applied formerly to what was called impure Cerebrin. It was supposed by Frem, to be capable of forming salts with bases. It is a mixture of a phosphorised matter, Thudichum's myelin, and of the cerebrin bodies, phrenosin, kerasin, and cerebrinic acid.

Cercbriform. (L. cerebrum; forma, likeness. F. cerebriforme.) Like to the form, or the substance, of the brain.

C. can'eer. See Cancer, cerebriform.

Cerebrif'ugal. (L. cerebrum; fugio, to flee away.) Applied to nerve fibres which run from the brain to the spinal cord, and serve for the transfer of cerebral impulses outwards.

Cerebrin. (L. cerebrum. F. cerebrine; G. Hirnfett.) C<sub>17</sub>H<sub>33</sub>NO<sub>3</sub>, Müller. A light, white hygroscopic powder, obtained by the action of baryta and heat on brain tissue, pus-corpuscles, and other complex matters. It is tasteless and odourless, soluble in boiling alcohol and ether, insoluble, but swelling up, in water. Heated with dilute mineral acids it was said to yield a levo-rotatory sugar-like body, incapable of fermentation, but this is doubtful. Its exact nature is not settled, and even its existence as a definite principle has been doubted. By some, it is classed as a complex non-phosphorised fat, and by others, as a glucoside; it is very near in composition to sphingosin, which is a strong alkaloid. Müller's cerebrin has been said to be a mixture of cerebrin, lecithin, and cholesterin, but erroneously; Geoghegan's formula  $C_{57}H_{110}N_2\Omega_{25}$  is an error. The name has been applied to a lamellar stearin obtained from the brain, which is only cholesterin; to lecithin and to the cerebric acid of Fremy, and to an uncertain substance by Gobley.

Cerebrin's ac'id. (Same etymon.)
C<sub>30</sub>H<sub>113</sub>NO<sub>9</sub>, probably; a little known hody.
Cerebrins. (Same etymon.) A term

applied by Thudiehum to a series of nitrogenous bodies, free from phosphorus, which he finds in the brain. They include *Phrenosin*, *Kerasin*, and *Cerebrinic acid*.

Gerebrip'etal. (L. cerebrum; peto, to seek.) Applied to nerve fibres which run from the spinal cord to the cerebrum, and serve for the transmission of sensations from the outer parts

to the brain. Cerebri'tis. (L. cerebrum. F. cérébrite; G. Gehrnentzindung.) A term for inflammation of the substance of the brain. Although occasionally occurring alone, it is most usually the sequel or accompaniment of meningitis, and may be caused by direct injury to the head, by pyæmia, by the irritation of a foreign hody, or it may, very rarely, arise idiopathically. It may affect the greater part of the organ, but more usually it is limited in extent, and may be

confined to either the grey or the white nervous tissue, and in this form may result in abscess or in red softening.

C., lo'cal. (L. localis, belonging to a place.) A synonym of red softening of the brain, and

also of abscess of the brain.

Cer'ebro. (L. cerebrum.) This word used as a prefix in compound terms denotes association or connection with the cerebrum or brain.

Cerebrocard'iac. (L. cerebrum; καρδία, the heart.) Relating to the brain and

heart.

C. neurop'athy. See Neuropathy, cerebrocardiae.

**Cerebromala'cia.** (L. cerebrum; μα-λακία, softness.) A term for softening of the hrain.

Gerebroolein. (L. cerebrum; oleum, oil.) A yellow, oily liquid, found in connection

with legithin in the brain; probably clein.

Cerebrop athy. (L. cerebrum; πάθος, disease.) The series of hypochondriacal and other symptoms of like nature accompanying overwork of the brain.

**Cerebropsycho'ses.** (L. cerebrum; ψχη, spirit.) Those forms of mental disturbψύχη, spirit.) ance which result from disease of the psychic centres, such as mania and dementia paralytica.

Cerebrorachidian. (L. cerebrum; ραχίs, the spine.) Same as Cerebrospinal.

Cerebrosclero'sis. Same as Brain,

sclerosis of.

Cerebros'copy. (L. cerebrum; σκοπέω, to examine.) A term applied to designate the use of the ophthalmoscope in cerebral affections, for the purpose of determining the state of the retina and its circulation, in order that the condition of the hrain may be deduced therefrom.

**Cer'ebrose.** (L. cerebrum, the brain.)  $C_6H_{12}O_6$ . A sugar obtained by Thudichum, by chemolysis of the nitrogenised, non-phosphorised educts of the brain, phrenosin, kerasin, and cerebrinic acid. It is characterised by its crystallisation, its optical power (its specific or limited rotation being to the right +70° 40'), and its reducing power over cupropotassic fartrate.

Cerebro'sic ac'id. (L. cerebrum.) C<sub>6</sub>H<sub>10</sub>(II<sub>2</sub>)U<sub>6</sub>. An acid obtained by Thudichum Cerebro'sic ac'id. from phrenosin, by means of the chemolytic process; it has the composition of a carbohydrate, is probably isomeric with cerebrose, and its barium salt leads to the inference that it is dibasic.

Cerebro'sis. (L. cerebrum.) A term applied variously to inflammation and to irrita-A term

tion of the hrain.

Cerebrospi'nal. (L. cerebrum; spina, the spine.) Relating to both brain and spinal cord.

Also, the same as Cerebrospinant.

C. axis. (L. axis, an axle-tree.) entire nerve centres; cerebrum, cerehellum, me-

dulla ohlongata, and spinal cord.

C. fe'ver. (F. cephalalgie epidemique, meningite cerebrorhachidienne, méningite purulente épidémique; I. febbre soporosa-convulsiva, tifo apoplettico-tetanico; G. Genickkrampf, Genick-starre; Swed. Nacksjucka.) Spotted fever. A disease occurring epidemically, and generally in children, often fatal; most common in winter and spring; more frequent in males than in females; perhaps contagions, but the nature of the infecting agent is unknown. The characteristic morbid changes found after death occur in connection with the cerebral and spinal membranes; the pia mater is engorged, there is exudation, often purulent, into the subarachnoid space, and the dura mater is congested, and it may he dotted with hæmorrhagic spots; these conditions are often general, but frequently they are confined to the base of the hrain. The brain itself is either hyperæmic or pale and ædematous, the ventricles containing much serum, generally purulent, and the neighbouring cere-bral substance softened. The spinal cord is generally engorged and softened, and the central canal has been found dilated with purulent fluid. Hyperaemia of the lnngs, bronchial catarrh, lobar and lobular pneumonia are seen. with inflammatory conditions and ecchymosis of various parts, as of the pericardium, endocardium, nincous membrane of stomach and intestines or bladder, and the synovial membrane of joints. Prodromata generally present, and consisting of general discomfort and chilliness, more or less marked, and lasting for hours or days, but often the access is sudden. Temperature not very high, 39° to 39.5° C. (102.2° F. to 103.1° F.), with exacerbations that are not periodic; pulse and respiration rising with the temperature. Often between the third and sixth day a bilateral attack of herpes facialis or symmetrical eruption of roseola, erythema, or sudamina; con-junctiva congested; the urine often albuminous or saccharine; bowels confined; loss of appetite; severe headache, increased by pressure; fainting and vomiting. The excitability of the whole nervous system is greatly increased in the first stage, shown by photophobia, acute perception of sound, and singular cramp of the muscles of the back of the neck, producing orthotonos or opisthotonos; death follows, attended with convulsions or coma. If life is preserved deafness or deaf-mutism often follows in children. In acute cases death occurs in a few hours; in severe cases after two or three weeks. The fatality in 15,632 cases 37 per cent.; it varies much in different epidemics, as much as from 20 to 80 per cent. Some have believed it to be a form of typhus.

C. flu'id. (F. liquide cérébrospinal; G. Subarachnoidalflussigkeit.) A limpid serous fluid occupying the subarachnoid space; it has a saltish taste, has an alkaline reaction, and contains only 1.5 per cent. of solid matter. amount has been estimated at from two drachms to two ounces, but the quantity is very variable,

and it is quickly reproduced.

It becomes opalescent on boiling, and a flocculent precipitate falls on the addition of acetic acid; a substance resembling sugar, and giving the same reactions, is said to be present; the salts are largely potassinm salts.

C. meningi'tis. Meningitis affecting the membranes of both brain and spinal cord. See

C. fever.

C. sys'tem. The cerebrum, ccrebellum, medulla oblongata, and spinal cord.

Ce'rebro-spina'lia. (L. cerebrum; pina, the spine.) Medicinal agents which influence the brain and spinal cord.

Cerebrospi'nant. (Same etymon.) A term applied to a remedy which exerts an infinence over one or more of the functions of the central nervous system.

Cer'ebrot. A synonym of impure Cere-

Cer'ebrum. (L. cerebrum, the hrain:

akin to Gr. κάρα, the head; and Sans. ciras. F. cerveau; I. cerebro, vervello; S. cerebro, celebro; G. Gehirn.) The brain proper. In man, the largest and highest of the four parts into which the encephalic mass is usually divided; it occupies the whole of the eavity of the cranium, with the exception of the middle and hinder basal portions, in which lie the other three divisions, the pons Varobi, the cerebellum, and the medulla oblongata. It varies in weight in the human species, the average being in the human male 43 oz. 15<sup>3</sup> drs., and in the female 38 oz. 12 drs., according to Reid; according to Weisbach's observations, the average male brain weighs 1154.97 grammes, and bears a relation to the whole encephalon of 87.86 per cent.; and the female brain weighs 1038.90 grammes, and its percentage is 88.03. It is of ovoid shape, the small end foremost, flattened on its under surface, and divided into two symmetrical halves or hemispheres by the great longitudinal fissure, except in the middle third of the lower surface, where they are united by the corpus callosum; smaller fissures divide it into five lobes, the frontal, parictal, temporo-sphenoidal, oecipital, and central; and still shallower elefts or farrows, the sulci, separate from each other the convolutions or gyri. It is closely invested by the pia mater, which transmits the blood-vessels, and is covered by the arachnoid epithelium. In the interior of each hemisphere is a branched flattened cavity, the lateral ventriele, with its three cornua, communicating towards the anterior part of the body of the ventricle, by the foramen of Monro, with the third ventricle which lies centrally between the optic thalami, and which at its posterior extremity is connected by means of the aquæductus Sylvii with the fourth ventricle, a spear-shaped cavity lying between the medulla oblongata in front and the cerebellum behind. The cerebrum is composed of grey and white nervous tissne, the latter forming the main bulk of its interior, and arranged in groups of fibres, the former covering the exterior and collected into nodules of greater or less size in the substance of the white matter at the base. For further detail, see Brain; B., development of, and the several parts of the cerebrum under their special uames.

C. abdomina'le. (L. abdominalis, belonging to the abdomen.) The solar plexus.

C., development of. See Brain, development of.

C. elonga'tum. (L. elongo, to lengthen.) A term for the Medulla oblongata.

C., fibres of. See Fibres, cerebral.

C., fis'sures of. See Fissures of cerebrum.

C., lobes of. (Λοβός, a lobe. F. lobes du cerreau; G. Hirnlappen.) The subdivisions of each hemisphere of the brain. They have been variously named; according to some they are three, anterior, middle, and posterior, or frontal, temporo-sphenoidal, and occipital; according to others, they are four, anterior, upper, lower, and the island of Reil; according to others they are five, frontal, parietal, occipital, temporo-sphenoidal, and central. For further detail, see the several sections of Lobc.

C. par'vum. (L. parvus, small.) The ccrebellum.

C., pe'duncles of. (L. pedunculus, a little foot.) The Crura cerebri.
C. poste'rius. (L. posterior, hinder.) The

cerebellum.

C., ven'tricles of. Sec Ventricles of cerebrum.

Cerecloth. (L. cero, to cover with wax; Sax. clath, a garment.) A linen or other cloth infiltrated with wax.

C., antisep'tic. ('Aντί, against; σηπτι-Ads, putrefying.) Calico or other material soaked in paraffin, wax, and carbolic acid, or other disinfectant. Used in the dressing of wounds.

Ceree'tomy. Same as Ceratectomy. **Cerefolium.** (Corrupted from phyllum.) The Anthriscus cerefolium. (Corrupted from Charo-

C. hispan'icum. (L. Hispania, Spain.) A name for the Myrrhis odorata, or sweet eicely. C. sylves'tre. The Anthriscus sylvestris. Ce'reiform. (L. cereus, a wax taper;

forma, shape.) Tapering, slender.

**Gerelæ'um.** (Κηρός, wax; ἔλαιον, oil.) Old name (Gr. κηρέλαιον), used by Galen, de C. M. per Gen. 7, 2, for a cerate or limiment made of wax and oil; also called Oleum ceræ and Butyrum cerer.

Cerenceph'alot.  $(K\eta\rho\delta s, wax; \ell\gamma\kappa\ell\phi-a\lambda os, the brain.)$  A synonym of Cephalot. Cere, wax; oleum, oil. G. Wachskerzehen.) Bougies made by rolling strips of linen, soaked in wax and oil, into a pipe shape.

C. antisep'tici. ('Aντί, against; σηπτικόs, putrefying.) Same as C. carbolici.

C. atropina'ti. Cereoli simplices, to each of which is added '01 to '02 gramme of atropin. Used for introduction into a mucous canal, such as the urethra, in painful affections.

C. carbol'ici. Four parts of ceratum carbolicum and one part of paraffin melted together and made into bougies, with a strip of linen, for insertion into the orifices of abscesses and into fistulous canals where there is a feetid discharge.

C. cum ac'ido tan'nico, Belg. Ph. Prepared with tannin, as C. cum opio.

(L. cera, wax; C. cum o'pio, Belg. Ph. oleum, oil.) Extract of opinm 20 centigrammes dissolved in 125 centigrammes of syrup, and gum acacia 300 centigrammes added. To be made into four suppositories.

C. plum'bi. (L. plumbum, lead. G. Bleikerzen.) Yellow wax 48 parts, spermaceti I 5, and solution of basic acetate of lead 1 part; melted together, and made iuto a bougie with cotton wool.

C. sim'plices. (L. simplex, simple.) Strips of linen soaked in a melted mixture of six parts of yellow wax and one of olive oil, and made into the form of a bougie. Used for expleration and dilatation.

Cere'olus. (L. dim. of cereus, a wax bougie.) A small wax bougie.

Wax-like, made of Ce'reous. (L. cera.) wax.

Cereris'ia. Same as Cerevisia.

Cer'etrin. A term believed to be intended for cetrarin.

Ce'reus. (L. cera, wax; because made of ax. F. bougie; C. Wachsstock.) A wax wax.

C. medica'tus. (L. medicatus, medicinal. F. bougie medicamentense.) A medicated wax bougie.

A Genus of the Nat. Order Ce reus. Cactacea.

C., night-bloom'ing. The Cactus grandi-

Cerevis'ia. A Gallic word; or, according

to some, as if Cereris vis in aqua, the strength of corn in water.) Term for any liquor brewed from corn; ale, beer.

C. ab'ietis. (L. abies, a fir tree.) Spruce

C. ama'ra, Belg. Ph. (L. amarus, bitter.) Four parts each of wormwood and gentian root, and 10 parts of pine buds; macerate for three days in 1000 parts of beer and filter.

C. antiscorbu'tica, Fr. Codex. ('Αντί, against; scorbutus, scurvy. F. bière antiscorbutique, sapinette.) See Beer, antiscorbutic.

C. antiscorbu'tica Sydenham'i, Belg. Watercress, fresb, 560 parts, mentha crispa and salvia officinalis, of each 41, orange peel \$3, nutmegs 7, alcohol 500, water sufficient. Distil 1000 parts.

Ċ. ferra'ta. (L. ferrum, iron.) Liq. ferri et sodæ pyrophosph. 5 parts, strong ale 500.

Dose, a glass two or three times daily. C. martia'ta. (L. Mars, a name of iron.)

Same as C. ferrata. C. medica'ta. (L. medicatus, healing. Krauterbier.) Beer containing herbs for medicinal purposes.

C. nigra. (L. niger, black.) A synonym of Beer, Swiss vulnerary.

Also, Beer, spruce.

C. stomach'ica. Stomachie beer. Gentian root, sliced, 15 parts, fresh lemon peel 10, cinuamon 1, strong ale 1000; macerate for four days, and filter.

Cerevis'iæ fermen'tum, B. Ph. (F. levure; I. fermento; S. levadura de ceveza; G. Barme, Bierhefen.) The ferment of beer. Yeast or barm, the well-known substance which forms on the surface of beer during the process of fermentation. It is a viscid, semifluid, frothy liquid, containing the cells of Saccharomyces cerevisiæ. It has been used as a nutrieut, as an antiseptic in typhus fever, and to convert starch directly into alcohol in diabetes. Locally it is used in phagedænic and sloughing sores.

**Cerria.** (L. cereus, soft.) Old name for a kind of flat worm bred in the intestines, perhaps a tamia.

Ce'ric. (L. ccra, wax.) Relating to wax. Also, a term for those cerium salts which correspond to cerium dioxide.

C. ac'id. (F. acide cérique.) A doubtful product of the action of nitric acid on cerin.

Ce'rides. Name by Ampère for a Family of simple bodies, including cerium and magnesium.

Cerif'erous. (L. cera; fero, to bear.)

Bearing, or producing, wax.

Cerig'erous. (L. cera; gero, to bear.
F. cerigere; G. wachshauttragend.) Applied to
the beak of a bird when furnished with a cere.

Ce'rii bromi'dum. Bromide of cerium. A sweet, chocolate-coloured astringent substance, obtained by dissolving cerous carbonate in hydrobromic acid; it is soluble in alcohol. Has been used as C. oxalas.

C. carbo'nas. Same as Cerous carbonate. C. ni'tras. Same as Cerous nitrate.

G. Ceriumozalat.) CeC<sub>2</sub>O<sub>4</sub>. 3H<sub>2</sub>O. Oxalate of cerium, obtained by adding solution of oxalate of ammonia to a soluble salt of cerium; it is a white granular powder, insoluble in water. A gastric nerve sedative used in reflex vomiting, especially that of pregnancy. Dose, 1-5 grains or more.

**Ce'rin.** (L. cera, wax.) The portion of beeswax which is soluble in boiling alcohol; it is not a definite compound, but impure Cerotic

Cerimous. (L. cera.) Of the colour of yellow wax.

Cerinth'e. A Genus of the Nat. Order Boraginuceæ.

C. as'pera, Roth. (L. asper, rough.) Formerly used as an astringent and vulnerary, especially in eye affections.

C. ma'jor, Linn. (L. major, greater.) The C. aspera.

**Ce'rion.** (Κηριόν, honeycomb.) A synonym of *Tinea favosa*.

Also, a synonym of Caryopsis.

Ceris'cus malabar'icus, Gartn. The Randia dumetorum.

Cerite. The natural siliceous protoxide of cerium, from which this metal is obtained.

**Ce'rium.** (From the planet Ceres.) Symbol Ce. Atomic weight 141.2. A metal baving the colour and lustre of iron, tarnishing in moist air. It forms two oxides, a sesquioxide,

Ce<sub>2</sub>O<sub>3</sub>, and a dioxide, CeO<sub>2</sub>.

C. bro'mide. See Cerii bromidum. C. ni tricum. Same as Cerous nitrate. C. ox'alate. See Cerii oxalas.

C. oxal'icum. Same as Cerii oxalas. Cernula'tio. (L. cernulo, to throw head

foremost.) A violent cough produced by acrid or foreign bodies in the larynx.

**Cernuous.** (L. cernuo, to bow downward. G. gebuckt.) Nodding; hanging its head;

**Ceroco'ma.** (Ké $\rho$ as, horn;  $\kappa \delta \mu \eta$ , the hair.) A Genus of heteromerous eoleopterous insects possessing vesicant properties analogous to those of cantharides.

**Ceroëne.** (Low L. ceroneum, from κηρός, wax. F. emplatre céroène.) The Emplastrum ceroneum, Fr. Codex.

Ceroi'des. (Knpós, wax; ¿lôos, likeness. F. céroide; G. wachsahnlich.) Resembling wax.

Cerolein. A fatty substance existing in small quantity in beeswax; it is a doubtful sabstance.

Ceroleum. (L. cera, wax; oleum, oil.) The same as Cerate.

Cero'ma. (Κήρωμα, from κηρός, wax.) Name formerly used for cerate or ointmeut, according to Hippocrates, de Rat. Vict. in Acut.

iv, 78.

Also, applied to organs which are the subject

waxy appearance.

Ce'romel. (L. cera, wax; mel, honey. G. Honigwachs.) A mixture of one part of yellow wax and two or four parts of honey. Used as an application to wounds and ulcers in hot climates, where eintments soon turn rancid.

Cero'neum. Same as Ceroma. Cero'nia. (Κερωνία.) The St. John's bread, or carob tree, Ceratonia siliqua.

Cerope gia, Linn. A Genus of the Nat. Order Asclepiadacea, the tuberous roots of some species of which are esculent.

C. edn'lis. (L. edulis, eatable.) An esculent species.

**Ceropis'sus.** (Κηρός, wax; πίσσα, pitch. F. ciropisse.) Old term for a cerate, or plaster formed of wax and pitch. Used as a depilatory. **Ceroplas'ty.** (Κηρός, wax; πλάσσω, to form.) The making of anatomical models in

Cero'sia. Same as Cerosin. Ce'rosin. (F. cerosie.) A waxy substance obtained by scraping the epidermis of the sugar-

Cerosi'na. Same as Cerosin.

**Cero'sis.** (Κηρός, wax.) Term for a diseased condition of tunics, membranes, or epithelium, consisting in wax-like scales.

Cerostro ma. The disease, or condition,

Cerostrosis

Cerostro'sis. (Κέρας, horn; στρῶσις, a spreading.) A deposit of horny material on the epidermis.

Cerotic acid. (Κηρός, wax.) C<sub>27</sub>H<sub>54</sub> O2. Obtained from beeswax by heating in alcohol, and also in the dry distillation of Chinese wax. It is in small granular crystals, melting at 78° C. (172·4° F.)

C. al'cohol. Same as Ceryl alcohol. Cerotomalag'ma. See Ceratoma-

lagma. Cero'tum. (Κηρωτόν.) A cerate. Ce'rotyl. Same as Ceryl.

Ce'rous carbonate. Ce2(CO3)3. Obtained by precipitating eerous sulphate with carbonate of ammonia. It crystallises with nine equivalents of water in silky needles. Proposed to be used as Cerii oxalas.

C. bro'mide. 2CeBr<sub>3</sub>+3H<sub>2</sub>O. See Cerii bromidum.

C. ni'trate.  $Ce(NO_3)_3 + 6H_2O$ . A crystalline substance, soluble in water and alcohol, used as Cerii oxalas.

Cerox'ylin. The wax of the Ceroxylon andicola. It has been used in the manufacture of bougies.

**Cerox'ylon.** (Κηρός, wax; ξύλον, wood.) A Genus of the Nat. Order *Palmaceæ*. The species supply vegetable wax.

C. andic'ola, llamb. A species of which the trunk and the axils of the leaves supply wax.

Cerulein. See Carulein.

Cerumen. (L. cera, wax. F. cérumen; I. cerume; G. Ohrenschmalz.) The wax-like secretion of the ear which is given out by the follicles, rauged along the inner surface of the meatus auditorius externus; ear wax. It consists of fat molecules and colouring particles, with epithelial scales and hairs.

It is composed, according to Schmidt, of palmitin, with traces of cholesterin, butyric, valerianic, and caproic acids, albuminoid matters, and salts of calcium, sodium, and potassium.

Ceru'minous. (Same etymon. F. céru-mineux; G. ohrensmalzartig.) Of, or belonging

to, the cerumen or wax of the ear.

C. glands. (F. glandes cérumineuses ; G. Ohrenschmalzdrüsen.) The numerous small oval glands situated between the cutaneous lining and the cartilage of the meatus anditorius externus, or external auditory canal. They have the same structure as sweat glands.

C. hu'mour. Same as Cerumen.

C. plug. (Old Dut. plugge; from Celtic ploc, or pluc.) A concretion in the meatus auditorius externus formed of dried cerumen

Ce'rus. (Knpós, wax.) Wax. Ceru'se. Same as Cerussa.

Cerus'sa. (Said to be from κηρός, the genitive of κήρ, a plague, death, or poison; from its poisonous qualities.) Term for the subcarbonate of lead; white lead.

C. aceta'ta. A name for the Plumbi acetas, or acctate of lead.

C. al'ba hispan'ica. (L. albus, white; hispanicus, Spanish.) Plumbi carbonas.

C. al'ba no'rica. (L. norica, Norican.) Carbonate of lead.

C. antimo'nii. Old term for a preparation of regulus of antimony and nitre, thrown successively into a crucible heated to a white heat, the result of which is an oxide of antimony, used as a diaphoretic.

C. ni'gra. (L. niger, black.) A synonym

of Graphite.

C. psimmyth'ion. lead.) Carbonate of lead. (Ψιμμύθιον, white

C. serpenta'riæ. Stareh from the Arum maculatum, which was formerly called Serpentaria minor.

C. us'ta. Name for cerussa burnt till it becomes red like the sandarach of the Greeks, or realgar.

C. zin'cl. Oxide of zine.

Cer'usse. Same as Cerussa.

Cerus sea uri'na. (L. cerussa; urina, urine.) A Paracelsian term for urine of the colour of, or having a deposit like, cerussa.

Cer'va. The Ricinus communis. Cervaria al'ba. (L. cervarius, pertaining to deer; albus, white.) The Lascrpitium

latifolium. Cer'vi bole'tus. (L. cervus, a stag; boletus, a kind of mushroom.) The Elaphomyces

granulatus. C. el'aphi cor'nu. Same as Cornu cervi;

the burnt horn of the Cervus elaphus. Cervical. (L. cervix, the neek. vical; G. zum Nacken gehörig.) Of, or belonging to, the neck.

C. adeni'tis. (' $A\delta\dot{\eta}\nu$ , a gland.) Inflammation of the cervical lymphatic glauds.

C. ar'tery, ascend'ing. (F. artère cervicale ascendente; G. aufsteigende Nackenschlag-ader.) A hranch of the inferior thyroid artery at the point where it turns inward behind the common carotid. It runs up the neck between the scalenus anticus and the rectus anticus major muscles, to which it sends branches which communicate with branches of the vertebral artery; its spinal branches enter the intervertebral foramina, and are distributed to the bodies of the vertebræ, the spinal cord, and its membranes. It is occasionally derived from the subclavian, or the transverse cervical, or the suprascapular arteries.

C. ar'tery, deep. (F. artère cervicale profonde; G. tufe Nackenschlagader.) Generally arises from the superior intercostal, sometimes from the subclavian or the posterior scapular. It passes backwards between the transverse process of the last cervical vertebra and the first rib, and ascends the neck in the interspace of the transverse and spinous processes between the complexus and semispinalis colli muscles; it gives off muscular twigs, and anastomoses with the princeps cervicis artery

C. ar'tery of occip'ital. Same as Princeps cerricis.

C. ar'tery, poste'rior. The C. artery,

(L. profundus, C. ar'tery, profound'. deep.) Same as C. artery, deep.

C. ar'tery, superfic'ial. (F. artere cor-

vicale superficielle; G. oberflüchliche Nackenschlagader.) A branch of the transverse cervical artery, or the sole trunk, when the posterior scapular arises from the subclavian. It arises near the anterior border of the trapezius and, ascending, gives branches to that musele, to the levator anguli scapulæ and the sterno-mastoid. and to the cervical glands, and anastomoses with the superficial branch of the princeps cervicis artery.

Also, a synonym of C. artery, ascending.

C. ar'tery, supe'rior. The C. artery, ascending.

C. ar'tery, trans'verse. (F. artère cervicale transverse.) The third branch of the thyroid axis; it passes outwards across the upper part of the subclavian triangle to the anterior margin of the trapezius, where it divides into the superficial cervical and the posterior scapular arteries. When the latter arises from the subclavian direct this artery is called the superficial cervical. Sometimes it arises from the subclavian, and oceasionally gives off the ascending cervical

C. curve. (G. Nackenkrümmung.) Cervical incurvation of the embryonic brain at the transition of the medulla oblongata into the spinal cord.

G. Nackenhocker.) The projection of the vertebra prominens in the neck.

C. endometri'tis. See Endometritis, cervical.

C. enlarge'ment. (F. renstement cervical; G. Halsauschwellung.) An enlargement of the spinal cord extending from the third cervical to the first dorsal vertebra, and flattened in the antero-posterior direction; it commences in the fætus with the development of the limbs, and, growing with their growth, is doubtless connected with the amount of the nerve supply to the anterior limbs or arms.

C. fas'cia, deep. (L. fascia, a band.) A strong fibrous investment of the muscles of the neck attached posteriorly to the ligamentum nuchæ and the spines of the cervical vertebræ, from whence it extends to the sterno-mastoid. which it invests by splitting and reuniting, and so to the middle line, where it is attached to the hyoid bone above, and by two layers to the sternum and the interclavicular ligament below, and in the middle it blends with that of the opposite side. Its superficial part is continuous with the masseteric and the parotid fascia; and its deeper part invests the muscles, joins the sheath of the vessels, and forms the prevertebral fascia.

C. fas'cla, superfic'ial. (L. fascia.)
The thin aponeurotic layer found with difficulty underneath the skin of the neck and above the platysma myoides and the external jugular vein. The superficial part of the deep cervical fascia is also thus called when the term deep cervical fascia is confined to the part called prevertebral.

C. fis'tula. (L. fistula, a pipe. G. Nacken-fistel, Halsfistel.) Same as Branchial fistula.

C. gan'glia. (Γάγγλιον, a tumour under the skin.) A term applied to the lymphatic glands of the neck, especially when somewhat enlarged.

See also C. ganglion.

C. gan'glion, infe'rior. (Γάγγλιον, a swelling of a nerve. F. ganglion cervical inferieur; G. unterer Halsknoten.) The lowest cervical ganglion; it is irregular in shape, and is often partially united to the first thoracic ganglion. Its superior branches join those

of the middle cervical ganglion. Its inferior branches are the lower cardiac nerve, and branches, some forming loops, the Ansae Vieussensii, on the subclavian artery, to join the first thoracic ganglion. Its external branches communicate with the seventh and eighth spinal nerves, and, after forming a plexus on the vertebral artery, with the fourth, fifth, and sixth.

C. gan'glion, low'er. The C. ganglion, inferior.

C. gan'glion, mid'dle. (F. ganglion cervical moyen; G. mittlerer Halsknoten.) The smallest of the three cervical gauglia; it is placed on or near the inferior thyroid artery, opposite the fifth cervical vertebra. Its superior branches communicate with those of the superior cervical ganglion. Its inferior branches communicate with the inferior cervical ganglion. Its external branches, when present, join the fifth and sixth spinal nerves. Its internal branches consist of the middle cardiac nerve and thyroid branches which join the recurrent laryngeal, external laryngeal, and middle cardiac nerves.

C. gan'glion of the u'terus. A closemeshed plexus of nerve fibres situated at the posterior and lateral part of the cervix uteri. It is from 13 mm. to 19 mm. in length, and is a continuation of the Plexus uterinus posterior.

C. gan'glion, supe'rior. (F. ganglion cervical supérieur; G. oberer Halsknoten.) The largest of the three cervical ganglia of the sympathetic, situated opposite the second, third, or fourth cervical vertebræ; it is reddish-grev, broad, fusiform, sometimes constricted in places. Its continuation upwards, or ascending branch, follows the course of the carotid artery, and in the carotid canal divides into two branches, the outer of which gives filaments to the artery and to the inner branch, and then forms the carotid plexus; the inner also supplies the artery, and then forms the cavernous plexus. The descending branch joins the middle cervical ganglion. The external branches communicate with the first four spinal nerves, with the second ganglion of the pneumogastric, with the ninth nerve, with the petrosal ganglion of the glosso-pharyngeal, and with the ganglion of the root of the pneumogastric. The internal branches are pharyngeal which join the pharyngeal plexus, laryngeal joining the superior laryngeal nerve, and the superior cardiac nerve. The anterior branches form a plexus, with small ganglia round the external carotid artery and its branches, and communicate with the digastric branch of the facial, and with the submaxillary, optic, and the external petrosal ganglia.

C. gan'glion, up'per. The C. ganglion,

superior.

C. gland. (G. Halsdrüse.) The tonsil.
C. la'bour. (G. Cervicalgeburt.) That
period of a natural labour, from its commencement to the complete dilatation and disappearance of the cervix nteri.

**C.** lig'ament, ante'rior. (L. anterior, in front.) A synonym of the accessory or superficial anterior occipito-atlantal ligament.

C. lig'ament, poste'rior. (L. posterior, hinder. G. hinterer Nackenband.) The Ligamentum nuchæ.

C. lymphatic glands, deep. (G. liefere Halsdrusen.) A chain of large glands lying along the carotid sheath, and extending from the base of the skull to the thorax.

C. lymphat'le glands, superfic'ial. (G. oberflachliche Halsdrüsen.) A series of glands

lying under the horizontal ramus of the lower jaw, and extending along the course of the external jugular vein underneath the platysma myoides; they are most numerous above the clavicle. where the external jugular joins the subclavian

C. nerve, superfic'ial. (F. nerf cervical transverse; G. oberflachlicher Halsnerv.) A branch of the cervical plexus proceeding from the arch of the second and third cervical nerves; it turns round the posterior border of the sternomastoid at its middle, perforates the cervical fascia, and divides beneath the platysma myoides into ascending and descending branches.

C. nerve, trans'verse. nerve, superficial. Same as C.

C. nerves. (F. nerfs cervicaux; G. Nack-ennerven.) The first eight pairs of spinal nerves. The common trunk, formed by the union of the two roots, is separated into two divisions, anterior The first cervical is the subocciand nosterior. pital nerve; the posterior division of the remaintog nerves divides into external branches, which supply the splenius, cervicalis ascendens, transversalis colli, trachelo-mastoid and complexus muscles; and internal branches, that of the second is the great occipital nerve; those of the third, fourth, and fifth nerves run beneath the complexus, forming the posterior cervical plexus, to the vertebral spines, and then running outwards supply the integument over the trapezius; those of the sixth, seventh and eighth supply muscles only.

The anterior divisions of the four upper cervi-

cal nerves form the cervical plexus, those of the four lower cervical nerves form, together with that of the first dorsal, the brachial plexus.

C. plex'us. (L. plexus, a plaiting. F. plexus errical; G. Naekengeflecht, Halsageflecht.) A nervous network formed by the interlacement of the anterior divisions of the first four cervical nerves. It lies opposite the first four cervical vertebræ on the scalenus medius and the levator anguli scapulæ muscles, and underneath the sternomastoid. The branches are superficial and deep. The former are the superficialis colli, the auricularis magnus, the occipitalis minor, and the supraelavicular; these supply the integument. The deep branches are communicating twigs with the pneumogastric, hypoglossal, and sympathetic nerves, a branch to the rectus anterior and rectus lateralis muscles, one to the sterno-mastoid, one to the trapezius, the phrenic nerve, a branch to the angularis scapulæ, and one to the rhomboidei muscles; the two latter sometimes proceed from the brachial plexus.

C. plex'us, poste'rior. The intercommnnication of the internal branches of the posterior divisions of the third, fourth, and cervical nerves

beneath the complexus muscle.

C. tri'angles. See Triangles of neck. C. vein, deep. (G. tirfe Nackinblutuder.) The branches of this vein accompany those of the artery of the same name, and open into the vertebral veiu.

C. veins, ascending. The branches accompany those of the corresponding artery, and form a trunk which opens into the vertebral vein.

C. ver'tebræ. (L. vertebra, a spine bone. F. vertebres cervicales; G. Halswirbel, Nackenwirbel.) The first seven vertebra of the spine, the two upper of which are exceptional, the atlas and axis. The body is small, widest from side to side, the upper surfaces concave in the same direction, the lower concave from before to behind. The laminæ are long and flat, the upper notches the deeper. The neural canal is triangular and large. The spinous process is short and bifid, but that of the seventh is long. The transverse pro-cesses are short and bifid, they spring by two roots, the anterior corresponding to a rib or its articulating capitular process, the posterior to a transverse process; they unite at their extremities and form the vertebral canal. The articular processes are large and flat. The last cervical vertebra is the Vertebra prominens.

C. zone. (L. zona, a girdle.) A term applied by Barnes to the part of the inner surface of the pregnant uterus which lies beneath an imaginary latitudinal circle drawn round the uterus at about a fourth of its height; it is the zone of dangerous placental attachment.

Cervicalis ascen'dens. (L. cervix, the neek; ascendo, to mount up. F. faisceaux de renforcement de la partie supérieure du sacro-lombaire; G. aufsteigender Nackenmuskel.) One of the outer columns of the erector spinæ nuscle, being a continuation upwards of the musculus accessorius. It arises by slips from the angles of four or five upper ribs, and is inserted into the posterior tubercles of the transverse processes of the fourth, fifth, and sixth cervical ver-

C. descen'dens. (L. descendo, to go down.) A synonym of C. ascendens, on the supposition that the upper attachment of the muscle

is its origin.

Also, a synonym of the Descendens noni nerve. Cervica'ria. (L. cervix, the neck.) The Campanula trachelium, great throat-wort; because believed to be efficacious in discases of the throat and neck.

Cervicitis. (L. cervix.) Inflammation

of the cervix uteri.

Cervicoacromia'lis. acromion.) The anterior part of the trapezius muscle, including its attachment to the acroprion.

Cervi'co-bra'chial. (L. cervix; brachium, the arm.) Belonging to the neck and

C.-bra'chial enlarge'ment. Same as Cervical enlargement.

C.-bra'chial neural'gia. nerve; άλγος, pain.) Neuralgia of the brachial plexus and of the posterior branches of the lower part of the cervical plexus, manifesting itself in severe pains in the scapular and axillary regions, which shoot down the arms, hands, and back of the neck; there is often acute cutaueous hyperæsthesia also; the nerves most affected are branches usually of the ulnar, radial, or musculocutaneous nerves. It may be caused by cold, pressure, er a tumour, or wound.

See Triangle, cervico-C tri angle. brachial.

**Cervicodyn'ia.** (L. cervix; οδόνη, pain.) Pain in the neck; stiff ueck; muscular rhoumatism of the neck.

Cervico-branch'ial. (L. cervix; branchiæ, the gills.) Belonging to the branchiæ and the neck.

C. fis'tula. (G. Halskiemenfistel.) Same as Branchial fistulà.

Cervi'co fa'cial. (L. cervix; facies, the face.) Belonging to the neck and face.

C. nerve. The lower of the two branches

of the facial nerve, into which it divides, behind the ramus of the lower jaw; it subdivides into buccal, supramaxillary and inframaxillary branches.

Cervi'co-mastoï'deus. **Cervi'co-mastoï'deus.** (L. cervix; μαστός, the breast; εἶδος, likeness.) The splenius capitis, from its attachment to the cervical vertebræ and the mastoid process of the temperal bone.

Cervi'co-occip'ital. (L. cervix; occiput, the back of the bead.) Relating to the neck

and the hinder part of the head.

C.-occipitai neural'gia. (Νεύρου, α uerve; ἄλγος, pain.) Neuralgia of the posterior hranches of the upper cervical nerves, consisting in pain below the occiput, behind the ear, and sometimes below the lower jaw. It may be paroxysmal or constant, and accompanied by hyperæsthesia, or anæsthesia, and cramps.

Cervi'co-orific'ial placen'ta. cervix; orificium, an opening.) A term applied by Barnes to designate a placenta which occupies entirely the cervical zone of the uterus and covers

the internal os.

Cervi'co-scap'ular. (L. cervix; scapula, the blade-bone.) Relating to the neck and the shoulder-bone.

C.-scap'uiar ar'tery. The transverse cervical artery.

Cer'vicose. (L. cervix. G. hartnäckig.) Having a hard, strong neck.

Cervic'ula. (Dim. of L. cervix.) A short neck; also, a term for goitre.

Cervic'ulæ spir'itus. (L. cervus. a stag.) Ruland's term for a spirit obtained from the bone of a stag's heart. (Parr.)

Cervic'ulate. (Dim. of L. cervix.)
Having a little, or a short, neck.

Also, having a goitre.

Cervidæ. (L. cervus, a stag.) A Family of artiodactylous ruminants having deciduous solid horns. Example, the stag. Cervus eluphus.

Cervi'na spi'na. (L. cervinus, belonging to a deer; spina, a thorn.) The buckthorn, Rhamnus catharticus.

Cervis'ia. Same as Cerevisia.

Cervispi'na. (L. cervus, a stag; spina, a thorn.) Buckthorn, Rhamnus catharticus.

C. cathart'ica. The Rhamnus cathurticus. Cervix. (L. cervix, from cer, the head; Sans. ceras; veho, te carry. F. col, cou; G. Hals.) That portion of the body which is between the head and the shoulders; the neck, but more particularly the back part of the neck.

Also, applied generally to those parts of organs that are narrowed, and so somewhat like a neek.

C. cor'nu posterio'ris. (L. cornu, a horn; posterior, hinder.) The narrew basal portion of the posterior hern of the grey matter of the spinal cord.

contracted portion of the Restiform body.

of the tooth where the enamel and the crusta petrosa meet on the dentine; it corresponds to the free margin of the gum.

C. fem oris. (L. femur, the thigh.) The

neck of the thigh-bene. C. glan'dis. (L. glans, an acorn. G. Ruthenhels.) The neck or colling of the glans penis. The constriction immediately behind the glans at the line of reflection of the prepuce.

C. obstipa. (L. obstipus, beut.) Wry-

C. rig'ida. (L. rigidus, stiff.) Wry-neck, stiff neck.

C. u'teri. (L. uterus, the wemb. F. col uterin; G. Gebärmutterhals.) The neck of the womb; the lower and narrower end of the uterus. It is a little less than an inch in length, and projects into the vagina; its upper end opens into the body of the uterus by the os internum, its lower into the vagina by the os externum; the canal connecting the two is flattened from front to back, and is somewhat dilated in the middle; along the middle of the anterior and posterior walls of the cell runs a ridge, from which side ridges, with an upward inclination, arise, forming the arbor vitae uterina. The vagina is inserted into its upper circumference.

C. u'teri, con'ical. A condition of imperfect development of the neck of the womb, in which it assumes a conical shape; sometimes it is long and sometimes curved; the canal is generally very small. It is said to be a cause of

sterility and menstrual troubles.

C. u'teri, gran'ular degenera'tion of. A common condition, consisting in a red, granular condition of the outer surface of the neck of the womb and the os, which is bathed in a purnlent secretion, and has a velvety, uneven feel. It is the condition called also abrasion, erosion, and granular ulcer.

C. u'teri, hyper'trophy of. above; τροφή, nourishment.) A condition in which the neck of the womb takes on increased growth; it sometimes attains a very large size; eccasionally one lip only is affected.

C. vesi'cæ. (L. vesica, the bladder. G. Blasenhals.) The slightly constricted part of the bladder which leads to the internal critice of

the urethra.

Cervus. (Κίραs, a horn; from its large antlers. F. cerf; G. Hirsch.) The hart or stag. A genus of artiodactylous ruminants. The flesh of all the following species is used as food.

C. al'ces. (F. l'élan; G. Elendthier.) The elk, or moose deer. The hoof was considered anti-

C. ax'is. The spotted Indian deer.

C. canaden'sis. The Wapiti deer.
C. capre'olus. (F. chevreuil; G. Rehbock.) The European roebnek.

C. da'ma. (L. dama, a fallow deer.) The fallew deer.

C. claphus. (Ελαφος, a deer. F. cerf commun; G. Edelhirsch.) The stag, the horns of which were burnt to form Cornu cervi; and when fresh the shavings make a nutritive jelly. The penis dried and powdered was used as an aphredisiac.

C. munt'jac. The Indian roebuck. C. taran'dus. (L. tarandus, the reindeer.

F. renne; G. Rennthier.) The reindeer.
C. virginia'nus. The Virginian deer.
Ce'ryl. (L. cera, wax.) A hypothetical

radical.

C. al'cohol. C<sub>27</sub>H<sub>56</sub>O. An alcehol obtained from Chinese wax. It is a waxy substance, melting at 79° C. (174·2° F.)

c. ce'rotate. Chinese wax.

C. ce'rotate. Chinese wax.

Cesalpi'no. Italy; near Arezze, in the Chiano Valley. A chaly beate water, springing from the clay slate, at a temp. of 17° C. (62·6° F.) It contains sodium carbonate 7·7 grains, calcium carbonate 42, magnesium carbonate 7, and iron carbonate 53, in 16 ounces, with free carbonic acid

Ces'pitose. Same as Caspitose. Cessa'tio men'sium. (L. cessatio, from cesso, to cease from; menses, the menses.)

A stoppage of the menstrual flow.

Cess pool. (Etymon suggested by Skeat, is from provincial Eng. suss, or soss, hogwash, a dirty mess; and this connected with Gael. sugh, and W. sug, moisture; whence Prov. Eng. soggy, wet; soch, the drainage of a farmyard; Webster gives it as from Sax. sessian, to settle; pool, from Sax. pol, a hole, a pit.) A receptacle for sewage matter, including human faces.

C., air of. Generally there is a diminution of exygen in the air of a cesspool, and it contains hydrogen sulphide, ammonium sulphide, earburetted hydrogen, and the very important, fætid, undetermined organic matter.

**Cesto'da.** (Κεστός, a studded girdle; εΙδος, likeness.) An Order of the Class *Plutyelmintha*, Subkingdom Vermes. Internal bandlike, segmented, hermaphrodite parasites, having no digestive or vascular system, and nourished by esmosis. The first segment is called the scolex, each of the remaining segments a proglottis; the proglottides all develop a reproductive system, and the whole are connected by a water-vascular system, and semetimes by a nervous system; the series of connected proglettides is a strobila. When the fecundated ova are received into the stomach of an animal, the testa falls off and the embryo is liberated; it is called a proscolex; from thence it finds its way into the tissues of a host or into the circulation, is arrested in some convenient spot, develops into an embryo scolex, is received into the alimentary canal of some other animal, and there develops its proglettides. Example: Tænia.

Cesto' dea. Same as Cestoda. Cesto'na. Spain; Province of Guipuzcoa, on the bank of the river Urola. Two springs of water, of a temperature of 35° C. to 38° C. (95° F. to 100°4° F.), and containing, in 12 ounces, sodium chloride 36 grains, sodium sulphate 9°6, and a little calcium chloride. Used in gout, vesical eatarrh, scrofula and lymphatic affections. The water is slightly purgative.

Cestra'ceæ. A synonym of Solanaceæ.
Ces'triform. (L. cestrum, a graving
tool; forma, shape.) Slender, straight, and
pointed, as a bristle.

Cestri'tes vi'num. (Κέστρου, the herb betony.) Old term for a wine in which betony has been steeped. (Quiney.)

Ces'trum. (Κέστρον.) The wood betony,

Betonica officinalis.

Also, a Genus of the Nat. Order Solanacea.

Low shrubs, bearing poisonous berries.

C. auricula'tum, L'Herit. (L. auricula, the outer ear.) Hab. Peru. Has been used as a febrifuge, and externally to relieve the pains of harmorrhoids.

C. laurifo'lium, L'Herit. Hab. Tropical

America. Berries poisonous.

C. macrophyl'ium, Vent. - (Μακρός, large; φύλλον, a leaf.) Hab. Antilles. A poisonous species.

C. nocturn'um, Linn. (L. nocturnus, belonging to the night.) Hab. Tropical America. (L. nocturnus, The berries contain a poisonous juice; the extract of them has been used in chorea.

C. par'qui, L'Ilerit. A decection of the plant is used in tinea.

C. venena'tum, Lam. (L. venenutus, poisenous.) The C. laurifolium.

C. venena'tum, Thunb. The Acocanthera venenata, G. Don.

Ceta'cea. (L. cetus, a whale; from Gr. κητος, a sea-monster. G. Wallthiere.) An Order of the Class Mammalia. Fish-like animals, usually of large size, with no visible hind limbs, fin-like, nailless fore limbs, a horizontally flattened tail, and often a triangular dorsal fin; the sacrum is absent; the nostrils are on the top of the head, and there are no external ears; the stomach consists of four or more compartments; the gall-bladder is absent; there are large arterial plexuses in the spinal canal, over the heads of the ribs, and on the sides of dorsal vertebræ; the placenta line is diffuse. Example: the whale.

Ceta'ceous. (L. cetus, a whale. F. cétacé; G. wallfischartig.) Of, or belonging to, the whale, er to spermaceti.

Ceta'ceum, B. Ph. (L. cetus, a whale; because it is obtained from a species of the whale kind. F. spermaccti; G. Wallrath.) A conerete, erystalline, pearly-white, glistening, semitransparent matter, with little taste or odour, obtained from the cavity of the cranium of several species of whale, but chiefly the spermaceti whale, or Physeter macrocephalus. It consists of nearly pure cetin, or cetyl palmitate, with a small quantity of sperm oil, has a specific gravity of 943, and fuses at about 45°C. (113°F.) It is used as a demulcent with yolk of egg in intestinal and urinary irritation, and in powder with sugar in sore throat.

C. cum sac'charo. (L. cum, with.) The C. saccharatum.

C. præpara'tum. (L. præparatus, prepared.) The C. saccharatum.

C. sacchara tum, G. Ph. C. sacchara'tum, G. Ph. (Σάκχαρου, sugar. F. blanc de baleine saccharé; G. Walrathzucker.) Spermaceti one part, finely pow-

dered sngar three parts.

Ce'tene. An oily liquid obtained from spermaceti, boiling at 275° C. (527° F.)

Ce'terach. (Arabic name Chetherac.) The spleenwort, Asplenium ceterach.

C. officina'lis. (L. officina, a shep.) The spleenwort, Asplenium ceterach.

Ce'tic. (L. cetus, a whale. F. ce'tique.) Of, or belonging to, the whale, or to spermaceti. C. ac'id. A name given to what was sun-

posed to be a peculiar acid resulting from the saponification of cetin, but has been found to be only a mixture of margaric acid and cetin.

Ce'tin. (L. cetus, a whale.) A name given to spermaceti.

Also, C32H64O2, according to Chevreul, the principle constituent of spermaceti, new called Cetyl palmitate.

Cetodont'a. (Κῆτος, a sea monster, a whale; ἀδούς, a tooth.) A term applied to those genera of Cetacca which have no fins and possess permanent teeth; such are the eachalot and the grampus.

A synonym of Ethal. Ce'tol. Ceto'nia. A Genus of pentamerous lamel-

licorn Colcoptera living on vegetables. C. aura'ta. (L. auratus, gold-coloured. iv Russia it is a popular F. cétoine dorée.) remedy for rabies; and it has been prepesed for the treatment of epilepsy.
